Before the 2009-2010 income year, the cash basis concession was available only to parties to a financial arrangement who were natural persons, other than trustees. A trustee of a deceased estate was a cash basis person only if, at the time of death, the deceased person was a cash basis person and the financial arrangements did not exceed the thresholds. This concession applied only for the income year of death and the following four income years. The concession ceased to apply if (at any time), the thresholds were breached. Once the trustee ceased to be a cash basis person, the cash basis could not apply in the future [s EW 60].

Cash basis persons may elect to use a spreading method rather than the cash basis method of calculating income and expenditure under the financial arrangements rules. This election cannot be made in the year in which a base price adjustment must be made. The election must be made for all financial arrangements to which the person is a party at the time of the election and any financial arrangements entered into in subsequent years. The person must continue to use the spreading method for those financial arrangements until the financial arrangements mature. The election can be revoked by giving notice to the CIR. The revocation will then apply to financial arrangements entered into after the income year in which the notice of revocation is given.

When moving between the cash basis and an accrual basis of accounting for a financial arrangement, a cash basis adjustment must be performed [see 470.85].

1. Old financial arrangement rules

Under the old financial arrangement rules, the cash basis concession is available only to holders of financial arrangements. It is not available to issuers. Cash basis taxpayers who are eligible to use the cash basis concession must do so.
The thresholds under the old financial arrangement rules are lower than those under the financial arrangement rules.

A cash basis holder is a natural person where either:

(a) The income derived in that income year, calculated under the financial arrangements rules does not exceed $70,000; or

(b) The value of financial arrangements held in the income year at any time does not exceed $600,000; and

(c) The difference between:
   (i) Income under the financial arrangements held at the end of the income year using either a yield to maturity, straight-line, or another approved method; and
   (ii) Income as a cash basis holder does not exceed $20,000.

**Base price adjustment** [ss EW 28, EW 29, EW 30, EW 31]

The base price adjustment is the “wash-up” calculation in the year of sale, maturity, remission or other disposal or transfer of a financial arrangement. The base price adjustment applies to both accrual and cash basis taxpayers.

A person who is a party to a financial arrangement must calculate a base price adjustment when any one or more of the following circumstances arise:

(a) The person ceases to be resident in New Zealand;

(b) A non-resident who holds the financial arrangement as part of a business carried on through a fixed establishment in New Zealand ceases to hold it for that purpose;

(c) The financial arrangement matures. This includes the situation where the amount remaining to be paid is immaterial and the arrangement has been structured to avoid the necessity to perform a base price adjustment;

(d) The financial arrangement is disposed of, or is deemed to be disposed of because:
   (i) A non-resident leaves the tax base;
   (ii) An in-kind, or in specie distribution of a financial arrangement is made by a company in liquidation;
   (iii) A party to a financial arrangement has died (for the deceased person);
   (iv) The financial arrangement is distributed to a beneficiary under a will or on intestacy.

(e) For an assignor or defeasor, an absolute assignment or legal defeasance of a debt is made;

(f) The person is a debtor and the debt is sold at a discount by the creditor to an associate of the debtor;

(g) A party to the financial arrangement is released from making all remaining payments without fully adequate consideration;

(h) A party to the financial arrangement is released from making all remaining payments by a deed or agreement of composition with the party’s creditors, by operation of law or by lapse of time.

A base price adjustment need not be performed by the following:

(a) A temporary resident who is a cash basis person who becomes non-resident for tax purposes within three years, provided the temporary resident was party to the financial arrangement before first becoming a New Zealand resident;

(b) A New Zealand resident who becomes non-resident if the financial arrangement continues to be held in relation to a business carried on by the person through a fixed establishment in New Zealand; and

(c) Taxpayers who are a party to a debt that has been legally defeased, and are not the defeasor.

A base price adjustment must not be performed where the person has assigned the rights under a financial arrangement absolutely, or their obligations have been defeased under a legal defeasance, if all or part of the
consideration for the assignment or defeasance is deferred. Under these circumstances, the deferred consideration is taxed on an accrual basis over the term of the arrangement.

The base price adjustment formula is:

\[ \text{consideration} - \text{income} + \text{expenditure} + \text{amount remitted} \]

Where:

“Consideration” is the consideration paid or payable to the person less the consideration paid or payable by the person — in both cases ignoring non-contingent fees (where the method is not the IFRS method) and non-integral fees (where the method is the IFRS method). Note that various provisions stipulate what “consideration” means under particular circumstances [see 470.90].

“Income” is:

(a) Income derived by the person under the financial arrangement in previous income years [s CC 3];
(b) Dividends derived by the person from the release of the obligation to repay the amount lent [ss CD 3(1), CD 4(1), (2), CD 5(1)]; and
(c) Income derived under s CF 2(2) and (3) (Remission of specified suspensory loans).

“Expenditure” is expenditure incurred by the person under the financial arrangement in previous income years;

“Amount remitted” is an amount that is not included in the consideration paid or payable to the person, because it has been remitted either by the person or by operation of law.

If the result is positive, the amount is income in the year for which the calculation is made. If the result is negative, the amount is expenditure incurred in the year for which the calculation is made. However, if the outcome of the base price adjustment is positive (income) to the extent to which the amount arises because of expenditure incurred in prior years but the expenditure was not allowed as a deduction, the amount is not be treated as income under the base price adjustment.

**470.85 Adjustment for person becoming or ceasing to be a cash basis person [ss EW 62, EW 63]**

Where a person becomes or ceases to be a cash basis person during an income year, an adjustment is required to be made. Where a person is becoming a cash basis person, no adjustment is made in respect of financial arrangements which are already being accounted for on a cash basis. Similarly, where a person is ceasing to be a cash basis person, no adjustment is required in respect of a financial arrangement that is already being accounted for on an accrual basis.

The adjustment formula is:

\[ \text{adjusted income} - \text{adjusted expenditure} - \text{previous income} + \text{previous expenditure} \]

Where:

“Adjusted income” is:

(a) For a person who becomes a cash basis person, the total amount that would have been income derived by the person from the financial arrangement if the person had been a cash basis person from the date on which the person became a party to the financial arrangement to the last day of the income year for which this calculation is made; and

(b) For a person who stops being a cash basis person, the total amount that would have been income derived by the person from the financial arrangement under the financial arrangements rules from the date on which the person became a party to the financial arrangement to the last day of the income year for which this calculation is made;

“Adjusted expenditure” is:

(a) For a person who becomes a cash basis person, the total amount of expenditure that a cash basis person would have incurred under the financial arrangement from the date the person became a party to the financial arrangement to the last day of the income year for which this calculation is made; and
Financial Arrangements

470.90

(b) For a person who stops being a cash basis person, the total amount of expenditure that would have been incurred under the financial arrangement by applying the accrual rules from the date on which the person became a party to the financial arrangement to the last day of the income year for which this calculation is made.

“Previous income” is the total amount of income of the person from the financial arrangement in all income years before the income year in which this calculation is made;

“Previous expenditure” is the total amount of expenditure incurred by the person under the financial arrangement in all income years before the income year in which this calculation is made.

If the result of the cash basis adjustment is a positive amount, it is income derived by the person in the income year. If the result is a negative amount, it is expenditure incurred by the person in the income year.

In the income year in which the cash basis adjustment is made, that is the only amount that is income derived or expenditure incurred under the financial arrangement for that income year.

470.90 Consideration [ss EW 31, EW 32, EW 33, EW 34, EW 35, EW 36, EW 37, EW 38, EW 39, EW 40, EW 41, EW 42, EW 43, EW 44, EW 45, EW 46, EW 46B, EW 47, EW 48, EW 49, EW 50, EW 51]

The term “consideration” is vital to the calculation of income and expenditure under the financial arrangements rules. While in most cases its meaning is obvious, it has different meanings under different circumstances.

(1) Consideration includes property or services [ss EW 32, EW 34]

Where the consideration includes property or services, “consideration” for an original party to an arrangement that is a finance lease, hire purchase agreement, agreement for the sale and purchase of property or services, or a specified option is which ever of the following first applies:

(a) The lowest price that the parties would have agreed to on the date on which the agreement was entered into on the basis of payment in full on the date on which the first right in the property passes or the services are performed. This does not apply to an agreement for sale or purchase of property or services that is part of another financial arrangement;

(b) The cash price of the property or services to which the agreement relates determined under s 5 of the Credit Contracts and Consumer Finance Act 2003 if applicable;

(c) The future value, discounted value (or a combination of both) paid or payable on the date on which the first right in the property is transferred or the services are provided, as determined by a CIR determination; or

(d) The amount determined by the CIR if either party applies for a specific determination.

Where paragraph (a) applies, and the lowest price is in a foreign currency, the conversion rate is to be selected from the following:

(a) A rate obtained from a New Zealand registered bank for the date on which the first right in property passes or is expected to pass;

(b) A rate obtained from a New Zealand registered bank for the date on which the final payment is to be made. This rate can be used only where the period between the date on which the first right in property passes and the date on which the final payment is to be made is not more than five years; or

(c) A rate approved by the CIR by way of determination.

(2) Changing from fair value method under the IFRS method to any other method [s EW 46B]

Where a person changes from the fair value method to any other method for any financial arrangement, the person is treated as having been paid consideration equal to the market value of the financial arrangement at the end of the first income year for which the replacement method is used for that financial arrangement. A base price adjustment must be performed at that time.
Financial Arrangements

(3) **Hire purchase agreement or finance lease [s EW 33]**

The consideration for a hire purchase agreement or finance lease includes an amount incurred by the lessor in preparing or installing the asset for use.

(4) **Exiting the financial arrangement rules [ss EW 36, EW 41]**

Where a person:

(a) Ceases to be New Zealand resident and does not hold the financial arrangement as part of a business carried on through a fixed establishment in New Zealand;

(b) Is a non-resident and ceases to be a party to an arrangement for the purposes of a business carried on through a fixed establishment in New Zealand; or

(c) Starts using the financial arrangement for private or domestic purposes and it becomes an excepted financial arrangement:

(i) The person is deemed to have disposed of any accrued entitlement under the financial arrangement at the market value of that entitlement; and

(ii) The person is deemed to have been relieved of any accrued obligation immediately before the time and to have paid the market value of a contract to assume the obligation at that time.

(5) **Entering the financial arrangement rules [ss EW 37, EW 42]**

Where a person is a party to a financial arrangement and the person:

(a) Becomes New Zealand resident and did not previously hold the financial arrangement as part of a business carried on through a fixed establishment in New Zealand;

(b) Is a non-resident (other than a transitional resident) and becomes a party to an arrangement for the purposes of a business carried on through a fixed establishment in New Zealand;

(c) Is a transitional resident and the arrangement ceases to be an excepted financial arrangement or the person ceases to be a transitional resident under s EW 5(17) [see 470.25]; or

(d) Stops using the financial arrangement for private or domestic purposes and it ceases to be an excepted financial arrangement.

Under each of these circumstances:

(a) The person is deemed to have paid the market value of any accrued obligation under the financial arrangement at that time; and

(b) The person is deemed to have acquired for market value any accrued entitlement under the financial arrangement at that time.

(6) **Disposal or acquisition for no or inadequate consideration or as a distribution in kind or for non-monetary consideration [ss EW 38, EW 42]**

If a person has an accrued entitlement under a financial arrangement and disposes of it for no consideration or for less than market value consideration, or for non-monetary consideration, the person is deemed to have received market value consideration for the entitlement.

If a person becomes party to a financial arrangement and acquires an entitlement other than for monetary consideration or for less than market value, the person is treated as having paid the market value of that entitlement at that time.

(7) **Consideration affected by unfavourable factors [s EW 39]**

If a person sells or transfers an arrangement for an amount influenced by any one or more of the following:

(a) A decline in the other person’s credit worthiness;

(b) An increase in the possibility that the other person would default on an obligation under the arrangement; or

(c) An event the reduces or cancels the other parties obligations,
the person is treated as having received the amount that would have been received had it not been for that circumstance. However, this provision does not apply where the person’s business includes holding or dealing in financial arrangements of that class and the parties to the arrangement are not associated.

(8) **Debtor released from obligation** [s EW 45]

Where a debtor is released from an obligation to pay amounts under a financial arrangement under s 304 of the Insolvency Act 2006, any of the Revenue Acts or under a social assistance suspensory loan, the person is treated as having paid the amount on the day on which they are released from the obligation.

(9) **Early withdrawal of term deposit** [s EW 31]

Where a term deposit is withdrawn in whole or in part before the contractual maturity date, and the rate of interest is reduced as a result of the early withdrawal resulting in the depositor having to either repay interest or receive a reduced repayment of principal, public binding ruling BR Pub 10/21 applies [see TIB vol 23:1 (February 2011) at 15].

Where the deposit is withdrawn in full, a base price adjustment is required [see 470.80]. The amount of repaid interest is included in “consideration” for the purposes of the base price adjustment and, if the result is a negative amount, it is deemed to be interest expenditure. This interest may be deductible under s DB 6 (Interest: not capital expenditure) or s DB 7 which allows companies to take an interest deduction without having to prove a nexus with income. To the extent to which the person has returned income from the financial arrangement in earlier income years, the deduction is automatically allowable.

Where only part of the term deposit is withdrawn, no base price adjustment is required to be performed at the time of early withdrawal. Instead depositors who are not cash basis persons, and cash basis persons who have elected to use a spreading method, are required to apply determination G25: *Variations in the terms of a financial arrangement* [see 470.105]. Cash basis persons are able to deduct the interest repaid at the time it is incurred provided there is sufficient nexus between the repayment of interest and the interest income derived such that the general permission is satisfied. In the CIR’s opinion as set out in the ruling, this will be the case only where the interest repayment was incurred in the course of carrying on a business. In all other cases, the repayment will be dealt with in the case price adjustment performed at maturity.

(10) **Legal defeasance** [s EW 47]

Where all of the following circumstances apply:

(a) A financial arrangement has been subject to a legal defeasance;

(b) Another person has been required to meet the remaining obligations under the arrangement; and

(c) The person who has a right to receive money under the arrangement is required to perform a base price adjustment in respect of the arrangement,

the consideration received by a person is the aggregate of the amounts received from the original debtor and the amounts received from the other person.

(11) **Anti-avoidance** [s EW 48]

Where:

(a) Parties to a financial arrangement have dealt with each other in such a way that the intention of the financial arrangements rules has been defeated and s GB 21 applies; or

(b) The amount payable by the person is excessive under a transfer-pricing arrangement and s GC 7 applies; or

(c) The amount receivable under a transfer-pricing arrangement is insufficient and s GC 8 applies,

the consideration is deemed to be the amount that it would have been if the parties had been independent and had been dealing with each other at arm’s length.
(12) Debt sold at a discount to associate of the debtor [ss EW 43, EW 49]
Where a creditor sells a debt to an associated person [see 70 ASSOCIATED PERSONS AND RELATIVES], for a discount of at least 20 per cent of the market value, the following consequences arise:

(a) The debtor is treated as having paid the creditor the amount that the associated person pays to the creditor for the debt. This results in a base price adjustment being required to be performed by both the debtor and the original creditor with resultant remission income for the creditor; and

(b) The associated person is treated as having provided the debtor with an interest-free loan of the amount paid for the debt. If the debtor later repays the associated person more than the amount that the associated person paid for the debt, the excess amount is income of the associated person and a deduction for the debtor.

When determining whether or not the 80 per cent threshold has been breached, it is necessary to determine the market value of the debt. If the market value of the debt has been affected by one or more of the following factors:

(a) A decline in the debtor’s credit worthiness after the date on which the debt was entered into;

(b) An increase in the likelihood of the debtor defaulting; or

(c) An event that reduces or cancels the debtor’s obligations,
the market value is deemed to be the amount which it would have been had that factor not existed.

(13) Debt forgiven for natural love and affection [ss EW 44, EW 50]
An amount owing under a debt (including accrued interest) may be forgiven by a natural person in consideration of natural love and affection. A debt owed by a trust may also be forgiven in consideration of natural love and affection if the trust is either intended primarily to benefit a natural person for whom the creditor has natural love and affection, a charitable organisation, or both. In these situations, the forgiven amount is treated as paid when it is forgiven [see TES 20 (October 2004) 283].

The same treatment applies where a resettlement is made to a trust which has been established primarily to benefit charities or natural persons for whom the creditor has natural love and affection. Where a forgiveness is conditional, the amount forgiven is not treated as paid until the conditions are fulfilled. However, if a trust distributes any amounts to a natural person for whom the creditor does not have natural love and affection or to a non-charitable organisation, the distribution is income of the trustee to the extent that the distribution is less than or equal to the total amount forgiven by the creditor, and is included in income in the income year in which the distribution is made.

470.95 Anti-avoidance provisions [s EW 53]
Adjustments are required where the terms of a financial arrangement meet all of the following criteria:

(a) The terms of the financial arrangement give any party to the arrangement, or an associated person of any party to the financial arrangement, the discretion to decide any amount payable under the financial arrangement;

(b) The exercise of the discretion does not reflect changes in economic, commodity, industrial, or financial indices or changes in banking or general commercial rates;

(c) The making of the financial arrangement is not generally accepted commercial practice; and

(d) The effect of the financial arrangement is to defeat the intention of the financial arrangements rules.

Where the criteria set out above are met, each party must make adjustments to the financial arrangement for the following income years:

(a) The income year in which the person ceases to be a party to the financial arrangement;

(b) Where the person remains a party to the financial arrangement at the end of the fifth income year following the income year during which the person became a party to the financial arrangement in that fifth income year; or
Financial Arrangements

470.100

(c) In every fifth income year following the year in which the previous adjustment was required to be made until such time as the person ceases to be a party to the financial arrangement, in which case an adjustment is required under paragraph (a) above.

In making the adjustment, the person is required to calculate income and expenditure under the financial arrangement for each income year using the yield to maturity method. The following amounts must be included in the calculation:

(a) All consideration that has been paid, is payable, or will be payable to or by the person other than:
   (i) Non-contingent fees (if the IFRS method is not used); and
   (ii) Non-integral fees (if the IFRS method is used);
(b) All amounts that have been, or are to be, remitted by the person; and
(c) All amounts that would have been payable to the person had they not been remitted by operation of law.

“Non-contingent fees” are defined as a fee that is:
(a) For services provided for a person becoming a party to a financial arrangement; and
(b) Payable whether or not the financial arrangement proceeds.

“Non-integral fees” are defined as a fee or transaction cost that, for the purposes of financial reporting under IFRS, is not an integral part of the effective interest rate of the financial arrangement.

For every fifth income year, the person must also include an amount equal to the arrangement’s market value on the last day of the income year as if the person had disposed of the arrangement for that amount. If the arrangement has no market value the amount that reasonably could be expected to be realised on an arms-length disposal is used instead. Once these calculations have been done, the person is required to recalculate the income tax liability for each income year using those amounts of income or expenditure in substitution for the amounts previously calculated for each income year.

470.100 Determinations [TAA, ss 90AA, 90AB, 90AC, 90AD]

The CIR may make determinations. They may apply generally to all financial arrangements or just to a class of financial arrangements. They may apply to all persons or just to a class of persons. Determinations can be made in respect of the following matters:

(a) How the yield to maturity method applies to any financial arrangement;
(b) How the straight-line method applies to any financial arrangement;
(c) The method that may be used in determining the income or expenditure incurred for compulsory methods under the IFRS financial reporting method and determination alternatives to IFRS;
(d) The market, the method or methods, and the source of information used to determine market values used where the business is engaged in dealing in financial arrangements or the financial arrangement is a futures contract or a forward or future contract for foreign exchange;
(e) The methods that may be applied in determining income deemed to be derived or expenditure deemed to be incurred for any financial arrangements or classes of financial arrangements;
(f) Whether, and in what circumstances, any alternative methods may be used to determine income or expenditure under a financial arrangement or class of financial arrangements;
(g) Whether a method meets the consistency requirements of s EW 24 and when the requirement to use a method for financial reporting purposes may be waived;
(h) Whether or not a method of accounting for income and expenditure under a financial arrangement may be changed and any conditions to be imposed;
(i) Where an excepted financial arrangement is included in a financial arrangement, the method to be used to determine the portion of the income or expenditure that is solely attributable to the excepted financial arrangement;
Financial Arrangements

(j) The method for determining the discounted value of hire purchase payments payable under any finance lease or hire purchase agreement;

(k) The method for determining the consideration to be taken into account in the case of a disposition between members of the same consolidated group of companies; and

(l) The exchange rate that may be adopted and the circumstances in which that rate may be adopted by a taxpayer or a class of taxpayers, having regard to the costs that would be incurred by the taxpayer or class of taxpayer in otherwise adopting a rate.

The information required for applications is set out in reg 3(1) of the Income Tax (Determinations) Regulations 1987. The applicant must provide:

(a) Fees as may be prescribed;

(b) A draft determination in the form as required by the Schedule to the regulations;

(c) The name or description of the applicant for the determination;

(d) If the applicant requires anonymity, a draft of an anonymous version of the determination;

(e) Copies of relevant documents; and

(f) Written submission and particulars to assist understanding.

The fees are non-refundable, GST inclusive, and include an application fee and a processing fee.

Applications can be made to:
Office of the Chief Tax Counsel,
Inland Revenue Department,
PO Box 2198,
Wellington.

The applications are registered by the CIR who may then make a determination or refuse the application. The CIR prepares a draft determination and the applicant has 10 working days after a date fixed by the CIR to notify a wish to hold a conference on the draft. The conference, if requested, must be within 20 days of the 10-day period, but the CIR may in any event determine to hold the conference.

Determinations can be issued without a conference where it is substantially in accordance with the draft submitted by the applicant, where the applicant waives the right to a conference, and where the CIR independently makes a determination incorporating the matter for which an application was made.

Determinations can be challenged under the disputes resolution procedures.

The CIR can vary, rescind, restrict, or extend a determination by making a fresh determination. Financial arrangements acquired or issued prior to notification or publication of that fresh determination are not subject to it until the expiry of four years.

A person who applies a determination must be assessed accordingly, except where legislation is repealed or amended to that person’s detriment, or there was a material misrepresentation or omission (whether intentional or not) in the application for the determination. A determination is deemed made when signed by the CIR.

470.105 Determinations issued

Many of the determinations currently on issue were formulated under s 90 of the TAA which applies to Division 1 financial arrangements. However, they continue to apply in principle until such time as a fresh determination is issued under s 90AC of the TAA.

The current determinations issued are listed below.

(1) G1A: Apportionment of income and expenditure on a daily basis

Determination G1A allows for the income derived or expenditure incurred by a holder or issuer of a financial arrangement to be apportioned on a straight-line basis. The income or expenditure is apportioned among the income years of the holder or the issuer in which that period falls on the basis of the number of days in the...
Financial Arrangements

period lying within each income year. The calculation may be made (at the option of the holder or issuer) on either a 360- or 365-day basis. Note that the terms “holder” and “issuer” apply to Division 1 financial arrangements. Division 2 refers only to “parties” to a financial arrangement.

(2) **G2: Requirements as to precision**

Under Determination G2, a calculation is sufficiently precise if the income derived or expenditure incurred from a financial arrangement in any period allocated would not be changed by more than five dollars by the use of greater precision in all intermediate calculations. It provides that calculations must be carried to a sufficient number of decimal places so that going to one further decimal place will not change the result by more than five dollars. It applies to all calculations required by the financial arrangements regime. Accordingly, taxpayers are obliged to comply with it even if they are making calculations pursuant to another determination.

(3) **G3: Yield to maturity method**

Determination G3 applies to the class of financial arrangements that has the following attributes:

(a) All amounts payable or receivable under the financial arrangement, and the dates on which the amounts are payable or receivable, are known not later than the first balance date of the issuer or holder following the date of issue or acquisition as the case may be; and

(b) All such amounts are determined in New Zealand currency. It does not apply to any financial arrangement for which the annual yield to maturity rate determined would be not unique, less than 0 per cent, or greater than 100 per cent.

(4) **G4: Unit trusts with repurchase obligations**

Determination G4 states that the gain or loss arising from the disposal of an interest in a unit trust is solely attributable to the interest in the unit trust.

(5) **G5C: Mandatory conversion convertible notes**

Determination G5C treats all amounts for a note as relating to the underlying shares with the exception of the coupon interest payments. Income and expenditure is calculated on a pro rata daily apportionment of coupon interest to the income years.

(6) **G6D: Foreign currency rates**

Determination G6D applies where it is necessary to ascertain the value in New Zealand currency of:

(a) A cashflow paid or received in a foreign currency;

(b) A financial arrangement denominated in a foreign currency;

(c) In other circumstances, an amount expressed in foreign currency.

(7) **G7C: New Zealand futures and options market**

Determination G7C sets approved markets, sources of information, and methods used in determining prices in the futures market.

(8) **G9A: Financial arrangement denominated in a foreign currency or foreign commodity**

Determination G9A sets out a method for calculating the income and expenditure for a financial arrangement where the rights are expressed in a base currency other than New Zealand dollars. The base currency may be a foreign currency or a commodity [see also Determination G9C].

(9) **G9C: Financial arrangements denominated in a currency other than New Zealand dollars: an expected value approach**

Determination G9C may be used as an alternative to Determination G9A in some circumstances. It applies to financial arrangements where the rights and obligations of the parties are expressed in a base currency (which may be a foreign currency or commodity) other than New Zealand dollars. The determination can be
used only if the payment dates are known on or before the first balance date following the issue of the financial arrangement and if the forward rates for the base currency can be determined. Using this method, the expected component of income or expenditure is spread over the term of the financial arrangement on a daily basis, while the unexpected component is recognised on realisation [see TIB vol 16:5 (June 2004)].

(10) **G10B: Present value calculation methods**

Determination G10B specifies two approved methods of calculating present values for use in other determinations. One method is a general purpose method which gives very similar results to Determination G3, and may be used on either a 360- or 365-day period.

The second method is to calculate prices of government or local authority stock and is similar to the formula approved by the International Association of Bond Dealers and used in calculators such as the HP12C. It differs from the first method in that coupons must be payable at regular half yearly or quarterly intervals, and compound interest is used in the first period, unless it is also the last period in which case simple daily interest is used. The first method always uses simple daily interest in the first period [see TIB vol 2:4 (November 1990)].

(11) **G11A: Accrual income and expenditure using present value based yield to maturity method**

Determination G11A is an alternative to Determination G3. In general there is no explicit formula for a yield to maturity in terms of the cash flows. The yield to maturity is defined as the interest rate at which the present value of all amounts payable after the date of issue or acquisition is equal to the amount payable on that date [see TIB vol 2:4 (November 1990)].

(12) **G12: Accounting for a financial arrangement in the absence of a determination**

Determination G12 applies where it is not possible to calculate income or expenditure using the yield to maturity method, and no determination provides a method of accounting and the amount is not reported for financial reporting purposes.

(13) **G13A: Prices or yields**

Determination G13A applies where it is necessary to determine a price or yield for valuation purposes. It may arise where a market valuation method is required for calculating the amount of income derived from New Zealand Government Stock in an income year. Alternatively, there may be no relevant quotations available. This determination provides approval for markets, sources of information, selection of buy-selling price and approving methods of determining income and expenditure [see TIB vol 2:4 (November 1990)].

(14) **G14: Forward contracts for foreign exchange and commodities**

Determination G14 determines the value of forward contracts where market value is not applied. The contract is divided into two components being the premium (difference between spot and forward rate at commencement) and the change in spot. The premium is spread over the term of the contract and the spot movement accrued [see also Determination G14B].

(15) **G14B: Forward contracts for foreign exchange and commodities: an expected value approach**

Determination G14B can be used as an alternative to Determination G14. It applies to financial arrangements which are forward contracts for foreign exchange or commodities. Using this method, the expected component of income or expenditure is spread over the term of the financial arrangement on a daily basis, while the unexpected component is recognised on realisation [see TIB vol 16:5 (June 2004)].

(16) **G15: Exemption for small debtors**

Determination G15 exempts compliance where three months or less interest is prepaid at the year’s end, and the person is either the issuer of the arrangement or a cash basis holder and total liabilities for financial arrangements for income tax assessing purposes at year end is $200,000 or less.
(17) **G16A: Discounted value of accounts payable for trade credits denominated in New Zealand currency**

Determination G16A provides the method to be used to calculate the core acquisition price of non-short-term trade credits denominated in New Zealand currency, where the terms of the trade credit is known at the commencement and the amounts and dates payable are known on the first balance date after supply. The cash flows are then discounted to present values. It could be used, for example, when a trade credit is entered into on 1 December, under which goods supplied on the following 17 February and to be paid by 14 July. The term of the trade credit (the period from the day after supply date to final payment date) is therefore 147 days [see TIB vol 1:9 (March 1990)].

(18) **G17B: Discounted value of amounts payable for deferred property settlements denominated in New Zealand currency**

Determination G17B applies to deferred property settlements for other than short-term agreements where they are stated in New Zealand dollars, the terms of credit are known at commencement and the amount and dates of payment are known by the first balance date after transfer [see TIB vol 1:9 (March 1990)].

(19) **G19: Exchange traded option contracts**

Determination G19 is for calculating the value of options traded on the exchange with reference to other determinations [see TIB vol 1:9 (March 1990)].

(20) **G20: Discounted value of amounts payable for trade credits denominated in a foreign currency**

Determination G20 provides the method to calculate the core acquisition price for a trade credit where, generally, any right or obligation of the parties is expressed in a base currency other than New Zealand dollars, and all amounts and dates of payment are known at the first balance date after the supply date [see TIB vol 1:9 (March 1990)].

(21) **G21: Discounted value of amounts payable for deferred property settlements denominated in a foreign currency**

Determination G21 applies to any agreement for the sale and purchase of property and to any specified option held or issued by a person, where payments are expressed in a base currency other than New Zealand dollars. It does not apply to any deferred settlement where the amounts payable are denominated in New Zealand currency, or to any deferred property settlement where more than 20 per cent of all the amounts payable is due before 31 days prior to transfer date, or any amount payable or the date of payment or the terms are not known at the first balance date of the person after the transfer date [see TIB vol 1:9 (March 1990)].

(22) **Determination G21A: Agreements for sale and purchase of property denominated in foreign currency: discounted value of amounts payable**

Determination G21 applies to any agreement for the sale and purchase of property (ASAP) which is subject to the accrual rules if the price for the property is denominated in a foreign currency (a foreign currency ASAP), and certain other conditions are met. It does not apply to a short-term ASAP or a private or domestic ASAP as those agreements are excepted financial arrangements [see TIB vol 8:4 (September 1996)].

Determination G21A differs from Determination G21 by:

(a) Removing the option to discount future amounts payable under a foreign currency ASAP using a New Zealand dollar interest rate; and

(b) Removing the requirement to convert the discounted value of amounts payable using the spot rate on the rights date.

(23) **G22A: Optional convertible notes denominated in New Zealand dollars**

Determination G22A replaced Determination G22 on 26 September 2006. It gives the methods under the financial arrangements rules for calculating income, expenditure and the base price adjustment in relation to
optional convertible notes that are denominated in New Zealand dollars. It applies in relation to a financial arrangement that is a convertible note which contains either a share warrant that the holder can exercise only on the maturity date or a share warrant that allows the holder to exercise the warrant component during the convertible note’s term:

(a) That a person becomes party to on or after the date of G22A; and

(b) Four years after the date of G22A for financial arrangements that were entered into before the date of G22A, and that currently apply Determination G22, satisfy the criteria of G22A and have not matured within that four-year period.

Special calculations apply where a financial arrangement changes from being taxed in accordance with Determination G22 to being taxed in accordance with Determination G22A. These are explained in detail in TIB vol 22:10 (November 2010) at 90-92.

(24) G23: Specified rate

Determination G23 applies where it is necessary to determine an annual yield or interest rate for valuation purposes. This rate is called the specified rate. The rate may be required where the present value of an amount payable or receivable under a financial arrangement is to be calculated. Such a calculation is necessary in certain cases (eg in Determination G22). This method approves two methods of selecting a specified rate [see TIB vol 2:4 (November 1990)].

(25) G24: Straight-line method

The straight-line method can be applied if the value of all of the financial arrangements held and issued by the taxpayer is below $1 million at all times during the income year in question. There are two ways of applying the straight-line method. The first applies to arrangements where the principal is fixed, and interest, if any, is payable at regular intervals. All finance charges are spread equally to each income year over the term of the arrangement. The second applies to all other financial arrangements (eg loans with reducing principals). The finance charges are spread over the term of the arrangement in proportion to the principal outstanding. Note that, in the legislative provision to which the determination relates, the threshold has been increased to $1.5 million.

(26) G25: Variations in terms of a financial arrangement

Determination G25 requires an adjustment to be made in the year of variation. It results in the total income or expenditure at the end of the year of variation being equal to what it would have been had the timing and details of the variation been known at the date of issue or acquisition.

(27) G26: Variable rate financial arrangements

Determination G26 applies to variable rate financial arrangements where interest is paid at least annually. Any income or expenditure must be accrued. Two alternative methods may be used.

(28) G27: Swaps

Determination G27 applies to interest rate swaps, interest swaps, currency swaps, interest rate and currency swaps, and interest and currency swaps entered into after 19 January 1995. It does not apply to more complex swaps such as commodity swaps, debt-equity swaps, debt-property swaps, swaps involving more than two currencies, or swaps involving the amortisation or accretion of principal. Four methods (A, B, C, and D) are available for calculating income and expenditure. The main method is Method C, which requires each leg of the swap to be treated as a separate loan and for the normal financial arrangements rules to be applied to each of those loans. Method A may be used if the business of the taxpayer involves dealing in swaps or if the swap is a forward or future contract for foreign exchange. Method B may be used if the swap involves a forward contract for the exchange of currencies. Method D enables the use of any alternative method to Method C provided it has regard to the principles of accrual accounting, conforms with commercially acceptable practice, is consistently applied, and the amounts are not materially different from those calculated under Method C [see TIB vol 6:8 (January 1995)].
Financial Arrangements

(29) **G29: Agreements for sale and purchase of property denominated in foreign currency: exchange rate to determine the acquisition price and method for spreading income and expenditure**

Determination G29 approves the adoption of three alternative exchange rates for converting the foreign currency lowest price into New Zealand dollars. It also prescribes the method that must be used to calculate income or expenditure from a foreign currency agreement for sale and purchase of property.

(30) **G30: Debt securities, finance leases and hire purchase agreements denominated in New Zealand dollars**

Determination G30 allowed persons in the business of lending money to continue to apply the same tax treatment for interest income and expenditure as under the previous rules following their adoption of International Financial Reporting Standards. It was a temporary measure while a legislative solution was being developed. This determination has been withdrawn from use with effect from 1 October 2009.

(31) **S16: Financial arrangement income or expenditure from certain retirement village arrangement**

Determination S 16 relates to occupation right agreements between the operator of the retirement village and the resident. Under such an arrangement, the resident pays the operator the “initial fee”. An accommodation payment accrues daily with the annual fee being seven per cent of the initial fee. The accommodation payment can ever accrue to 35 per cent of the initial fee. There is also a “village expenses payment” which is payable by the resident each month. This is to cover the costs of such things as maintenance, rates, utilities, wages etc. When the agreement is terminated, the operator makes a “termination payment” to the resident or the resident’s estate. This is equal to the initial fee. The agreement consists of both a financial arrangement, being the initial fee and the termination payment, and an excepted financial arrangement, being the accommodation payment and the village expenses payment. The determination does not provide a spreading methodology. The determination, including examples, can be found in TIB vol 22:7 (August 2010).

470.110 **Financial arrangements rules — decision process**

In order for the financial arrangements rules to apply, the taxpayer must be a party to a financial arrangement which is not an excepted financial arrangement. For most financial arrangements, it is necessary to spread the income and deductions over the life of the arrangement with a wash-up calculation (called the base price adjustment) being performed in the year in which the arrangement matures. There are a number of spreading methods that can be used under particular circumstances, although the IFRS and yield-to-maturity method are the most commonly used.

The following flowchart illustrates the process to be followed in determining whether a financial arrangement is involved in a transaction.
The following flowchart illustrates which spreading method to use.

**Spreading Methods**

- Are you required under s EW 15I to use the yield to maturity method? (YTM method) or an alternative method under s EW 16 and EW 19?  
  - Yes: You must use YTM or an alternative method under s EW 15I and EW 19.  
  - No: Do you use IFRS for financial reporting purposes?  
    - Yes: You must use one of the 4 methods described in s EW 15C(1).  
    - No: Are you required under s EW 15H to use a particular determination?  
      - Yes: You must use that determination.  
      - No: Are you required under s EW 15I to use the yield to maturity method?  
        - Yes: You must use yield to maturity.  
        - No: Do you use IFRS for financial reporting purposes?  
          - Yes: You may use SL.  
          - No: Can you use the straight line (SL) method under s EW 17?  
            - Yes: You may use SL.  
            - No: Can you use the yield to maturity (YTM) method under s EW 16?  
              - Yes: You may use MV.  
              - No: Can you use the market valuation (MV) method under s EW 18?  
                - Yes: You may use MV.  
                - No: Is there a determination?  
                  - Yes: You must use a method that complies with s EW 22.  
                  - No: Do you meet the criteria under s EW 22?  
                    - Yes: You must apply to the Commissioner for a determination under s 97AC TAA 1994.  
                    - No: You must use a method that complies with s EW 22.
Chapter 480

Financial Relief

480.10 General position

The CIR has the power to release a taxpayer from a tax liability (tax write off), if that would put the taxpayer in serious hardship, or to allow a taxpayer to defer or spread the payment of a tax liability (instalment arrangement), provided certain conditions are met.

In providing financial relief, the CIR has an overriding statutory duty to maximise the outstanding tax recovered from a taxpayer. However, the CIR may not recover outstanding tax if that recovery is an inefficient use of the CIR’s resources or if it would place a natural person taxpayer in serious hardship [TAA, s 176].

A special form of tax relief is available to farmers who receive new start grants [see 430.105].

Monthly incremental late payment penalties are not imposed on any debt covered by an instalment arrangement, provided the taxpayer adheres to the terms of the arrangement. However, use-of-money interest (UOMI) continues to accrue during the term of the arrangement [see 1110.290].

The CIR may remit UOMI if an emergency event physically prevents a taxpayer from making a tax payment on or before the due date [see 1110.342].

The financial relief provisions apply to all taxes, but not to child support or student loans.

The CIR has issued standard practice statements on instalment arrangements [see 480.35], and writing-off tax debt [see 480.45].

Note: Taxpayers who are having difficulty paying tax that is due, or who expect to have difficulty meeting future tax obligations, should contact Inland Revenue as soon as possible. An early request for tax relief is important because:

(a) Some or all of the debt may be written-off if the taxpayer is facing serious hardship;

(b) Incremental late payment penalties are put on hold for the term of an instalment arrangement and so the debt does not escalate (however, interest is still charged on the outstanding debt);

(c) The taxpayer is able to pay off the debt in a manageable way without getting into serious financial difficulty; and

(d) The mental stress on the taxpayer is reduced.

480.20 Application for financial relief [TAA, s 177]

A taxpayer, or a person on the taxpayer’s behalf, may apply for financial relief by:

(a) Making a claim stating why recovery of outstanding tax would place the taxpayer in serious hardship (ie requesting debt write off); or

(b) Requesting to enter into an instalment arrangement with the CIR.
The application may be made either by telephone or in writing, although the CIR may require that a request under (a) be made in writing.

Upon receiving a request, the CIR may do any of the following:

(a) Accept the taxpayer’s request;
(b) Seek further information from the taxpayer;
(c) Make a counter offer; or
(d) Decline the taxpayer’s request.

If the CIR requests further information or makes a counter offer, the taxpayer has 20 working days to respond. If a taxpayer takes longer than 20 days to respond, the response is treated as a new request for financial relief. The CIR may allow more than 20 days if the taxpayer is having difficulty obtaining the required information or responding to the counter offer [see 480.35].

The CIR will not commence recovery action during the negotiation period. If recovery action has already commenced when the taxpayer seeks financial relief, the CIR will discuss with the taxpayer whether this action will continue during the negotiation period [see TIB vol 14:11 (November 2002) at 84].

In McLean v Commissioner of Inland Revenue (2005) 22 NZTC 19,231 (HC) the High Court dismissed an application by the taxpayer for judicial review of the CIR’s decision not to grant relief under s 177 of the TAA on the grounds of serious hardship and financial difficulty. The CIR had rejected a settlement offer by the taxpayer because the taxpayer had participated in a tax avoidance arrangement and had taken steps to alienate his property and transfer it to trusts. The High Court held that there was no basis upon which the CIR’s decisions could be said to have been unreasonable or a breach of a legitimate expectation. The taxpayer had engaged in transactions, designed to reduce his assets, with two trusts of which he was the sole beneficiary. The taxpayer had transferred property to the trusts when he knew that schemes in which he had invested were being investigated by Inland Revenue and during the period after he had already sought relief.

480.25 Definition of serious hardship [TAA, s 177A]

Serious hardship, for the purposes of financial relief, can apply only in respect of an individual. Serious hardship means significant financial difficulties that arise because of:

(a) The taxpayer’s inability to meet minimum living expenses, according to normal community standards;
(b) The cost of medical treatment for an illness or injury of the taxpayer or their dependant;
(c) A serious illness suffered by the taxpayer or their dependant; or
(d) The cost of education for the taxpayer’s dependant.

Serious hardship does not include significant financial difficulties that arise because:

(a) The taxpayer is obligated to pay tax;
(b) The taxpayer may become bankrupt;
(c) The taxpayer’s, or their dependant’s, social activities and entertainment may be limited; or
(d) The taxpayer is unable to afford goods or services that are expensive or of a high quality or standard according to normal community standards.

The CIR may take into account whether the recovery of outstanding tax from a company would place in serious hardship:

(a) A shareholder who owns 50 per cent or more of the shares in a company;
(b) Two shareholders who jointly own 50 per cent or more of the shares in a company; or
(c) A shareholder-employee of a close company [see 170.05 for the definition of “close company”].

The correct approach when considering whether to grant relief on the basis of serious hardship is to determine whether, in the year in which the tax obligation arose, the taxpayer was able to meet minimum living standards according to normal community standards. The scheme and purpose of the hardship provisions of the TAA...
indicates that the focus should be on the ability of the taxpayer to pay at the time when the tax became payable, not when enforcement proceedings are taken. This is supported by the fact that in s 177A(1)(b)(i) of the TAA, serious financial difficulties do not include difficulties that arise because of the obligation to pay tax: Larmer v Commissioner of Inland Revenue (2010) 24 NZTC 24,016 (HC).

480.30 Instalment arrangements [TAA, s 177B]

The CIR must not enter into an instalment arrangement with a taxpayer if that arrangement would place the taxpayer in serious hardship. The amount of the instalments must therefore take into account the ability of the taxpayer to pay.

The CIR may decline to enter into an instalment arrangement if:

(a) It would not maximise the recovery of outstanding tax from the taxpayer;
(b) The CIR considers that the taxpayer is in a position to pay all of the outstanding tax immediately (eg if a taxpayer has term deposits or other investments, or the ability to borrow sufficient funds to pay the outstanding tax);
(c) The taxpayer is being frivolous or vexatious; or
(d) The taxpayer has not met their obligations under a previous instalment arrangement.

A taxpayer may renegotiate an instalment arrangement at any time. The CIR may renegotiate an instalment arrangement at any time after the end of two years from the date the original arrangement was entered into (ie the date it was accepted by the CIR). The renegotiation of an instalment arrangement is treated as if it were a new request for financial relief.

The CIR may cancel an instalment arrangement if it was entered into on the basis of false or misleading information provided by the taxpayer, or if the taxpayer is not meeting their obligations under the arrangement.

A taxpayer who is meeting their obligations under an instalment arrangement, and who has a refundable tax credit remaining for a tax year, may choose to have the credit paid to them rather than used under the ordering rules in s LA 6(2) and former s LH 2(6).

480.35 CIR’s practice on instalment arrangements

Standard practice statement SPS 11/01 [TIB vol 23:2 (March 2011) at 4–16] sets out Inland Revenue’s practice when considering applications for financial relief by way of an instalment arrangement under s 177 of the TAA. It applies to applications for relief by way of instalment arrangements made on or after 16 February 2011. SPS 11/02 replaces SPS 05/11 [TIB vol 17:10 (December 2005)].

Taxpayers are encouraged to contact the CIR at the earliest opportunity if they think they will have trouble paying their tax by the due date. Options for payment can be discussed, which may include an instalment arrangement if they are unable to pay their tax in full.

Negotiation of an instalment arrangement will generally not commence until the returns relevant to the period have been filed. This is because the outstanding tax needs to be quantified before the CIR will commence negotiation.

Upon receipt of a taxpayer’s application for an instalment arrangement, the CIR has four options:

• Accept the taxpayer’s request;
• Seek further information from the taxpayer;
• Make a counter offer; or
• Decline the request.

The CIR will take into account the following factors when considering a taxpayer’s application for an instalment arrangement:

• Whether the tax payable can be quantified;
• Whether the proposal will place the taxpayer, being a natural person, in serious hardship or cause
financial difficulties for other taxpayer entities;
• Whether the instalment arrangement would maximise the recovery of tax debt from the taxpayer;
• Whether the taxpayer is in a position to pay all of the tax debt immediately;
• Whether the taxpayer is being frivolous or vexatious;
• Whether the taxpayer has met their obligations under a previous instalment arrangement;
• Whether the taxpayer’s proposal is realistic;
• Whether the taxpayer is likely to comply with their current and future tax obligations;
• Whether the taxpayer has filed all relevant returns for the period of the instalment arrangement requested;
• Other relevant factors that the CIR may consider appropriate.

When considering a taxpayer’s application for an instalment arrangement, if the CIR requires further
information the taxpayer has 20 working days (or a longer period where allowed by the CIR) to provide the
information requested. The taxpayer must provide the information requested within the required timeframe,
or request further time from the CIR, to preserve the application for an instalment arrangement. Failure to
provide the information requested is likely to result in the expiry of the negotiation period and lapse of the
application. This means that the initial late payment penalty and the monthly incremental late payment penalty
will be imposed on their tax debt.

When the CIR accepts an instalment arrangement or, the taxpayer accepts a counter offer, the confirmation
will include the terms and set out both the taxpayer’s and the CIR’s obligations under the instalment
arrangement. Confirmation may be made by telephone or electronic means consistent with the method used
by the taxpayer for their application. For a complex instalment arrangement the CIR is likely to set out the
details of the instalment arrangement in writing.

Where the taxpayer applies for an instalment arrangement before the tax is due for payment and the CIR
accepts the application, the initial late payment penalty of one per cent will be imposed on the tax debt.
Regardless of the CIR accepting an instalment arrangement, use-of-money interest will accrue daily on the
tax debt while it remains unpaid.

Where the taxpayer applies for an instalment arrangement after the tax is due and the CIR accepts the
application, the initial late payment penalty of one per cent and, if applicable, the initial four per cent will be
imposed on the tax debt. In addition, any incremental late payment penalties imposed up to the date of the
taxpayer’s request are also payable. Use-of-money interest will also accrue daily on the tax debt that remains
unpaid.

The taxpayer may renegotiate an instalment arrangement at any time. The CIR may do so only after the end
of two years from the date on which the instalment arrangement was entered into. However, the CIR may
cancel an instalment arrangement if it was entered into on the basis of false or misleading information. In
these cases, the late payment penalties will be imposed as if the instalment arrangement had not been entered
into.

Default on payment of an instalment may not undo an overall instalment arrangement. When the CIR is
satisfied a taxpayer is making their best effort to meet their obligations, the terms of an instalment arrangement
may be varied for recovery of the tax debt.

480.40 Write-off of tax by the CIR [TAA, s 177C]
The CIR is authorised to write off outstanding tax that cannot be recovered. The CIR must write off
outstanding tax that cannot be recovered due to bankruptcy, liquidation or the distribution of a taxpayer’s
estate.
The CIR may not write off outstanding tax (including any shortfall penalties) if the taxpayer is liable to pay a shortfall penalty for taking an abusive tax position [TAA, s 141D(2), see 1110.105], evasion [TAA, s 141E(1), see 1110.110], or a similar act in relation to that outstanding tax [see 1110.235].

The CIR may reinstate all or part of any outstanding tax written off if, by operation of law, the CIR receives additional funds in respect of a taxpayer after the taxpayer becomes bankrupt, is liquidated, or if additional funds due to the taxpayer’s estate are discovered after the taxpayer’s estate has been distributed.

If the CIR writes off outstanding tax for a taxpayer who has a net loss, the CIR must extinguish all or part of the net loss by dividing the amount written off by 33 per cent and reducing the net loss by that amount. The taxpayer’s net loss is measured according to the return of income for the tax year preceding the tax year in which the outstanding tax is written off.

**Example:**

A taxpayer has a net loss of $10,000. The CIR is unable to recover outstanding tax of $2,500 due from the taxpayer and writes it off. The taxpayer’s net loss must be reduced by $7,576 ($2,500 / 0.33). This effectively means that the net loss is “cashed in” to pay the outstanding tax.

The CIR has the discretion to write off outstanding tax that results from the payment or crediting of excess abating WFF tax credits or minimum family tax credits in the 2008-2009 tax year. This applies if the tax is outstanding as a result of amendments to the family scheme made by the Taxation (Personal Tax Cuts, Annual Rates, and Remedial Matters) Act 2008. If the amount of outstanding tax is $100 or less, write-off is automatic (TAA, s 177C(1B), (1C)).

The CIR must write off outstanding tax of up to $30 to the extent that it is outstanding from the 2010-2011 tax year and is tax payable under ss MF 5(2) or MF 6(2), or is otherwise the result of WFF tax credit overpayment or overcrediting [TAA, s 177C(1D)].

If the CIR writes off outstanding tax for a taxpayer who has unused imputation credits carried forward, the CIR must extinguish the credits on a one-for-one basis up to the amount of the tax written-off. If a taxpayer has both a net loss and unused imputation credits carried forward, the CIR must extinguish the net loss before extinguishing any unused imputation credits.

The CIR may reinstate outstanding tax written off if:

(a) The outstanding tax was written-off on the grounds of serious hardship and the taxpayer declares bankruptcy, or is subject to bankruptcy proceedings brought by a creditor, within a year of the write off;

(b) The outstanding tax was written off on the grounds of serious hardship and the taxpayer, being a company, is or is in the course of being liquidated within a year of the write-off; or

(c) The outstanding tax was written off due to false or misleading information provided by the taxpayer.

If the CIR enters into an instalment arrangement that provides for some of the outstanding tax to be written off, the CIR may not reverse the write-off even if, during the term of the arrangement, the taxpayer fails to meet some or all of the terms of the arrangement.

The net loss that may be extinguished is the taxpayer’s net loss at the time the outstanding tax is written off. For this purpose, the CIR may use a figure for the net loss based on the most recent tax return filed by the taxpayer.

### 480.45 CIR’s practice on debt write off [TAA, ss 6(1), 6A and 176(1)]

Standard practice statement SPS 06/02 sets out the CIR’s practice for permanently writing-off outstanding tax [see TIB vol 18:5 (June 2006) at 55-64]. The statement applies to all write offs of outstanding tax from 10 May 2006. It replaces SPS RDC-620SPS RDC-620 [see TIB vol 14:11 (November 2002) at 88-93 and TIB vol 15:3 (March 2003) at 5]. SPS 06/02 does not apply to child support, domestic maintenance, or student loan repayment obligations. However, the statement does apply to employer obligations to deduct child support or domestic maintenance from the wages of employees and pay it to Inland Revenue. The statutory rules relating to writing-off outstanding tax are set out in 480.40.
Taxpayers may apply for debt write off by telephone, facsimile, secure Inland Revenue email (Online Correspondence Service) or letter. If Inland Revenue requires the application to be in writing (eg because detailed evidence is required), taxpayers can apply in writing by:
(a) Delivering the notice in person to Inland Revenue;
(b) Sending the notice by facsimile;
(c) Sending an email by secure Inland Revenue email; or
(d) Sending the notice by post.

Applications for debt write off should explain why recovery would place the taxpayer in serious hardship [see 480.25 for definition], and should include supporting financial information. Written applications will not be required when it is obvious from information already available to Inland Revenue that recovery would place the taxpayer in serious hardship. To assess whether the taxpayer would be placed in serious hardship Inland Revenue will request relevant details of the person’s financial position, including typically (but not limited to):

(a) Income and expenditure;
(b) Assets and liabilities;
(c) A 12-month cash flow projection;
(d) Asset valuations;
(e) Statement of financial performance (where applicable);
(f) Statement of financial position (where applicable);
(g) List of debtors and creditors (where applicable).

Upon receipt of a taxpayer’s application for writing-off outstanding tax, Inland Revenue may accept the taxpayer’s request, seek further information from the taxpayer, make a counter offer, or decline the request. Inland Revenue will take into account the following factors when considering a taxpayer’s application for a write off of outstanding tax:
(a) Whether the proposal will place the taxpayer, being a natural person, in serious hardship;
(b) Whether the value of the taxpayer’s proposal when compared to other options would maximise the recovery of outstanding tax from the taxpayer;
(c) Whether the taxpayer is in a position to pay all or part of the outstanding tax immediately;
(d) Whether the taxpayer has filed all required returns; and
(e) Whether other relevant factors exist.

Example 1:
A taxpayer has outstanding tax of $8,000 and has been putting funds aside to clear this amount by the due date. However, at the due date they have only managed to save $2,000 towards this amount. Due to the taxpayer’s financial circumstances, any payment over and above the $2,000 they have saved would cause difficulty in meeting their day-to-day living expenses. Inland Revenue accepts the lump sum payment of $2,000 and writes off the balance on the grounds of serious hardship as it is not feasible for Inland Revenue to enter into an instalment arrangement for payment of the outstanding $6,000.

When considering a taxpayer’s application, Inland Revenue may require the taxpayer to provide additional information within 20 working days (or such longer period that may be allowed). This may include financial information and will include the filing of any outstanding returns. Taxpayers must provide the required information within the allowed timeframe. Information received outside the allowed timeframe will be treated as a new request for financial relief. If Inland Revenue subsequently declines to grant financial relief to the taxpayer, both initial and incremental late payment penalties will be imposed and interest will accrue as if the request for financial relief had not been made.

Although Inland Revenue is required to maximise the recovery of outstanding tax from taxpayers [TAA, s 176(1)], this duty is subject to the overriding obligations to protect the integrity of the tax system [TAA, s 6] and to collect over time the highest net revenue that is practicable within the law [TAA, s 6A].
Example 2:
A taxpayer has outstanding tax of $100,000 and makes an offer of $75,000 to settle the arrears over a period of three years. Inland Revenue considers that bankruptcy would only yield $50,000 and that there are no other viable avenues for recovery. In this instance, Inland Revenue would consider writing-off $25,000 and entering into an instalment arrangement over three years for $75,000. Inland Revenue may permanently write-off outstanding tax under s 174AA(a) of the TAA where the balance of the tax payable is not more than $20. In exercising this discretion Inland Revenue may consider the factors referred to in SPS 06/02.

Inland Revenue will not write off outstanding tax (including any shortfall penalties) if the taxpayer is liable to pay a shortfall penalty for taking an abusive tax position [see 1110.105], evasion [see 1110.110], or a similar act in relation to that outstanding tax [see 1110.235].

Example 3:
A taxpayer has outstanding GST for the 31 March 20X1 return period and also has outstanding income tax for the 20X1 tax year, including a shortfall penalty for taking an abusive tax position. In this instance, where the criteria for serious hardship are met, the outstanding GST can be written-off. However, the outstanding income tax will not be written-off, regardless of whether recovery will cause serious hardship.

Example 4:
A close company owes outstanding tax of $300,000 and its only asset is a debit balance in the principal shareholder’s current account of $300,000. If the company were placed into liquidation, the $300,000 in the current account would be called up. The shareholder’s personal assets are a house valued at $290,000 and a car valued at $7,000. Inland Revenue recognises that any action taken to liquidate this company could place the shareholder in serious hardship. The company agrees to pay to Inland Revenue the sum of $220,000, borrowed against the principal shareholder’s home. The balance of the outstanding tax ($80,000) will be written-off, as collection of the amount would cause the shareholder serious hardship.

Neither a trust nor its trustees can apply for outstanding tax to be written-off on the grounds of serious hardship. Serious hardship applies to natural persons only and the CIR generally considers that a trustee of a trust is not acting as a natural person in that capacity. However, Inland Revenue may consider writing-off a trust’s outstanding tax under s 177C(1) of the TAA if that tax cannot be recovered. In determining whether a trust’s outstanding tax is irrecoverable, Inland Revenue will also consider whether the trustees can satisfy the outstanding tax in their capacity as trustees or personally. If Inland Revenue cannot recover the outstanding tax from the trust or its trustees, the outstanding tax will be considered as irrecoverable for the purposes of s 177C(1) of the TAA.

When writing-off outstanding tax, Inland Revenue must extinguish all or part of any net losses carried forward from the taxpayer’s most recent income tax return and/or any excess imputation credits. Where the taxpayer has both net losses and excess imputation credits carried forward from a previous year, the net losses will be extinguished first.

A taxpayer must file all earlier outstanding tax returns before their applications for a write off of outstanding tax will be considered. Any available net losses and/or excess imputation credits will not be extinguished under s 177C(5) and (5B) until all outstanding tax returns are filed. Inland Revenue may then calculate the net losses using the taxpayer’s most recently filed income tax returns. When Inland Revenue writes off outstanding tax, the taxpayer will be notified in writing of the financial relief granted and of the remaining value of any net losses or excess imputation credits carried forward.

There is no statutory right to challenge or object to any decision of Inland Revenue to grant or cancel relief [s 138E(1)(e)(iv)]. However, if a taxpayer does not agree with Inland Revenue’s decision not to grant relief, the taxpayer may request that the decision be reviewed by the officer involved or their superior officer. The decision may also be reviewed by the Ombudsman or by way of judicial review.
480.50 Late payment penalties when financial relief sought [TAA, ss 139B, 139BA]

The late payment penalty consists of an initial late payment penalty of five per cent of the unpaid tax and an incremental late payment penalty of one per cent of the amount outstanding at the end of each subsequent month. The initial late payment penalty is imposed in two parts: a one per cent penalty imposed on the day after the due date; and a further four per cent penalty imposed at the end of the seventh day after the due date if the tax owing remains outstanding at that time [see 1110.40].

If a taxpayer contacts the CIR seeking financial relief before the date outstanding tax is due, the CIR must impose the one per cent initial late payment penalty, but not the four per cent penalty.

If a taxpayer contacts the CIR seeking financial relief on or after the date outstanding tax is due, the CIR must impose the whole of the initial late payment penalty (ie both the one per cent and the four per cent parts), but must not impose an incremental late payment penalty as from the date of request. The incremental late payment penalty will be imposed from the due date until the date the taxpayer requests financial relief.

“Outstanding tax” is defined, for the purposes of the financial relief rules, as tax that is payable before or after a due date [TAA, s 3(1)]. This definition ensures that taxpayers can enter into an instalment arrangement before the tax is actually due.

If the CIR decides not to give financial relief, or the taxpayer does not provide information sought by the CIR or respond to a counter offer within the response period (20 working days), the late payment penalty (both initial and incremental) is imposed as if no request for relief had been made.

When an instalment arrangement is entered into, the incremental late payment penalty is not imposed for any month during which the taxpayer fully complies with their obligations under the arrangement. Failure to meet any monthly payment obligations means that the incremental late payment penalty will be imposed for that month based on the balance outstanding under the instalment arrangement.

Note: The agreed instalment arrangement amount is the minimum amount that is due each month. Payments in excess of the minimum amount are not used as credits against future monthly obligations. Instead, the additional amount will reduce the total debt. Thus, if a taxpayer who is required to pay monthly instalments of $500 pays $700 during a month, the taxpayer is still required to pay $500 in the following month. However, the total debt will be reduced by the additional payment of $200.

If an instalment arrangement is cancelled on the basis of false or misleading information provided by the taxpayer, the CIR must impose those late payment penalties not imposed, as if the instalment arrangement had not been entered into.

Use-of-money interest continues to accumulate on the outstanding debt until it is paid off [see 1110.290 and TIB vol 14:11 (November 2002) at 87-88].

480.60 Proof of debt [TAA, s 177CA]

If a taxpayer has entered into an instalment arrangement with the CIR and the taxpayer becomes bankrupt or, in the case of a company, is in the course of being liquidated, any amount outstanding under the instalment arrangement must be included in the Inland Revenue’s proof of debt.
Chapter 500

Fishing Industry

500.10 Payments to fishing industry employees

People working on fishing boats are assumed to be employees unless they can substantiate a claim to self-employment. The general rules for determining whether a person is an employee or an independent contractor are set out in TIB vol 11:2 (February 1999) at 5-8. These revised interpretation guidelines were issued following the Court of Appeal decision in TNT Worldwide Express (New Zealand) Ltd v Cunningham [1993] 3 NZLR 681, (1993) 15 NZTC 10,234 (CA) in relation to the employment status of courier drivers [see 335.20].

PIB 125 (March 1984) sets out the rules for determining when such a person is self-employed for income tax and ACC purposes. While these were issued prior to the revised general rules, the two are consistent in policy terms. The tests for self-employed status are:

(a) The operation is carried out under a share fishing agreement;
(b) There is no sick leave entitlement;
(c) There is no right to paid leave of any form;
(d) The costs of operating the fishing boat for the trip are deducted from the gross catch; and
(e) The net amount is shared between the:
   (i) Boat owner, from which overhead expenses are met; and
   (ii) Crew (in varying proportions), from which individual costs are met.

Withholding tax at 20 per cent should be deducted from payments made under these agreements.

Where members of a crew receive a regular wage or a regular wage plus a share of profits, tax deductions must be made according to the appropriate tables for salary and wages. The share of profits should be treated as a bonus and included in gross earnings or, if the share is paid annually, treated as an extra pay. Where crew working on oyster boats are paid on the basis of the number of sacks of oysters obtained, the remuneration is subject to tax deductions as wages.

500.20 Repairs to fishing boats [s EJ 2]

A taxpayer carrying on a fishing business in New Zealand may spread expenditure incurred in making repairs or alterations to the hull, equipment, or machinery of any fishing boat as is required by Part 10 of the Maritime Transport Act 1994. To qualify, the fishing boat must be used wholly and exclusively for fishing. “Fishing boat” means a boat that is registered as a fishing boat under Part 4 of the Fisheries Act 1983; and includes a small boat belonging to any boat that is so registered. A “fishing business” means a business of catching or taking fish, including crustaceans and shellfish for the purpose of sale. The taxpayer may allocate the whole or any part of the expenditure to the income year in which the expenditure was incurred or to any one or more of the four succeeding income years.

If the taxpayer ceases to carry on the fishing business before the end of the fourth tax year following the tax year in which the expenditure was incurred, any expenditure not already deducted may be either:

(a) Deducted in the income year in which the person ceases business; or
(b) Allocated equally to the income year in which it was incurred and the following income years during which the person continued to carry on the business.

**TaxNote:** A “tax year” is the year from 1 April to 31 March while an “income year” is the year ending on balance date of a taxpayer who has a non-standard balance date. The reference to the cessation of business refers to a cessation that occurs before the end of the fourth tax year following the tax year in which the expenditure was incurred. The provision, therefore, applies where the business ceases before 31 March, rather than before the taxpayer’s balance date in any particular year.

### 500.30 Aquaculture deduction for capital expenditure [s DO 12]

Taxpayers carrying on an aquaculture business in New Zealand may claim an amortisation deduction on specified capital expenditure at the rates set out in sch 20, Part B to Part F, applied to the “diminished value” of the asset. For the purposes of this provision, “aquaculture business” is fish farming under a licence issued under the Freshwater Farming Regulations 1983 or farming of mussels, rock oysters, scallops and sea-cage salmon.

In order for the deduction to be claimed, all of the following tests must be met in relation to the expenditure:

(a) The expenditure is incurred on making an improvement of a type listed in the schedule;
(b) It is incurred in the 1995-1996 or later income year, but not in the income year in which the person ceases to carry on the business;
(c) It is incurred in developing the business;
(d) It is of benefit to the business in the income year in which the deduction is allowed;
(e) Where the taxpayer owns the improvement, the expenditure is incurred either by the taxpayer or by some other person; and
(f) Where the taxpayer does not own the improvement, the expenditure in incurred by the taxpayer.

The amount of the allowable depreciation deduction for each income year is calculated using the following formula:

\[
\text{Schedule 20 percentage} \times \text{diminished value of the improvement}
\]

Details of the percentages contained in sch 20, Part B to Part F, are as follows:

<table>
<thead>
<tr>
<th>Diminished value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Freshwater Fish Farming — Part B</td>
<td></td>
</tr>
<tr>
<td>(a) Drilling of water bores.</td>
<td>6%</td>
</tr>
<tr>
<td>(b) The draining of land or the excavating of sites for ponds, races or tanks.</td>
<td>6%</td>
</tr>
<tr>
<td>(c) The construction of ponds, races, settling ponds, sluices or tanks of impervious materials to conduct and contain water.</td>
<td>6%</td>
</tr>
<tr>
<td>(d) The supply and installation of pipes for water reticulation.</td>
<td>6%</td>
</tr>
<tr>
<td>(e) The construction of access paths, embankments, service paths, walkways or walls.</td>
<td>6%</td>
</tr>
<tr>
<td>(f) The construction of effluent ponds.</td>
<td>6%</td>
</tr>
<tr>
<td>(g) The supply and installation of baffles or screens for the containing or excluding of fish.</td>
<td>12%</td>
</tr>
<tr>
<td>(h) The construction of fencing on the fish farm.</td>
<td>12%</td>
</tr>
<tr>
<td>Mussel Farming — Part C</td>
<td></td>
</tr>
<tr>
<td>The deduction covers expenditure incurred on:</td>
<td></td>
</tr>
<tr>
<td>(a) The acquisition, preparation, and mooring of pontoons, rafts, or other floating structures for collecting spat.</td>
<td>24%</td>
</tr>
</tbody>
</table>
(b) The acquisition, mooring, and outfitting of moored floating platforms or longlines from which the collected spat is suspended for subsequent growth. 24%

(c) The collecting and depositing of shell or other suitable material on the sea bed to create spatting surfaces. 24%

Rock Oyster Farming — Part D

(a) Acquisition and preparation of spatting sticks. 24%

(b) Construction and erection of posts, rails, or other structures for the holding of spatting sticks during spat catching and maturing. 24%

(c) The construction of fences (including breakwater fences). 24%

Scallop Farming — Part E

(a) The acquisition, preparation, and mooring of floating structures for collecting spat. 24%

(b) The acquisition, mooring, and outfitting of longlines from which the collected spat is suspended for subsequent growth. 24%

Sea-Cage Salmon Farming — Part F

(a) The acquisition, preparation, and mooring of floating structures for securing or protecting cages. 24%

(b) The acquisition, preparation, and placing of equipment or structures for containment of live salmon. 24%

(c) The acquisition and placing of ropes and buoys used in breeding or maturing salmon. 24%

Where an improvement which would otherwise qualify for a deduction under s DO 12 is destroyed or irreparably damaged rendering it useless for the purpose of deriving income, the remaining value of the improvement may be written off. In order to qualify for the deduction, the damage must not have been caused by the action or inaction of the taxpayer, an agent of the taxpayer or an associated person of the taxpayer. The provision applies from the 2005-2006 tax year.

Income equalisation scheme

Taxpayers in the business of fishing, rock oyster farming, mussel farming, or freshwater fish farming can make deposits under the farm income equalisation scheme [see 440 FARMERS INCOME EQUALISATION SCHEME].

Acquisition and conversion of transferable term fishing quota

TIB vol 12:3 (March 2000) sets out the CIR’s interpretation of how the cost of a transferable term fishing quota (“TTQ”) under the ITA 1976 is to be treated for income tax purposes. These quota were introduced under the ITA 1976, and have a term life of 25 years. In summary, the cost of a TTQ is not an allowable deduction as the expenditure is capital in nature. However, as TTQ is depreciable intangible property, an allowable deduction for depreciation arises. The conversion of a TTQ to an individual term quota is not considered to be a disposal for the purpose of the depreciation regime [see TIB vol 12:3 (March 2000) at 8, 250 DEPRECIATION].
Chapter 520
Forestry and Timber

520.05 Overview
The forestry tax regime is based on the concept that a forest is a crop rather than trading stock. The amount derived from the sale of cut timber, less a deduction for the cost of the timber, is subject to tax.

As a forest matures, various planting and maintenance expenses are allowed as deductions. These expenses are not included in the cost of the timber sold.

Dispositions of timber rights are also included in the forestry taxation regime.

520.10 Taxation of timber sales
The proceeds of a disposition of timber, or of a right to take timber, constitute income for tax purposes. This is so whether or not the timber is situated on land owned by the taxpayer. A “right to take timber” is defined as including “an easement or licence or right of taking profits or produce from the land to the extent to which the easement, licence, or right relates to timber”.

Where a taxpayer disposes of land on which there is standing timber, the proceeds of the disposition are taxable to the extent to which they relate to the timber. Excluded from this treatment is standing timber which consists of:

(a) Ornamental or incidental trees;
(b) Trees subject to a forestry right as defined in the Forestry Rights Registration Act 1983; and
(c) Trees subject to a right to take a benefit in the form of a profit à prendre granted before 1 January 1984.

The fact of whether or not trees are incidental or ornamental must be evidenced by a certificate issued by an officer of the Ministry of Forestry or by some other person suitably qualified to give such a certificate.

Where it is necessary to separate the value of the timber from the value of the land, two cases provide some guidance.

In Rusk v Commissioner of Inland Revenue (1986) 8 NZTC 5,128 (HC), Henry J adopted an “added value” approach to the valuation of the land and timber. He held that the correct approach was to value the land first and then to value the timber by reference to the added value which it brings to the land. He considered that this approach was particularly warranted because it was impractical to sell the timber separately from the land. Although the CIR did not appeal this case, it is considered to be limited in application to cases involving the sale of immature timber. In the case of mature timber the valuation method should be adopted. In Tasman Forestry Ltd v Commissioner of Inland Revenue [1999] 3 NZLR 129, (1999) 19 NZTC 15,147 (CA), the Court of Appeal found the cost of land and standing timber distributed in specie during a corporate...
reconstruction can be the value of the cost of the shares in the company from which the land and timber was distributed.

There may be difficulty in determining the actual cost of the timber where the land has been owned for a considerable time. The CIR has stated that, in such cases where the cost is not known, and regardless of the time for which the property has been held, the amount that will be taxable on sale will be the difference between the value of the timber at the time of purchase and the value at the date of sale; this will usually be taken on a royalty basis.

A forestry owner wishing to sell land without losing ownership of the trees can create a forestry right for himself or herself. The creation of such a right does not give rise to a tax liability because the definition of “dispose” (and therefore “disposition”) in s YA 1 specifically excludes a forestry right created for oneself.

Where there is a life tenancy for the income from a stand of timber, such income should be assessed as trustee income. The proceeds of sale are only assessable to the life tenant if the life tenant is entitled in possession to the proceeds in terms of the will.

520.20 Deductible forestry expenditure [ss DP 1, DP 2, DP 3, DP 4]

Some specific deductibility rules apply to a taxpayer who is carrying on a forestry business on land in New Zealand. The definition of “forestry business” includes permanent forest sink initiative forests established under the emissions trading scheme.

The following expenditures incurred by a taxpayer carrying on a forestry business on land in New Zealand are deductible:

(a) Rent, rates, insurance premiums, administrative overheads, or other like expenses;
(b) Weed, pest or disease control, or fertiliser application after planting;
(c) Planting or maintaining trees on the land;
(d) Interest on money borrowed and employed as capital for the purposes of that business;
(e) Repair or maintenance of plant, machinery, or equipment used mainly in planting or maintaining the trees or in preparing or otherwise developing the land for forestry operations;
(f) Repair or maintenance of land improvements (other than trees) which are used mainly in a forestry business;
(g) The construction to or on the land of access tracks that are constructed for a specific operational purpose and are used for no longer than 12 months after construction; and
(h) The cost of standing timber that is lost or destroyed.

The remaining value of any improvement that is destroyed or irreparably damaged rendering it useless for the purpose of deriving income can be written-off under certain circumstances. The circumstances are that:

(a) The damage does not result from the action or failure to act of the taxpayer, the taxpayer’s agent or an associated person of the taxpayer; and
(b) The taxpayer would otherwise have been allowed a deduction in respect of that improvement under s DP 3. The provision has application for the 2005-2006 and subsequent income years [s DP 4].

Any expenditure which is recouped by way of insurance or otherwise is required to be included in income in the income year in which it is recouped.

Section DP 2 provides a deduction for depreciation of plant or machinery acquired and used after 1 April 1975 where that plant or machinery is used primarily and principally in planting or maintaining trees on land in New Zealand on which the person carries on a forestry business or in preparing or developing land for forestry operations.

Any expenditure which is allowable as a deduction is not to be included in the cost of timber [see 520.30].
520.30 **Deduction for cost of timber expenditure** [s DP 10, DP 11]

The “cost of timber” determines the amount of the deduction that is available at the time at which the timber is sold.

First, what is timber? It is defined for the purposes of s DP 11 as including:

(a) The creation or grant of a right to take timber;
(b) The grant of a licence or easement in relation to timber;
(c) The creation of a “forestry right”, other than a right in favour of the proprietor, in relation to establishing, maintaining and harvesting timber.

“Forestry right” is defined in the Forestry Rights Registration Act 1983.

The “cost of timber” means the amount of expenditure incurred in relation to timber at the following time:

(a) Before harvest where harvested timber is being disposed of; and
(b) Before disposal of the timber or of a right referred to in the definition of “timber”.

It includes, for the purposes of s DP 11, expenditure on planning, planting and growing timber.

The following amounts are not included in “cost of timber”:

(a) Deductible expenditure;
(b) Expenditure incurred in avoiding, remedying, or mitigating the effects of a discharge of contaminants to which s DB 46 applies; and
(c) Expenditure which is deductible under s DQ 4 as a transfer to an environmental restoration account.

The amount of the deduction for the “cost of timber” which is available at the time at which the timber is sold varies according to the circumstances.

The cost of timber does include the cost of acquiring an existing forest or forestry right. If the forest or right was acquired by way of an acquisition of land on which there was standing timber, the purchaser’s cost of timber is the amount that was income of the vendor.

Where the forest or forestry right was trading stock of the vendor and was sold together with other assets, the purchaser’s “cost of timber” is the amount determined under s EB 24 [see 1400.70].

Where the forest or forestry right was acquired under a relationship agreement, the purchaser’s “cost of timber” is the amount determined under ss FB 6 and FB 7. These sections provide that the transferee is treated as having acquired the forest or forestry right from the transferor for consideration equal to the transferor’s costs. That amount is treated as income to the transferor and a cost of acquisition to the transferee.

Where the forest or forestry right was acquired for nil or inadequate consideration, the purchaser’s “cost of timber” is the amount determined under s GC 2 [see 880.95].

Where a forest or forestry right was acquired by way of a shareholder distribution from a company, the shareholder’s “cost of timber” is market value under ss FC 1 and FC 2.

Where a forest or forestry right was acquired from an associated person, s DP 10 limits the vendor’s cost of timber deduction to the amount of the income derived on the sale. The purchaser’s cost of timber then becomes the sum of the amount paid to the associated person for the acquisition plus the amount (if any) for which the vendor was denied a deduction.

**Example:**

Alex and Bob are associated persons. Alex purchases a forest for $3 million. Ten years later Alex sells the forest to Bob for $2 million. Alex’s cost of timber deduction is limited to $2 million, being the amount for which the forest was sold to Bob resulting in Alex having neither a profit nor a loss. Bob’s cost of timber is $3 million made up of the $2 million paid to Alex plus the $1 million for which Alex was denied a deduction.

The cost of timber is not necessarily limited to the actual amount paid for the timber or forestry right. It may also include some historic costs. Prior to the 1991-1992 income year, the costs of planting and maintaining
trees were carried forward and allowed as a deduction only when the timber was sold. For some taxpayers there may still be such expenditure being held in the cost of timber account.

A cost of timber account may be maintained on a stand by stand, annual planting or total forest basis. Where not all of the timber to which a cost of timber account relates is felled in one income year, the costs will need to be spread between the timber felled and the timber that remains standing. This generally is done on an area basis.

The timing of the deduction for the cost of timber depends on whether the forest is held as trading stock or as revenue account property. If it is held as trading stock, the deduction is allowed in the income year in which it first becomes trading stock of the taxpayer. Closing stock at year end is required to be brought to account under the trading stock rules. If it is held as revenue account property, the deduction is allowed in the year of sale.

**520.40 Expenditure on forestry land improvements [ss DP 3, DP 4, DZ 18]**

Certain items of capital expenditure are able to be amortised for tax purposes on an annual percentage basis. The deduction is equal to the percentage specified in sch 20, Part G (listed below) of the amount of the diminished value of the expenditure. “Diminished value” means the amount of expenditure reduced by:

(a) The total deductions allowed in any preceding year for that expenditure; and
(b) Any deduction for that expenditure allowed in the current income year under any other section.

(1) **Land owned by taxpayer**

The taxpayer is entitled to an amortisation deduction for expenditure of any of the kinds listed below incurred personally or by any other taxpayer in developing that land and which is of benefit to the business in that income year. The inclusion of expenditure incurred by another taxpayer enables the claiming of unexpired expenditure incurred by a previous owner of the land. The taxpayer claiming the deduction must carry on forestry business on that land.

(2) **Land not owned by taxpayer**

The taxpayer is entitled to an amortisation deduction for expenditure of any of the kinds listed below, incurred by the taxpayer in developing that land and which is of benefit to the business in that income year. The taxpayer claiming the deduction must carry on forestry business on that land.

No deductions are allowed under this provision for expenditure incurred in the income year in which the taxpayer disposes if the land. The deductions are not recoverable where improvements are sold for more than book value. The following rates [see sch 20, Part G] apply to expenditure incurred from the 1995-1996 income years:

<table>
<thead>
<tr>
<th>Expenditure — Part G</th>
<th>Diminished value allowed as deduction</th>
</tr>
</thead>
<tbody>
<tr>
<td>The felling, clearing, destruction, or removal of timber, stumps, scrub, or undergrowth on the land in the preparation of the land for the planting of trees on that land.</td>
<td>6%</td>
</tr>
<tr>
<td>The eradication or extermination, to enable the planting of trees on the land, of animal or vegetable pests on the land.</td>
<td>6%</td>
</tr>
<tr>
<td>The destruction, to enable the planting of trees on the land, of weeds or plants detrimental to the land.</td>
<td>6%</td>
</tr>
<tr>
<td>The draining of swamp or low-lying lands in the preparation of the land for the planting of trees on the land.</td>
<td>6%</td>
</tr>
<tr>
<td>The construction of roads to or on the land, being roads which are formed and wholly or substantially metalled or sealed, and any culverts or bridges that are necessary for the purposes of that construction.</td>
<td>6%</td>
</tr>
</tbody>
</table>
**Expenditure — Part G**

<table>
<thead>
<tr>
<th>Diminished value allowed as deduction</th>
<th>24%</th>
</tr>
</thead>
<tbody>
<tr>
<td>The construction of roads to or on the land (including any culverts or bridges that are necessary for the purposes of that construction), being roads which are formed and partially metalled or sealed; or roads which are not metalled or sealed, and not being access tracks for which a deduction may be claimed under s DP 1(1)(h).</td>
<td>24%</td>
</tr>
<tr>
<td>The construction of dams, stopbanks, irrigation or stream diversion channels, or other improvements for the purpose of conserving or conveying water for use on the land or for preventing or combating soil erosion.</td>
<td>6%</td>
</tr>
<tr>
<td>The repair of flood or erosion damage.</td>
<td>6%</td>
</tr>
<tr>
<td>The sinking of bores or wells for the purpose of supplying water for use on the land.</td>
<td>6%</td>
</tr>
<tr>
<td>The construction of aeroplane landing strips to facilitate aerial top-dressing or disease control work for firefighting on the land.</td>
<td>6%</td>
</tr>
<tr>
<td>The construction on the land of fences, including the purchase of wire or wire netting for the purpose of making new or existing fences rabbit proof.</td>
<td>12%</td>
</tr>
<tr>
<td>The erection on the land of electric power lines or telephone lines.</td>
<td>12%</td>
</tr>
</tbody>
</table>

For expenditure incurred before the 1995-1996 income year, the rates are the base rates increased by 25 per cent, rather than the 20 per cent increase which applies to expenditure incurred from the 1995-1996 income year (as outlined above). This means that the five per cent rate is increased to 6.3 per cent (rather than six per cent), the 10 per cent rate to 12.5 per cent (rather than 12 per cent), and the 20 per cent rate to 25 per cent (rather than 24 per cent).

Where any s DP 4 improvement is destroyed or irreparably damaged, rendering it useless for the purposes of deriving income, the remaining value of the improvement is able to be written-off provided that the taxpayer would otherwise have been entitled to a deduction under s DP 3 in respect of that asset in that income year. The damage must not have been caused by the action or inaction of the taxpayer, an agent of the taxpayer or an associated person of the taxpayer [s DP 4].

### 520.50 Joint venture of holding company, Maori owners, and the Crown

[ss CW 1, CW 3, DP 9]

Special provisions apply where a forestry business is carried on by a forestry company as a joint venture by the Crown, Maori owners, and a holding company.

Interest payable under any debentures issued by the forestry company for unpaid purchase money for land purchased from any of the partners in the joint venture, or for money lent to it by a holding company for development purposes, is exempt from income tax. Interest payable under any debentures issued by a Maori investment company (ie a company holding on behalf of Maori owners shares or debentures issued by the forestry company) is similarly exempt from income tax provided that it is capitalised by way of the issue of further debentures. Where such interest is exempt, no deduction is allowable to the forestry company or Maori investment company for that interest.

A sale to the forestry company by any of the partners in the joint venture of land together with any standing timber thereon is deemed not to be a sale of the timber. The cost of the timber to the forestry company is not to exceed the cost of the timber to the person by whom the land was sold to the company.

“Forestry company” means a company that is incorporated under an agreement between the Crown, the Maori owners, and a holding company of the company for the purposes of buying land partly from the Crown, partly from the Maori owners and partly from a holding company of the forestry company and carrying on a forestry business on that land.
520.51  **Treaty of Waitangi claim settlements** [ss CW 1B, DP 9B, DP 11]

Special rules apply where a person’s right to take timber is extinguished and new rights to take timber are granted in their place. In order for the special rules to apply, the following conditions must be satisfied:

(a)  The sole reason for the replacement is to facilitate a Treaty of Waitangi claim settlement process; and

(b)  The rights and obligations of the new rights are equivalent to the old rights, other than for differences that are solely to facilitate the settlement.

Where these conditions are met, any income that would otherwise arise from the disposal of the old right is exempt income. However, the exemption does not extend to any amount paid to the person as compensation for accepting the new right in exchange for the old.

The new rights are deemed to have been acquired for a cost equal to the expenditure which was incurred on the old right. This applies only in so far as that expenditure relates to the land covered by the new right and to the extent to which it has not previously been allowed as a deduction. Where the person is entitled to the exempt income treatment, the deemed cost of the new right does not give rise to any deduction under the cost of timber rules.

520.55  **Deceased estates** [s FC 6]

Where timber, standing timber or a right to take timber is transferred on the death of the owner to a “close relative”, the transfer is treated as a settlement of relationship property for the purposes of Subpart FB [see 960.90]. The treatment applies not only to a direct transfer, but also to a transfer on death to the executor, administrator or trustee and the subsequent transfer to the beneficiary.

A “close relative” is a surviving spouse or a person within the second degree of relationship to the deceased.

520.60  **Spreading of forestry income** [ss EI 1, EJ 1]

The income from the sale or other disposition of timber or the right to take timber can be spread at the option of the taxpayer over the income year of derivation and up to three preceding income years.

A written application must be made to the CIR not later than one year following the end of income year of derivation. The taxpayer may specify the amount of income that is to be allocated to each income year.

Where the taxpayer elects to use the income spreading provision, deductions for the cost of timber must also be allocated to each of the relevant income years on the same proportional basis.

520.70  **Forestry income equalisation scheme**

New Zealand forestry companies may deposit in a special income equalisation scheme reserve account the proceeds from thinning operations [see 440.65].
Chapter 530

Franchises, Licences and Trade Ties

530.10 Franchises and licences

Whether amounts derived from the sale of franchises and licences are assessable or deductible is a question of fact.

In Commissioner of Taxation v Merv Brown Pty Ltd (1985) 16 ATR 218, 85 ATC 4,080 (FCA), the sale of rights by a clothing wholesaler to share in base import quotas (comprising three per cent of its total entitlements) was a capital sum, because it was a sale of an essential part of the taxpayer’s income earning mechanism.

In Trailways Motel Systems of New Zealand Ltd v Commissioner of Inland Revenue (1976) 2 NZTC 61,097 (SC), money received from sales of franchises was held assessable as sales of “know-how” derived as part of the business carried on by the franchise vendor. The franchisee gained an entitlement to establish a motel in a specified area using a licensed trade name and, in return, the vendor agreed to subscribe for shares in a company established by the franchisee.

In Kwikspan Purlin System Pty Ltd v Commissioner of Taxation (1984) 15 ATR 531, 84 ATC 4,282 (QSC), the taxpayer sold the exclusive right to use an invention to several companies in a certain specified area. The lump sum payment received for each sale was held to be a capital receipt upon realisation of an asset.

In TRA Case S71 (1996) 17 NZTC 7,441, the purchaser of a mobile video library franchise was able to deduct a portion of the franchise fee relating to an all-weather-uniform and stationery.

(1) Lotto franchise

The retailer with a lotto sales outlet must pay to the New Zealand Lotteries Commission a franchise fee, and also pays ongoing expenditure such as line hire charges, terminal maintenance service charges, and entry coupon and sales ticket costs. The franchise fee is a capital expense and not deductible to the retailer. The ongoing expenditure is revenue related and deductible.

530.20 Trade ties

(1) Inducement payments paid by oil companies to petrol retailers

The deregulation of the oil industry has resulted in an increase in trade-tie agreements between oil companies and petrol retailers. Each agreement is considered on its own merits. The following is generally the income tax position:

(a) Regular cash payments: income.
(b) Regular credits or rebates: income.
(c) Single lump-sum payment: may not be income, depending on the facts.
(d) Payments either to the retailer or a third party for improvements or extensions to retailer’s premises: not income.
(e) Agency rights: not income.

(2) Development allowance paid to petrol station owners

In BP Australia Ltd v Federal Commissioner of Taxation [1966] AC 224, (1965) 112 CLR 386, (1965) 9 AITR 615 (PC), the appellant company, in order to counter a similar move by one of its competitors, joined with three other oil companies to secure filling stations where their products might in common be resold to
the public, and through this arrangement the appellant agreed to pay a “development allowance” as part of the consideration for the undertaking by the proprietor of the service station to deal exclusively, for a specified number of years, in the brands of motor spirit approved by the appellant. The gallonage factor was a matter for consideration in deciding what sum should be the maximum amount paid in a particular case, but it was not the determining factor.

The Privy Council, on appeal from the majority judgment of the High Court of Australia, held:

(a) The guiding features to be considered in this class of case were:

(i) The character of the advantage sought, ie how long it would last, the question of recurrence and the nature of the need for expenditure;
(ii) The manner in which the advantage was to be used;
(iii) The means adopted to obtain the advantage; and

(b) The advantage sought by the expenditure was to promote sales and orders by up-to-date marketing methods, and orders were obtained in the circumstances only from tied retailers;

(c) The agreements with the retailers were part of the appellant company’s ordinary selling process; and

(d) The expenditure was of a revenue nature, and was therefore allowable.

In Maney and Sons De Luxe Service Station Ltd v Commissioner of Inland Revenue [1967] NZLR 41 (SC), where quarterly payments receivable for an exclusive “trade tie” to a particular oil product were assessable income. The reasons include:

(a) The payments were small and regular and not a substantial sum agreed in advance;
(b) The tie period was not substantial;
(c) No goodwill loss was suffered;
(d) There had been no calculation of any capitalisation of lost profits over the relevant period; and
(e) Payments were not used for capital improvements to property.

In Birkdale Service Station Ltd v Commissioner of Inland Revenue (1999) 19 NZTC 15,493 (HC), the High Court found that payments made to retail petrol station operators as trade-tie arrangements that anticipated and secured compliance with petrol supply agreements were income in nature. The Court found that the payments were made to enable the retailers to carry out their business under an arrangement that best suited them, and was not made under a restraint of trade arrangement. The amounts were therefore required to be included in gross income. The taxpayer’s appeal to the Court of Appeal was unsuccessful: Birkdale Service Station Ltd v Commissioner of Inland Revenue [2001] 1 NZLR 293, (2000) 19 NZTC 15,981 (CA).

Fringe Benefit Tax

540.10  **Imposition of fringe benefit tax** [ss RA 5, RD 26]

Fringe benefit tax (FBT) in New Zealand is not governed by its own statute, but is dealt with under the Income Tax Act 2007. This is in contrast to the Australian fringe benefits tax, which has its own legislative basis (The Fringe Benefits Tax Act 1986 and The Fringe Benefits Tax Assessment Act 1986). Despite the difference in legislative approach, New Zealand’s FBT has many features in common with its Australian counterpart. Australia’s FBT was introduced on 1 July 1986, only 15 months after New Zealand’s (1 April 1985), and many of the similarities are the result of mutual consultation and common design objectives.

The legislation provides that an employer who provides a fringe benefit to an employee must pay FBT in accordance with the “FBT rules” [ss RD 25, RD 26]. The FBT rules are defined in s RD 25, as ss CX 2 to CX 38, GA 2, GB 31, GB 32, RD 26 to RD 63, sch 1 (part C), sch 5 of the ITA; and ss 46B to 46E, 93, Part 7 and 139B of the TAA.

Under the FBT rules, an employer who provides or grants a fringe benefit to an employee is liable to pay FBT [s RD 26]. The liability for FBT is imposed on employers rather than employees for two main reasons:

(a)  The Government hopes that by imposing the liability on employers, they will be discouraged from providing non-cash benefits; and

(b)  Because it is administratively more efficient to collect the tax from employers than from each individual employee.

The flowchart below illustrates when a particular benefit is subject to FBT. It is a general approach only and must be used in conjunction with the legislation.

540.15  **Meaning of fringe benefit** [ss CX 2, CX 6, CX 9, CX 10, CX 12, CX 13, CX 14, CX 15, CX 16, CX 37]

A fringe benefit is a benefit provided by an employer to an employee, in connection with their employment, that consists of:

(a)  The making available of a motor vehicle to an employee for their private use, whether the vehicle is owned, leased or rented by the person who makes it available [s CX 6(1)].
Fringe Benefit Tax

(b) Subsidised transport [s CX 9].

c) A loan provided by an employer to an employee [s CX 10(1)]. However, a FBT liability will arise only if the rate of interest on the loan is less that the “prescribed” rate.

d) Travel, accommodation, attendances and communications services provided to members of Parliament, where the services are exempt income under s CW 31 [s CX 12].

e) A non-monetary contribution by an employer to a superannuation scheme for the benefit of an employee [s CX 13]. Monetary contributions are subject to specified superannuation contribution withholding tax [see 540.105].

(f) A contribution by an employer to a sickness, accident or death benefit fund for the benefit of an employee [s CX 14].

g) A contribution by an employer to a funeral trust [s CX 15].

(h) A payment by an employer of a specified insurance premium, or a contribution by an employer to the insurance fund of a friendly society, for the benefit of an employee [s CX 16].

(i) An unclassified benefit [ss CX 2(1)(b)(ii), CX 37]. This includes free, subsidised or discounted goods and services.

In each case, in order to constitute a fringe benefit, the benefit must have been provided to the employee in connection with their employment. The above benefits are explained in more detail in subsequent paragraphs.

Inland Revenue’s policy is that the mere availability for private use or enjoyment of any employee benefit (other than a motor vehicle) will not constitute a fringe benefit subject to FBT. A benefit which is not a motor vehicle and is provided by the employer will only be a fringe benefit if the employee has actually used, enjoyed, or received the benefit in relation to, in the course of, or by virtue of the employee’s employment [see TIB vol 6:10 (March 1995) at 3].

**Example:**

A television rental company makes television sets and video recorders available to its employees for their private use. FBT is only payable on any day on which an employee takes the equipment home and uses it privately. The value of the fringe benefit is based on the market value of the benefit (ie the amount the company would have charged a customer for that use).

**540.20 Employment relationship [s CX 2]**

The liability to pay FBT is dependent on the existence of an employment relationship. A benefit is not a fringe benefit for FBT purposes unless it is provided by an employer (or, by another person under an arrangement with the employer) to an employee “in connection with their employment”.

**Example 1:**

Jim works full-time in his father’s motorcycle repair shop. His father, who operates his business as a sole trader, gives Jim a motorbike for his 21st birthday. Although Jim is an employee of his father, no FBT liability arises because the gift was not given to Jim by virtue of the employment relationship but rather out of natural love and affection for a family member. If Jim’s father operated his business as a company, instead of as a sole trader, the provision of the free motorbike to Jim would still not be subject to FBT. However, it would constitute a dividend because company property is distributed for less than market value to an associated person of a shareholder.

**Example 2:**

Jim purchases a set of motorcycle leathers from his father’s business at 20 per cent below cost. The same discount is available to all employees. In this case an FBT liability arises because the benefit was provided because of the employment relationship.

**Note:** In addition to fringe benefits provided by employers directly to current employees, the following are also subject to FBT:

(a) Fringe benefits provided to employees who have not yet commenced working for the employer;

(b) Fringe benefits provided to former employees;

(c) Fringe benefits provided to associated persons of employees [see 540.35];
Fringe Benefit Tax

(d) Fringe benefits provided to employees by third parties with whom the employer has entered into an arrangement [see 540.45]; and
(e) In the case of subsidised transport, fringe benefits provided to employees by a company in the same group of companies as the employer [see 540.125].

540.25 Meaning of employee [s YA 1]

An “employee” is a person who is entitled to receive PAYE income payment [s YA 1]. A fringe benefit arises even if the employment relationship does not exist at the time the employee receives the benefit [s CX 2(3)].

Example:
A fringe benefit is provided by an employer to a former employee (e.g., goods sold at less than cost). Where the benefit was provided because of the past employment relationship, it will be subject to FBT.

A “PAYE income payment” is a payment of salary or wages, an extra pay, or a schedular payment [s RD 3, see 1080.10]. Individuals who receive only the following kinds of PAYE income payments are not employees for FBT purposes:

(a) Accident compensation earnings-related payments;
(b) Deductible payments made by partnerships to working partners under s DC 4;
(c) Payments of income-tested benefits, veteran’s pensions, New Zealand superannuation, or living alone payments;
(d) Basic grants and independent circumstances grants made under the Education Act 1989;
(e) Parental leave payments; or
(f) Schedular payments referred to in sch 4, parts A (payments to non-resident contractors) and I (personal service rehabilitation payments) for which the person is liable for income tax under s BB 1 [see paragraph (c) of the definition of “employee” in s YA 1].

In Roma Properties Ltd v Commissioner of Inland Revenue (1998) 18 NZTC 13,903 (CA), the company sold off land and advanced the proceeds as loans to its directors, just before FBT was put into place. The company loans to the directors were recorded in their current accounts. The shareholders and directors changed their status in the company and became managers of the newly-configured company. They continued to have the same duties as before. The Court of Appeal held that the shareholders of a company had passed competent resolutions to pay directors’ fees, and the directors must be taken to have performed their services and provided consideration for payment of directors’ remuneration. The directors were therefore employees for FBT purposes.

540.30 Meaning of employer [s YA 1]

An employer is a person who pays or is liable to pay a PAYE income payment. The following are specifically included in the definition of employer:

(a) The manager or other principal officer of an unincorporated body of persons (other than a partnership);
(b) Each partner in a partnership;
(c) Each person in whom property has become vested or to whom the control of the property has passed in the case of a deceased person, a trust, a company in liquidation or an assigned estate, or where property is vested or controlled in a fiduciary capacity; and
(d) The Crown (including Government departments and local authorities).

A person who only pays PAYE income payments of the types listed as exclusions in 540.25 is not an employer for FBT purposes.
540.35 Fringe benefits for associated persons [ss CX 2(5), CX 18, GB 32, subpart YB]

If an employer provides a fringe benefit to a person who is associated with an employee (such as a spouse [see 960.10] or child), the benefit is taxed in the same way as if it had been provided directly to the employee. This applies whether the benefit is provided by the employer directly or by another person under an arrangement with the employer [ss GB 32, subpart YB].

The most likely situation in which an “associated person” [see 70.20] will receive a fringe benefit is when one is provided to a “relative” [see 70.45] of an employee. For income tax purposes, a “person” includes a company and a partnership, as well as an individual.

If a fringe benefit is provided to a person who is associated both with an employee and with a shareholder, the benefit is deemed to be a fringe benefit subject to FBT if the following conditions are met:

(a) The employer is a company;
(b) The associated person is not a company;
(c) The associated person is not an employee or a shareholder of the company; and
(d) The benefit would be a dividend if provided to a shareholder [ss CX 18, GB 32(4)].

This provision is intended to overcome the uncertainty which arises when a non-cash benefit is provided by a company to a person who is associated with two or more persons, one of whom is an employee and the other a shareholder. An associated person is not deemed to be an employee for the purpose of calculating FBT on attributed and non-attributed fringe benefits [see 540.300 and 540.315].

An FBT liability does not arise when a company provides a benefit to an associated person of a shareholder-employee if:

(a) The associated person is a company; and
(b) The benefit is not provided under an arrangement intended to provide the benefit in place of employment income or free from FBT [s GB 32(2)].

540.45 Fringe benefits from third parties [ss CX 2(2), YA 1]

If an employer enters into an arrangement under which a third person provides a benefit to an employee, the benefit is taxed in the same way as if the employer had provided it directly to the employee [s CX 2(2)]. The employer (and not the person actually providing the benefit) is thus liable for FBT on the benefit.

Bulk discounts arranged for employees by employers through unrelated third parties are exempt from FBT [s CX 33, see 540.200, 540.255].

An “arrangement” is a contract, agreement, plan or understanding (whether enforceable or not), including all steps and transactions by which it is carried into effect [s YA 1]. Inland Revenue considers that an arrangement for the provision of a benefit to an employee by a third party exists where:

(a) Consideration passes from the employer to the third party for a benefit;
(b) The employer requests, instructs or directs the third party to provide a benefit;
(c) There is negotiation or discussion between the employer and the third party which (explicitly or implicitly) involves the threat or suggestion that the employer would withhold business or other benefits from the third party unless a benefit is provided to the employees; or
(d) The third party and the employer are associated parties, and there is a group policy (whether formal or informal) or any other agreement between the associated parties, that employees of the group will be entitled to receive benefits from the other companies in the group.

An arrangement for the provision of a benefit to employees will not exist if the employer has merely facilitated contact between its employees and a third party to enable a benefit to be offered or discussed [see Public ruling BR Pub 09/07, TIB vol 21:7 (September 2009) at 7-21; the ruling applies from the start of the 2008-2009 income year to the end of the 2013-2014 income year].
Example 1:
An employee works for a company. She obtains a personal credit card and joins its associated points reward scheme. Under that scheme she can accumulate points as goods and services are charged on the credit card. After the employee accumulates 10,000 points, she can transfer those points, at her option, to any one of a number of airlines’ frequent flyer schemes affiliated to the credit card company’s points reward scheme. Once she accumulates a specified number of points on the airline frequent flyer scheme, she can exchange them for free or discounted travel.

In the course of her work, the employee incurs a number of employment-related charges on the credit card as well as private expenditure. The employee accumulates points on the credit card points reward scheme for both types of expenditure. She soon reaches the specified threshold of points, and transfers them to a particular airline’s frequent flyer scheme, exchanging them for a free trip to Fiji.

Section CX 2(2) will not apply. The company does not have an FBT liability. The receipt of the points under the credit card company’s points reward scheme is because of the contractual arrangement between the credit card company and the employee. No arrangement exists between the employer and the credit card company to provide the employee with entitlements under its points reward scheme or the associated airline’s frequent flyer scheme. It does not matter that some of the points that give the entitlement result from employment-related expenditure.

Example 2:
DFG, a travel agent, employs a number of staff, and enters into a scheme with YTR, an airline, to strengthen their relationship. The scheme involves YTR agreeing to give a certain number of free domestic flights per year to employees of DFG who excel in promoting and selling YTR flights. In return, DFG agrees to have their employees promote YTR flights, and convert flights to YTR wherever possible. To determine which employees are entitled to free flights, DFG awards its staff with points for outstanding customer service. Once a staff member has accumulated the required number of points, they are entitled to a free flight from YTR. There is no cost to DFG for those flights.

Here, s CX 2(2) will apply. There is an “arrangement” between the parties, as the course of action agreed to between DFG and YTR involves the provision of a benefit to employees. One of the main purposes of DFG in entering into the arrangement is to provide the staff with free flights. Although DFG has another significant purpose in entering into the arrangement, which is to strengthen their relationship, the purpose of providing a benefit to employees is not incidental to that purpose. Therefore, FBT will be payable by DFG on the value of the flights.

540.50 Fringe benefits provided to shareholder-employees [ss CX 17(1), (3), CD 20(4)]

Where a company provides a benefit to an employee who holds shares in the company, the benefit is deemed to have been provided in connection with that person’s employment rather than in their capacity as a shareholder. This applies whether the employee holds the shares in his or her own right, or beneficially on behalf of someone else. The benefit is taxed as if the employee had received it directly in relation to their employment.

A benefit provided by a group investment fund [see 620 GROUP INVESTMENT FUNDS] to an employee who holds an interest as an investor in the fund is also treated as a fringe benefit [s CX 17(1)]. This provision does not apply to a non-cash benefit provided to a shareholder who is a non-executive director [s CX 17(3)]. A non-executive director is a person whose only services to the company as an employee are the formal occupation of the role of director and compliance with the associated statutory obligations [s CD 20(4)].

Example:
A company provides a non-executive director shareholder with a motor vehicle that is available for her private use. The benefit is treated as a taxable non-cash dividend and not as a fringe benefit.

The following table summarises the tax treatment of non-cash benefits provided to various categories of shareholders and employees of companies:

Fringe benefits provided to employees who have shares in qualifying companies are subject to FBT whether or not they are derived by the shareholders in their capacity as shareholders. Both the fringe benefit and the FBT are deductible in these circumstances.

Non-monetary benefits provided to non-employee shareholders of qualifying companies are deemed to be non-cash dividends and not fringe benefits. A non-cash dividend (except for a taxable bonus issue) from a qualifying company is exempt because imputation credits and DWP credits cannot be attached to such dividends [ss HA 14 to HA 16]. In either case, as a dividend it is not a deductible expense.

540.55 Election regarding benefits provided to shareholder-employees
[ss CD 20, CX 17(2)-(5)]

A company or a trustee of a group investment fund that has provided a non-cash benefit to an employee who holds shares in the company, or who is an investor in the fund, may choose to treat the benefit as either a fringe benefit or a dividend if the benefit would:

(a) In the absence of s CD 32 (which excludes fringe benefits that are subject to FBT from being dividends), be a dividend under s CD 4 if provided to a person in their capacity as a shareholder; and

(b) In the absence of s CX 4 (which excludes employment-related benefits that are assessable income from being fringe benefits), be an unclassified benefit if provided to a person in their capacity as an employee [s CX 17(2), (4)].

Note: Before the start of the 2008-2009 income year, only one of the above conditions, (a) or (b), had to be satisfied in order for an election to be made. A transitional provision enables a person who took a tax position based on the previous version of s CX 17(4) in the period from 1 April 2008 to 7 September 2010 (the date of Royal assent of the amendment Act) in a return filed before 7 September 2010 to make an election on that basis.

If the company or trustee does not make an election, the benefit is treated as a fringe benefit. If the company or trustee chooses to treat the benefit as a dividend, the FBT rules do not apply.

The election must be in writing and must be delivered to Inland Revenue within the time allowed for filing a FBT return for the period in which the benefit was provided [see 540.325].

A non-cash benefit provided by a company to a non-executive director of the company is treated as a dividend in all cases [see 540.50].

540.60 Motor vehicles [ss CX 6, CX 7, CX 36, YA 1]

A fringe benefit arises when a motor vehicle is made available to an employee for their private use [s CX 6]. This applies whether the person making the vehicle available owns, leases or rents the vehicle, or has a right to use the vehicle under an agreement or arrangement with the employee or a person associated with the employee. The person making the vehicle available may be either the employer or a person with whom the employer has made an arrangement for the benefit to be so provided [s CX 2(2)].

The availability for use or enjoyment of a motor vehicle per se is not a fringe benefit. A fringe benefit only arises if the employer makes the motor vehicle available for use by the employee for private purposes.

“Motor vehicle” is defined as a vehicle drawn or propelled by mechanical power, including a trailer [s 2(1) Land Transport Act 1998]. The definition excludes certain specialised types of vehicle. For FBT purposes, a vehicle with a gross laden weight exceeding 3,500 kg is not a motor vehicle [s YA 1]. “Private use” of a motor vehicle by an employee includes travel in the vehicle to and from work, and any other travel that confers a private benefit on the employee [s CX 36].
(1) Case law

In *TRA Case S26* (1995) 17 NZTC 7,182, the TRA found that it would be “quite unjust to suggest that a company should pay FBT on the basis of a vehicle being available to shareholder-employees when they were permitted to use the vehicle for work purposes only, and complied with that direction, and owned and used their own vehicle for all private motoring”. The company vehicle concerned was a Chevrolet hatchback.

In *Commissioner of Inland Revenue v Schick* (1998) 18 NZTC 13,738 (HC) the use of utilities and a van to transport employees of an earthmoving business between their homes and their place of work was held not to constitute a fringe benefit because the homes were essentially a base of work. The employees were expected to maintain contact with clients and carry out necessary bookwork from home. They travelled directly from their homes to their place of work each day; there was no requirement for them to first go to the main depot. The vehicles were provided to enable the employees to service and operate earthmoving equipment in remote rural areas.

In *Commissioner of Inland Revenue v Yes Accounting Services Ltd* (1999) 19 NZTC 15,296 (HC), the meaning of “availability for private use” in s CX 6(1) was clarified. The respondent company owned a car which was used only for business purposes but was garaged at the home of a shareholder-employee for security reasons. The CIR contended that because the vehicle was garaged at the shareholder-employee’s home, it was available for private use even if it was not, in fact, used for private purposes. The Court held that the wording of the legislation means that a vehicle is only available for private use if that availability is with the permission of the proprietor of the vehicle. In this case the company had written to the shareholder-employee and instructed him that the vehicle was not available for private use. A logbook showed that the vehicle was dedicated to business use. The vehicle was therefore not available for private use within the terms of the legislation. The Court noted that it would have been preferable if the directors of the company had passed a directors’ resolution prohibiting private use of the vehicle and if the shareholder-employees, in their capacity as employees, had acknowledged and agreed in writing to be bound by that direction.

(2) Vehicles leased from employees [s CX 7]

If an employer and an employee enter into an agreement or arrangement transferring the right to use a motor vehicle to the employer (typically, an arrangement under which a shareholder-employee leases a vehicle to a company), the employer is treated as having a right to use the motor vehicle for any period during which the employee:

(a) Uses the vehicle privately, or
(b) Has a right to use the vehicle privately.

The effect of this rule is to eliminate the use of “nine-to-five” and “flip-flop” leases as a means of avoiding liability for FBT [see 540.115]. Section CX 7 achieves this result by treating the period of private use as a period during which a fringe benefit is provided. This provision also applies if an associated person of the employer and/or an associated person of the employee enter into the agreement or arrangement.

540.65 Calculating the value of motor vehicle fringe benefit [ss RD 28, RD 29, RD 30, sch 5]

The value of a motor vehicle fringe benefit depends on whether the employer pays FBT on a:

(a) Quarterly basis;
(b) Annual basis; or
(c) Income year basis [s RD 29].

(1) FBT paid on a quarterly basis

When FBT is paid quarterly, the value of a motor vehicle fringe benefit is calculated using the formula:

\[
\frac{\text{days} \times \text{Schedule 5 amount}}{90}
\]

Where:
“Days” is the number of days in the quarter on which the motor vehicle is made available for private use, reduced by the number of days on which the vehicle was a work-related vehicle (“days” may not exceed 90) [see below];

“Schedule 5 amount” is the value of the benefit that would have been received for unlimited private use of the vehicle in the quarter, as calculated under sch 5 [see 540.90].

(2) **FBT paid on an annual basis**

When FBT is paid on an annual basis the value of the motor vehicle fringe benefit is the aggregate of the amounts calculated for each quarter in the applicable tax year using the method for the quarterly basis.

(3) **FBT paid on an income year basis**

\[(\text{days} \times \text{Schedule 5 amount}) / 365\]

Where:

“Days” is the number of days in the income year on which the vehicle is made available for private use, reduced by the number of days on which the vehicle was a work-related vehicle. The total of “days” may not exceed 90 [see 540.85];

“Schedule 5 amount” is the value of the benefit that would have been received for unlimited private use of the vehicle in the income year, as calculated under sch 5 [see 540.90].

(4) **Option to elect starting time of “day” [s RD 30]**

An employer has the option of choosing the starting time of a day for FBT purposes. The starting time that the employer elects applies to all motor vehicles of the employer that are subject to FBT and must be used for a minimum of two years. The starting time must be a whole number of hours after midnight (eg 11 am, 4 pm or 7 pm, but not 8.30 pm). If an employer does not elect to use a particular starting time, a day is treated as a 24-hour period starting at midnight.

Despite the requirement to use an elected starting time for at least two years, an employer may apply to the CIR to change the starting time for a day, or to treat an election as revoked, if the employer’s circumstances change significantly and make the original starting time no longer relevant to the employer’s business.

**Example:**

An employee finishes work at 6 pm and travels home in his employer’s vehicle. He returns the vehicle at 8 am the next day. If the employer elects a starting time of 6 pm, only one day’s FBT would be incurred on the vehicle.

**540.7 Exempt days [ss CX 6, RD 29]**

The number of days on which the vehicle is made available for private use means the number of days during the quarter or income year on which the motor vehicle was actually available for the private use of an employee. Any days on which the vehicle is not so available will not be included in the value of “days” when calculating the value of the benefit [ss CX 6, RD 29].

**Example 1:**

A motor vehicle is available for an employee to take home each weekday, but not over the weekends. “Days” will be the number of weekdays in the period.

Whether or not a motor vehicle is available for private use on any particular day is a matter of fact. In each case, for a day to be treated as an exempt day, the motor vehicle must not be available for private use at any time during the 24-hour period.

**Example 2:**

A motor vehicle is not available for private use on any days on which the vehicle is:

(a) Parked at an airport car park;
(b) Broken down or being repaired (eg at a garage or panel beater); or
(c) Being stored at the employer’s premises (eg over the weekend).
A motor vehicle is not available for the private use and enjoyment of an employee on any day that the employee uses the vehicle:

(a) To make an emergency call [see 540.75]; or
(b) For out-of-town business travel for a period of at least 24 hours [see 540.80].

540.75 Emergency calls [ss CX 6(3), (5), CX 34]

No fringe benefit arises on any day on which a motor vehicle is used for an emergency call. The whole of the day on which a motor vehicle is used for an emergency call is treated as a day on which the vehicle is not available for private use, even if the vehicle is in fact used privately on that day [s CX 6(3), (5)].

“Day” means a period of 24 hours ending at midnight (unless the employer has elected a different start time).

An “emergency call” is defined as a visit that an employee must make from home in the course of their employment, at the request of their employer, a customer, or a member of the public [s CX 34]. The purpose of the visit must be to perform services that are:

(a) Essential to the operation of any plant or machinery of the employer, or of a client or customer;
(b) Essential to the maintenance of services provided by a public or local authority, or by a business comprising the supply of energy or fuel to the public; or
(c) Emergency services relating to the health or safety of any person.

Except in the case of services that relate to health and safety, the services must be required to be performed between 6 pm and 6 am on any weekday, or at any time on a Saturday, Sunday, or statutory public holiday.

Example:

As part of his duties, a freezing-plant maintenance engineer is required to inspect a client’s large freezing unit each day to ensure that the correct temperature is being maintained. The check is made at noon on each day. On Saturday and Sunday, the engineer travels from his home to conduct the check, using a vehicle provided by his employer. In this case, the maintenance of the correct temperature is essential to the operation of the client’s freezing unit. Therefore, the maintenance engineer’s visits on Saturday and Sunday qualify as emergency calls. Any Saturday, Sunday, or public holiday on which such an inspection visit is made will not be a day on which FBT is payable on the vehicle [see TIB vol 6:9 (February 1995) at 21].

540.80 Business travel [s CX 6(4), (5)]

No fringe benefit arises on any day on which an employee is absent from home, with the motor vehicle, for a period of at least 24 hours continuously. This exclusion applies only if the employee is required to use a vehicle and to be regularly absent from home in the performance of their duties [s CX 6(4)].

The whole of the day on which a motor vehicle is used for a business trip is treated as a day on which the vehicle is not available for private use, even if the vehicle is in fact used privately on that day [s CX 6(5)]. Incidental private use therefore does not affect the exemption. “Day” means a period of 24 hours ending at midnight (unless the employer has elected a different start time).

Example:

A travelling salesman employed by a company makes regular overnight business trips away from home using his employer’s motor vehicle. During a quarter, he was away from home from 2 pm on Tuesday until 6 pm on Friday. As the trip exceeds 24 hours, each day of absence (Tuesday to Friday inclusive) will be treated as a day the vehicle was not available for private use. In this quarter, “days” in the formulae in 540.65 would be reduced by four.

540.85 Work-related vehicle [ss CX 6(2), CX 38, YA 1]

A fringe benefit does not arise when a motor vehicle is a work-related vehicle [s CX 6(2)]. A “work-related vehicle” is a motor vehicle that meets the following conditions:

(a) It is not a car;
(b) The form of identification that the employer regularly uses is prominently and permanently displayed on the exterior of the vehicle;
If the vehicle is rented, the form of identification that the employer regularly uses, or the form of identification that the person from whom the vehicle is rented regularly uses, is prominently and permanently displayed on the exterior of the vehicle; and

The motor vehicle is not available for any private use other than travel to and from the employee’s home, or travel that is incidental to the employee’s employment duties [s CX 38].

A motor vehicle is not a work-related vehicle on any day that it does not meet condition (d).

A “car” is a motor vehicle designed exclusively or mainly to carry people. Car includes motor vehicles that have rear doors or collapsible rear seats (eg station wagons and hatchbacks), but does not include taxicabs, minibuses, motorcycles or mopeds [s YA 1].

A “minibus” is a motor vehicle designed wholly or mainly to carry people, the interior of which contains either:

(a) Three seats, each of which is designed to seat two or more adults, is permanently fixed to the vehicle, and is not collapsible or capable of being folded down; or

(b) More than three seats, at least three of which are designed for seating two or more adults, are permanently fixed to the vehicle, and are not collapsible or capable of being folded down [s YA 1].

The following is a summary of vehicles that can and cannot qualify as work-related vehicles.

**Work-related vehicles**  
**Non-work-related vehicles**

</table>

* If permanently without rear seats (ie the rear seats have either been removed, or welded down, or made unusable by the installation of shelving or the like).

Any vehicle with a gross laden weight exceeding 3,500 kg does not give rise to a fringe benefit.

(1) **Case law**

In *TRA Case J50* (1987) 9 NZTC 1,281 the vehicles of a chauffeur-driven limousine service with discreet non-affixed business cards and vehicle authority stickers did not qualify as work-related vehicles.

In *Tisco Ltd v Commissioner of Inland Revenue* (1991) 13 NZTC 8,049 (HC), it was held that the question of whether or not a vehicle is designed principally for the carriage of persons relates to the vehicle’s construction and not to the owner’s use of the vehicle. If a vehicle is designed equally for passengers and for goods, neither purpose can be called the principal purpose.

In *Commissioner of Inland Revenue v Rag Doll Fashions (New Zealand) Ltd* (1995) 17 NZTC 12,104 (HC), it was held that vehicles which were motorcars (referred to as “cars” in the ITA 2007), when they left the factory may be altered to qualify as work-related vehicles. The vehicles at issue were altered by lowering the back seats and placing plywood covers over them, with the result that they were no longer exclusively and principally designed for the carriage of persons.

**Note:** Inland Revenue have indicated that it had originally appealed the *Rag Doll Fashions* decision but had withdrawn that appeal for reasons peculiar to the case. However, the withdrawal of the appeal should not be taken as acceptance by Inland Revenue that temporary design alterations are sufficient to satisfy the work-
related vehicle test. Inland Revenue’s view is that alterations to the design of a motorcar must be permanent in order to satisfy the test [see TIB vol 7:13 (May 1996) at 19].

**540.90 Value of benefit from motor vehicle [ss RD 29, RD 50, RD 51, RD 56, RD 57, sch 5]**

Determining the value of private benefit from the use of a motor vehicle is calculated using the formulae in s RD 29 [see 540.65]. These formulae use schedular values of benefit located in sch 5, called the “Schedule 5 amount”. An employer has the option of calculating FBT using either the cost price or the tax value of the vehicle [s RD 28(2), sch 5]. The employer chooses which method to use in the first period that FBT is calculated for a vehicle. This method must then continue to be used until the earliest of the following dates:

(a) The date the vehicle is disposed of;
(b) The date the vehicle ceases to be leased by the employer or an associated person without a consecutive or successive lease of the vehicle by the employer or an associated person; or
(c) Five years after the start of the initial FBT period [s RD 28(3)].

After five years, the employer can choose between cost price or tax value for any subsequent FBT period [s RD 28(4)].

An employer must use the cost price valuation method if:

(a) The vehicle is owned, leased or rented by the employer or an associated person; and
(b) The employer or the associated person owned, leased or rented the vehicle before 1 April 2006 [s RD 28(5)].

However, the cost price method does not have to be used if:

(a) The employer’s initial return for the vehicle is for a period beginning on or after 1 April 2006 and the vehicle is not subject to a “nine-to-five” or “flip flop” type lease arrangement under s CX 7 [see 540.60]; or
(b) The vehicle is owned by the employer or an associated person and five years has elapsed since the start of the period of the employer’s first return for the vehicle [s RD 28(6), (7)].

**1) Tax value [sch 5]**

Normally, “tax value” means the adjusted tax value of the vehicle at the beginning of the tax or income year, as determined under the depreciation rules [subpart EE]. In the first income year or tax year that the vehicle is acquired, the tax value of a vehicle is its cost. The tax value of a vehicle cannot be less than $8,333 for FBT purposes.

However, special valuation rules apply if, in the period of two years before the vehicle’s acquisition by the person (person A) providing it to the employee, the vehicle was owned by person A or by a person (person B) associated with them. In these circumstances the tax value of the vehicle for person A is the adjusted tax value of the vehicle at the beginning of the tax or income year, or at the time of acquisition, as determined under the depreciation rules, if the cost of the vehicle were the applicable one of the following:

<table>
<thead>
<tr>
<th>Circumstances</th>
<th>Amount treated as cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>The cost price was last used by person A or person B for calculating the value of the benefit.</td>
<td>The highest cost of the vehicle to person A or person B on any acquisition of it by them.</td>
</tr>
<tr>
<td>Person A did not own the vehicle and person B last used the tax value of the vehicle for calculating the value of the benefit.</td>
<td>The higher of the following amounts:</td>
</tr>
<tr>
<td></td>
<td>(a) The tax value of the vehicle for person B immediately before they last disposed of it;</td>
</tr>
<tr>
<td></td>
<td>(b) The cost of the vehicle to person A on acquisition.</td>
</tr>
</tbody>
</table>
Circumstances

Person A owned the vehicle and the tax value was last used for calculating the value of the benefit.

Amount treated as cost

The higher of the following amounts:

(a) The tax value of the vehicle for whichever of person A or person B last used the tax value of the vehicle for calculating the value of the benefit, immediately before the last disposal;

(b) The cost of the vehicle to person A on the last acquisition of it by them.

The tax value of a vehicle cannot be less than $8,333 for FBT purposes. Thus if the adjusted tax value of a vehicle drops below $8,333, the tax value for FBT purposes is treated as $8,333.

(2) Value of benefit [sch 5]

The value of the benefit (ie the “Schedule 5 amount”) is determined as follows:

<table>
<thead>
<tr>
<th>FBT period</th>
<th>Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>FBT calculated on a quarterly basis</td>
<td>5% of GST-inclusive cost price;</td>
</tr>
<tr>
<td></td>
<td>9% of GST-inclusive tax value;</td>
</tr>
<tr>
<td></td>
<td>5.625% of GST-exclusive cost price; or</td>
</tr>
<tr>
<td></td>
<td>10.125% of GST-exclusive tax value.</td>
</tr>
<tr>
<td>FBT calculated on an annual or income year basis</td>
<td>20% of GST-inclusive cost price;</td>
</tr>
<tr>
<td></td>
<td>36% of GST-inclusive tax value;</td>
</tr>
<tr>
<td></td>
<td>22.5% of GST-exclusive cost price; or</td>
</tr>
<tr>
<td></td>
<td>40.5% of GST-exclusive tax value.</td>
</tr>
</tbody>
</table>

The same valuation options apply whether the vehicle is owned or leased by the person making it available to the employee. If a vehicle is leased, the lessor must disclose to the lessee the cost price or tax value of the vehicle if the lessee requests this information. If there is a pool of vehicles available for private use by one or more employees, the following valuation options apply to a particular vehicle in the pool:

Type of usage

<table>
<thead>
<tr>
<th>Options</th>
</tr>
</thead>
</table>

Vehicle used mainly by one employee

Vehicle not used mainly by one employee

Vehicle not used mainly by one employee, and vehicle is trading stock of an employer in the business of selling motor vehicles

The market value of a leased or rented motor vehicle is used by a person instead of its cost price if the vehicle has previously been leased or rented to another person and:

(a) The person is not associated with the other person;

(b) The person is not associated with the lessor or the owner of the vehicle;

(c) The employee is not the lessor or owner of the vehicle; and

(d) The employee is not associated with the lessor or owner of the vehicle.

Example 1:

An employer purchases a car for $27,000 (including GST) on 1 April 20X1 and makes it available for private use by an employee without restriction. The GST-exclusive cost price of the vehicle is $24,000. The employer calculates FBT on a quarterly basis.
In the FBT period commencing 1 April 20X1, the employer must elect to calculate its FBT liability using either cost price or tax value. The method chosen must be used until the FBT period ending 31 March 20X6. The value of the benefit in the first quarter under each of the valuation options is as follows:

<table>
<thead>
<tr>
<th>Option</th>
<th>Value of benefit</th>
</tr>
</thead>
<tbody>
<tr>
<td>GST-inclusive cost price</td>
<td>$27,000 × 5% = $1,350</td>
</tr>
<tr>
<td>GST-inclusive tax value</td>
<td>$27,000 × 9% = $2,430</td>
</tr>
<tr>
<td>GST-exclusive cost price</td>
<td>$24,000 × 5.625% = $1,350</td>
</tr>
<tr>
<td>GST-exclusive tax value</td>
<td>$24,000 × 10.125% = $2,430</td>
</tr>
</tbody>
</table>

If the employer calculated its FBT on an annual or income year basis, the value of the benefit under each of the valuation options is as follows:

<table>
<thead>
<tr>
<th>Option</th>
<th>Value of benefit</th>
</tr>
</thead>
<tbody>
<tr>
<td>GST-inclusive cost price</td>
<td>$27,000 × 20% = $5,400</td>
</tr>
<tr>
<td>GST-inclusive tax value</td>
<td>$27,000 × 36% = $9,720</td>
</tr>
<tr>
<td>GST-exclusive cost price</td>
<td>$24,000 × 5.625% = $5,400</td>
</tr>
<tr>
<td>GST-exclusive tax value</td>
<td>$24,000 × 40.5% = $9,720</td>
</tr>
</tbody>
</table>

Under the cost price option, the value of the benefit will be the same for every FBT period for the first five years. Under the tax value option, the value will be higher initially but will decline over subsequent years, as illustrated by the following example.

Example 2:
A motor vehicle costing $54,000 (including GST) is made available for private use by an employee from 1 April 20X1. Depreciation on the vehicle is calculated at 36 per cent DV. The value of the benefit for each of the first five years under the two valuation options is as follows:

<table>
<thead>
<tr>
<th>Year ending 31 March</th>
<th>Cost price including GST</th>
<th>Calculation</th>
<th>Value of benefit</th>
</tr>
</thead>
<tbody>
<tr>
<td>20X2</td>
<td>$54,000</td>
<td>54,000 × 5% × 4</td>
<td>$10,800</td>
</tr>
<tr>
<td>20X3</td>
<td>$54,000</td>
<td>54,000 × 5% × 4</td>
<td>$10,800</td>
</tr>
<tr>
<td>20X4</td>
<td>$54,000</td>
<td>54,000 × 5% × 4</td>
<td>$10,800</td>
</tr>
<tr>
<td>20X5</td>
<td>$54,000</td>
<td>54,000 × 5% × 4</td>
<td>$10,800</td>
</tr>
<tr>
<td>20X6</td>
<td>$54,000</td>
<td>54,000 × 5% × 4</td>
<td>$10,800</td>
</tr>
<tr>
<td>Total</td>
<td></td>
<td></td>
<td>$54,000</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

<td>$14,156</td>
<td>14,156 × 9% × 4</td>
<td>$5,096</td>
</tr>
<tr>
<td>20X6</td>
<td>$9,060</td>
<td>9,060 × 9% × 4</td>
<td>$3,262</td>
</tr>
<tr>
<td>Total</td>
<td></td>
<td></td>
<td>$48,202</td>
</tr>
</tbody>
</table>

The total value of the benefit over the five-year period is less using the tax value method, although significantly more FBT will be paid in the first two years. For example, applying the 64 per cent FBT rate, $3,710 less FBT would be paid using the tax value option than the cost price option, over the five-year period.

In 20X7, the adjusted tax value of the car will be $5,798 ($9,060 less depreciation at 36 per cent DV). Since the tax value cannot be less than $8,333, the value of the benefit in 20X7 will be $3,000 ($8,333 × 36%). Under the cost price method, the value of the benefit in 20X7 will be $10,800.

540.95 Motor vehicle acquired from associated person [s GB 31, sch 5, cl 4]
When FBT was first introduced, enterprising employers sought to reduce their FBT liability on motor vehicles by selling them to an associated person and then buying them back at a reduced price. This reduced price
would then be used as the basis for calculating the value of the benefit. A specific anti-avoidance provision \[\text{sch 5, cl 4}\] was introduced to eliminate this loophole.

Under this anti-avoidance provision, where a person acquires a motor vehicle that is to be made available for private use by an employee, the cost price of the motor vehicle for FBT purposes is the highest cost price paid for the car since its manufacture by the person or an associated person if, within two years (ie 24 months) preceding the date of acquisition, the motor vehicle has been owned by that person or an associated person.

**Example 1:**
AB and AC are associated persons. AB purchased a new car for $40,000. Eighteen months later AB sold the car to AC for $32,000. For FBT purposes, the cost price of the motor vehicle to AC is $40,000 \[\text{see TIB vol 7:2 (August 1995) at 31}\].

<table>
<thead>
<tr>
<th>Months</th>

<td></td>
</tr>
<tr>
<td>18</td>
<td></td>
<td>$32,000</td>
</tr>
<tr>
<td>24</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Example 2:**
FG and FH are associated persons. FG purchased a new car for $70,000 and six months later sold the car to FH for $55,000. FH kept the car for 12 months and then sold it to an unrelated third party (XY) for $48,000. Twenty-six months later, FG purchased the car from the unrelated third party for $25,000. For FBT purposes, during the 12-month period of ownership by FH, the cost price of the car is $70,000, because it was owned within the preceding 24 months by an associated person. During the second period of ownership by FG, the cost price of the car will be $25,000. The anti-avoidance provision does not apply in this latter period because the car was not owned by FG or FH during the preceding 24 months.

Another anti-avoidance provision applies where a motor vehicle is acquired at less than market value, or the cost price is unable to be established \[\text{s GB 31}\]. The cost price of a motor vehicle for FBT purposes is deemed to be its market value at the date of acquisition if:

(a) The motor vehicle was acquired at no cost;

(b) The cost price of the motor vehicle was less than its market value as a result of the purchaser entering into an arrangement with an associated person in order to defeat the intent and application of the FBT rules; or

(c) The purchaser is unable to establish the cost price of the motor vehicle to the satisfaction of the CIR.

### 540.100 Cost price of a motor vehicle

The cost price of a motor vehicle for the purposes of calculating FBT under \text{s CX 6(1)(a)} and \text{sch 5} includes:

(a) The purchase price of the vehicle;

(b) The cost of initial registration and licence plate fees;

(c) The cost of accessories, components and equipment other than business accessories (see below) fitted to the vehicle at the time of purchase or subsequently; and

(d) The cost, including freight insurance costs and customs duty, of transporting the motor vehicle to the place where it is to be first used.

In all cases, the price or cost is the GST-inclusive amount \[\text{sch 5, cl 8}\].

602 Staples Tax Guide 2012
Fringe Benefit Tax

The cost price of a motor vehicle does not include the cost of:

(a) Annual vehicle re-licensing fees;
(b) Road user charges;
(c) Sign-writing the vehicle in the company’s colours or style (in physical terms, the addition of paint or other graphics such as magnetic signs, decals or transfers);
(d) Business accessories fitted to the motor vehicle at the time of purchase or subsequently; or
(e) Financing the purchase of the vehicle.

(1) Business accessories

Business accessories are accessories, components, and equipment fitted to the vehicle, required for and relating solely to the business operations for which the vehicle is used, and that are depreciable property [see 250.20].

Where business accessories are powered, they will usually require the vehicle’s power source to operate them (eg a two-way radio, roof-mounted flashing lights, and electronic testing or monitoring equipment).

Business accessories are items permanently affixed to the vehicle. Permanency is not negated if the accessory is removed from the vehicle temporarily for repair or maintenance, or on the removal of the accessory at the time of sale or disposal of the vehicle or the accessory itself [see Public ruling BR Pub 09/08, TIB 22:1 (February 2010) at 3-12 which applies from 1 November 2008].

540.105 Three-month test period [ss RD 31, RD 32]

Rather than keep a continuous record of the days a motor vehicle is available for private use, an employer may instead keep a record of use for a three-month test period. The result of the test period is then used as the basis for calculating the employer’s FBT liability for a period of three years [s RD 31]. When the test period must be run, and when the three-year application period starts, is illustrated below.

<table>
<thead>
<tr>
<th>FBT period</th>
<th>Test period</th>
<th>Start of three-year application period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quarterly</td>
<td>One full FBT quarter</td>
<td>First day of the test period</td>
</tr>
<tr>
<td>Annual</td>
<td>One full quarter in the year</td>
<td>1 April of the tax year in which the test period was run</td>
</tr>
<tr>
<td>Income year</td>
<td>Any three consecutive months in the year</td>
<td>First day of the income year</td>
</tr>
</tbody>
</table>

The test period chosen must be representative of the normal use of the vehicle over the application period. The employer must keep a record of the use of the vehicle during the test period, including accurate details of the days the vehicle was available for private use by the employee. Days on which the vehicle is a work-related vehicle are treated as days the vehicle is not available for private use.

If the actual number of days of private use (excluding days on which the vehicle is a work-related vehicle) is 20 per cent or more higher than the test period number, the application period will end on the last day of the FBT period. The employer will then need to either start another test period or revert to recording all private use.

If Inland Revenue considers that the test period number is not fairly representative of the actual private use of the vehicle, they may notify the employer that the application period will end on a specific date and that the test period number may no longer be used.

If the vehicle for which the test period record was kept is replaced by another vehicle, the test period number can continue to be used for the new vehicle until the end of the original application period, provided the test period number remains representative of the average private use of the vehicle.

540.110 Motor vehicle available to more than one employee [s CX 8]

If one motor vehicle is made available for private use by more than one employee on the same day, only one fringe benefit is deemed to be provided on that day. The value of the benefit is calculated as if only one
employee had used the vehicle privately on that day. If more than one employee pays the employer for the private use of the vehicle on the same day, the sum of all the amounts paid is deducted from the value of the benefit in arriving at the taxable value [see 540.260].

540.115 Motor vehicle lease arrangements [s CX 7]
The tax advantages of the following types of lease arrangements were eliminated by s CX 7 [see 540.60] and amendments to sch 5 [see 540.90]:
(a) Nine-to-five leases;
(b) Flip-flop leases;
(c) Yearly renewable leases; and
(d) Multi-leases.
A detailed explanation of these lease arrangements and their effect before 1 April 2006 can be found in Staples Tax Guide (2006) 540.115.

540.125 Subsidised transport [ss CX 9, RD 33, YA 1]
The provision of subsidised transport by an employer, or group company, to an employee, or by a third party to an employee on behalf of the employer, is a fringe benefit [ss CX 2(2), CX 9].

“Subsidised transport” means the provision of transport (excluding transport in a motor vehicle) to an employee by the employer or group company if:
(a) The employer or group company carries on a business that consists of or includes transporting the public for hire or reward;
(b) The employer or group company provides the transport to the employee in the course of transporting the public; and
(c) The amount the employee pays for the transport is less than the highest amount charged by the employer or group company to the public for transport that is equivalent in terms of class, extent and occasion to that provided to the employee [s YA 1].

“Group company” means a company which is in the same group of companies as the employer. Subsidised transport provided to employees by a company in the same group of companies as the employing company is valued in the same way as if the employer had provided the benefit directly.

Subsidised transport also includes the provision by an employer or group company to an employee of an entitlement to transport, provided the above conditions are met. The exclusion for transport in a motor vehicle will, in most cases, not extend to motor coaches and buses because the definition of “motor vehicle”, for FBT purposes, excludes any vehicle with a gross laden weight exceeding 3,500 kg [s YA 1].

When a person with whom the employer has entered into an arrangement (ie a third party) provides a benefit to an employee, the benefit is deemed to be provided by the employer [s CX 2(2)]. Thus, transport provided to an employee by a third party is also a fringe benefit, provided the employer is itself in the public passenger transportation business.

The value of a benefit that consists of subsidised transport is 25 per cent of the highest fare the employer or group company charges the public for equivalent transport in terms of class, extent, and occasion. If a third person provides subsidised transport to an employee under an arrangement with the employer, the value of the benefit is the greatest of:
(a) Twenty-five per cent of the highest fare the employer charges the public for equivalent transport (in terms of class, extent and occasion);
(b) Twenty-five per cent of the highest fare the third person charges the public for equivalent transport (in terms of class, extent and occasion), if the third person is a company in the same group of companies as the employer; and
(c) The amount that the employer pays the third person for the benefit [s RD 33].
The word "amount", in this context, means the GST-inclusive amount if the employer is a registered person and can claim input tax for the subsidised transport. The taxable value of the benefit is the value of the subsidised transport, as determined above, reduced by any amount paid by the employee for that benefit.

“Class” refers to the classes of transportation available, such as first, business or economy class. Standby (subload) travel is not considered by Inland Revenue to be a separate class of transportation. “Extent” refers to transportation with the same departure and destination points. “Occasion” refers to the time of carriage.

Example 1:
An airline employee takes an overseas holiday on his employer’s airline. He travels economy class. The highest price charged to the public for a ticket on that flight in economy class, with the same departure and destination points, is $650. The employee pays $200.
(a) Highest fare charged to the public for the same flight = $650.00
(b) Twenty-five per cent of that fare = $162.50
As the employee pays more than the value of the benefit ($200 compared to $162.50), the taxable value of the benefit is nil and no FBT is payable by the employer.

Example 2:
An airline employee takes a holiday overseas on an airline that has an agreement with her employer. The highest price charged to the public for travel of the same class, extent, and occasion is $650. Under the agreement the employee’s airline pays $325 to the airline that carries the employee.
(a) Highest fare charged to the public for the same flight = $650.00
(b) Twenty-five per cent of that fare = $162.50
(c) Price payable by the employer = $325.00
The price paid by the employer is greater than twenty-five per cent of the highest fare charged for the flight. As the employee does not make any contribution, the taxable value of the benefit is $325. If the employee pays the employer $200, that amount would be deducted from $325 and the taxable value of the benefit would be $125.

Where expenditure incurred by an employer results in a fringe benefit consisting of subsidised transport, the taxable value of the benefit is nil, provided:
(a) The expenditure was incurred in relation to the employee’s employment duties, and not in relation to the taking of leave or vacation by the employee; and
(b) The expenditure would not have been less if the fringe benefit had not resulted from it.

Example 3:
An airline employee is flown from Wellington to Auckland to attend a work conference and after the conference takes a week’s leave in Auckland. As the expenditure was not incurred directly in respect of or in relation to the leave taken by the employee, and the expenditure would not have been less had the fringe benefit not resulted from it (assuming there were no seasonal price variations resulting in an increased cost in flying the employee back to Wellington a week later), the value of the fringe benefit would be nil.

540.130 Low-interest loans [ss CX 2, CX 10, RD 34, RD 35]
Any loan owing by an employee to an employer gives rise to a fringe benefit if the loan was provided because of the employment relationship [ss CX 2(1), CX 10(1)]. However, a liability for FBT only arises if, and to the extent that, the rate of interest charged on the loan is less than the prescribed interest rate [s RD 34] or, if an election is made under s RD 35 [see 540.132], the market interest rate. The prescribed interest rate is intended to be an approximation of the market interest rate.

A “loan” (defined the same as “money lent”) is:
(a) An amount of money that a person lends in some way, including by depositing it in an account, whether or not the lending is secured or evidenced in writing;
(b) An amount of credit that a person gives, including by not enforcing a debt, whether or not the giving is secured or evidenced in writing;
(c) An amount of money that a person lends, or credit that a person gives, under an obligation or arrangement, whether or not secured or evidenced in writing;
(d) An amount of money that goes (ie is paid) from person A to person B in consideration for person B’s promise to pay person A an amount of money and that is less than the amount that person B promises to pay person A. Person B’s promise is not required to be secured or evidenced in writing. Person B includes any other person with whom person B is associated [s YA 1].

The value of the benefit provided by an employment-related loan for an FBT period using the prescribed interest rate is [s RD 34]:

\[
\text{prescribed interest} - \text{actual interest}
\]

The “prescribed interest” is the amount of interest on the loan for the FBT period calculated at the prescribed interest rate on the daily balance of the loan. The prescribed interest rates are listed in 540.135.

If the loan was made before 1 April 1985 and the rate of interest on the loan is non-reviewable, the prescribed interest is calculated using the non-concessionary rate of interest for the year in which the loan was entered into. The non-concessionary rates of interest are available on the Inland Revenue website.

In Waitomo District Council v Commissioner of Inland Revenue (1987) 9 NZTC 6,185 (HC), the taxpayer granted a loan to one of its employees before the introduction of FBT. The loan was secured by a mortgage over the employee’s property. The mortgage contained no review of interest rate provision. Inland Revenue assessed the loan as subject to FBT. The High Court held that if a loan agreement contains no express provision providing for an interest review, the interest rate on the loan is presumed to be non-reviewable. An express negative provision is unnecessary.

The “actual interest” is:
(a) The amount of interest that actually accrued on the loan for the FBT period; or
(b) If the loan is a financial arrangement and it is appropriate for the nature of the loan, the income that would have accrued to the employer’s benefit in the period as calculated under the yield-to-maturity method.

### Example:

Jane has a $10,000 employment-related loan from her employer. During the quarter ended 30 September 2011, her employer charged her interest on the loan at the rate of four per cent per annum. The prescribed interest rate during the quarter was 5.90 per cent. She made no principal repayments during the quarter. There are 92 days in the quarter. The value of the fringe benefit is calculated as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prescribed interest</td>
<td>$10,000 × 5.90% × 92 / 365</td>
</tr>
<tr>
<td>Less Actual interest</td>
<td>$10,000 × 4% × 92 / 365</td>
</tr>
<tr>
<td>Value of fringe benefit</td>
<td></td>
</tr>
</tbody>
</table>

(1) Excluded loans [s CX 10(2)]

The following loans are not subject to FBT:
(a) An employee share loan [see 540.205];
(b) A loan made under a share purchase scheme [see 340.10];
(c) Before 1 April 2011 a loan made by a superannuation fund, to the extent to which the value of the loan constitutes income of the fund under s CS 18 [see 1390.15]; and
(d) An advance of salary or wages, if the total amount owing by the employee from all such advances does not exceed $2,000 during the FBT period and the employer is not required under the contract of employment to make the advance.

### 540.132 Option to value loan benefit at market interest rate [s RD 35]

An employer who is in the business of lending money to the public (eg a bank) may choose to calculate the value of a benefit for an employment-related loan using the market interest rate. The market interest rate is
Fringe Benefit Tax

540.135

defined as the interest rate that would apply to a borrower belonging to a group that has similar characteristics to the group to which the employee belongs, determined on an arm’s length basis.

The comparable group must meet the following criteria:

(a) The group has a comparable credit risk to the employee group;
(b) Membership of the group does not arise because of a link between the member and the employer;
(c) The group is large enough to ensure a transaction on an arm’s-length basis.

This requirement could cover rates offered to the general public, and rates offered to a defined group (not associated with the employer) that is comparable in credit risk to the employee group.

The value of the benefit provided by an employment-related loan for an FBT period using the market interest rate is the amount by which interest calculated on the loan at the market interest rate exceeds:

(a) The actual amount of interest that accrued on the loan during the period; or
(b) If the loan is a financial arrangement and it is appropriate having regard to the nature of the loan the amount of interest that accrued on the loan using the yield-to-maturity method.

Interest calculations must be made on the daily balance of the loan. If an employer elects to use the market interest rate method, the employer must use this method for the current income year and the following income year (i.e., for a minimum of two income years). An employer can change method only by giving notice to the CIR at least one year before the start of the income year in which the change will occur.

An employer makes an election to apply the market interest rate in respect of each employment-related loan. There is no requirement to apply this method to all employees. Similarly, different market interest rates could apply to different employees if they are assessed as falling within different risk categories.

540.135 Prescribed interest rates for low-interest loans [s RA 21(3)]

Prescribed interest rates for low-interest loans are set by regulation under s RA 21(3) and published by Inland Revenue in the TIBs and on its website at www.ird.govt.nz. The following is a list of prescribed interest rates. For earlier rates see Brookers Tax Rates Guide 5-4500 or earlier editions of Staples Tax Guide.

Staples Tax Guide 2012
540.140 Deemed reduction of loan balance [s RD 36]

Any income paid to an employee during a tax year which is applied in reduction of an employment-related loan owing by the employee is deemed to be applied in repayment of the loan on the first day of the income year or on the date the loan was advanced, whichever is the later [s RD 36]. This only applies when an employee derives income that is:

(a) Salary or wages, an extra pay, a dividend or interest;

(b) Payable to the employee without any amount of tax withheld under the PAYE rules, the RWT rules, or the NRWT rules; and

(c) Income of the employee in the tax year in which it is applied to repay the loan, or in an earlier income year.

This provision typically applies to shareholder-employees with a current account in debit who receive a lump-sum salary payment at or following the end of the year, which is credited to the current account, eliminating all or part of the debit balance. The amount is deemed to have been credited at the start of the tax year, or on the date the current account first went into debit, whichever is the later.

If a company has a non-standard accounting year, the income applied in repayment of the loan is deemed to have been applied on the first day of that accounting year or the date the loan was advanced, whichever is the later.

An employee may elect that an amount of income derived in a tax year and applied in repayment of an employment-related loan be treated as derived in the income year preceding the year in which it would otherwise be treated as derived. The election must be given in writing to Inland Revenue by the due date for filing the tax return for the year in which the loan is owed.

540.145 Loans provided by life insurers [s CX 11]

Loans made by life insurers to their policyholders (or associated persons of policyholders) are subject to FBT as employment-related loans if the loan was granted, or the interest rate set, because of the person’s status as a policyholder. This applies whether the loan is provided by the life insurer directly, by an associated person, or by a person with whom the life insurer has entered into an arrangement. The meaning of “associated person” is explained in 70.20.

540.150 Promissory notes

Loans made to employees by way of promissory notes and other similar financial arrangements are liable to FBT as employment-related loans [see 540.130].

Normally, FBT is payable on the difference between the interest actually accrued under a loan and the prescribed interest. However, in the case of financial arrangements with no interest payments (ie promissory notes), the interest accrued is substituted for the income (if any), that would have accrued to the employer using the yield-to-maturity method.

Example:

An employee sells a promissory note, with a face value of $1,000 and a term of five years, to his employer for $800. Assume the prescribed rate of interest is 8.5 per cent. FBT is payable on the difference between $1,000 × 8.5 per cent ($85.00), if calculated on a yearly basis, and the income accruing to the employer using the yield-to-maturity method. The figures are as follows:

<table>
<thead>
<tr>
<th>Prescribed Interest</th>
<th>YTM income</th>
<th>Difference</th>
</tr>
</thead>
<tbody>
<tr>
<td>20X1</td>
<td>$85</td>
<td>$36.51</td>
</tr>
</tbody>
</table>
Fringe Benefit Tax

<table>
<thead>

<td>$43.26</td>
</tr>
<tr>
<td>20X5</td>
<td>$85</td>
<td>$43.65</td>
<td>$41.35</td>
</tr>
</tbody>
</table>

In some cases promissory notes are sold at face value, so there is no income accruing to the employer and no yield-to-maturity calculation is required. FBT will be payable on the total amount of the prescribed interest in such cases. Source: Inland Revenue Technical Rulings Manual, 67.14.2.

### 540.152 Credit cards provided by charities [ss CX 25(2), (3), RD 39]

Benefits provided by way of short-term charge facilities (eg credit cards) by a charitable organisation to an employee are subject to FBT if the value of the benefit for the tax year exceeds five per cent of the employee’s salary or wages for the tax year [s CX 25(2)].

A “short-term charge facility” is defined as an arrangement that enables an employee to buy or hire goods or services (that have no connection with the charity or its operations) or charge them to an account, and places some or all of the liability for paying for them on the charity. Short-term charge facilities do not include employment-related loans covered under s CX 10 [s CX 25(3)].

The value of the benefit is the sum of:

(a) The amount that the charity pays towards the purchase or hire of the goods and services obtained by the employee under the short-term charge facility;
(b) Any interest incurred in relation to such purchases (eg credit card interest); and
(c) The associated account or service fees, if the facility is a credit card or a charge card provided solely for an employee’s private use [s RD 39(1)].

If the charitable organisation pays FBT on a quarterly basis, no FBT is payable in a quarter unless the accumulated benefit value (ie the total taxable value of benefits provided to the employee under a short-term charge facility since the beginning of the tax year) exceeds the threshold benefit value (ie five per cent of the employee’s salary or wages for the tax year). In the first quarter in the tax year in which the accumulated benefit value exceeds the threshold benefit value, FBT is payable on the accumulated benefit value. In any subsequent quarter of that tax year, FBT is payable on the taxable value of the benefits provided in that quarter [s RD 39(2)-(4)].

#### Example 1:
Alpha Charity provides one of its employees with a remuneration package that includes a salary of $30,000 a year and a credit card to which the employee is able to charge personal expenditure. The charity pays all charges to the credit card account, up to a maximum of $5,000 for the year. In the quarter ended 30 June 20X1, Alpha Charity pays for goods costing $1,735 charged to the credit card. Alpha Charity is required to pay FBT on $1,735 in the first quarter because the taxable value of the benefits provided exceeds five per cent of the employee’s annual salary (five per cent of $30,000 is $1,500). Any benefits provided in the following three quarters will also be taxable.

#### Example 2:
Beta Charity provides one of its employees with a remuneration package that includes a salary of $50,000 a year and a credit card to which the employee is able to charge personal expenditure. The charity pays for all charges to the credit card account, up to a maximum of $5,000 for the year. Beta Charity pays for private goods and services charged to the credit card during each quarter as follows:

<table>

</tbody>
</table>
In the first two quarters, Beta Charity has no FBT liability because year-to-date payments have not exceeded five per cent of the employee’s salary for the tax year (five per cent of $50,000 is $2,500). In the third quarter, year-to-date payments exceed five per cent of the employee’s annual salary and so Beta Charity is liable to pay FBT on the taxable value of $3,700. In the fourth quarter, Beta Charity is required to pay FBT on the credit card payments it makes during that quarter ($1,300).

Note: The legislation does not address the issue of how the employing charity is to determine the amount of the employee’s salary or wages for the tax year, in the first three quarters. If the employee is on a salary that is fixed for the year, the five per cent threshold could be determined on this basis. However, if an employee’s salary were to increase during the tax year (eg because of a promotion), as a result of which benefits drop below five per cent of annual salary, how would FBT paid in earlier quarters be recovered? Similarly, if the employee is paid wages on an hourly basis, the amount payable for the full tax year may be difficult to predict. Hopefully future legislation will deal with these issues.

540.155 Sickness, accident or death benefit funds [ss CX 14, RD 38(1), YA 1]
A contribution by an employer to a sickness, accident or death benefit fund for the benefit of an employee is a fringe benefit if made because of the employment connection [s CX 14].

A “sickness, accident or death benefit fund” is defined in s YA 1 as a sickness, accident or death benefit fund, approved by the CIR, that is established for the benefit of:

(a) Employees;
(b) Members of an incorporated society; or
(c) Surviving spouses [see 960.10] and dependents of deceased employees or members of an incorporated society.

The value of the benefit is the amount of the contribution made by the employer [s RD 38].

540.160 Contributions to funeral trusts [ss CW 45, CX 15, RD 38(2)]
Any contribution, by an employer to a funeral fund for the benefit of its employees and their families is a fringe benefit if the contribution is made by virtue of the employment relationship. A fringe benefit will arise only if the fund meets the following criteria:

(a) The sole purpose of the fund is to pay the expenses of the funerals of
   (i) Employees and their spouses [see 960.10] and dependants;
   (ii) The surviving spouses and dependants of deceased employees;
(b) The employer has at least 10 employees;
(c) All persons eligible for benefits from the fund are equally eligible;
(d) The only contributors to the fund are the employer and its employees; and
(e) The fund is approved by the CIR [ss CX 15, CW 45].

The value of the benefit is the amount of the contribution made by the employer during the relevant quarter or year [s RD 38(2)]. Any interest or dividends received by the trustee of the fund is exempt from income tax under s CW 45 [see 370.15].

540.165 Specified insurance premiums [ss CX 16, CZ 15, RD 38(3), (4)]
A specified insurance premium paid, or a contribution to an insurance fund of a friendly society made, by an employer for the benefit of an employee is a fringe benefit [s CX 16(1)].

A “specified insurance premium” [s CX 16(3)] is a premium paid for the benefit of an employee, their spouse [see 960.10] or their child on a policy of one of the following types:

(a) An insurance policy on the life of the employee or their spouse or child, which meets the criteria set out in s CX 16(4);
(b) A life insurance policy which provides pension benefits [s CX 16(5)]; or
(c) An insurance policy that provides benefits for an accident, disease, or sickness of the employee, their spouse or their child [s CX 16(6)].
A “friendly society” is a society, credit union or association of credit unions registered under the Friendly Societies and Credit Unions Act 1982 [s YA 1].

The value of the benefit is the amount of the premium paid or contribution made by the employer [s RD 38(3), (4)]. If the employer is registered for GST and is able to claim an input tax deduction for the premium, the amount of the benefit is the GST-inclusive amount. A premium or contribution is not a fringe benefit if it relates to an accident insurance contract, or cover and entitlements for work-related personal injury, in force before 1 July 2000 [ss CX 16(2), CZ 15].

540.170   Discounted premiums on life agents’ insurance policies

When a life agent or a person associated with the life agent [see 70.20, 70.45], receive discounted premiums on a life insurance policy from the life agent’s employer, the policy will be a fringe benefit under s CX 2 if it is provided in connection with the life agent’s employment. The life insurer will be liable for FBT on the taxable value of the benefit. The value of the benefit is the amount by which the amount normally paid by the general public for the same type of policy exceeds the amount paid by the life agent or associated person. [Public ruling BR Pub 10/08, TIB vol 22:5 (June 2010) at 8-17 applies from the first day of the 2008-2009 income year].

540.175   Superannuation scheme contributions [ss CX 13, CX 32, RD 37, RD 65]

A contribution by an employer to a superannuation scheme for the benefit of an employee is a fringe benefit if the contribution is not an “employer’s superannuation cash contribution” [s CX 13]. An “employer’s superannuation cash contribution” is a contribution in money made to a superannuation fund by an employer for the benefit of one or more employees [s RD 65]. This means that only non-monetary superannuation scheme contributions are subject to FBT. An example of a non-monetary contribution is the provision of services or office space by an employer to an employee superannuation scheme.

The provision of services to a superannuation fund is not subject to FBT if the expenditure would have been deductible if it were incurred by the superannuation fund itself [s CX 32].

A “superannuation scheme” [s YA 1] is:

(a) A trust or unit trust established by its trust deed mainly to provide retirement benefits to natural persons or to pay benefits to superannuation funds;
(b) A non-resident company (that is not a unit trust) established mainly to provide retirement benefits to members or their relatives who are natural persons; or
(c) An arrangement constituted under an Act of Parliament of New Zealand, other than the Social Security Act 1964, mainly to provide retirement benefits to natural persons; or
(d) An arrangement constituted under the legislation of a country, state or local authority outside New Zealand mainly to provide retirement benefits to natural persons.

The value of the benefit is the amount of the contribution made by the employee. If the employer is registered for GST and is able to claim an input tax deduction for the contribution, the amount is the GST-inclusive amount [s RD 37].

Monetary contributions to employee superannuation schemes (referred to as “employer’s superannuation benefits”) are not subject to FBT, but give rise to a liability for employer’s superannuation contribution tax [see 1080.105, 1390.45].

540.180   Unclassified benefits [ss CX 2(1)(b)(ii), CX 37]

A benefit other than those described in the preceding paragraphs (as described in ss CX 6 to CX 16), provided by an employer to an employee in connection with their employment, is also a fringe benefit if it is not an excluded benefit. These other benefits are referred to as “unclassified benefits”.

Unclassified benefits consist primarily of free, subsidised or discounted goods and services provided by employers to employees.
540.185  **Free or discounted goods** [s RD 40]

When an employer (or another person under an arrangement with the employer) makes free, discounted, or subsidised goods available to its employees, a fringe benefit may arise. The value of the fringe benefit is determined as illustrated below.

<table>
<thead>
<tr>
<th>Origin of goods</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Goods manufactured, produced or processed by the employer (or other person providing them).</td>
<td>The market value of the goods. “Market value” means the lowest GST-inclusive price, at the time the goods were provided to the employee, for which identical goods were sold to an arm’s length buyer (whether wholesaler, retailer, or the public) in the open market in New Zealand in sales on ordinary trade terms.</td>
</tr>
<tr>
<td>Goods purchased by the employer (or other person providing them) from the supplier in an arm’s length deal.</td>
<td>The cost of the goods. “Cost” means the GST-inclusive cost, if the purchaser can claim an input tax credit.</td>
</tr>
<tr>
<td>The employer (or other person) providing the goods is a company included in a group of companies.</td>
<td>Either the market value or the cost of the goods (as explained above), at the option of the company. The amount is determined as if the group of companies were a single company.</td>
</tr>
</tbody>
</table>

The value determined under the rules shown above may not exceed the GST-inclusive open market retail price of the goods. The open market retail price is the price that would apply to a sale that is:

(a) At retail in the open market in New Zealand;
(b) Freely offered;
(c) Made on ordinary trade terms; and
(d) To a member of the public with whom the employer is at arm’s length.

**Example 1:**
Craig, a machinist employed by a bicycle manufacturing company, was given a mountain bike by his employer as a reward for exceeding his yearly production target. The lowest price at which the company sells this model wholesale is $775, including GST. The value of the fringe benefit is $775.

**Example 2:**
A hardware store sells a lawnmower to the public for $399, including GST. The store purchases this model from the manufacturer for $285, including GST. Fiona, an employee, was allowed to purchase one of these lawn mowers at the normal staff discount price of $325, including GST. In this case, no fringe benefit has been provided because Fiona paid more than cost. A fringe benefit would arise only if the lawn mower were sold to her at less than $285 (including GST).

540.190  **Free or discounted services** [s RD 41]

When an employer (or another person under an arrangement with the employer) makes free, discounted or subsidised services available to its employees, a fringe benefit may arise. This does not apply to the making available of a motor vehicle for private use, providing an employment-related loan, or providing subsidised transport — these services are treated as fringe benefits under separate provisions.

The value of the fringe benefit is determined as illustrated below.

<table>
<thead>
<tr>
<th>Type of service</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Services provided by employer as part of the employer’s normal business.</td>
<td>The GST-inclusive price charged by the employer, at the time the services were provided, for the same or similar services to the public in the open market in New Zealand.</td>
</tr>
</tbody>
</table>
Fringe Benefit Tax

540.190(1)

<table>
<thead>
<tr>
<th>Type of service</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Zealand on ordinary trade or professional terms between independent buyers and sellers.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>The GST-inclusive amount that the employer is liable to pay for the services.</td>
</tr>
<tr>
<td>The GST-inclusive price or fee that the employer or supplier of the services would have charged the public for the same or similar services in the open market in New Zealand on ordinary trade or professional terms.</td>
</tr>
</tbody>
</table>

Example:
A dentist’s receptionist, as part of her conditions of employment, receives dental treatment at 50 per cent of the normal fee charged by her employer. During a quarter, she received three hours of treatment. The normal charge to the public is $130 (including GST) per hour. The receptionist is charged $65 per hour. The value of the benefit is $195 \[($130 – $65) \times 3\].

A person who provides services to a group of employees is treated as providing the same or similar services to the public in the open market on ordinary trade or professional terms if the person provides the same or similar services to a group of persons that:

- Negotiates the transaction on an arm’s-length basis; and
- Is comparable in number to the group of employees.

(1) Employee’s home telephone costs
When an employer pays the cost of an employee’s home telephone, the tax treatment depends on who has actually contracted for the supply of the service.

If the employee has contracted with the telephone company for the supply of the telephone service, but the employer pays for it (either by reimbursement or by direct payment), the employee is liable for income tax on any amount that the employer pays that is not an exempt reimbursing allowance under s CW 17. The employer must deduct PAYE from such payments. No FBT liability arises in this situation.

If the employer contracts directly with the telephone service provider for the provision of telephone services to an employee, payment of the rental and toll accounts is a fringe benefit. Any amount that cannot be justified as an exempt allowance will be subject to FBT. In this situation, the employee will not be liable for income tax on any amount the employer pays.

Inland Revenue’s policy on the payment of employee home telephone costs is set out in TIB vol 4:8 (April 1993) at 4-5.

(2) Expatriates’ home leave travel
Free or subsidised travel provided by employers to expatriate employees, to enable them to travel overseas on recreational leave, is liable for FBT.

Organisations may arrange for their employees to work overseas, whether by being employed by overseas employers (secondment), or by remaining with the same employer and being posted overseas for a period. Sometimes the employer provides free or subsidised return overseas travel so that employees (sometimes with their families), can return to their home country for holidays.

Employers who are New Zealand taxpayers are liable for FBT on travel benefits they provide to their expatriate employees (and/or associated persons of those employees) to enable them to take recreational leave overseas. Travel benefits are fringe benefits under either s CX 9 [see 540.125] or s CX 37 [see 540.275].

(3) Brokerage provided by sharebrokers to employees
It is the CIR’s view that, for FBT purposes, the value of brokerage services provided by sharebrokers to their employees is the amount that would be charged by the employer to a member of the general public. The value is thus to be determined on a transaction-by-transaction basis according to the sharebroker’s normal scale of
charges. Brokerage rates are normally calculated on a graduating scale based on the size of the trade, subject to a minimum charge. A “trader rate” may also apply to customers (and employees) who have traded in excess of a specified amount of brokerage. A lower rate may also be charged for online brokerage services [see TIB vol 18:2 (March 2006) at 25-26].

540.193 US Federal Insurance Contributions

Under the United States Federal Insurance Contributions Act (FICA), United States employers may be required to make deductions from the wages of USA citizens working outside the United States, to fund social security benefits. Such employers may also be required to make contributions themselves under the same Act.

Employer contributions paid, and employee contributions required to be deducted from wages and paid under FICA, do not give rise to a fringe benefit and are therefore not subject to fringe benefit tax (FBT) [see Public ruling BR Pub 09/02, TIB vol 21:4 (June 2009) at 2-9].

540.195 Default method of determining value [s RD 27(2), (3)]

If the value of a particular fringe benefit is unable to be determined under ss RD 28, RD 29, RD 33, RD 34, RD 35, RD 36, RD 37, RD 38, RD 39, RD 40 and RD 41, the value of the benefit is the market value or the value determined by the CIR. For these purposes “market value” means the price, at the time the goods or services were provided to the employee, for which the goods or services would normally sell in the open market in New Zealand to a member of the public at arm’s length if freely offered and made on ordinary trade terms.

540.200 Excluded benefits — general scope [s CX 2(1)(c)]

The following benefits are excluded benefits and are therefore not subject to FBT:

<table>
<thead>
<tr>
<th>Excluded benefit</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>A benefit provided by an employer to an employee in connection with their employment, to the extent that it is assessable income (e.g., salary and wages).</td>
<td>s CX 4</td>
</tr>
<tr>
<td>A benefit provided by an employer to an employee in connection with their employment, to the extent that it is exempt income. The exclusion does not include: (a) an exempt reimbursing allowance [s CW 17] provided by an employer to enable an employee to provide a benefit to another person; or (b) A payment by an employer of a life insurance premium that is excluded from being expenditure on account of an employee under s CE 5(3)(f) to (i).</td>
<td>s CX 5(1), (2)</td>
</tr>
<tr>
<td>A benefit provided by an employer to an employee in connection with their employment, to the extent that it would have been exempt income if paid in cash. This does not apply to interest, dividends, or an exempt reimbursing allowance provided by an employer to enable an employee to provide a benefit to another person.</td>
<td>s CX 5(3), (4)</td>
</tr>
<tr>
<td>The private use of a motor vehicle by an employee when the vehicle is a work-related vehicle.</td>
<td>s CX 6(2), 540.85</td>
</tr>
<tr>
<td>The private use of a motor vehicle by an employee on any day the vehicle is used for an emergency call.</td>
<td>s CX 6(3), 540.75</td>
</tr>
</tbody>
</table>
Fringe Benefit Tax 540.200

**Excluded benefit**

The private use of a motor vehicle by an employee when the employee is regularly absent from home on business trips.

Employee share loans.

Loans provided under an employee share purchase scheme.

A loan provided by a superannuation fund to the extent the loan constitutes income to the fund.

An advance of salary or wages if the total advances outstanding by the employee do not exceed $2,000 at any time during the FBT period, and the employment contract does not require the employer to make the advance.

An employer’s superannuation contribution. Such contributions are subject to employer’s superannuation contribution tax or PAYE.

A specified insurance premium or any contribution to the insurance fund of a friendly society that relates to an accident insurance contract, or cover and entitlements for work-related personal injury, in force before 1 July 2000.

A benefit provided by an employer to an employee, in connection with their employment, to the extent that it removes a need, that would otherwise exist, for the employer to pay the employee an exempt allowance under s CW 13, provided it does not enable the employee to provide a benefit to another person.

A benefit provided by an employer to an employee, in connection with their employment, to the extent that it removes a need, that would otherwise exist, for the employer to pay the employee an allowance for additional transport costs.

A benefit provided by an employer to an employee, in connection with their employment, to the extent that it removes a need, that would otherwise exist, for the employer to pay the employee an exempt relocation payment under s CW 17B.

A benefit provided by an employer to a relative of an employee, instead of to the employee under s CX 19(1)(b), because the employee has a temporary change in their place of work while in the same employment. Certain restrictions apply.

A benefit by way of subsidised transport or expenditure incurred by an employer on transport or accommodation, if the expenditure relates to work-

Excluded benefit

- Related travel, does not relate to leave or a vacation and is not increased as a result of the benefit.
- The private use, and the availability for private use, of business tools with a GST-inclusive cost not exceeding $5,000.
- A transfer of value to a non-executive director that is a dividend under s CD 20(2), if made solely because of their capacity as a non-executive director.
- A benefit provided by an employer that is used or consumed by an employee on the employer’s premises. The exemption does not apply to free, discounted, or subsidised travel, accommodation or clothing, nor to benefits received on premises occupied by an employee for residential purposes. This exemption also applies to benefits provided on the premises of other companies in the same group of companies as the employer.
- Benefits provided by an employer to an employee that relate to the employee’s health or safety.
- A benefit provided by a charitable organisation to an employee, except when the employee is engaged in a non-charitable business activity.
- A benefit received by an employee who derives PAYE income payments, none of which are liable for income tax.
- An employer’s assistance with the preparation of an employee’s tax return or income statement [see 1270.75].
- The value of accommodation that an employer provides to an employee in connection with the employment or services. “Accommodation” is defined as board or lodging, or the use of a house or living premises, or the use of part of a house or living premises. [This type of benefit is assessable income for the employee under s CE 1(c)].
- A benefit consisting of entertainment, provided by an employer to an employee, to which the limitation rule [s DD 2] applies. Exceptions apply.
- Distinctive work clothing provided, by sale or otherwise, to an employee by an employer.
- Income protection insurance premiums paid by an employer, where the policy is for the benefit of an employee and any payment of insurance would be assessable income of the employee.
- A benefit by way of the provision of services to a superannuation fund to the extent that the expenditure

Excluded benefit

incurred would have been an allowable deduction of the superannuation fund, if incurred by the fund.

Bulk discounts secured at arm’s-length through unrelated third parties by employers for their employees.

Unclassified benefits totalling less than $300 per employee per quarter, if the total such benefits provided to all employees is less than $22,500 for the year.

A benefit provided to an employee, within eight weeks of 4 September 2010 or 22 February 2011, to give them relief from the adverse effects of the Canterbury earthquake. The exclusion is subject to a number of restrictions.

540.205 Employee share loans [ss CX 10(2)(a), CX 35]

Employee share loans are not subject to FBT. An “employee share loan” is a loan made to an employee if:

(a) The sole purpose of the loan is to enable the employee to buy shares, rights or options in the company that is their employer (or is a company associated with their employer);

(b) The loan is used only for that purpose;

(c) The employee beneficially owns the shares, rights, or options throughout the term of the loan;

(d) The loan must be immediately repaid if the employee stops being the beneficial owner of any of the shares, rights, or options;

(e) The company issuing the shares has a dividend-paying policy throughout the term of the loan;

(f) The company issuing the shares, rights or options is not a qualifying company;

(g) The loan is not made under a share purchase scheme [s DC 12]; and

(h) The employer and the employee are not associated persons [see 540.35].

540.210 Employee tax returns [s CX 27]

If an employer provides an employee with assistance in the preparation of the employee’s income tax return or income statement [see 1270.75], the benefit is not subject to FBT. This applies only if the expenditure incurred by the employer would have been deductible under s DB 3 had it been incurred by the employee.

The exemption is allowed because the employee would have been entitled to an income tax deduction if the employee had incurred the expenditure.

540.215 Benefits provided by charitable organisations [s CX 25]

A benefit provided by or on behalf of a charitable organisation to an employee is excluded from the definition of fringe benefit, and is thus exempt from FBT. However, such a benefit is a fringe benefit to the extent that the employee receives it mainly in connection with their employment, where the employment consists of the carrying on by the organisation of a business whose activity is outside its benevolent, charitable, cultural or philanthropic purposes.

A “charitable organisation” is an association, fund, institution, organisation, society or trust to which s LD 3(2) or sch 32 applies [s YA 1]. Local authorities, public authorities and universities are not charitable organisations. See 1395.75 for further details.
Public Ruling 09/03

The CIR’s interpretation of when an activity will be a business activity that is outside the organisation’s benevolent, charitable, cultural, or philanthropic purposes, and when a benefit will be received by an employee mainly in connection with such activities, is set out in public ruling BR Pub 09/03 [see TIB vol 21:6 (August 2009), at 12-19], which applies from the first day of the 2008-2009 income year. The ruling provides as follows:

(a) A fringe benefit is not provided by a charitable organisation if a non-monetary benefit is received by an employee of the organisation mainly in connection with employment in an activity that either:
   (i) Carries out any of the organisation’s benevolent, charitable, cultural, or philanthropic purposes; or
   (ii) Does not constitute a profession, a trade, or an undertaking that is carried on for profit.

(b) A fringe benefit is provided by a charitable organisation if a non-monetary benefit is received by an employee of the organisation mainly in connection with employment in an activity that:
   (i) Cannot be characterised as carrying out any of the organisation’s benevolent, charitable, cultural, or philanthropic purposes; and
   (ii) Constitutes a profession, a trade, or an undertaking that is carried on for profit (even if that profit is to be applied solely for the purposes of the charitable organisation).

(c) A non-monetary benefit that is provided to an employee of a charitable organisation is received by an employee “mainly in connection with” their employment in a business activity outside the organisation’s benevolent, charitable, cultural, or philanthropic purposes, if the employee is employed:
   (i) Solely in the business activity of the organisation; or
   (ii) In both the business activity and in activities related to the charitable purpose of the organisation, and the benefit arises mainly in connection with the employment in the business activity; or
   (iii) In both the business activity and in activities related to the charitable purpose of the organisation, the benefit arises equally in connection with both the business and non-business activities, and the employee is predominantly employed in the business activities of the employer.

A charitable organisation that carries on its activities in a businesslike manner and which has the intention and record of making surpluses is not carried on “for profit”, unless the organisation’s constitution states that one of its purposes is to make a profit. As such organisations are not carried on “for pecuniary profit”, they are not carrying on a “business” for the purposes of the FBT exemption.

Activities involved in carrying out the charitable objects of a charitable organisation, or directly facilitating the carrying out of the charitable objects (such as fundraising or administrative or clerical activities) will not be treated as being business activities for the purposes of s CX 25(1). However, trading activities that are carried on to raise funds for the charity, and that are not themselves the charitable purposes of the charity, will be treated as business activities of the charitable organisation, if they satisfy the “business” test.

A benefit will be provided to an employee of a charitable organisation mainly in connection with employment in a non-charitable business activity of the organisation if the benefit arises mainly in connection with such a business activity. If an employee is employed both in activities relating to the charitable purpose of the organisation and in non-charitable business activities, it will be necessary to determine which activity the benefit arises primarily in relation to. If a benefit arises equally in connection with both the business and non-business activities carried out by an employee, the benefit will be provided mainly in connection with the activity in which the employee is predominantly employed.

If a benefit is provided mainly in connection with employment in a non-charitable business activity of an organisation, then the entire benefit will be a fringe benefit; it will not be apportioned between its relation to
charitable activities and non-charitable business activities. The use of the words “to the extent to which” in s CX 25(1) does not mean that the benefit should be apportioned.

**Example 1**

A charitable organisation has the principal purpose of providing education through a private school. The organisation is a charitable organisation for the purposes of the FBT rules, because it is not carried on for the private pecuniary profit of any individual and its funds are applied wholly or principally for charitable purposes (ie the advancement of education) within New Zealand. It provides a car to its principal for work and private use. The organisation is not liable for FBT on the benefit arising from the provision of the low interest loan to Peter. The organisation provides a car to its school principal for work and private use. The organisation is not liable for FBT on the benefit arising from the provision of the low interest loan to Peter. This is because the benefit arises in relation to Peter’s employment in the charitable organisation carrying out its charitable purposes. The organisation is not liable for FBT on the benefit arising from the provision of the low interest loan to Peter. The organisation is not liable for FBT on the benefit arising from the provision of the low interest loan to Peter. This is because the benefit arises in relation to Peter’s employment in the charitable organisation carrying out its charitable purposes. The benefit arises “mainly in connection with” those activities.

**Example 2**

A charitable organisation has the principal purpose of relieving poverty by running a food bank. The organisation is a charitable organisation for the purposes of the FBT rules, because it is not carried on for the private pecuniary profit of any individual and its funds are applied wholly or principally for charitable purposes (ie the relief of poverty) within New Zealand. It runs a shop that sells office supplies (purchased from a wholesaler) to the public. The organisation provides a car to its farm manager for work and private use. The farm manager is employed in respect of the charitable organisation carrying out its charitable purposes (ie the advancement of education). The organisation provides a car to its farm manager for work and private use. The farm manager is employed in respect of the charitable organisation carrying out its charitable purposes (ie the advancement of education). The organisation is not liable for FBT on the benefit arising from the provision of the low interest loan to Peter. The organisation is not liable for FBT on the benefit arising from the provision of the low interest loan to Peter. This is because the benefit arises in relation to Peter’s employment in the charitable organisation carrying out its charitable purposes. The organisation is not liable for FBT on the benefit arising from the provision of the low interest loan to Peter. This is because the benefit arises in relation to Peter’s employment in the charitable organisation carrying out its charitable purposes. The benefit arises “mainly in connection with” those activities.

(2) **Credit facilities not exempt**

Benefits provided by way of short-term charge facilities (eg credit cards) by a charity to an employee are not exempt from FBT if the value of the benefit for the tax year exceeds five per cent of the employee’s salary or wages for the tax year [see 540.152].

**540.220 Employees of non-resident employers [s CX 26]**

In some circumstances, benefits provided in New Zealand to the employees of non-resident employers are exempt from FBT.

Benefits received by employees who do not receive any PAYE income payments that are taxable in New Zealand in the same FBT period are excluded from the definition of “fringe benefit”. Section CX 26 excludes from the definition of “fringe benefit” benefits received by an employee who does not receive any PAYE income payments that are taxable in New Zealand in the same FBT period. any PAYE income payments are
generally taxable in New Zealand if the earner is not otherwise exempt and payments are either earned by a New Zealand resident or earned in New Zealand.

When a New Zealand resident employee works in New Zealand for a non-resident employer, the employee’s PAYE income payments are taxable in New Zealand [ss CE 1, YD 4(4)], so any fringe benefits the employee receives are subject to FBT.

When a non-resident employee works in New Zealand for a non-resident employer, the employee’s PAYE income payments may be tax exempt in New Zealand under s CW 19 or the provisions of an applicable DTA. When none of the employee’s PAYE income payments are taxable in New Zealand in an FBT period, any fringe benefits that the employee receives in that period are not subject to FBT. When some or all of the employee’s PAYE income payments are taxable in New Zealand in an FBT period, any fringe benefits that the employee receives in that period are subject to FBT.

540.225 Benefits provided by overseas branches [s CX 26]

Benefits received by an employee in any FBT period in which that employee is not liable for New Zealand income tax on any PAYE income payments received during that period are excluded from the definition of fringe benefit [see 540.220]. This applies only when the employee derives no PAYE income payments liable to New Zealand income tax in that particular FBT period. If the employee derives a PAYE income payment that is liable to New Zealand tax in a FBT period, any benefits provided during that period will not be exempt. This exclusion may affect the FBT liability of New Zealand employers that transfer employees to overseas branches.

Example 1:
Phillipa, a United States national, was appointed manager of the Bermudan branch of a New Zealand bank, Tui-Bank NZ. She was seconded to New Zealand for three months’ training before taking up her position. In that time she received PAYE income payments from Tui-Bank NZ, which are subject to New Zealand income tax under s CE 1. She received the first payment on 4 August, and the last on 27 October of the same year. Tui-Bank NZ pays FBT on a quarterly basis. Phillipa is an employee as she receives a PAYE income payment on which she is liable for New Zealand income tax. Tui-Bank NZ is accordingly her employer. On return to Bermuda, Phillipa is provided with a car, which is paid for by Tui-Bank NZ. The car is completely at her disposal, for private as well as business purposes. Whether Tui-Bank NZ is subject to FBT on the provision of a car in Bermuda depends upon when the car is provided to Phillipa. If the car is provided on her return to Bermuda on 1 November, Tui-Bank NZ is liable for FBT on that fringe benefit in the quarter ending 31 December. This is because in that quarter she received PAYE income payments liable to New Zealand income tax. She is an employee for FBT purposes in that quarter. Tui-Bank NZ does not have to account for FBT on the car in the quarter starting on 1 January of the following year because Phillipa does not receive any PAYE income payment for which she is liable for New Zealand income tax in that FBT period. Therefore, for that quarter, provision of the car is not a fringe benefit. However, if Phillipa were liable for New Zealand income tax on PAYE income payments she received, Tui-Bank NZ would have to account for FBT in that quarter.

Example 2:
Mike, a New Zealand resident, is appointed as Phillipa’s assistant manager at the Bermudan branch. Mike receives the same training in New Zealand and receives a car on the same conditions as Phillipa. When a New Zealand resident is transferred overseas to work for a branch of a New Zealand company, the analysis is different to that of a non-resident. If the New Zealand resident retains his or her resident status, a liability to New Zealand income tax continues under s BD 1. Therefore, any PAYE income payments will be subject to New Zealand income tax, and s CX 26 will not operate to exclude the fringe benefit. If the resident loses resident status (under a DTA or the residence tests in s YD 1), the exclusion in s CX 26 will apply. If Mike retains his New Zealand resident status, Tui-Bank NZ will continue to be subject to FBT on the provision of the car. If Mike loses his New Zealand resident status, Tui-Bank NZ will be subject to FBT in the same way as it is for Phillipa (in the previous example).

540.227 Benefits provided instead of allowances [ss CW 18(3), CX 19]

A benefit provided by an employer to an employee in connection with their employment is not a fringe benefit if it removes the need that would otherwise exist for the employer to pay the employee:

(a) An allowance that would have been exempt under s CW 17 [see 330.20] and would not have been paid to enable the employee to provide a benefit to another person; or

(b) An allowance reimbursing an employee for additional transport costs incurred in connection with their employment, for the benefit of the employer in travelling between home and work. The benefit is exempt only if the allowance would have been attributable to one or more of the following factors:
(i) The day or time of day when the work duties are performed;
(ii) The need to transport goods or material for use or disposal in the course of the employee’s work;
(iii) The requirement to fulfil a statutory obligation;
(iv) A temporary change in the employee’s place of work while in the same employment;
(v) Any other condition of the employee’s work;
(vi) The absence of an adequate public passenger transport service that operates fixed routes and a regular timetable for the employee’s place of work.

(c) An amount that, if it had been paid, would have been an exempt relocation payment under s CW 17B [see 330.40].

(1) Travel benefits provided to relatives of employees [s CX 19(2)]
The cost to an employer of paying for a spouse, civil union partner, de facto partner or other relative to visit an employee while the employee is temporarily working away from home is not a fringe benefit. The exemption is limited to the amount that would have been exempt from FBT (under (b) above) if the employee had made the visit home instead.

For this purpose, a “relative” is defined as a person connected with another person by:
(a) Blood relationship, within the second degree;
(b) Marriage, civil union, or de facto relationship;
(c) Marriage, civil union or de facto relationship with a person who is connected by blood relationship within the second degree to the other;
(d) Adoption as a child of the other;
(e) Adoption as a child of a person who is within the first degree of relationship to the other; or
(f) Being the trustee of a trust under which a relative has benefited or will benefit [s YA 1].

540.230 Benefits provided on employer’s premises [s CX 23] A benefit (other than free, discounted, or subsidised travel, accommodation, or clothing) is not subject to FBT if the benefit is:
(a) Provided to the employee by the employer and used or consumed by the employee on the employer’s premises or on the premises of a company in the same group of companies as the employer; or
(b) Provided to the employee by a company that is in the same group of companies as the employer and used or consumed by the employee on the employer’s premises or on the premises of the company that provides the benefit.

The premises of a person include premises that the person owns or leases and premises (other than the employer’s) on which an employee is required to perform duties for the employer, but do not include premises occupied by an employee for residential purposes. This exemption will apply mainly to free, discounted or subsidised goods or services (excluding free, discounted, or subsidised travel, accommodation, or clothing) used or consumed by the employee on the employer’s premises, including car parks [see 540.235].

540.235 Employer provided car parks [s CX 23]
Benefits used or consumed by an employee on the employer’s premises are exempt from FBT [see 540.230]. This exemption includes a car park provided to an employee where:
(a) The car park is on land or in a building owned or leased by the employer;
(b) There is an exclusive right to occupy the property; and
(c) There is a legal estate or interest in that property.

The exemption includes car parks provided on the premises of companies in the same group of companies as the employer.
The exemption also applies to a space in a public car park where the space is subject to a lease between the employer and the proprietor of the car park [see Public ruling BR 99/6 (expired 31 March 2005), TIB vol 11:8 (September 1999) at 12; TIB vol 15:6 (June 2003) at 7]. The ruling includes the examples summarised below.

**Example**  
The employer provides employees with car parks on land across the road from where the employer conducts its business. The employer leases the land under a written and enforceable lease agreement. The leased land is part of the employer’s premises. The car parks are exempt and no FBT liability arises. It does not matter that the employer carries out no business on the leased land.

The employer arranges parking at a commercial car park for three employees. No particular spaces are designated for them, but they are able to park in a reserved area in which spaces are always available for the three employees.

Although the employee’s have exclusive use of three specific spaces, the car park is not part of the employer’s premises because the employer does not have ownership or legal possession of the car parks. Specific car parks are not allocated to the employer. The car parks are not exempt and are subject to FBT.

The employer arranges parking at a commercial car park for three employees. The employer is allotted three specific parking spaces. The car park proprietor bills the employer direct. The car parks are not subject to a lease or rental agreement although the employee’s have exclusive use of three specific spaces, the car park is not part of the employer’s premises because the employer does not have ownership or legal possession of the car parks. The employer merely has the right to use them. The car parks are not exempt and are subject to FBT.

A company with many employees enters into a written and enforceable agreement to lease the whole of the top floor of a nearby car park building. Only the company’s employees can access the car parks.

**Example**  

An employer provides each of its employees with a Christmas hamper, containing food and wine, worth $250. Although the benefit is entertainment expenditure within the meaning of s DD 2, it is subject to FBT rather than the limitation rule because the benefit is not received in the course of employment and the employees can choose when to use the benefit.

Any entertainment that is received or used on the employer’s premises is exempt from FBT. Entertainment that is subject to FBT is fully deductible [see 540.355].

**540.240 Entertainment [s CX 29]**

In general, expenditure on entertainment that is subject to the limitation rule [s DD 2] is not subject to FBT but is subject to the 50 per cent deductibility restriction [see 350.30]. However, an entertainment benefit is a fringe benefit if the employee does not receive or use the entertainment benefit in the course of their employment, or as a necessary consequence of their employment duties, and either:

(a) The employee may choose when to receive or use the benefit; or
(b) The entertainment is enjoyed or consumed outside New Zealand.

**Example:**

An employer provides each of its employees with a Christmas hamper, containing food and wine, worth $250. Although the benefit is entertainment expenditure within the meaning of s DD 2, it is subject to FBT rather than the limitation rule because the benefit is not received in the course of employment and the employees can choose when to use the benefit.

**540.242 Benefits related to health or safety [s CX 24]**

A benefit that an employer provides to an employee is not subject to FBT if:

(a) It is related to the employee’s health or safety;
(b) It is aimed at hazard management in the workplace under the Health and Safety in Employment Act 1992; and
(c) It would be excluded from being a fringe benefit by s CX 23 if it were provided on the employer’s premises.

Such benefits are exempt from FBT anyway if provided on the employer’s premises [see 540.230]. Section CX 24 extends the exemption to cover health and safety benefits provided elsewhere. The exemption
Fringe Benefit Tax

includes, for example, health checks and influenza vaccinations administered off the employer’s premises, but does not include employer-paid health insurance premiums or gym membership fees.

540.245 Distinctive work clothing [s CX 30]

Distinctive work clothing provided by employers to employees is not subject to FBT. This applies whether the clothing is given or sold at a discount to employees.

“Distinctive work clothing” is clothing that:

(a) Is worn by an employee as a uniform (or part of a uniform) that is identifiable with the employer;
(b) Is worn during or as an incidence of employment; and
(c) Is not clothing that employees would normally wear privately.

Clothing is considered to be identifiable with the employer if:

(a) A name, logo or other identification that the employer regularly uses is permanently and prominently displayed on the clothing; or
(b) The colour scheme, pattern or style of the uniform is readily associated with the employer.

Example:

A jacket, shirt, and trousers are supplied to an employee. The jacket has identification on it, but the jacket is often removed during the working day. To satisfy the “permanently” requirement, the shirt would also need to have identification on it. If only a single item of clothing is provided by an employer (eg a jersey), only that item needs to display identification to be exempt.

540.247 Business tools [s CX 21]

The private use or availability for private use of a business tool by an employee is not a fringe benefit. This exemption applies when:

(a) The business tool is provided to the employee by the employer mainly for business use; and
(b) The GST-inclusive cost of the business tool does not exceed $5,000.

A “business tool” is defined as an item that is used by an employee in the performance of their work duties and, in the absence of s CX 21, would give rise to an unclassified benefit [s YA 1]. It therefore includes items such as cell phones and laptop computers, which would otherwise give rise to an FBT liability if used privately by an employee.

A business tool may be provided mainly for business use even if it is not taken to and used on the employer’s premises, if the employee performs a significant part of their duties away from the premises.

540.250 Exemption for minor unclassified benefits [ss CX 37, RD 45]

A special exemption applies to unclassified benefits [s RD 45], which consist mainly of free or discounted goods and services [see 540.180 to 540.190]. The exemption applies as follows:

(a) If the taxable value of all unclassified benefits provided to an employee during a quarter is $300 or less, those benefits are exempt from FBT. However, this exemption does not apply if the total taxable value of all unclassified benefits provided by the employer to all employees during the last four quarters, including the current quarter, exceeds $22,500.

(b) If an employer pays FBT on an annual or income year basis and the taxable value of all unclassified benefits provided to an employee during the year is $1,200 or less, those benefits are exempt from FBT. However, this exemption does not apply if the total taxable value of all unclassified benefits provided by the employer to all employees during the year exceeds $22,500.

(c) Where the employer is accounting for FBT on an income year basis for a period of more or less than a full year (eg because the employer has commenced or ceased business), or for an income year with a non-standard balance date, the amounts of $1,200 and $22,500 are increased or decreased pro rata according to the number of days in the period.

Before 1 April 2009, the exemption thresholds were $200, $800 and $15,000.
Example 1:
Mark has two employees, Therese and John. During a quarter, Mark provided Therese with discounted goods with a taxable value of $170 and John with discounted goods with a taxable value of $340. Mark has to pay FBT on the full amount of the $340 benefit provided to John, but the $170 benefit provided to Therese is exempt because it is less than $300 (assuming the $22,500 annual threshold is not exceeded). The first $300 of John’s fringe benefit is not exempt.

Example 2:
Kiwifone Ltd provides discounted telephone and internet services to a large number of its employees, but the taxable value of the services provided to any one employee during a quarter never exceeds $300. During six consecutive quarters, the taxable values of services provided to all of its employees were as follows:

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Total for quarter</th>
<th>Total for quarter and previous three quarters</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>$5,300</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>$5,400</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>$6,600</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>$5,700</td>
<td>$23,000</td>
</tr>
<tr>
<td>5</td>
<td>$4,500</td>
<td>$22,200</td>
</tr>
<tr>
<td>6</td>
<td>$5,800</td>
<td>$22,600</td>
</tr>
</tbody>
</table>

In quarter 4, Kiwifone Ltd will have to pay FBT on $5,700. This is because, even though the value of the benefits provided to any one employee does not exceed $300, the total taxable value of unclassified benefits provided in the last four quarters including quarter four to all employees ($23,000) is more than $22,500. However, FBT is not payable on the services provided in quarter five because the total taxable value in that quarter and the previous three quarters ($22,200) is less than $22,500. Will FBT be payable in quarter six?

For the sake of keeping the example simple, the issue of whether the company is liable for FBT during the first three quarters has been ignored. However, in reality the potential FBT liability for each quarter would have to be determined.

540.252 Adjustments for unclassified benefit exemptions on amalgamation [s RD 46]

When a company ceases to exist through amalgamation, or when a new company is established on amalgamation, the exemptions available under s RD 45 must be adjusted in accordance with the following paragraphs.

If the amalgamating company pays FBT quarterly, the figure of $22,500 referred to in s RD 45(2)(b) [see 540.250] must be reduced by the amount calculated under the following formula:

\[
\frac{($22,500 \times \text{number of days in the quarter after amalgamation})}{\text{days in the quarter}}
\]

If an amalgamated company (being a new company established on amalgamation) pays FBT quarterly, the figure of $22,500 referred to in s RD 45(2)(b) must be reduced by the amount calculated under the following formula:

\[
\frac{($22,500 \times \text{number of days in the quarter before amalgamation})}{\text{days in the quarter}}
\]

If the amalgamating company pays FBT annually, the figure of $22,500 referred to in s RD 45(2)(b) must be reduced by the amount calculated under the following formula:

\[
\frac{($22,500 \times \text{number of days in the year after amalgamation})}{365}
\]

If an amalgamated company (being a new company established on amalgamation) pays FBT annually, the figure of $22,500 referred to in s RD 45(2)(b) must be reduced by the amount calculated under the following formula:

\[
\frac{($22,500 \times \text{number of days in the year before amalgamation})}{365}
\]

Note: From 1 April 2009, the $22,500 threshold increased from $15,000.
540.255 Exemptions for goods sold at discount [ss CX 33, RD 42, RD 43, RD 44]

Goods sold to employees at a discount are treated as having been sold at cost (and therefore no fringe benefit arises) if:

(a) The goods are sold to an employee in the normal course of business, and  
   (i) The normal retail price of the goods is $200 or less;  
   (ii) The price of the goods to the employee is less than cost as a result of a normal staff discount; and  
   (iii) The staff discount is no more than five per cent of the normal retail price; or  
(b) The goods are sold to an employee on a day when the employer is selling identical goods at a special price to the public; and  
   (i) The normal retail price of the goods is $200 or less;  
   (ii) The price of the goods to the employee is less than cost as a result of a staff discount offered to the employee in addition to any other discount;  
   (iii) Immediately before or after the sale, a reasonable quantity of those goods is available in the open market in New Zealand; and  
   (iv) The price is at least 95 per cent of the cost of the goods, or at least 95 per cent of the price of identical goods to the public on the day of the sale, whichever is the lesser.

The normal retail price is the price at which identical goods would be sold to an arm’s length buyer in the open market in New Zealand in a sale freely offered and made on ordinary trade terms [ss RD 42, RD 43]. “Cost” means the GST-inclusive cost of the goods to a registered person. “Price” means the GST-inclusive price to a registered person [s YA 1].

The exemptions also apply if a company that is included in a group of companies sells goods to an employee of another company in the group. The sale is treated as if it were made directly from employer to employee [s RD 44].

Discounts provided to employees on goods purchased from a third party under a bulk discount arrangement, entered into between the employer and the third party, are not fringe benefits if:

(a) The third party is not associated with the employer; and  
(b) The same discount would have been available to any other group of comparable size negotiating at arm’s-length [s CX 33].

540.257 Exemption for benefits for Canterbury earthquake relief [s CZ 24]

A benefit provided by an employer to give relief to an employee from the adverse effects of one of the Canterbury earthquakes on 4 September 2010 or 22 February 2011 is exempt from FBT if the benefit:

(a) Would be a fringe benefit, if not exempted;  
(b) Is received within eight weeks following the day of the earthquake;  
(c) Is not in place of a PAYE income payment;  
(d) Is not dependent on the seniority of the employee;  
(e) Is available to a non-associated employee, if the benefit is provided to an associated employee; and  
(f) Is treated by the employer as not being a fringe benefit.

If the employer can estimate the value of the benefits provided to an employee in respect of one earthquake, the benefits will be exempt to the extent that the $3,200 exemption for that earthquake has not been used to exempt employee income under s CZ 23 [see 370.40]. A separate $3,200 exemption limit applies to each earthquake.
If the employer cannot estimate the value of the benefits provided to an employee they are treated as exempt, with no monetary limit.

Example:
Many employees of a large Christchurch employer were badly affected by the earthquake on 4 September 2010. To help these employees, on the day following the earthquake, the employer gave each of them $2,000 in cash, as well as clothing, bedding, food and water at a cost of $1,500 per employee. On 6 September 2010 the employer set up a welfare centre where its employees and their families could call in to have a hot meal, get medical attention, relax or get some sleep in a secure environment. The welfare centre was closed down on 5 December 2010. The total cost of running the welfare centre was $2,500 per week.

The $2,000 cash paid to each employee is exempt income under s CZ 23, as it is less than $3,200. The cost of the clothing, bedding, food and water provided to each employee is partially exempt. The value provided to each employee ($1,500) can be estimated, but the total of the income exemption and the fringe benefit exemption is limited to $3,200. Therefore only $1,200 of the $1,500 value is exempt. The other $300 is a taxable fringe benefit, although it may be exempt under the $300 quarterly exemption if no other unclassified benefits were received by the employee during the quarter [see 540.250]. The cost of running the welfare centre for the eight weeks following 6 September 2010 ($20,000) is also exempt under s CZ 23 because the value of the benefit to individual employees would be difficult to estimate. The cost for the ninth and subsequent weeks is not covered by the Christchurch earthquake exemption. Note, however, that if the welfare centre had been set up on the employer’s premises, the total cost would be exempt under s CX 23 [see 540.230].

540.260 Calculation of taxable value [s RD 54(1), (2)]
The taxable value of a fringe benefit is the value of the benefit (as determined under ss RD 27 to RD 46) reduced by:
(a) The amount paid by the employee for the fringe benefit; or
(b) A set percentage, when an employee is part owner of the motor vehicle.

540.265 Employee contributes towards cost of fringe benefit [s RD 54(2)-(4)]
The value of a fringe benefit is reduced by any payment made by an employee (or an associated person) for the receipt of a fringe benefit other than an employment-related loan. The value of a fringe benefit cannot be reduced by the estimated value of maintenance performed on an employer’s motor vehicle by an employee. Only monetary contributions by the employee may be deducted (eg if the employee purchased parts or oil for the vehicle, these could be deducted).

Example:
Rob has the unrestricted use of a car provided by his employer. The GST inclusive cost of the car was $32,995. During one FBT quarter, Rob personally purchased petrol, oil, and tyres for the car at a total cost of $419 (including GST). Rob was not reimbursed by his employer for these expenses. The value of the fringe benefit for the quarter (using the cost price method), is $1,650 (five per cent of $32,995). The taxable value of the fringe benefit is $1,231 ($1,650 − $419).

540.270 Employee is part owner of motor vehicle [ss RD 55, RD 56, RD 57]
When an employee is part owner of a motor vehicle that is made available by the employer for the employee’s private use, the employer’s FBT liability is reduced. The value of the fringe benefit is reduced by:
(a) 2.5 per cent of the amount contributed by the employee towards the cost of the car, if FBT is calculated on a quarterly basis;
(b) 2.5 per cent per quarter for each quarter in which the vehicle was part-owned, if FBT is calculated on an annual basis; or
(c) Ten per cent of the amount contributed by the employee towards the cost of the car, if FBT is calculated on an income year basis [ss RD 55, RD 56].

This applies also when the vehicle is part owned by a person associated with the employee. Special rules apply if the employer values the vehicle on a GST-inclusive basis [s RD 57, see 540.130].
If the vehicle is subject to FBT on an income year basis and the return period is more or less than a full year because:
Fringe Benefit Tax

(a) The employer commenced or ceased business during the year; or
(b) The employer furnished a tax return for a period longer or shorter than a normal income year after a change in balance date;

the amount by which the value of the fringe benefit is reduced is the employee’s contribution towards the cost of the vehicle multiplied by the following percentage:

\[
\frac{10\% \times \text{number of days in the period}}{365}
\]

Example:

Snowy Ltd, a close company, commenced business on 18 August. On the same day it purchased a motor vehicle for the use of Steven, one of its shareholder-employees. The GST-inclusive cost of the vehicle was $25,000. Steven agreed to contribute $5,000 towards the cost of the vehicle, as he will be able to use it privately. Snowy Ltd elected to pay its FBT on the vehicle on an income year basis. The company has a 31 March balance date. The period covered by the FBT return for the first income “year” is 226 days (assuming 28 days in February). The value of the benefit is:

\[
($25,000 \times 24\%) \times \frac{226}{365} = $3,715.07
\]

The value of the benefit is reduced by:

\[
$5,000 \times \frac{10\% \times 226}{365} = $309.59
\]

The taxable value of the fringe benefit for the first income year is therefore:

\[
$3,715.07 - $309.59 = $3,405.48
\]

If the employee has been a part-owner of the vehicle for only part of an income year, the amount to be deducted from the value of the benefit is reduced (or further reduced) on a pro rata basis depending on the number of days that the employee was a part-owner.

540.275 Benefits incidental to business travel [s CX 20]

When an incidental benefit arises to an employee as a result of their employer providing them with a travel-related benefit, the taxable value of the fringe benefit is zero [s CX 20]. This exemption applies to subsidised transport or expenditure incurred by the employer on accommodation or transport provided to an employee, if the expenditure:

(a) Relates to travel by the employee to enable them to perform their employment duties;
(b) Does not relate to leave or a vacation; and
(c) Is not increased as a result of the benefit.

540.280 FBT rate options [ss RD 26, RD 58, RD 59]

Employers who provide fringe benefits to employees are required to pay FBT [s BE 1(4), RD 26]. Employers must choose one of the following options for calculating and paying their FBT:

(a) Single rate option;
(b) Alternate rate option;
(c) Close company option (income year basis) [see 540.333]; or
(d) Small business option (annual basis) [see 540.330].

Options (c) and (d) are available only if the employer meets the eligibility criteria. The choice of method is made by providing an FBT return setting out the chosen rate. An employer’s decision to pay FBT on a quarterly basis under the single rate option or the alternate rate option cannot be changed [s RD 62(1)].

(1) Single rate option [s RD 58]

For the tax year starting 1 April 2011, employers who elect to use the single rate option must pay FBT at the rate of 49.25 per cent of the taxable value of all fringe benefits for each of the four quarters.

In the final quarter the employer may, instead of calculating FBT at the single rate, calculate it as for the alternate rate option (ie by attributing fringe benefits to the employees who received them and taxing them...
Accordingly. However, an employer may in the final quarter substitute the amount calculated under s RD 59(4) (ie the “multi-rate calculation”) for the amount calculated at the single rate.

(2) **Alternate rate option [s RD 59]**

Under the alternate rate option, employers must (for the tax year starting 1 April 2011) pay FBT in the first three quarters at either 43 per cent or 49.25 per cent of the taxable value of all fringe benefits.

For example, the employer could pay FBT at 43 per cent in the first two quarters, then at 49.25 per cent in the third quarter. For the final quarter, the employer must calculate the FBT liability for the tax year by attributing (as far as possible) the fringe benefits to the employees who received them and calculating the FBT at the rate applicable to the employee on the basis of their total income. Benefits that can’t be attributed are pooled and taxed at a flat rate [see 540.295, 540.300]. FBT paid in the first three quarters is then deducted from the total.

**540.285 Choosing the FBT rate option**

Taxpayers should consider the following factors when deciding whether to adopt the single rate or alternate rate option:

(a) The additional time and possible set-up costs to complete the multi-rate calculations.

(b) The impact of non-attributed benefits. If the business provides a number of non-attributed benefits, it should consider using the multi-rate calculation process.

(c) If employees receiving fringe benefits earn over $70,000, the business should consider using either the single rate option or the simplified multi-rate option when calculating FBT.

(d) If employees receiving fringe benefits are on lower remuneration levels, the business should consider using the multi-rate or the short-form multi-rate calculation process.

**540.295 Attributed fringe benefits [ss RD 47, RD 48, RD 49]**

When calculating the FBT liability in the final quarter using the alternate rate option, certain fringe benefits provided during the year must be attributed to the specific employees who received those benefits [s RD 47]. The following types of fringe benefit must be attributed:

(a) Motor vehicles made available for private use by an employee;

(b) Low interest loans, other than loans provided by life insurers;

(c) Subsidised transport, if the taxable value of all such benefits provided to an employee in a year is $1,000 or more;

(d) Contributions to sickness, accident or death benefit funds, if the taxable value of all such benefits provided to an employee in a year is $1,000 or more;

(e) Contributions to funeral funds, if the taxable value of all such benefits provided to an employee in a year is $1,000 or more;

(f) Specified insurance premiums or contributions to insurance funds of friendly societies, if the taxable value of all such benefits provided to an employee in a year is $1,000 or more;

(g) Contributions to employee superannuation schemes, if the taxable value of all such benefits provided to an employee in a year is $1,000 or more;
(h) Unclassified benefits, if the taxable value of all such benefits received by the employee during the year is $2,000 or more.

If one of these benefits is available to more than one employee during a quarter (or income year, in the case of shareholder-employees paying FBT on an income year basis), the benefit must be attributed to the employee who mainly uses or receives the benefit. This will apply mainly to the private use of motor vehicles. If the employer cannot decide which employee mainly uses or receives the benefit, the fringe benefit must be pooled [s RD 48].

Fringe benefits that fall under the $1,000 and $2,000 thresholds specified above may, at the employer’s option, be either attributed or pooled. However, if any such benefits are attributed, all benefits in the same category must be attributed.

There is a special rule that subsidised transport, even if the taxable value exceeds $1,000 a year, can be pooled provided that all employees have the same or a similar entitlement to the benefit. All fringe benefits that do not have to be attributed (referred to as non-attributed fringe benefits) are pooled [s RD 49].

540.300 Calculating FBT on attributed fringe benefits [ss RD 50, RD 51, RD 52, RD 63]

The year-end FBT calculation using the alternate rate option involves three steps:

(a) Calculate each employee’s all-inclusive pay;
(b) Calculate the tax on each employee’s all-inclusive pay; and
(c) Calculate the employer’s FBT liability for each employee.

(1) Calculate each employee’s all-inclusive pay [s RD 51]

At the end of the year (31 March), for each employee to whom a fringe benefit is attributed, the employer must calculate the employee’s “all-inclusive pay” using the following formula:

\[
\text{All-inclusive pay} = \text{Cash pay} - \text{tax on cash pay} + \text{taxable value of all fringe benefits}
\]

Where:

“Cash pay” is the employee’s total gross employment earnings for the year [see 540.305].

“Tax on cash pay” is tax calculated on cash pay at the relevant personal tax rates for the tax year. The rates (as per sch 1, part A, cl 1) for 2011-2012 are:

<table>
<thead>
<tr>
<th>Cash pay for year</th>
<th>Tax rate</th>
<th>Cumulative tax total</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0 - $14,000</td>
<td>10.5%</td>
<td>$1,470.00</td>
</tr>
<tr>
<td>$14,001 - $48,000</td>
<td>17.5%</td>
<td>$7,420.00</td>
</tr>
<tr>
<td>$48,001 - $70,000</td>
<td>30.0%</td>
<td>$14,020.00</td>
</tr>
<tr>
<td>Over $70,000</td>
<td>33.0%</td>
<td>-</td>
</tr>
</tbody>
</table>

The rates from 2011-2012 are:

<table>
<thead>
<tr>
<th>Cash pay for year</th>
<th>Tax rate</th>
<th>Cumulative tax total</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0 - $14,000</td>
<td>10.5%</td>
<td>$1,470.00</td>
</tr>
<tr>
<td>$14,001 - $48,000</td>
<td>17.5%</td>
<td>$7,420.00</td>
</tr>
<tr>
<td>$48,001 - $70,000</td>
<td>30.0%</td>
<td>$14,020.00</td>
</tr>
<tr>
<td>Over $70,000</td>
<td>33.0%</td>
<td>-</td>
</tr>
</tbody>
</table>

“Taxable value of all fringe benefits” is the taxable value of all fringe benefits attributed to the employee in the tax year and all fringe benefits attributed to a person associated with the employee in the income year, if that person does not receive the fringe benefits as an employee (eg a shareholder who is not an employee).
(2) **Calculate the tax on each employee’s all-inclusive pay [s RD 50]**

The tax on each employee’s all-inclusive pay is calculated using the rates below (as per sch 1, part C, table 1) for 2011-2012.

<table>
<thead>
<tr>
<th>All-inclusive pay</th>
<th>Tax rate</th>
<th>Cumulative tax total</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0 - $12,530</td>
<td>11.73%</td>
<td>$1,469.77</td>
</tr>
<tr>
<td>$12,531 - $40,580</td>
<td>21.21%</td>
<td>$7,419.17</td>
</tr>
<tr>
<td>$40,581- $55,980</td>
<td>42.86%</td>
<td>$14,019.61</td>
</tr>
<tr>
<td>Over $55,981</td>
<td>49.25%</td>
<td>-</td>
</tr>
</tbody>
</table>

(3) **Calculate the employer’s FBT liability for each employee [s RD 50(2)]**

The employer’s FBT liability for each employee on the value of attributed fringe benefits is taxed on all-inclusive pay minus tax on cash pay.

Employers who choose to pay FBT at the rate of 42.86 per cent in accordance with s RD 52(3)(a), on fringe benefits attributed to shareholder-employees and employees who receive attributed income must, when they apply the alternate rate option in the following tax year, deduct from the amount determined under step three the amount of FBT so paid.

(4) **Employers who cease to employ [s RD 63]**

A person who stops employing staff and does not intend to replace them during the tax year must pay FBT under the alternate rate option in the quarter in which the employer stops employing staff. However, this does not apply if the employer continues to provide a fringe benefit to a former employee.

Employers who cease to employ staff can calculate FBT at the 49.25 per cent rate rather than making the FBT calculation. If this option is used, FBT is calculated at the applicable rate on all benefits provided from the start of the tax year to the date the employer stop employing staff, with credit given for any FBT already paid.

Example (based on 2011-2012 tax rates):

An employer stopped trading on 22 November and ceased to employ staff. In the quarters ended 30 June and 30 September, the employer had provided fringe benefits with a taxable value of $5,234 and $4,897 respectively and paid FBT on those benefits at the rate of 43 per cent (under the alternate rate option). The taxable value of fringe benefits provided between 1 October and 22 November was $2,957. The employer decided to pay FBT at the 49.25 per cent rate in the final return, rather than work out the FBT calculation. The total value of fringe benefits provided since the start of the tax year is $13,088 ($5,234 + $4,897 + $2,957). FBT on this amount at the rate of 49.25 per cent is $6,446. FBT paid in the first two quarters is $4,356 [(5,234 + $4,897) × 43%]. FBT payable in the final return is $2,090 ($6,446 - $4,356).

540.305 **Meaning of cash pay [s RD 51]**

If an employee is a major shareholder of a close company (a shareholder with 10 per cent or more of the control of the company), “cash pay” is the cash pay (ie pay that is received in cash form) of an employee, for the income year in which a fringe benefit is attributed, that is paid to the employee by the employer or a related employer, and includes:

(a) A dividend and interest derived by the employee from their employer; and
(b) A dividend and interest derived by the employee from a related employer.

If the employee is not a major shareholder of a close company, “cash pay” is the cash pay of the employee, for the tax year in which the fringe benefit is attributed, that is paid to the employee by the employer or a related employer.

“Pay” means:

(a) Salary or wages;
(b) Salary or wages derived by a shareholder-employee from a close company, that is not treated as a source deduction payment (ie does not have PAYE deducted from it);
(c) An amount attributed under s GB 29 (personal services income);
(d) Extra pays; and
(e) Schedular payments [s RD 51(6)].

A “related employer” is a branch or division of an employer, or a person associated with the employer.

540.310 Simplified alternate rate option [RD 50(5)]

Instead of using the alternate rate option [see 540.300], the employer may simply pay FBT at the rate of 49.25 per cent on the taxable value of all attributed fringe benefits.

Depending on the employee’s annual remuneration, this option may result in the employer paying more FBT than necessary, but it has the advantage of lower compliance costs because a “square up” calculation is not required in the following year. Each employer will need to compare the relative costs and benefits to see which alternative is better for them.

540.315 Fringe benefits attributed to shareholder-employees [s RD 52]

If, at the time it would normally complete its fourth quarter FBT return, an employer does not have sufficient information to calculate its FBT liability on attributed fringe benefits, two options are available to the employer. These options are aimed at employers who have not completed their annual accounts by 31 May and therefore have not determined the amount of shareholder-employee remuneration for the year or the amount of income to be attributed to an employee under s GB 29. Section RD 52 does not apply to employers who pay their FBT on an income year basis.

The two options are:

(a) The employer is not required to calculate FBT on attributed fringe benefits in the year the fringe benefits are attributed to those employees outlined above. Instead, the employer pays FBT at the rate of 42.86 per cent on the taxable value of the fringe benefits in the tax year they are attributed, and then calculates FBT on the attributed fringe benefits in the next tax year in respect of those employees. For this purpose, cash remuneration is treated as being cash remuneration in the income year following the income year in which the amount was derived or attributed [s RD 51(5)].

(b) The employer can opt to pay FBT at the rate of 49.25 per cent on the taxable value of fringe benefits attributed for the tax year. In this case, FBT on the attributed fringe benefits does not have to be calculated in the following tax year.

540.320 Calculating FBT on pooled fringe benefits [ss RD 47, RD 48, RD 49, RD 53]

The following fringe benefits must be pooled:

(a) Subsidised transport, if the taxable value of all such benefits in a year is less than $1,000 per employee and the benefit has not been attributed;
(b) Contributions to sickness, accident or death benefit funds, if the taxable value of all such benefits in a year is less than $1,000 per employee and the benefit has not been attributed;
(c) Contributions to funeral funds, if the taxable value of all such benefits in a year is less than $1,000 per employee and the benefit has not been attributed;
(d) Specified insurance premiums or contributions to insurance funds of friendly societies, if the taxable value of all such benefits in a year is less than $1,000 per employee and the benefit has not been attributed;
(e) Contributions to employee superannuation schemes, if the taxable value of all such benefits in a year is less than $1,000 per employee and the benefit has not been attributed;
(f) Unclassified benefits, if the taxable value of all such benefits received by the employee during the year is less than $2,000 and the benefit has not been attributed;
(g) Subsidised transport with a taxable value exceeding $1,000 per employee a year that an employer (who meets the specified criteria) has chosen to pool;

(h) Any fringe benefits that cannot be attributed to a particular employee;

(i) Any fringe benefits provided to a former employee;

(j) Loans owing by policyholders or their associates to life insurers.

FBT is calculated at 49.25 per cent on pooled fringe benefits provided to major shareholders and their associates (unless the associate receives the fringe benefit in their own right as an employee). FBT is calculated at 42.86 per cent on all other pooled fringe benefits.

A “major shareholder” is a shareholder in a close company who owns or has the power to control (directly or indirectly), 10 per cent or more of the ordinary shares or the voting rights of the company, or has 10 per cent or more control of the company [s YA 1].

A “close company” is a company controlled by five or fewer individual shareholders.

540.325 Returns [ss RA 15, RD 63, RM 9; TAA, ss 46B, 46C]

Employers who provide fringe benefits must provide Inland Revenue with periodic FBT returns, setting out details of the fringe benefits provided to each employee during the period and a calculation of the amount of FBT payable. Details of the returns required are:

<table>
<thead>
<tr>
<th>Calculation option</th>
<th>Return period</th>
<th>Due date</th>
<th>Return form to use</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single rate or alternate rate option</td>
<td>Quarter ended: 30 June, 30 September, 31 December, 31 March</td>
<td>20 July, 20 October, 20 January, 31 May</td>
<td>IR420</td>
</tr>
<tr>
<td>Close company option</td>
<td>Income year</td>
<td>Terminal tax date</td>
<td>IR421</td>
</tr>
<tr>
<td>Small business option</td>
<td>Tax year</td>
<td>31 May</td>
<td>IR422</td>
</tr>
</tbody>
</table>

Any FBT payable must be paid by the same due date as for the return [s RA 15].

FBT returns can be filed electronically using Inland Revenue’s eFBT service, which can be accessed through Inland Revenue’s website. The advantages of filing returns electronically are that the calculations are made automatically by the system, the return arrives at Inland Revenue instantaneously, and refunds are paid out earlier than for paper-based returns.

An employer who does not provide any fringe benefits during a quarter must provide Inland Revenue with a nil return. Nil returns are due on the same dates as if there were an FBT liability. However, Inland Revenue may exempt employers or classes of employers from the need to file nil returns [TAA, s 46B(5)].

If an employer discovers an error in an FBT return that has already been filed, the error can be corrected informally (in the case of small errors) by writing to Inland Revenue, or formally by issuing a notice of proposed adjustment (NOPA) [see 260.20].

A person who stops employing and does not intend to re-employ staff during the tax year must furnish their final FBT return and pay any FBT due within two months following the end of the quarter in which employment ceased. An employer who continues to provide a fringe benefit to a former employer must continue to provide FBT returns as normal [s RD 63; TAA, s 46B(6)].

540.330 Annual basis [s RD 61]

An employer may pay FBT on an annual basis (small business option) for fringe benefits provided to employees other than shareholder-employees in a tax year if:

(a) Total PAYE and ESCT for the preceding tax year were no more than $500,000; or

(b) The employer was not an employer in the preceding tax year.

If an employer ceases business and begins a new business, or operates two or more businesses simultaneously, the gross tax deductions and ESCT relating to all businesses carried on by that employer must not exceed $500,000 for the preceding tax year.
An employer meeting the criteria may choose to use the annual basis by giving notice to the CIR, either in writing or by telephone, stating the first tax year to which the election applies. Where the employer was an employer in the previous tax year, the notice must be given to Inland Revenue by 30 June in the tax year to which the election first applies.

**Example 1:**
An employer (whose gross tax deductions and ESCT during the previous year were less than $500,000) wishes to pay FBT on an annual basis for the first time during the year beginning 1 April 20X1. The employer must provide a written election to Inland Revenue on or before 30 June 20X1.

If the employer was not an employer in the previous tax year, the notice must be given to Inland Revenue by the last day of the quarter during which the employer commenced employing staff.

**Example 2:**
A new employer who wishes to pay FBT on an annual basis first employed staff on 1 August 20X1. The employer must provide a written election to Inland Revenue on or before 30 September 20X1.

An employer who elects to pay FBT on an annual basis must pay FBT on the taxable value of fringe benefits provided during the tax year to all employees other than shareholder-employees. FBT is calculated in the same way as if it was being calculated on a quarterly basis. FBT is paid at either the flat rate of 49.25 per cent on all fringe benefits, or by attributing benefits to individual employees under ss RD 50 and RD 53.

**540.333 Income year basis [ss RD 60, RD 62]**
A close company may elect to pay FBT on fringe benefits provided to shareholder-employees on an income year basis (close company option) if:

(a) The total PAYE and ESCT for the preceding income year were no more than $500,000; or
(b) The company was not an employer in the preceding income year.

If an employer ceases business and begins a new business, or operates two or more businesses simultaneously, the PAYE and ESCT relating to all businesses carried on by that employer must not exceed $500,000.

An employer meeting the criteria may elect to use the income year basis by giving notice to the CIR, either in writing or by telephone, stating the first year to which the election applies. If the employer is a new employer, notice must be given by the last day of the quarter in which the employer begins employing staff. If the employer is not a new employer, notice must be given by the last day of the first quarter of the relevant income year.

**Example:**
If a close company, which meets the under-$500,000 criterion, was an employer in the previous income year and has a 30 June balance date, wishes to commence paying FBT on an income year basis in its 20X1 income year, the election must be made by 30 September 20X1.

When an employer who has been paying FBT on a quarterly basis elects to pay it on an income year basis, a calculation must be made under s RD 59 [see 540.325] for the period:

(a) Beginning immediately after the end of the last full tax year for which the employer paid FBT on a quarterly basis; and
(b) Ending immediately before the start of the first income year for which the election applies [s RD 62(5)]

Employers that elect to pay FBT on an income year basis calculate and pay their FBT annually on fringe benefits provided to shareholder-employees during the company’s income year. FBT is paid either at the flat rate of 49.25 per cent on the taxable value of all fringe benefits, or by attributing benefits to individual employees under ss RD 50 and RD 53.

An employer who has elected to use the annual basis or income year basis but ceases to meet the criteria to use these methods (eg because gross tax deductions in a subsequent tax year exceed $500,000) must furnish
returns and pay FBT on a quarterly basis for the tax year in which it ceases to meet the criteria [s RD 62(2)].

An employer may change from the annual basis or income year basis to the quarterly basis at any time by providing Inland Revenue with a written election. If the first day of a quarter does not coincide with the last day of the last return filed by the employer on an income year basis, a return is required for the broken period [s RD 62(3), (4)].

540.335 Record keeping [TAA, s 22(2), (2B), (5)]

Any employer to whom the FBT rules apply, or any person who provides a fringe benefit, must keep in New Zealand sufficient records in the English language to enable Inland Revenue to readily ascertain every fringe benefit (and the taxable value of every fringe benefit) provided by the employer.

Those records must include, among other things, details of the recipient of the benefit, the occasion when it was provided, and the amount (if any) paid by the employee for the benefit. The records must be retained for at least seven years after the end of the income year to which they relate. The CIR may extend the seven-year period by a further three years provided notice is given to the taxpayer before the expiry of the seven-year retention period.

540.340 Assessment [TAA, s 93]

Inland Revenue may make an assessment of the amount of FBT that it considers ought to be imposed on any person chargeable with FBT. The person so assessed is liable to pay the FBT assessed unless they can establish by challenging the assessment that the assessment is excessive or they are not chargeable with FBT [TAA, s 93]. This provision is aimed at taxpayers who have an FBT liability but fail to file returns or file false returns.

An assessment may not be challenged in Court, and the assessment is deemed to be correct, unless the challenge procedures in Part 8A of the TAA are followed [TAA, s 109]. A taxpayer who does not follow these procedures within the specified time limits loses all right to legally challenge the assessment. Inland Revenue must provide the person assessed with a notice of assessment [TAA, s 111, see 260.70].

Inland Revenue may at any time alter or amend an assessment to ensure its correctness, even if the tax already assessed has been paid. If a new or increased liability results from the amended assessment, Inland Revenue must give notice of it to the taxpayer [TAA, s 113].

540.345 Penalties and interest

The following penalties may apply to persons liable to pay FBT:

(a) Late payment penalty [TAA, s 139B, 1110.40];
(b) Shortfall penalty for lack of reasonable care, unacceptable tax position, etc; [see 1110.85 to 1110.165]
(c) Criminal penalties [see 1110.220 to 1110.270]; and
(d) Use-of-money interest [see 1110.290, 1110.295].

The late filing penalty does not apply to FBT returns.

540.350 Anti-avoidance rule [ss BG 1, GA 2, GB 31, YA 2, YA 3]

If an arrangement has been entered into, with a purpose or effect (not being incidental) to defeat the intent and application of any FBT rules, Inland Revenue may deem any party to that arrangement to be an employer and any person or persons to be employees. Any benefit obtained by the deemed employees and provided by the deemed employer is considered to be a benefit provided by virtue of an employment relationship, and the FBT rules apply accordingly for the period of the arrangement [s GB 31].

The definition of “income tax” in s YA 2 includes FBT for the purposes of ss BB 3 and BG 1. This means that the CIR can invoke the general anti-avoidance rules [s BG 1] to counteract an avoidance arrangement involving FBT.
If an arrangement involving FBT is void under s BG 1, the CIR is able to adjust the amount of excluded income under s CX 3 of any person affected by the arrangement, so as to counteract any tax advantage obtained. In adjusting excluded income, the CIR may consider:

(a) The amount of excluded income that, in the CIR’s opinion, the person would have had or is likely to have had if the arrangement had not been entered into; or
(b) The amount of excluded income that, in the CIR’s opinion, the person would have had if they had been allowed the benefit of some or all of the excluded income derived by any other person or persons as a result of the arrangement.

If an amount of excluded income is included in the income of a person under this adjustment, that amount cannot be included in the income of any other person [s GA 2].

540.355 Deductibility [ss DA 1, DA 3, EF 1]

FBT is deductible for income tax purposes to the extent that it is incurred by the employer in deriving their assessable income or excluded income, or in the course of carrying on a business. Similarly, the expenditure incurred by the employer in providing a fringe benefit is deductible if it relates to deriving their assessable or excluded income, or in carrying on a business [s DA 1]. FBT paid overseas is also deductible for income tax purposes if the general permission [s DA 1] is satisfied.

Although FBT is a form of income tax, the prohibition on the deduction of income tax in s DB 1(1)(a) does not apply to FBT because FBT is specifically excluded from the definition of income tax for the purpose of the prohibition — see the definition of “income tax” in s DB 1(2).

FBT is deductible in the income year in which the fringe benefits (to which the FBT relates) were provided or granted, not necessarily in the year the FBT is due and payable [s EF 1].

Example:

FBT paid on 28 May 20X1 in respect of fringe benefits provided to employees during the quarter ended 31 March 20X1 will be deductible in the income year ended 31 March 20X1 (assuming the employer has a standard balance date).

A company paying FBT on a quarterly basis and having a non-standard balance date may have an FBT quarter spanning two income years. The FBT on benefits provided by the company before the end of the earlier income year is deductible in that earlier income year. The FBT on benefits provided in the later income year is deductible in that later income year.

540.360 GST payable on fringe benefits [GSTA 1985, ss DB 2, 21I, 23A]

When an employer who is registered for GST provides an employee with a fringe benefit, the employer is deemed to have made a supply of goods and services in the course of a taxable activity. The supply is treated as taking place at the time the fringe benefit is provided [GSTA, s 211].

The GST on the fringe benefit (one ninth of the value of the benefit) is accounted for in the FBT return and must be paid at the same time as the FBT to which the return relates [GSTA, s 23A]. The value of the supply is the taxable value of the fringe benefit reduced by any contribution made by the employee towards the cost of that fringe benefit.

No GST is payable if the fringe benefit is exempt (eg a low-interest loan) or zero-rated (eg overseas travel), or if a registered person provides the benefit in the course of making an exempt supply (eg a company car provided to a life insurance salesperson) [see 580.126].

The GST payable on fringe benefits is deductible for income tax purposes [s DB 2(2)].

580.05 Summary of the GST regime

GST is an indirect consumption tax imposed at the rate of 15 per cent (12.5 per cent prior to 1 October 2010) on most goods and services supplied in New Zealand by registered persons in the course of carrying on a taxable activity. It is also imposed on goods other than fine metal imported into New Zealand for manufacturing or home consumption. Some supplies are specifically exempted from GST, while others are zero-rated. Supplies which are exempt from GST include financial services, donated goods and services sold by non-profit organisations, residential rental accommodation, the sale of a property which has been used for residential rental accommodation for at least five years, and the supply of fine metals (pure gold, silver, and platinum). A reverse charge mechanism applies to imported services under certain circumstances. This results in the importer of the services being liable for GST on the value of those services.

Supplies which are zero-rated include exported goods, goods not situated in New Zealand at the time of supply, taxable activities sold as going concerns to registered persons, new fine metal supplied by a refiner to a dealer, international transportation of passengers and goods, services in connection with land or moveable personal property situated outside New Zealand, services provided to non-residents, and services physically supplied outside New Zealand.

GST operates on a credit offset basis. It is charged on all taxable supplies whether made by importers, manufacturers, wholesalers or retailers. At each stage along this chain, businesses making taxable supplies must account for GST on each supply. At the same time, they are able to offset the GST that they pay on the goods and services that they receive. Therefore, the burden of GST — this privilege is reserved for the final consumer of the good or service. Exempt supplies are completely excluded from the GST regime — no GST is charged on them and GST cannot be claimed back on the expenses incurred in supplying them. However, with zero-rated supplies, no GST is charged on the supply, but GST can be claimed back for expenses incurred in making the supply.
GST is charged only on supplies made by registered persons. A person must be registered for GST if they carry on a taxable activity and their total taxable supplies in any 12-month period exceeds, or is expected to exceed, $60,000 (formerly $40,000, before 1 April 2009). Persons with an annual turnover of less than $60,000 have the option of registering for GST, provided they are carrying on a taxable activity. The purpose of this threshold is to reduce compliance and administration costs by excluding part-time traders, non-profit organisations, and hobbyists whose GST liabilities would be insignificant.

A taxable activity is any activity carried on continuously or regularly, whether or not for profit, which involves the supply of goods and services for consideration. It includes any such activity carried on in the form of a business, trade, manufacture, profession, vocation, association, or club. The activities of public and local authorities are specifically included. Private recreational pursuits or hobbies, employment (including engagement as a company director), and activities which involve the making of exempt supplies are not taxable activities.

Registered persons are required to provide returns and pay the tax owing (if any) within one month after the end of their taxable period, except in the case of returns otherwise due on 31 December which are not required until 15 January. The normal taxable period is two months, although if taxable supplies are less than $500,000 per year (formerly $250,000, before 1 April 2009), a person can apply to file six-monthly returns. Where taxable supplies have been less than $500,000 per year, but increase above that threshold, the CIR has the discretion to allow the registered person to remain on a six-monthly filing basis. Any person can apply to file returns on a monthly basis. In addition, any person whose annual taxable supplies exceed or are likely to exceed $24 million must file monthly returns.

There are three ways in which registered persons can account for GST — on the invoice basis, the payments basis, or the hybrid basis. The invoice basis is the default method and must be used by all registered persons unless they apply to use, and meet the criteria for, either of the other two methods. Both output tax (tax on sales, or outputs) and input tax (tax on supplies received, or inputs) must be accounted for in the taxable period in which the supply is made. The payments basis may be used by persons whose taxable supplies do not exceed $2 million per year (formerly $1.3 million, before 1 April 2009), local authorities listed in an Order in Council, and non-profit bodies, and also in circumstances where it would be appropriate for the person to use the payments basis because of the nature, volume and value of the taxable supplies made, and the nature of the person’s accounting system. Under the payments basis, GST is accounted for in the taxable period in which the person receives payment for taxable supplies made, and makes payment for taxable supplies received. The hybrid basis may be used by any registered person. As its name suggests, the hybrid basis is a combination of the other two — GST on sales is accounted for on an invoice basis, while GST on purchases is accounted for on a payments basis.

The amount of tax payable for each taxable period by registered persons is the difference between their output tax and input tax for that period. If the amount of input tax exceeds output tax, the registered person receives a GST refund. Output tax is the tax on all taxable supplies made by the person. Input tax is the tax charged to the person in respect of all taxable supplies they receive. A number of adjustments must be made to input tax and output tax when completing the return (for example for private use of business assets, entertainment expenditure, bad debts recovered, barter transactions, and changes in the accounting basis used).

A credit for input tax can only be claimed if the registered person holds a tax invoice, or a debit or credit note. A tax invoice must be provided by all registered persons making a taxable supply in excess of $50. Where the price of the supply is between $50 and $1,000, a simplified form of tax invoice can be used. Inland Revenue may approve the use of modified tax invoices in special cases, or may even exempt a supplier from issuing tax invoices altogether. Invoices may be transmitted electronically provided they contain the necessary information.

580.07 Supplies liable for GST [s 8]

In order for a supply to be liable for GST, it must meet all of the following conditions. The supply must:

(a) Be a supply of goods and services;

(b) Not be an exempt supply;
(c) Be made in New Zealand;
(d) Occur on or after 1 October 1986;
(e) Be made by a registered person; and
(f) Be made in the course or furtherance of a taxable activity.

These conditions are explained in more detail in subsequent paragraphs.
The flowchart summarises the decision process necessary to determine whether a particular transaction or event is a supply chargeable with GST (a taxable supply). However, the flowchart is only a summary and
must be used in conjunction with the legislation and relevant statutory definitions of terms such as “supply”, “exempt supply”, “taxable activity”.

Supplies which meet all of the above conditions are taxed at the rate of 15 per cent (12.5 per cent prior to 1 October 2010) unless they are zero-rated supplies [see 580.30]. Zero-rated supplies are taxed at the rate of zero per cent, that is, no tax is imposed [s 11].

GST is charged on the value of the supply [see 580.60].

For GST purposes, all monetary amounts must be expressed in New Zealand currency [s 77].

**580.10 Taxable supplies [ss 2, 5]**

A taxable supply is any supply of goods and services which is charged with GST under s 8, including zero-rated supplies. An exempt supply is not charged with GST and is therefore not a taxable supply.

“Supply” is broadly defined to include all forms of supply.

“Goods” means all kinds of personal or real property, except choses in action and money. “Goods” excludes a product that is transmitted by a non-resident to a resident by means of a wire, cable, radio, optical or other electromagnetic systems, or by means of a similar technical system.

“Services” means anything which is not goods or money. Services therefore includes choses in action and products transmitted electronically.

Goods and services together include everything except money. A supply of anything other than money is therefore potentially liable to be charged with GST [see TES 5 (June 2003) 65].

The GST treatment of PAYE intermediaries [see 1080.80] follows the general rules. Such things as the provision of the trustee structure, establishing and maintaining customer accounts and the clearing and settlement processes are likely to be taxable supplies. Other services such as tax deposits made with Inland Revenue may be a debt security and, therefore, a GST-exempt financial service.

The payment to a local authority of a financial contribution, in the form of money or land, under the Resource Management Act 1991, or a development contribution under the Local Government Act 2002, is deemed to be made in consideration for a supply of goods and services by the local authority. Where the contribution is in money, it is subject to GST at the standard rate of 15 per cent (12.5 per cent prior to 1 October 2010). This allows the registered person making the contribution to claim back the GST amount as an input tax deduction. Where the contribution is in the form of land, both the supply by the local authority and the supply of the land is zero-rated. This treatment avoids the difficulty of ascertaining a value for the land.

Sheriffs executing writs of sale are not obliged to account to the CIR for outstanding GST until they have paid their own expenses and sums owed to any creditors with security over the assets. They are carrying out their powers as officers of the Court and are not acting as agents for the party who obtained the writ: *Sheriff of the New Zealand High Court v Commissioner of Inland Revenue* (1996) 17 NZTC 12,599 (HC).

In *TRA Case T2* (1997) 18 NZTC 8,007, a wife (who was in partnership with her husband in a farming business) was held not to be liable for GST on her share of income derived by her husband from illegal activities carried out on the farm because she had no knowledge of these activities and had not consented to them. The illegal activities were not part of the usual activities of the partnership business.

In *TRA Case T13* (1997) 18 NZTC 8,080, the owner of three taxis was held not to be liable to account for GST on the 50 per cent share of takings earned by relief drivers. The relief drivers were, on the facts of this particular case, independent contractors who derived the income on their own account, not as employees of the taxi owner. This finding was followed in *TRA Case U9* (1999) 19 NZTC 9,077.

In *Commissioner of Inland Revenue v New Zealand Refining Co Ltd* (1997) 18 NZTC 13,187 (CA), payments totalling $85 million made by the Crown to an oil refining company as an inducement for the company to remain in operation were held not to be for a supply for GST purposes. The payments were received in the course of a taxable activity but they were not in consideration for any supply made by the company. The Court stated that it is fundamental to the GSTA that the tax is levied on, or in respect of, supplies. It is not a tax on receipts or turnover. The decision contains a useful analysis of the meaning of “consideration” for GST purposes.

642 Staples Tax Guide 2012
In *TRA Case T22* (1997) 18 NZTC 8,124, a payment by the Crown to the owner of a marron (freshwater crayfish) farming business, in settlement of a dispute between the parties, was held not to be for a supply of goods and services to the Crown and was therefore not liable to GST. The dispute arose because a change in Government policy rendered the marron farming business valueless. After negotiation, the Crown paid the owner of the business $1,366,377 in settlement of all claims. Inland Revenue subsequently assessed this amount for GST. The TRA rejected all three grounds relied on by the CIR in making the assessment:

(a) The payment by the Crown for the surrender of the fish farming licence could not be for a supply because, at the time of settlement, the licence had no value.

(b) The objector did not make a supply of goods or a service by ceasing to carry on its business of marron farming. The objector’s business was rendered inoperative by the actions of the Crown.

(c) No part of the payment was for the value of the marron which had to be destroyed.

The payment was a global offer intended to persuade the objector not to pursue claims for damages. The CIR’s alternative argument — that the objector’s forbearance to sue amounted to a supply — was contrary to established law in *TRA Case S77* (1996) 17 NZTC 7,483, and the CIR was unable to distinguish that case.

In *TRA Case U37* (2000) 19 NZTC 9,353, the Authority held that an inducement to enter into a lease is a payment made in the course of a taxable activity and therefore subject to GST.

In *Pacific Trawling Ltd v Chief Executive of the Ministry of Fisheries* (2005) 22 NZTC 19,204 (HC), Miller J found that deemed value payments made by fishers to the Ministry of Fisheries to cover the value of unintended catches of species for which quota is not held (by-catch), are payments in respect of a taxable supply.

In an interpretation statement *Treaty of Waitangi Settlements — GST Treatment*, the CIR states that settlement payments (whether cash or non-cash), made by the Crown to Maori claimant groups, for wrongs done in the past, are not consideration for a supply of goods and services and therefore are not subject to GST. Nor does compensation fall within the meaning of “grant or subsidy” and so will not be deemed to be consideration for the supply of goods and services under s 5(6D) [see TIB vol 14:9 (September 2002) at 50-59]. The CIR has also stated that claimant funding (provided by the Crown through the Office of Treaty Settlements) for claimants’ negotiation costs is not subject to GST [see TIB vol 18:11 (December 2006) at 37-39].

**580.12 Special forms of supply [s 5]**

(1) **Sale in satisfaction of debt (repossessed goods) [s 5(2)]**

When goods securing a debt are sold by a creditor in satisfaction of the debt owing by the debtor, the goods are deemed to be supplied by the debtor in the course of a taxable activity unless certain conditions are met [see 580.14].

(2) **Cessation of registration [ss 5(3), (3A)]**

When a person ceases to be registered for GST, any goods and services used in the taxable activity and not sold prior to deregistration are deemed to be supplied in the course of the taxable activity at the time registration ceases [see 580.84].

(3) **Door to door sales [s 5(4)]**

A sale covered by the Door to Door Sales Act 1967 is not a supply of goods and services until the expiry of the statutory period within which the sale may be cancelled.

(4) **Layby sales [s 5(5)]**

A layby sale is not a supply of goods and services until the goods are delivered, and the property in the goods is transferred, to the buyer. If a layby sale is cancelled, a supply is deemed to take place to the extent of any amount retained or recovered from the buyer to recoup the selling costs [s 10(9)].
(5) **Public authority services [s 5(6)]**

Goods and services provided by public authorities and paid for by the Crown are taxable supplies. The value of the supply is the amount brought to charge by the public authority as revenue from the Crown for the supply of outputs [s 10(10)].

(6) **Transport registration and licence fees [s 5(6A)]**

Registration and licence fees paid to the Land Transport Safety Authority under the Transport (Vehicle and Driver Registration and Licensing) Act 1986 are deemed to be consideration for taxable supplies.

(7) **New Zealand Fire Service Commission levies [s 5(6AB)]**

Levies paid to the NZ Fire Service Commission, other than amounts that are a penalty surcharge or interest, are deemed to be consideration for taxable supplies [see s 155 of the Taxation (Base Maintenance and Miscellaneous Provisions) Act 2005, clarifying this treatment, with retrospective effect from 1 October 1986].

(8) **Waste disposal levies [s 5(6AC)]**

The Waste Minimisation Act 2008 imposes three types of levy obligations. These are:

(a) Payment of the waste disposal levy by a user of a waste disposal facility to the operator of that facility;
(b) Payment of the levy by the operator to the Secretary for the Ministry of the Environment (represented by the levy collector); and
(c) Payment made by the Secretary for the Ministry to funding recipients and for other amounts set out in s 30 of the Waste Minimisation Act 2008.

Waste disposal levies payable at each step are treated as consideration for a supply of services in the course of carrying on a taxable activity. They are, therefore, subject to GST and give rise to input tax credits.

(9) **Road user charges [s 5(6B)]**

Road user charges paid to the Land Transport Safety Authority under the Road User Charges Act 1977 on or after 26 April 1993 are deemed to be consideration for taxable supplies.

(10) **Electoral deposits [s 5(6C)]**

Electoral deposits paid under the Electoral Act 1993 or the Local Elections and Polls Act 1976 are deemed to be consideration for taxable supplies. The supply takes place if and when the deposit is forfeited.

(11) **Government grants or subsidies [ss 5(6D), (6E)]**

A payment in the nature of a grant or subsidy made on behalf of the Crown or by a public authority to a person (either directly or indirectly) in relation to that person’s taxable activity is deemed to be consideration for a taxable supply made by that person.

A “payment in the nature of a grant or subsidy” is defined as a suspensory loan or advance that has become non-repayable in terms of the conditions of the loan. The following are excluded from the definition:

(a) The payment of a monetary benefit under the Social Security Act 1964;
(b) Any other payment made for the personal use and benefit of a person or a relative (unless declared by Order in Council to be a taxable grant or subsidy);
(c) A payment declared by Order in Council not to be a taxable grant or subsidy. These include:

(i) Any payment made on behalf of the Crown for the purpose of repaying the loans (as to both principal and interest), specified in s 2(1) of the Petroleum Sector Reform Act 1988; with application from 1 January 1993.

(ii) Any suspensory loan or advance made on behalf of the Crown or by any public authority before 1 January 1993, other than any suspensory loan or advance that, at the time it was made, was explicitly stated to include the amount of any GST payable by the person to whom or for whose benefit the loan or advance was made; with application from 1 January 1993.
(iii) Any payment made by the New Zealand agency for International Development to a New Zealand organisation where, as a condition of the payment, it must be transferred outside New Zealand to an organisation that is operating overseas at that time and be used for the purpose of acquiring goods or services overseas. GST must be returned to the extent to which any portion of the grant is allocated or used for administration or building of capacity in New Zealand.

In *Chatham Islands Enterprise Trust v Commissioner of Inland Revenue* (1999) 19 NZTC 15,075 (CA), the Government established a trust to advise on and implement the handing over of responsibility for various infrastructure facilities (electricity, meat works, airport, wharf facilities, and so on) to the residents of the Chatham Islands. To finance these facilities, the Government made two payments of $4 million each to the trust. The Court of Appeal held that the payments were not subject to GST under s 8 because the trust, in performing its responsibilities, was not carrying on a taxable activity. The payments were settlements on a trust. As per Blanchard J:

“The Trust is not making a supply of anything to the settlor in exchange for, or induced by, the payments; it is the recipient of an endowment to be held upon the terms of the deed. Nor can it, consistently with well established principles, be said that the Trust is performing services for its beneficiaries in return for a consideration provided by the settlor … [T]here is no consideration passing to the Trust since the payments are not properly to be seen as an inducement. Without them, it is true, the Trust could not function; indeed it would not have even come into existence. But in law they cannot properly be characterised as inducing its functions nor can it be said that what the Trust did with the money was a response to the payment. There is an absence of reciprocity in the relationship.”

Similarly, the payments were held not to be taxable under s 5(6D)(a) because there was no taxable activity carried on by the trust to which the grants by the Crown could have related.

(12) **Local authorities** [s 5(7), (7B), (7C)]

The payment of rates to a local authority and the payment of council dues to the Chatham Islands Council are consideration for a taxable supply. Some specific types of payment are excluded. However, penalties imposed on unpaid rates and postponement fees that relate to financial costs of the local authority arising from a postponement of rates are exempt supplies if imposed on or after 1 July 2003.

The payment to a local authority of a financial contribution, in the form of money or land, under the Resource Management Act 1991, or a development contribution under the Local Government Act 2002, is deemed to be made in consideration for a supply of goods and services by the local authority. Where the contribution is in money, it is subject to GST at the standard rate of 15 per cent (12.5 per cent prior to 1 October 2010). This allows the registered person making the contribution to claim back the GST amount as an input tax deduction. Where the contribution is in the form of land, both the supply by the local authority and the supply of the land are zero-rated. This treatment avoids the difficulty of ascertaining a value for the land. The same principle applies to the transfer of land or payment of money under a territorial authority’s affordable housing policy [s 11 of the Affordable Housing: Enabling Territorial Authorities Act 2008]. Note section 5(7D) and (7E) of the GSTA, and the Affordable Housing: Enabling Territorial Authorities Act 2008, were repealed from 6 August 2010.

These provisions apply to a contribution under the Resource Management Act 1991 imposed on or after 25 November 2003. Due to the differing treatments that local authorities have afforded these contributions in the past, the provisions also apply to contributions imposed on or after 1 October 1991 where the local authority imposed tax at a rate other than zero per cent. For contributions under the Local Government Act 2002, the provisions apply to contributions imposed on or after 25 November 2003. And for transfers of land or payments of money under the Affordable Housing: Enabling Territorial Authorities Act 2008, the provisions apply to transfers or payments made on or after 18 September 2008. **Note:** The provisions relating to the Affordable Housing: Enabling Territorial Authorities Act 2008, and that Act itself, were repealed from 6 August 2010.
Goods and Services Tax

(13) **Gambling** [ss 5(8)-(11C)]

The following are deemed to be payments for the supply of services:

(a) Money placed as a race bet, a totalisator bet, an equaliser bet, a fixed-odds race bet, or a sports bet conducted by or on behalf of the New Zealand Racing Board. The rules for determining the value of the supply are set out in s 10(12).

(b) Money paid to participate in gambling, a sales promotion scheme, bookmaking, a New Zealand lottery, a prize competition, or an instant game [see s 5(11)(a) of the GSTA and s 4(1) of the Gambling Act 2003 for definitions of these terms]. The value of the supply is the amount of money paid to participate in the game less the amount of money paid in prizes [s 10(14)].

(c) Money paid to a casino to purchase a chip or otherwise participate in gambling, or paid as commission for participating in gambling played or conducted in a casino venue. The value of the supply is the amount of money paid to buy chips or otherwise participate in the gambling, or paid as commission to participate in the gambling, less the amount of money paid in winnings or for redemption of chips by the casino [s 10(15A)].

Where a person pays money to participate in gambling (including a New Zealand lottery), the money paid is payment for services supplied by the person, society, licensed promoter or organiser that conducts the gambling under the Gambling Act 2003 [s 5(10)]. The time of supply of the service to participate in the gambling is deemed to be the time at which the first drawing or determination of a result commences [s 9(2)(e)]. The consideration in money for the supply is the portion of the amount that a person pays to participate in the gambling that represents the total proceeds (after deducting the amount of all prizes paid and payable in money) [s 10(14)].

If a lottery is conducted by any person, society, or corporate society that is registered (or required to be registered) for GST, output tax is payable on the amount of money paid to participate in the lottery less the amount of all prizes paid or payable in money, and input tax credits can be claimed for expenses (ie purchases of non-cash prizes, promoter fees, printing tickets, etc). If a lottery is promoted by a licensed promoter who is registered (or required to be registered) for GST, output tax is payable on any fees received, and input tax credits can be claimed for expenses connected with the promotion [see Public Ruling BR Pub 07/11, TIB vol 20:1 (February 2008) at 6].

(14) **Tokens, stamps and vouchers**

The issue or sale of a token, stamp or voucher is treated as a supply of goods and services. However, if the token, stamp or voucher is issued or sold by a registered person to another registered person (who subsequently issues or sells the token, stamp or voucher), and the first-mentioned registered person is not the person who will supply the goods and services on redemption of the token, stamp or voucher, then there is no supply of goods and services.

The redemption of the token, stamp or voucher is not treated as a supply of goods and services, unless:

(a) it is not practical for the issuer or seller of the token, stamp or voucher to treat the issue or sale of those items as a supply of goods and services (for example the issuer or seller is a member of a food franchise, a branch department store, or a fashion retailer); and

(b) the issuer or seller is, or could be, or may be, a different person from the supplier of the goods and services on redemption of the token, stamp or voucher; and

(c) both parties agree that a supply will occur on the redemption of the token, stamp or voucher.

The provision above does not apply to:

(a) the extent to which the consideration received for the token, stamp or voucher is more than the face value of any of those items. The excess must be accounted for at the time of issue or sale of those items.

(b) an adhesive label, or a mark or design that is affixed to, or that appears on stationery, indicating prepayment of the fee chargeable for the carriage of a letter, parcel or other article, without
distinguishing the letter, parcel or article from other similar items carried by the same person. Such label, mark or design must be accounted for at the time at which they are issued or sold.

(c) a token, stamp or voucher that gives the recipient the right to receive services in New Zealand from a non-resident. Such token, stamp or voucher must be accounted for at the time at which they are issued or sold.

[See further discussions in 580.67]

(15) **Sale of a going concern [s 5(12)]**

The disposition of a taxable activity as a going concern is deemed to be a taxable supply. However, such a supply is zero-rated by s 11(1)(c), provided that the buyer and the seller agree to this in writing and both parties are registered for GST [see 580.37].

(16) **Indemnity payment [s 5(13)]**

An indemnity payment received by a registered person under a contract of insurance for a loss incurred in the course of that person’s taxable activity is deemed to be consideration for a taxable supply. The supply is deemed to take place on the day on which the payment is made. The following are not taxable supplies:

(a) An indemnity payment received under a contract of insurance which is not liable for GST, and

(b) A payment to indemnify for the loss of earnings.

An indemnity payment requires an output adjustment to be made in the GST return covering the period in which the payment is received [see 580.126].

(17) **Refund of excise duty [s 5(13A)]**

A refund of excise duty paid to a registered person under s 101 of the Transit New Zealand Act 1989 is a taxable supply to the extent the excise duty was incurred for the principal purpose of making taxable supplies. The refunds relate to excise duty paid on motor spirits, CNG and LPG used as fuel for exempted vehicles, licensed vehicles and in other specified circumstances, for example, when fuel is used in commercial vessels.

(18) **Subrogation payment [s 5(13B)]**

An amount recovered by an insurer under a contract of insurance, as a result of the exercise of rights acquired by subrogation, is deemed to be consideration received for a supply of services provided that an input tax deduction has previously been allowed in relation to that amount. This does not apply to aggravated or exemplary damages received by the insurer. The time of supply is the day the insurer receives the recovery amount.

(19) **Supply partly zero-rated [s 5(14)]**

If a supply is partly zero-rated and partly charged with GST at the standard rate, each part is deemed to be a separate supply. The CIR’s interpretation of s 5(14) is discussed in interpretation statement IS 08/01 GST – Role of Section 5(14) of the Goods and Services Tax Act 1985 in Regard to the Zero-Rating of Part of a Supply [see TIB vol 20:5 (June 2008) at 8]. The CIR has concluded that s 5(14) does not of itself create standard-rated and zero-rated supplies. It is necessary to first determine that there is a “supply” that is charged with GST at the standard rate under s 8. The next step is to determine whether there is an applicable provision in ss 11, 11A, 11AB, or 11B that requires part of a supply to be charged with GST at the rate of zero per cent. An example of where apportionment is mandated by the GSTA is s 11A(1)(b), which states that a supply of services that is chargeable with tax under s 8 must be charged at the rate of zero per cent where “the services are the transport of passengers from a place in New Zealand to another place in New Zealand to the extent that the transport is by aircraft, as defined in s 2 of the Civil Aviation Act 1990, and is international carriage for the purposes of that Act”.

Interpretation statement IS 08/01 considers only the interpretation of s 5(14). It does not consider the principles of apportionment under case law, which are used to determine whether a package of goods and/or services is a single supply or, alternatively, consists of two or more supplies for the purposes of the GSTA. Where there are two or more supplies, the GST treatment of each must be separately considered. Relevant case law includes Auckland Institute of Studies Ltd v Commissioner of Inland Revenue (2002)
Goods and Services Tax

20 NZTC 17,685 (HC) [see 580.43] and Commissioner of Inland Revenue v Smiths City Group Ltd (1992) 14 NZTC 9,140 (HC), which concerned whether the sale of a piece of vacant land was part of the supply of a business as a going concern. The High Court found that it was not sufficiently part of the business operations to be zero-rated as part of a going concern and should therefore be subject to GST at the standard rate.

(20) Dwelling included in a supply after 11 August 1995 [ss 5(15)-(19)]

If a dwelling is included in a supply (for example a farm house included in the sale of a farm), then the supply of the dwelling is deemed to be a separate supply from any other real property included in the overall supply [see 580.16].

580.14 Sale of goods in satisfaction of debt [ss 5(2), 17]

When goods securing a debt are sold by a creditor in satisfaction of the debt owing by the debtor, the goods are deemed to be supplied by the debtor in the course of a taxable activity. This means that the debtor is charged with GST on the proceeds of the sale of those goods. The creditor is responsible for filing a special return and paying the GST charged on the sale. However, such a sale is not treated as a taxable supply if:

(a) The debtor provides the creditor with a written statement to the effect that if the debtor had sold the goods it would not have been a taxable supply. The reasons why the supply would not be taxable must also be stated; or

(b) The creditor is unable to obtain such a statement, but is able to determine from available information that the supply would not have been taxable if the goods had been sold by the debtor.

In an interpretation statement, the CIR clarified the GST treatment of repossessed motor vehicles [see TIB vol 9:9 (September 1997) at 18-19]. The type of transaction contemplated is one where a GST-registered motor vehicle dealer sells a motor vehicle to a customer, the customer finances the purchase by a hire purchase agreement with a finance company, and the motor vehicle dealer is required to guarantee that the customer will meet all their payments. If the customer defaults on hire purchase payments, the motor vehicle dealer is required to pay the outstanding amount to the finance company. The dealer is then entitled to repossess the motor vehicle to recover its debt. The correct GST treatment of these transactions is as follows:

(a) On first purchasing the vehicle, the dealer is able to claim an input tax deduction.

(b) On sale of the vehicle to the customer, the dealer returns output tax when the hire purchase agreement is signed.

(c) When the customer defaults, the payment of the outstanding amount by the dealer to the finance company is an exempt supply (financial service) and no input tax deduction can be claimed on it.

(d) The sale of the repossessed vehicle by the dealer is covered by s 5(2). The sale is subject to GST if the customer was GST-registered and the sale would have taken place as part of a taxable activity. If the customer was not GST-registered, the dealer would not charge GST on the sale of the vehicle.

The statement applies not only to motor vehicles, but also in any similar situation in which goods are purchased by hire purchase.

TRA Case Y2 (2007) 23 NZTC 13,017 confirms that where goods are sold by a debtor, or land is sold by way of a mortgagee sale, no input tax deductions are able to be claimed by the debtor or mortgagee. The sale is deemed to be a supply made in the course or furtherance of the mortgagor’s taxable activity. Section 5(2) does not deem the mortgagee or debtor to be a registered person or to be carrying on a taxable activity.

580.16 Dwelling included in a supply [s 5(15)-(19)]

If a dwelling is included in a supply, the supply of the dwelling is deemed to be a separate supply from any other real property included in the overall supply, for example, if a farm house is included in the sale of a farm, the house and curtilage is treated as a separate supply from the supply of the rest of the farm land and buildings. This prevents the purchaser of the farm from claiming an input tax deduction in relation to the house [see 580.123]. If a registered person has claimed an input tax deduction in relation to a dwelling, any subsequent supply of the dwelling (including curtilage) is deemed to be a taxable supply.
Goods and Services Tax

If an input tax deduction has been claimed in respect of a proportion of a dwelling, any subsequent sale of the dwelling is a taxable supply only to the extent of that proportion. For example, if an input tax deduction has been claimed in respect of 50 per cent of a dwelling, 50 per cent of the sale proceeds would be taxable if the dwelling were subsequently sold.

If a dwelling which was originally applied for the principal purpose of making taxable supplies is subsequently used for a non-taxable purpose, and consequently a deemed supply occurs under s 21(1), the sale of that dwelling is not deemed to be a taxable supply provided no input tax deduction under s 21(5) has been allowed.

From 1 April 2012, special rules apply to supplies of land [see 580.49]. These rules change the treatment of supplies that consist of, or include, land. They do not change the requirement to treat the supply of a dwelling as a separate supply.

In TIB vol 8:6 (October 1996) at 4-5, the CIR issued an interpretation statement on the apportionment of consideration between, and the valuation of, supplies of dwellings and other real property for the purposes of ss 5(15)-(19). The following are the main points of the statement:

(a) A dwelling includes that area surrounding the dwelling that is necessary for its enjoyment (the curtilage). Any apportionment of the consideration for the supply of a dwelling and other real property must reflect the true respective values of the dwelling and the surrounding land. If a dwelling is supplied along with other real property, it is necessary to identify the physical area of the dwelling, and the consideration that relates to the dwelling, and the area and consideration that relates to the other real property.

(b) The onus of proof that an apportionment is correct is on the person seeking to rely on the apportionment. To satisfy this onus, it may be necessary to support the apportionment with a valuation. In cases of doubt, or where significant amounts of consideration are involved, Inland Revenue may require a valuation from a registered valuer. The method of valuation depends on the circumstances of the case. The method adopted should reflect the true value of the property. Different circumstances may require different methods. An area apportionment may not always be appropriate. In some cases, it may be more appropriate to value residential land on farm properties by comparison with sales of residential properties in nearby rural townships. If registered persons are in doubt as to whether they need to obtain a valuation from a registered valuer, they should contact their local Inland Revenue office. Any valuation relied on needs to identify the method of valuation used and the reasons for adopting that method.

(c) When the supplier and the recipient are both GST-registered, the same apportionment, as set out in the tax invoice, will apply to both parties. Ideally, this should be negotiated between the parties and agreed at the time of supply.

(d) When a purchaser intends to use a part of the curtilage for the making of taxable supplies, or part of the other real property for the dwelling, ongoing adjustments under s 21 will be required.

Where land holds legal rights to erect a residential dwelling on a portion of the land, apportionment of cost (based on land area set aside for the residential dwelling where typography and other considerations are not relevant) is available for GST purposes. There is no requirement to value the right to erect a dwelling and add it to the value of the land set aside for that purpose [see M Lodder and B Clark “Cost Equals cost?” Chartered Accountants Journal of New Zealand vol 83:2 (March 2004) at 34].

The CIR has ruled, in public rulings BR Pub 10/10, 10/11, 10/12 and 10/13 [see TIB vol 22:10 (November 2010 ) at 3-23], that the consideration for the supply of dwellings and other real property includes local authority rates apportioned between the buyer and the seller and any rates arrears where the purchaser takes over this obligation. The GST treatment of the rates apportionment will be the same as that for the other consideration for the property. Therefore, the purchaser will be entitled to claim the input tax in the rates apportionment only if input tax can be claimed for the other consideration.

580.20 Exempt supplies [ss 8, 14]

Supplies of goods and services which are exempt are not charged with GST. Exempt supplies are supplies of a type that would ordinarily be taxable if they were not specifically exempted. To the extent that a registered
person carries on any activity which is exempt, the registered person is not required to account for GST on any supplies made, and is unable to claim input tax deductions for supplies received.

“Exempt supplies” are defined as the supply of:

(a) Financial services;

(b) Donated goods and services by a non-profit body;

(c) Accommodation in a dwelling (but not a commercial dwelling [see 580.66]), supplied by way of hire (rent), a service occupancy agreement, or a licence to occupy;

(d) Leasehold land for rent, where the land is used principally for accommodation in a dwelling;

(e) A dwelling, or the reversionary interest in the fee simple estate of leasehold land, which has been used exclusively as rental accommodation for at least five years. In order to be exempt, the supply must be made by a registered person in the course of a taxable activity;

(f) Fine metal which is not zero-rated.

A “dwelling” is any place used predominantly as a place of residence or abode. It includes any appurtenances belonging to or enjoyed with the place, but does not include any of the following:

(a) A hospital;

(b) A hotel, motel, inn, hostel, or boardinghouse;

(c) A serviced apartment for which paid services in addition to the supply of accommodation are provided to a resident, and in relation to which a resident does not have quiet enjoyment, as that term is used in s 38 of the Residential Tenancies Act 1986;

(d) A convalescent home, nursing home, or hospice;

(e) A rest home or retirement village, except to the extent that, in relation to a relevant place, it is, or can reasonably be foreseen to be, occupied as a person’s principal place of residence for independent living;

(f) A camping ground.

This definition applies from 1 April 2011.

580.22 Financial services [ss 3, 14(a)]

The supply of financial services is exempt from GST. Also exempt are any other goods and services which are reasonably incidental and necessary to the supply of financial services. The following are not exempt:

(a) Financial services which are zero-rated (for example financial services provided outside New Zealand or certain business to business financial services);

(b) The supply, under an equity security or participatory security, of a right to the supply of goods and services at other than market value; and

(c) A part of a supply of financial services which is not, as between the supplier and the recipient, a supply of financial services.

“Financial services” includes:

(a) The exchange of currency by exchanging bank notes or coins, crediting or debiting accounts, or by any other means. “Currency” means any banknote or other currency of any country except when used as a collector’s item, investment article, item of numismatic interest, or for any purpose other than as a medium of exchange;

(b) The issue, payment, collection, or transfer of a cheque or letter of credit. “Cheque” means a cheque as defined in the Bills of Exchange Act 1908, an instrument specified in s 5(2) of the Cheques Act 1960, a postal note, money order, traveller’s cheque, or any order or authorisation to a financial institution to credit or debit any account;
(c) The issue, allotment, drawing, acceptance, endorsement, or transfer of a debt security. “Debt security” means any interest in or right to be paid money owing or to become owing by any person. A cheque is not a debt security;

(d) The issue, allotment, or transfer of an equity security or a participatory security. “Equity security” means any interest in or right to share in the capital of a corporate body. “Participatory security” means any interest or right to participate in any capital, assets, earnings, or other property where that interest or right forms part of a contributory scheme. It includes an interest in a unit trust but not an equity security, a debt security, money or a cheque. “Contributory scheme” is defined in s 2 of the Securities Act 1978;

(e) Underwriting or sub-underwriting the issue of an equity security, debt security or participatory security;

(f) The provision of credit under a credit contract. “Credit contract” is defined in s 3 of the Credit Contracts Act 1981 (immediately before its repeal); however, a taxpayer may choose to use the definition contained in s 7 of the Credit Contracts and Consumer Finance Act 2003. This choice has been backdated to 1 April 2005 to accommodate finance leases that do not result in a deferral of debt;

(g) The renewal or variation of a debt security, equity security, participatory security, or credit contract;

(h) The provision, taking, variation or release of a guarantee, indemnity, security or bond for a cheque, credit contract, equity security, debt security or participatory security, or for any of the activities (b) to (g) above;

(i) The provision or transfer of a life insurance contract or the reinsurance of such a contract. “Life insurance contract” means “a contract lawfully entered into to the extent that it places a sum or sums at risk upon the contingency of the termination or continuance of human life, marriage, civil union or de facto relationship, or the birth of a child, but not to the extent that it provides for entitlements under sch 1, Part 5 of the Accident Insurance Act 1998 (which relates to entitlements arising from fatal injuries)”. The term was extended to include civil unions with effect from 26 April 2005, and de facto relationships with effect from 1 April 2007;

(j) The provision or transfer of an interest in a superannuation scheme, or the management of a superannuation scheme. “Superannuation scheme” is defined in the Superannuation Schemes Act 1989;

(k) The provision or assignment of a futures contract through a futures exchange or at arm’s length if:
   (i) The contract does not provide for the delivery of a commodity; or
   (ii) The contract provides for the delivery of a commodity and the supply of the commodity is an exempt supply; or
   (iii) The contract provides for the delivery of money;

(l) The provision of a financial option;

(m) The payment or collection of interest, principal, dividend or other amount in respect of a debt security, equity security, participatory security, credit contract, contract of life insurance, superannuation scheme or futures contract;

(n) Agreeing to do, or arranging, any of the activities listed in (a) to (m) above;

(o) The investment in equity securities or participatory securities issued by another entity where:
   (i) The investment represents a 10 per cent or greater interest in the equity securities or participatory securities issued by that other entity; and
   (ii) The investment terms allow the investor, or a person acting on the investor’s behalf, to influence the management of the business of the entity;

(p) The evaluation by an investor of an investment, referred to in activity (o) above, and the planning or action by the investor to influence the management of the entity in the best interests of the investment.
The terms “debt security”, “equity security”, and “participatory security” do not include insurance contracts, shares in a flat-owning or office-owning companies, or interests in superannuation schemes. Prior to 3 April 2006, these terms also did not include estates or interests in land (except as mortgagee or charge-holder). Cheque clearance fees charged by banks to their customers are charges for financial services, and consequently exempt from GST. Where a retailer (eg a supermarket), charges fees to customers making payments by cheque, the fee is not a charge for financial services and GST must be accounted for on these fees [see PIB 148 (May 1986)]. The retailer’s charge does not come within the definition of financial services in s 3 and so it does not qualify for the exemption in s 14 [see TIB vol 3:5 (March 1992) at 9].

In the insurance industry, for policies which cover life and fire and general insurance, GST is not charged on the life insurance as it is an exempt supply but it is charged on that part of the premium that relates to other non-exempt insurance [see TIB vol 3:5 (March 1992) at 3]. However, from 1 April 1999, any minimal life insurance component contained in accident insurance contracts provided under sch 1, Part A of the Accident Insurance Act 1998 is treated as a taxable supply. This change is intended to reduce compliance costs.

A share is an equity security and, therefore, trading in shares cannot constitute a taxable activity for GST purposes, as it is a financial service which is an exempt supply [see TIB vol 6:9 (February 1995) at 23]. Subscription to a redeemable preference share which secured for the owner the right to use golf club facilities was found to be an exempt supply: Commissioner of Inland Revenue v Gulf Harbour Development Ltd [2005] 2 NZLR 162, (2004) 21 NZTC 18,915 (CA). This decision is overturned by legislative amendment, effective from 3 April 2006. The amendment covers the supply of rights to goods and services under an equity security or participatory security. If part of the supply of an equity security or participatory security involves an “associated supply”, the “associated supply” is treated as a separate supply [s 5(14B)]. An “associated supply” is defined in s 2 as including a supply where the supplier and recipient are associated persons and/or a supply of a right, under an equity security or participatory security to the supply of goods and services at other than market value.

An “associated supply” is excluded from the definition of “financial services”. There are two exclusions from the definition of “associated supply”. These are where the rights are to receive an exempt supply (such as interest or dividends), or where the supply relates to the control of the issuer of the security (such as voting rights).

The market value rules do not apply where the consideration equals or exceeds open market value, nor do they apply where, from the time of supply, the recipient applies the goods and services for the purposes of making taxable supplies. Where an associated supply arises because of a discount which applies to security holders, the treatment will depend on whether the discounted price is market value such as, for example, where the same discount is available to members of the public.

The time of supply for an “associated supply” is the earliest of the time at which:

(a) An invoice is issued;
(b) Any payment is made in respect of the supply;
(c) The goods are removed by the recipient or made available to the recipient; or
(d) The services are performed.

The sale of cards entitling the holders to purchase meals at nominated restaurants at a discount does not constitute the supply of a financial service for GST purposes and is, therefore, not an exempt supply: TRA Case S54 (1996) 17 NZTC 7,354.

Section 3(4)(b) excludes the provision of debt collection services from the definition of “financial services” unless the services are provided by the creditor in relation to the debt. Therefore, the activities of debt collection agencies and bill-pay agencies are subject to GST as from 10 October 2000. Penalties and default interest (including penalties on unpaid rates and postponement fees under the Local Government (Rating) Act 2002) are treated as considerations for exempt supplies.
(1) **General accounting and record package services**

The provision of the following types of services to suppliers of financial services or their customers is not a supply of financial services:

(a) The provision of a financial clearing system as part of a settlement process;
(b) The posting of transactions to customers’ accounts;
(c) The maintenance of customers’ accounts;
(d) The provision of ancillary services such as network management, software support and development.

For example, the supply of financial clearance services by EDS to the trading banks is not the supply of a financial service and, consequently, is taxed at the standard rate of 15 per cent (12.5 per cent prior to 1 October 2010).

However, if such services are supplied directly by the supplier of financial services (ie the bank) to its customers, they are treated as financial services if they are reasonably incidental and necessary to the supply of financial services, for example, if a bank or other financial institution maintains records of customers’ accounts and charges them for this service as part of its overall banking operations, this supply would be exempt because it is incidental to the supply of financial services.

The meaning of financial services [s 3] was amended in December 1989 to exclude the supply of general accounting and record package services provided to suppliers of financial services. The reason for the amendment was to reverse the effect of the Court of Appeal decision in *Databank Systems Ltd v Commissioner of Inland Revenue* [1989] 1 NZLR 422, (1989) 11 NZTC 6,093 (CA), that the supply of financial clearing and record-keeping services by Databank to trading banks was a financial service and, therefore, exempt from GST.

(2) **Financial planning fees**

In an interpretation statement [see TIB vol 13:7 (July 2001) at 37-50], *Financial planning fees — GST treatment*, the CIR clarified the GST treatment of services provided in relation to financial planning fees charged by financial advisers to plan, implement, and monitor an investment portfolio for their investor clients. The interpretation statement replaces public ruling BR Pub 95/11, which ceased to apply from 31 March 1999.

The CIR’s views can be summarised as follows:

(a) *Initial planning fees* are subject to GST. They do not constitute financial services under any of paragraphs (a) to (ka) of s 3(1), nor do they, as undertaken by advisers, generally constitute the “agreeing to do or arranging” of any of the activities listed in paragraphs (a) to (ka) in terms of paragraph (l). The initial planning services do involve advisers in “advising” the investor on an investment programme, and therefore come within the specific exclusion from the definition of a financial service in s 3(1)(l).

(b) *Implementation fees* will be financial services under s 3(1)(c), (d), and/or (l), and as such they are exempt supplies under s 14(1)(a).

(c) *Administration fees* provided in relation to maintaining records constitute exempt supplies either:

(i) By virtue of being financial services coming within one of the paragraphs in s 3(1); or
(ii) By being reasonably incidental and necessary to the supply of those financial services in terms of s 14(1)(a).

(d) *Monitoring fees* will be regarded as not constituting a financial service in terms of s 3(1), or an exempt supply in terms of s 14(1)(a), and are therefore subject to GST.

(e) *Evaluation fees* are subject to GST to the extent that the services involve agreeing to do, or arranging, any of the activities specified in s 3(1)(a) to (ka), the services falling squarely within the “advising” exclusion in s 3(1)(l).
(f) Replanning fees do not come within any of paragraphs (a) to (ka) of the definition of “financial services” in s 3(1). However, to the extent that these services involve agreeing to do, or arranging, any of the activities specified in s 3(1)(a) to (ka), they fall squarely within the “advising” exclusion in s 3(1)(l). Replanning fees are therefore subject to GST.

(g) Switching fees are treated in the same way as implementation fees because s 3(1) applies to switching fees in the same way as it applies to implementation fees.

580.23 Donated goods and services [s 14(b)]

When a non-profit body sells goods and services that have been donated to it, that supply is exempt from GST (eg the sale of clothing and furniture by Salvation Army stores where the clothing and furniture was donated). In TRA Case X19 (2006) 22 NZTC 12,255, the TRA held that the sale of a car, that was won in a lottery by a non-profit sporting club, was an exempt supply.

The donated goods and services must have been gifted to the non-profit body and they must have been intended to be used for the purposes of that non-profit body. The sale by a non-profit body of unclaimed lost property left on its premises is not exempt as it has not been donated [see TIB vol 6:9 (February 1995) at 23].

“Non-profit body” means any society, association, or organisation which is not carried on to provide profits or gains to any proprietor, member, or shareholder, and the rules or constitution of the body prohibit the making of any distribution of money or property to any proprietor, member, or shareholder. The definition includes both incorporated and unincorporated bodies.

580.24 Residential accommodation [ss 14(c), (ca)]

The supply of accommodation in any dwelling by way of hire, a service occupancy agreement, or a licence to occupy is exempt from GST.

A “dwelling” is any place used predominantly as a place of residence or abode. It includes any appurtenances belonging to or enjoyed with the place, but does not include any of the following:

(a) A hospital;
(b) A hotel, motel, inn, hostel, or boardinghouse;
(c) A serviced apartment for which paid services in addition to the supply of accommodation are provided to a resident, and in relation to which a resident does not have quiet enjoyment, as that term is used in s 38 of the Residential Tenancies Act 1986;
(d) A convalescent home, nursing home, or hospice;
(e) A rest home or retirement village, except to the extent that, in relation to a relevant place, it is, or can reasonably be foreseen to be, occupied as a person’s principal place of residence for independent living;
(f) A camping ground. [s 2].

This definition applies from 1 April 2011.

TIB vol 23:1 (Feb 2011) at 44 states:

“For accommodation to be in a “dwelling” the relevant premises must be occupied by the recipient as their principal place of residence or it must be reasonably foreseeable that this will be the case.”

As it is the supplier of the accommodation that needs to determine whether the premises will be occupied as the tenants as their principal place of residence, landlords may wish to obtain a written statement from the tenant as to whether or not this will be the case. The following examples illustrates the problem:

Example 1

John and his family live in rented accommodation in Auckland. John is seconded to Wellington for a year and rents an apartment which he lives in from Monday morning to Friday evening, returning to his family for the weekend. Where is John’s principal place of residence? Can he have more than one? Case law (though not in relation to the GST Act, suggests that this is possible.
Example 2
Mary lives in a rented house in Hamilton. The landlord decides to renovate the house over summer. The landlord pays for storage of Mary’s furniture and belongings and Mary rents a beach cottage for the four weeks of the renovation process which coincides with her annual leave. Is the beach cottage her principal place of residence for that four week period? It probably is, but how will the owner of the beach cottage know that?

Example 3
Tekno Ltd seconds one of its Christchurch employees to Auckland for six months. During this period, the company rents a house for the employee to live in. As the recipient of the supply is the company and the company will not be occupying the house as its principal place of residence, is the accommodation in a dwelling and, therefore, is it able to be treated as a GST-exempt supply?

These issues have been pointed out to Inland Revenue. They have undertaken to provide some guidance in a future TIB. The exemption applies only to residential accommodation, not to commercial accommodation (offices, business premises, workshops, etc). The exemption also does not apply to “commercial dwellings”, which are defined in s 2 as:

(i) A hotel, motel, homestay, farmstay, bed and breakfast establishment, inn, hostel, or boarding-house;
(ii) A serviced apartment managed or operated by a third party for which services in addition to the supply of accommodation are provided and in relation to which a resident does not have quiet enjoyment, as that term is used in section 38 of the Residential Tenancies Act 1986;
(iii) A convalescent home, nursing home, rest home, or hospice;
(iv) A camping ground;
(v) Premises of a similar kind to those referred to in subparagraphs (i) to (iv).

The following are not commercial dwellings and, therefore, are exempt supplies:

(i) A hospital except to the extent to which the hospital is a residential establishment;
(ii) A dwelling situated in a retirement village or rest home if the consideration paid or payable for the supply of accommodation in the dwelling is for the right to occupy the dwelling.

This definition applies from 1 April 2011.

Special provisions apply to the valuation of accommodation in commercial dwellings [see 580.66]. The term “hire” includes a letting on any terms, including a lease [s 2]. It therefore includes the renting or leasing of residential accommodation.

A “service occupancy agreement” means a licence under which a person occupies a dwelling for no consideration [s 2].

A “licence to occupy” means the right to exclusive personal occupancy [s 2].

In Norfolk Apartments Ltd v Commissioner of Inland Revenue (1995) 17 NZTC 12,212 (CA), the Court of Appeal upheld the High Court’s decision that the CIR had acted correctly in disallowing claims for input tax deductions or refunds of GST associated with the purchase of land and the costs of construction of a retirement village, which was an exempt activity. The taxpayer’s argument that it was making both exempt and taxable supplies was not upheld.

The supply of leasehold land by way of rental is also exempt from GST to the extent the land is used for the principal purpose of accommodation in a dwelling erected on that land. Exemption does not apply to the grant or sale of the lease itself [s 14(ca)]. The CIR has released a binding ruling on the question of when a supply of leasehold land is exempt from GST [see TIB vol 20:7 (August 2008) at 13]. Public ruling BR Pub 08/01 (applies for an indefinite period from 1 February 2006) can be summarised as follows:

(a) Where the leasehold land that is the subject of the supply is only used for the principal purpose of accommodation in a dwelling erected on that land, the supply is exempt from GST;
(b) Where the leasehold land that is the subject of the supply is not used, to any degree, for the principal purpose of accommodation in a dwelling erected on that land, the supply is not exempt from GST;
Where the leasehold land that is the subject of the supply is used for the principal purpose of accommodation in a dwelling erected on that land and for another use, the supply is exempt from GST to the extent that the leasehold land is used for the principal purpose of accommodation in a dwelling erected on that land, irrespective of whether the predominant use of the land is for the principal purpose of accommodation in a dwelling erected on that land;

Where the leasehold land that is the subject of the supply is used for the principal purpose of accommodation in a dwelling erected on that land and for another use, the apportionment of the value of the supply between the exempt and non-exempt uses must be made on the basis of allocating that proportion of the supply that is fairly attributable to the exempt supply.

Where a lease is entered into for leasehold land, and that land is to be used for the principal purpose of accommodation in a dwelling erected on that land, the supply of that leasehold land pursuant to the lease (or the relevant portion of the lease) is not exempt until the dwelling has been erected.

In *Wairakei Court Ltd v Commissioner of Inland Revenue* (1999) 19 NZTC 15,202 (HC), a company had extended an existing rest home, constructing studio units (described as bed sits) and six stand-alone villas. The company created separate licences to occupy the studio units and villas. The issue was whether the supply of these rest home facilities was a taxable or an exempt supply. The High Court reviewed a number of previous decisions and held that the principal purpose test set out in the definition of “input tax” [s 3A] requires making an overall evaluation of all relevant purposes at the time the goods and services were acquired. Applying this test, the Court found that the studio units came within the definition of “commercial dwelling” because the licences to occupy were merely a legal mechanism to deliver care to the elderly. However, the licences to occupy the villas did not carry the same entitlement of care delivery. As a result, the villa accommodation was held to be an exempt supply as the villas were not commercial dwellings.

Further information can be found in the CIR’s Interpretation Statement IS 10/07 – 10/08 which is available on Inland Revenue’s website www.ird.govt.nz

**580.25 Sale of residential rental properties [s 14(d)]**

The supply of residential accommodation by way of lease is always an exempt supply [see 580.24]. As the provision of exempt supplies is not a taxable activity, the sale of a property that has been used for residential rental will generally also be an exempt supply.

However, where the sale of residential dwellings occurs frequently enough to make it continuous and regular, and the sales are not due to the cessation or winding down of the rental activity, a taxable activity of supplying dwellings by way of sale may exist. In these cases, if a registered person has used a dwelling exclusively for residential rental accommodation (of the types outlined in 580.24) for a period of at least five years, the sale of that property is exempt from GST. This applies also to a reversionary interest in the fee simple estate of any leasehold land.

The CIR has issued interpretation statement IS07/01 on the application of GST to the sale of long-term residential properties by persons who are also carrying on a taxable activity of selling residential rental properties [see TIB vol 19:5 (June 2007) at 16-21]. Interpretation statement IS07/01 provides that all of the following criteria must be satisfied in order for the supply to be an exempt supply under s 14(d):

(a) The supply must be by sale.

(b) The supply must be by a registered person in the course or furtherance of any taxable activity. A person will usually have a taxable activity of selling residential properties if that person sells properties continuously or regularly: *TRA Case S36* (1995) 17 NZTC 7,237.

(c) The property must have been used for residential, rather than commercial, rental purposes.

(d) The property must have been used exclusively for rental purposes. If the property has been used partly for rental purposes and partly for other purposes, the sale will not be exempt. For example, a property developer who rents out property for residential purposes while trying to sell the property does not meet this test. A property developer can only take advantage of the exemption if the property has been used exclusively for rental purposes. It cannot apply when the property has been used for two
purposes, one a taxable supply (property development) and one an exempt supply (rental accommodation), as the property has not been used exclusively for the exempt purpose.

(e) The vendor must have rented out the property for at least five years. It is not sufficient that the property has been rented out for a minimum of five years by different owners. It is not necessary for the same tenant to have occupied the property for the entire period. Where the property is vacant while a new tenant is sought, the vacancy period is regarded as being a period during which the property is used for residential rental purposes.

Example:
Bill, who is not registered, sold a house to PD Ltd, a property developer. Bill had rented out the house for 15 years prior to the sale. This sale is not a taxable supply as it was not a sale in the course or furtherance of a taxable activity. PD Ltd claimed a “secondhand goods” input tax deduction as the property was acquired for the principal purpose of making taxable supplies. PD Ltd continued to rent out the property while developing it. Four years after acquiring the house, PD Ltd sold the house in the course of its taxable activity of property development. This sale is not an exempt supply for two reasons:

(a) During the time that the property was rented, PD Ltd was trying to sell it as part of the property development. Therefore, it was not used exclusively for rental purposes.
(b) PD Ltd did not rent out the house for five years.

PD Ltd must account for output tax on the sale of the house.

580.26 Fine metal [s 14(e)]

The supply of fine metal is exempt from GST, unless it is a supply of new fine metal which is zero-rated under s 11(1) [see 580.38].

“Fine metal” means gold, silver or platinum (or any other substance declared by the Governor-General, by Order in Council, to be fine metal) which has a fineness (purity) of not less than the following percentage:

<table>
<thead>
<tr>
<th>Metal</th>
<th>Fineness</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gold</td>
<td>99.5%</td>
</tr>
<tr>
<td>Silver</td>
<td>99.9%</td>
</tr>
<tr>
<td>Platinum</td>
<td>99.0%</td>
</tr>
</tbody>
</table>

580.30 Zero-rated supplies [s 11]

Zero-rated supplies are supplies which are taxable but which have GST charged on them at the rate of zero per cent. They differ from exempt supplies in that persons making zero-rated supplies can register for GST and claim back the GST on expenses incurred in making zero-rated supplies.

The following supplies are zero-rated:

Goods [s 11]:
(a) Exported goods;
(b) Duty-free goods;
(c) Goods destined for export but which died or were destroyed or ceased to exist;
(d) Boats and aircraft exported under their own power;
(e) Goods not situated in New Zealand at the time of supply and either the goods are not situated in New Zealand at the time of delivery to the recipient and/or GST is paid by the recipient on the importation of the goods into New Zealand;
(f) Goods and services used in relation to temporary imports;
(g) Goods for consumption outside New Zealand on foreign going aircraft, fishing vessels and ships;
(h) Taxable activities sold as going concerns to registered persons;
(i) New fine metal;
(j) Goods supplied in consideration for the transfer or surrender of certain emissions units;
(k) Land supplied to another registered person who intends to use it in the carrying on of a taxable activity [see 580.49].

**Goods and Services Tax**

**Services** [s 11A]:

(a) International transportation of passengers and goods, and associated services;
(b) Services in connection with land situated outside New Zealand;
(c) Services in connection with moveable personal property situated outside New Zealand;
(d) Services supplied to overseas postal organisations for the delivery in New Zealand of postal articles mailed outside New Zealand;
(e) Services physically performed outside New Zealand;
(f) Services supplied to non-residents who are outside New Zealand at the time of supply (other than services directly in connection with land or moveable personal property situated in New Zealand, and not being the acceptance of an obligation to refrain from carrying on a taxable activity to the extent to which that activity would have occurred in New Zealand);
(g) The supply of information to a person not resident in New Zealand and who is outside New Zealand, where the services are in relation to moveable personal property situated in New Zealand;
(h) Services provided in relation to intellectual property rights for use outside New Zealand;
(i) Services provided in relation to intellectual property rights to non-residents who are outside New Zealand at the time of supply;
(j) Services provided in relation to goods under warranty to the extent to which the services are provided under the warranty for a consideration given by a non-resident warrantor who is not a registered person and who is outside New Zealand at the time at which the services are performed;
(k) Certain business-to-business financial services;
(l) The acceptance of an obligation to refrain from carrying on a taxable activity outside New Zealand;
(m) The transfer, surrender, sale or disposal of certain emissions units;
(n) The supply of services in consideration for the transfer or surrender of certain emissions units.

**Territorial authorities** [s 11B]:

(a) Proceeds from the Local Authorities Petroleum Tax paid to a territorial authority under s 198 of the Local Government Act 1974.

Each of these types of zero-rated supply is explained in more detail in subsequent paragraphs.

**580.31 Business to business financial services** [ss 10(3B), 11A, 20F]

Historically, “business to business” financial services have been exempt from GST. This treatment has resulted in over-taxation. From 1 January 2005, the supply of financial services from providers to business customers are zero-rated if the customer is GST registered and makes taxable supplies to equal or exceed 75 per cent of total supplies. The provisions also zero-rate the supply of financial services to customers who may not, themselves, meet the 75 per cent test, but are members of a wholly-owned group and the group as a whole does meet the test (eg financial services provided to the head office company in the group) [ss 11A(1)(q), 11A(1)(r)].

An additional input tax deduction is allowed for supplies of financial services from one financial services supplier to another (eg bank to bank). The amount of the deduction is determined by the ratio of taxable to exempt supplies made by the service recipient. The ratio is determined by statistics supplied by the recipient [ss 20C, 20D].

The calculation method for the deduction is contained in s 20C which provides the following formula:

\[
\frac{a \times b}{c \times d}
\]

Where:

“a” is the total amount in respect of the taxable period that the registered person—
Goods and Services Tax

580.32

(i) would not be able to deduct under s 20(3) in the absence of this section; and

(ii) would be able to deduct under s 20(3), other than under s 20(3)(h), if all supplies of financial services
by the registered person were taxable supplies;

“b” is the total value of exempt supplies of financial services by the registered person to the direct supplier
in respect of the taxable period;

“c” is the total value of exempt supplies of financial services by the registered person in respect of the taxable
period;

“d” is the total value of taxable supplies by the direct supplier in respect of the taxable period, determined
under s 20D; and

“e” is the total value of supplies by the direct supplier in respect of the taxable period, determined under
s 20D.

The proposal is optional and providers of financial services who wish to take advantage of the potential
reduction in costs must elect in writing into the regime [s 20F].

The CIR will provide methods by which the financial services provider can estimate the level of taxable
supplies made by its customers. Provided that such a method is complied with, no retrospective adjustments
will be made if the estimate is found to be inaccurate.

Financial services that are provided to associated parties are required to be valued at market value for the
purposes of the zero-rating provision.

The CIR has issued guidelines for working with the new rules [see TIB vol 16:10 (November 2004) at
54-71].

580.32 Exported goods [s 11(a)-(g)]

Goods that are exported are zero-rated. Zero-rating applies to goods that have actually been exported, goods
that have been entered for export under the Customs and Excise Act 1996, and goods destined for export but
which died or were destroyed or ceased to exist. See s 11(1)(a)-(n) for the specific conditions that must be
satisfied before exported goods can be zero-rated.

A supply of goods is zero-rated only if the supplier directly exports the goods. For example, if a manufacturer
sells goods destined for export to an exporting company, and the exporting company actually exports the
goods, the supply by the exporting company is zero-rated but the supply by the manufacturer is not [see TIB
vol 6:10 (March 1995) at 18].

The one exception to this rule is where all of the following apply:

(a) The goods are supplied to a non-resident;
(b) The goods have been, or will be entered for export by the supplier as a condition of the supply;
(c) The goods are exported by the recipient;
(d) The recipient does not intend to later import the goods into New Zealand for use other than in making
taxable or exempt supplies;
(e) The lack of intention to re-import is confirmed in a document which is retained by the supplier;
(f) The goods are not used or altered by the recipient prior to export except to the extent necessary to
prepare them for export;
(g) The goods leave New Zealand at or before the time of supply; and
(h) The goods do not leave New Zealand in the possession of a passenger or crew member of an aircraft
or ship.

This exception applies from 17 May 2007 [s 11(1)(eb)].

For goods exported by mail with a value of $1,000 or more, Inland Revenue requires a customs export entry.
The export entry and a copy of an international parcels customs declaration (form C2/CP3) stamped by a
postal officer when the parcel is posted, are sufficient evidence of export. A customs export entry is not
required for exports with a value of less than $1,000. Acceptable evidence of export for goods with a value of less than $1,000 is either an international parcels customs declaration (form C2/CP3 for parcels with a value of $620 or more, or form C1 for parcels with a value of less than $620) stamped by a postal officer at the time of posting, or a till receipt for the foreign postage [see TIB vol 6:8 (January 1995) at 21].

Goods that have been entered for export must be actually exported within 28 days of supply or they are taxed at the standard rate of 15 per cent (12.5 per cent prior to 1 October 2010). Inland Revenue may extend this 28 day period if circumstances beyond the control of the exporter and the recipient have prevented export within 28 days or if, because of the nature of the supply, it is not practicable to export the goods within 28 days. Where the goods have died, been destroyed, or ceased to exist prior to export, in circumstances beyond the control of both the supplier and the recipient, the supply is to be treated as if the goods had been exported.

Zero-rating does not apply to exported goods:
(a) For which a secondhand goods input tax deduction has been claimed by either the registered person or an associated person of the registered person [see 580.145]; or
(b) That have been or will be re-imported to New Zealand by the supplier.

From 6 October 2009, there is one exception to this prohibition on zero-rating of goods, for which a secondhand goods input tax deduction has been claimed. In order for the exception to apply, the recipient of the goods must give the registered person a written undertaking that neither the recipient nor an associated person of the recipient will cause the goods to be re-imported into New Zealand in substantially the same condition. An obvious example of where this provision may apply is the export of scrap metal which a scrap metal dealer has acquired from various members of the public. The fact that the metal may eventually be re-imported into New Zealand as a new product (eg gate latches), would not breach the conditions for the exemption. In the event that the goods are re-imported into New Zealand and are reacquired by the registered person who claimed the zero-rated treatment, the person is deemed to have supplied the goods at that time and in the course of carrying on a taxable activity. Therefore, output tax must be accounted for. The deemed supply does not occur if GST is paid at the border on re-importation of those goods.

(1) **Bloodstock**

For zero-rating to apply, it must be the supplier who enters the animal for export under the Customs and Excise Act 1996. The export must be in the course of, or as a condition of, the supply contract. The animal must be exported within 28 days of the time of supply. If the animal is exported by the purchaser, then zero-rating does not apply.

Where bloodstock is sold and destined for export, but cannot be exported within 28 days of the time of supply due to the nature of the contract, the supplier may apply for an extension of up to 24 months in which to export the animal. To qualify for the extension, the animal must not be used for commercial activities (for example for breeding, racing or entry into show in New Zealand). A request for an extension of time beyond 28 days must be made in writing and be accompanied by a copy of the contract of supply. If the animal is still in New Zealand at the end of the 24-month period, then GST becomes payable whether or not the animal is later exported [see TIB vol 19:3 (April 2007) at 91].

(2) **Animal trophies**

Animal trophies supplied to overseas (non-resident) tourists by the tourist, hunting, and safari industry are zero-rated in some circumstances. Animal trophies include mounted trophies, salted skins, and horns of animals, including fish and birds. The three main types of supplies and their GST treatment are as follows:

(a) **Taxidermy and mounting services provided by a taxidermist:** These services are chargeable with GST at the standard rate of 15 per cent (12.5 per cent prior to 1 October 2010). They generally are not zero-rated because they are performed in connection with movable personal property situated in New Zealand at the time the services are performed [s 11(2)(e)(ii)]. However, where the supply of the service is consistent with the requirements of s 11A(1)(m), and the goods are exported under circumstances where ss 11(1)(d), 11(1)(e), and 11(1)(eb) are satisfied or entered for export, zero-rating may apply [see TIB vol 19:7 (August 2007) at 19-20].
(b) Packaging and shipping of trophies: This is zero-rated under s 11(2)(ac) [see 580.39] because it involves the arranging of the transport of goods from a place in New Zealand to a place outside New Zealand.

(c) Trophy fees: These fees are zero-rated under s 11(1)(ac), provided the person charging the trophy fee is the same person who enters the goods for export. In addition, the export must take place within 28 days of supply, or such extended period as the CIR may allow under s 11(1C)(b). An extension of time is permitted if it is not practicable to export the goods within 28 days due to the nature of the supply. It is the CIR’s practice to grant extensions of up to 183 days. A request for an extension must be made in writing to the local Inland Revenue office and be accompanied by a copy of the supply contract.

(3) Goods sold to tourists

Six categories of exported goods sold in New Zealand to tourists and other persons departing from New Zealand can be zero-rated:

(a) Goods sold to departing travellers by a shop operating in the Customs-controlled area of an airport, unless the goods are normally intended to be used within that area;

(b) Goods sold to a customer before the customer leaves New Zealand, where the supplier delivers the goods to the Customs-controlled area of the airport, provided the customer does not take possession of the goods at any time outside the Customs-controlled area;

(c) Goods sold to persons departing by sea, where the purchaser does not have access to the goods at any time before the ship has left the final New Zealand port;

(d) Goods sold by a supplier licensed as an export warehouse, where the supplier has been licensed by the Comptroller of Customs to operate a sealed bag system;

(e) Goods posted or couriered overseas by the supplier; and

(f) Goods sold by shops licensed as export warehouses which operate within the Customs-controlled area of an international airport, where the goods are sold to departing travellers who uplift the goods on their return to New Zealand.

In each case the supplier must keep sufficient information to provide evidence for the zero-rating claim [see TIB vol 6:7 (December 1994) at 13-15].

When goods with a value of less than $1,000 are sold to customers from visiting cruise ships, there is no requirement for them to be entered for export. The goods may be zero-rated if the supplier follows these procedures:

(a) Obtain a document signed by the ship’s purser that contains a clause to the effect that the purchaser will not have access to the goods while they are in New Zealand. The goods may only be made available to the purchaser after the vessel has left its final New Zealand port of call.

(b) Keep records that identify the purchaser’s name and address, and the vessel’s name and departure date, together with a copy of the document signed by the purser [see TIB vol 7:1 (July 1995) at 22].

580.33 Duty-free goods [s 11(1)(h)]

Goods are zero-rated in the following situations:

(a) Goods purchased from a duty-free shop in a Customs-controlled area by an inbound air traveller, or an outbound air traveller who collects the goods on return to New Zealand;

(b) Where a retailer sells goods to a tourist and arranges to send the items overseas to the buyer;

(c) When a retailer arranges to send the items to an overseas customer;

(d) Goods purchased from duty-free shops, where the customer does not take possession of the goods before leaving New Zealand (for example a duty-free shop may arrange to send goods to the airport for a traveller to pick up at the time of departure);
580.34  Goods and Services Tax

(e) If a shop has been licensed by the Customs Service to operate a sealed bag system, goods given to the customer in New Zealand can be zero-rated. In this situation, the customers cannot use the goods until they leave the country;

(f) Goods sold by duty-free shops which are licensed as export warehouses and which operate within the Customs processing area at international airports, although GST may be payable at Customs upon entry to New Zealand.

See Inland Revenue Booklet GST Guide (IR375).

580.34  Boats and aircraft exported under their own power [s 11(1)(i), (7), (8), (9)]

The sale of a boat or aircraft to a purchaser, who then exports it under its own power to a place outside New Zealand, is zero-rated. However, the boat or aircraft must leave New Zealand within 60 days of the time the purchaser (or their agent) takes delivery, otherwise the supply will be subject to GST at the standard rate.

The 60-day period may be extended if Inland Revenue is satisfied that circumstances beyond the control of the supplier and purchaser have prevented, or would prevent, the export within the 60 day period. The application by the supplier Inland Revenue for an extension must be in writing and include documentation in relation to: records of the sale, limitations on dealings in and the uses that the boat or aircraft will be put to before export, and the proposed and actual date of export.

Inland Revenue [see TIB vol 19:3 (April 2007) at 22] requires the supplier to keep the following documentation to support the zero-rating of the exported boat or aircraft:

(a) A written statement from the purchaser that the boat or aircraft is not intended for use within New Zealand and that they will be exported from New Zealand;

(b) A written statement from the purchaser that the boat or aircraft will not be hired or given away before it is exported (however, they may be used as security for financing arrangements);

(c) A written statement from the purchaser that, if the boat or aircraft is offered for sale while it remains in New Zealand, it will be exported under its own power before completion of the sale;

(d) A record of the sale; and

(e) A copy of the “certificate of clearance” document issued to the purchaser by New Zealand Customs upon leaving New Zealand or other documentation that proves the boat or aircraft has left New Zealand. If the certificate is not available, the CIR may accept other documentation (eg the “entry for export” documents issued by the foreign customs authority evidencing arrival of the boat, or evidence of foreign registration of the boat).

580.35  Goods not situated in New Zealand at the time of supply [s 11(1)(j)]

Goods that are situated outside New Zealand at the time they are supplied and that are not going to be imported into New Zealand are zero-rated. For example, the supply of goods in Japan by the Japanese branch of a New Zealand company would be zero-rated. Because the New Zealand company is registered for GST the supply is a taxable supply, but it is zero-rated because the goods are not situated in New Zealand at the time of supply.

580.36  Goods and services used in relation to temporary imports

[ss 11(1)(h), (k), (ka), 11A(1)(h), (k), (i)]

Goods supplied in the course of repairing, renovating, modifying, or treating goods in transit through New Zealand and goods temporarily imported into New Zealand, that are consumed or become incorporated into the goods being repaired, are zero-rated. Where the goods being repaired are goods in transit, the supply is zero-rated only if the goods being repaired are not removed from the ship or aircraft on which they arrived in New Zealand. Typical examples of such zero-rated goods are spare parts supplied to repair the engine or equipment on board a foreign fishing vessel, materials consumed in repairing a cargo container, and medical supplies used to treat livestock in transit on a foreign ship or aircraft.
Goods and Services Tax

Services supplied in relation to goods in transit through New Zealand and goods temporarily imported into New Zealand are also zero-rated. Where the goods are in transit, zero-rating only applies if the goods are not removed from the ship or aircraft in which they arrived.

**Example 1:**
A vet treats a thoroughbred horse on board an aircraft that has stopped off in New Zealand en route from Sydney to Hawaii. The fee charged by the vet will be zero-rated.

**Example 2:**
A marine engineer makes repairs to a launch visiting New Zealand under a temporary import entry. The engineer’s fees would be zero-rated.

Inland Revenue requires a copy of the Import Entry form issued by Customs to be kept by any person supplying goods or services in relation to a temporary import.

The CIR’s interpretation of these provisions (particularly as they apply to yachts and other vessels) is set out in TIB vol 10:11 (December 1998) at 22-24. The key points of the interpretation statement are as follows:

(a) To be zero-rated, non-consumable goods must be fastened to, or become part of, the temporary import. For example, cabin fittings or engine parts would be zero-rated, but not life jackets. Ropes are only zero-rated if they form part of the rigging.

(b) Zero-rating does not apply to goods in respect of which the supplier has claimed a secondhand goods input tax credit [see 580.123].

(c) In order to be zero-rated, services must be performed directly in connection with the temporarily imported vessel (eg painting, mechanical work, or hull repairs). Marina space or storage facilities for overseas yachts are considered to be supplied directly in connection with the vessels.

(d) The supplier must provide evidence such as the following to support a claim for zero-rating:
   (i) A copy of the recipient’s passport (note that the previous requirement that the recipient of the services be a non-resident ceased to apply from 10 October 2000);
   (ii) A copy of the NZ Customs Service temporary import entry permit;
   (iii) Details of the goods and services supplied (eg by way of invoices and photographs); and
   (iv) Evidence to show that those goods became part of the temporary import or were consumed in the process (eg by an explanation of the work done).

Refer to the interpretation statement for full details of the CIR’s interpretation and a detailed example.

From 24 October 2001, zero-rating also applies to goods that are supplied for use on, or the use of, a pleasure craft, where that pleasure craft is a temporary import. To qualify for zero-rating, they must be goods that cause or enable the craft to sail, or goods that ensure the safety of passengers and crew on the craft [s 11(1)(ka)]. Examples of such goods include sails, spinnaker poles, lights for navigation and safety purposes, anchors, life rafts, tenders, life buoys, sheets and halliards.

Evidence required to support the claim for zero-rating include:

(a) A copy of the TIE permit, issued by the Customs Service;
(b) A copy of the recipient’s passport;
(c) Details of the goods purchased;
(d) If available, a copy of the Customs certificate of clearance.

The final provisioning of consumable stores supplied to a foreign-based pleasure craft that is departing New Zealand may also be zero-rated under s 11(1)(l) [see 580.39].

580.37 Going concerns [ss 11(1)(m), 78E]

When a taxable activity [see 580.95], or a part of a taxable activity, is sold to a registered person as a going concern, the supply is zero-rated provided the supplier and the purchaser have agreed in writing that the
supply is of a going concern. The test for whether or not a going concern is to be transferred is applied at the
time of supply.

**TaxNote:** The supplier must be registered in order for the supply of a going concern to be zero-rated. This
is because, to be zero-rated, a supply must first be taxable, and to be taxable, the supply must be made by a
registered person.

To be a going concern, a supply must meet all of the following conditions [s 2(1)]:

(a) There must be the supply of a taxable activity, or of part of a taxable activity, capable of separate
operation;

(b) Everything necessary for the continued operation of the taxable activity (or part thereof) must be
supplied to the purchaser; and

(c) The supplier must carry on the taxable activity up to the time it is transferred to the purchaser.

Section 11(1)(m) requires that the supplier and the purchaser agree in writing that the supply is of a going
concern.

**Example:**
A beef and sheep farm is sold and the land, livestock, buildings, and machinery are included in the sale. The vendor continues
to run the farm up to the settlement date. The sale of the farm qualifies as the sale of a going concern. If only the land and
buildings were sold, and the machinery and the livestock were retained by the vendor, the sale would not qualify as a going
concern. It is not necessary that the purchaser actually continue to operate the taxable activity that has been transferred. So, for
instance, it would not matter if the purchaser had the intention of undertaking a dairy conversion and carrying on the activity of
dairy farming rather than drystock farming.

When a supply is treated as a going concern in error, and the agreement for the supply makes no provision
for the recovery of uncharged GST, s 78E enables the supplier to recover the GST from the purchaser by
increasing the consideration for the supply by 15 per cent (12.5 per cent prior to 1 October 2010). For further
examples, see TES 43 (November 2006) 659.

1) **Case law**

In *TRA Case N17* (1991) 13 NZTC 3,148, the subdivision of an eight-hectare block, including a house, from
152-hectare block and its subsequent sale was held to be still a going concern or part of a taxable activity as
a going concern and capable of separate operation. The purchasers acquired the vendor’s farming operation
in that they took over the taxable activities as well as the capital asset of land and buildings for agricultural
use.

In *TRA Case N3* (1991) 13 NZTC 3,021, it was held that the transfer of an individual fishing quota and a
fishing vessel was not a sale of a going concern.

In *TRA Case P38* (1992) 14 NZTC 4,288, the sale of a developing motel was not deemed to be the sale of a
going concern in that the vendors had been developing a new activity rather than operating a going concern.

In *Belton v Commissioner of Inland Revenue* (1997) 18 NZTC 13,403 (HC), the sale of the land, buildings,
and chattels of a motel, under a contract which provided for vacant possession, was held not to be the sale
of a going concern despite the fact that the motel was capable of being run as a going concern immediately
following settlement. The motel did not continue in its operation uninterrupted; at settlement date the motel
had been closed down and there were no future bookings.

In *TRA Case T63* (1998) 18 NZTC 8,480, the sale of the land, buildings and some of the plant of a joinery
business to a registered person was held not to be the supply of a taxable activity as a going concern. Although
the new owner subsequently used some of the plant to set up a different type of joinery business, the old
joinery business ceased to operate at the time the purchaser took possession. The purchase and sale agreement,
which was in a form used for the sale of land and buildings, expressed the price to be inclusive of GST (if
any) and the agreement did not mention the words “going concern”, nor did it provide for goodwill, restraint
of trade, stocktaking, preservation of stock levels, perusal of business records and financial accounts, the
employment of staff or for any work on hand.
In Commissioner of Inland Revenue v Fatac Ltd (in liq) (2001) 20 NZTC 17,348 (HC), the High Court found that the relevant taxable activity was the licensing of land and not quarrying as found by the TRA. The licence between the vendor and the third party had not been transferred on settlement. Had a lease been assigned to the purchaser, the goods and services necessary for the continued operation of the taxable activity would have been supplied. Also at issue was whether or not the parties had agreed that there be a transfer of a business as a going concern. This analysis was confirmed by the Court of Appeal in Fatac Ltd (in liq) v Commissioner of Inland Revenue (2002) 20 NZTC 17,902 (CA).

In Mortre Holdings Ltd v Starrenburg (2004) 21 NZTC 18,536 (HC), the High Court cited Fatac with approval when ordering the plaintiff to pay damages as a result of a breach of a warranty that they were registered for GST when, in fact, they were not.

(2) Commercial buildings

In 1989, Inland Revenue set a threshold of 80 per cent of the floor area of a commercial building which must be tenanted in order for the supply of the building to be a going concern. Following cases such as TRA Case M89 (1990) 12 NZTC 2,556 and TRA Case N38 (1991) 13 NZTC 3,322, Inland Revenue accepted that the 80 per cent threshold was too high and issued a new guideline setting a threshold of 50 per cent of rentable floor area, with effect from 1 April 1992. However, even this 50 per cent figure has subsequently been challenged in the Courts.

In TRA Case S27 (1995) 17 NZTC 7,189, the sale of a commercial rental property, which was 42 per cent tenanted, with a 58 per cent vacancy of a temporary nature that was merely part of the ordinary letting cycle, was accepted as the sale of a going concern.

The sale of a commercial building which was untenanted at the time of settlement was not the sale of a going concern even though: the building was tenanted at the time the contract was entered into; the contract referred to the sale as being zero-rated because it was a going concern; and the taxpayer had fully intended to carry on the business of producing rental income: TRA Case S91 (1996) 17 NZTC 7,573. The judgment summarised six principles relevant when deciding whether the sale of a commercial property is that of a going concern:

(a) There must be some undertaking happening on the land at the time of the agreement for sale and purchase;
(b) That undertaking must be of a business or commercial nature;
(c) The undertaking must be in existence and operating before, during, and after the sale;
(d) The inquiry as to whether there is a going concern must be into the substance of the transaction, not the form. Statements of intent in a contract are relevant but not conclusive;
(e) The transfer of the business activity itself, rather than simply the transfer of assets, is crucial in determining whether there has been the transfer of a going concern; and
(f) The relevant time to determine whether a going concern exists is the date the purchaser takes over the assets.

In New Zealand Guardian Trust Ltd v Commissioner of Inland Revenue (1996) 17 NZTC 12,506 (HC), the sale of a commercial building under an agreement which provided for vacant possession was not the sale of a going concern even though the tenant remained in the building after settlement date and paid rent to the new owner on an informal, monthly basis.

In Tepe Holdings Ltd v Commissioner of Inland Revenue (2010) 24 NZTC 24,551 (HC), the taxpayer was the lessor of a floor in a commercial building, holding shares in the office owning company. The taxpayer subleased that floor to tenants. It then entered into an agreement with another company to sell its shares in the office owning company. The taxpayer claimed that transaction was the sale of a going concern and therefore zero rated for GST purposes. The High Court held that the transaction entered into by the taxpayer was the sale of the shares of a company and was not the supply of a going concern. The Court of Appeal in Tepe Holdings Ltd v Commissioner of Inland Revenue [2011] NZCA 534 upheld that decision.
580.38  **New fine metal** [s 11(1)(n)]

The first supply of new fine metal following refining by a refiner to a dealer in fine metal is zero-rated if it is to be used by the dealer as an investment item. Where a person is both a refiner of and a dealer in fine metal, the new fine metal is deemed to have been supplied to a dealer immediately prior to the making of any exempt supply of that new fine metal.

For the definition of “fine metal”, see 580.26. New fine metal means fine metal that has been refined into fine metal by a refiner.

580.39  **International transportation** [s 11A(1)(a)-(d), (l)]

A supply is zero-rated if it involves the transport of passengers or goods:

(a)  From New Zealand to an overseas destination, or vice versa; or

(b)  Between two destinations, both outside New Zealand.

Zero-rating applies to both air and sea transport. The insurance and arranging of international transportation are also zero-rated. Travel between New Zealand and the Cook Islands, Niue, or Tokelau is not zero-rated because these islands are considered to be part of New Zealand.

International passenger transport includes any internal air travel within New Zealand that is part of the international carriage. Before 26 March 2003, this applied only to passenger travel by air. From 26 March 2003, it also applies to domestic legs of a cruise, provided that either the first place of departure or the final place of destination, is outside New Zealand.

**Example 1:**
A cruise commences in Sydney, docking in two other Australian ports before crossing the Tasman sea to dock in three New Zealand ports before finally terminating in Auckland. As the first place of departure is outside New Zealand, the cruise is zero-rated.

**Example 2:**
A person living in Invercargill wishing to fly to Melbourne may need to fly to Christchurch first to catch an international flight. Provided both legs of the flight are booked at the same time through the same travel agent, the Invercargill-Christchurch leg will be treated as part of the international flight and will be zero-rated.

When the services involve the international transport of goods (including ancillary transport activities such as loading, unloading and handling), transportation within New Zealand is also zero-rated where the transport is part of the international transport and the same person supplies the internal and international transport.

**Example 3:**
Manufactured goods are exported to Australia. One freight company is retained to transport the goods from the factory in Hamilton to the final destination in Australia. The services supplied by the freight company to the manufacturer, including transport and handling within New Zealand, qualify for zero-rating.

From 25 November 2003, the transport of household goods within New Zealand (including ancillary transport activities), is zero-rated where:

(a)  The services are supplied to a non-resident who is outside New Zealand at the time of supply;

(b)  The goods are entered for home consumption; and

(c)  The supply arrangement is made before the goods are entered and the services are expected to be completed within 28 days of the goods being entered.

A port company’s supply of storage facilities to non-residents does not qualify for zero-rating [see TIB vol 6:5 (November 1994) at 2].

The supply of goods which are consumable stores for use as stores for consumption outside New Zealand on an aircraft going to a destination outside New Zealand, or on a fishing ship going outside New Zealand fisheries waters, or on a foreign-going ship, is zero-rated under s 11(1)(l). This would include such things as fuel, food and beverages, fishing bait, and other stores that are expected to be consumed during the voyage.
The supply of goods are zero-rated where they are consumable stores for use on:
(a) An aircraft going to a destination outside New Zealand;
(b) A fishing ship outside, or going outside, New Zealand fisheries waters;
(c) A ship (other than a pleasure craft) carrying consumables to a foreign-going ship or fishing ship that meets the requirements of (a) or (b) above; or
(d) An aircraft going to a destination outside New Zealand [s 11(1)(l)].

This includes fuel, food and beverages, fishing bait, and other stores that are expected to be consumed during the voyage.

580.40 Services in connection with property situated outside New Zealand [ss 11A(1)(e)-(f)]

Services supplied directly in connection with land (including improvements such as buildings) situated outside New Zealand are zero-rated.

Example 1:
A New Zealand architect designs a building to be constructed on an overseas property for an overseas client. The charge for this service is zero-rated.

In Malololailai Interval Holidays New Zealand Ltd v Commissioner of Inland Revenue (1997) 18 NZTC 13,137 (HC), it was held that a supply will not be zero-rated under s 11(2)(b) unless the contractual arrangement between the parties evidences the direct supply by the supplier (ie not through a third party) of the services in connection with land.

Services supplied directly in connection with moveable personal property (excluding choses in action) situated outside New Zealand at the time the services are performed are zero-rated. Moveable personal property is any property other than land and improvements.

Example 2:
A New Zealand insurance company insures a vehicle which is located outside New Zealand. The premiums are zero-rated.

580.41 Services performed outside New Zealand [s 11A(1)(j)]

Any services physically performed outside New Zealand are zero-rated, provided that the nature of the services are such that they can be received at no place or time other than that at which they are performed.

Example:
A New Zealand doctor, who is registered for GST, goes to Western Samoa to treat patients there. The fees charged to those patients are zero-rated. In contrast, a lawyer who travels to Western Samoa to write a report for a New Zealand client would not be able to zero-rate the fee on the basis that the service was performed outside of New Zealand. The condition regarding place and time applies from 1 January 2005.

580.42 Services supplied to non-residents [ss 8(2), 11A(1)(g), (k), (2), (3)]

Many services supplied to non-residents are able to be zero-rated. However, a number of special rules apply to specific types of transaction.

Services supplied to non-residents who are outside New Zealand at the time the services are performed are zero-rated. For example, a charge for legal advice given to a person living in Australia by a lawyer resident in New Zealand is zero-rated.

Where the non-resident is a company or an unincorporated body, that entity will be considered to be outside New Zealand if its presence in New Zealand is of a minor nature and is not effectively connected with the supply. For example, if services are being supplied to a foreign company and, at the time of the supply, one of the company’s employees is in New Zealand for a few days working on a matter unrelated to the services being supplied, the company will be considered to be outside New Zealand at that time. The CIR has considered the presence of the non-resident purchaser in relation to short films made in New Zealand where the non-resident collects the film cassette and physically takes it overseas. The CIR considers the non-
resident’s presence in New Zealand to be sufficiently minor as to not impact on the ability of the New Zealand film maker to zero-rate the supply of the film making services [see TIB vol 19:1 (February 2007) at 47]. Zero-rating does not apply where an agreement is entered into with a non-resident person (person A) and the services are received in New Zealand by another person (person B), including:

(a) An employee of person A; or
(b) If person A is a company, a director of the company; and
(c) If it is reasonably foreseeable, at the time at which the agreement is entered into, that person B will not receive the services in the course of making taxable or exempt supplies.

Zero-rating does not apply to the following types of services:

(a) Services supplied directly in connection with land and improvements situated in New Zealand;
(b) Services supplied directly in connection with moveable personal property (excluding choses in action, temporary imports and goods in transit) situated in New Zealand at the time of supply;
(c) Agreeing to refrain from carrying on a taxable activity inside New Zealand.

The CIR has issued a binding ruling BR Pub 10/09 in relation to legal services provided to non-residents relating to transactions involving land in New Zealand. The ruling covers the following types of transaction:

• transactions involving the sale or purchase of land in New Zealand or the lease, licence, or mortgage of land in New Zealand;
• easements, management agreements, construction agreements, trust deeds, guarantees and other agreements concerning land in New Zealand; or
• disputes arising in relation to land in New Zealand.

The ruling concludes that the following types of legal services, provided to a non-resident who is not in New Zealand at the time at which the service is performed, and in relation to the above types of transaction are zero-rated under s 11A(1)(k) of the GST Act:

• legal services relating to transactions involving the sale and purchase of land in New Zealand, including the drafting of agreements for the sale and purchase of land, the provision of legal advice in relation to the sale and purchase transaction and ancillary and related services leading up to the completion of the sale and purchase transaction;
• legal services relating to transactions involving the lease, licence, or mortgage of land in New Zealand;
• legal services relating to easements, management agreements, construction agreements, trust deeds, guarantees and other agreements relating to land in New Zealand; and
• legal services relating to disputes arising in relation to land in New Zealand, including drafting court documents, court appearances, representation in negotiations and settlements and general advice in relation to such disputes.

The ruling applies from 23 May 2010 to 23 May 2015. The full text of the ruling, including commentary and examples, can be found in TIB vol 22:9 (October 2010) at 2-9.

More specific rules apply to the following types of service:

1) Airport operators’ terminal services charges

Airport operators’ terminal services charges and international garbage disposal charges are not zero-rated, but international airport dues and landing costs are: Auckland Regional Authority v Commissioner of Inland Revenue (1994) 16 NZTC 11,080 (HC).

2) Delivery of postal articles

Services that are supplied to overseas postal organisations for the delivery in New Zealand of postal articles mailed from outside New Zealand may be zero-rated.
**Example:**
A parcel is posted in the United States addressed to a New Zealand recipient. The US postal company receives payment for the cost of postage. Once the parcel has reached New Zealand, it is delivered to the recipient by New Zealand Post. If New Zealand Post charges the US postal company for the delivery within New Zealand, the charge may be zero-rated.

(3) **Advertising**

The supply of advertising space in a publication or advertising time on radio, television or other broadcasting service (including the communication of the advertising message and all steps involved in providing the service by the supplier of the advertising) is zero-rated if the service is supplied contractually for and to a non-resident who is outside New Zealand at the time the service is performed. Such supplies are not regarded as being “directly in connection with” land or moveable personal property in New Zealand. The supply is zero-rated even if a New Zealand resident also benefits from the advertising [see public ruling BR Pub 03/03, TIB vol 15:5 (May 2003) at 7-12].

Zero-rating also applies to creative services and placement services supplied to non-residents who are outside New Zealand at the time the services are performed, regardless of whether or not the goods to be advertised are situated inside New Zealand [see TIB vol 11:1 (January 1999) at 30-31].

(4) **Facilitation services provided by inbound tourism operators**

“Facilitation services” are services that a registered person provides in packaging one or more domestic tourism products, such as meals, transport and other activities, in New Zealand and selling them outside New Zealand to a non-resident person.

To the extent to which a supply of services consists of facilitation services, it is chargeable with GST at the standard rate and cannot be zero-rated. This treatment has been backdated to 1 July 2007. However, a transitional provision applies to relieve the transition to the new rule. Under the transitional provision, facilitation services are zero-rated for the period 1 July 2007 to 30 June 2008.

The consideration that relates to these services must be quantified for each GST period that falls within the transitional period. Where a GST period includes days that fall both within and outside of the transitional period, the consideration must be apportioned on a day-by-day basis. Quantification must be based on the person’s gross margin attributable to the facilitation of inbound tour operations or by some other means that the CIR is able to verify.

Where a registered person has paid GST in respect of the supply of facilitation services during the transitional period, the person is entitled to a refund of that GST. Applications for a refund must be made in writing to the CIR by 7 June 2010.

580.43 Exported information services [s 11A(1)(1), (2), (3)]

The supply of information to a non-resident who is outside New Zealand can be zero-rated if the information has a direct connection with moveable personal property in New Zealand as the services are regarded as being consumed offshore. However, zero-rating does not apply if the services are received by a person other than the purchaser and that person is in New Zealand at the time at which the services are performed.

Where the non-resident is a company or an unincorporated body, that entity will be considered to be outside New Zealand if its presence in New Zealand is of a minor nature and is not effectively connected with the supply [see 580.42].

Zero-rating does not apply to exported information in relation to land in New Zealand.

**Example 1:**
The provision to a non-resident of testing services on goods brought into New Zealand for the purposes of the testing activity would be zero-rated.

**Example 2:**
The provision of educational services in New Zealand to the child of a non-resident would not be zero-rated as the services are consumed in New Zealand.
Example 3:
The provision of architectural services in relation to a building situated in New Zealand would not be zero-rated as it is relation to land in New Zealand.

In *Auckland Institute of Studies Ltd v Commissioner of Inland Revenue* (2002) 20 NZTC 17,685 (HC), the taxpayer ("AIL") was a private educational institute that provided tuition services to overseas students. In 1993, the institute incorporated a subsidiary, AIS International Ltd ("AISI") to carry out its overseas activities. AIL provided the actual tuition services under subcontract to AISI. Under the arrangement, AISI was not able to charge a margin on the fee, but was able to charge an “assistance fee” for assistance with translation services, immigration procedures and the completion of enrolment applications. The assistance fee was not separately charged but, instead, was included in a global fee covering both the tuition and the assistance. The taxpayer sought to apportion the fee between the assistance component, which was to be zero-rated, and the tuition fee which was not. The CIR conceded that the assistance services could be zero-rated and suggested that 10 per cent of the fee could be apportioned to that component. AIS objected to the apportionment ratio. Hansen J found that the services provided to students comprised a single supply of tuition services and that no portion could be zero-rated. He held that, when considering whether a supply could be apportioned for GST purposes, it is necessary to examine the true and substantial nature of the consideration given to determine whether there is sufficient distinction between the allegedly different parts to make it reasonable to sever them and apportion accordingly. He found that all of the services were an integral part of the tuition services. Students had contracted for tuition, not for the assistance services. There was a single supply and no portion of it was able to be zero-rated. Hansen J went on to add that, had apportionment been available, it could have been calculated on the basis of the actual cost of providing the service plus a reasonable allowance for profit.

580.44 Services in connection with exported goods [s 11A(1)(m)]

Services supplied directly in connection with exported goods which themselves are zero-rated under any of paragraphs (a)-(e) of s 11A(1) are also zero-rated.

Example:
A non-resident purchases in New Zealand a piece of machinery that is to be shipped by the supplier to the purchaser’s home country. The purchaser requests that, prior to shipping, the machine be painted and signwritten. The services supplied by the painter and signwriter would be able to be zero-rated.

580.45 Supplies of property rights [s 11A(1)(n)-(p), (4)]

The following services in respect of the supply of rights are able to be zero-rated:

(a) The filing, prosecution, granting, maintenance, transfer, assignment, licensing, and enforcement of intellectual property rights, including patents, designs, trademarks, copyrights, plant variety rights, know-how, confidential information, trade secrets and similar rights.

(b) Other services in respect of the rights listed above, including making searches, giving advice, opposing a grant, seeking the revocation of the rights, and opposing steps taken to enforce the rights. These services are able to be zero-rated only where either: (i) the rights are for use outside New Zealand; or (ii) the services are supplied to a non-resident of New Zealand who is outside New Zealand when the services are performed.

(c) Services that are the acceptance of an obligation to refrain from pursuing or exercising, in whole or in part, the rights listed above. However, this applies only where and to the extent to which the rights are for use outside New Zealand.

(d) Services that are the acceptance of an obligation to refrain from carrying on a taxable activity if the activity would have occurred outside New Zealand.

580.46 Warranty payments from non-resident warrantors [s 11A(1)(ma)]

The supply of services to a non-registered offshore warrantor, in relation to goods sold in New Zealand which were subject to GST on importation and which are covered by a warranty agreement is zero-rated with effect
from 1 August 2002. The effect of the legislation is to remove the double tax impost that occurred as a result of the decision in the case of *Suzuki New Zealand Ltd v Commissioner of Inland Revenue* (2001) 20 NZTC 17,096 (CA). The amendment relieves non-registered offshore warrantors from the GST cost arising from the fact that they are not able to recover the GST on the cost of the remedial services. The term “warranty” is defined as “an undertaking given under a supply agreement to remedy any defect in the goods that appears during a certain period of time after the goods are supplied or before a certain level of usage is reached”. A supply of such services is treated as being the only supply of services in respect of the consideration supplied by the warrantor. If goods are supplied under the warranty (eg spare parts), the supply of those goods is treated as being a supply of services for the purposes of the provision.

**580.47 Telecommunication Services** [ss 2, 8(3), 8(4), 8A, 11A(5), 11AB, 51(1)(e)]

From 1 July 2003, new rules apply to cross-border supplies of telecommunication services. The changes have been made to cope with difficulties in determining where the services are physically performed and the identification of the party to whom the services are being supplied.

(1) **Place of supply — the “physical location” test**

There is deemed to be a supply in New Zealand when a person (other than a telecommunications supplier) who is physically in New Zealand initiates a supply of telecommunications services from a supplier outside New Zealand.

(2) **Place of supply — the “billing address” test**

Where the physical location test is not practical to use for a class of customer or service, there is deemed to be a supply in New Zealand when a person with a billing address in New Zealand initiates the supply from a telecommunications supplier outside New Zealand. The billing address is the physical location of the business or residence of the person and does not include a post office box number. Where the “billing address” test is used for a member of a class of customer or service, it must be used consistently for all members of that class of customer or service.

(3) **The initiator test**

In order to apply either of the above two tests, it is necessary to determine who has initiated the supply. In determining who has initiated a supply, the factors to be taken into account are:

(a) The person who controls the commencement of the service;
(b) The person who pays for the service; and
(c) The person who contracts for the supply.

Where more than one of these test is met, it is the test that is highest on the list that takes priority.

(4) **Zero-rating**

Telecommunications services are able to be zero-rated only under the following two circumstances:

(a) Telecommunication services supplied by a New Zealand telecommunications supplier to a non-resident telecommunications supplier when the service is initiated outside New Zealand; and

(b) Telecommunication services supplied to a non-resident person other than a telecommunications supplier when the service is initiated outside New Zealand.

All other telecommunications services will be either subject to GST under the tests outlined above or will be outside the scope of the GSTA because they are not deemed to be supplied in New Zealand.

A supply of telecommunications services from a non-resident to a registered person in New Zealand who would be entitled to an input tax credit are not subject to GST unless the supplier and recipient agree otherwise.

(5) **Registration**

Where a foreign telecommunications supplier makes more than $60,000 of supplies to persons in New Zealand within a 12-month period (formerly $40,000, before 1 April 2009), the supplier will be required to register for GST. However, a non-resident supplier is not required to register where the threshold is breached.
solely as a result of supplies deemed to be made in New Zealand under the “physical location” or “billing address” tests. This ensures that non-resident cellular phone companies are not forced to register for GST solely because they make supplies to non-resident customers who are “roaming” in New Zealand.

The CIR has issued an operational statement which provides guidelines regarding the GST treatment of cross-border supplies of telecommunications services [see TIB vol 18:3 (April 2006) at 13-24 and TIB vol 18:4 (May 2006) at 18 for diagram correction].

580.48 Emissions trading [ss 11, 11A]

Almost all transactions in emissions units are zero-rated. Specifically, the following transactions related to the emissions trading scheme are zero-rated:

(a) The transfer of the emissions unit (other than by the Crown) under s 64, or Part 4, subpart 2 of the Climate Change Response Act 2002 or under a covenant entered into under the Forests (Permanent Forest Sink) Regulations 2007 [s 11A(1)(s)].

Section 64 of the Climate Change Response Act relates to emissions units allocated by the Crown in consideration of a person’s removal activities which result in greenhouse gases being removed from the atmosphere, or not released into the atmosphere. Part 4, subpart 2 relates to emissions units allocated by the Crown to certain industry groups.

(b) The surrender of an emissions unit under s 63 of the Climate Change Response Act 2002 [s 11A(1)(t)];

(c) Services supplied free of charge to or by the Crown in consideration for a supply that is zero-rated under (a) or (b) above [s 11A(1)(u)];

(d) Goods supplied free of charge to or by the Crown in consideration for a supply that is zero-rated under (a) or (b) above [s 11A(1)(o)];

(e) The sale or other disposal of an emissions unit, other than the transfer from the Crown for nil consideration [s 11A(1)(v)];

(f) The sale or other disposal of a unit that:
   • Is not an emissions unit;
   • Has been verified to an internationally recognised standard; and
   • Has been issued by reference to the sequestration or avoidance of emission of human-induced greenhouse gasses [s 11A(1)(v)].

The following is a summary of the GST treatment of various transactions under the Emissions Trading scheme:

(1) Zero-rated supplies

The following transactions are zero-rated:

(a) Transactions involving New Zealand units, Kyoto-compliant units and approved overseas units:
   (i) Transfer of emissions units by Government under s 64 or Part 4, subpart 2, of the Climate Change Response Act 2002;
   (ii) All supplies of services (deemed or actual) made in exchange for emissions units transferred by Government under s 64 or Part 4, subpart 2, of the Climate Change Response Act 2002;
   (iii) Surrender of emissions units under s 63 of the Climate Change Response Act 2002;
   (iv) Supply of New Zealand units and Kyoto-compliant emissions units not involving the Government.

(b) Transactions involving voluntary units:
   (i) All supplies of voluntary units;

(c) Transactions outside of the emissions trading scheme:
   (i) Transfer of emissions units by Government under a Permanent Forest Sink Initiative (PFSI);
(ii) Supply of services (deemed or actual) made in exchange for emissions units transferred by the Government under PFSI.

(2) Non-zero-rated supplies
The following transactions are standard-rated:
(a) All supplies of services (deemed or actual) made in exchange for voluntary units;
(b) Transfer of emissions units by Government other than under s 64 or Part 4, subpart 2, of the Climate Change Response Act 2002 or PFSI (for example, Project to Reduce Emissions (PRE)).
(c) A supply of goods and services by one business to another in exchange for a supply of emissions unit.

(3) Recent changes in treatment
The GST treatment of the following transactions has changed:
(a) All supplies of emissions units, and all supplies of services (deemed or actual) made in exchange for emissions units were standard-rated until 1 January 2009. Services supplied by one business to another in exchange for emissions units are again standard rated from 1 July 2010;
(b) All supplies of voluntary units were standard-rated until 1 April 2010;
(c) Transfer of emissions units by Government other than under s 64 or Part 4, subpart 2, of the Climate Change Response Act 2002 (for example PFSI, PRE and NGA) were zero-rated from 1 January 2009 to 6 October 2009;
(d) Supplies of services (deemed or actual) made in exchange for emissions units transferred by Government other than under s 64 or Part 4, subpart 2, of the Climate Change Response Act 2002 (for example, PFSI, PRE and Negotiated Greenhouse Agreements) were standard-rated from 1 January 2009 to 6 October 2009. They are again standard rated from 1 July 2010.

580.49 Land [ss 2, 5, 11, 20, 25, 51B, 60B, 75, 78F]
From 1 April 2011, the supply of land is zero-rated where certain conditions are met. Zero-rating also applies where the supply has land as a component. In this case, it is the entire supply, and not just the land component, that is required to be zero-rated.
Where services are part of the supply that includes land, the services are deemed to be goods and are zero-rated along with the rest of the supply [s 11(8C)].
Where a transaction involving land is entered into before 1 April 2011, and the time of supply is 1 April 2011 or later, the supplier has the option of using either the old rules or the new rules for that supply [s 11(8C)].

(1) Conditions for zero-rating to apply [s 11(1)(mb)]
Zero-rating applies where all of the following conditions are met:
(a) The supply is a supply of land or a supply that includes land;
(b) Both the supplier and the recipient are registered persons;
(c) The recipient intends to use the goods (the land and anything sold with it) for making taxable supplies;
(d) The recipient does not intend to use the land as the “principal place of residence” for the recipient or any relative of the recipient.

The requirement that the recipient intend to use the goods for making taxable supplies is satisfied even where the recipient also intends to use the goods, or some of them, for making non-taxable supplies. In this case, the recipient is required to make an output tax adjustment to account for the non-taxable use [s 20(3)].
These conditions must be satisfied at the time of settlement [s 11(8B)]. If any of the conditions is not met, the supply is chargeable with GST at the standard rate.
Where a supply includes land that is:
Goods and Services Tax

(a) Intended to be used as the principal place of residence by the recipient or relative of the recipient; and
(b) The “principal place of residence” is included in a larger supply of land; the supplier is required to treat the supply of the residence as a separate supply. That separate supply is not subject to zero-rating [s 5(15)].

(2) Land definition [s 2]
The definition of “land” is repealed in respect of supplies made on or after 1 April 2011. From that date, the ordinary meaning of the work applies. A savings provision applies where a person has taken a tax position:

(a) For an adjustment period that ends before the date on which the Taxation (Tax Administration and Remedial Matters) Bill 2010 receives Royal assent;
(b) In relation to an adjustment for concurrent uses of land; or
(c) Relying on the definition prior to its repeal.

Prior to repeal, “Land” was defined to include:

(a) An estate or interest in land (this includes both legal and equitable interests);
(b) A right that gives rise to an interest in land (this includes a “profit à prendre”);
(c) An option to acquire land or an estate or interest in land;
(d) A share in the share capital of a flat-owning or “office-owning company” (as defined in s 121A of the Land Transfer Act 1952);
(e) A share in the share capital of a flat-owning or office-owning company.

“Land” did not include:

(a) A mortgage;
(b) A lease of a dwelling;
(c) An interest in land in circumstances where the supply is made periodically and 25 per cent or less of the total consideration specified in the agreement, in addition to any regular payments, is paid or payable under the agreement in advance of or contemporaneously with the supply being made.

The exclusion in (c) ensures that a lease of residential or commercial land is not “land” for the purposes of zero-rating unless there are large up-front payments.

(3) Obligations of the recipient of the supply [s 78F]
The supplier is required to base the decision as to whether or not the supply is required to be zero-rated on the registration status and the intentions of the recipient. To facilitate this decision-making, the recipient is required to give the supplier certain information. The information is required to be given in writing at or before settlement. The required information is that, at the date of settlement, the recipient:

(a) Is, or expects to be, a registered person;
(b) Is acquiring the goods with the intention of using them for making taxable supplies; and
(c) Does not intend to use the land as a principal place of residence for the recipient or a relative of the recipient.

As the information may be supplied before settlement, the recipient is able to supply it on the basis of the best estimate of what the situation will be as at the date of settlement. For example, a recipient who is not registered for GST may indicate that they intend to be registered as at the date of settlement. If the purchaser is acquiring the land on behalf of a nominee, the information given is that which pertains to the circumstances of the nominee. Where the sale is a sale in satisfaction of debt, such as a mortgagee sale or sale of repossessed goods, the information is given to the lender.

The recipient is required to supply their registration number to the supplier at or before the settlement date. If the supply is being made to an agent acting on behalf of an undisclosed principal, the requirement will be
met if the agent provides a written statement to the supplier as to whether, as at the date of settlement, the principal:

(a) Is, or expects to be a registered person; and
(b) Is acquiring the goods or services with the intention of using them for making taxable supplies; and
(c) Does not intend to use the land as a principal place of residence for themselves or a person associated with them.

The agent is also required to provide their own registration number to the supplier on or before settlement date.

(4) Obligations of the supplier [ss 75, 78F]

The supplier is able to act on the basis of the information supplied by the purchaser. The supplier has no obligation to make any attempt to verify the information. However, if the supplier has reason to suspect that the information is not correct, the supplier may, but is not obliged to, use the GST treatment that they believe to be correct. This could arise, for example, where the purchaser has stated in writing that they do not intend to use the property as their principal place of residence, but the supplier has reason to believe that they intend to use it for that purpose. If the purchaser does not supply the required written information, the supplier should not zero-rate the supply [s 78F].

If the supply is zero-rated, s 75(3B) requires the supplier to maintain records of the following particulars in relation to the supply:

• The name and address and registration number of the recipient;
• A description of the land; and
• The consideration for the supply.

Where the supply is made to a person who is acting as agent for an undisclosed principal, the supplier will have met the requirements if they maintain sufficient records to enable the name, address and registration number of the agent to be ascertained. The agent is required to maintain sufficient records for the name, address and registration number of the principal to be ascertained.

(5) Where the wrong GST treatment is used

The time of supply may be earlier than the date of settlement. This could arise where, for example, there is a binding contract in place, a tax invoice has been issued, and the supplier is required to account for GST on the invoice basis. The recipient of the supply may have provided information that, while correct at the time of supply, is incorrect at the time of settlement.

For example, the recipient may have stated that they intend to be registered for GST as at the date of settlement but, for some reason, the registration has not occurred. Or the recipient may have stated that they intend to use the property for the making of taxable supplies but have changed their mind and zero-rating is now known not to be the correct treatment. Conversely, the original information may have meant that the supply should not be zero-rated but the new information means that it should be zero-rated, such as when the recipient becomes registered for GST when they had originally not intended to do so.

Where the new information comes to light before settlement, the parties are permitted to agree to correct the GST treatment but are not obliged to do so. If a tax invoice has already been issued, the supplier would need to issue:

• A credit note, where the transaction has been standard rated and should be zero-rated; or
• A debit note, where the transaction has been zero-rated but should be standard-rated.

Where a credit note is issued, it provides the basis for the supplier to claim back any GST that has been remitted to Inland Revenue. The claim is made by way of an adjustment in the supplier’s GST return. The credit note also creates an obligation for the purchaser to repay any GST that has been claimed as a deduction. Where a debit note is issued, the opposite applies but the purchaser will not be able to claim GST as either
they are not registered for GST, their intention is not to use the property for making taxable supplies, or they intend using the property as a principal place of residence for themselves or a relative.

Where the matter is corrected after settlement, a credit note will need to be issued if the supply should have been zero-rated but was not. This will allow the supplier to claim back the GST if they have already remitted it to Inland Revenue. The purchaser won't have claimed GST on the purchase (it would have been zero-rated had the purchaser been registered and had the intention of using the property for making taxable supplies) and so need take no further action.

If, after settlement, it transpires that the transaction should have been standard rated but has occurred on the basis that it is zero-rated, the purchaser is treated as having made a supply of the goods at standard rate. This deemed transaction occurs on the date of settlement [s 5(23)]. If the purchaser is not registered, they will be treated as being registered as from the date of supply and are required to apply for registration. As this may result in the GST being paid late, use-of-money interest and penalties may apply. Once the GST has been accounted for, the person is able to request de-registration [s 51B]. Provided the request for de-registration is made by the end of the taxable period in which the deemed output tax is remitted to Inland Revenue, and the CIR agrees, the deemed sale of all goods and services forming part of the assets of the taxable activity that normally occurs on de-registration, will not occur.

Where the purchaser is subject to the deemed supply provisions of s 5(23), they are denied a corresponding input tax deduction [s 20(4B)]. However, a deduction may be allowed at some later date if the goods are then used in making taxable supplies.

Example 1:
Ben owns a small farmlet on which he carries on horticultural activities. Ben lives on the property and is registered for GST. Ben sells the property to Gemma who initially does not intend to use it for carrying on a taxable activity. The house and curtilage is valued at $450,000 and is required to be treated as a separate transaction for GST purposes. The selling price of the entire property is $800,000 plus GST if any.

Ben issues a tax invoice for $902,500 made up of $450,000 for the house and curtilage (which is not subject to GST and $452,500 ($350,000 plus GST of $52,500) for the remainder of the property). Ben remits the output tax of $52,500 to Inland Revenue. Prior to settlement, Gemma changes her mind and decides to carry on a taxable activity on the property. She registers for GST and informs Ben of the change. Ben and Gemma agree to correct the GST treatment before settlement.

Ben issues a credit note for $52,500 and uses this as the basis for an adjustment in his next return, claiming the $52,500 of GST that he has previously paid. Gemma pays Ben the new figure of $800,000 and, as the house and curtilage is not subject to GST and the balance of the transaction is zero-rated, she makes no claim in her GST return.

Had the change in circumstances occurred before settlement but either had not been notified to Ben before settlement or the parties had not agreed to amend the treatment before settlement, Ben will still need to issue a credit note in order to claim back the GST that he has paid to Inland Revenue. If Gemma has already claimed the GST at the time of supply, she will need to repay it and the credit note will crystallise this obligation. Gemma will also be keen to recover the GST that she paid to Ben on settlement. Commercially, this is unlikely to occur until Ben has successfully claimed the amount from Inland Revenue.

Example 2:
Catherine owns and operates a motel complex. She sells the property to Jason for $3,000,000 plus GST if any. Jason advises in writing that he intends to use the property for making taxable supplies, will be registered for GST at the time of settlement and does not intend to use the property as the principal place of residence of himself or any relative. The supply is, therefore, zero-rated. Just before settlement, Jason advises Catherine that he has had a change of plan and intends to turn the motel into apartments. Catherine has already issued a tax invoice showing the property as zero-rated and the time of supply has, therefore, occurred. The parties agree to correct the GST treatment prior to settlement. Catherine issues a debit note and Jason pays Catherine the GST inclusive price of $3,450,000. Catherine will account to Inland Revenue for the GST. Jason will not be entitled to make claim the GST that he has paid as he will not be using the property for making taxable supplies.

If the treatment is not changed at settlement, Jason will be required to register and will be deemed to have made a taxable supply of the property as at the date of settlement. After he has accounted for the GST to Inland Revenue, he will be able to de-register. Provided de-registration occurs prior to the end of the period in which he pays the GST to Inland Revenue, he will not have a deemed disposal of all of the assets.

(6) Nominee transactions

Where a purchaser nominates another person (a nominee) to be the recipient of the land, that nominee is deemed to be the purchaser and the GST treatment is based on the circumstances of the nominee. The
provision does not apply to supplies made by or to agents. Neither do they apply to other types of transaction such as assignments or novations [s 60B].

In the event that the transaction is not zero-rated, the tax invoice for the supply could be in the name of the purchaser who acquired the property on behalf of the nominee. In this case, it is essential that the nominee maintain records of:

- The name and address of the supplier;
- The date on which payment for the land was made;
- A description of the property; and
- The amount paid for the property.

Failure to maintain the records will preclude any input tax deduction or input tax adjustment being made in respect of the land [ss 20(2)(d), 24(7B)].

580.50 Place of supply [s 8(2)]

GST is charged only on goods and services supplied in New Zealand. A supply is deemed to take place in New Zealand if the supplier is resident in New Zealand.

A supply is deemed to take place outside New Zealand (and therefore is not a taxable supply) if the supplier is not resident in New Zealand, unless the goods are in New Zealand at the time of supply, or the services are physically performed by a person who is in New Zealand at the time of performance. However, if goods and services supplied in New Zealand by a non-resident are supplied to a registered person, the supply is deemed to be outside New Zealand unless the supplier and recipient agree otherwise in writing.

For GST purposes, the term "resident" has the same meaning as in the ITA [see 1250 RESIDENCE], except that it also includes:

(a) A person carrying on any taxable or other activity in New Zealand through a fixed or permanent place in New Zealand; and

(b) An unincorporated body that has its centre of administrative management in New Zealand [s 2].

580.60 Value of supply [s 10]

The value of a supply determines the amount of GST charged on it. For example, if the value of the supply is $100, the GST charged is 15 per cent of $100, or $15 (prior to 1 October 2010, the rate was 12.5 per cent). The rules for determining the value of a supply vary depending on the type of supply and who the supply is made to. However, as a general rule, the value of a supply is the consideration for that supply (excluding GST). Where the consideration received for the supply is in a foreign currency, the value of supply is the (GST-exclusive) amount of foreign currency converted to New Zealand dollars. The exchange rate required to be used is the “buy rate” offered by an approved bank or bureau de change at the time of supply. Any foreign exchange fluctuation is regarded as being part of the supply and is not regarded as being a separate (exempt) supply [see public ruling BR Pub 04/01 (expired 1 March 2004), TIB vol 16:2 (March 2004) at 3-6].

In the vast majority of cases, the value of the supply will be the amount paid for the supply, less the GST. The value of a supply is the GST-exclusive amount, whereas the consideration includes the GST. This can be expressed as follows:

\[
\text{Consideration} = \text{value of supply} + \text{GST}
\]

Applying this to the previous example, the value of the supply is $100, the GST is $15 and the consideration is $115. The GST component of the consideration is easily calculated by multiplying the consideration by three-twenty-thirds (known as the “tax fraction”).

“Consideration” includes both monetary and any non-monetary consideration, and is defined in s 2 to include any payment made or any act or forbearance, whether or not voluntary, in respect of, in response to, or for the inducement of, the supply of any goods and services, whether by that person or by any other person.
In *TRA Case T61* (1998) 18 NZTC 8,461, the issue of paid up shares in part consideration for the purchase of a commercial property was held to constitute “consideration in money” under s 10(2). The vendor of the building was required to account for GST on the entire sale price of the property including the shares received. Where the consideration is non-monetary, the open market value of the consideration determines the value of the supply. See 580.63 for a discussion of the meaning of “open market value”. The one exception to this rule relates to emissions units. Where:

(a) The supply is the right to receive a certain number of emissions units at a future date;
(b) The supplier and recipient are not associated; and
(c) Each is either making a taxable supply or acquiring a taxable supply for use in making taxable supplies.

The value of the supply is the amount agreed to by the parties.

The CIR has issued four public binding rulings regarding the GST implications where property is sold and the rates either have been prepaid or are in arrears. Public ruling BR Pub 10/10 relates to the GST implications for the vendor where the rates have been paid for a period beyond settlement. Public ruling BR Pub 10/11 relates to the GST implications for the purchaser where the rates have been paid for a period beyond settlement. Public ruling BR Pub 10/12 relates to the GST implications for the vendor where the rates are in arrears. Public ruling BR Pub 10/12 relates to the GST implications for the purchaser where the rates are in arrears. In each case the ruling considers whether payment by the purchaser to the vendor for prepaid rates, or a reduction in the amount paid by the purchaser where the rates are in arrears, gives rise to output tax payable by the vendor and input tax claimable by the purchaser.

In the case of rates paid beyond settlement, the CIR concludes that the payment by the purchaser for the apportioned amount of the prepaid rates is part of the consideration for the supply of the property. Therefore, if the purchaser is GST-registered, and is entitled to an input tax claim in respect of the property, the claim will be based on the total consideration paid, including the amount for rates. Similarly, the vendor’s liability for output tax will be based on the total amount. In the case of rates arrears where the purchaser agrees to pay the outstanding amount, the consideration for the purchase is the sum of the purchase price plus the rates debt taken over by the purchaser. Again, the GST obligations of both parties is based on this total amount. The four rulings, together with worked examples can be found in TIB vol 22:10 (November 2010) at 3 - 16.

(1) *Supplies to associated persons [ss 10(3), (3A)]*

If a supply is made to an associated person [see 580.65] for a consideration in money that is less than the open market value of the supply, the consideration for the supply is deemed to be its open market value. However, the open market value is not used if:

(a) The supply is a fringe benefit provided or granted by the supplier to a person employed under a contract of service; or
(b) The supplier and the associated person are both registered for GST, and the associated person acquired the supply for the principal purpose of making taxable supplies and is able to claim an input tax deduction for it.

In *TRA Case T12* (1997) 18 NZTC 8,070 an unregistered farm owning company had leased a farm to an associated person of the company for less than its market rental. In fact the open market rental was well in excess of the GST registration threshold. The farm owning company was therefore deemed to be registered. In *TRA Case M110* (1990) 12 NZTC 2,704, where a sale between associated persons was at a value greater than the open market value, the CIR was not permitted to reduce the value of the supply to the open market value.

**580.62 Value of supply — summary**

The following table is a summary of the various value of supply rules in s 10. The appropriate subsection should be referred to for full details of these rules.

</tr>
</tbody>
</table>
**580.63 Open market value** [s 4]

The open market value of a supply of goods and services is determined according to the following rules.

(a) The open market value at any date is the consideration in money which the supply of goods and services would fetch if sold in similar circumstances in New Zealand at that date, being a supply freely offered and made between unassociated persons.

(b) If the open market value cannot be determined under (a), the open market value is the consideration in money which a similar supply would fetch if sold in similar circumstances in New Zealand at that date, being a supply freely offered and made between unassociated persons. A “similar supply” is defined as a supply of goods and services which is the same as, or closely or substantially resembles, the supply in question in respect of its characteristics, quality, quantity, functional components, materials and reputation.

(c) If the open market value cannot be determined under (a) or (b), the open market value is determined in accordance with a method approved by the CIR. The method must provide an objective approximation of the consideration in money which could be obtained for that supply.

(d) The open market value of a non-monetary consideration is determined in the same way as for a monetary consideration under (a) to (c), with any necessary modifications.

The CIR’s policy on determining “open market value” is set out in TIB vol 6:14 (June 1995) at 6-8.

In *TRA Case T12* (1997) 18 NZTC 8,070 an unregistered farm owning company had leased a farm to an associated person of the company for less than its market rental. In fact the open market rental was well in excess of the GST registration threshold. As a result, the farm owning company was deemed to be registered.

**580.64 Apportionment** [ss 5(14), 10(18)]

When a supply is partly zero-rated and partly standard-rated, or partly taxable and partly exempt, the supply or the consideration for it must be apportioned between the various parts. The two main provisions dealing with apportionment are ss 5(14) and 10(18).

Under s 5(14), when a supply is partly standard rated and partly zero-rated, each part of the supply is treated as a separate supply.
Example 1:
A travel agency bills a business client for air travel within New Zealand and a return air trip to London. The two trips are unrelated. The total value of the travel supplied is $3,000, of which $700 relates to travel within New Zealand. For GST purposes, the overseas travel (being zero-rated) is treated as one supply and the travel within New Zealand (being standard rated) is treated as another. The value of the zero-rated supply is $2,300 and the value of the standard rated supply is $700.

Under s 10(18), when consideration is provided which relates partly to a taxable supply and partly to some other matter, the consideration must be apportioned between the taxable supply and the other matter. The taxable supply is deemed to be for such portion of the consideration as is properly attributable to it.

Example 2:
A customer pays an insurance company an annual premium of $5,000 for a special executive insurance plan which provides life insurance, superannuation and medical insurance cover. As life insurance and superannuation are exempt supplies, only the portion of the premium which relates to medical insurance is the value of the taxable supply. The portion of the premium which relates to each type of cover is:

<table>

<td>$1,200</td>
</tr>
</tbody>
</table>

The consideration must be apportioned between the taxable supply ($1,200) and the non-taxable supply ($3,800).

Example 3:
Where a taxpayer carries on the business of financing finance leases, expenditure on goods acquired for leasing will give rise to an input tax deduction. However, goods and services acquired for general business use will need to be apportioned [see Binding Ruling BR Pub 96/11 (expired 31 March 2000)].

A special apportionment provision [s 5(15)] deems a dwelling to be a separate supply when it is included as part of a supply [see 580.16].

580.65 Associated persons [s 2A]
Associated persons or persons associated with each other are:

(a) Two companies, if a group of persons (as defined in s YA 1) has:
   (i) Voting interests in each of those companies of 50 per cent or more when added together; or
   (ii) Market value interests in each of those companies of 50 per cent or more when added together, and a market value circumstance (as defined in s YA 1) exists in respect of either company; or
   (iii) Control of each of those companies by any other means whatsoever.

(b) A company and a person other than a company, if the person has:
   (i) A voting interest in the company of 25 per cent or more; or
   (ii) A market value interest in the company of 25 per cent or more, and a market value circumstance exists in respect of the company.

Under paras (a) and (b) above, any two persons who are associated under the remainder of the paras below are treated as holding anything held by the other of them. For example, if a husband and wife each holds a 13 per cent interest in a company, they are both associated persons of the company as each is deemed to hold not only their own shares but also those held by their spouse.

(c) Two branches or divisions of a person that are each treated as a separate person under s 56B.

(d) Two persons who are:
   (i) Connected by blood relationship;
   (ii) Connected by marriage, civil union or de facto relationship; or
   (iii) Connected by adoption.
(e) A partnership and a partner in the partnership.
(f) A partnership and a person, if the person is associated with a partner in the partnership.
(g) A trustee of a trust and any person who is associated by blood, marriage, adoption, etc, with another person who is associated with the trustee due to their having benefited or being eligible to benefit under the trust.
(h) A trustee of a trust and a person who has benefited or is eligible to benefit under the trust, except if, in relation to a supply of goods and services:
   (i) The trustee is a charitable or non-profit body with wholly or principally charitable, benevolent, philanthropic or cultural purposes; and
   (ii) The supply is made in carrying out those purposes or the supply enables them to carry out those purposes.
(i) A trustee of a trust and a settlor of the trust (other than a charitable trust or a charitable non-profit body with wholly or principally charitable, benevolent, philanthropic or cultural purposes).
(j) A trustee of a trust and a trustee of another trust if the same person is a settlor of both trusts except where, in relation to a supply of goods and services:
   (i) Either trustee is a charitable or non-profit body with wholly or principally charitable, benevolent, philanthropic or cultural purposes; and
   (ii) The supply is made in carrying out those purposes or enable them to be carried out.
(k) A person (“A”) and another person (“B”) if:
   (i) B is associated with a third person (“C”) under any one of paras (a) to (j) above; and
   (ii) C is associated with A under any one of paras (a) to (j) above.

Persons are connected by blood relationship if they are within the second degree of relationship.

<table>
<thead>
<tr>

<th>Degree of relationship</th>
</tr>
</thead>
<tbody>
<tr>
<td>Parent or child</td>
<td>First</td>
</tr>
<tr>
<td>Grandparent, grandchild or sibling</td>
<td>Second</td>
</tr>
</tbody>
</table>

Persons are connected by marriage, civil union or de facto relationship if:

(a) One is in a marriage or civil union with the other;
(b) One is in a marriage or civil union with a person who is connected by blood relationship with the other; or
(c) One is in a de facto relationship, between a man and a woman, with the other.

Same gender de facto relationships are included in the definition with effect from 1 April 2007. For discussion regarding what constitutes a de facto relationship see TIB vol 17:4 (May 2005) at 6.

Persons are connected by adoption if one has been adopted as the child of the other or as a child of a person who is within the first degree of relationship to the other.

580.66   Accommodation in commercial dwellings [s 10(6)]

Special rules apply for valuing accommodation in commercial dwellings and residential establishments.

A “commercial dwelling” is defined as:

(i) A hotel, motel, homestay, farmstay, bed and breakfast establishment, inn, hostel, or boardinghouse;
(ii) A serviced apartment managed or operated by a third party for which services in addition to the supply of accommodation are provided and in relation to which a resident does not have quiet enjoyment, as that term is used in s 38 of the Residential Tenancies Act 1986;
(iii) A convalescent home, nursing home, rest home, or hospice;
(iv) A camping ground;
(v) Premises of a similar kind to those referred to in subparagraphs (i) to (iv).

It does not include:
(i) a hospital except to the extent to which the hospital is a residential establishment;
(ii) a dwelling situated in a retirement village or rest home if the consideration paid or payable for the supply of accommodation in the dwelling is for the right to occupy the dwelling.

This definition applies from 1 April 2011.

A “residential establishment” is any commercial dwelling in which at least 70 per cent of the occupants are expected to reside for a minimum period of four weeks. A hospital is a residential establishment if it is used to provide accommodation in a similar way.

A “hospital” is an institution that is a hospital care institution under the Health and Disability Services (Safety) Act 2001, or an institution whose principle purpose is to receive and treat people needing medical treatment or suffering from a disease. It includes all clinics, dispensaries, offices, outpatient departments, services, and undertakings, maintained in connection with, or incidental to, such an institution.

(1) Accommodation in a commercial dwelling

The amount of GST charged on accommodation supplied to an individual in a commercial dwelling depends on the length of the stay. If the length of the stay is less than four weeks, GST is charged on the full amount paid for the accommodation. If the length of stay exceeds four weeks, GST is charged on the full amount paid for the first four weeks’ accommodation and on 60 per cent of the amount paid for accommodation in excess of four weeks. GST at 15 per cent on 60 per cent of the value of the supply equates to an effective rate of GST of nine per cent. The 12.5 per cent GST rate that applied prior to 1 October 2010 would have given an effective rate of 7.5 per cent.

Example 1:
Horace stays in a motel for two weeks, paying a tariff of $490 (excluding GST) per week. Because Horace’s stay is for less than four weeks, he will be charged GST at 15 per cent on the full amount of $980 ($490 × 2), or $147.
Nancy stays in the same motel for six weeks, paying the same weekly rate. She will be charged GST at 15 per cent on the full tariff for the first four weeks and at 15 per cent on 60 per cent of the tariff for the last two weeks:
\[
\text{GST} = (490 \times 4 \times 15\%) + (490 \times 2 \times 60\% \times 15\%) = 294.00 + 88.20 = 382.20
\]

Using the same example and taking into account the increase in the GST rate to 15 per cent from 1 October 2010, the result is $980 x 15% or $147 in GST for Horace. For Nancy, the calculation is: ($490 × 4 × 15%) + ($490 × 2 × 60% × 15%) = $294 + $147 = $441.

The reduced rate of GST for periods in excess of four weeks applies only to the portion of the supply that relates to the actual accommodation (including cleaning, maintenance, electricity, gas, air conditioning, heating, telephones, television, radio or similar services). Goods and services not directly related to the supply of accommodation, such as meals, drinks and laundry are taxed in full at the standard rate.

(2) Accommodation in a residential establishment

The amount of GST charged on accommodation supplied to an individual in a residential establishment is 15 per cent (prior to 1 October 2010, 12.5 per cent) of 60 per cent of the tariff for the whole of the period of the stay, provided that the supplier and the recipient agree that the length of the stay is at least four weeks or, if there is going to be more than one period, that the total of all the periods will exceed four weeks.

As with commercial dwellings, the reduced rate of GST applies only to the portion of the supply that relates to the actual accommodation (including cleaning, maintenance, electricity, gas, air conditioning, heating, telephones, television, radio or similar services). Goods and services not directly related to the supply of accommodation, such as meals, drinks and laundry are taxed in full at the standard rate.
Example 2:
Alice stayed in a nursing home for six weeks to recover following major surgery. Ninety per cent of the patients who go to the nursing home stay for longer than four weeks. Alice was charged $6,300 for her room, $2,100 for meals and $400 for medication, excluding GST. Because Alice’s stay exceeded four weeks, GST will be charged on only 60 per cent of the value of her accommodation. GST will be charged as follows:

<table>

580.67  Tokens, stamps, vouchers and casino chips

In TIB vol 7:2 (August 1995) at 21-24, the CIR issued a policy on the GST treatment of tokens, stamps, vouchers, and casino chips.

Tokens, stamps, and vouchers are “chose in action” and, accordingly, “services” as defined in s 2. Therefore, the supply of a token, stamp, or voucher is a supply of services for GST purposes. The definition of “services” in s 2 specifically excludes the supply of goods or money. A chose in action is a personal right of property that can be claimed or enforced only by legal action. The holder of a token, stamp, or voucher is entitled to rights that cannot be enforced by taking physical possession. For example, if a retailer refused to convert a gift voucher into goods the holder of the voucher could only enforce compliance with legal action. The CIR accepts that tokens, stamps, and vouchers include such things as phone cards, rail passes, bus tickets, courier tickets, and gift vouchers.

From 10 October 2000, s 5(11E) and (11F) provides that the issue of a token, stamp, or voucher with a face value is treated as a supply. The redemption of the token, stamp, or voucher is not treated as a supply. Therefore, the treatment of a token, stamp, or voucher is the same as the treatment of the supply of any other good or service.

There are two exceptions to this rule. Firstly, the issue or sale of a token, stamp, or voucher by a registered person (Issuer 1) to another registered person (Issuer 2) who subsequently issues or sells it is not a supply unless Issuer 1 is the person who supplies the goods and services on redemption of the token, stamp, or voucher.

Secondly, s 5(11G) provides that where:

(a) It is not practical to treat the issue of a token, stamp, or voucher as a supply of goods and services; and

(b) The supplier of the goods or services specified in the token, stamp, or voucher and the issuer of the token, stamp, or voucher (who are, or could be, different persons) agree,

the redemption of the token, stamp or voucher, rather than its issue, may be treated as a supply. For the purposes of this exception, it is important to differentiate between the “issue” and the “sale” of a voucher. The exemption will generally apply only where the issuer and the redeemer of the voucher for goods or services are different persons and they have agreed to use the redemption basis. For example, a petrol voucher may be issued by the Motor Trades Association, sold to a customer by a BP service station, and redeemed by a Mobil service station. However, the redemption basis of recognition may be used where the issuer of the voucher and the supplier of the goods or services are the same person if it is not practicable to recognise the supply on the issue of the voucher.

In all cases, the input tax deduction for the registered person acquiring the token, stamp, or voucher will arise at the time at which the voucher is issued.

Section 5(11I) deals with postage stamps and ensures that, with effect from 3 April 2006, the sale of postage stamps connected with mail is subject to GST and cannot be zero-rated. The term “postage stamp” is defined in s 5(11I) as being an adhesive label; or a mark or design that is:

(a) Issued or sold by a person to another person;
(b) Affixed to, impressed on or printed on stationery;
(c) Indicates prepayment of the fee chargeable for the carriage of a letter, parcel or other article; and
(d) Not intended to distinguish the article to which it relates from similar articles carried by the same person (this is intended to differentiate between a postage stamp and labels such as PAT labels used by courier operators to identify the specific parcel).

Section 10(15A) specifically deals with casino chips. The combined effect of ss 10(15A) and 5(11B) is that the value of a supply made by a casino is the amount that the casino collects from a customer, less the amount that the casino pays to a customer as winnings or for the redemption of chips.

For the treatment of tokens, stamps, vouchers and casino chips prior to 10 October 2000 [see Staples Tax Guide (2005) 580.67].

**Example:**
A casino sells $1,000 of casino chips to a gambler who loses $900 of the chips. The last gamble of $100 of chips wins $300 plus the return of the stake. At the end of the night, the gambler collects winnings of $300 and cashes in the $100 in chips retained. The casino must account for GST of $66.67 on its supply to the gambler, the consideration for that supply being $600 (the $1,000 of chips, less the winnings of $300, less the redemption of chips of $100).

### 580.70 Time of supply [s 9]

The time at which a supply takes place is important because it determines the taxable period in which registered persons must account for GST on the supply.

Generally, a supply takes place when an invoice is issued for the supply, or when any payment is received by the supplier for the supply, whichever is the earlier.

**Example 1:**
Goods are delivered to a customer on 28 August, an invoice is issued on 2 September and the customer pays for the goods on 18 October. The time of supply is 2 September, being the earlier of when an invoice is issued and any payment is made.

A supply is deemed to take place when an invoice is issued. This applies whether the supplier or the recipient issues the invoice, and whether or not the invoice is a tax invoice [see 580.140].

**TaxNote:** The use of the words “any payment” means that the supply does not have to be paid for in full in order for the supply to have occurred. A deposit is sufficient.

**Example 2:**
A customer pays a 10 per cent deposit on 24 March, the goods are delivered on 27 April, an invoice is issued on 5 May and the customer pays the outstanding balance on 22 June. The time of supply is 24 March, being the earlier of when an invoice is issued and any payment is made.

The CIR’s policy on when an agreement for the sale and purchase of property is an “invoice” for tax purposes is set out in interpretation statement IS 07/02 [see TIB vol 19:7 (August 2007) at 7-8]. Under this policy:

(a) A conditional agreement for the sale and purchase of property does not constitute an invoice;
(b) A conditional agreement for the sale and purchase of property that becomes unconditional will not constitute and invoice; or
(c) An unconditional agreement for the sale and purchase of property does not constitute an invoice.

Therefore, unless an actual invoice is issued prior to any payment being made, the time of supply will be triggered by the first payment that is made in respect of the supply.

The CIR’s revised policy on the effect of the payment of a deposit on the time of supply is set out in Interpretation Statement IS 10/03. The revised policy applies from 27 May 2010. The Statement discusses the treatment of a deposit under the following three circumstances:

- A payment made under an unconditional contract;
- A payment made under a conditional contract;
- A payment made when no contract exists.
The conclusions are as follows:

(1) **Unconditional contracts**

Where the payment is made under an unconditional contract, there is a supply and the deposit is paid in respect of that supply. Section 9(1) will deem the time of supply to be when the deposit is received by the supplier. This will be so even if the goods or services have not been physically supplied or performed at that time. It is possible that there is more than one supply taking place and that there is a supply that occurs before the main supply ("a preliminary supply"). This might occur, for example, in the case of a wedding function where a preliminary supply relating to the securing of a particular date takes place before the main supply of the actual function. However, the CIR considers that this situation would be unusual.

(2) **Conditional contracts**

Where the payment is made under a conditional contract, a deposit is not received by a supplier as long as any person holds it as stakeholder, whether that person is the supplier or an independent third party. A deposit will not be received unless the supplier, or the supplier’s agent, receives it for his or her own benefit, or, in the case of a deposit paid to an agent, for the principal’s benefit. The CIR considers that the following requirements must be met in respect of the stakeholder:

(a) The essential requirement for a stakeholder relationship is the existence of an agreement between the parties. A person cannot establish himself or herself as a stakeholder unilaterally.

(b) A stakeholder is required to hold the funds until a defined event takes place. That event establishes who is entitled to the money. The parties have no proprietary interest in the funds until that event takes place.

(c) A person who holds money as a stakeholder does not act as agent for either party. A stakeholder, in their capacity as stakeholder, holds the funds for both parties and owes a contractual or quasi-contractual obligation to both parties. This is the case even if the person acting in the capacity of stakeholder is also acting in the capacity of agent for one or other of the parties.

(d) The entitlement to interest may be dealt with as a term of the stakeholding agreement between the parties and who is entitled to the interest on the deposit may, therefore, vary. If the supplier as stakeholder is entitled to the interest and the interest is applied to the purchase price, the interest will constitute a payment received by the supplier in respect of the supply and the time of supply will be triggered.

(e) The consent of both parties is necessary to vary a stakeholder’s obligations.

(f) The intention of the parties, determined from all the circumstances, will establish in which capacity a person receives the money.

(g) The existence of a separate bank account in which the funds are placed (although not a legal requirement) combined with clear written confirmation of the stakeholder relationship will generally support the contention that a person is a stakeholder.

(3) **Where no binding contract exists**

The mere receipt of payment will not necessarily indicate the existence of a taxable supply. If there is no supply, the payment cannot be consideration.

The full text of IS 10/03, including a number of examples can be found in TIB vol 22:6 (July 2010) at 7-16.

The CIR’s policy regarding time of supply where payment is made by cheque, credit card, or charge card is the subject of public ruling BR Pub 96/12 (expired 31 December 1999) [see TIB vol 8:10 (December 1996) at 10-13]. The main points of the ruling are set out below:

(a) Where payment is made by cheque, “payment” occurs when the cheque is handed over. If the cheque is subsequently dishonoured, payment has not occurred. This rule applies also to post-dated cheques.
Goods and Services Tax

If the supplier and recipient are associated persons, evidence will be required as to the presentation and honouring of the cheque.

(b) Where payment is made by way of credit or charge card, “payment” occurs on the date on which the transaction takes place.

(c) Where payment is by way of irrevocable letter of credit, “payment” occurs on the date on which the provision of the letter of credit is accepted as performance or payment.

A practice known as pre-funding is prevalent in the shipping and port services industries. In this situation, the provider of a service requires payment before performing the service. When the prepayment is expressed as a percentage of the ultimate consideration, Inland Revenue considers the full consideration has been determined and a time of supply has occurred. GST is payable on the full value of the service at the earlier of the time the invoice requesting prepayment is issued or a payment is received. When the final consideration has not been determined, and cannot reasonably be determined, GST is only payable on the amount of the part-payment invoiced or paid. GST is payable on the balance of the supply when the final consideration is established and an invoice is issued or payment is received [see TIB vol 7:3 (September 1995) at 26-27].

Where the transaction is a barter transaction, “payment” is made at the time at which legal or equitable title in the property passes to the acquirer: *Lanauze v King* (2001) 20 NZTC 17,360 (HC).

580.72 Time of supply in special cases [s 9]

Some types of supply are subject to special time of supply rules. The following table summarises these rules. See s 9 for complete details.

<table>
<thead>

<td>Loyalty programme transactions.</td>
<td>9(9)</td>
<td>Under some circumstances, the time of supply of the sale of loyalty points can be deferred until the time at which the loyalty points are redeemed for a reward. This applies only where the criteria set down in s 11C are met (see below).</td>
</tr>
</tbody>
</table>

(1) **Loyalty programme transactions [s 9(9)]**

The aim of this provision (which applies from 6 October 2009), is to defer the imposition of GST until it is known whether or not a loyalty programme reward should be zero-rated or standard rated for example, a customer may redeem the loyalty points for international travel. International travel is generally a zero-rated supply. Conversely, the customer may redeem the loyalty points for a home appliance. The supply of that good is generally standard rated.

A “loyalty programme” is defined as a consumer incentive scheme under which a customer can obtain loyalty points that are redeemable for goods or services [s 2(1)].
Goods and Services Tax

Where an operator of a loyalty programme enters into an arrangement with another person (the purchaser) through which the operator receives consideration for providing loyalty points to a third person as directed by the purchaser. The operator may defer the time of the supply of the services to the time at which loyalty points are redeemed.

In order for the deferral to be available, the following conditions must be met:

(a) Twenty-five per cent or more of the operator’s taxable supplies must be zero-rated supplies of goods or services. The 25 per cent threshold must be met for the 12-month period that ends with the month in which the supply of services under the loyalty transaction is made, and the operator must have reasonable grounds for believing the threshold will be met for the 12-month period that begins with the month in which that supply of services is made. The 25 per cent threshold may be met by including the taxable activity of an associated person; and

(b) Either the operator or an associated person of the operator must make supplies of goods or services in a business activity that is not the operating a loyalty programme and the loyalty points supplied by the operator must only be able to be redeemed for reward as part of the operator’s business activity. If the operator has a partner in an associated loyalty programme, this requirement is still treated as met if loyalty points supplied by the operator are able to be redeemed by the partner; and

(c) When the loyalty points are redeemed, the operator must be able to identify whether GST has been imposed on the supply of the loyalty points or whether the time of supply has been deferred under this provision.

580.80 Registration [s 51]

Any person carrying on a taxable activity [see 580.95] is liable to be registered for GST if either of the following conditions is satisfied:

(a) The total value of taxable supplies made by the person in New Zealand in any 12-month period in the course of the taxable activity has exceeded $60,000 (formerly $40,000, before 1 April 2009), and the total value of taxable supplies to be made by the person in New Zealand in the next 12 months in the course of the taxable activity is also expected to exceed $60,000.

(b) There are reasonable grounds for believing that the total value of taxable supplies to be made by the person in New Zealand in the next 12 months in the course of the taxable activity will exceed $60,000.

If a person is carrying on more than one taxable activity, it is the total value of taxable supplies made from all the activities that is considered when determining whether the $60,000 threshold has been exceeded.

A person becomes liable to register at the end of the 12-month period in which the $60,000 threshold has been exceeded, or at the start of the 12-month period in which the $60,000 threshold is expected to be exceeded.

A person is not liable to register for GST if the $60,000 threshold is exceeded solely as a result of the person:

(a) Ceasing to carry on, or substantially and permanently reducing the size or scale of, a taxable activity;

(b) Replacing any plant or other capital asset used in a taxable activity; or

(c) The supply to non-residents (who are physically present in New Zealand), of telecommunications services that are treated as being supplied in New Zealand under ss 8(6) and 8A.

For example, in TRA Case T3 (1997) 18 NZTC 8,014, the sale of a forest (for an amount exceeding the then-threshold of $30,000) before its maturity by an unregistered person was held to represent a premature cessation of the taxable forestry activity, and the owner was therefore not liable to register for GST.

For GST purposes, “person” includes not only an individual but also a company, an unincorporated body of persons, a public authority and a local authority. Registration thus applies to any entity likely to be carrying on a taxable activity, such as an individual, company, partnership, trust, club, association, school, university, Government department, or local authority. In Newman v Commissioner of Inland Revenue [2000] 3 NZLR 227, (2000) 19 NZTC 15,666 (HC), the High Court held that associated persons who acted together to supply goods valued above the threshold for registration should be treated as a single registered person.
and the taxable activities should therefore not be disaggregated. However, mere co-owners of land as tenants in common generally will not constitute a “body” for GST purposes. Where the land is leased out, compulsory registration will apply only where the rental income receivable by each particular co-owner is sufficient to breach the registration threshold. The application of these rules is discussed in public ruling BR Pub 97/11 (expired 31 March 2000) [see TIB vol 9:11 (November 1997) at 14-17]. Although this ruling expired on 31 March 2000 and has not been reissued, it does provide some guidance.

Any person liable to be registered must apply (on form GST1) for registration within 21 days of becoming liable to register.

**Example:**
Rachel commenced business as a self-employed hairdresser on 1 May and expects her turnover to be well in excess of $60,000 in the coming year. Rachel is liable to register on 1 May (the start of the 12-month period in which she expects taxable supplies to exceed $60,000), and she must apply to register within 21 days of that date.

Registration normally takes effect from the date of application although registration may be backdated in some circumstances.

“Registered person” is defined as a person who is registered or who is liable to be registered under the GSTA. The effect of this definition is that a person cannot avoid the obligations of being registered merely by failing to actually register. For example, in *Trustee, Executors and Agency Co New Zealand Ltd v Commissioner of Inland Revenue* (1997) 18 NZTC 13,076 (HC) the taxpayer (a trust) leased land to a lessee for $24,000 a year. The lessee also paid the rates on the property and accounting fees on behalf of the trust. The trust was not registered for GST. The land was subsequently sold and the purchaser claimed an input deduction for goods purchased secondhand from an unregistered supplier. The High Court held that the payment of the rates and accounting fees by the lessee was part of the consideration for the supply by the trust of the land. The total value of supplies made by the trust during the years in question therefore exceeded the then-threshold of $24,000 per annum, and the trust was liable to be registered retrospectively and to account for GST on the sale of the land, even though it had subsequently ceased to carry on a taxable activity.

If a person has not applied for registration and the CIR considers that the person should be registered, the CIR can register the person with effect from the date the person first became liable to be registered. However, the CIR has the discretion to register the person from a later date if that would be equitable.

From 1 April 2005, the following persons are deemed to be registered:

(a) Any unregistered person who supplies goods and services and represents to charge GST on them;

(b) Any person whose registration has been cancelled because they have not carried on a taxable activity since they were registered. Even though the person’s registration is cancelled retrospectively, the person is still deemed to have been a registered person from their original date of registration until the date their registration was cancelled, and the person must pay any GST represented to have been charged on any supplies made during that period;

(c) Any person selling goods in satisfaction of a debt, or the person whose goods are sold in satisfaction of a debt if they have supplied a written statement under s 5(2) and the CIR considers the statement to be incorrect.

(1) **Voluntary registration**

Any person carrying on a taxable activity may voluntarily register for GST, even if the total value of taxable supplies made is less than the registration threshold. A person can apply for registration in advance of commencing a taxable activity. For example, a person intending to commence trading from a certain date can apply, in advance, to be registered from that date.

The main advantage of voluntary registration is that a deduction can be claimed for GST paid on taxable supplies received. The main disadvantages are that the registered person must account for GST on all taxable supplies made, meet the record-keeping requirements [see 580.168] and file regular GST returns. As a general guide it is preferable, from a cash flow point of view, to be registered if standard-rated taxable supplies received exceed standard-rated taxable supplies made because this will result in regular GST refunds. For
example, a small, registered manufacturer which exports all its products will get a refund of all of the GST that it pays on its taxable expenses because its sales, being exports, are zero-rated.

2 Backdated voluntary registration

People who apply for voluntary registration may request that their registration be backdated. The CIR has issued a policy statement on backdating voluntary registration in TIB vol 7:3 (September 1995) at 14-16. Each request for backdated registration is dealt with according to the facts of that particular case. Generally, the CIR will select the date of application or a date in the future to be the date of registration, unless circumstances exist that justify registering the person effective from a previous date. The CIR will only register a person retrospectively when the circumstances show that it would be unfair on the taxpayer for the registration not to be retrospective. When considering whether to backdate the registration, the CIR may consider and weigh up various factors including:

(a) The reason why the applicant did not request registration at the time that registration was first desirable;
(b) Whether the applicant proceeded in business in the belief that he or she was ineligible to be registered;
(c) Whether the applicant considered that he or she had been registered automatically;
(d) Whether the applicant can substantiate the amount of output tax payable;
(e) The amount of time between the date of application and the date from which the applicant wishes to be registered; and
(f) The possible effect on the administration of the GSTA.

When the CIR backdates the registration, the applicant must return the output tax that should have been charged on past supplies made. Tax invoices must be issued to the recipients of the supplies made since the date of registration so that the recipients can claim GST input deductions in the current period. The applicant may also reduce the output tax by the amount of input tax paid for goods and services acquired for the principal purpose of making taxable supplies for that period, provided that the applicant has the relevant tax invoices.

580.82 Notification of change of status [s 53]

Registered persons must notify Inland Revenue in writing within 21 days of any of the following changing:

(a) Their name, address or constitution;
(b) The nature of their principal activity or activities;
(c) The address from which, or the name in which, any taxable activity is carried on;
(d) The registered person ceasing to qualify for a six-month taxable period because annual taxable supplies exceed $500,000 (formerly $250,000, before 1 April 2009);
(e) The registered person becoming required to have a one-month taxable period because annual taxable supplies exceed $24,000,000;
(f) The registered person ceasing to qualify to use the payments basis to account for GST;
(g) The registered person, being a member of a group of companies, ceasing to be eligible to be a member of the group.

A registered person who ceases all taxable activities, must notify Inland Revenue in writing within 21 days. If a registered person wishes to adopt or change the trading name used on their tax invoices and debit and credit notes, they must advise Inland Revenue of the new name and the date from which it will be used. No time period is specified for doing this.

580.83 Registration of non-residents

The provisions relating to registration do not distinguish between residents and non-residents. The requirement to register therefore applies equally to non-residents, on the basis of the rules explained in 580.80. Consequently, a non-resident carrying on a taxable activity (either inside or outside New Zealand) is required to register for GST if the total value of taxable supplies made in New Zealand has exceeded...
$60,000 in the previous 12 months, or will exceed $60,000 in the next 12 months. Similarly, a non-resident carrying on, or intending to carry on, a taxable activity may voluntarily register for GST if taxable supplies are less than $60,000 per year [see TIB vol 6:13 (May 1995) at 7-8].

The rules for determining when a supply by a non-resident is deemed to be made in New Zealand are set out in 580.50.

580.84 Cancellation of registration [ss 5(3), (3A), (7A), (8), (10), 52, 54, 58]

(1) Taxable supplies less than $60,000

A registered person may apply for their registration to be cancelled if the value of their taxable supplies in the subsequent 12-month period will be no more than $60,000 (formerly $40,000, before 1 April 2009). The application may be made either in writing or by telephone. Cancellation of registration is optional because persons making taxable supplies of less than $60,000 may voluntarily register so long as they are carrying on a taxable activity [see 580.95].

Before cancelling a person’s registration, Inland Revenue must be satisfied that taxable supplies will, in fact, be less than $60,000 during the next 12 months.

Cancellation normally takes effect from the last day of the taxable period in which the application is processed, although Inland Revenue may cancel the registration from another date. Inland Revenue must notify the person of the date that registration is cancelled.

Output tax is payable at the time of deregistration based on the market value of all goods other than those acquired by the taxable activity prior to the introduction of GST on 1 October 1986. Output tax is payable on goods acquired before 1 October 1986 based on the lesser of cost and market value.

In Lopas v Commissioner of Inland Revenue (2006) 22 NZTC 19,726 (CA), the Court of Appeal found that the CIR was entitled to re-exercise his power of cancellation of registration to amend the cancellation date. The taxpayers who owned a forestry property had deregistered as of 30 September 1999 under s 52(1) on the basis that their taxable supplies for the ensuing 12 months would be below the threshold. They paid output tax based on the cost price of the property. On 8 October, they entered into an agreement to sell the property to the family trust. The CIR was of the opinion that output tax should be paid on the sale price of the property, not its cost price. Consequently, he amended the deregistration date to 30 November.

In the High Court case of Thompson v Commissioner of Inland Revenue (2009) 24 NZTC 23,725 (HC), Dobson J concluded that the taxpayer was not entitled to deregister on 30 November 1999. The CIR’s assessment of output tax on two property transactions which occurred in December 1999 and March 2000 was upheld but the assessment in respect of a third sale in September 2000 was not. In the case of this third transaction, the Court found that the output tax should be returned in the taxpayer’s unregistered capacity.

His Honour found that the deemed supply on deregistration applies irrespective of whether the business is to cease on deregistration or continue in a reduced form below the registration threshold. He found that the Court of Appeal in Lopas had held that the proviso to s 51(1) (being the non-application of the requirement to register where the registration threshold will be exceeded only because of downsizing or cessation of the business, replacement of a capital asset or supply of telecommunication services to non-residents who are in New Zealand) applies only where the transaction would, for the first time, push the transaction level over the registration threshold. Therefore, in this case, the three land transactions were relevant to determining whether the scale of taxable activities would, in the future, exceed the registration threshold.

His Honour also noted that the Court in Lopas had held that, where transactions were planned as at the date of deregistration, the sale will be treated as part of the taxable activity. “Planned” requires an assessment of the facts of the case to determine whether the transactions are planned in a “sufficiently choate way that is to be seen as connected with the conduct of the business, even when it is being downsized”. Intention to sell will not be sufficient.

The case was appealed by the taxpayer with a cross appeal by the CIR in Thompson v Commissioner of Inland Revenue [2011] NZCA 132. The judgment of the Court of Appeal was that the test in s 52 is not whether the sale was “planned” or “contemplated”, but whether the CIR has reason to be satisfied that no transaction
would occur that would result in the total of all taxable supplies exceeding the registration threshold. The result of the appeal was that output tax was payable on the sale of all three sections. The Supreme Court has granted leave to appeal. The questions to be examined by the Supreme Court are:

(a) When did the appellant become entitled to be de-registered for GST purposes? and

(b) In the light of that determination, and the circumstances in which they took place, did the second and third sales of land attract GST?

(2) All taxable activities ceased

A registered person who ceases to carry on all taxable activities must notify Inland Revenue in writing within 21 days of the date of cessation. Cancellation normally takes effect from the last day of the taxable period during which all taxable activities cease, although Inland Revenue may cancel the registration from another date. Registration cannot be cancelled if the registered person is likely to recommence to carry on a taxable activity at any time within 12 months after the date of cessation.

The notice provided by the registered person must state:

(a) The date when all taxable activities ceased; and

(b) Whether or not the person intends to recommence any taxable activity within 12 months of that date.

Even if no cessation notice has been received from the registered person, Inland Revenue may still cancel a registered person’s registration if it is satisfied that the registered person is not carrying on a taxable activity. The registration will normally be cancelled with effect from the last day of the taxable period in which Inland Revenue made the decision to cancel the registration. Inland Revenue may cancel the registration from another date, including a retrospective date which is not earlier than:

(a) The last day of the taxable period during which the taxable activity ceased; or

(b) The date the person was registered, if the person has never carried on a taxable activity.

Inland Revenue must notify the registered person of the date cancellation takes effect.

(3) CIR discretion to deregister non-residents

The CIR has discretion to deregister a non-resident where they carry on a taxable activity overseas but do not carry on a taxable activity in New Zealand. The measure is designed to prevent such persons claiming GST refunds on such things as entertainment provided for no charge to New Zealand guests. The measure is not intended to apply to non-residents who are starting up a business in New Zealand but who have yet to make a taxable supply. Guidelines explaining the circumstances under which the discretion will be exercised have been issued [see TIB vol 17:7 (September 2005)]. The amendment applies to persons who register for GST on or after 21 June 2005.

(4) Consequences of ceasing to be registered

A person who ceases to be registered for GST needs to be aware of the following:

(a) The person must furnish a final GST return covering the period from the beginning of the final taxable period up to the date registration ceased. The return must be furnished by the last working day of the month after the month in which registration ceased.

(b) A person’s GST obligations and liabilities for the period for which the person was registered are not affected by the fact that registration is cancelled [s 54]. For example, if a person’s registration is cancelled, the person is still required to file all the necessary returns and pay any tax due in relation to all taxable periods up to the date their registration was cancelled.

(c) If the person retains any of the assets that were part of the taxable activity, GST must be accounted for on the value of those retained assets by way of an output adjustment in the final return. See below.

(d) All the accounting and business records relating to the taxable activity must be kept for at least seven years after the end of the taxable period in which registration ceased [s 75, see 580.168].
(5) Accounting for GST on assets held at cessation of registration

If a person ceases to be registered for GST, any goods and services used in the taxable activity and not sold prior to the cessation of registration are deemed to be supplied in the course of the taxable activity at the time registration ceases. Thus, for example, if a business carrying on a taxable activity subsequently ceases trading, the business must pay GST on the value of all the assets it owns as at the date of ceasing to be registered. For this purpose, the assets are valued at market value. However, where the assets were acquired prior to 1 October 1986, the assets are valued at the lower of their GST-inclusive cost and open market value [s 10(8)]. Open market value is explained in 580.63. The GST is accounted for by means of an output adjustment in the GST return [see 580.126].

The requirement that assets acquired on or after 1 October 1986 and retained on deregistration be adjusted for at market value rather than the lower of cost or market value applies from 10 October 2000.

A deemed supply does not occur if:

(a) A person carrying on a taxable activity dies, goes into liquidation or receivership, or becomes bankrupt or otherwise incapacitated, and a specified agent (personal representative, liquidator, receiver or agent) carries on the taxable activity in their stead. In these circumstances, the specified agent is deemed to be a registered person.

(b) A mortgagee takes possession of land or other property and carries on the taxable activity of the mortgagor. The mortgagee is deemed to be a registered person for the period the mortgagee is in possession of the land or other property [see 580.89].

580.85 Registration of branches and divisions [s 56]

A registered person carrying on a taxable activity in branches or divisions may apply in writing to register any of the branches or divisions separately if those branches or divisions maintain their own accounting system, and are in separate locations or carrying out different activities. The $60,000 registration threshold (formerly $40,000, before 1 April 2009), applies to the supplies across all branches or divisions and not each branch or division separately.

The consequence of separate registration is that each branch is treated separately from the parent body but must use the same taxable period and accounting basis as the parent, and must remain registered as long as the parent is registered. Supplies of goods and services between the parent and branches are fully taxable. If a branch or division fails to furnish returns or pay GST, the liability for these actions becomes the responsibility of the parent body.

The parent body may apply to have the separate registration of any branch or division cancelled. Cancellation is effective from the last day of the taxable period in which the application is made. If the parent body ceases to be registered, the separate registrations of all branches and divisions will also be cancelled.

580.86 Group registration [s 55]

(1) Companies

Two or more companies can apply (on form GST4) to Inland Revenue for GST group registration where they:

(a) Are a group of companies or part of a group of companies for income tax purposes [see 940.30]; or

(b) Would be a group of companies or part of a group of companies for income tax purposes were it not for the fact that one or more of the companies is a multi-rate PIE; or

(c) Would be a group of companies, or part of a group of companies, for income tax purposes were it not for the fact that one or more of the companies is a listed PIE.

One of the companies must be nominated as the representative member. Not all the companies in a group of companies need be included in a group registration. GST group companies are effectively treated as a single entity in relation to their intra-group supplies. The main effect of GST group registration is that intra-group transactions are not liable for GST.
Group registration is available where:

(a) Each of the companies in the group is a registered person; or

(b) At least 75 per cent by value of the total supplies made by the companies (in any consecutive 12-month period that includes that time) to persons outside the GST group are taxable supplies.

**TaxNote:** The 75 per cent test is continuous. If the group cannot meet the test at any particular time, its right to include a non-registered company within the GST group is forfeited. When determining whether or not the 75 per cent test is met, the group is entitled to look both backwards and forwards in time. For instance, the 12 months chosen in respect of a particular day, may be that day plus the previous 364 days, or that day plus the following 364 days, or any other combination of consecutive 365 days that it chooses. If the group needs to look forward in time in order to meet the test, it would need to be in possession of reliable information indicating that the test will be met. The burden of proof rests with the taxpayer. In the event that the test is not met on a prospective basis, it is hoped that the CIR would remove the unregistered company from the group prospectively rather than making retrospective adjustments and imposing penalties.

**Example:**

On 1 October 20X1, two of the four companies in the group are GST registered. As not all of the companies in the group are registered, it will not qualify for GST group registration under the first limb of the test. However, over the past 12 months 75 per cent of the group’s taxable supplies are made to persons outside the group. Accordingly, the group qualifies for GST group registration under the second limb of the test. On 2 October 20X1, there is a major supply of taxable supplies within the group, and the group’s taxable supplies over the past 12 months to persons outside the group falls below 75 per cent. At this point the group does not qualify for group registration on the factual situation to date. However, the company is able to project that over the next 12 months (ie by 2 October 20X2) it will meet the 75 per cent threshold. Accordingly, it remains GST group registered.

The following changes can be made to the group, on application to Inland Revenue by the representative member:

(a) Eligible companies can be added to or removed from the group;

(b) The representative member can be changed;

(c) The group registration can be cancelled.

If a member of the group ceases to be eligible to be a member of the group because it no longer meets the requirements of s IC 3, that company or the representative member must notify Inland Revenue in writing within 21 days. Inland Revenue will then remove that company from the group registration. Even if such a notice is not received, Inland Revenue will terminate a company’s membership of a group if Inland Revenue is aware that the company is no longer eligible.

Any notice served by Inland Revenue on the representative member is considered to have been served on all members of the group.

The effects of group registration are as follows:

(a) All taxable activities are considered to be carried on by the representative member, not by the individual members. The representative member is effectively treated as the registered person for the whole group.

(b) All members of the group must have the same taxable period and use the same accounting basis.

(c) Intra-group supplies of goods and services are not subject to GST.

(d) Any taxable supplies (other than intra-group supplies) made to or by a group member are considered to be made to or by the representative member.

(e) Any non-taxable supplies made by a group member are considered to be made by the representative member.

(f) If any goods and services acquired or produced by a group member are used by the representative member for a purpose other than making taxable supplies, the adjustment required under s 21(1) must be made by the representative member.
(g) If any goods and services acquired or produced on or after 1 October 1986 by a group member for a purpose other than making taxable supplies are subsequently used by the representative member for the purpose of making taxable supplies, the adjustment required under s 21(5) must be made by the representative member.

(h) Any input tax paid by a group member is considered to be paid by the representative member.

(i) The requirement to furnish returns applies only to the representative member, not to the individual group members.

(j) All group members remain jointly and severally liable for any GST payable by the representative member. This means that a company in the group could be liable for a GST liability arising in another company in the group if, for example, that other company went into receivership. This is an important consideration when deciding whether or not to apply for group registration.

(k) Group members are responsible for issuing their own tax invoices, keeping the records required under s 75, and complying with the registration provisions.

The GST effects of grouping, other than items (b), (h), (i), (j) and (k), are disregarded for the purposes of the reverse charge mechanism in relation to imported services [see 580.101].

(2) Other entities

Group registration is also available to entities other than companies in some circumstances. A group of registered persons may apply for group registration if any one of the following conditions are met:

(a) One of them controls each of the others;

(b) One person (whether registered or not) controls all of them;

(c) Two or more persons carrying on a taxable activity in partnership control all of them.

The main test to satisfy is one of common control. The test of common control is met if more than 50 per cent of the voting powers or profit sharing rights are held between those wanting to group or by one person having control of all of them.

Example:

The AB Trust is the majority partner in the partnership “AB Trust and C” as well as being the majority partner in the partnership “AB Trust and D’. The AB Trust could group with either or both of the two partnerships.

The CIR’s views on when a trust may group with other entities for GST purposes is contained in TIB vol 16:6 (July 2004) at 32-34.

Once the persons are registered as a group, the same rules as set out above for group registration of companies (with references to “companies” being read as references to “group members”) apply.

580.87 Partnerships, joint ventures, trusts, and other unincorporated bodies [s 57]

An unincorporated body includes, but is not limited to, a partnership, a joint venture and the trustees of a trust [see TES 5 (June 2003) 65]. The following rules apply to unincorporated bodies that are registered for GST:

(a) The members of the unincorporated body (for example the partners, joint venturers, or trustees) may not be separately registered for the taxable activity carried on by the unincorporated body.

(b) Any supply made in the course of the taxable activity is deemed to be supplied by the unincorporated body, not by any member of that body.

(c) Any supply made to any member acting in the capacity as a member and in the course of the taxable activity of the unincorporated body, is deemed to be supplied to that body and not to any member.

(d) The registration must be in the name of the unincorporated body, or in the name of the trust (if the unincorporated body is a trustee).
(e) Any change in the membership of an unincorporated body has no effect on that body’s registration, etc.

(f) All members of the unincorporated body are jointly and severally liable for all GST payable by that body for the period during which each one of them was a member. This is the case even where a person has since ceased to be a member. On a member’s death, the member’s estate is severally liable for any unpaid GST of the body. For these purposes, a member of a partnership or joint venture, or the trustees of a trust, do not cease to be members of the unincorporated body until Inland Revenue is notified in writing.

(g) A notice served under the GSTA to the unincorporated body by its registered name is deemed to be served on that body and on all its members.

(h) All members of the unincorporated body are jointly and severally liable to do anything required to be done by the body for GST purposes, such as the filing of a GST return.

(i) If the unincorporated body is not a partnership, a joint venture, or the trustees of a trust, the liability to do anything required to be done by the body for GST purposes falls jointly and severally on the body’s office holders. The primary responsibility falls on the body’s president, chairman, treasurer, or secretary. If these office holders fail to carry out their responsibilities, the liability falls to the committee members, or any similar office holder.

(j) A settlement on a trust is not a payment for a taxable supply: Chatham Islands Enterprise Trust v Commissioner of Inland Revenue (1999) 19 NZTC 15,075 (CA) [see 580.12].

580.88 Non-profit bodies [s 51(5)]

Branches or divisions of non-profit bodies may be separately registered if they are carrying on a taxable activity. A non-profit body is any society, association or organisation:

(a) Whose activities are not intended to profit any member of the body; and

(b) Whose rules prohibit the distribution of money or property to any member.

Non-profit bodies include:

(a) Charitable organisations (for example IHC, Red Cross, World Vision);
(b) Sports clubs (for example rugby clubs);
(c) Service organisations (for example Lions, Rotary);
(d) Religious organisations (for example churches, the Salvation Army);
(e) School boards of trustees.

A non-profit body may apply for one or more of its branches or divisions to be registered separately if they each have their own accounting system and can be separately identified by the nature of their activities or by their location. Once separately registered, a branch or division is no longer considered to be part of the parent organisation for GST purposes.

A branch or division of a non-profit body is only required to register for GST if its annual taxable supplies exceed the $60,000 threshold (formerly $40,000, before 1 April 2009). Thus if the turnover of a branch or division (which is eligible for separate registration), is less than $60,000 a year it does not have to register for GST if it does not want to, but it can voluntarily register if it is carrying on a taxable activity.

The CIR’s policy on the separate registration of branches and divisions of non-profit bodies is set out in TIB vol 5:11 (April 1994). The main points are:

(a) A branch or division is regarded as having its own accounting system if it separately records its receipts and payments, and if it produces separate financial statements.

(b) A branch or division is regarded as separately identified by the nature of its activities so long as those activities are not just incidental to the body’s main activity. Activities such as administration, fund raising, running raffles, providing refreshments and entertainment are usually incidental to the main activity of the body, and would therefore not justify separate registration.
(c) A branch or division is regarded as separately identified by its location if there is a distinct geographical siting. A branch or division does not exist simply because it is located on a separate floor of a building or in a nearby building which merely houses overflow staff or activities.

The policy statement includes the following examples.

**Example 1:**
A golf club which is a non-profit body has an expected annual turnover of $90,000. Funds are raised as follows:

<table>
<thead>
<tr>
<th>Source of Funds</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Garden fees, club hire, etc</td>
<td>$70,000</td>
</tr>
<tr>
<td>Fund raising (raffles and gaming machine)</td>
<td>$20,000</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>$90,000</strong></td>
</tr>
</tbody>
</table>

The golf club could not register the two divisions separately. The fundraising is incidental to and associated with the principal activity of the golf club, so it cannot be separately identified by the nature of its activities or its location.

**Example 2:**
A non-profit national body carries on a taxable activity with an expected turnover of $130,000 per year. It is conducted in separate branches, each with its own accounting system. The expected turnovers for the next 12 months are:

<table>
<thead>
<tr>
<th>Region</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Northern Region</td>
<td>$65,000</td>
</tr>
<tr>
<td>Eastern Region</td>
<td>$25,000</td>
</tr>
<tr>
<td>Western Region</td>
<td>$20,000</td>
</tr>
<tr>
<td>Southern Region</td>
<td>$20,000</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>$130,000</strong></td>
</tr>
</tbody>
</table>

The national body could apply to have all of its branches treated as separate persons for GST purposes. Only the Northern Region (whose turnover is over $60,000), would have to register. The others could do so on a voluntary basis.

580.89 **Registration of a specified agent or mortgagee in possession**

[ss 46(7), 58]

When a registered person dies, goes into liquidation or receivership, or becomes bankrupt or otherwise incapacitated, that person’s taxable activity may be taken over by a personal representative, liquidator, receiver, or other agent. The person who takes over the taxable activity (the “specified agent”) is deemed to be a registered person carrying on the taxable activity of the incapacitated person for the agency period. If the specified agent has been appointed to carry on only part of the taxable activity, the provisions apply only in respect of that part of the taxable activity.

This deemed registration is automatic and not dependent on the CIR’s discretion. The incapacitated person is deemed not to be carrying on the taxable activity for the agency period. A specified agent is personally liable for any GST liabilities incurred during the agency period, but not for those incurred by the incapacitated person before the agency commenced.

A person is deemed to be a registered person carrying on a taxable activity of a incapacitated person even if he or she only acts in connection with the termination of that activity, for example selling off the assets of a business [s 6(2)].

When a mortgagee in possession of land or other property carries on a taxable activity previously carried on by the mortgagor (who is GST-registered), the CIR may deem the mortgagee to be a registered person for the period the mortgagee is in possession of the land or other property. Such registration is not automatic but dependent on the CIR’s discretion.

Any person who becomes a specified agent, or any mortgagee in possession who carries on the taxable activity of the mortgagor, must inform Inland Revenue in writing within 21 days. The notice must specify (as applicable):

(a) The date of death;
(b) The date of the liquidation, receivership, or bankruptcy;
(c) The date the mortgagee took possession of the land or other property;
(d) The nature of the incapacity and the date on which it began.

The GST registration number remains the same for a specified agent or a mortgagee in possession as for the incapacitated person or mortgagor.

No GST is payable on any of the assets of a taxable activity held at the time a person ceases to be registered if the taxable activity is subsequently carried on by a specified agent or mortgagee in possession who Inland Revenue has deemed to be a registered person [s 5(3)].

A specified agent is responsible for filing a return for the period from the date of incapacity to the end of the relevant taxable period [s 15(8)] and for all subsequent periods until the end of the agency period. In addition to accounting for GST outputs and inputs arising during the term of the agency, the specified agent is able to claim input tax credits to which the incapacitated person was entitled but failed to claim. However, the CIR is able to offset these credits against any pre-agency tax debt of the person.

The CIR’s policy on the application of the law relating to specified agents is set out in TIB vol 7:6 (December 1995) at 13-15. The policy statement includes examples.

580.95 Taxable activity [s 6]

Only persons carrying on a taxable activity may register for GST, and only supplies made in the course or furtherance of a taxable activity (taxable supplies) have GST charged on them. The meaning of “taxable activity” is therefore crucial for registration and in determining whether a person must charge GST on supplies made and can claim for GST on supplies received. Because of its importance, the issue of whether a taxable activity is being carried on has been at the centre of many GST cases, some of which are summarised below.

A “taxable activity” is any activity which meets the following conditions:
(a) The activity is carried on continuously or regularly, whether or not for pecuniary profit [see 580.96];
(b) The activity involves the supply of goods and services to another person for a consideration [see 580.98];
(c) It includes (but is not limited to) any such activity carried on in the form of a business, trade, manufacture, profession, vocation, association or club.

The activities of public and local authorities are taxable activities.

Anything done in connection with the commencement or termination or premature ending of a taxable activity is deemed to be carried out in the course or furtherance of the taxable activity. Thus, for example, the sale of the assets of a taxable activity on its winding up would be treated as taxable supplies, and any expenses incurred in the process of winding up the activity would give rise to input tax deductions.

The following are not taxable activities:
(a) Any activity carried on by an individual essentially as a private recreational pursuit or hobby. In deciding whether or not an activity is a hobby, Inland Revenue [see TIB vol 6:14 (June 1995) at 6-8] will consider the following factors:
   (i) The reasons for conducting the activity;
   (ii) The duration of the activity;
   (iii) Regularity;
   (iv) The frequency of supply;
   (v) The businesslike nature of operations (but note that a profit motive is irrelevant);
   (vi) Structure and organisation;
   (vii) The level of financial investment;
   (viii) The time available to devote to the activity.
(b) Any activity carried on by a non-individual (for example, a club or society) which, if it were carried on by an individual, would be carried on essentially as a private recreational pursuit or hobby.

(c) Any engagement, occupation, or employment under a contract of service or as a company director. Thus the activity of working for wages, salaries, or directors’ fees, is not a taxable activity and does not attract GST. However, anyone carrying on a taxable activity who accepts any office is deemed to supply any services as office holder in the course or furtherance of that taxable activity. For example, a chartered accountant or lawyer who accepts appointment as a company director will charge GST on the supply of their services. For the CIR’s view on when directors’ fees constitute a taxable supply, see public ruling BR Pub 05/13, TIB vol 17:7 (September 2005) at 9-14.

(d) Any engagement, occupation, or employment such as:
   (i) The Governor-General, the Prime Minister, or a Member of Parliament;
   (ii) A Judge, the Solicitor-General, the Controller and Auditor-General, or an Ombudsman;
   (iii) An appointee of the Governor-General;
   (iv) A chairman or a member of a local authority or a statutory board, council, committee, or other body.

(e) Any activity to the extent it involves the making of exempt supplies [see 580.20]. For example, a bank whose only activity is the provision of financial services is not carrying on a taxable activity and therefore cannot register for GST.

In TRA Case T30 (1997) 18 NZTC 8,211, a company which sold its only significant asset (a restaurant business), but continued to look for ways to invest the sale proceeds, did not cease to carry on a taxable activity and was able to claim an input tax deduction for legal and accounting expenses incurred some 18 months to two and a half years after the restaurant was sold. The expenses were incurred as a result of a dispute between the company and the purchaser of the restaurant. The TRA stated that a taxpayer will not cease to carry on a taxable activity merely because it ceases to use its assets in one form of income-earning process. Provided the taxpayer continues to employ its assets in some activity, or has the intention to do so, it will not have ceased to carry on a taxable activity. The TRA also ruled that if the sale of the restaurant did, in fact, constitute the cessation of the taxable activity, the legal and accounting expenses were incurred [under s 6(2)] in connection with the termination of a taxable activity.

In Nelson v Commissioner of Inland Revenue (2001) 20 NZTC 17,220 (HC), the High Court addressed the issue of whether making a share of a farm available to a partnership constituted the carrying on of a taxable activity. In finding that a taxable activity was being carried on, the Court said that the absence of an express agreement to make the land available made no difference. It was the act of repetitively and habitually making the land available which constituted the taxable activity.

(1) Distinction between “taxable activity” and “business”

It is important to distinguish between the GST concept of “taxable activity” and the income tax concept of “business”. The key difference is that a business necessarily involves a profit motive on the part of the person operating it [see 130.10], whereas the profit motive is not a necessary precondition for a taxable activity. The profit motive may or may not be present in a taxable activity, but it is always (by definition) present in a business. For this reason, businesses will always be taxable activities, unless they make only exempt supplies, but not all taxable activities will be businesses, for example a charity selling goods (other than donated goods) to raise funds for its charitable work is not carrying on a business, but it is carrying on a taxable activity and will be required to register if supplies exceed $60,000 a year (formerly $40,000 before 1 April 2009). The difference between a taxable activity and a business is summarised in TIB vol 7:3 (September 1995) at 8-10.

580.96 Meaning of “continuously or regularly”

An activity is a taxable activity if, among other things, it is carried on continuously or regularly. To be taxable, the activity does not have to be carried on both continuously and regularly — an activity is a taxable activity if it is carried on continuously, or if it is carried on regularly. The terms “continuously” and “regularly” are
not defined in the legislation. However, their meaning has been clarified to some extent by a series of Court cases, the most important of which was the Court of Appeal decision in *Newman v Commissioner of Inland Revenue* (1995) 17 NZTC 12,097 (CA). The majority of cases (including *Newman*) which have considered the meaning of “continuously or regularly” to date have been concerned with whether certain types of land subdivision were taxable activities. These cases are explained in §80.97.

As a general rule, when determining whether a taxable activity exists, the words “continuously” and “regularly” can be regarded as having their ordinary meaning, for example an activity is continuous if there is no permanent cessation or significant interruption of the activity. A brief interruption, such as the business closing down for the weekend or for the Christmas break, would not mean that the activity is not carried on continuously. An activity is regular if it is repeated at fixed intervals, for example, if a person sells one car, the activity is not regular, but if the individual sells 12 cars each year this is fairly indicative of a regular activity. These concepts are expanded on in the following section on subdivisions.

It is the *activity* which must be carried on continuously or regularly, not the supply of goods and services. The supply of goods and services itself may be intermittent or irregular, but so long as the activity which generates or results in the supply being made is carried on continuously or regularly, it will still be a taxable activity (assuming the other necessary conditions are met).

In *Commissioner of Inland Revenue v Bayly* (1998) 18 NZTC 14,073 (CA) the provision by a trustee of land and livestock to a farming partnership of which the trustees were a partner was held to be a taxable activity. As a consequence, the trustees were liable to account for GST on the subsequent sale of the land to an associated family company. The Court of Appeal agreed with the reasoning of the earlier TRA decision that the trustees were conducting a taxable activity because:

- (a) They were carrying on the activity of making land available year by year for use and occupation by the farming partnership; and
- (b) The trust received consideration for the supply of land from the assumption by the farming partnership of the liability to pay rates and insurance, and from their entitlement to a share in the partnership profits.

The Court of Appeal also noted that the trustees had ongoing and recurring rights and responsibilities under the partnership deed, which pointed to an activity carried on continuously or regularly. The liability of the trustees to register for GST arose because the consideration, being non-monetary, must under s 10(2) be the open market value of the supply, which in this case exceeded the then-threshold of $30,000.

### §80.97 When a subdivision is a taxable activity

The leading case in relation to whether subdivisions are taxable activities is *Newman v Commissioner of Inland Revenue* (1995) 17 NZTC 12,097 (CA). This Court of Appeal case confirmed the principle that a subdivision involving the splitting of one section of land into two and the selling off of one of those sections (a typical private, residential subdivision), with minimal development work, is not an activity carried on continuously or regularly. McKay J stated that "it is not the supply of goods which is to be carried on continuously or regularly, but the activity which involves or is intended to involve, that supply”. A single supply, even if it necessitates the performance of a series of steps over time, cannot therefore be said to be carried on continuously or regularly. Richardson J said:

> “The activity engaged in by the appellant in relation to this land to provide the front lot for sale was, on the evidence, a straightforward subdivision. There was no development work on the property. The activity was not repeated over time either continuously or regularly. It did not involve repeated acts. Dissection of what was done into a series of sequential steps does not answer the statutory test of whether the activity was carried on continuously … almost any activity, even going shopping, could be broken down into a series of many sequential steps. But to do so risks detracting from the true inquiry which is whether the activity in question was itself carried on continuously or regularly by the taxpayer.”

The Court of Appeal agreed with the earlier decision in *Tout v Cook* (see below).
Goods and Services Tax

The meaning of “continuously or regularly” in relation to land subdivisions is best understood by considering some of the Court cases which have dealt with this issue:

(a) In **Tout v Cook** (1991) 13 NZTC 8,053 (HC) a residential property was subdivided into two sections. One of the sections was sold, the other was retained as a residence by the vendor. The Court held that such a “one-off” property development cannot be regarded as being a continuous or regular activity as envisaged by s 6(1)(a).

(b) In **TRA Case P54** (1992) 14 NZTC 4,379, the sale of land by the trustees of a family trust was held to be neither a one-off nor a non-continuous business activity. The trust was in the business of subdividing and selling land, the trustees were at all material times registered for GST, and the subdivision and sale of part of a block was in the furtherance of their taxable activity.

(c) In **TRA Case S57** (1996) 17 NZTC 7,368, the taxpayers purchased a residential subdivision in 1984 consisting of 16 sections. They sold 12 of the sections before the introduction of GST on 1 October 1985, and retained the remaining four sections. From the outset, the taxpayers had intended to keep back four of the sections to carry out a rest home development at some future time. Subsequently, the taxpayers changed their plan to develop a rest home on the site and proceeded to dispose of the land. The four sections were sold in 1988 and 1989. The Authority held that the taxable activity of selling land had ceased before 1 October 1986 and the taxpayers were therefore not liable for GST on the sale of the sections.

(d) **TRA Case S70** (1996) 17 NZTC 7,431 concerned the subdivision of 5.7 hectares of land into five sections by a husband and wife who previously had occupied the property. This was held to constitute a taxable activity despite the fact that it was the taxpayers’ first and only venture of that type. The Authority regarded the activity as having been carried on “continuously” because it involved the subdivision and sale of multiple sections.

(e) In **Wakelin v Commissioner of Inland Revenue** (1997) 18 NZTC 13,182 (HC), the subdivision of an area of land of 2.4 hectares into six residential sections and their subsequent sale, over a period of approximately nine years, was held to be a taxable activity and therefore liable for GST. The decision turned on the meaning of “continuously or regularly” in the definition of taxable activity. Paterson J expressed the view that while a one-off subdivision involving the supply of one section could not be regarded as an activity carried on continuously or regularly (per **Newman**), a one-off subdivision involving the supply of several sections could. The subdivision in question involved extensive and ongoing work over a period of time with the ultimate aim of selling five sections. The time span was irrelevant. See also **TRA Case T40** (1997) 18 NZTC 8,267 and **TRA Case T62** (1998) 18 NZTC 8,468.

(f) In **TRA Case T60** (1998) 18 NZTC 8,449, the subdivision of a 202-hectare farm into six lifestyle blocks and the sale of those blocks was held to be a taxable activity. There was continuous activity of subdivisional work to achieve sales or supplies carried on over a period of more than two years in an uninterrupted sequence. In reaching its decision, the Authority relied on the principles in **Newman** and **Wakelin**.

(g) In **TRA Case V15** (2002) 20 NZTC 10,182, the taxpayer company had held 52 hectares of land at a beach resort since 1972. Various lots had been subdivided off over time, so that by the time the taxpayer registered for GST in 1986, only 23 hectares remained in that block. The taxpayer had claimed all expenditure relating to the land for both GST and income tax purposes. Part of the land was used free-of-charge by two unregistered subsidiaries for business purposes. However, the majority of the land was used for private recreational purposes by the taxpayer’s shareholders. Following financial difficulties, the taxpayer subdivided the land to provide better security to its lender. In 1996 the taxpayer sold two lots and part of a third lot of land to a developer. The CIR contended that the land was sold in the course or furtherance of a taxable activity. The TRA held that the land in question was not part of the taxpayer’s taxable activity, but was held as a private asset that was mixed with business assets by way of a “streamlined” accounting system. Therefore the
taxpayer was not liable for GST on the sale. Judge Barber held that the taxpayer should not have claimed all of the expenses relating to the land and all of the costs of subdivision.

(1) CIR's policy
Following the Court of Appeal decision in Newman, the CIR issued a policy statement on the meaning of taxable activity in the context of subdivisions [see TIB vol 7:2 (August 1995) at 10-13]. The principal features of the policy are as follows:

(a) A subdivision of land into two allotments, involving no development work, will not by itself amount to a taxable activity.

(b) In other circumstances, whether or not the activity is “continuous” and amounts to a taxable activity will depend on all the facts of the particular activity. The following factors are relevant in determining the existence of a taxable activity:

(i) The scale of the subdivision;
(ii) The level of development work;
(iii) The number of sales of subdivided land;
(iv) The time and effort involved;
(v) The level of financial investment;
(vi) The commerciality of the transaction.

The greater the number of allotments created and sold, the more extensive the development work, the more time and effort involved and the higher the financial commitment to the project, the more likely that there is a taxable activity. Note that the above list of factors is not exhaustive. No particular factor determines the existence of a taxable activity. The activity as a whole must be examined to see whether or not there is a taxable activity.

(c) The one-off sale of other private assets (eg a car) will not in isolation constitute a taxable activity. This is the result even if the process of sale involves a number of steps.

(d) The process of constructing and selling a commercial building is a continuous activity which falls within the definition of “taxable activity”. This is because the transaction involves substantial development work, financial investment, and time and effort.

(e) If a person carries out the process of subdivision on a regular or repeated basis, a taxable activity will exist. This is the result even if each individual subdivision is not a taxable activity in its own right.

(f) If a person who subdivides land on which a residence is located is carrying on a taxable activity, only the newly-subdivided allotments form part of that person’s taxable activity. The allotment containing the original home is separate from the taxable activity of subdivision and sale. If the person later sells the residential home (and curtilage), that sale is not made in the course or furtherance of the taxable activity of subdivision. GST will not apply, provided the residential home (and curtilage) do not form part of the assets of another taxable activity carried out by that person.

580.98 Meaning of “consideration” [s 2]
An activity is a taxable activity only if it involves the supply of goods and services to another person for a consideration. Section 2 states:

“‘Consideration’, in relation to the supply of goods and services to any person, includes any payment made or any act of forbearance, whether or not voluntary, in respect of, in response to, or for the inducement of, the supply of any goods and services, whether by that person or by any other person; but does not include any payment made by any person as an unconditional gift to any non-profit body.”

The key elements of this definition are:

(a) Consideration can be either a payment or an act of forbearance. The Courts have indicated that “payment” has a very wide meaning and can include payment in non-monetary form or by offset of
Goods and Services Tax

debts. For example, in Trustee, Executors and Agency Co New Zealand Ltd v Commissioner of Inland Revenue (1997) 18 NZTC 13,076 (HC), the High Court held that the payment of rates and accounting fees by the lessee on behalf of the lessor was part of the consideration for the supply of land. An example of an act of forbearance would be a mortgagor surrendering the right to take possession of a property following default in payment by the mortgagor; or the forgiveness of a debt.

(b) A payment does not have to be voluntary in order for it to constitute consideration.

(c) The payment must be made in respect of, in response to or for the inducement of a supply. In other words, there must be a connection between the making of the payment and the supply of goods and services. The payment must be made for the supply.

(d) The consideration does not have to be provided by the person receiving the supply. If goods and services are supplied to one person, but payment for them is made by another person, the payment still amounts to consideration.

(e) A payment made to a non-profit body as an unconditional gift is not consideration for a supply. The donor must receive nothing in return for the donation, and there must be no conditions attached to the making of the gift. The meaning of “non-profit body” is explained in 580.88.

In Taupo Ika Nui Body Corporate v Commissioner of Inland Revenue (1997) 18 NZTC 13,147 (HC), the supply of goods and services by a body corporate to its owners was held not to be a supply for consideration and so did not amount to a taxable activity. The goods and services in question were supplied by independent contractors, not by the body corporate itself. The body corporate merely collected the money supplied by the owners and passed it on to the independent contractors. It did not obtain anything for its own benefit.

The CIR considers the apportionment of local authority rates on the sale and purchase of real property to be part of the consideration for the single supply of the property. The GST treatment of rates apportionment will therefore be the same as the other consideration for the property [see public ruling BR Pub 10/10, 10/11, 10/12, and 10/13 TIB vol 22:10 (November 2010) at 3-16].

Payments made to a state school or state integrated school for the provision of education of a child are not consideration, and therefore not subject to GST, provided that the child is a NZ citizen or NZ resident. This is because there is a statutory entitlement for the child to receive a free education. If other services, not integral to the supply of education, are supplied on condition that a payment is made for the services, the payment is considered and GST applies [see public ruling BR Pub 09/01, TIB vol 21:3 (May 2009) at 4-14].

Grants made by Infrastructure Auckland are not deemed to be consideration for a supply of goods or services. Recipients of those grants are not required to account for GST on the receipt of the grant, provided that certain conditions are met. [see product ruling BR Prd 04/03, TIB vol 16:3 (April 2004) at 17-22].

580.100 Imports [ss 3A, 12, 60]

Goods other than fine metal imported into New Zealand are subject to GST, which is collected by the Customs Department under the Customs and Excise Act 1996 as if it were customs duty. GST is imposed at 15 per cent (12.5 per cent prior to 1 October 2010) on the total value of imported goods including:

(a) The customs value for duty purposes;
(b) The amount of customs duty and any taxes imposed other than GST;
(c) The insurance and freight costs in bringing the goods to New Zealand (if not already included in the customs value).

“Fine metal” is defined in 580.26.

Under s 12(4)(b), goods re-imported by the same person who exported them are exempted from duty and GST if, at the time of export, those goods were not zero-rated or, if exported before 1 October 1986, they would not have been zero-rated if exported after that date. In other words, if the goods were zero-rated when originally exported, GST will be charged at 15 per cent (12.5 per cent prior to 1 October 2010) when the goods are re-imported [see TIB vol 5:13 (June 1994) at 14].
Provided that the agent and the principal agree, and the principal is non-resident and is outside New Zealand, the supply of goods in New Zealand is treated as made by the agent. This means that the agent is liable for output tax but able to claim input tax in respect of the taxable supplies made by the agent. When goods are imported for a taxable activity but cannot be used for that purpose, GST paid at the border can be recovered.

If goods are imported into New Zealand for the purpose of making taxable supplies by a registered person who accounts for GST on an invoice basis, a claim for an input tax deduction may be supported by one of the following documents:

(a) The New Zealand Customs Service Electronic Entry document;
(b) A Customs Import Entry form;
(c) A Deferred Payment of Duty statement.

See public ruling BR Pub 06/03 in TIB vol 18:6 (July 2006) at 5-8. This ruling applies indefinitely.

If goods are brought into New Zealand for less than 12 months they are treated as temporary imports. A deposit equal to the sum of the GST and duty may be payable to the Customs Department on the value of the goods imported. The deposit is refunded if the goods are removed from New Zealand within the 12-month period following their importation.

Some circumstances in which a non-resident can claim GST paid to the Customs Department as an input tax deduction are shown in the following examples from TIB vol 12:12 (December 2000 1992) at 12.

Example 1:
A non-resident art gallery decides to exhibit artwork in New Zealand and arranges this through a New Zealand agent, who is also authorised to sell the artwork. The gallery does not intend to establish itself in New Zealand and does not want to incur the costs associated with returning GST.

Provided that the agent is registered for GST and resident in New Zealand, and the art gallery and the agent agree, s 60(7) treats the agent as the supplier of the artwork in New Zealand. This means the agent will be able to claim an input tax credit for any GST paid to bring the artwork into New Zealand and will be required to pay GST on any sales.

Example 2:
An individual in New Zealand orders goods from an overseas supplier advertised through a catalogue. The order is received, along with 50 others, and is processed. The ordered goods are bulk-consigned and sent to New Zealand. A third-party handler in New Zealand receives the goods and breaks down the import into the constituent orders and posts the goods to the individuals who ordered them. The handler is registered for GST and charges the offshore supplier for the service.

The handler does not have proprietary rights to the goods but merely facilitates their delivery in New Zealand. Unless the handler acquires the goods, it will not be able to claim an input tax credit if it pays GST to uplift the goods from Customs. This is appropriate because the handler does not supply the goods in New Zealand. Although it is arguable that the GST levied at the border is incurred when applying the goods for the purpose of making taxable supplies to the offshore supplier, the goods are incidental to the services provided and cannot be said to be applied for the principal purpose of making taxable supplies.

Section 12(1A) exempts from the imposition of GST on imports those goods intended solely for the use of an organisation, visiting force, expedition, or other body approved by the chief executive of the New Zealand Customs Service that may be established or temporarily based in New Zealand under an agreement or arrangement between the New Zealand Government and the government of another country or the United Nations or other international organisation. An exemption is also granted where the goods are intended solely for the use of a person temporarily resident in New Zealand for the purpose of serving as a member of any approved organisation, visiting force, expedition, or other body.

**580.101 Imported services — reverse charge mechanism** [ss 5B, 8(4B), 8(4C), 9(2)(a)(iii), 24B, 25AA, 55(7B), 56B, 84B; s DB 2]

Historically, imported services have not been subject to GST. This has created a distortion in favour of imported services compared with domestically supplied services. A reverse charge mechanism counteracts this distortion. The measures apply from 1 January 2005.

From 1 April 2011, the application of the reverse charge mechanism is based on the intended and actual use of the imported service in the making of taxable supplies. Previously it was based on the type of supplies.
made by the importer’s business. Under the new test, the reverse charge mechanism applies only where the recipient of the supply either:

(a) estimates at the time of acquisition of the service that it will be used less than 95 per cent for making taxable supplies; or

(b) determines at the end of an adjustment period that less than 90 per cent of the services is actually used in the making of taxable supplies.

An “adjustment period” is the period in which an adjustment for apportioned supplies is required for assets that have a mixed use [see 580.128].

The reverse charge mechanism applies only to services that would be subject to GST if supplied in New Zealand. The zero-rating provisions of s 11A do not apply unless the services are physically received at the time and place at which the services are physically performed.

For the purpose of determining whether or not the registration threshold is exceeded, the registration options available and the requirement to return GST on the supply, the recipient of the supply is deemed to be the supplier. This means that the importation of services can cause a business that is currently under the registration threshold, or a private individual, to be required to register for GST. However, the provisions mainly apply to businesses making principally exempt supplies such as banks and other financial service providers.

The time of supply is deemed to be the end of the taxable period that includes the date that is two months after the balance date next following the completion of the services. This allows businesses that have imported management services from an offshore parent company to finalise the consideration for the services for the income year, before having to return the GST. Where there is a change of use of the services such that the use for making taxable supplies drops to below the 90 per cent threshold, the time of supply is the first day of the adjustment period in which the percentage falls below 90 per cent.

The GST output tax payable under the reverse charge mechanism is deductible for income tax purposes where the underlying services are deductible [ITA 2007, s DB 2]

Example 1:
A local retailer, who is just below the registration threshold, imports a set of computer games over the internet as a gift for his children. The $500 that the retailer pays for the games is just enough, when added to his taxable supplies, to breach the registration threshold. The retailer is required to register for GST and to remit to the CIR the GST on the deemed supply of the computer games. The amount of GST is $75 ($500 ÷ 23/20 - $500). As the computer games are not intended for use in the taxable activity, the amount cannot be claimed back as input tax. Neither is it deductible for income tax purposes.

Example 2:
Following the receipt of a substantial inheritance, Mary is planning to build her dream home. She secures the services of an English architect and an Italian interior designer to design the home. The total cost of these services is NZ$62,000. The services are performed overseas and the design plans are sent to Mary by post. As the services have been imported and the cost exceeds the registration threshold, Mary is required to register for GST and remit the deemed GST amount on the charges made for the design services.

Where the provisions apply to both the person and the supply, the recipient is required to add GST to the consideration paid for the supply and return this amount as output tax.

The associated persons valuation rules do not apply if the recipient of the supply is entitled to an income tax deduction for the supply, or would be had consideration been given for the supply. The associated persons valuation rules also do not apply where the recipient of the supply is a branch or division that is treated under the GSTA as a separate person and that branch or division would, if it was entitled to income tax deductions have been entitled to an income tax deduction for any consideration given for the supply.

If a non-resident makes a supply of services to a resident who is a member of the same group of companies, or to its New Zealand branch or division, the value of the supply is reduced by an amount that represents salary and wages paid to an employee of either the non-resident or of the group company and interest incurred by either the non-resident or the group company. This ensures that such things as management fees are treated on the same basis as internally generated services.
Where a contract for the supply of imported services is wholly or partly cancelled or varied, the recipient of the supply is required to make an adjustment to the amount of output tax paid or input tax claimed in the return for the GST period in which it becomes apparent that the amount claimed or paid was incorrect.

The GST grouping provisions deeming taxable activities carried on by a member of the group to be carried on by a representative member of the group, and deeming supplies made to and by group members to be made to or by the representative member [see 580.86] are disregarded for the purposes of the reverse charge mechanism.

Similarly, where a person carries on activities both inside and outside of New Zealand, each branch is treated as being a separate person and any activity carried on by a branch or division is treated as being carried on separately by the branch or division. A branch or division within New Zealand is treated as being resident in New Zealand. A branch or division that is outside of New Zealand is treated as being non-resident. For these purposes, a head office company is treated as a branch or division of the company.

Section 78, which relates to the GST effects of an alteration in law [see 580.170] do not apply to the introduction of the reverse charge mechanism.

Where a registered person receives a supply of services that is subject to the reverse charge mechanism, the following records are required to be maintained:

(a) The name and address of the supplier;

(b) The date on which, or the period during which, the services were received;

(c) A description of the services;

(d) The consideration for the services and the time by which payment is required; and

(e) The amount that salary, wages, or interest by which the recipient has reduced the value of the supply in accordance with ss 10(15C)(a) and 10(15C)(b).

The CIR has issued guidelines for recipients of imported services [see TIB vol 16:10 (November 2004) at 71-80].

### 580.105 Taxable periods [s 15]

Registered persons must account for GST monthly, two-monthly or six-monthly. The period for which a registered person accounts for GST is referred to as a taxable period. Registered persons select their preferred taxable period when they complete the GST registration form (GST1). A registered person can change their taxable period by applying in writing to Inland Revenue [see 580.107].

The choice of taxable periods available to a particular registered person depends principally on their turnover. The following table summarise the options.

<table>
<thead>
<tr>
<th>Category</th>
<th>Taxable periods</th>
<th>Available to</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Two months, ending on the last days of January, March, May, July, September, and November.</td>
<td>Any registered person not required to use Category D or who does not elect to use category C or D. If the registered person does not express a preference for category A or B, the CIR will allocate them to one or the other.</td>
</tr>
<tr>
<td>B</td>
<td>Two months, ending on the last days of February, April, June, August, October, and December.</td>
<td>All registered persons not required to use category D or who do not elect to use category C or D. If the registered person does not express a preference for category A or B, the CIR will allocate them to one or the other.</td>
</tr>
<tr>
<td>Category</td>
<td>Taxable periods</td>
<td>Available to</td>
</tr>
<tr>
<td>----------</td>
<td>-----------------</td>
<td>-------------</td>
</tr>
<tr>
<td>C</td>
<td>Six months, ending on the last days of any two months that are six months apart (e.g., 31 March and 30 September).</td>
<td>Optional for any registered person whose total taxable supplies in the last 12 months have not exceeded $250,000 or whose total taxable supplies are not likely to exceed $500,000 (formerly $250,000 before 1 April 2009) in the next 12 months or where the CIR exercises discretion under s 15A(1AA) (see below).</td>
</tr>
<tr>
<td>D</td>
<td>One month, ending on the last day of each month.</td>
<td>Compulsory for any registered person whose total taxable supplies in the last 12 months have exceeded $24 million or whose taxable supplies are likely to exceed $24 million in the next 12 months.</td>
</tr>
</tbody>
</table>

Persons who are provisional taxpayers are required to align their GST taxable periods with their balance date [s 15B].

A registered person who has not been allocated a taxable period by the CIR (for example because of oversight or as a result of a CIR-initiated registration) is automatically placed in category A. Most registered persons who adopt a two-month taxable period choose category A as this aligns with a 31 March balance date for income tax purposes.

If the taxable supplies made by a registered person during a 12-month period exceed the $500,000 or $24 million thresholds (for the six-month and one-month taxable periods, respectively) solely as a result of:

(a) The cessation, or substantial and permanent reduction in the size or scale of, a taxable activity carried on by the registered person; or

(b) The replacement of any plant or other capital asset used in a taxable activity carried on by the registered person,

the registered person does not cease to qualify to use six-month taxable periods and cannot be compelled to use one-month taxable periods.

Example:

A manufacturing company has a two-month taxable period and an annual turnover of $21 million. In anticipation of a lessening demand for its products, the company sells off a large portion of its factory site and machinery. As a result, taxable supplies for the last 12 months exceed $24 million. At this point the company would normally be required to adopt a one-month taxable period. However, as the higher than usual taxable supplies are due to the substantial and permanent reduction in the scale of the company’s operation, it may retain a two-month taxable period.

1. **End of period on death, liquidation, receivership, bankruptcy or amalgamation**

   When a registered person dies, goes into liquidation or receivership, becomes bankrupt, or ceases to exist on amalgamation [see 180 COMPANIES — AMALGAMATION], the last day of that person’s final taxable period is the date of death, liquidation, receivership, bankruptcy or cessation of existence, as applicable.

2. **End of period other than last day**

   Normally, the last day of a month is the end of a taxable period. However, a registered person may apply in writing to Inland Revenue to have a day other than the last day of the month as the end of its taxable period. A day other than the last day may be more convenient if, for example, a business’s monthly accounting procedures close off payments and receipts a few days before the end of the month. The day chosen must be within seven days either side of the last day of the month. An alternative end of period does not affect the due date for the filing of returns.
(3) **CIR’s discretion regarding six-month periods**

Section 15A(1AA) provides that the CIR may, on written application by a registered person who falls within any one of categories A, B, or D, direct that the registered person be placed within category C, after considering the following factors:

(a) The person’s history of filing and paying tax;
(b) The person’s record-keeping practices;
(c) Whether the person has been placed within category C before;
(d) The nature and volume of the person’s taxable supplies.

As outlined in the CIR’s standard practice statement [see TIB vol 13:12 (December 2001) at 8], the discretion will be exercised where the registered person:

(a) Has a good compliance history;
(b) Has satisfactory record keeping practices and the cost of more regular filing would be excessive; and
(c) Has a turnover that is subject to seasonal or low-volume/high-value cashflow peaks.

580.107 **Change in taxable period** [ss 15A, 15C, 15D]

The taxable period initially adopted by a registered person may cease to meet the needs of the registered person, or the registered person may cease to meet the criteria [see 580.105] for using a particular taxable period. In these circumstances, a change of taxable period may be required. A change in taxable period may be initiated by the registered person or by Inland Revenue as follows.

A registered person may apply to change:

(a) To a six-month taxable period (if annual taxable supplies are less than $500,000);
(b) To a two-month taxable period (if annual taxable supplies are under $24m);
(c) To a one-month taxable period;
(d) From a category A to a category B two-month taxable period, or vice versa (provided annual taxable supplies remain less than $24 million);
(e) The months in which their six-month taxable periods end.

Inland Revenue will automatically change a registered person’s taxable period if they cease to satisfy the necessary conditions, for example if a registered person’s taxable supplies have exceeded $24 million in the previous 12 months, and they currently use two-month taxable periods, they will be changed to one-month taxable periods. Similarly, if the taxable supplies of a registered person using six-month taxable periods have exceeded $500,000 in the previous 12 months, Inland Revenue will change the registered person’s taxable periods to two-monthly or (if requested, or if taxable supplies exceed $24 million) one-monthly. To enable this to be enforced, registered persons must advise Inland Revenue in writing within 21 days if:

(a) Having six-month taxable periods, their annual taxable supplies exceed or are likely to exceed $500,000; or
(b) Their annual taxable supplies exceed or are likely to exceed $24 million.

Any change in taxable period takes effect from the start of the next taxable period following notification by Inland Revenue. However, an earlier date may be specified with the agreement of the registered person.

**TaxNote:** Persons who are provisional taxpayers are required to align their GST taxable periods with their balance date [s 15B].

580.110 **Returns** [s 16]

All registered persons are required to furnish a GST return for each taxable period showing the amount of tax payable or refundable for that taxable period. The return must be furnished in the prescribed form (Inland Revenue form GST101).
Returns for taxable periods ending on or after 31 March 2007 are required to be filed on or before the 28th day of the month following the end of the taxable period. Returns otherwise due on 28 December are required to be furnished by the following 15th of January. Returns otherwise due on 28 April are required to be furnished by the following 7th of May.

**Example 1:**
A GST return for a taxable period ending on 31 May 20X1 must be filed (either mailed or physically delivered) on or before 28 June 20X1.

Where a person ceases to be registered part-way through a taxable period, a return must be furnished for the part-period during which they were registered. The due date for furnishing the return is the same date as would have applied had the person remained registered for the entire period.

When a person ceases to be registered, that person must file a final return on or before the 28th day of the month following the month in which registration ceased. The final return must cover the part of the last taxable period up to the date registration ceased.

**Example 2:**
Hamish, who had category A, two-month taxable periods, had his GST registration cancelled when he ceased business on 31 December 20X1. His final return will cover the period from 1 December to 31 December 20X1, and this return must be filed by 28 January 20X2.

The CIR may vary the date for the filing of returns in particular cases (for example to meet the circumstances of a non-profit body). A return purporting to be made by or on behalf of any person is deemed to have been made by that person or by that person’s authority, unless the contrary is proved [s 23(4)].

### 580.112 Special returns [ss 17, 18]

**1. Goods sold in satisfaction of debt [s 17]**

When repossessed goods sold in satisfaction of a debt are a deemed supply under s 5(2) [see 580.14], the person selling the goods (whether registered or not) must file a special GST return providing the following information:

- (a) The person’s name, address and (if registered) registration number;
- (b) The name, address and (if registered) registration number of the person whose goods were sold;
- (c) The date of sale;
- (d) The amount for which the goods were sold and the amount of GST charged; and
- (e) Any other particulars required by the CIR.

The return must be filed on or before the 28th day of the month following the month of sale, together with payment for the GST charged on the sale. The person whose goods were sold must be provided with details of the information supplied in the return, by the same due date. If November was the month in which the sale was made, the return and payment are due by 15 January following. If March was the month in which the sale was made, the return and payment are due by 7 May following.

Any tax included in the special return must not be included in the ordinary returns of the vendor or the person whose goods were sold.

**2. Other returns [s 18]**

In addition to ordinary returns and returns for goods sold in satisfaction of debt, the CIR can require any person, whether registered or not, to file any further or other returns required for GST administration. Such returns may be on that person’s own behalf, or as agent or trustee for another person.

### 580.113 Correction of minor errors [TAA, s 113A]

From 7 December 2009, a statutory basis exists in s 113A of the TAA for the correction of minor errors in the next return following the discovery of the error. The conditions that must be met are:
(a) The person has provided a return for income tax, FBT or GST, and the assessment includes one or more minor errors;
(b) The error was caused by a clear mistake, simple oversight or mistaken understanding on the person’s part; and
(c) For a single return, the total discrepancy caused by the error is $500 or less (for this purpose, income tax, FBT and GST are treated separately).

The CIR also has a standard practice of allowing the correction of minor errors which has applied since 1 July 1998 [see standard practice statement INV-490 in TIB vol 10:6 (June 1998) at 13-14, and the clarification statement in TIB vol 11:2 (February 1999) at 10].

The following summarises the standard practice statement:

If a registered person makes a mistake when preparing a GST return, they can correct the error in a subsequent GST return without penalty, provided total adjustments do not exceed:

(a) $200 GST (taxable supplies of $1,800) per return, for registered persons with an annual turnover of up to $250,000;
(b) $500 GST (taxable supplies of $4,500) per return, for registered persons with an annual turnover of $250,000 or more.

The maximum error figures of $200 and $500 apply to the return in which the error was originally made, not to the return in which the error is corrected. Therefore, they do not limit the value of errors that can be corrected in a later return. Errors in different return periods cannot be averaged to fit within the maximum figures.

The registered person must keep a written record of:

(a) The return period in which the error occurred;
(b) The amount of GST involved;
(c) The nature of the error; and
(d) The return period in which the error was corrected.

If the amount of the corrections exceeds the limits shown above, the registered person must correct the error by following the disputes resolution process. To do this, the registered person must prepare a notice of proposed adjustment [see 260.20] and send it to Inland Revenue within two months of filing the GST return in which the error occurred. Errors in excess of the limits may result in the registered person incurring late payment or shortfall penalties, and use of money interest.

It should be noted that there are two major differences between the standard practice statement and the statutory provision. These are:

(a) The standard practice statement allows correction of a minor GST error in any subsequent return, whereas the statutory provision allows the correction to occur only in the return immediately following the return in which the error was made; and
(b) The standard practice statement allows the correction of errors of up to $200 GST (taxable supplies of $1,800) per return, for registered persons with an annual turnover of up to $250,000 and $500 GST (taxable supplies of $4,500) per return, for registered persons with an annual turnover of $250,000 or more. The statutory basis allows the correction of errors of up to $500, irrespective of the turnover of the registered person.

580.115 Accounting basis [ss 19, 19A, 19B, 19C, 19D, 20(3)]

There are three methods by which a registered person can account for GST:

(a) Invoice basis;
(b) Payments basis;
(c) Hybrid basis.
Unless a registered person requests otherwise, they will be required to use the invoice basis. Any registered person can apply to Inland Revenue to use the hybrid basis — there are no restrictions on its use. The payments basis can only be used by:

(a) Registered persons whose taxable supplies during the previous 12 months have not exceeded $2 million;
(b) Registered persons whose taxable supplies during the next 12 months are not likely to exceed $2 million;
(c) Local authorities listed in an Order in Council and non-profit bodies [see 580.88]; and
(d) Registered persons for whom the nature, volume and value of taxable supplies and the nature of the accounting system used make it appropriate.

The $2 million threshold relates to the GST-exclusive value of the taxable supplies. The equivalent GST-inclusive amount, based on the 15 per cent GST rate, is $2,300,000 [see TIB vol 18:5 (June 2006) at 3].

Registered persons using the payments basis are required to account on the invoice basis for any supply of goods and services for a consideration of $225,000 or more unless settlement is required within one year. The CIR has the power to aggregate supplies where of the opinion that they have deliberately been broken down so as to avoid the $225,000 threshold. This requirement does not apply to a non-profit body provided that it determines at the time of supply, and on the basis of reasonable information, that the recipient of the supply is not registered and either:

(a) Does not intend to use the goods or services for making taxable supplies; or
(b) Intends to use them for making taxable supplies but not before they have been paid for in full.

If a registered person ceases to meet the criteria for using the payments basis, Inland Revenue will direct the registered person to use the invoice basis or, if requested by the registered person, the hybrid basis. A registered person who accounts for GST on a payments basis does not cease to meet the criteria for using the payments basis if their annual taxable supplies exceed $2 million solely as a result of:

(a) The cessation of, or any substantial and permanent reduction in, the size or scale of any taxable activity carried on by the person; or
(b) The replacement of any plant or other capital asset used in any taxable activity by the person.

The difference between the three methods of accounting for GST is in the timing of when the registered person must account for GST on taxable supplies made (output tax) and taxable supplies received (input tax). The following table summarises when output tax and input tax must be accounted for under each accounting basis.

<table>
<thead>
<tr>
<th>Accounting basis</th>
<th>Output tax</th>
<th>Input tax</th>
</tr>
</thead>
<tbody>
<tr>
<td>Invoice</td>
<td>Earliest taxable period in which an invoice is issued or any payment is received.</td>
<td>Earliest taxable period in which an invoice is issued or any payment is made.</td>
</tr>
<tr>
<td>Payments</td>
<td>Taxable period in which payment is received.</td>
<td>Taxable period in which payment is made.</td>
</tr>
<tr>
<td>Hybrid</td>
<td>Earliest taxable period in which an invoice is issued or any payment is received.</td>
<td>Taxable period in which payment is made.</td>
</tr>
</tbody>
</table>

Except for low value supplies, a registered person must hold a tax invoice before they can claim an input tax deduction — this applies no matter which accounting basis is used [see 580.140].

A registered person may change the basis on which they account for GST by applying in writing to Inland Revenue provided, in the case of the payments basis, they meet the criteria set out above. Any change in accounting basis takes effect from the start of the next taxable period following the taxable period during which Inland Revenue confirmed the change.

When a registered person changes the basis on which they account for GST, an adjustment is required because of the difference in the way debtors and creditors are accounted for under each method [see 580.126].
580.120 Calculation of GST payable [s 20]
The amount of GST payable by or refundable to a registered person for a taxable period is the total amount of output tax (tax on supplies made) for the period less the total amount of input tax (tax on supplies received) for the period. If the result is positive, GST is payable. If the result is negative, the registered person is entitled to a refund of GST. In calculating the total amount of output tax and input tax for a period, certain adjustments are required [see 580.125].

A deduction for input tax cannot be made unless the registered person holds a tax invoice, a debit note or a credit note for the supply. However, an input deduction can be claimed in a subsequent taxable period once a tax invoice, or debit or credit note, is obtained. No tax invoice is required for low value supplies (consideration less than $50), non-taxable supplies of secondhand goods, or where, in special circumstances, the CIR has exempted the registered person from the invoice requirements [see 580.140].

If a registered person has not deducted input tax from output tax in the taxable period in which it arose (for example, due to oversight or error), the input tax can be deducted from output tax in any subsequent taxable period. With effect from return periods beginning on or after 1 April 2005, the ability to claim input deductions in later return periods has been curtailed to some degree. From that date, there is a further requirement that one or more of the following apply:

(a) The claim is made within two years of either the date on which payment for the supply was made or the date on which a tax invoice for the supply was issued;
(b) The failure to make the deduction in an earlier return period was due to:
   (i) An inability of the registered person to obtain a tax invoice;
   (ii) A dispute over the amount payable for the supply;
   (iii) A mistaken belief of the registered person that the supply was not a taxable supply; or
   (iv) A clear mistake or oversight of the registered person.

580.122 Output tax [s 2]
Output tax is the GST charged by a registered person on the taxable supplies made by that person. The total output tax for a taxable period is therefore the total GST charged on all taxable supplies made by the registered person during the period, including any output adjustments required [see 580.126]. The amount of output tax relating to a particular taxable period will depend on the accounting basis used by the registered person.

580.123 Input tax [ss 2, 3A, 20, 24, 60B]
Input tax is the GST charged on the taxable supplies received by a registered person. The total input tax for a taxable period is therefore the total GST charged on all taxable supplies received by the registered person during the period, including any input adjustments required [see 580.127]. The amount of input tax relating to a particular taxable period will depend on the accounting basis used by the registered person.

The amount of input tax claimable by a registered person acquiring a good or service for the purposes of making taxable supplies is determined by the definition of “input tax” in s 3A:

(a) If the goods or services were supplied by a registered person in the course of carrying on a taxable activity, the amount of input tax claimable by the purchaser is three twenty-thirds of the consideration paid.
(b) Where the goods have been entered for home consumption under the Customs and Excise Act 1996, the amount claimable is the tax levied under s 12(1) of the GSTA.
(c) Where the goods are secondhand goods and were acquired from a non-registered person, either where the two parties are not associated persons, or where the two parties are associated persons and the acquisition occurred prior to 10 October 2000, the amount claimable is the lower of:
   (i) One-ninth of the purchase price;
   (ii) One-ninth of the open market value.
However, where the secondhand goods are to be used in making supplies that are zero-rated under the business-to-business financial services provisions of s 11A(1)(q) and (r), no claim is available if the goods previously have been owned by the registered person or an associated person of the registered person. This limitation applies from 1 January 2005.

(d) Where the goods are secondhand goods and were acquired from a non-registered person, where the two parties are associated persons, and the acquisition occurred on or after 10 October 2000 but before 1 October 2010, the amount claimable is the lowest of:

(i) The GST component (if any) of the original cost to the supplier;
(ii) One-ninth of the purchase price;
(iii) One-ninth of the open market value.

This means, for instance, that if the supplier originally acquired the goods before the introduction of GST on 1 October 1986, no secondhand goods deduction will be claimable.

(e) Where the goods are secondhand goods and were acquired from a non-registered person, where the two parties are associated persons, and the acquisition occurred on or after 1 October 2010, the amount claimable is the lowest of:

(i) The GST component (if any) of the original cost to the supplier;
(ii) Three twenty-thirds of the purchase price;
(iii) Three twenty-thirds of the open market value.

This means, for instance, that if the supplier originally acquired the goods before the introduction of GST on 1 October 1986, no secondhand goods deduction will be claimable.

(f) Where the goods are secondhand goods and were acquired from a non-registered person who held the goods on deregistration, and where the two parties are associated persons, and the acquisition occurred on or after 10 October 2000 but before 1 October 2010, the amount claimable is the lowest of:

(i) The amount of output tax paid by the supplier on deregistration;
(ii) One-ninth of the purchase price;
(iii) One-ninth of the open market value.

(g) Where the goods are secondhand goods and were acquired from a non-registered person who held the goods on deregistration, and where the two parties are associated persons, and the acquisition occurred on or after 1 October 2010, the amount claimable is the lowest of:

(i) The amount of output tax paid by the supplier on deregistration;
(ii) Three twenty-thirds of the purchase price;
(iii) Three twenty-thirds of the open market value.

(h) If the supplier is a non-resident who has previously supplied the same goods to a registered person for home consumption, no input tax can be claimed irrespective of the supply date.

An input tax deduction can only be claimed if the goods and services were acquired for the principal purpose of making taxable supplies.

Fishing quota is not “goods”. Therefore, a secondhand goods input tax claim is unable to be made in respect of fishing quota acquired from a non-registered person. This was the conclusion reached in public ruling BR Pub 09/04, which applies for the period 13 November 2006 to 30 June 2014. The same conclusion is reached in public ruling BR Pub 09/05 in respect of coastal permits and certificates of compliance [see TIB vol 21:6 (August 2009) at 20].

An input tax deduction can be claimed for the GST on any goods and services purchased for the purpose of determining the registered person’s income tax or GST liability [see 580.124].

Non-profit bodies are able to claim input tax on all goods and services acquired other than those acquired for the principal purpose of making exempt supplies. This provision (which applies from 17 October 2002),
allows charities and other non-profit bodies to claim input tax on goods and services acquired for the purpose of, for example, collecting donations.

A GST-registered person who pays for the full cost of installing power lines to a farm property may claim an input tax deduction for the full amount of the installation cost of the power lines. In calculating the private use adjustment required under s 21(1), the taxpayer need only be concerned with the power used in the residence as well as its ongoing supply charges. The taxpayer does not need to include the installation costs in the calculation. However, when building the farm residence, the cost of connecting it to the established power supply is a private expense for which no input tax deduction may be claimed [see TIB vol 7:2 (August 1995) at 35-36].

The circumstances under which a sports club can claim an input tax deduction in relation to competition prizes is explained in TIB vol 13:5 (May 2001) at 52-53.

Where a purchaser nominates another person (a nominee) to be the recipient of the goods and services, special rules apply [s 60B]. The GST treatment depends on whether both the contractual purchaser and the nominee are both registered or not registered or whether one is registered and the other is not.

Where both have the same GST registration status, the treatment is dependent on which party actually pays for the goods or services. If the contractual purchaser pays for the goods and services, the supply is treated as having been made by the supplier to the contractual purchaser and the existence of the nominee is ignored. Similarly, if the nominee pays for the goods and services, the supply is treated as having been made by the supplier to the nominee and the existence of the contractual purchaser is ignored. If each party pays part of the contract price, the supply is deemed to have been made to the contractual purchaser unless the contractual purchaser and the nominee agree in writing that it be treated as having been made to the nominee. The option to agree is not available where the contractual purchaser has already claimed an input deduction in relation to the supply.

If the contractual purchaser and the nominee have different GST registration status, the supply is treated as being made by the supplier to the nominee.

Different rules apply to supplies that are of, or include, land [see 580.49].

In nominee transactions, it is likely that the tax invoice will be in the name of the contractual purchaser. This does not preclude the nominee from obtaining an input tax deduction provided that the following records are maintained [ss 20(2)(e), 24(7B)]:

- The name and address of the supplier;
- The date on which payment for the supply was made;
- A description of the goods and services; and
- The amount paid for the supply.

(1) Case law

The High Court case of Commissioner of Inland Revenue v Trustees in the Mangaheia Trust (2009) 24 NZTC 23,711 (HC) examined whether input tax was claimable on legal fees arising from litigation between trustees and beneficiaries and whether those legal services had been acquired for the principal purpose of making taxable supplies. The case was an appeal from the TRA’s decision in TRA Case Z12 (2009) 24 NZTC 14,142. In finding for the taxpayer, Gendall J concluded that there was a sufficient nexus between the services acquired and the making of taxable supplies, for the services to have been obtained for the principal purpose of making taxable supplies. His Honour further found that there is no requirement for the particular expenditures to be directly linked to the specific resulting products.

In TRA Case M106 (1990) 12 NZTC 2,674, it was held that the objector, an insurance broker, was entitled to a deduction for input tax on the supply of a vehicle so long as the vehicle was required by him for the principal purpose of making taxable supplies. At the time of acquisition, the principal purpose of the vehicle was for the making of non-taxable supplies. The turnover method of apportionment between goods supplied for taxable activities and goods supplied for non-taxable activities could be used to determine the relative gross receipts for life insurance and other insurance.
In TRA Case N1 (1991) 13 NZTC 3,001, a claim for input tax by the purchaser of a business was disallowed as the CIR considered it to be the purchase of a going concern, and therefore zero-rated. As a consequence, the purchaser claimed the input tax on the basis that it was a purchase of secondhand goods. The claim was disallowed by the TRA for reasons including:

(a) The purchaser could not prove that the vendors were not registered persons at all relevant times, which is fundamental to a claim for input tax in the purchase of secondhand goods.

(b) The grounds for objection could not be expanded. Consequently, the argument that the vendor was not a registered person could not apply.

(c) The zero-rating of the supply of the business as a going concern could not be avoided simply because the purchaser was not a registered person at the time.

In TRA Case N19 (1991) 13 NZTC 3,158, the taxpayer had bought a building comprising both tenanted residential accommodation and commercial premises for the purposes of a redevelopment project, but later abandoned the project and sold the property at a loss. It was held that input tax could be claimed by the objector on the full value of the purchase consideration, notwithstanding that, when the property was sold at auction on a GST-exclusive basis, the subsequent purchaser was able to reduce the GST through apportioning the purchase price between the residential letting accommodation and the commercial letting accommodation.

In TRA Case N22 (1991) 13 NZTC 3,187, the objector had two properties that were purchased for the principal purpose of making taxable supplies, viz property development, but while awaiting sale the properties were rented and therefore put to an exempt use. It was held that this was a subsidiary and secondary application and not a 100 per cent change in use. The principal purpose means more than 50 per cent and it was held that the objector be allowed an input tax deduction or credit to the extent of 51 per cent meantime.

In TRA Case R17 (1994) 16 NZTC 6,091, it was found that an input tax deduction is not claimable for the value of a dwelling house, grounds, and accompanying buildings when purchased with a farm property, as these constitute an exempt supply. The definition of “dwelling” could be construed to include situations when sharemilkers and staff are allowed to have the use of the farmhouse, grounds, and accompanying buildings.

In TRA Case R19 (1994) 16 NZTC 6,099, a partnership was not entitled to a GST input tax deduction on the value of subdivided farm land as the land had been purchased many years before GST was introduced.

In TRA Case S16 (1995) 17 NZTC 7,123, it was held that the objector could claim a full GST input tax deduction on a half share in premises purchased for both a business and a place of residence if it was established that the property was acquired for the principal purpose of making taxable supplies. As the objector used more than 50 per cent of the property for the business, on the balance of probability the objector’s predominant or principal use of the property was for business.

In TRA Case S56 (1996) 17 NZTC 7,361, the TRA ruled that a taxpayer who constructed a new farmhouse and garage primarily for the purpose of operating a farm homestay business, but also for use by his family, was entitled to an input tax deduction of 100 per cent of the input tax paid on the construction. However, the taxpayer was required to make a 40 per cent private use adjustment under s 21(1) in respect of the family’s use of the house and garage.

In TRA Case S61 (1996) 17 NZTC 7,387, a taxpayer who constructed a kitset house on a camping ground leased from the Department of Conservation was entitled to an input tax deduction for the GST paid on the building materials because the principal purpose in acquiring the house was to operate a camping ground business. It was a condition of the lease that the lessee/manager live on the site and provide his or her own accommodation in order to be on the site 24 hours per day.

In TRA Case S65 (1996) 17 NZTC 7,408, costs ordered against a taxpayer at a law practitioner’s disciplinary hearing did not constitute a taxable supply and the taxpayer could not therefore claim an input tax deduction.

In TRA Case S77 (1996) 17 NZTC 7,483, an out-of-court settlement in respect of a claim for negligence against a taxpayer is not a taxable supply and therefore does not entitle the taxpayer to an input tax deduction.

In TRA Case S99 (1996) 17 NZTC 7,622, a person registered for GST on a payments basis was held to have made payment for a property, and was therefore entitled to claim an input tax deduction, on the date an
irrevocable letter of credit became unconditional. The letter of credit was honoured six months after settlement, as agreed.

In *Nicholls v Commissioner of Inland Revenue* (1999) 19 NZTC 15,233 (CA), a taxpayer operating on a payments basis was unable to claim an input tax deduction for the entire GST component of the purchase price of a section of land at the time the deposit was paid. The deduction was limited to one-ninth of the deposit paid. The fact that only one invoice was issued in respect of the land purchase did not preclude the taxpayer from claiming an input deduction on payment of the balance. According to the Court of Appeal, s 20(3)(b)(i) places no limit on the number of occasions input tax may be deducted on the strength of a single tax invoice.

In *TRA Case T44* (1998) 18 NZTC 8,295, the purchase and erection of a portable home on a dairy farm as a residence for sharemilkers was held to be for the principal purpose of providing accommodation, not for making taxable supplies, and therefore no input tax deduction was available. However, the TRA assessed that 40 per cent of the use of the house was related to the farming activity, therefore a subsequent use adjustment of 40 per cent of the GST paid was available to the taxpayer under s 21(5).

In *TRA Case U30* (2000) 19 NZTC 9,286, the GST paid on legal expenses incurred in defending a criminal charge did not give rise to an input tax deduction. The TRA found that the taxpayer’s principal purpose in acquiring the legal services was to defend the criminal charges relating to an illegal business activity (cannabis cultivation), a purpose that was quite indirect to the taxable activity and was therefore too remote to be an input to that activity.

In *TRA Case W9* (2003) 21 NZTC 11,083, the taxpayer had claimed an input tax deduction in respect of a property transaction that ultimately did not proceed. The taxpayer was required to refund the amount to the CIR.

**580.124 GST incurred in determining tax liability** [s 20A]

A registered person can claim an input tax deduction for any GST incurred on goods and services acquired for:

(a) The calculation of the registered person’s taxable income for any income year;
(b) The calculation or determination of the registered person’s GST liability for any taxable period;
(c) The preparation of an objection or challenge to, or an appeal against, any determination or assessment made by the CIR in respect of the registered person’s income tax or GST liabilities; or
(d) Any contribution by the registered person towards the costs incurred by another registered person or taxpayer in relation to a matter which the first registered person has objected to, challenged, or appealed against.

No input tax deduction can made if the goods and services were acquired in relation to:

(a) A fraudulent or wilfully misleading income tax or GST return;
(b) An offence under any of the Inland Revenue Acts;
(c) An assessment of penal tax or a shortfall penalty, unless the assessment is subsequently cancelled;
(d) An objection, challenge or appeal which, in the opinion of the CIR, is inconsequential or frivolous.

Any recovery or reimbursement of costs incurred by a registered person in determining their tax liability (as set out above) is treated as a taxable supply made by the registered person and the output tax must be accounted for in the taxable period that the reimbursement was received.

**580.125 Adjustments**

Adjustments may be required to be made to input tax and output tax when calculating the amount of GST payable for a taxable period. The adjustments (other than the fringe benefit adjustment) are entered in total in boxes 9 and 13 for debit and credit adjustments respectively on the GST return form GST101. Debit adjustments result in GST payable. Credit adjustments result in a reduction in GST payable. The various adjustments are summarised below.
**TaxNote**: Special transitional rules apply where there is a statutory change to the GST rate [see 580.172].

(1) **Mixed use of goods and services**

From 1 April 2011, new apportionment rules apply to the adjustments for partial taxable or non-taxable use of assets. The new rules apply to assets acquired on or after 1 April 2011. They also apply where a person or partnership registers for GST on or after 1 April 2011 and uses acquired goods and services for making taxable supplies after the date of registration.

The rules that applied prior to 1 April 2011 continue to apply to assets acquired before 1 April 2011 with the exception that there is a limitation to the number of adjustments that need to be made where the asset is something other than land [see 580.126].

(2) **Second-hand goods [s 20(3)]**

In order for GST to be claimed on the acquisition of second-hand goods, the following conditions must be met:

(i) The goods must have been both sold in New Zealand and always situated in New Zealand, or have had GST levied on their importation; and

(ii) The supply must not be a taxable supply; and

(iii) The goods have not been supplied to another person who is the importer of the goods.

The amount claimable is usually the tax fraction of the amount paid for the goods. However, where the supply includes things other than second-hand goods, the amount claimable is limited to the lesser of the consideration and the market value of the goods.

Further restrictions apply where the goods have been acquired from an associated person:

(i) The general rule is that the amount of input tax is the least of:
   
   (a) The tax included in the original cost of the goods to the supplier;
   
   (b) The tax fraction of the purchase price paid by the recipient to the supplier; or
   
   (c) The tax fraction of the open market value of the goods.

(ii) Where the supplier has previously ceased being a registered person and, therefore, has been deemed to have disposed of the goods on cessation of registration, the amount of input tax on the later supply to the associated person is the least of:

   (a) The tax fraction of the value of the supply that was deemed to have occurred at the time of cessation of registration;
   
   (b) The tax fraction of the purchase price paid by the recipient to the supplier; or
   
   (c) The tax fraction of the open market value of the goods.

(3) **Assets kept after ceasing to be registered**

When a person ceases to be registered for GST, any goods and services forming part of the assets of the taxable activity are deemed to be supplied to that person at that time, unless the taxable activity is carried on by another registered person [see 580.12, 580.84]. Consequently an adjustment is required in the final GST return.

The amount of the adjustment is dependent on the dates on which the particular assets were acquired and the date on which deregistration takes place:

(a) Where deregistration occurs on or after 10 October 2000, where the asset is a pre-GST asset (acquired before 1 October 1986), the adjustment is three twenty-thirds of the lesser of cost or market value of the asset.

(b) Where deregistration occurs on or after 10 October 2000, where the asset is a post-GST asset (acquired on or after 1 October 1986), the adjustment is three twenty-thirds of the market value of the asset.
Goods and Services Tax

Example 1:
Hugh is a registered person who runs a consulting business from business premises that he owns. The premises are located in the Wellington CBD. In December 2010, he wins Lotto and retires, retaining the premises as a place to entertain his many new-found friends. The premises were acquired in November 1988 for a cost of $800,000 and have a current market value of $2.4 million. Hugh is liable for output tax on the market value of the property, being three twenty-thirds of $2.4 million = $313,043.47.

Example 2:
Same facts as above, but the building was acquired for $800,000 in 1980. Hugh is liable for output tax based on the original cost of the asset, being three twenty-thirds of $800,000 = $104,347.82.

(4) Change of accounting basis [s 19C]
When a registered person changes the basis on which they account for GST, an adjustment is required because of the difference in the way debtors and creditors are accounted for under each method. The adjustments required are set out below. In each case, if the adjustment is positive, the amount is GST payable (a debit adjustment); if the adjustment is negative, the amount is a reduction in GST payable (a credit adjustment). The registered person is required to provide Inland Revenue with a list of creditors and/or debtors (as applicable) as at the date of the change. These lists, and any tax payable as a result of the adjustment, must be provided to Inland Revenue by the return due date for the last taxable period before the change in accounting basis takes effect.

Change of accounting basis from:
(a) Invoice basis to payments basis: The adjustment required is the amount of GST on creditors as at the date of change less the amount of GST on debtors as at the date of change.
(b) Payments basis to invoice basis: The adjustment required is the amount of GST on debtors as at the date of change less the amount of GST on creditors as at the date of change.
(c) Hybrid basis to invoice basis: The adjustment required is zero less the amount of GST on creditors as at the date of change. In other words, the adjustment is a refund of GST payable on creditors as at the date of change.
(d) Hybrid basis to payments basis: The adjustment required is zero less the amount of GST on debtors as at the date of change. In other words, the adjustment is a refund of GST payable on debtors as at the date of change.
(e) Invoice basis to hybrid basis: The adjustment required is the amount of GST on creditors as at the date of change, less zero. In other words, the adjustment is a payment of GST payable on creditors as at the date of change.
(f) Payments basis to hybrid basis: The adjustment required is the amount of GST on debtors as at the date of change, less zero. In other words, the adjustment is a payment of GST payable on debtors as at the date of change.

(5) Entertainment expenses [s 21(3)]
When any entertainment expenditure is not deductible because of s DD 1 of the ITA, the GST for the non-deductible amount must be included as an adjustment. The adjustment is made only once a year in the GST return which covers the period in which the taxpayer’s income tax return is due to be filed. For example, if the income tax return is due on 7 July, an adjustment is made in the GST return which covers that date. If the return is prepared by a tax practitioner who has an extension of time arrangement with Inland Revenue, the adjustment is made in the GST return which covers the date the return is actually filed. The adjustment is three twenty-thirds of the GST-exclusive amount of entertainment expenditure which is non-deductible.

The adjustment does not apply to an entertainment allowance or a reimbursing payment that is exempt income to the employee under ss CW 17, CW 17B, CW 17C and CW 18. These relate to reimbursements and allowances for expenditure that would be deductible to the employee were it not for the employment limitation, exempt relocation payments, overtime meal and sustenance allowances, and allowances for additional transport costs.
Example 3:
Hifly Ltd paid $22,500 (including GST) for the exclusive use of a corporate box at an international cricket match held in Wellington. The corporate box was used to entertain clients and generate new business. In the GST return covering the period during which the company is required to file its income tax return that includes this entertainment expenditure, Hifly Ltd needs to make a GST adjustment:

Organisations that are not liable for income tax, such as non-profit bodies, charities, and Government bodies, do not need to make this adjustment as no deduction for entertainment is being claimed.

(6) Fringe benefits [ss 21I, 23A]

Where a registered person has provided an employee with a fringe benefit, the registered person is deemed to have made a supply of goods and services in the course of a taxable activity. The value of the supply is the taxable value of the fringe benefit reduced by any contribution made by the employee towards the cost of that fringe benefit [s10(7)]. No GST adjustment is required for fringe benefits which constitute exempt or zero-rated supplies (for example low interest loans or international travel), or are provided by a registered person in the course of making exempt supplies. The adjustment is three twenty-thirds of the value of the benefits.

TaxNote: No adjustment is required where the employer cannot obtain an input tax deduction for the cost of the benefit. This may occur with such things as gift vouchers given to an employee where GST is accounted for when the vouchers are redeemed rather than when they are issued.

Example 4:
A taxpayer’s fringe benefit tax return included the following fringe benefits:

<table>
<thead>
<tr>
<th>Fringe Benefit</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Motor vehicles</td>
<td>$2,605</td>
</tr>
<tr>
<td>Low-interest loan</td>
<td>$425</td>
</tr>
<tr>
<td>Journal subscriptions</td>
<td>$52</td>
</tr>
<tr>
<td>Subsidy on employee’s overseas honeymoon</td>
<td>$600</td>
</tr>
</tbody>
</table>

The benefits liable for GST are the motor vehicles and the journal subscriptions. The low interest loan and the subsidy on overseas travel are excluded because they are exempt and zero-rated respectively. The GST adjustment is ($2,605 + $52) × 3 / 23 = $2,657 × 3 / 23 = $346.56. The $346.56 is deductible from the taxpayer’s income.

Where the granting of the fringe benefit arises in the course of the taxpayer producing exempt supplies, for example a company car provided to a life assurance salesperson, a deemed supply does not occur. No GST is payable on the granting of the motor vehicle fringe benefit to the salesperson.

Employers are required to pay GST on the taxable value of fringe benefits. The adjustment is made in the employer’s fringe benefit tax return for the period in which the benefit is granted.

(7) Bad debts written-off [s 26(1)]

When a registered person has made a taxable supply and accounted for the output tax on it, and later written-off all or part of the consideration as a bad debt, an input adjustment must be made for the GST content of the bad debt. The adjustment is made in the taxable period in which the debt is written-off. The adjustment cannot be made for a provision for bad debts — the debt must actually be written-off [see 90 BAD DEBTS AND BAD DEBTS RESERVES, TES 5 (June 2003) 68 and 69].

Public ruling BR Pub 05/01 [see TIB vol 17:2 (March 2005) at 5] sets out the CIR’s view of the requirements for the writing off of a bad debt for GST and income tax purposes. The ruling allows an income tax deduction under s DJ 1(a)(iii) of the ITA 1994 [now s DB 31(1)(a)], and a deduction from GST output tax under s 26(1)(c). The ruling applies from 1 April 2004 for an indefinite period.

According to the ruling, the following conditions must be met:

(a) An existing debt is owing to the taxpayer;
(b) The debt is adjudged as “bad” when a reasonably prudent commercial person would conclude that there is no reasonable likelihood that the debt will be paid; and

(c) The bad debt is “written-off” in accordance with the accounting and record keeping systems maintained by the taxpayer.

What constitutes “written-off” depends on the class of taxpayer concerned. Where the taxpayer is a large corporate or business taxpayer who maintains a computerised bad debts system, the writing off is achieved by an authorised person making the appropriate entry in that system recording the debt as written-off. Where the taxpayer is a company (other than one falling within the above class), by an executive or other responsible officer of the company with the authority to do so, the writing off is achieved by making the appropriate bookkeeping entries in the books of account of the company. For a taxpayer (other than a company) that maintains double-entry accounts, by an authorised person making the appropriate bookkeeping entries in the books of account the writing off is achieved by way of the business recording the debt as written-off. For a taxpayer who is an unincorporated sole trader or small unincorporated business which does not maintain double-entry accounts, the taxpayer can note in the bookkeeping records the amount owed by the bad debtor, that the debt has been written-off, and the date of the writing off.

**TaxNote:** Public ruling BR Pub 05/01 does not consider or rule on the tax treatment of arrangements to which the avoidance provisions in the ITA or the GSTA are applicable.

---

**Example 5:**

Milly, who uses the invoice basis, sells Fred electrical goods for $375, including GST, and issues him with an invoice for this amount. Milly includes the sale in her GST return for the period ended 31 August. In March of the following year, she gives up hope of getting payment from Fred and writes off the $375 as a bad debt. In her return for the period ended 30 April, Milly includes an input adjustment of $48.91 ($375 × 3 / 23).

Where a debt is factored by a registered person accounting for GST on an invoice basis, any difference between the price received from the factor and the face value of the debt is not a bad debt for the purposes of s 26 and the registered person is not able to claim a GST deduction. If a portion of the debt is written-off before the debt is sold to a factor, a GST deduction will be claimable provided that the amount was written-off as bad according to the normal tests for the write-off of bad debts [see public ruling BR Pub 06/01 in TIB vol 18:5 (June 2006) at 26-29].

---

(8) Bad debts recovered [s 26(2)]

When a registered person has claimed an input tax deduction for GST on a bad debt written-off [see 580.127], and all or part of that debt is subsequently recovered, an adjustment is required to account for the GST on the amount of the debt recovered. The adjustment is three twenty-thirds of the amount recovered.

**Example 6:**

Laurie, a used car dealer who uses the invoice basis of accounting for GST, has written-off a bad debt of $4,500 but later recovers $3,600 of this amount. Laurie must make an adjustment of $469.56 ($3,600 × 3 / 23) in the taxable period in which he recovers the $3,600.

---

(9) Factored debts [s 26A]

Registered persons who account for GST on the payments basis are required to pay GST on the remaining book value of a debt when it is factored. Section 26 allows an input tax credit when a factor exercises a right of recourse and the debt becomes bad after it is returned to the assignor.

---

(10) Barter transactions [s 10(2)]

When taxable supplies are provided in exchange for other goods and services, rather than for money, an adjustment is required of three twenty-thirds of the open market value (including GST) of the consideration.

**Example 7:**

Sally agrees to complete Barry’s tax return in exchange for Barry cutting the lawns around her offices every week for four weeks. Both are registered for GST. Sally would have charged $100 to complete Barry’s tax return. Barry charges $30 per week to cut lawns of a similar size to Sally’s. Sally needs to make an adjustment of $15.65 ($120 × 3 / 23) in her GST return, and Barry makes an adjustment of $13.04 ($100 × 3 / 23).
When the consideration consists partly of money and partly of goods and services, the money is included along with normal
sales receipts to calculate output tax, and the open market value of the goods and services is used to calculate an adjustment.
When the buyer and seller have agreed in advance on a monetary value for the supply, and goods and services are provided in
exchange for the supply (for example a trade-in), the value of the supply is the agreed monetary amount. This is treated as a
normal supply.

(11) Exported second-hand goods [s 10(4)]
When a registered person exports goods which were purchased by that person second-hand, and for which
an “imputed” input tax deduction has been claimed [see 580.123 ], an adjustment is required of three twenty-
thirds of the cost price of the second-hand goods.

Example 8:
Oscar, an antique dealer, purchased antiques from a private individual for $3,780. At the time of purchase, he claimed an input
tax deduction of $493.04 ($3,780 × 3 / 23). Later, he exported the antiques to a buyer in the UK after obtaining all the necessary
export documentation. The sale price to the UK buyer was $6,426. Oscar must make an adjustment of $493.04 in the taxable
period during which he exported the antiques. Prior to 1 October 2010, the amount of the initial claim and the required adjustment
was $420 ($3,780 / 9).

TaxNote: The adjustment is based on the cost of the goods, not the export price.

(12) Insurance payments received [s 5(13)]
When a registered person receives an indemnity payment under an insurance policy for a loss incurred in a
taxable activity, the payment constitutes a taxable supply and the registered person must account for the GST
on the supply [see 580.12 ]. An adjustment is not required when the payment is for loss of earnings. The
adjustment is three twenty-thirds of the amount of the indemnity payment.

Example 9:
Marvo Manufacturing Ltd received an insurance payment of $124,000 following fire damage to one of its factories. The company
needs to make an adjustment of $16,173.91 ($124,000 × 3 / 23) in its GST return for the period in which the payment is received.

(13) GST paid to or invoiced by Customs Department [s 12]
The Customs Department is responsible for collecting GST when:
(a) Goods are imported into New Zealand; and
(b) New Zealand manufactured goods are removed by a purchaser from a bonded warehouse (eg liquor
or tobacco). GST is charged on the amount of the excise duty.

When GST is paid to the Customs Department, a registered person is able to claim an input tax credit in the
same way as for any other taxable supply received, however the amount is required to be shown separately
as an adjustment. The supporting Customs documents must be held before the adjustment can be made
[see 580.100].

Example 10:
Murray imports a specialised woodworking machine from the US for use in his joinery business. The GST charged by the
Customs Department on the landed value of the machine is $3,500. Murray received the Customs documentation on 15 June. In
his taxable period covering 15 June, Murray claims an input credit of $3,500. This is included as an input adjustment in his GST
return.

Each of the adjustments is explained in more detail in the following paragraphs.

580.126 Apportionment rules for mixed or concurrent use of goods and
services [ss 3A, 20, 21, 21B, 21D, 21F, 21G, 21H]
From 1 April 2011, new apportionment rules apply to the adjustments for partial taxable or non-taxable use
of assets. The new rules apply to assets acquired on or after 1 April 2011. The rules that applied prior to
1 April 2011 continue to apply to assets acquired before 1 April 2011 with the exception that there is a
limitation to the number of adjustments that need to be made where the asset is something other than land.
Goods and Services Tax

(1) **Assets acquired before 1 April 2011 [s 21H]**

Adjustments must continue to be made under the “old” rules for assets acquired before 1 April 2011. However, the time period for which these adjustments must continue to be made is limited and no adjustment is either required or permitted on or after the following dates:

- 1 April 2011 for goods or services (other than land) whose market value or book value on that date is $5,000 or less;
- 1 April 2013 for goods or services (other than land) whose market value or book value on that date is $5,001 to $10,000;
- 1 April 2016 for goods or services (other than land) whose market value or book value on that date is more than $10,000.

There is no time limit for adjustments under the old rules in respect of land.

For details of the calculation of adjustments under the “old” rules see Staples Tax Guide 2011 edition.

The new rules applying to assets acquired on or after 1 April 2011 (see below) also apply to assets acquired before that date where the person first registers for GST on or after that date and uses those existing assets in making taxable supplies.

(2) **Assets acquired on or after 1 April 2011**

(a) **Background**

The new rules apportion input tax deductions according to the anticipated and actual use of the goods and services, rather than whether they will be used principally for making taxable supplies or principally for private or exempt purposes.

At the time of acquisition, the registered person is required to make an adjustment based on the intended percentage of use of the item. For example, if it was anticipated that the asset would be used 60 per cent for the purpose of making taxable supplies, the initial GST claim would be based on the 60 per cent estimate. If it was anticipated that the asset would be used 30 per cent for the purpose of making taxable supplies, the initial GST claim would be based on the 30 per cent estimate.

In subsequent years, further adjustments may be required where the actual percentage use proves to be different from the anticipated percentage use. There are limits on the number of further adjustments that need to be made. These limits are based on the asset’s value or estimated useful life.

When goods or services that have been subject to the apportionment rules are sold, a “washup” calculation is required to be made to ensure that the correct amount of GST has been claimed over the period during which the item was owned.

The rules apply to goods and services, not just fixed assets. Therefore they will need to be considered for some costs other than the acquisition cost of a fixed asset. For example, while ongoing running costs such as fuel for a vehicle would tend to be consumed in a very short period and be subject to apportionment based on the use of the vehicle in a single GST period, costs relating to such things as extended warranties or fleet vehicle maintenance contracts may need to be considered over a longer period.

These rules apply for GST purposes, not income tax purposes. Apportionment of expenses for income tax purposes continues to be subject to existing rules for deductibility under the ITA.

**TaxNote:** In the course of preparing this material, a number of drafting issues have been identified. These have been raised with Inland Revenue who is understood to be recommending legislative corrections. The following material is based on the policy as advised by Inland Revenue and the drafting errors have been ignored.

(b) **Apportionment at time of acquisition [s 20(3C), 20(3D), 20(3G), 20(3H), 20(3J)]**

At the time at which goods and services are acquired, the purchaser can deduct input tax based on the extent to which the goods or services are intended to be used for, or available to be used for, making taxable supplies [s 20(3C)].
The estimate is required to be based on an apportionment method which will provide a fair and reasonable result [s 20 (3G)]. This can be based on existing records, previous experience, business plans, or other data and may differ depending on the type of asset and the uses to which it is to be put. Once the estimate has been made, it is required to be expressed as a percentage. This percentage is then applied to the amount of GST paid on acquisition of the goods and services to calculate the amount that may be claimed [s 20(3H)].

There is a de minimis provision to provide relief from the requirement to apportion input tax for assets which are to be used for providing both exempt and taxable supplies (not private use). No adjustment is required where the person has reasonable grounds for believing that their exempt supplies in the first adjustment period will be no more than the lesser of $90,000 or 5 per cent of the consideration for all taxable and exempt supplies [s 20(3D)].

Example:
Mary purchases a new car which, based on the logbook for her existing car, will be used 60 per cent for business use and 40 per cent for private use. The cost of the car is $46,000 of which the GST content is $6,000 ($46,000 x 3/23). The amount of input tax that Mary can claim is $6,000 x 60% = $3,600. Had Mary estimated that the percentage of business use would be 20 per cent, she would be entitled to claim $6,000 x 20% = $1,200.

Where the acquisition of the goods and services was treated as a zero-rated supply, an adjustment is required to be made [s 20(3J)]. This applies to transactions involving the supply of land which are required to be zero-rated under certain circumstances [see 580.49]. The first step is to ascertain the nominal amount of GST that would have been included in the acquisition cost had it not been a zero-rated supply. Then the percentage of intended use that will relate to making taxable supplies, and the amount of the adjustment, need to be calculated (see above).

Example:
Finance Ltd commences business and acquires a building for $3 million which it intends to use as its business premises. As both the seller and Finance Ltd are registered for GST and Finance Ltd intended to use the building for making taxable supplies, the transaction was required to be zero-rated. Finance Ltd estimates from its business plan that 80 per cent of its supplies will be exempt supplies and the other 20 per cent will be taxable supplies. As this exceeds the de minimis of $90,000 or five per cent (see above) an adjustment is required to be made. The first step is for Finance Ltd to calculate the nominal amount of GST on acquisition. This is the acquisition price multiplied by the GST rate which is $3,000,000 x 15% = $450,000. This amount is then multiplied by the percentage of intended use in making non-taxable (exempt) supplies $450,000 x 80% = $360,000. Finance Ltd is required to account for output tax of $360,000.

(c) Subsequent adjustments [s 21G, 21D, 21(2)]

Subsequent adjustments will need to be made only if the actual use of the goods and services differs from what was initially anticipated. These adjustments (if any) are made at the end of “adjustment periods”. The first “adjustment period” starts on the date of acquisition and ends on whichever of the following two dates the person chooses:

(a) The first balance date that falls after the date of acquisition; or

(b) The first balance date that falls at least twelve months after the date of acquisition.

Example:
John has a 31 March balance date. He acquires a new car on 1 November 20X1. He makes the initial claim in the GST return for the period in which he acquires the car. This is based on the anticipated business use of the car. John needs to determine whether any further adjustment is required in the first and subsequent adjustment periods. The first adjustment period will end on either 31 March 20X2 (the first balance date following acquisition of the car) or 31 March 20X3 (the first balance date that falls at least twelve months from the date of acquisition of the car).

The maximum number of adjustment periods that apply to any particular asset depend on either the GST-exclusive cost of the asset or, at the person’s option, the estimated useful life of the asset as specified in the CIR’s tax depreciation rate determinations.

The maximum number of adjustment periods for which adjustments are required to be made for assets other than land are:

GST exclusive cost of asset Maximum number of adjustment periods

724

Staples Tax Guide 2012
$5,001 to $10,000  
$10,001 to $500,000  
$500,001 or more  

There is no limit to the number of adjustment periods for land.

No subsequent change in use adjustments are required where the GST exclusive cost of the asset is $5,000 or less.

The de minimis threshold for the initial adjustment for assets used in making both taxable and exempt supplies (see above) applies also in respect of subsequent adjustments.

Example:
Catherine purchases a bench saw for $4,600. The saw is for use in her building business but she will also use it when doing work around her house. GST adjustments need to be made. Catherine estimates that the use of the saw will be 95 per cent for her business and five per cent for private purposes. In the return for the GST period in which she acquired the saw, Catherine makes an adjustment of five per cent of the GST component of the acquisition cost, being 5% x 600 = $30. The GST exclusive cost of the saw was $4,000 ($4,600 - $600). As this is less than $5,001 Catherine is not required to make any adjustments for the saw in future adjustment periods.

Where none of the exemptions applies, adjustments will need to be made in subsequent adjustment periods only if the change in the percentage of use for making taxable supplies exceeds 10 percentage points.

In the first adjustment period following acquisition of the asset, the comparison is made between the “percentage intended use” for making taxable supplies at the time of acquisition and the “percentage actual use” for making taxable supplies during the adjustment period.

In subsequent adjustment periods, the comparison is made between the “previous actual use” for making taxable supplies and the “percentage actual use” for making taxable supplies.

If the difference between the two figures is the same or differs by less than 10 percentage points, no adjustment needs to be made unless the value of the adjustment exceeds $1,000. If the difference is 10 percentage points or more, an adjustment is required irrespective of the amount.

If an adjustment is required, the amount is calculated using the amount of GST included in the acquisition of the asset. If the asset is land and the acquisition was zero-rated, the amount used is the nominal amount of GST for the acquisition (see above).

If an adjustment is required to be made, the formula is:

\[
\text{full input tax deduction} \times \text{percentage difference}
\]

The number of months in the adjustment period is also taken into account.

Example:
Jason has a 31 March balance date. On 1 October he acquires a new car for $46,000. He anticipates that it will be used 90 per cent for making taxable supplies and 10 per cent for private purposes. At the time of acquisition he claims GST of 90% x $6,000 = $5,400.

As the car cost $40,000 exclusive of GST, the number of adjustment periods is five. He chooses to have his first adjustment period end on the first balance date following acquisition.

First adjustment period
In the first adjustment period, Jason’s business use of the car is 89 per cent. The difference between “percentage intended use” of 90 per cent and the “percentage actual use” is one percentage point. An adjustment will need to be made only if it exceeds $1,000. The calculation is $6,000 x 1% = $60. Jason does not need to make an adjustment.

Second adjustment period
During the second adjustment period, Jason decides to take a holiday and tours the South Island with his family. As a result of this trip, his percentage business use of the car for the twelve months to his next balance date is only 51 per cent. The first step is to identify the “percentage actual use”. This is based on six months at 89 per cent and 12 months at 51 per cent. The calculation is:

\[
(6/18 \times 89\%) + (12/18 \times 51\%) = 29.66\% + 33.99\% = 63.65\%
\]
As Jason was not required to make an adjustment in his first adjustment period, this figure is compared with his “percentage intended use” which was 90 per cent. The difference is 26.35 percentage points (90 - 63.65). As this is 10 percentage points or more, an adjustment is required to be made. The calculation is $6,000 x 26.35% = $1,581 GST to pay.

Third adjustment period

At the end of the third adjustment period, Jason’s logbook indicates that the percentage business use of the car for the year has been 91 per cent. The calculation that needs to be made compares the “percentage actual use” with the “previous actual use”. The calculation based on the 30 months since acquisition of the car is:

\[ (6/30 \times 89\%) + (12/30 \times 51\%) + (12/30 \times 91\%) = 17.8\% + 20.4\% + 36.4\% = 74.6\% \]

As the use of the vehicle has changed by 10 percentage points or more (74.6 - 63.65 = 10.95), an adjustment is required to be made. The calculation is: 10.95% x $6,000 = $657 GST claimable.

Fourth adjustment period

At the end of the fourth adjustment period, Jason’s logbook indicates that the percentage business use of the car for the year has been 87%. The calculation based on the 42 months since acquisition of the car is:

\[ (6/42 \times 89\%) + (12/42 \times 51\%) + (12/42 \times 91\%) + (12/42 \times 87\%) = 12.71\% + 14.57\% + 25.99\% + 24.85\% = 78.12\% \]

As the difference between the “percentage actual use” and the “previous actual use” is only 3.52 per cent and the adjustment would be only $211.20, no adjustment is required to be made.

Fifth adjustment period

Jason again takes a holiday and this time tours the North Island. His percentage business use of the car for the twelve months to his next balance date is 53 per cent. The calculation based on the 54 months since acquisition of the car is:

\[ (6/54 \times 89\%) + (12/54 \times 51\%) + (12/54 \times 91\%) + (12/54 \times 87\%) + (12/54 \times 53\%) = 9.88\% + 11.33\% + 20.22\% + 24.85\% + 11.77\% = 78.05\% \]

This is compared with the “previous actual use” for the adjustment period in which an adjustment was last made (the third adjustment period). The change is 3.45 percentage points (78.05 - 74.60). As any adjustment would be only $207, no adjustment is required to be made.

As five adjustment periods have now passed, no more adjustments are made until the car is disposed of (see below).

(d) “Washup” adjustment on disposal [s 21F]

When an asset has been subject to apportionment, a final adjustment is required to be made when the item is disposed of in the course of carrying on a taxable activity. The formula for the adjustment is:

\[ \text{tax fraction} \times \text{consideration} \times \frac{[1 - \text{actual deduction}]}{\text{full input tax deduction}} \]

Where:

“Tax fraction” is the tax fraction for the applicable GST rate. For the 15 per cent rate the tax fraction is three twenty-thirds.

“Consideration” is the amount of consideration received or deemed to be received for the disposal.

“Actual deduction” is the amount already claimed, taking into account all adjustments made to the date of disposal.

The amount calculated under the formula, when added to the total of any deductions already claimed, must not exceed the GST component (or nominal component) of the original acquisition cost.

Example:

Continuing with the above example of Jason’s car, assume that Jason continued to use the car in his business for three more years and then sold it for $23,000 inclusive of GST.

Jason has not claimed the full amount of the GST component of the original acquisition of the car. The full amount was $6,000 and the total of Jason’s claims at the time of acquisition and in the five adjustment periods is $5,390.76 ($5,400 - $1581 + $657).

Applying the formula:

\[ 3/23 \times 23,000 \times [1 - \$5,390.76/\$6,000.00] = \$2,999.99 \times (1 - 0.89) = \$2,999.99 \times 0.11 = \$329.99 \]

When this is added to the amount already claimed by Jason, the total is $5,720.75. As this does not exceed the full amount of GST on acquisition ($6,000), Jason is able to claim the full $329.99 as an input tax (credit) adjustment.

A different formula applies to sales of land that have been zero-rated under the land provisions [see 580.49]. The formula is:

\[ \text{tax fraction} \times \text{consideration} \times (1 - \text{previous use}) \]

where:

726 Staples Tax Guide 2012
“Tax fraction” is the tax fraction for the applicable GST rate. For the 15 per cent rate the tax fraction is three twenty-thirds. However, if the disposal is itself zero-rated the tax fraction is 15 per cent, rather than three twenty-thirds.

“Consideration” is the amount of consideration received or treated as received for the supply.

“Previous use” is the percentage intended use or previous actual use in the period prior to the period in which the disposal occurs.

(e) **Transitional rule for dwellings [s 21HB]**

As a result of the changes to the definitions of dwelling and commercial dwelling, supplies that were previously exempt supplies are now taxable supplies. Examples include some hostels and homestays. Provided the person is GST registered, a one-off adjustment is able to be made. The person is treated as having acquired the dwelling on 1 April 2011 at the original cost of the supply. This means that the amount of the adjustment is calculated using the original cost multiplied by the tax fraction as at that date, being three-twenty-thirds. The amount of the adjustment is then reduced by any amount of input tax claimed under the old apportionment rules.

(f) **Concurrent use of land [s 21E]**

Concurrent use occurs where an asset is used for both GST-taxable and GST-non-taxable purposes at the same time. The most common example is probably where a land developer has a property advertised for sale (GST-taxable) and, while awaiting sale, rents the property out as a domestic rental (GST-non-taxable).

Registered persons are required to calculate the extent to which the asset is used for making taxable supplies. A formula is provided in the Act but registered persons are able to apply to the CIR for an alternative method where the formula is not workable in their particular circumstances.

The formula is:

\[
\frac{\text{Consideration for taxable supply}}{\text{Total consideration for supply}} \times 100\%
\]

Where:

“Consideration for taxable supply” is the amount derived on a disposal of the land or, if the land has not been disposed of, the market value of the land at the time of the adjustment.

“Total consideration for supply” is the sum of:

- The amount of the “consideration for taxable supply”; and
- The amount of all rental income derived from the supply of a dwelling since the land was acquired; and
- If no rental income is paid or payable in relation to the non-taxable use of the land, the market value of rental income that would have been derived from the time of acquisition of the land if rental had been charged.

If any amounts are derived from associated persons or are not arms-length amounts, market value is required to be substituted. This applies to both “consideration for taxable supply” and “total consideration for supply”.

If the market value of either of these amounts is not readily ascertainable, another method that provides a fair and reasonable estimate of market value can be used.

**Example (taken from TIB vol 23:1 (February 2011) at 38):**

Sandy, a property developer, constructed two similar residential houses, House A and House B, next to each other. The construction cost of each house is $230,000 (including GST of $30,000). Sandy intends to sell both properties on completion (a taxable use) and therefore claims a full deduction on the GST incurred on construction.

Sandy is unable to sell the property immediately on completion. Therefore, while still advertising the houses for sale, she:

- Rents out House A and receives rental income of $26,000 in the first adjustment period; and
- Moves into House B and lives there rent-free.

At the end of the first adjustment period, Sandy sells House B for $360,000.

**Adjustment at the end of the first adjustment period— House A**

Since Sandy used the house concurrently for taxable (advertising for sale) and exempt (supplying a residential dwelling) purposes, she uses the formula in s 21E(3) to identify the actual taxable use of the property in the first adjustment period.
The “consideration for taxable supply” is either the amount derived on a disposal of the land or, if the land has not been disposed of, the market value of the land at the time of the adjustment. Sandy has not disposed of House A, but ascertains that the market value of the house is approximately the same as for House B—$360,000.

The “total consideration for supply” is the amount of the “consideration for the taxable supply” ($360,000) and the amount of all rental income ($26,000) derived from the supply of the dwelling since the land was acquired—$386,000.

Therefore, Sandy’s taxable use of the house is:

$$\frac{360,000}{386,000} \times 100 = 93\%$$

Sandy has therefore deducted seven per cent more input tax than she should have and has to account for this to Inland Revenue:

$$30,000 \times 7\% = 2,100$$

Adjustment at the end of the first adjustment period—House B

Since Sandy used the house concurrently for taxable (advertising for sale) and private (residential) purposes, she has to use the formula in s 21E(3) to identify the actual taxable use of the property in the first adjustment period.

The “consideration for taxable supply” is the amount derived on a disposal of the house—$360,000.

Since Sandy did not rent out House B, but still used it for non-taxable purposes, the “total consideration for supply” is the amount of the “consideration for the taxable supply” ($360,000) and the market value of the rental income that she would have derived if she had rented out the property. Sandy estimates that she would have received $26,000 of rental income.

Therefore, Sandy’s taxable use of the house is:

$$\frac{360,000}{386,000} \times 100 = 93\%$$

Sandy has therefore deducted seven per cent more input tax than she should have and has to account for this amount to Inland Revenue:

$$30,000 \times 7\% = 2,100$$

In both cases it should be noted that Sandy may be able to recover some or all of the unclaimed input tax if she later disposes of the houses in the course of her taxable activity. (See “Washup adjustment on disposal” above).

If the land is at any time used solely for making non-taxable supplies (for example it is taken off the market and rented out on a permanent basis) an additional formula must then be applied. It is:

$$\frac{\text{Months}}{\text{Total months}} \times \text{result}$$

Where:

“Months” is the number of months in which all or part of the land is used to some extent for making taxable supplies.

“Total months” is the total number of months since acquisition.

“Result” is the result calculated under the concurrent use adjustment (see above).

**Example (taken from TIB vol 23:1 (February 2011) at 39):**

The facts are the same as in the above example. Assume that the length of the first adjustment period was 12 months.

In the second adjustment period, Sandy continues both letting out and advertising for sale House A. However, six months after the start of the second adjustment period, Sandy stops advertising House A for sale as she decides to permanently rent it out.

In the second adjustment period, she receives rental income of $30,000. The market value of House A at the time of the adjustment is still $360,000.

At the end of the second adjustment period, Sandy uses the formula in s 21E to identify the taxable use of the house. For the purposes of the second adjustment period, the “total consideration for supply” is the sum of the market value of the house and all rental income received since the land was acquired:

$$\frac{360,000}{416,000} \times 100 = 86.5\%$$

However, because the house has been used for six months solely for making non-taxable supplies, she has to apply the formula in s 21E(6):

$$\frac{18}{24} \times 86.5\% = 64.8\%$$

Sandy’s percentage actual use of House A in the second adjustment period is 64.8 per cent. The percentage actual use must be compared with the “previous actual use”, that is with the percentage actual use as determined in the most recent period in which an adjustment has been made. For Sandy, the previous actual use will be 93 per cent. Sandy has therefore deducted 28.2 per cent more input tax than she should have and has to account for this to Inland Revenue:

$$30,000 \times 28.2\% = 8,460$$
(g) Goods and services acquired before registration [ss 21B 3A(3C)]

Where a person registers for GST on or after 1 April 2011, the new apportionment rules apply to goods and services acquired before registration. This is the case whether the goods and services were originally acquired before 1 April 2011 or after that date. It is the date of registration that is important.

GST will be claimable only where it was payable at the standard rate on acquisition and where the GST exclusive cost was more than $5,000. Section 21B which allows the adjustment does not apply where the cost was $5,000 or less. A further requirement is that the person hold a tax invoice for the original acquisition or have adequate records that enable the identification of the particulars that would be in a tax invoice.

**TaxNote:** There is an error in TIB vol 23:1 (February 2011). The statement at the foot of page 41 is incorrect in that it states that the cost must have been $5,000 or less. This error has been pointed out to Inland Revenue. They have advised that a correction in a future TIB is intended.

The GST deduction claimable when the person first registers and the goods or services are first used in the making of taxable supplies is calculated under the apportionment rules. The first adjustment period starts on the date of acquisition of the goods and services and ends on the first balance date following registration and use of the goods and services in the making of taxable supplies. Subsequent adjustments are made according to the standard rules (see (3) above).

Where the goods and services have been acquired from an associated person, the total amount of GST claimable under the adjustment provisions is limited to the amount of output tax accounted for by the associated person [s 3A(3C)].

**Example:**

On 1 April 20X1, Fiona acquired a car for $46,000 inclusive of GST of $6,000. On the same day she commenced a small business which she carried on for the next two years. On 1 April 20X3, Fiona registered for GST as she had reached compulsory registration threshold.

As the cost of the car was over $5,000 and provided that Fiona has kept the tax invoice or has records that enable the identification of the details that would be on a tax invoice, she will be able to make a claim for a portion of the GST that was included in the original purchase of the car. She will make the claim on the balance date following registration. This will be 31 March 20X4, by which time she will have owned the car for three years. In each of the three years, Fiona’s logbook shows an 80 per cent use of the car.

Notwithstanding the constant level of business use of the car, Fiona has used the car for making taxable supplies for at the rate of zero per cent for the first two years (as she was not registered) and 80 per cent for the third year. The adjustment for the first adjustment period will be based on:

\[
(0\% \times 24/36) + (80\% \times 12/36) = 51.11\%
\]

This gives an input tax adjustment (credit adjustment) of $3066.60 ($6,000 x 51.11%).

As the car’s total cost was between $10,001 and $500,000, the maximum number of adjustments is five. Therefore four more adjustment periods will occur in the future if Fiona continues to own the car for that period. A “washup” adjustment will be required to be done on any future sale of the car.

580.128 Goods and services acquired before incorporation [s 22]

A company may claim an input tax deduction for the GST paid on goods and services purchased for the company prior to its incorporation if all of the following conditions are met:

(a) The company must be registered when the deduction is claimed;

(b) The goods and services must have been taxable supplies;

(c) The goods and services must have been purchased no more than six months prior to the date of incorporation;

(d) The goods and services must have been purchased for or on behalf of the company, or in connection with the incorporation of the company (for example, legal costs);

(e) The goods and services must have been purchased by a person who became a member, officer or employee of the company;
The person who purchased the goods and services must have been fully reimbursed by the company for the cost of them;

The goods and services must have been acquired for the purpose of the taxable activity to be carried on by the company;

The goods and services must not have been used for any purpose other than that taxable activity;

The supply of goods and services by the person to the company must not be:

  (i) A taxable supply; or
  (ii) A non-taxable supply of secondhand goods;

The company must hold sufficient records to support the claim for an input tax deduction.

Payment of GST [s 23]

Any GST payable for a taxable period must be paid to the CIR on or before the due date for the filing of returns [see 580.110].

The calculation of the amount of tax payable for a taxable period is explained in 580.120.

The amount showing on a return as the amount of tax payable is taken as the correct amount unless the CIR has challenged it or has issued an assessment showing a different amount.

Relief where new start grant made [s 48A]

Where a registered person has received a new start grant in respect of their taxable activity, the CIR has the power to remit, either wholly or partly, any amount of GST payable that relates to both the new start grant and the taxable activity. This includes both the GST payable in respect of the grant itself and any GST payable due to the cessation of the taxable activity, whether prematurely or not.

The same power to remit exists in respect of an associated person of the person who received the new start grant. In this case, the GST that can be remitted must relate to the person’s taxable activity (including its ending) or land on which the taxable activity was carried on (including its sale or disposal).

Example:

John farms land owned by a company. The shares in the company are owned equally by John and his wife, June. John receives a new start grant due to the effects of a flood. As John and the company are associated persons, the CIR has the power to remit GST in respect of both John and the company.

A “new start grant” is defined in s YA 1 as:

   “A grant of money that is designated by the Minister of Agriculture as a new start grant and is paid by the Government of New Zealand to a person in relation to –

   “(a) an adverse event:

   “(b) an event that is a qualifying event”

In order to qualify for the remission, the person must have furnished all GST returns required under the GSTA 1985.

Refunds of GST [ss 20(5), 45, 46]

(1) Excess tax paid [s 45]

Any GST paid by a registered person to the CIR in excess of the amount assessed for a taxable period must be refunded to that person. However, the refund will not be paid unless the registered person applies for it in writing within four years after the end of the taxable period.

If the amount of tax payable by a registered person has decreased, or the amount of tax refundable has increased, as a result of a revised assessment, the excess must be refunded to that person. The refund will not be paid unless the registered person applies for it in writing within four years after the end of the year in which the new assessment was made.
The four-year periods are increased to eight years where the overpayment of tax is due to clear mistake or simple oversight. Prior to 1 April 2005, the period was eight years in all circumstances.

(2) Return shows a refund [ss 20(5), 46]

If the total input tax for a taxable period exceeds the total output tax, the registered person is entitled to a refund. The excess must be refunded by Inland Revenue within 15 working days following the day on which the return was received by Inland Revenue. However, if the CIR is not satisfied with the return, the CIR may investigate the return and request the registered person to provide further information. The CIR must notify the registered person in writing within 15 working days following receipt of the return if the CIR intends to investigate it. Any request for information must be made to the registered person within 15 working days following receipt of the return. Any request for information subsequent to the initial request must be made within 15 working days following the date of receipt of the information previously requested.

In *Contract Pacific Ltd v Commissioner of Inland Revenue* SC114/2009, 16 November 2010, the Supreme Court addressed the question of whether the CIR was obliged by s 46 of the Goods and Services Tax Act 1985 to refund GST of $7,542,295.51 to Contract Pacific Ltd (Contract Pacific) as at 5 February 2001. Under s 46(1)(a), where an amount of GST is refundable to the taxpayer, the CIR must make the refund within 15 working days of receiving a return, unless within that time he is not satisfied with the return and requests further information about it or gives notice that he intends to investigate the circumstances of the return. Contract Pacific’s return was received by the CIR on 26 June 2000. On 10 July, within 15 working days, the CIR gave notice of intention to investigate the return. The effect of s 46(1)(b) is that, once such notice is given within the specified time, there is no obligation to refund GST until the CIR has both determined that the amount is refundable and is also satisfied that the registered person has complied with the person’s tax obligations (a conclusion to be reached on wider tax liability than may be entailed in assessing whether the GST is refundable).

In *Sea Hunter Fishing Ltd v Commissioner of Inland Revenue* (2001) 20 NZTC 17,206 (HC), Master Faire found that the request for information or the notification of an intention to further investigate the return must be received by the taxpayer within the 15 working day period. Any notice sent by post is deemed to have been received when, in the normal course of post, it would have been delivered and not, as the CIR contended, at the time at which it is posted. The finding on this point was upheld on appeal: *Commissioner of Inland Revenue v Sea Hunter Fishing Ltd* (2002) 20 NZTC 17,478 (CA).

In a further Court of Appeal decision relating to *Sea Hunter Fishing Ltd* Glazebrook J found that a notice of assessment and a payment of the input tax claimed by the taxpayer were not evidence of an agreement in writing to the taxpayer’s claim. Therefore, the CIR was not precluded from making further inquiries or issuing a reassessment which disallowed the claim: *Sea Hunter Fishing Ltd v Commissioner of Inland Revenue* (2004) 21 NZTC 18,569 (CA).

Once the CIR is satisfied with the return, the refund must be paid the next day. Use of money interest must be paid by the CIR on any amount not refunded within the time limits.

In *Almond Properties Ltd v Commissioner of Inland Revenue* (2003) 21 NZTC 18,289 (CA), the taxpayers put forward three arguments in support of their contention that the CIR was required to issue them with a GST refund. The first was that the CIR is required to apply their mind to the return and convey to them that they were not satisfied with it. The Court of Appeal held that the sending of the letter stating that they were not yet satisfied was sufficient. The second was that the CIR’s information request did not comply with the requirements of s 46. However, the Court held that a statement that the returns were to be reviewed and that further information would be required was sufficient. The third argument was that, if the CIR requests further information and that information is supplied, the CIR must make a further information request within 15 days or pay the refund. This argument was dismissed as “misconceived”.

If the registered person has not filed a return for any taxable period, the CIR can withhold payment of the refund and any use of money interest until the returns are filed. The CIR must notify the registered person in writing within 15 working days following the receipt of the return if the CIR intends to withhold a refund.
(3) **Power to offset [s 46(6)]**

If a registered person has any unpaid tax to pay (GST or income tax), the CIR may offset the amount otherwise refundable (including excess tax paid and any use of money interest) against that unpaid tax. Where a person is an agent for an incapacitated person [see 580.89], and the agent is entitled to a deduction for supplies made before the commencement of the agency period, the CIR may deduct that amount in payment of GST or income tax that is payable by the incapacitated person.

### 580.140 Tax invoices [s 24]

A registered person who makes a taxable supply to another registered person must, at the request of the recipient, provide the recipient with a tax invoice within 28 days (unless the supply is for $50 or less). Under normal circumstances it is not necessary to make such a request as most businesses routinely issue tax invoices for all taxable supplies they make. A registered person may not issue more than one tax invoice for the same supply, but a duplicate can be supplied at the request of the recipient if it is clearly marked “copy only”.

A tax invoice is an invoice containing the information detailed below. The type of invoice which must be provided by a supplier depends on the value of the taxable supply.

In calculating the amount of GST on a tax invoice, any amount less than or equal to half a cent is disregarded, and any amount of more than half a cent is rounded up to a whole cent.

An input tax deduction may not be claimed by a registered person who is an individual on an invoice made out to a partnership: *TRA Case M132 (1990) 12 NZTC 2,859.*

It is extremely important that a registered person obtains a tax invoice (or a debit or credit note) for all taxable supplies they receive in excess of $50, because an input tax deduction cannot be claimed unless the registered person holds one. The importance of retaining tax invoices is highlighted by the following cases:

In *Bennett v Commissioner of Inland Revenue* (1996) 17 NZTC 12,676 (HC), the taxpayer was assessed for additional GST of more than $30,000 following an Inland Revenue audit which resulted in expenditure being disallowed due to the absence of supporting documentation. As a result of failing to pay the outstanding GST, the taxpayer was adjudicated bankrupt.

In *TRA Case T15* (1997) 18 NZTC 8,090 a company taxpayer, whose major shareholder and managing director refused to provide Inland Revenue inspectors with tax invoices following a GST audit, was reassessed after having had all its input deduction claims for a period in excess of five years disallowed. Inland Revenue took action under s 400 of the ITA 1976 to recover the outstanding amount from the director’s bank account. The director eventually provided Inland Revenue with the necessary information, and the subsequent audit revealed that all except two of the 32 returns reviewed were in fact correct. The director could have saved himself considerable time and stress if he had simply provided Inland Revenue with the invoices in the first place.

In *Lanauze v King* (2001) 20 NZTC 17,360 (HC), Young J found that an “approved form of transfer of individual term quota or transferable term quota” did not qualify as an invoice for GST purposes.

1. **Consideration for supply of $50 or less**

If a taxable supply is for an amount of $50 or less, the supplier is not required to provide the recipient with a tax invoice and the recipient does not require a tax invoice to support an input tax deduction. However, the recipient must keep a record of the purchase, and Inland Revenue recommends that, as a minimum, the purchaser record the date, description of the supply, cost and name of the supplier.

2. **Consideration for supply of $50 to $1,000**

If a taxable supply (other than a zero-rated supply) is for an amount of more than $50 but no more than $1,000, a simplified form of tax invoice may be used which must contain the following details:

(a) The words “tax invoice” in a prominent place;
(b) The name and registration number of the supplier;
(c) The date the tax invoice is issued;
(d) A description of the goods and services supplied;
(e) The consideration for the supply and a statement that it includes GST.

If the supply is zero-rated, a full tax invoice must be provided (as for supplies in excess of $1,000).

(3) Consideration for supply of more than $1,000

If a taxable supply is for an amount of more than $1,000, or if the supply is zero-rated, a full tax invoice must be provided and must contain the following details:
(a) The words “tax invoice” in a prominent place;
(b) The name and registration number of the supplier;
(c) The name and address of the recipient;
(d) The date the tax invoice is issued;
(e) A description of the goods and services supplied;
(f) The quantity or volume of the goods and services supplied;
(g) Either:
   (i) Separate figures for the consideration excluding GST, the total GST charged, and the GST-inclusive consideration; or
   (ii) The GST-inclusive consideration and a statement that it includes GST.

(4) Modified tax invoices

In certain circumstances, Inland Revenue will approve the issuing of tax invoices without some of the details normally required, or may even permit a registered person to make taxable supplies without issuing tax invoices at all. Inland Revenue will only do this if it is satisfied that sufficient records are available to enable it to establish all the details required for each supply, and if it would be impractical to require that a tax invoice be issued. An approved modified tax invoice must contain the words “modified tax invoice — IRD approved” in a prominent place.

580.141 Shared tax invoices [s 24BA]

In some circumstances, two or more suppliers can issue a single tax invoice for goods and services. This occurs where the two or more suppliers either:
(a) Are part of the same group of companies for GST purposes; or
(b) Have statutory obligations which make it practical to use the shared invoice option.

An example of where shared tax invoices might prove to be useful is for local body rates where a single tax invoice could suffice for both Regional council and City Council rates in respect of a property.

Shared invoices must contain the following information:
(a) The words “tax invoice” in a prominent place;
(b) The name and registration number of the principal supplier;
(c) The name and address of the recipient;
(d) The date the tax invoice is issued;
(e) A description of the goods and services supplied; and
(f) Either:
   (i) Separate figures for the consideration excluding GST, the total GST charged, and the GST-inclusive consideration; or
   (ii) The GST-inclusive consideration and a statement that it includes GST.

Where the conditions are met, the single tax invoice is treated as having been provided by each of the suppliers.
The “principal supplier”, being either the supplier responsible for issuing the invoice or the representative member of a group of companies, is required to maintain sufficient records to enable the name, address, and registration number (if any) of the actual supplier to be ascertained.

580.142 Buyer-created tax invoices [ss 24(2), (9)]

In some industries, it is more convenient or logical for the amount charged for a supply to be determined by the recipient rather than by the supplier, and for the recipient to issue a tax invoice for the supply. Tax invoices may be created by the recipient of goods and services, provided the following conditions are met:

(a) Inland Revenue has approved their use;
(b) The supplier and the recipient are both registered persons;
(c) The supplier and the recipient have agreed that only the recipient will issue a tax invoice;
(d) The supplier and the recipient both keep a copy of the tax invoice;
(e) The words “buyer created tax invoice — IRD approved” are prominently displayed on the tax invoice;
(f) All the other requirements for a tax invoice are met. If the tax invoice covers taxable supplies by both the supplier and the recipient (for example, in the case of a farmer supplying livestock to a freezing works) the registration numbers of both parties must be shown on the tax invoice.

Inland Revenue may withdraw approval for the issue of buyer-created tax invoices if the conditions for that approval have not been complied with.

580.143 Credit and debit notes [s 25]

If the amount of GST charged for a taxable supply is altered after a tax invoice has been issued, the supplier must issue the recipient with a debit or credit note, as applicable. The amount charged for a supply could change because:

(a) The supply has been cancelled;
(b) The goods and services (or part thereof) have been returned;
(c) The nature of the supply has been fundamentally varied;
(d) The price has been altered.

The CIR has determined that it is not necessary to issue a credit or debit note where the consideration for a supply is altered due to the removal from circulation of the five cent coin. This is because the effects of rounding will be shown on the docket issued by the supplier. It is the adjusted amount of consideration that should be included in the person’s GST return [see TIB vol 18:9 (October 2006) at 12].

If the sale is cancelled, the goods and services returned or the amount charged is reduced, the supplier will issue a credit note. If the amount charged is increased, the supplier will issue a debit note.

It is normal business practice to issue credit and debit notes. To meet the GST requirements, a credit or debit note must contain the following information:

(a) The words “credit note” or “debit note”, as appropriate, prominently displayed;
(b) The name and registration number of the supplier;
(c) The name and address of the recipient;
(d) The date the note was issued;
(e) The difference between the amount charged on the original tax invoice and the correct amount;
(f) A brief explanation of the circumstances giving rise to the issuing of the credit or debit note.

In the case of a cancelled sale, the credit note will be for the same amount as that charged on the tax invoice. When a credit or debit note is issued, the supplier and recipient will need to make the following adjustments in their GST returns in the period the note is issued.

Credit note:

(a) The supplier will reduce its taxable supplies made by the amount shown on the credit note;
(b) The recipient will reduce its taxable supplies received by the amount shown on the credit note.

Debit note:
(a) The supplier will increase its taxable supplies made by the amount shown on the debit note;
(b) The recipient will increase its taxable supplies received by the amount shown on the debit note.

580.144 Electronically transmitted invoices [s 25A]

Tax invoices, and debit and credit notes, may be supplied in electronic format because the definition of “document” in s 3 of the Tax Administration Act includes all information, all devices on which information is held, and all devices associated with such a device. This is wide enough to include any electronic data, computer programmes, computer tapes and computer discs. To facilitate the electronic transfer of tax invoices, or debit or credit notes, Inland Revenue may approve the use of symbols, abbreviations or other notations to represent any particulars required to be contained in these documents. Such approvals may be general or may apply only to a specific registered person or class of registered persons [see TES 5 (June 2003) at 73].

580.145 Secondhand goods [s 24(7)]

When a registered person purchases secondhand goods, and that supply is a non-taxable supply (eg from an unregistered person), the supplier is unable to issue a tax invoice. The purchaser is able to claim an input tax deduction for the “imputed” GST on the supply [see 580.123], but to do so the purchaser must keep a record of the following details of the supply:
(a) The name and address of the supplier;
(b) The date the secondhand goods were acquired;
(c) A description of the goods supplied;
(d) The quantity or volume of the goods supplied;
(e) The consideration for the supply.

In order for a secondhand goods input tax claim to be available, the following conditions must be met:
(a) There must be a supply by way of sale;
(b) The supply must be made to a registered person;
(c) The supply must not be a taxable supply;
(d) The supply must be of secondhand goods that are situated in New Zealand at the time of supply;
(e) The goods must be acquired for the purpose of making taxable supplies;
(f) Payment must have been made.

TaxNote: For the avoidance of doubt, taxpayers may wish to enter into a cheque swap when dealing with associated parties.

The word “goods” means all kinds of real or personal property, but excludes choses in action. A “chose in action” is a thing in respect of which a man has no actual possession or enjoyment but merely a right enforceable by action: Re Marshall (dec’d) [1965] NZLR 851 (CA). Therefore knowledge is a chose in action, but the right to use knowledge evidenced in a contract is not: TRA Case V9 (2001) 20 NZTC 10,101.

If the amount paid is less than $50, these details do not have to be kept but a record of the purchase should still be kept.

The term “secondhand goods” is not defined for GST purposes, but the following are specifically excluded [s 2]:
(a) Fine metal;
(b) Goods to the extent they are made from any fine metal;
Goods and Services Tax

(c) Livestock.

Because the term “secondhand goods” is not defined, it must take its ordinary meaning, that is, goods that have been previously used by someone else, and goods that are not new or not obtained from the original source. Examples of goods that the CIR considers are not secondhand are:

(a) All animals, including progeny — livestock includes domestic animals generally and any animals kept or dealt in for profit;
(b) Primary produce from farming (eg wool, meat, milk);
(c) Any goods that have been manufactured that are being supplied for the first time;
(d) Trading stock consisting of any of the above.

(1) Forestry rights

A forestry right (s 2 of the Forestry Rights Registration Act 1983) is a right granted by the owner or lessee of land to a person to establish, maintain and harvest a crop of trees on that land. The right may also include ancillary rights of access and of constructing roads, bridges and buildings, and may make provision for the payment of charges, royalties and so on to the grantor of the right.

In public ruling BR Pub 07/01 (an indefinite period from 1 October 2006), the CIR has ruled that a forestry right is a secondhand good for which an input tax deduction can be claimed if the following conditions are met:

(a) A forestry right is sold to a registered person;
(b) The sale is not a taxable supply;
(c) The right is situated in New Zealand at the time of supply;
(d) The right is acquired by the registered person for the principal purpose of making taxable supplies;
(e) The right has been used by at least one previous owner for its intrinsic purpose.

The original grant of a forestry right cannot be a sale of a secondhand good — only subsequent sales of the same right can be secondhand. The transfer of ownership must be by way of sale. Transfers by way of lease or a sub-grant of the right do not qualify. The input tax deduction must be claimed in the taxable period in which payment for the right is made [s 20(3)(a)(ia)]. If the sale is by instalment, input tax deductions must be claimed in each taxable period an instalment is paid [see public ruling BR Pub 07/01, TIB vol 19:3 (April 2007) at 4].

(2) Case law

In TRA Case N16 (1991) 13 NZTC 3,142, it was held that the purchase of deer velvet from unregistered persons did not constitute the acquisition of secondhand goods.

In TRA Case P45 (1992) 14 NZTC 4,314, the purchase of half shares in a building from an estate was considered to be a purchase of secondhand goods as the vendor executors were not carrying on a taxable activity and were not required to be a GST-registered person. The objectors, as purchasers, met the criteria under s 20(3)(a)(ia) and were entitled to an input deduction on the transaction because there had been a supply of secondhand goods.

In LR McLean and Co Ltd v Commissioner of Inland Revenue (1994) 16 NZTC 11,211 (CA), wool was held not to be secondhand goods for GST purposes.

In Union Corporate Services Ltd v Commissioner of Inland Revenue (1997) 18 NZTC 13,151 (HC), a subsidiary of the appellant company (not the company itself) was held to have acquired the beneficial ownership of a vessel purchased in the Isle of Man, even though the appellant company had paid for the vessel and the true nature of the arrangement had not been fully reflected in contemporaneous accounting entries. The most compelling piece of evidence was the fact that, at that time, it was unlawful to register a ship in the Isle of Man in the name of any party other than its beneficial owner. The vessel had been registered there in the name of the subsidiary company. As a result of this finding, the appellant company was entitled
to claim an input tax deduction for secondhand goods in respect of its subsequent purchase of the vessel from the subsidiary. At the time of purchase the vessel was situated in New Zealand.

In *TRA Case V9* (2001) 20 NZTC 10,101, it was found that the sale to a company by its shareholders of the exclusive right to further develop and enhance, market, license or franchise, and utilise certain business concepts was a sale of goods that were not choses in action, but was not a sale of secondhand goods.

**580.150 Assessment [ss 27-31]**

The CIR may at any time issue an assessment, or an amended assessment, of the amount of GST payable. The CIR does not have to issue an assessment for each GST return filed. The CIR must give notice of an assessment to the person liable to pay the GST, but failure to do so does not invalidate the assessment. The validity of an assessment is not affected if any of the provisions of the GSTA have not been complied with.

Assessments can be made for:

(a) Any person required to file a GST return;

(b) Any unregistered person who supplies goods and services and represents to charge GST on them;

(c) Any person whose registration has been cancelled because they have not carried on a taxable activity since they were registered. Even though the person’s registration is cancelled retrospectively, the person is still deemed to have been a registered person from their original date of registration until the date their registration was cancelled, and the person must pay any GST represented to have been charged on any supplies made during that period;

(d) Any person who breaches a tax obligation [see 1270.05]; and

(e) Any person selling goods in satisfaction of a debt, or the person whose goods are sold in satisfaction of a debt if they have supplied an incorrect written statement [s 5(2)].

The assessment can be based on the information supplied in a return and on any other information in the CIR’s possession.

The CIR must issue an assessment if a taxpayer requests in writing that a return be amended and if an assessment has not already been made. Once the assessment is made, the taxpayer is liable to pay the GST assessed unless the amount of tax is shown, on objection or challenge, to be incorrect.

A taxpayer who has made a genuine error in the preparation of a GST return (eg a calculation or transcription error), may request that the assessment for the relevant period be amended by the CIR to correct the error [see 80.22]. A small error in a GST return may be corrected in a subsequent return [see 580.113].

**TaxNote:** An assessment, once made, cannot be disputed on any grounds in any Court or proceedings except by following the challenges procedures in Part 8A of the TAA [see 260.70]. For this reason, if a person believes they have been incorrectly assessed, it is extremely important that they initiate the disputes resolution procedures by issuing Inland Revenue with a NOPA or a response notice, as applicable, within the two-month response period [see 260.20 to 260.35]. Failure to follow these procedures means that the person loses all legal rights to dispute an incorrect assessment. If in any doubt whatsoever, seek professional advice.

In respect of GST periods beginning on or after 1 April 2005, taxpayers who are required to provide a GST return are required to make an assessment of the amount of GST payable for the GST period. The assessment is made on the date on which the return is received by Inland Revenue. Where a person fails to file a GST return, or files a return with which the CIR is not satisfied, the CIR can make an assessment. The CIR is not able to amend an assessment to increase the amount of GST payable after four years following the end of the GST period in which the return was provided. However, no time limit applies where the CIR considers that the person has knowingly or fraudulently failed to disclose all of the material facts that are necessary for determining the amount of GST payable. This restriction may have little effect in practice as GST returns are normally filed without documentation to validate the figures contained in the return [ss 92B, 106(1C), 108A].
580.152  **Priority of GST owing on bankruptcy, liquidation, receivership, or mortgagee sale** [s 42]

When a person who owes GST to Inland Revenue goes into bankruptcy, liquidation or receivership, the amount of GST owing has the following ranking in relation to other debts:

<table>
<thead>
<tr>
<th>Circumstances</th>
<th>Ranking of unpaid GST</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bankruptcy of an individual, or individual makes and assignment for the benefit of creditors</td>
<td>After preferential claims for wages etc, and in priority to all other claims</td>
</tr>
<tr>
<td>Company in liquidation</td>
<td>As provided for in sch 7 of the Companies Act 1993</td>
</tr>
<tr>
<td>Company in receivership</td>
<td>As provided for in sch 7 of the Companies Act 1993. See also <em>Rob Mitchell Builder Ltd (in liq) v National Bank of New Zealand Ltd</em> (2004) 21 NZTC 18,397 (CA)</td>
</tr>
<tr>
<td>Receivership of an unincorporated body, including a partnership, joint venture or trustee (as defined in s 57)</td>
<td>After preferential claims for wages etc, and in priority over any claims of debenture holders under any floating charge</td>
</tr>
</tbody>
</table>

580.153  **Attachment notices** [s 43]

If a registered person fails to pay GST that is due (including any interest, late payment penalty or shortfall penalty), Inland Revenue can recover the debt from any amount payable to the registered person by any other person. The most common examples are money deposited at a bank by the registered person, and salaries or wages owing to the registered person by an employer. The debt is recovered by issuing an attachment notice to the person (ie the bank or employer) requiring them to deduct an amount from money otherwise payable to the registered person and pay it to Inland Revenue. The notice may require the deduction to be made in one lump sum, such as from a bank account, or by a number of instalments, such as from salaries or wages. The notice may also require the deduction of daily interest until the total amount specified in the notice has been deducted.

An attachment notice cannot be issued in respect of a home layby account, a home ownership account, a farm ownership account or a fishing vessel ownership account at a bank. A bank includes a building society.

From 21 December 2010, the CIR is specifically entitled to access funds held in a joint account where the registered person is able to access those funds without the signature or other authorisation (such as a pin number) of the other account holder or holders. Note that the CIR’s ability to access funds held in a joint account does not extend to the bank account of a business partnership that files a return of income under s 33(1) of the TAA.

When an attachment notice relates to wages or salary, the minimum weekly deduction is $10. The maximum weekly deduction is the lesser of:

(a)  Ten per cent of the unpaid GST at the date of the attachment notice;

(b)  Twenty per cent of the wages or salary payable.
An attachment notice can be revoked by Inland Revenue at any time. An attachment notice must be revoked at the request of the registered person if all outstanding tax has been paid. Copies of all notices must be sent immediately to the registered person.

The person to whom an attachment notice is issued must send the registered person a statement whenever a deduction is made, showing the amount of the deduction and the reason why it was made. The person making a deduction or payment in terms of an attachment notice is indemnified. The following amounts are deemed to be held in trust for the Crown and may be recovered from the person to whom the attachment notice was issued as if it were tax payable:

(a) Any amount deducted but not yet paid to Inland Revenue;
(b) Any amount (to the extent of the amount required to be deducted) which becomes payable to the registered person but from which the required deduction has not been made.

580.154 Liability of directors and shareholders for GST of company [s 61]

Where a company has entered into an arrangement that has put it into a position where it cannot meet its GST liabilities, the tax owing, any civil penalty, and any use-of-money interest, can in some circumstances be recovered from the directors and controlling shareholders. Section HD 15 applies as if references to tax or income tax were references to GST [see 40.40].

580.160 Agents [ss 59, 60]

When an agent makes a supply for and on behalf of a principal, the supply is deemed to be made by the principal and not the agent. However, if the supply is a taxable supply and the agent is registered, the agent may issue a tax invoice or a credit or debit note for that supply [see TES 5 (June 2003) 70]. The principal may not also issue a tax invoice or a credit or debit note for the same supply.

Example 1:
A cafe proprietor, who is registered for GST, sells original paintings on behalf of two local artists. The paintings are displayed on the walls of the cafe. One of the artists is registered for GST, the other is not. When the cafe owner sells paintings for the unregistered artist, the supply is a non-taxable supply and no GST has to be charged, even though the cafe owner is registered. When the cafe owner sells paintings for the registered artist, GST must be charged on the supply. The supply is deemed to be made by the artist, and the artist must account to Inland Revenue for that GST and include the sale in the appropriate return. If the purchaser of the painting requests a tax invoice, the cafe owner (as agent) can issue a tax invoice for the supply. The artist cannot then also issue a tax invoice for the same supply.

Example 2:
An advertising agency purchases advertising time on television on behalf of its clients. As all the television companies are assumed to be registered, all supplies of advertising time will be taxable supplies. The advertising agency can request the television companies to provide tax invoices for all supplies. However, the supplies are deemed to be supplies made to the advertising agency’s clients, and not to the agency itself.

If a tax invoice or a credit or debit note has been issued by or to an agent as above, the agent must keep a record of the name, address and registration number (if any) of the principal.

The CIR’s views on whether funeral directors act as agents of their clients in respect of the supply of goods or services from third parties are set out in TIB vol 13:8 (August 2001) at 9. The article states that goods and services such as flowers, burial plots and funeral notices would normally be acquired by the funeral director at the request of their client and that the funeral director would be acting as agent for their client. Where this is the case, the goods are deemed to have been acquired by the client and the funeral director is not entitled to a GST input tax credit. Where the funeral director charges out the amount as a disbursement, no GST should be added to the amount charged. Any amount charged in excess of the cost to the funeral director would be part of the fee for the services supplied by the funeral director and would be subject to GST.
Sheriffs executing writs of sale are not obliged to account to the CIR for outstanding GST until they have paid their own expenses and sums owed to any creditors with security over the assets. They are carrying out their powers as officers of the Court and are not acting as agents for the party who obtained the writ: *Sheriff of the New Zealand High Court v Commissioner of Inland Revenue* (1996) 17 NZTC 12,599 (HC).

(1) **Non-resident principal**

When a registered person makes a taxable supply to an agent acting on behalf of a non-resident principal, the supply can be treated as if it were made to the agent and not to the principal, and therefore the agent can claim an input tax deduction, if the following conditions are met:

(a) The agent is a registered person;
(b) The principal is not a registered person;
(c) The supply is not zero-rated;
(d) The supply is directly in connection with the export of goods from New Zealand, or the import of goods into New Zealand, including incidental transportation within New Zealand;
(e) The agent and the principal have agreed that the supply be treated as if it were made to the agent.

(2) **Agent for an absentee principal** [s 59]

A person who carries on a taxable activity in New Zealand on behalf of an absentee principal is required to file GST returns and pay any GST due in relation to that taxable activity. For these purposes, an “absentee” means:

(a) A person, other than a company, who is for the time being out of New Zealand;
(b) A company incorporated outside New Zealand, unless it has a fixed or permanent place in New Zealand for the carrying on of a taxable activity in New Zealand in its own name; or
(c) A company incorporated outside New Zealand which the CIR has declared to be an absentee for GST purposes. The CIR must give the company, or its agent or attorney a notice to this effect, and the company remains an absentee until the declaration is revoked.

580.162 **Auctioneers** [ss 59, 60]

When an auctioneer sells goods on behalf of a client, the sale is normally only taxable if the client is registered for GST and the sale of the goods is in the course of the client’s taxable activity. However, with the agreement of the client, an auctioneer can treat a sale as if it were a supply made by the auctioneer and not by the client. This means that the auctioneer will charge GST on the supply. In these circumstances the auctioneer may either recover the GST from the principal or deduct it from the proceeds of the sale.

580.164 **Company amalgamations** [s 61A]

An “amalgamated company” is the company which exists following an amalgamation under the Companies Act. An “amalgamating company” is a company which amalgamates to form an amalgamated company [see 180 COMPANIES — AMALGAMATION].

In general, goods and services acquired during a company amalgamation are ignored for GST purposes. The specific provisions are as follows.

If a registered amalgamated company acquires goods and services from an unregistered amalgamating company during an amalgamation, the amalgamating company is deemed not to have supplied those goods and services and the amalgamated company is deemed not to have paid for them. Any subsequent adjustments required under s 21 assume that the goods and services were acquired at the same time, for the same purposes and for the same cost as applied to the amalgamating company.

If an unregistered amalgamated company acquires goods and services from a registered amalgamating company during an amalgamation, the supply of goods and services is deemed to have been for a consideration equal to their open market value at the date of amalgamation.
Any adjustment for non-deductible entertainment expenditure, which the amalgamating company would have been required to make had it not amalgamated, must be made instead by the amalgamated company.

Any input deduction for bad debts, which would have been available to the amalgamating company had it not amalgamated, is available instead to the amalgamated company.

When an amalgamating company ceases to exist on amalgamation, all the supplies made by the amalgamating company are treated as having been made by the amalgamated company for the purposes of determining whether the amalgamated company has exceeded the $60,000 compulsory registration threshold (formerly $40,000, before 1 April 2009).

580.166  Penalties and use of money interest  [s 61B]

The penalties and offences in Part 9 of the TAA apply to GST from 1 April 1997 [see 1110 PENALTIES AND INTEREST].

Use of money interest applies to over- and under-payments of GST [see 1110.290, 1110.295].

580.167  Compensation payments

For GST to apply to a court award or out of court settlement, the payment must be consideration for a supply of a good or service, or be an adjustment to the amount of consideration for an earlier supply. There must be some element of reciprocity to link the consideration to that supply. The CIR has issued an interpretation statement on the applicability of GST to compensation payments and court awards [see TIB vol 14:10 (October 2002) at 21-38, TES 5 (June 2003) 72].

In Commissioner of Inland Revenue v New Zealand Refining Co Ltd (1997) 18 NZTC 13,187 (CA), payments totalling $85 million made by the Crown to an oil refining company as an inducement for the company to remain in operation were held not to be for a supply for GST purposes. The payments were received in the course of a taxable activity but they were not in consideration for any supply made by the company. The Court stated that it is fundamental to the GSTA that the tax is levied on or in respect of supplies. It is not a tax on receipts or turnover.

GST is not payable on compensation payments that the Government makes to Maori people for the confiscation of land and the destruction of goods and chattels. A supply must take place before GST is payable. Compensation payable in these circumstances is payable under statute. It is not consideration for the supply of goods and services as no supply has taken place. This situation must be distinguished from amounts received for the supply of goods or services (eg a Government grant to a registered organisation) [see TIB vol 4:7 (March 1993) at 4].

The Maori Reserved Land Amendment Act 1997 provides for the payment of compensation to lessees and owners of leased Maori reserved land. Owners may be compensated for delays in moving to market rents, and lessees may be compensated for the more rapid move to market rents than the original lease agreements provided for. Both parties may also be compensated for additional transaction costs involved (for example legal fees and valuation costs). Such compensation payments are exempt from income tax, and they are not treated as consideration for the supply of goods and services for GST purposes [see TIB vol 10:2 (February 1998) at 2].

580.168  Records  [s 75]

All registered persons who supply goods and services in New Zealand must keep sufficient records in the English language to enable Inland Revenue to ascertain the person’s GST liability. Copies of all records issued by the registered person (such as tax invoices and credit notes) must also be kept. These records must be kept in New Zealand for at least seven years after the end of the taxable period to which they relate. The CIR may authorise some or all records to be kept outside New Zealand, or in a language other than English, on application from the registered person.

The records retained must include:
Goods and Services Tax

(a) A record of all goods and services supplied by or to the registered person showing sufficient detail to enable the goods and services, and the suppliers or the agents, to be readily identified by Inland Revenue, and all invoices, tax invoices, credit notes and debit notes relating to those supplies.

(b) The charts and codes of account, the accounting instruction manuals and the system and program documentation which describes the accounting system.

(c) Any list of debtors or creditors required to be provided following a change in accounting basis, or when a new rate of tax comes into force.

The term “records” includes:

(a) Books of account recording receipts, payments, income, or expenditure;
(b) Vouchers;
(c) Bank statements;
(d) Invoices;
(e) Tax invoices;
(f) Credit notes;
(g) Debit notes;
(h) Receipts;
(i) Any other documents necessary to verify the entries in any books of account.

Records are not required to be kept if the registered person has been so notified in writing, or if the registered person is a company which has been liquidated.

Inland Revenue may extend the seven-year retention period by a further period not exceeding three years by notifying the registered person in writing before the end of the seven-year period. This may be done where Inland Revenue is auditing or investigating the affairs of the registered person, or where Inland Revenue intends to conduct such an audit or investigation within the three-year extended period.

580.170 Effect of alteration in law [ss 78, 78D]

“Alteration in the law” means an enactment resulting in a supply of goods and services being charged with or exempted from GST, or the rate of GST applying to a supply of goods and services being increased or decreased.

Where a supplier and a recipient have entered into an agreement for the supply of goods and services, and as a result of an alteration in the law the amount of GST payable in respect of that supply changes, the agreement is deemed to be modified as follows:

(a) Where the change in law results in the supply being charged with GST, or increases the amount of GST charged on the supply, the price payable is increased by the amount of GST, or the increase in GST, as appropriate.

(b) Where the change in law results in the supply being exempted from GST, or reduces the amount of GST charged on the supply, the price payable is reduced by the amount of GST, or the reduction in GST, as appropriate.

This provision does not apply:

(a) Where the agreement for supply expressly excludes any such change in law having effect;
(b) If the change in law has already been taken into account. Note this paragraph has been repealed with effect from 1 October 2010;
(c) Where the agreement is entered into more than three months after the change in law;
(d) To require a public authority to alter the amount it pays for a supply of goods and services where the consideration is in the nature of a grant or subsidy; or
(e) The reverse charge mechanism in respect of imported services [see 580.101].
The meaning of “subsidy” in (d) above was considered in *de Morgan v Director-General of Social Welfare* (1996) 17 NZTC 12,441 (HC). The owners of a rest home entered into an agreement with the Department of Social Welfare (DSW) to provide rest home facilities to retired persons in return for an agreed fee. The fee was met partly from the beneficiaries’ superannuation or welfare benefits and partly by a payment from the DSW. Shortly after the agreement was entered into, the rate of GST was increased from 10 per cent to 12.5 per cent. The agreement made no reference to GST. The appellants claimed that they were entitled to recover the increase in GST from the DSW under s 78(2) of the GSTA. The DSW claimed exemption as a public authority under the second proviso to that subsection [see (d) above]. The High Court ruled that the “top up” payment by the DSW was not a subsidy in relation to the rest home operator (although it is a subsidy to the beneficiary in respect of whom it was paid). It was merely part of the consideration provided for a commercial supply arrangement. The rest home operators were entitled to recover the increase in GST from the DSW.

In *Kena Kena Properties Ltd v Attorney-General* (2002) 20 NZTC 17,429 (CA), it was held that s 78(2) is intended to clarify that no increase in a subsidy would follow from increases in GST. It did not have an effect of requiring a subsidy to be made to the supplier of the service. This decision was upheld by a majority of the Privy Council: *Kena Kena Properties Ltd v Attorney-General* [2002] 2 NZLR 597, (2001) 20 NZTC 17,433 (PC).

Any increase in consideration payable as a result of an alteration in the law is recoverable by the supplier from the recipient of the supply.

If an alteration in the law has retrospective effect, the above provisions also have retrospective effect.

The repeal or amendment of any provision in the GSTA does not affect the liability or right of any person or the Crown that existed under that provision before that repeal or amendment occurred. In particular, the following are not affected:

(a) Any liability to GST, or to any fine or penalty, arising under a repealed or amended provision;
(b) The right of the Crown to any tax, fee, fine or penalty imposed under a repealed or amended provision;
(c) All acts and proceedings for the assessment or recovery of any revenue, tax, fine or penalty assessed under a repealed or amended provision;
(d) All proceedings in respect of offences committed or alleged to be committed in respect of a repealed or amended provision.

### 580.172 Consequences of change in rate of GST [ss 78A, 78B, 78BA, 78C]

The rate of GST has been increased twice since GST came into force 1 October 1986 and provided for a rate of 10 per cent. The first increase was on 1 July 1989, when the rate was raised to 12.5 per cent. The second increase was on 1 October 2010, when the rate was raised to 15 per cent. The increase to 15 per cent changes the tax fraction to be used for all calculations from 1/9 to 3/23 (equivalent to 15/115).

A number of transitional provisions apply where there is a change in the GST rate. These are explained below.

(1) **Effect on contracts [s 78]**

Section 78 provides a mechanism whereby the consideration under a contract entered into prior to the change in rate can be amended to take into account the effect of the change. It allows the supplier to recover the additional GST from the recipient and also allows the recipient to benefit from a reduction in tax should the rate be decreased.

The provision also applies where there is an alteration in law which changes the GST treatment of a transaction from, for example, exempt to taxable or from zero-rated to standard-rated, or vice versa. However, it expressly does not apply to the introduction of the reverse-charge mechanism which applies to imported services.

The provision does not apply where there is an express provision in the contract excluding an alteration in the consideration.
All amounts prescribed by regulation or statute are automatically increased or decreased where the GST rate changes. However, the automatic adjustment does not apply to amounts required to be paid by any public authority other than a public authority.

(2) Returns for GST periods where two different GST rates apply [s 78A]

It is possible that a registered person’s GST period will not begin on the same day as that on which the new GST rate comes into force. Where this occurs, the person is required to file the return in two parts. The first part covers that part of the GST period that occurs prior to the date of the rate change. The second part covers the period from the date of the rate change to the end of the person’s GST period.

(3) Returns furnished following rate change [s 78B]

Where a registered person, on or after the date on which the GST rate changes:

(a) Makes or receives a payment and accounts for GST on the payments basis; or
(b) Makes a payment for a secondhand good and accounts for GST on the invoice basis; or
(c) Makes a payment for any taxable supply or secondhand good and accounts for GST on a hybrid basis, the transaction is deemed to have incurred GST at the new GST rate.

However, an adjustment is made to ensure that the correct amount of GST is paid. The adjustment requires the person to identify the supplies which require adjustment. This is the debtors and creditors immediately prior to the date on which the rate changed. The net amount is multiplied by the difference in the old and new GST rates. If creditors exceed debtors, the amount is treated as output tax in the return period. If debtors exceed creditors, the amount is offset against the GST liability and any remaining balance is refunded unless it is used by the CIR for the payment of tax outstanding under the terms of s 46. These adjustments are recorded on a special form.

Example:

Jason runs a small business and accounts for GST on a two-monthly cash basis. His return periods end with the last day of the uneven months of the year. As at 30 September 2010, Jason had the following debtors and creditors:

<table>
<thead>
<tr>
<th>Debtors (GST-inclusive at 12.5%)</th>
<th>Creditors (GST-inclusive at 12.5%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Three invoices for services rendered $11,250.00</td>
<td>Office rental $1,125.00</td>
</tr>
<tr>
<td>Electricity $225.00</td>
<td>Stationery $112.50</td>
</tr>
<tr>
<td><strong>Total</strong> $11,250.00</td>
<td><strong>Total</strong> $1,462.50</td>
</tr>
</tbody>
</table>

The net amount of the debtors and creditors is $9,787.50 ($11,250.00 - $1,462.50).

This net figure is multiplied by the difference between the old and new GST rates, being 2.5 per cent (15% - 12.5%).

The amount of the adjustment is $9,787.50 x 2.5% = $244.68.

As Jason’s debtors exceeded his creditors, the amount of the adjustment is deducted from the net input tax that he is required to pay for the period.

(4) Insurers’ recoveries [s 78AA]

Where:

(a) An insurer accepts a claim before 1 October 2010 and either pays the claim or unconditionally agrees the amount to be recovered; and

(b) The amount recovered is received after 1 October 2010;

the insurer has the option of treating the amount recovered as being subject to GST at the rate of 12.5 per cent.

(5) Finance leases [s 78AA]

Where a finance lease is entered into before 1 October 2010, and the term of the lease is not more than five years, the provider of the lease has the option of continuing to account for GST at the rate of 12.5 per cent rate for...
the remainder of the lease. Where this option is taken, the lease provider is required to advise any GST registered lessees that the option has been taken and that the lessee must claim any input tax deduction at the 12.5 per cent rate. The notification to lessees must occur within 30 days after 1 October 2010.

(6) Layby sales [s 78AA]
The supply in a layby sale is treated as occurring when the goods are delivered. This means that, under normal rules, layby sales that are not completed before 1 October 2010 will attract the 15 per cent GST rate. However, under the transitional provision, for layby sale agreements that were entered into before 20 May 2010 (Budget day), suppliers have the option of treating payments received before 1 October 2010 as being subject to the 12.5 per cent GST rate. Payments received on or after 1 October 2010 would be subject to the 15 per cent rate. Where this option is taken, the GST relating to payments received before 1 October 2010 must be included in the supplier’s September 2010 GST return.

(7) Invoices issued after 1 October for pre-1 October supplies [s 78AA] Where goods or services are supplied before 1 October 2010 but are invoiced after that date, the supplier has the option of issuing the invoice using the 12.5 per cent GST rate. The invoice must be issued no later than 11 October 2010 and payment of the invoice must be due no later than 60 days from the date of the invoice. This provision would typically apply to such things as electricity and telephone services.

(8) Periodic payments [s 78AA] A contract that is for a period of one year, and is reviewed annually, may provide for a single payment or may provide for progressive payments throughout the year. An example would be health insurance. Where the review period under the contract is no more than 396 days, and the review dates span 1 October 2010, suppliers have the option of treating the entire year’s instalments as being subject to GST at the 12.5 per cent rate. Where the supplier takes this option, all of the GST not already accounted for must be accounted for in a GST return for a period ending before 1 October 2010. Suppliers who take this option are required to advise any GST-registered recipient that the option has been taken and that the lessee must claim any input tax deduction at the 12.5 per cent rate. The notification must occur within 30 days after 1 October 2010. Where this option is not taken, the supplier is likely to need to issue a credit note and a debit note to account for the increased GST on the remaining part of the contract. As an alternative to issuing debit and credit notes, replacement tax invoices can be issued to replace the original pre-1 October tax invoice to take into account the increased GST payable on the remaining services provided from 1 October.

(9) Private training establishments [s 78B] “Private training establishments” (PTEs) are registered with the New Zealand Qualifications Authority. They are required to use a trust arrangement where students pay their course fees in full. As the course is delivered, the trustee progressively pays the fee to the private training establishment. As the services are supplied for GST purposes at the time at which the fees are released by the trustee, the organisations will be faced with the prospect of either recovering from the students the additional GST for post-1 October 2010 supplies or paying the extra GST amount even though they have not received it from the students. To alleviate this problem, PTEs are able to treat the entire amount as subject to GST at the 12.5 per cent rate. Where the PTE takes this option, all of the GST not already accounted for must be accounted for in their September 2010 GST return.

(10) Adjustments for debit notes and credit notes [s 78BA] Where a registered person accounts for GST on a payments basis and there has been a change in the GST rate, an adjustment is required to be made in respect of debit and credit notes received or issued under the following circumstances:
(a) The person has made an adjustment under s 78B [see the paragraph “Returns furnished following rate change” above] in respect of that supply; and
(b) The person issues or receives a debit note or credit note before payment has been made or received in respect of the supply. In the case of the recipient of the supply, knowledge that the tax invoice held is incorrect is sufficient to trigger the requirement to make an adjustment.

The adjustment is the amount of the change in the consideration for the supply multiplied by the change in the GST rate. If the result is positive, then it is treated as output tax. If it is negative, then it is treated as input tax.

11) Adjustment where a change in accounting basis occurs [s 78C]

Where a person changes the basis on which they account for GST and that change coincides with or occurs subsequent to a change in the GST rate, an adjustment is required. The calculation is undertaken in accordance with s 19C [see 580.126]. When making the adjustment, no account is taken of the amount of any adjustment under s 78B [see above].

12) Change of use adjustment: Goods or services applied for other than making taxable supplies [s 21CB]

The provisions of s 21CB apply where:
(a) A registered person acquired or produced goods or services for the purposes of making taxable supplies; and
(b) Before 1 October 2010, wholly or partially applied those goods and services for a purpose other than making taxable supplies; and
(c) As a consequence, is required to make an adjustment under s 21 (as modified by s 21D for change of use in contemplation of sale).

Provided that all of the above criteria are satisfied, the person is able to choose to make the adjustment at the GST rate that applied immediately before 1 October 2010 (ie 12.5 per cent).

The provision can be used only for goods or services applied for other than a taxable purpose before 1 October 2010 where the attribution of output tax occurs on or after 1 October 2010. An example of where the provision would apply is where a registered person's GST period spans 1 October 2010.

13) Change of use adjustment: Goods or services applied for making taxable supplies [s 21F]

An amendment has been made to s 21F, which provides an input tax deduction where goods or services acquired for other than making taxable supplies are applied for the purpose of making taxable supplies. The section now requires the GST rate at which the adjustment is made to be the “COU tax fraction”. The “COU tax fraction” is either:
(a) The tax fraction applying at the time at which the adjustment is made, which is 1/9 before 1 October 2010, and 3/23 on and after 1 October 2010; or
(b) The tax fraction that applied at the time at which the goods or services were acquired by the person if they are applied for the purposes of making taxable supplies before 1 October 2010.

This covers the situation where the goods or services were applied for the purposes of making taxable supplies before 1 October 2010, but the adjustment is made after that date. Examples of where the transitional provision would apply are where the person’s GST period spans 1 October 2010, or where a person is making an annual adjustment after the end of the tax year as part of finalising their annual accounts.

TaxNote: Application of this transitional provision is mandatory.

14) Adjustment for fringe benefits and entertainment expenditure [s 21I]

As the GST time of supply of a fringe benefit is deemed under s 21I(3) to be the time at which the benefit is, or is deemed to be, granted or provided, no transitional rule is necessary. GST payable on fringe benefits provided before 1 October 2010 will be calculated at the rate of 12.5 per cent irrespective of the time at which the return is filed.
The GST time of supply for entertainment expenditure is the date on which the return of income is furnished or due (if earlier). This means that a transitional rule is needed to ensure that the amount of the GST adjustment for the non-deductible portion of entertainment expenditure is not excessive. The new s 21I(4B) provides that the time of supply for entertainment is treated as being 30 September 2010, provided that the relevant expenditure was incurred before 1 October 2010. Use of this provision is optional.

(15) Remission of penalties and interest [TAA, s 183AA]
Automatic remission of the late filing penalty, late payment penalty and use-of-money interest applies where, objectively, the penalties are imposed because of the taxpayer’s acts or omissions in respect of the 1 October 2010 change in GST rate; and the penalties are imposed in respect of:
(a) A “GST transitional taxable period”, which is a taxable period that includes 1 October 2010, or includes 1 October 2010 and a later GST taxable period that ends on or before 31 December 2010; or
(b) A taxable period in which an adjustment is required to be made by a person who is registered for GST on the payments basis (see the paragraph “Returns furnished following rate change” above).

Answers to frequently asked questions can be found under the “FAQ” tab on the GST Advisory Panel website www.gstadvisory.govt.nz.

580.174 Administration [ss 79-80]
The CIR, or an authorised officer, and the Chief Executive of the New Zealand Customs Service, or an authorised Customs officer, may exchange information obtained for revenue-gathering purposes, provided it is to be used for that purpose. This ability to exchange information is not prevented by any obligation to secrecy or other restriction on the disclosure of information. Such information must not be disclosed except for revenue-gathering purposes under the GSTA.

580.180 Income tax treatment of GST [ss CH 5, CX 1, DB 2, EE 45, EE 54]
(1) Taxpayer is GST-registered
When a taxpayer is registered for GST, the following rules generally apply to the income tax treatment of GST:
(a) GST charged on taxable supplies made, and any GST refund received from Inland Revenue is excluded income and is not subject to income tax.
(b) GST charged or levied on taxable supplies received, and any GST paid to Inland Revenue, are not deductible.
(c) In calculating the depreciation deduction allowable, the cost of the asset is its GST-exclusive cost. However, there are some exceptions to this general rule:
(a) An income tax deduction is allowed for the GST adjustment arising:
   (i) Under s 5B when imported services are treated as being supplied in New Zealand and the reverse charge mechanism applies [see 580.101];
   (ii) Under s 21(1) when an asset acquired principally for making taxable supplies is subsequently used for a non-taxable purpose. For example, an asset acquired for making taxable supplies is used for making exempt supplies [see 580.126];
   (iii) Under s 21I when supplies made to employees are subject to FBT [see 580.126]. The adjustment is deductible only if the expenditure or depreciation would otherwise be deductible under the ITA.
(b) Income includes the GST adjustment arising under s 21(5) when a private or non-business asset is used for the purpose of making taxable supplies [see 580.127].
These GST adjustments are not taxable or deductible (as appropriate) if the adjustment results from a permanent change in the principal use of the asset. If there is a permanent change in the principal use of a depreciable asset, the cost of the asset is:

(a) Reduced, when the adjustment results from a change from a non-taxable to a taxable purpose;
(b) Increased, when the adjustment results from a change from a taxable to a non-taxable purpose.

(2) Taxpayer is not GST-registered or goods and services acquired for exempt purpose

When a taxpayer is not registered for GST or if a GST-registered taxpayer purchases goods and services to make exempt supplies, the following rules apply:

(a) No GST is charged by the taxpayer on the supplies it makes. Therefore, the issue of GST in relation to income does not arise.
(b) GST charged on taxable supplies received is deductible. This is because the taxpayer is unable to claim an input tax deduction in relation to those taxable supplies. Therefore, the cost of the goods and services includes the GST charged on them.
(c) In calculating the depreciation deduction allowable, the cost of the asset is its GST-inclusive cost.

For the impact of GST on the preparation of income tax accounts [see TIB vol 7:1 (July 1995) at 8-9, 580.124].

580.182 Depreciation when asset transferred to exempt use

Where an asset is transferred to be used for GST exempt purposes, no deduction is available for the GST payable to Inland Revenue. However, the cost price of the capital asset concerned is increased by the amount of GST which becomes payable by the taxpayer as output tax. Accordingly, an income tax deduction is gained by way of an increased depreciation charge against the asset concerned.

Example:

Motor vehicle acquired by a retail store for delivery of customer purchases on 1 April 20X1:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cost (GST inclusive)</td>
<td>37,125</td>
</tr>
<tr>
<td>Input tax deduction claimed ($37,125 x 3/23)</td>
<td>4,842</td>
</tr>
<tr>
<td>Net cost</td>
<td>32,283</td>
</tr>
<tr>
<td>Depreciation to 31 March 20X3 (at 13.5 per cent straight-line)</td>
<td>4,358</td>
</tr>
<tr>
<td>Adjusted tax value</td>
<td>28,682</td>
</tr>
<tr>
<td>Depreciation to 31 March 20X2 (at 13.5 per cent straight-line)</td>
<td>4,358</td>
</tr>
<tr>
<td>Adjusted tax value</td>
<td>24,284</td>
</tr>
</tbody>
</table>

On 1 November 20X3 the motor vehicle is transferred to the residential rental (GST-exempt) business arm of the firm:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open market value of vehicle</td>
<td>16,500</td>
</tr>
<tr>
<td>GST output tax payable ($16,500 x 3/23)</td>
<td>2,152</td>
</tr>
<tr>
<td>New adjusted tax value 1 April 20X3 (24,284 + 2,152)</td>
<td>26,436</td>
</tr>
</tbody>
</table>

580.183 Avoidance [s 76]

The anti-avoidance provision of s 76 is consistent with the general anti-avoidance provision of s BG 1. These provisions apply to any arrangement that directly or indirectly has tax avoidance as:

(a) Its purpose or effect; or
(b) One of its purposes or effects, whether or not another purpose or effect relates to business or family dealings, if the purpose or effect is not merely incidental.

A tax avoidance arrangement is void as against the CIR for GST purposes. The CIR may adjust the amount of GST payable by, or the refund to, a registered person affected by the arrangement, and thereby counter any tax advantage obtained by the person under the arrangement.
Goods and Services Tax

(1) Cases

In Ch’ elle Properties (New Zealand) Ltd v Commissioner of Inland Revenue (2004) 21 NZTC 18,618 (HC), the taxpayer had claimed GST input tax credits on the purchase of 114 properties. In each case, a small deposit was paid to the vendor with the balance being payable at settlement, a gap of 10 to 20 years. As the taxpayer was registered on the invoice basis and the vendors on the payments basis, the purchaser was able to claim GST on the entire purchase price while the vendors were liable for output tax only on the amount of the deposit. The High Court found the fact that a scheme complied with the specific requirements of the Act does not preclude a finding of tax avoidance. Section 76 does not require proof of intention. It is directed to the effect or purpose of the arrangement. It requires the arrangement to be assessed by reference to the principles which underly the Act. A tax advantage does not have to be established before the CIR can treat an arrangement as void.

The case, which was an appeal from the findings of the TRA in TRA Case W22 (2003) 21 NZTC 11,212, was itself appealed to the Court of Appeal as Ch’ elle Properties (New Zealand) Ltd v Commissioner of Inland Revenue [2007] NZCA 256. In dismissing the appeal, the Court of Appeal stated that an arrangement that complies technically with the GSTA 1985 can nonetheless be struck down by s 76, which provides for an overview and assessment of the combined effect of the individual components of the arrangement. The Supreme Court declined the taxpayer’s application for leave to appeal the decision.

In Glenharrow Holdings Ltd v Commissioner of Inland Revenue [2007] NZCA 346, (2007) 23 NZTC 21,564, the Court of Appeal (by majority) dismissed the taxpayers appeal holding that s 76 applied to the arrangement. The case concerned the purchase of a mining licence for $44.92 million when previous prices offered ranged from $100 to $10,000. The licence was to expire in approximately three years and there was legislation before Parliament that could substantially impact on the intended mining activity. The purchase was funded in part by a vendor loan, with the obligation to repay being, for all intents and purposes, dependent on the success of the mining activity. The findings of the Court of Appeal were upheld by the Supreme Court in Glenharrow Holdings Ltd v Commissioner of Inland Revenue [2008] NZSC 116, [2009] 2 NZLR 359, (2009) 24 NZTC 23,236. The Supreme Court found the arrangement entered into by the taxpayer was void under s 76. On an objective view, the effect of the arrangement was to produce a GST refund totally disproportionate to the economic burden undertaken by the taxpayer or the economic benefit obtained by the vendor. In order for the CIR to carry out a reconstruction under s 76, the CIR does not have to demonstrate that the parties subjectively or consciously had the purpose of defeating the intent and application of the GSTA 1985. The natural and sensible reading of s 76 is to ask what objectively was the purpose of the arrangement, which in turn requires examination of the effect the arrangement. In order to discern that objective purpose of the arrangement, it is necessary to work “backwards” from its effect (ie what it has achieved). The intent and application of the GSTA 1985 will be defeated if an arrangement has been structured to enable the avoidance of output tax, or the obtaining of an input deduction in circumstances where that consequence is outside the purpose and contemplation of the relevant statutory provisions.
Chapter 600

Goodwill

600.10 Goodwill — income and timing of income

Goodwill is income when received by:

(a) An owner of land from any lease affecting the land [s CC 1]: Hawkless v Commissioner of Inland Revenue (1983) 6 NZTC 61,646 (HC). In such a case, the goodwill is equivalent to additional rent calculated over the whole term of the lease but payable at the commencement as a premium. A sham transaction in avoidance was at issue in TRA Case K77 (1988) 10 NZTC 619.

(b) Any person on the sale or other disposition of any real or personal property. This only applies if the person carries on a business of dealing in such property, or if the property was acquired with a view to selling or otherwise disposing of it [see 710.65]. In this situation, the amount received for goodwill is income.

In this context, the term “owner of land” means a person who is the owner of any estate or interest in land, including inter alia any right to the possession of land. Accordingly, a lessee is an “owner of land” for this purpose, and any sum received as goodwill on the grant of a sublease is gross income. However, goodwill derived from the sale of a lease (instead of subletting), or any other property, real or personal (eg a licence), is normally a capital receipt (and not income). This exception does not apply if the vendor carries on a business of dealing in that class of property or has acquired the property with a view to selling or otherwise disposing of it.

The amount received for the goodwill of the lease of licensed premises is the typical instance of goodwill being income. The full amount received is assessable in one sum in the year of receipt. However the taxpayer may apply to the CIR to have the amount spread over the year of assessment and the five succeeding years in accordance with s EI 7.

The findings in the following cases use terminology in force prior to the Taxation (Core Provisions) Act 1996. However, the principles should continue to apply.

In Romanos Motels Ltd v Commissioner of Inland Revenue [1973] 1 NZLR 435 (CA), the taxpayer company granted a lease of its motel property to a company to be formed on terms which provided for an annual rental of $10,000, and for the sale of the “goodwill and lease” for $5,000, and the furniture and fittings for $12,000. The question at issue was whether the sum of $5,000 for the sale of the goodwill and lease was assessable in terms of s 88(1)(d) of the Land and Income Tax Act 1954. It was held on the facts of the case that the $5,000 was properly assessed as income under the above provision. In order to be caught, a goodwill payment must relate so closely to the site or locality as to be inseparable from it. On the facts, the motel business required a licence which related solely to the land owned by the taxpayer. What the taxpayer sold to the purchaser was the right to carry on an existing business that could only be carried on at the premises comprised in the lease. The business was not one that could be transferred at will to other premises.

In Gaynor Fussell Transport Ltd v Commissioner of Inland Revenue (1973) 3 ATR 679 (SC), the taxpayer was a carrying company employing 50 drivers, which entered into additional contracts with seven or eight owner-drivers. Each owner-driver was required to obtain a goods service licence and undertake to work exclusively for the company. The company undertook to find work for the owner-driver, even if this meant standing down its own trucks at times. In consideration of the company guaranteeing work for an owner-driver, he agreed to pay the company $3,000 (plus interest) in monthly instalments over the five year term of the agreement. Inland Revenue included the $3,000 payable by each owner-driver in the income of the company, and the company objected, contending that the $3,000 was paid for a covenant in restraint of trade and as such should be treated as a capital receipt to the company. It was held that the sums in question were
part of the profits of the company in the course of carrying on its business in a particular way, and were 
receipts of an income nature, not of capital.

In TRA Case H66 (1986) 8 NZTC 473, involving the sale of a motor vehicle dealership, the goodwill sold 
in the particular circumstances was held to comprise both personal and site goodwill, only the proportion of 
the total goodwill price representing the latter was assessable.

Two cases were considered in Capel v Commissioner of Inland Revenue (1987) 9 NZTC 6,195 (HC). The 
Capel partnership owned three fast food outlets. The company “Melco” owned the chattels and equipment 
used in the outlets and leased them to the operators. The partnership disposed of two outlets on the same 
terms, each by way of a licensing agreement. The partnership retained the shop leases and in each case 
received a goodwill payment as well as a fixed weekly share of trading profits from the purchasers. The third 
outlet was sold by the partners to their wives for a goodwill payment. Melco began to manufacture ice cream 
for the various outlets and in order to ensure security of outlets, future licensing agreements incorporated a 
provision whereby 50 per cent of any goodwill obtained by a licensee on sale would be paid to Melco. Several 
payments were received. Further shops were established where Melco was not a party to the arrangements. 
However, Melco’s interest was protected by a clause requiring its consent to any assignment or subletting. 
Payments were made to Melco in recognition of its assistance in establishment of the business. Inland 
Revenue assessed both taxpayers on goodwill received. On the above facts, it was held that:

(a) The payments received in relation to the first two dispositions were not assessable. They were not 
within the then s 65(2)(a) of the ITA 1976 [now s CB 1] as the principal motive was to ensure that 
purchasers had a financial interest. This suggested a capital asset disposition and not an attempt to 
obtain an income. There was also an insufficient nexus between the grant of licences and goodwill 
payments to ensure assessability, the facts showing that business success was dependent neither on 
the premises nor on their location but on the nature of the business. It was to this latter matter that 
the goodwill related.

(b) The goodwill payment to the partners from their wives was assessable under the principles of 
Romanos Motels Ltd (above).

(c) Melco’s activity pattern showed an intention to achieve a payment of an income in relation to the 
disposition of businesses for which it had some interest. Accordingly, due to the pattern of payments 
the income was assessable.

600.20 When goodwill deductible

Under s EZ 8, a deduction is allowed for a premium or a goodwill payment by a lessee to a landlord, or by 
a sublessee to a head lessee, on the grant of a lease or sublease, or on the renewal of a lease, or sublease where 
the grant or renewal occurring before 1 April 1993. After this date such payments are treated as depreciable 
tangible property.

In other situations, payments for goodwill are usually an acquisition of a capital (intangible) asset. Therefore, 
the cost of that goodwill is not allowed as a deduction [s DA 2(1)] and cannot be depreciated as it is not 
depreciable intangible property.

There is some doubt as to whether payments to preserve goodwill are an allowable deduction. In considering 
the deductibility of a payment in Buckley & Young Ltd v Commissioner of Inland Revenue (1975) 
2 NZTC 61,036, (1975) 1 TRNZ 180 (SC), the Court stated:

“It is, of course, perfectly clear that if the purpose of the payments in the instant case was to 
secure the operation of the restrictive covenants until such time as T attained the age of 60 or 
sooner died, then the payments made by the company were of a capital nature and not deductible. 
The payments would have been made to preserve goodwill, a capital asset.”
Chapter 610

Government Grants and Suspensory Loans

610.05 Government grants to businesses [s CX 47, DF 1]

Sections CX 47 and DF 1 apply to any business-related grant made to a taxpayer by a local authority or a public authority.

The payments may be in the nature of a subsidy or grant or may be a grant-related suspensory loan. However, any advance or loan other than a grant-related suspensory loan is not covered by the provisions.

The provisions do not apply to:

(a) Large budget screen production grants where the final application for the grant is made on or after 1 October 2009 and the company has not incurred $3 million or more in expenditure on the project before 1 July 2008; or

(b) A grant made under the Agriculture Recovery Programme for the lower North Island and Eastern Bay of Plenty, to the extent to which the grant relates to expenditure which was incurred by the recipient before the grant was made and for which the recipient would be allowed a deduction under general tax law.

The provisions are optional to the extent to which the grant is made to a person in relation to their business as a technology development grant or under a technology transfer voucher and the following conditions are met:

(a) The payment of the grant is withheld until the conditions of the grant are satisfied;

(b) The person would be entitled to a deduction or a depreciation loss for the expenditure to which the payment relates.

A grant-related suspensory loan is a loan that is:

(a) Made by a public authority, and not designated by that public authority as being a “specified suspensory loan”, and which provides that the loan may be wholly or partly remitted; or

(b) Made by the Rural Banking and Finance Corporation of New Zealand as an “irrigation suspensory loan” or a “West Coast drainage suspensory loan”.

Where a grant is made to any taxpayer for expenditure incurred that is an allowable deduction, the amount of the allowable deduction is reduced by the amount of the grant, and the grant is excluded income of the taxpayer and therefore not subject to tax.

Example 1:

A grant of $70,000 is received to be applied towards deductible expenditure of $80,000. The allowable deduction to the taxpayer is $10,000 and no part of the grant is treated as assessable income.

Example 2:

A grant may be made to a taxpayer towards expenditure incurred in the acquisition, construction, installation, or extension of an asset which is subject to an allowable depreciation deduction. When calculating the value of the asset for depreciation, the expenditure on the asset is reduced by the amount of the grant, and the grant is excluded income of the taxpayer and therefore not subject to tax.

Example 2:

A grant of $40,000 is received towards the purchase of a depreciable asset costing $50,000. The value of the asset for depreciation purposes is $10,000 and no part of the grant is treated as assessable income.
The CIR has power at any time to alter any assessment to give effect to these provisions, notwithstanding the time bar restricting the alteration of assessments.

A taxpayer who has received a suspensory loan for social policy reasons from a specified government agency is not required to pay tax when the loan is remitted [ss EZ 38(6), EW 45]. The schedule to the Income Tax (Social Assistance Suspensory Loans) Order 1995 lists three social assistance suspensory loans:

(a) Any suspensory loan made by the Housing NZ Corporation under the “Right to Buy” programme;
(b) Any suspensory loan made by the Department of Social Welfare under s 14 or s 16A of the Disabled Persons Community Welfare Act 1975; and
(c) Any suspensory loan made by the Department of Social Welfare under Part 9 of the War Pensions Regulations 1956.

Special rules apply to technology development grants and technology transfer vouchers [see 1240.35].

610.10 Repayment of grant-related suspensory loans [s DF 2]

When a taxpayer is required to repay a grant-related suspensory loan, the tax effect mirrors that which applied to the receipt of the loan.

To the extent to which the grant-related suspensory loan was used to meet an item of deductible expenditure, a deduction is allowed equal to the amount of the repayment.

To the extent to which the grant-related suspensory loan was used to acquire, construct, install or extend a fixed asset, the taxpayer is allowed a deduction for any depreciation which the taxpayer has been denied as a result of receiving the grant-related suspensory loan.

A statement by the grantor is conclusive as to whether the grant was used to meet revenue or capital expenditure.

610.20 Specified suspensory loans [s CF 2]

A specified suspensory loan has taxation consequences only when the loan or part thereof is remitted.

A "specified suspensory loan" is a business-related loan from a public authority where the loan is designated by that public authority as being a specified suspensory loan.

Specified suspensory loans are subject to the following rules:

(a) The amount of a specified suspensory loan is not treated as assessable income at the time the loan is made;
(b) If and when the taxpayer’s liability for the loan is remitted, the amount remitted is deemed to be income derived equally over the year of remission and the following two years;
(c) Any amount that is deemed to be income in either the second or third income year can be allocated by the taxpayer to an earlier income year in that three-year period;
(d) Where the taxpayer ceases to carry on the business for which the loan was granted before the full amount remitted has been included in assessable income, the unassessed balance is taxable in the year in which the taxpayer ceases to carry on the business;
(e) The expression “income year” refers to the taxpayer’s corresponding accounting year where the taxpayer has a non-standard balance date;
(f) The conversion of the loan into a grant does not affect the taxpayer’s deductions for depreciation; and
(g) If the loan is not converted to a grant (eg if the taxpayer does not meet the required targets, it will continue to be ignored for tax purposes).

The CIR’s policy on the tax treatment of remitted specified suspensory loans is set down in TIB vol 7:1 (July 1995) at 7-8.
Chapter 620

Group Investment Funds

620.10 Group investment fund income

A group investment fund is a trust for investment purposes which can be set up only by a trustee company or the Public Trustee. It is a pool of funds which has been gathered from sources such as estates, trusts and other small investors and which is available to the trustee company or the Public Trustee for investment in authorised trustee securities.

A trustee of a group investment fund is required to file separate returns of taxable income for an income year in relation to Category A and Category B income.

Category A income is the proportion of the income of the fund that is not Category B income or is not income of a designated group investment fund.

Category B income is the proportion of the fund’s income derived from investments in the fund:

(a) From the following designated sources:

(i) Trusts that are estates, or are created by statute or Court order; and

(ii) Charitable trusts; or

(b) That were made prior to 23 June 1983 but are not made from designated sources. This generally represents funds invested by the trustee of the group investment fund as an agent for the investors (agency funds).

A designated group investment fund is any group investment fund that invests only in:

(a) Trustee securities authorised by s 4(1)(a) to (j) of the Trustee Act 1956, read as if the Trustee Amendment Act 1988 had not been enacted; or

(b) A forestry business, but only for land owned or held on 22 June 1983.

A group investment fund is treated as a company for its calculation of taxable income arising from Category A income and for resident withholding tax purposes [s YA 1, see 1260.40].

In relation to Category B income and income derived by a designated group investment fund, a group investment fund is treated as a trustee. Sections DV 1, DV 2, DV 4, GB 22, subpart HC and s HD 12 apply for this purpose.

An investor’s interest in a group investment fund (GIF) which derives category A income is deemed to be shares, and the nominal amount of the interest of the investor is deemed to be paid up on those shares [s YA 1].

Where the group investment fund has elected to become a PIE [see 1130 PORTFOLIO INVESTMENT ENTITIES], See also 40 AGENCY where a trustee of a group investment fund is an agent for absentee investors [s HD 23].

620.20 Group investment fund dividends [ss CD 4(1), CD 5(1), HC 1(2)]

From 1 April 1999, distributions to a superannuation fund are treated as a distribution of a dividend. The share repurchase rules will apply to exclude the capital portion from the dividend [see TIB vol 10:12 (December 1998) at 18-19, s CZ 14].

The provisions in the ITA 2007 that apply to companies, shares, or shareholders, apply to dividends of a group investment fund as if it were a company, the deemed shares were the only shares, and the investors holding the deemed shares were the only shareholders.
Group investment fund redemptions may be made from available subscribed capital. Redemptions may only give rise to a dividend once all the subscribed investment has been paid out and the group investment fund begins to pay out reserves. However, this may be negated through elections made by the group investment fund for a different treatment [s CZ 13].
Chapter 640

Hire Purchase Agreements

640.10 Hire purchase agreements
When a person (referred to as the “seller”) provides personal property to another person (referred to as the “buyer”) under a hire purchase agreement:
(a) The agreement is treated as a sale by the seller to the buyer on the date the term of the agreement starts;
(b) The seller is treated as giving a loan to the buyer for the property;
(c) The buyer is treated as using the loan to buy the property; and
(d) The depreciation rules, the financial arrangement rules and the other provisions of the ITA 2007 apply to the agreement.

This does not apply to property that is livestock or bloodstock.

For the seller, the amount of the loan is determined under s EW 32. For the buyer, the amount of the consideration is determined under ss EW 32 and EW 33 [see 470.90]. The buyer is treated as the owner of the property, and the seller is not treated as the owner, for the purposes of the depreciation rules.

If the seller takes an amount calculated under s FA 15 into account as the cost of trading stock or in the calculation of their net income, the seller is denied a deduction under ss DB 14 or DB 31 (debts sold at a discount and bad debts) for an amount owing under the hire purchase agreement.

640.15 Definition of hire purchase agreement
A “hire purchase agreement” is an agreement under which goods are let or hired with an option to purchase, or purchased by instalment payments, and in either case the purchaser is given possession of the goods before the total amount payable has been paid. The way in which the agreement describes the payments is irrelevant to the definition. A hire purchase agreement includes:
(a) An agreement to sell goods at retail where the buyer grants security over the goods to the seller for some or all of the purchase price, and the property in the goods passes to the buyer subject to the security;
(b) A sale and loan agreement where a person (either the seller or a third party) lends money on the security of the goods bought, and some or all of the purchase price is paid out of the loan proceeds. If the loan is made by a third party, it must be arranged by the seller and the third party must be engaged in the money lending business or habitually lend money in the course of their business.

A hire purchase agreement does not include an agreement:
(a) Under which property in the goods passes absolutely to the purchaser at the time the agreement is entered into, or at any time before delivery of the goods, unless the agreement is an agreement under which goods are let or hired with an option to purchase, or purchased by instalment payments, and in either case the purchaser is given possession of the goods before the total amount payable has been paid;
(b) Made otherwise than at retail;
(c) To the extent to which the property that is the subject of the agreement is livestock or bloodstock.
640.20 Buyer does not acquire ownership of property [ss FA 15, FA 16, FA 17]

If a hire purchase agreement ends and the buyer (or an associated person) does not acquire ownership of the property, the seller is treated as buying the property from the buyer for an amount equal to the outstanding balance, and the buyer is treated as selling the property to the seller for the same amount. The date of the sale is the date the agreement ends.

The outstanding balance is calculated using the formula:

\[
\text{net balance due on termination} - \text{buyer’s termination payment} + \text{seller’s termination payment}
\]

Where:

“Net balance due on termination” is the net balance due under the hire purchase agreement on the date the agreement ends, less any repossession costs and expenses.

“Buyer’s termination payment” is the sum of the following amounts, as applicable:

(a) An amount paid by the buyer, or an associated person, to the seller, or an associated person, under the agreement;
(b) An amount paid as a consequence of the agreement ending; and
(c) An amount required to be taken into account by the buyer under the base price adjustment [see 540.80] or in item “a” of the formula in s EZ 38(1).

“Seller’s termination payment” is the sum of the following amounts, as applicable:

(a) An amount paid by the seller, or an associated person, to the buyer, or an associated person, under the agreement;
(b) An amount paid as a consequence of the agreement ending; and
(c) An amount required to be taken into account by the buyer under the base price adjustment or by the seller in item “b” or “c” of the formula in s EZ 38(1).

The outstanding balance is taken into account as the consideration paid by the buyer to the seller under the hire purchase agreement, when calculating the base price adjustment in s EW 31 [s FA 15].

(1) When seller is a cash basis person

When the seller is a cash basis person [see 470.75], the amount treated as the seller’s purchase price in s FA 15(2) is reduced by any accrued but unpaid interest on the hire purchase agreement calculated using the formula:

\[
\text{accrual income} - \text{income}
\]

Where:

“Accrual income” is the amount of income that would have been derived under one of the spreading methods for payments under the hire purchase agreement if the seller were not a cash basis person and the base price adjustment did not apply to the seller in the income year when the agreement ends.

“Income” is the amount of the seller’s income from payments received under the hire purchase agreement [s FA 16].

(2) When the buyer is a cash basis person

When the buyer is a cash basis person, the amount treated as the buyer’s sale price in s FA 15(2) is reduced by any accrued but unpaid interest on the hire purchase agreement calculated using the formula:

\[
\text{prepaid expenditure} - \text{expenditure}
\]

Where:

“Prepaid expenditure” is the amount of prepaid expenditure that would have been incurred under one of the spreading methods for payments under the hire purchase agreement if the buyer were not a cash basis person and the base price adjustment did not apply to the buyer in the income year when the agreement ends.
“Expenditure” is the amount of expenditure incurred by the buyer and treated as interest under the hire purchase agreement [s FA 17].

640.25 **Amount paid after agreement ends** [s FA 18]

When an amount payable under a hire purchase agreement is paid after the income year in which the agreement ends:

(a) If the buyer is liable to pay the amount to the seller, the amount is income of the seller under s CC 13(2);

(b) If the seller pays the amount to the buyer and, consequent on the ending of the agreement, it was not taken into account, the amount is treated as:

(i) Expenditure incurred by the seller in the income year the amount is paid; and

(ii) Income of the buyer under s CC 13(3), if they have been allowed a deduction in relation to the property in the income year the amount is paid.

For these purposes, the seller and buyer include a person associated with them.

640.30 **Applying the financial arrangement rules to hire purchase agreements**

Source: TIB vol 4:9 (May 1993) at 41, 42.

---

**Example 1:**

Assume the following facts for a hire purchase transaction:

<table>
<thead>
<tr>
<th>Vendor’s balance date:</th>
<th>31 March X1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum face value of financial arrangements held by the vendor during the year:</td>
<td>$1,000,000</td>
</tr>
<tr>
<td>(Accordingly interest income may be accrued on a straight line basis.)</td>
<td></td>
</tr>
<tr>
<td>Date of transaction:</td>
<td>5/9/X1</td>
</tr>
<tr>
<td>Cash price of the property subject to the agreement:</td>
<td>$1,000</td>
</tr>
<tr>
<td>Deposit paid by the purchaser:</td>
<td>$100</td>
</tr>
<tr>
<td>Amount loaned by way of the hire purchase agreement:</td>
<td>$900</td>
</tr>
<tr>
<td>Term of the hire purchase contract:</td>
<td>Twenty-four months</td>
</tr>
<tr>
<td>Interest rate on the loan:</td>
<td>20% pa compound, payable monthly in arrears</td>
</tr>
<tr>
<td>Hire purchase payments:</td>
<td>$45.81</td>
</tr>
</tbody>
</table>

Twenty-four equal monthly payments of $45.81 representing payment of interest and principal computed on a declining balance basis.

**Calculation of income under the agreement**

The hire purchase contract spans three tax years of the vendor. Assume the vendor adopts a 365 day basis for allocating income from the agreement. The relevant details for each tax year are:

<table>
<thead>
<tr>
<th>Year ending</th>
<th>Period of HP contract</th>
<th>Days</th>
</tr>
</thead>
<tbody>
<tr>
<td>31/3/X2</td>
<td>5/9/X1 to 31/3/X2</td>
<td>207</td>
</tr>
<tr>
<td>31/3/X3</td>
<td>1/4/X2 to 31/3/X3</td>
<td>365</td>
</tr>
<tr>
<td>31/3/X4</td>
<td>1/4/X3 to 5/9/X3</td>
<td>158</td>
</tr>
</tbody>
</table>

Income from the agreement is spread on a straight line basis in accordance with accruals.

Determinations G1A and G24 as follows:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial deposit</td>
<td>$100</td>
</tr>
<tr>
<td>Twenty-four payments of interest and principal of $45.81 per month</td>
<td>$1,099.44</td>
</tr>
<tr>
<td>Total consideration received</td>
<td>$1,199.44</td>
</tr>
</tbody>
</table>
Hire Purchase Agreements

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less acquisition price</td>
<td>$1,000</td>
</tr>
<tr>
<td>Net income from contract</td>
<td>$199.44</td>
</tr>
</tbody>
</table>

Interest to the holder under the agreement is allocated to tax years as follows:

- Year ending 31/3/X2 (207 days) $56.55
- Year ending 31/3/X3 (365 days) $99.72

**Base price adjustment**

The base price adjustment at the termination of the contract on 5/9/X3 is calculated using the following formula:

\[ a - b + c + d \]

Where:

- \( a \) is the consideration paid or payable to the vendor less the consideration paid or payable by the vendor ($1,199.44 - $1,000 = $199.44);
- \( b \) is the total amount of income derived by the vendor from the agreement in previous tax years ($56.55 + $99.72 = $156.27);
- \( c \) is the expenditure incurred by the vendor under the agreement in previous tax years (nil); and
- \( d \) is the amount remitted by the vendor (nil).

The base price adjustment is therefore calculated as $199.44 - $156.27 + $0 + $0 = $43.17. As this is a positive amount, it will be included in the vendor’s assessable income in the 20X3-X4 tax year.

**Example 2:**

The facts are the same as in Example 1 except that income from the hire purchase agreement is calculated on a yield-to-maturity basis. (The vendor holds financial arrangements in excess of $1 million.)

- Cash price of the property subject to the agreement: $1,000
- Amount loaned by way of hire purchase agreement: $900
- Term of hire purchase agreement: Twenty-four months
- Interest payable on the loan: 20% pa compound, payable monthly in arrears

Based on this information, it is possible to construct a schedule spreading income to each tax year calculated on a yield-to-maturity basis in accordance with accruals determination G3:

<table>
<thead>
<tr>
<th>Year ending</th>
<th>Income in period</th>
</tr>
</thead>
<tbody>
<tr>
<td>31/3/X3</td>
<td>$92.01</td>
</tr>
<tr>
<td>31/3/X4</td>
<td>$99.36</td>
</tr>
</tbody>
</table>

As before, income allocated to the year ending 31/3/X5 (the year in which the arrangement matures) is calculated using the base price adjustment:

\[ a - b + c + d \]

Where:

- \( a \) is the consideration paid or payable to the vendor less the consideration paid or payable by the vendor ($1,199.44 - $1,000 = $199.44);
- \( b \) is the total amount of income derived by the vendor from the agreement in previous tax years ($92.01 + $99.36 = $191.37);
- \( c \) is the expenditure incurred by the vendor under the agreement in previous tax years (nil); and
- \( d \) is the amount remitted by the vendor (nil).

On this basis the income attributable to the 20X4-X5 tax year under the base price adjustment is $8.07.
# Chapter 670

**Imputation**

670.10 Overview of imputation rules

The imputation regime was introduced from 1 April 1988 to eliminate double taxation that occurred when profits of a company which had already been taxed were effectively taxed again on distribution as dividends to shareholders. The imputation system enables a resident company to pass on to its shareholders the benefit of income tax it has paid, through attaching imputation credits to shareholders’ dividends for company tax paid. A resident shareholder can then claim a credit of tax for the imputation credit attached to the dividend, against the shareholder’s income tax liability [see 670.50]. This results in company profits being effectively taxed at shareholders’ marginal personal tax rates, when those profits have been distributed to shareholders with full imputation credits attached for tax paid by the company.

For this purpose, every resident company (with the exceptions noted in 670.20), is required to maintain a memorandum account called an imputation credit account (ICA), on an annual basis from 1 April to the following 31 March (a tax year). Broadly speaking, the ICA records the company’s payments of income tax, and the allocation of the benefit of those payments to shareholders. ICA entries are in the form of credits and debits. The principal credits to the ICA are for income tax paid by the company and any imputation credits attached to dividends received by the company. The principal debits to the ICA are for refunds of tax and for the amounts of any imputation credits attached to dividends paid by the company to its shareholders [see 670.30 to 670.35].

An ICA company may determine the amount of imputation credit, if any, that it attaches to a particular dividend. However, allocation rules restrict the maximum amount of credit that can be attached, and also prevent the “streaming” or unequal allocation of imputation credits to different shareholders [see 670.45].

The ICA does not have to be in credit at the time that a debit arises for imputation credits attached to dividends. However, if the ICA has a debit balance at the 31 March tax-year end (eg if insufficient income tax has been paid in relation to imputation credits distributed to shareholders), the company must make a payment of further income tax [see 670.95]. In this situation penalties will apply [see 670.100]. The company must file an annual imputation return that gives details of credit and debit entries into its ICA [see 670.65]. The closing ICA balance for a tax year is carried forward to the following tax year [see 670.25].

Credits in a company’s ICA are lost if shareholder continuity provisions are breached. These provisions require that the company’s shareholding remains at least 66 per cent unchanged from the time that the credit to the ICA arose [see 670.75].

The imputation rules are closely linked to the foreign dividend payment (FDP) rules, that require a resident company to make a deduction of FDP from a foreign-sourced dividend received, and to pay that amount of FDP to the CIR. Like imputation credits, credits for FDP paid by the company can be attached to dividends

670.10 Overview of imputation rules

The imputation regime was introduced from 1 April 1988 to eliminate double taxation that occurred when profits of a company which had already been taxed were effectively taxed again on distribution as dividends to shareholders. The imputation system enables a resident company to pass on to its shareholders the benefit of income tax it has paid, through attaching imputation credits to shareholders’ dividends for company tax paid. A resident shareholder can then claim a credit of tax for the imputation credit attached to the dividend, against the shareholder’s income tax liability [see 670.50]. This results in company profits being effectively taxed at shareholders’ marginal personal tax rates, when those profits have been distributed to shareholders with full imputation credits attached for tax paid by the company.

For this purpose, every resident company (with the exceptions noted in 670.20), is required to maintain a memorandum account called an imputation credit account (ICA), on an annual basis from 1 April to the following 31 March (a tax year). Broadly speaking, the ICA records the company’s payments of income tax, and the allocation of the benefit of those payments to shareholders. ICA entries are in the form of credits and debits. The principal credits to the ICA are for income tax paid by the company and any imputation credits attached to dividends received by the company. The principal debits to the ICA are for refunds of tax and for the amounts of any imputation credits attached to dividends paid by the company to its shareholders [see 670.30 to 670.35].

An ICA company may determine the amount of imputation credit, if any, that it attaches to a particular dividend. However, allocation rules restrict the maximum amount of credit that can be attached, and also prevent the “streaming” or unequal allocation of imputation credits to different shareholders [see 670.45].

The ICA does not have to be in credit at the time that a debit arises for imputation credits attached to dividends. However, if the ICA has a debit balance at the 31 March tax-year end (eg if insufficient income tax has been paid in relation to imputation credits distributed to shareholders), the company must make a payment of further income tax [see 670.95]. In this situation penalties will apply [see 670.100]. The company must file an annual imputation return that gives details of credit and debit entries into its ICA [see 670.65]. The closing ICA balance for a tax year is carried forward to the following tax year [see 670.25].

Credits in a company’s ICA are lost if shareholder continuity provisions are breached. These provisions require that the company’s shareholding remains at least 66 per cent unchanged from the time that the credit to the ICA arose [see 670.75].

The imputation rules are closely linked to the foreign dividend payment (FDP) rules, that require a resident company to make a deduction of FDP from a foreign-sourced dividend received, and to pay that amount of FDP to the CIR. Like imputation credits, credits for FDP paid by the company can be attached to dividends
paid to the company’s shareholders, and if the company does not elect to maintain a foreign dividend payment account (FDPA) the company’s payments of FDP are credited instead to its ICA [see 670.120].

The imputation and FDP rules are also linked to the branch equivalent tax account (BETA) regime, that operates to prevent double taxation arising when a resident taxpayer receives a dividend from a foreign company whose profits have been subject to New Zealand income tax, as attributed foreign income to the taxpayer, through the international tax rules. Essentially, the BETA regime allows the taxpayer to offset income tax payable on such attributed foreign income against the taxpayer’s FDP liability (or, for an individual, income tax liability) on foreign dividends received [see 670.285].

For non-resident shareholders, imputation and FDP credits attached to dividends received limit the rate of non-resident withholding tax (NRWT) otherwise applicable, and may effectively reduce NRWT liability to nil under the foreign investor tax credit regime [see 670.50, 1020.40, and 1010 NON-RESIDENT INVESTORS].

From the 1998-1999 tax year, the imputation and FDP rules also operate in conjunction with the conduit tax relief regime that provides relief from New Zealand tax when non-resident shareholders structure their investments in foreign companies through shareholdings in New Zealand companies [see 215 CONDUIT TAX RELIEF].

Various other legislative reforms have resulted in modifications to the imputation rules since their introduction. The principal reforms are set out below.

From 1 April 1990, the regime has applied to life insurance companies. Basically, these companies maintain both an ICA and a further imputation account termed a policyholder credit account (PCA) relating to notional distributions to policyholders. An outline of the operation of the PCA and its relationship to the ICA for a life insurance company is given at 800.40.

The former exemption for dividends paid between resident companies was removed from 1 April 1992 (from 30 July 1991 for certain dividends), except for dividends paid within a wholly-owned group of companies. Other changes from that date included the ability to attach imputation credits to non-cash dividends [see 670.40], and the reduction from 75 per cent to 66 per cent of the required shareholder continuity percentage for carrying forward imputation credits [see 670.75].

The attributed repatriation rules for FDP purposes were introduced from 2 July 1992 [see 670.125].

The consolidation regime for companies was introduced generally with effect from 1 April 1993. See 190.75-190.92 for an outline of the imputation, FDP, and BETA provisions that apply to companies in a consolidated group.

The BETA and FDP rules were amended from 28 September 1993, principally to permit FDP paid by a company to reduce its income tax liability on attributed foreign income. Consequential changes were made to the linkages between the ICA, FDPA, and BETA of a company [see 670.120 and 670.285].

The amalgamation regime for companies was introduced from 1 July 1994. See 180.110 for the ICA, FDPA, and BETA provisions that apply on an amalgamation of companies.

Trans-Tasman imputation was introduced with effect from the 2003-2004 tax year for the maintenance of imputation accounts by Australian companies and with effect from 1 October 2003 for the ability for an Australian company to attach imputation credits to dividends paid [see 670.375].

With the reduction in the company tax rate from 33 per cent to 30 per cent from 1 April 2008, consequential changes have been made to the imputation and FDP ratios: the maximum ratio is now 30/70. Other changes have been made to the BETA and conduit memorandum accounts and to the FITC ratios.

To ensure shareholders are not immediately affected by the new ratios, transitional rules have been introduced to allow companies to continue to allocate imputation and FDP credits at 33/67 on those earnings of the company that were taxed at 33 per cent. The transitional period is for two years, being the 2008-2009 and 2009-2010 years. However, when the 33/67 ratio is used, dividends passed up to other companies (and widely-held savings vehicles) will not get the benefit of the 33/67 ratio. That is, the credits attached will be capped at 30/70. The full 33/67 credit will flow through to the ICA.
670.15 Principal features of imputation rules

The following features apply under the imputation rules:

(a) Provisional tax or terminal tax paid by the company gives rise to credits to the imputation credit account (ICA).

(b) A refund of income tax overpaid to an ICA company is generally restricted to the credit balance in its ICA as at 31 March for the most recently ending tax year.

(c) Further income tax and a 10 per cent imputation penalty tax apply if the ICA has a debit balance at the 31 March tax-year end, or on ceasing to be an ICA company.

(d) Either imputation credits, or foreign dividend payment (FDP) credits if the company also maintains a foreign dividend payment account (FDPA), or both, can be attached to dividends paid, including non-cash dividends, subject to the allocation rules that limit the maximum amount of credits attachable.

(e) From 1 April 2008, the ratio of imputation and FDP credits to the amount of the net dividend cannot exceed 30/70. The first dividend paid in any tax year (ie the “benchmark dividend”) sets the required ratio for subsequent dividends paid for that year, unless a ratio change declaration is filed with the CIR.

(f) Special allocation rules apply for statutory producer boards and co-operative companies, which can attach credits to either cash distributions or notional distributions to members.

(g) Special imputation rules apply for qualifying companies [see 1160.68, 1160.70].

(h) Anti-avoidance rules also apply to prevent the “streaming” of credits to shareholders, including where this takes place over more than one tax year.

(i) A resident shareholder offsets imputation and FDP credits attached to dividends received against the taxpayer’s income tax liability for that year. Excess imputation credits not utilised in this way are not refundable, but in the case of a company or trustee are convertible into an amount of net loss for carrying forward to a subsequent income year, and in the case of individuals carried forward as a tax credit. Excess FDPs are refundable tax credits.

670.20 Requirement to maintain ICA [ss OA 2(2), (3), OB 1]

The ICA is a memorandum account that records a company’s tax payments and how the benefit of those payments is allocated to shareholders. Every company resident in New Zealand is required to maintain an ICA, except in certain situations. A company is not permitted to establish or maintain an ICA for any tax year, or for any period within a tax year, if:

(a) It is also resident in another country (other than Australia);

(b) It is acting in the capacity of trustee (except a company that is the trustee of a group investment fund that derives category A income. In this case the trust is taxed as a company and the trustee must maintain an ICA). Further, if a company acting in the capacity of trustee also performs other activities and is required to maintain an ICA, no debits or credits arise to the ICA for its activities as a trustee;

(c) It is prohibited by its constitution from making any kind of distribution to any shareholder of the company. This exclusion could apply to incorporated clubs and societies as the definition of shareholder includes any member;

(d) It is a company that derives only exempt income (except when that income is exempt dividend income under ss CW 9, CW 10, and CW 11, in which case an ICA must be maintained);

(e) For the purposes of a double tax agreement it is treated as being resident in a country other than New Zealand or Australia;

(f) It is a local authority;

(g) It is a Crown Research Institute;

(h) It is a portfolio tax rate entity;
It is a Maori authority.

Note: A Maori authority is required to maintain a Maori Authority credit account.

A company that is resident in both New Zealand and Australia may choose to be an Australian ICA company and elect to maintain an ICA for the purposes of the trans-Tasman imputation system [see 670.375].

670.25 Information to be recorded in the ICA [ss OA 2, OA 3, OA 7, OB 3]

Imputation is recorded and measured generally over a tax year that is from 1 April to 31 March, regardless of the company’s own balance date.

The ICA must record for each year the 1 April opening balance for that year and credits and debits to the account on the dates they are deemed to arise as per Tables O1 and O2. The opening balance of the ICA is nil for the tax year in which the company first becomes an ICA company, and for subsequent years it is the 31 March closing balance (credit or debit) for the preceding tax year.

The balance of the ICA at any time is the difference (credit or debit) between the aggregate credits and debits to the account at that time [s OA 3].

The CIR can issue a determination to correct the amount, timing, or omission of any credit or debit to the ICA that the CIR considers was recorded incorrectly or should have been recorded. The company retains the right to challenge such a determination [s 104B TAA]. Other than a determination made under this power, ICAs are not subject to annual assessment, as is the case with income tax for example. An ICA is a memorandum account and merely records credits and debits and the balances at the start and end of a tax year. As there is no assessment, there is no statute bar to the CIR adjusting entries in the ICA.

An argument could be constructed, based on the reasoning in Lloyds Bank Export Finance Ltd v Commissioner of Inland Revenue (1988) 10 NZTC 5,088 (HC). However such an argument runs contrary to the clear scheme of the ICA rules.

Records relating to the ICA must be retained for at least seven years after the end of the relevant tax year [TAA, s 22, see 670.80]. It would clearly be unreasonable for the CIR to try and adjust an ICA beyond this period if the taxpayer had disposed of the records.

670.30 Credits to the ICA [Table O1]

Table O1 sets out the credits that arise to an ICA, the date the credit arises and the section reference pertinent to the credit. The table needs to be read in conjunction with the appropriate section. For example, under row 2 of Table O1, provisional tax and income tax give rise to an imputation credit. However, the appropriate section is s OB 4, which as well as confirming that provisional and income tax paid give rise to imputation credits, it also sets out what cannot be credited.

Table O1 features in the ITA 2007 between subparts OB and OC. Each of the following transactions refers to an explanation of the imputation credits that shall be stated in the ICA, and the date when the entry should be made. For ease of reference, the row numbers are the same as those stated in Table O1 of the legislation.

1 Opening credit balance: The opening credit balance is the previous year’s closing balance if that was a credit balance. The ICA rules refresh this credit on first day of the tax year (ie 1 April irrespective of the balance date for the company) [s OA 7].

2 Provisional tax and income tax paid: To be credited on the day of payment. [s OB 4] Note that, under s OB 4(3), no credit arises for an amount that is:

(a) A transfer from a tax pooling account to the company’s tax account with the CIR [see rows 3 and 4 below and pooling of provisional tax, 1150.77];

(b) Attributable to income derived when the company was not an ICA company;

(c) Paid by a non-resident life insurance company for its policyholder base income tax liability;

(d) Paid as credits of tax for imputation credits attached to dividends received by the company in terms of ss LA 2 and LE 1. This was introduced effective from 30 July 1991 to prevent double crediting of imputation credits attached to dividends, on the removal of the intercorporate dividend exemption;
(c) Paid as credits of FDP credits attached to dividends received by the company in terms of ss LA 2 and LF 1. This provision was introduced effective from 30 July 1991 to prevent double crediting of FDP credits attached to dividends, on the removal of the inter-corporate dividend exemption;

(eb) Paid as credits for research and development expenditure in terms of ss LA 2 and LH 2;

(f) Paid by way of the company obtaining a credit of tax under the subpart LP provisions relating to supplementary dividend payments to non-resident investors [see 1010.10];

(g) Paid by way of a crediting of further income tax paid (for which an ICA credit arises), for a 31 March ICA debit balance, for which the company chooses to apply against an income tax or provisional tax liability under s OB 69;

(h) Paid for a tax liability on attributed CFC income by way of crediting the company’s BETA under s OE 7 [see 670.86]; or

(i) Paid by a company in its capacity as a trustee, unless paid on category A income of a group investment fund.

Income tax paid for the 1987-1988 and earlier income years is also excluded. [s OZ 1]

3 Deposits into a tax pooling account: An imputation credit is allowed for an amount provided by the company and paid by an intermediary into a tax pooling account. It is credited on the day the amount is deposited into the tax pooling account [s OB 5].

4 Transfer from a tax pooling account: An imputation credit is allowed for an amount that represents an entitlement to funds held in a tax pooling account and transferred by an intermediary to the company’s tax account with the Commissioner or refunded to the company. The credit date is either the date the funds held in the tax pooling account are refunded to the company, or the date that, under ss RP 19 and RP 20, the amount is transferred to the company’s tax account with the CIR [s OB 6].

5 Payment of further income tax: The credit arises on the date the further income tax (payable under ss OB 65 or OB 66 for a debit balance in the ICA as at 31 March) is paid. [see 670.95, s OB 7].

5B Payment of qualifying company election tax under s HA 40: The credit arises on the day the QCET is paid. QCET has only given rise to an imputation credit since 1 April 2008. The rationale is avoidance motivated, and designed to stop companies that are contemplating winding up from electing to become qualifying companies, paying QCET at 30 per cent on taxable reserves, and distributing those reserves tax free to 39 per cent rate shareholders. However, as QCET now gives rise to an ICA, the reserves will be fully taxable to the shareholders when distributed [s OB 7B].

5C Tax credits for research and development expenditure: An imputation credit arises for a tax credit that the company has under s LH 2. The credit arises on the date the Commissioner is notified in the company’s return of income of the entitlement to the credit. This is likely to be the date the return is filed [s OB 7C].

6 Tax withheld for resident passive income: The credit arises on the date that the deduction was made from income treated as derived by the company under s RA 9(1)(b) [s OB 8].

7 Imputation credits attached to dividends derived: A credit arises for any imputation credit attached to a dividends paid to the company. The credit arises on the date that the dividend is paid [s OB 9]. The date when a taxable bonus issue of shares with imputation credits attached is treated as having been paid will determine the date the credit arises.

8 FDP credit attached to dividend derived when not a FDPA company: FDP credits attached to dividends paid to the company give rise to ICA credits if the company is not a FDPA company at the time of receipt of the dividend. The credit arises on the date the dividend is paid [s OB 10].

9 Payment of FDP when not an FDPA company: A credit arises for an amount of any FDP paid by the company when it is not an FDPA company on the date the FDP is paid. No credit arises for the offset of a FDP liability against income tax losses under s RG 6 [s OB 11].
Transfer from FDP account: A credit arises for an amount equal to the amount of FDP debit transferred from its FDP account under s OC 18 [s OB 12]. The company may wish to do this to cover an ICA debit balance [see 670.165]. The credit to the ICA and corresponding FDP debit arise at the end of the relevant tax year under s OC 18(6). Note that s OB 12 states the credit arises on the date of transfer. However, this is not consistent with the ITA 2004 which provides the credit arises at the end of the tax year in which the FDP debit arose.

Transfer of debit balance when company leaves wholly-owned group: This was introduced together with provisions aimed at imputation credit shopping [see 670.70 and s OB 71]. A company with a debit balance in its ICA that leaves a group that has a loss balance carried forward in excess of $1,000,000, may elect that an amount (not more than the debit balance) be a debit in the ICA of a company [s OB 44] that remains a member of the wholly-owned group that the company concerned left. The debit will give rise to this corresponding credit. The credit arises on the day the company stops being a part of the wholly-owned group [s OB 13].

Additional tax payable when company leaves a wholly-owned group: The imputation additional tax that is paid under s OB 71(6) gives rise to an ICA credit on the date of payment. This provision is also to prevent imputation credit shopping [see 670.70 and ss OB 14, OB 71].

Additional income tax when company joins wholly-owned group: The imputation additional tax that is paid under s OB 72(7) gives rise to an ICA credit on the date of payment. This provision is also to prevent imputation credit shopping [ss OB 15, OB 72].

Attribution of personal services if company is not a qualifying company: An ICA arises on 31 March for an amount equal to 42.86 per cent of the amount attributed under s GB 29 (the attribution rules) [see 740.33]. No credit arises if the company is a qualifying company [s OB 16].

Transfer from PCA: A credit arises on the day the amount is transferred [see 800.50] equal to the amount of the debit under s OJ 9 for the transfer of a credit from the PCA to the ICA [s OB 17].

Transfer from available subscribed capital (ASC) account: A credit arises for the transfer from the ASC account under subpart OF on the date of transfer [s OB 18]. The ASC rules were introduced to overcome “negative dividend” issues arising in the managed funds industry.

Transfer to master fund: A credit arises on 31 March for the transfer of an amount to a master fund equal to 30 per cent of the amount of expenditure transferred in accordance with ss DV 5 to DV 7 [s OB 19].

Maori authority credit attached to distribution received by company: A credit arises on the day the distribution is paid for the amount of a Maori authority credit attached to a distribution received [s OB 20].

Transfer of balance of Maori authority tax credit: A credit arises when a company ceases maintaining a Maori authority credit account for the amount of the credit balance in the Maori authority credit account. The credit arises on the date on which the account is closed [s OB 21].

Replacement money paid under a share-lending arrangement: A credit arises for an imputation credit attached under s OB 64 to a replacement payment made by a share user under a share-lending arrangement, or treated as attached under s RE 25 to a replacement payment paid to the company under a share-lending arrangement [see 1340.90]. The credit arises on the date the replacement payment is made [s OB 22].

Imputation credit shown in credit transfer notice: A credit arises on the date the notice is given for the amount of an imputation credit shown in a credit transfer notice given to the company [see 1340.90, s OB 23].

Imputation credit, FDP credit, or policy holder credit on resident’s restricted amalgamation: A credit arises on or after a resident’s restricted amalgamation in the ICA of an amalgamated company when ss OA 10 to OA 17 apply [s OB 24].
Reversal of debit for tax advantage arrangement: A credit arises for the amount of a debit in the company’s ICA under s OB 54 (which relates to debits arising for imputation credits determined to have been subject to an arrangement to obtain a tax advantage arrangement) when it is established that an imputation credit in a company’s ICA was incorrectly determined to be the subject of an arrangement to obtain a tax advantage [see 670.115]. The credit arises on the date the debit was made under s OB 54 [s OB 25].

Eliminating debit for loss of shareholder continuity cancelling tax pooling account deposit that is refunded or credited: This credit arises to eliminate what would otherwise be a double debit when there is a shareholder continuity debit under s OB 41, and after the shareholder continuity debit, a further debit arises under s OB 34 for a refund of an amount by an intermediary from a tax pooling account or the deposit is transferred to the tax account of the taxpayer a client of the tax pooling intermediary under s RP 19. The double debit is eliminated by crediting the ICA with a credit equal to the amount of the shareholder continuity debit. The credit arises on the day the deposit is refunded, or when the credit for the tax transferred from the tax pool arises in the company’s ICA [s OB 26].

Amount of tax withheld from Australian ICA company for non-resident passive income: An Australian ICA company has an imputation credit for an amount of tax withheld by the payer of the non-resident passive income. The credit arises on the date that the tax is withheld [s OB 27].

Amount of tax withheld from schedular payment to Australian ICA company: An Australian ICA company has an imputation credit for an amount of tax payable on a scheduler payment paid to the company as a non-resident contractor. The credit arises on the date that the tax is withheld [s OB 28].

Schedular income tax paid by Australian ICA company: An Australian ICA company has an imputation credit for a payment of income tax relating to the company’s schedular income tax liability for income arising under ss CR 3, CV 16 and CV 17 (which relate to non-resident insurers, shipper and film renters respectively). The credit arises on the date the schedular income tax is paid [s OB 29].

Note: A provision existed in s ME 4(1)(b) of the ITA 2004 to ensure imputation credits arose for overpaid provisional tax by another company in the same wholly-owned group of companies that the other company has elected, under s RC 32, to allocate to the company to cover its underpaid provisional tax. This provision seems to have been missed from the ITA 2007.

Debits to the ICA [Table O2]

Table O2, like Table O1, features in the ITA 2007 between subparts OB and OC and follows Table O1. Each of the following transactions refers to an explanation of the imputation debits that shall be stated in the ICA, and the date when the entry should be made. The row numbers are the same as those stated in Table O2 of the legislation.

1. **Opening debit balance**: The opening debit balance is the previous year’s closing balance if that was a debit balance. The ICA rules refresh this debit on first day of the tax year (ie 1 April irrespective of the balance date for the company) [s OA 7].

2. **Imputation credit attached to dividend paid**: A debit arises for the amount of imputation credit attached to a dividend paid by the company. The debit arises on the date the dividend is paid [s OB 30].

3. **Allocation of provisional tax**: A debit arises for any provisional tax that the company has overpaid and then elects, under s RC 32 to allocate to another company in the same wholly-owned group of companies, to cover the latter company’s underpaid provisional tax. The debit arises on the date that notice in writing of the allocation is supplied to the CIR [s OB 31].

4. **Refund of income tax**: A debit arises for income tax refunded to the company (for tax paid as from 1988-1989), except to the extent that:
(a) The tax paid was for an income year when the company was not an ICA company (with apportionment applying where it was an ICA company for part of a year); or

(b) A debit has already arisen in the ICA through a breach of shareholder continuity requirements after the original date that the tax was paid. This is to prevent double debiting of the ICA for the same amount of tax paid. If, however, the refund arises under the provisions of paying supplementary dividends to non-resident investors, then the supplementary dividend must have been paid before the debit for the breach of shareholding continuity arose. This ensures that no double debit to the ICA will occur when there is a breach of shareholder continuity between the payment of a supplementary dividend and the receipt by the company of a related refund of foreign investor tax credit.

The debit to the ICA for tax refunded arises on the date the refund is paid [s OB 32].

5 Overpaid income tax applied to meet another tax liability: A debit arises for overpaid income tax that the CIR applies to satisfy some other tax liability of the company (ie GST). If there has subsequently been a breach of shareholder continuity that has given rise to an ICA debit, then the debit is limited to the amount that overpayment applied to the other tax liability exceeds the loss of continuity ICA debit (thus preventing double debiting). The debit arises on the date that the amount is applied [s OB 33].

6 Refund from tax pooling account: A debit arises where there is a refund of an amount held by an intermediary from funds in a tax pooling account for which the company has received an imputation credit. The debit arises on the day the refund is made [s OB 34].

7 Transfer of entitlement to another person in tax pooling account: A debit arises where there is a transfer of an amount held by an intermediary from funds in a tax pooling account for which the company has received an imputation credit. Where the refund is for a qualifying company, the debit arises on the date of the refund. In all other cases the debit arises:

(a) On the last day of the previous tax year to the extent to which the debit does not exceed the credit balance of the account on that day;

(b) On the date on which the refund is made to the extent to which it exceeds the amount in item (a) above, but does not exceed the credit balance of the account on that day;

(c) On the last day of the previous tax year for the remainder of the debit [s OB 35].

8 Refund of FDP when not FDPA company: A debit arises for a refund of a FDP paid to the company at a time when it does not maintain a foreign dividend payment account. The debit arises on the date the refund is paid [s OB 36].

9 Refund of tax credit: The debit arises on the day of the refund [s OB 37].

10 Overpaid FDP applied to satisfy liability when not FDPA company: A debit arises when overpaid FDP is applied to pay amounts due under the Inland Revenue Acts when the company does not maintain a FDPA. The debit arises on the date the amount is applied [s OB 38].

11 Overpaid income tax or FDP applied to satisfy pre-imputation income tax when not an FDPA company: The debit arises on the day of application [s OZ 3].

12 Transfer to FDP account on account of net foreign attributed income for income year: Transfer to FDP account on account of net foreign attributed income for income year A debit arises under the CTR rules [see 215.10] if the company maintains a FDPA for an amount that is transferred to the FDPA on account of its income tax liability on any foreign attributed income for its income year that corresponds with the tax year. The amount transferred to the FDPA depends on whether the company is also a CTR company for the corresponding tax year. The company must apply either of two methods in order to calculate the amount to be transferred. If neither method can be applied, then no transfer arises under these provisions. Method 1 applies when the company is an FDPA company and a CTR company for all of the tax year. Under this method, the company must apply ss LQ 1 to LQ 4 (which relate to credits for conduit tax relief) as if:
(a) The amount transferred were CTR for the tax year;
(b) The percentage of resident shareholders were substituted for the item percentage of shareholders in s LQ 1 and LQ 2(2); and
(c) The percentage of resident shareholders were calculated by subtracting the item percentage of shareholders from 100 per cent.

Method 2 applies when the company is not both a FDPA company and a CTR company for all of the tax year. Under this method the company must make the calculation under ss LQ 1 and LQ 2 as if the company were a CTR company and the item percentage of shareholders were 100 per cent. The debit to the ICA arises on the last day of that tax year, to the extent that it does not exceed the amount of provisional tax paid prior to 31 March tax-year end for that income year. Any excess above that amount is debited to the ICA on the date that the company files its income tax return for that income year [s OB 39].

13 Attribution for personal service: A debit arises for the amount of a credit arising under s OB 16 if the company’s financial statements are adjusted to reflect an amount attributed in accordance with s GB 29 [see 740.33, s OB 40]. The debit arises on 31 March.

14 Debit for loss of shareholder continuity: Any credits existing in the ICA (and not cancelled by a prior or subsequent debit) at any time where there is a breach of shareholder continuity [see 670.75]. The debit occurs at the time the breach of shareholder continuity occurs [s OB 41].

15 Debit for on-market cancellation: A debit arises where the company repurchases its shares in an on-market acquisition [see 270.35], and the distribution to the shareholder exceeds the available subscribed capital per share cancelled. The debit is calculated by applying the tax rate applicable to dividends (on a “grossed up” basis) to the amount of the excess distribution. The formula is:

\[ \text{ASC per share excess} \times \frac{\text{tax rate}}{1 - \text{tax rate}} \]

Where:

“ASC per share excess” is the amount distributed on the on-market cancellation that is more than the amount of the available subscribed capital per share calculated under the ordering rule.

“Tax rate” is the basic rate of income tax for companies for the tax year in which the acquisition occurs.

The debit arises on the date that the share acquisition occurs.

Note: A deemed on-market acquisition by the company will arise where shares are acquired by an associated person of the company, under an arrangement for that associated person to acquire the shares in lieu of the company. There is a requirement that the acquisition would have been an on-market transaction if the company had been the acquirer [s OB 42].

16 Debit for breach of imputation ratio: An allocation debit arises when the imputation ratio of a subsequent dividend differs from that of the benchmark dividend [see 670.45]. The debit arises at the end of the tax year for which the allocation debit arises [s OB 43].

17 Transfer for debit balance when company leaves wholly-owned group: Day on which company leaves group [s OB 44].

18 Redemption debit for unit trust or group investment fund for income year: A special imputation debit may arise to the ICA of a unit trust manager or the trustee or manager of a group investment fund (GIF). The debit arises where this manager or trustee derives a dividend on redeeming units purchased from investors in the ordinary course of the activities. The debit is effectively an amount equal to the greater of the total imputation and FDP credits attached to the dividend or the amount of income tax liability of the manager or trustee that is attributable to the dividend. The provision also applies for a consolidated group of which the manager is a member [see TIB vol 7:9 (February 1996) at 7, s OB 45].

19 Transfer from member fund to master fund: A debit arises for expenditure transferred by the company, being a member fund, to a master fund under ss DV 5 to DV 7. The debit is calculated as the amount
of expenditure transferred multiplied by the company tax rate and arises on 31 March corresponding to the income year in which the expenditure is transferred [s OB 46].

Transfer to company’s PCA: A debit arises for the amount of the credit balance in a life insurance company’s ICA that the company elects to credit to its PCA. The debit to the ICA and credit to the PCA arise on the date that the company elects by recording the entries in these memorandum accounts [s OB 47].

Credit balance when Maori authority credit account starts: A debit arises equal to the amount of the credit balance of the ICA if, during the tax year, the company establishes a Maori authority credit account. The debit arises immediately before the company becomes a Maori authority [s OB 48].

Credit attached to replacement payment paid by company under share-lending arrangement: A debit arises for the amount of an imputation debit attached under s OB 64 to a replacement under a share-lending arrangement. The debit arises on the day of payment [s OB 49].

Credit attached to dividend paid to company shown in returning share transfer: A debit arises for the amount attached to a dividend that is paid to the company as a share user in a returning share transfer that is not a share-lending arrangement. The debit arises on the day of payment [s OB 50].

Credit attached to dividend paid to company shown in credit transfer notice: A debit arises for the amount attached to a dividend that is paid to the company if the credit is shown in a credit transfer notice issued by the company. The debit arises on the day the dividend is paid [s OB 51].

Credit that is also credit to ICA of consolidated imputation group: Credit date for imputation credit [s OB 52].

Imputation debit, FDP debit, or policyholder debit in account of amalgamating company: Debit date in account of amalgamating company [s OB 53].

Debit for tax advantage arrangement: A debit may be imposed where under the anti-avoidance provision of s GB 36 there is an arrangement to obtain a tax advantage [see 670.115]. The debit arises at the end of the tax year in which the tax advantage arrangement occurred or commenced [s OB 54].

Retrospective attachment of imputation credit to non-cash dividend: Day of payment of dividend [s OB 55].

Final balance when ICA company status ends: A debit arises for any credit balance in the ICA when the company ceases to be an ICA company (eg on ceasing to meet the residency requirements, or on winding up). The debit arises immediately before the company ceases to be an ICA company, so that any credit balance in the ICA is extinguished at that time [s OB 56].

Refund of amount of tax for non-resident passive income to Australian ICA company: Day of refund [s OB 57].

Refund of amount of tax for schedular payment to Australian ICA company: Day of refund [s OB 58].

Refund of schedular income tax to Australian ICA company: Day of refund [s OB 59].

670.40 Attaching imputation credits to dividends [ss OB 60, OB 61, OB 62, OB 63, OB 64]

An imputation credit account (ICA) company is authorised to attach an imputation credit to a dividend, should it choose to do so, on payment of the dividend [s OB 60]. If it does so, the total of the dividend paid plus the attached imputation credit will be included in the income of the shareholder [see 670.50]. The company is free to determine the amount of imputation credit attached, provided the allocation rules as to maximum permissible credits and benchmark dividends are adhered to [see 670.45].

As the company must attach the imputation credit at the time the dividend is paid, it is suggested that a statement to this effect should be included in the company’s resolution to pay the dividend.
An exception to this timing rule, is that imputation credits can be attached retrospectively to a non-cash dividend in circumstances where the arrangement giving rise to that dividend has been subject to a transfer pricing adjustment [see 1000.70] under s GC 7. If the company does so, the debit to the ICA arises on the date of payment of the non-cash dividend. The maximum amount of retrospective credit attachments is limited, in that the aggregate imputation credits so debited must not cause an ICA debit balance to arise at 31 March in any tax year from the year of payment of the dividend up to the year immediately prior to that in which the retrospective attachment is made. However, when extra income tax is paid by the company as a result of the transfer pricing adjustment, the company can also utilise part or all of that extra income tax (on written notification to the CIR) to retrospectively attach imputation credits to the prior year’s non-cash dividend. In this case, that income tax is treated for ICA purposes as having been paid at the time of the non-cash dividend [s OB 62]. TIB vol 7:11 (March 1996) at 9 contains a practical example of this rule. For the compliance procedures regarding the preparation of company and shareholder dividend statements and notification to the CIR, see 670.60.

Imputation credits may also be attached retrospectively where the company is emigrating and is treated as having made a distribution to its shareholders [see 170.65]. Tax paid that is attributable to the deemed disposal of property is treated as being paid immediately before migration thereby making it available for attaching to the deemed distribution to shareholders.

The ICA does not have to be in credit at the time a debit arises for imputation credits attached to dividends. This means the company can anticipate payments of provisional tax or income tax that will be made after that date. However, if a debit balance remains at the 31 March end of the tax year, further income tax [see 670.95] and penalties [see 670.100] will apply.

Any dividend that arises for income tax purposes (subject to the non-cash dividend rules noted below) can have imputation credits attached to it at the time it is paid (or deemed to be paid). However, exceptions exist for any dividend that is:

(a) Deemed to arise under s GB 23 from excessive remuneration paid by a company to a relative of a director or shareholder;
(b) Deemed to arise under s GB 25 from excessive remuneration paid by a close company to a shareholder or director or relative of any such person; or
(c) Deemed to arise under the proviso to s CB 34 when a mutual association pays a rebate in excess of the amount for which a deduction is allowed.

(1) **Non-cash dividends**

Non-cash benefits provided to shareholders who are also employees of the company are generally excluded from being dividends and subject instead to fringe benefit tax (FBT) [ss CD 32, CX 17]. However, s CD 20 provides for the employer company to elect, by notice in writing to the CIR within the time allowed for filing the FBT return, that benefits falling within “unclassified benefit” under s CX 37 will be treated instead as being a dividend.

Accordingly, imputation credits may be able to be attached to both cash and non-cash dividends generally. The rules for determining the amount of non-cash dividends, and the time at which they arise for imputation credit attachment purposes, are set out in s CD 39 [see 270 DIVIDENDS].

### 670.45 Allocation rules and benchmark dividend

[ss OA 18, OB 43, OB 61]

(1) **Allocation rules**

There are two allocation rules to prevent imputation credits from being directed to shareholders on an inappropriate basis. They place restrictions on the imputation ratio of a dividend (ie the ratio of the amount of attached imputation credit to the amount of dividend paid — exclusive of the imputation credit or any foreign dividend payment (FDP) credit).

The first allocation rule restricts the maximum amount of imputation credit that can be attached. It requires that the imputation ratio of the dividend cannot exceed the following fraction:
tax rate / (1 – tax rate)
Where “tax rate” is the basic rate of income tax for companies, expressed as a percentage, for the income year.
Therefore, the maximum imputation ratio is 30/70 or approximately 42.86 per cent.
This rule prevents imputation credits from being attached to dividends in excess of the maximum income tax payable on the dividends.

Example:
A company resolves to pay a dividend of $700 and to attach an imputation credit. The maximum imputation credit that can be attached is $300, calculated as 30/70 × $700, and doing so would result in a total distribution for tax purposes of $700 + $300 = $1,000 to the shareholders. However, the company could instead attach any amount of imputation credit, not exceeding $330 under the transitional rules that applied when the tax rate was dropped to 30 per cent. The transitional rules allowed old 33 per cent imputation credits to be used until 31 March 2010.

Where the imputation ratio of a dividend exceeds the 30/70 maximum, the excess amount of imputation credits attached is not allowed as a credit of tax and is excluded from the amount of dividend derived [see 670.55]. However, the full amount of imputation credits attached is still debited to the company’s imputation credit account (ICA), so that the excess amount is effectively forfeited.

The second allocation rule is aimed at preventing the “streaming” or unequal allocation of imputation credits to different shareholders or different classes of shareholders (not all of whom may be able to utilise the tax credits) during a tax year. It requires that the imputation ratio of every subsequent dividend paid by the company during a tax year must be the same as the imputation ratio of the “benchmark dividend”, unless the company has supplied a ratio change declaration, in the prescribed form, to the CIR.

(2) Benchmark dividend
The benchmark dividend for a tax year is the first dividend paid by the company in that tax year. If the company becomes an ICA company during a tax year, it is the first dividend paid while the company is an ICA company [s OB 61(3)].
If the imputation ratio of the benchmark dividend exceeds the maximum permissible figure in breach of the first allocation rule above, the benchmark dividend’s ratio for the purposes of the second allocation rule is deemed to be the maximum permissible (ie 30/70).
The imputation ratio of a dividend paid subsequent to the benchmark dividend in a tax year can differ from that of the benchmark dividend if:
(a) A ratio change declaration is filed with Inland Revenue before the date of payment of the subsequent dividend, or before such later date as the CIR may allow; and
(b) The subsequent dividend is not paid as part of an arrangement to obtain a tax advantage [see 670.115].
The ratio change declaration requires an officer of the company to declare, in the prescribed form, that the subsequent dividend is not being paid as part of an arrangement to obtain a tax advantage, and to provide such further information as is prescribed.

Note: Any non-cash dividends paid will have benchmark dividend implications [see 670.40]. These are generally deemed to be paid to the shareholder once a year on the earlier of six months after the end of the company’s income year or the date of any notification to the shareholder of the amount of the dividend [see 270 DIVIDENDS].

(3) Allocation debit
If the second allocation rule is breached (ie where the required ratio change declaration is not filed, or the subsequent dividend paid is part of an arrangement to obtain a tax advantage), an allocation debit arises to the ICA, calculated as follows:

\[(\text{net dividends} \times \text{imputation ration}) - \text{attached credits}\]

Where:
“Net dividends” is the total of all dividends paid during the tax year exclusive of any imputation credits or FDP credits attached;

“Imputation ratio” is the maximum permitted ratio calculation (as above) not exceeding 30/70 or if less, the greatest imputation ratio of dividends paid by the company for the tax year;

“Attached credits” is the total of all imputation credits attached to dividends paid during the tax year.

The allocation debit is effectively the difference between the total amount of imputation credits actually attached to dividends paid during the income year, and the total amount of imputation credits that would have been attached if all such dividends had imputation ratios equal to the highest imputation ratio (not exceeding 30/70) that was actually adopted.

Example:
An ICA company pays the following dividends:

<table>
<thead>
<tr>
<th>Date</th>
<th>Amount</th>
<th>Imputation Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>9 July</td>
<td>$10,000</td>
<td>$3,000</td>
</tr>
<tr>
<td>9 January</td>
<td>$10,000</td>
<td>$3,000</td>
</tr>
<tr>
<td>15 March</td>
<td>$20,000</td>
<td>$7,760</td>
</tr>
</tbody>
</table>

The imputation ratio (7,760/20,000, or 38.8 per cent) of the subsequent 15 March dividend differs from that of the 9 July benchmark dividend. No ratio change declaration was filed. The allocation debit arising is: $(40,000 \times 0.388) - $13,760 = $1,760.

The allocation debit to the ICA rises at 31 March year end, so that it might cause an ICA debit year end balance to arise with consequential further income tax and penalties [see 670.95].

These allocation rules do not apply to statutory producer boards and co-operative companies [see 670.85 and 670.90].

(4) Modifications to the allocation rules

The first allocation rule is modified when the company maintains both an ICA and a foreign dividend payment account (FDPA), and attaches both imputation credits and FDP credits to dividends paid. In this case, the rule is that the combined imputation and FDP ratio of the dividend cannot exceed 30/70 [see 670.175].

The allocation rules are also further modified in the case of a conduit tax relief (CTR) company [see 670.175].

Special allocation rules apply to qualifying companies. Under s HA 15 qualifying companies are generally required to attach imputation or FDP credits to dividends to the maximum extent possible [see 1160.70].

670.50 Shareholder income and tax credits [ss CD 15, LE 10, LE 11, OC 1(5); TAA, s 78D]

As a general rule, the amount of dividend included in income derived by a resident taxpayer includes not only the amount of dividend paid, but also the amount of any imputation credit (or foreign dividend payment (FDP) credit [see 670.180] attached to the dividend [s CD 15]. The taxpayer is entitled to a credit of tax for the amount of imputation credit included in income [s LE 1]. However, this general rule is modified by the various provisions, which limit in particular circumstances the amount of imputation credit that applies for both income and tax credit purposes [see 670.55].

To obtain the tax credit, the taxpayer may furnish the shareholder dividend statement [see 670.60] or other written evidence of the imputation credit [s LE 11; TAA, s 78D]. However, Inland Revenue does not require the statement to be supplied unless there is doubt about the credit claimed. The tax credit is credited against the income tax liability of the resident taxpayer for that income year, so that any amount of imputation credit in excess of the tax liability on the dividend (eg for an individual taxpayer) is effectively offset against the tax liability on the taxpayer’s other income.

Where the taxpayer is a company (as defined in s YA 1), a trustee (other than the Maori Trustee), a Maori Authority or where the dividend is Category A income of a group investment fund, any surplus tax credit is not refundable [s IA 2(4)(a)], but instead is converted into a tax loss that is available:
Imputation

(a) To be carried forward as an available net loss to a later income year (subject, if the taxpayer is a company, to the continuity provisions that apply to changes in company shareholding); or

(b) If the taxpayer is a company, to be offset against the net income in the same income year of another company in the same group of companies (provided the requirements for grouping of losses are met [see 940 LOSSES].

The amount of the deemed net loss is calculated by dividing the amount of surplus tax credit by a percentage, depending on the nature of the taxpayer, as follows:

(a) The basic rate of income tax for companies, where the taxpayer is a company; or

(b) The rate of tax applicable to category A income of a group investment fund (GIF), for category A income of a group investment fund;

(c) The basic rate of income tax for trustees, where the taxpayer is a trustee other than the Maori Trustee; or

(d) The basic rate of income tax for Maori authorities, where the taxpayer is a Maori authority.

The above loss conversion rates are contained in sch 1, Part A [see 1190.20, 1190.30, 1190.35].

Where the taxpayer is an individual or incorporated body, any excess imputation credits received in the 2005-2006 and later income years are carried forward to the next income year. Credits received in income years prior to the 2005-2006 income year were converted to a loss by dividing the excess credit by 21 per cent.

No claim for a credit of tax [s LE 10] is allowed where:

(a) It would be inappropriate for the credit to be allowed, in whole or in part, because the company that issued the imputation credit has paid insufficient income tax or further income tax for it. In this case, the claim for the tax credit is disallowed to the extent that the CIR considers appropriate. However, the disallowance is to be reversed where sufficient income tax or further income tax has subsequently been paid by the company.

(b) The CIR is satisfied that the credit of tax claimed exceeds the proper amount (eg if it has been miscalculated, or exceeds the maximum imputation credit permissible), in which case the excess amount claimed is not allowed.

Where a credit of tax has been allowed by the CIR in excess of the proper amount, the CIR can recover the amount of excess as if it were income tax payable by the taxpayer [TAA, s 165A].

Credits of tax for imputation credits attached to dividends are limited to such imputation credits arising under the New Zealand imputation regime for companies, and so do not apply to dividends from Australian companies with imputation credits attached under Australia’s imputation regime [see 760 INCOME FROM NEW ZEALAND AND FOREIGN SOURCES], for the implications of such dividends and credits for foreign taxes paid.

However, imputation credits attached to dividends from Australian companies under the trans-Tasman triangular rules [see 670.375] are allowed as credits in New Zealand. If the interest in the Australian company is an attributing interest in a FIF, the imputation credit is treated as assessable income for the purposes of determining the taxpayer’s entitlement to the credit, despite the fact that under s EX 59 the dividend to which the credit is attached is assessed under the FIF rules and not assessed separately. In other words, the dividend is treated as separately assessable for determining the taxpayers eligibility to the credit.

For a non-resident taxpayer, imputation credits attached to dividends paid limit the rate of non-resident withholding tax (NRWT) otherwise applicable (subject to the operation of the provisions of any double tax agreement), or eliminate NRWT liability in the case of fully imputed non-cash dividends [see 1020.42]. See 1010 NON-RESIDENT INVESTORS for the subpart LP foreign investor tax credit provisions that apply to non-resident investors.
670.55  **Limits on amount of shareholder tax credit** [ss LE 4, LE 5, LE 6, LF 2, LF 3, LF 4]

Various rules determine or limit, in particular circumstances, the amount of imputation credit or foreign dividend payment (FDP) credit that is treated as being attached to a dividend. Where these provisions apply, the amount so calculated is substituted for the actual amount of imputation credit attached, in determining the amount of the dividend to be included as income and the imputation or FDP tax credits available.

(1) **Beneficiaries of trusts**

Trust beneficiaries who derive, as beneficiary income, dividends with imputation credits attached (except for category A income from a group investment fund), have the amount of imputation credit calculated under the following formula:

\[
\text{(person’s distributions / trust distributions)} \times \text{total beneficiary credits} - \text{person’s supplementary dividend}
\]

Where:

“Person’s distributions” is the total of all distributions (whether income or capital, and whether or not assessable to the beneficiary) made to the beneficiary in the income year;

“Trust distributions” is the total of all distributions as above made to all beneficiaries of the trust in the income year (including supplementary dividends);

“Total beneficiary credits” is the total of all imputation credits attached to all dividends and total supplementary dividends paid to beneficiaries in the income year;

“Person’s supplementary dividend” is the total supplementary dividends for the tax year paid to the person in their capacity as beneficiary of the trust.

The formula effectively pro-rates total imputation credits attached to dividends paid to beneficiaries, according to each beneficiary’s share of any distributions from the trust in that income year. All types of distribution are to be taken into account for this purpose. A similar formula pro-rates FDP credits. The rule is aimed at preventing the “streaming” of dividends with credits attached to beneficiaries best placed to utilise those credits (eg New Zealand residents as opposed to non-residents).

**Note:** The formula does not apply to a beneficiary who derives dividends from the trust that do not have either imputation credits or FDP credits attached. However, distributions to that beneficiary are to be taken into account in the calculation of “trust distributions” in the above formula, when applying the formula to other beneficiaries.

The application of the formula can reduce the total amount of imputation or FDP credits allocated to beneficiaries for income tax purposes, as shown in the example below.

**Example:**

During the income year, a trust makes the following distributions:

(a) To beneficiary A: dividends of $15,000 with $4,500 of imputation credits attached
(b) To beneficiary B: capital of $4,000, and dividends of $6,000 with $1,800 of imputation credits attached
(c) To beneficiary C: capital of $5,000.

The total of all distributions made is $30,000, and the total of all imputation credits attached to dividends distributed is $6,300.

The amounts of imputation credit to be included in income and credits of tax available for each beneficiary, applying the formula above, are as follows:

<table>
<thead>
<tr>
<th>Beneficiary</th>
<th>Formula</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>15,000/30,000 × 6,300</td>
<td>$3,150</td>
</tr>
<tr>
<td>B</td>
<td>10,000/30,000 × 6,300</td>
<td>$2,100</td>
</tr>
<tr>
<td>C</td>
<td>Nil</td>
<td></td>
</tr>
</tbody>
</table>

Accordingly an amount of $1,050 of total imputation credits attached to the dividends is effectively lost.

The formula above is modified where a non-resident beneficiary receives from the trust a supplementary dividend under the foreign investor tax credit provisions of subpart LP [see 1010.30]. In such a case, the “total beneficiary credits” in the formula includes the amount of all supplementary dividends distributed from...
the trust to beneficiaries during the income year. The amount of imputation credit calculated for each such non-resident beneficiary is then reduced by the amount of the supplementary dividend.

In certain circumstances, a distribution to a beneficiary who is a minor is treated as taxable to the trustee rather than to the minor [see 1420.60]. Where this is the case, any credit allocated to the minor as a result of the above formula is deemed to be income of, and allowable as a credit to, the trustee.

(2) **Partners**

The amount of imputation credit for a partner of a partnership who, as a partner, derives dividends with imputation credits attached, is calculated under the following formula:

\[
\text{Partner's income / partnership income} \times \text{partnership imputation credits} - \text{partner's supplementary dividend}
\]

Where:

- “Partner’s income” is the total assessable income of the partner from the partnership for the income year excluding the imputation and FDP credits (and also excluding any supplementary dividend if the partner is a non-resident);
- “Partnership income” is the total assessable income of the partnership for the income year excluding the imputation and FDP credits and any supplementary dividends;
- “Partnership imputation credits” is the total of all imputation and supplementary credits attached to dividends derived by all partners of the partnership in the income year;
- “Partner’s supplementary dividend” is the total supplementary dividends for the tax year derived by the person as a non-resident partner.

This formula also effectively pro-rates credits among partners according to each partner’s share of partnership income. Non-resident partners have the credits allocated to them reduced under this formula by the amount of supplementary dividends derived. A similar formula is used to pro-rate the FDP credits derived by a partnership.

(3) **Other rules**

Other rules limiting the credits are as follows:

(a) If a dividend has an imputation ratio greater than the 30/70 maximum permitted, the imputation credit is limited to the maximum permissible amount [see 670.45];

(b) If a dividend has a FDP ratio [see 670.175] greater than the 33/67 maximum permitted, the FDP credit is limited to the maximum permissible amount;

(c) If a dividend has a combined imputation and FDP ratio greater than the 30/70 maximum permitted, the amounts of the imputation and FDP credits are reduced in the following way. The FDP credit is first reduced, as far as it extends, by the amount of the excess credit amount [see 670.175]. If there is still any remaining excess credit amount, the imputation credit is correspondingly reduced. This rule means that (potentially refundable) FDP credits are lost first;

(d) If the CIR has not fully allowed an imputation credit or a dividend withholding credit because a shareholder dividend statement or other written evidence has not been provided, or because the CIR considers that insufficient income tax or further income tax supporting the credit has been paid by the company, or that the credit claimed exceeds the proper amount, the amounts of each of these credits are the amounts (if any) allowed by the CIR;

(e) Where the dividend arises from a “stapled stock” arrangement subject to the anti-avoidance provision s GB 37 [see 670.110], the amount of any imputation credit attached is nil;

(f) Where an imputation credit or FDP credit arises under an arrangement that the CIR determines is an arrangement to obtain a tax advantage subject to the anti-avoidance provision ss GB 35, GB 36; TAA, s 90AF [see 670.115], the amount of the credit is the amount (if any) that remains after the CIR has made a determination reducing the credit by the amount that the CIR considers is the subject of the arrangement.
670.60  **Dividend statements** [TAA, ss 29, 30, 67, 68]

(1)  **Shareholder dividend statement**

A company that pays a dividend with an imputation credit or foreign dividend payment (FDP) credit or conduit tax relief (CTR) credit attached (or from which resident withholding tax (RWT) has been deducted) must, at the time of payment, give the shareholder a statement in a form approved by the CIR which shows:

(a)  The name of the company;

(b)  The date of payment of the dividend;

(c)  The name and address of the shareholder;

(d)  The amount, if any, of RWT deducted;

(e)  The amount, if any, of non-resident withholding tax (NRWT) deducted;

(f)  The amount of dividend actually paid;

(g)  The amount of any imputation credit attached;

(h)  The aggregate of the dividend paid and imputation credit attached;

(i)  If a FDP credit is attached to the dividend:

  (i)  The amount of the FDP credit;

  (ii) The aggregate of the dividend paid and the sum of the imputation and FDP credits;

  (iii) The aggregate of the imputation and FDP credits; and

(j)  Such other information as the CIR may require.

If a CTR credit [see 215.65] is attached to the dividend, the statement must also include [TAA, s 30A]:

(a)  The amount of the CTR credit;

(b)  The amount of the s LQ 5 additional dividend [see 215.30]; and

(c)  The aggregate of the dividend paid and the CTR additional dividend paid.

Where a company has emigrated and is deemed under subpart FL to have made a distribution to shareholders [see 170.65], the statement must be provided to shareholders within three months following the date of migration.

The statement is deemed to have been given to the shareholder when it is given personally to either the shareholder or a person authorised to act on the shareholder’s behalf, or posted to the usual or last known place of abode or business of the shareholder or that authorised person.

(2)  **Company dividend statement**

At the time that it declares a dividend (whether or not imputation or FDP credits are to be attached), an ICA company must complete and retain a company dividend statement, in a form approved by the CIR, which shows:

(a)  The number of shares for which the dividend is declared (or, if it is a bonus issue, included in the bonus issue);

(b)  The date the dividend is declared, and the payment date;

(c)  The total dividend amount payable (or, in the case of a bonus issue, the amount for tax purposes of the bonus issue);

(d)  The total amount of imputation credits attached (this amount must be shown as nil if no imputation credits are attached);

(e)  The imputation ratio of the dividend;

(f)  If the dividend was paid in Australian currency by an Australian imputation credit account company, the exchange rate used to calculate the imputation ratio; and

(g)  Such other information as the CIR may require.
If the company attaches a FDP credit to a dividend, the company dividend statement also must include the following:

(a) The total amount of FDP credits attached;
(b) The FDP ratio of the dividend; and
(c) The combined imputation and FDP ratio of the dividend, if imputation credits are also attached.

If a CTR credit is attached to the dividend, the statement must further include [TAA, s 68A]:

(a) The amount of the s LQ 5 additional dividend paid;
(b) The FDP ratio of the dividend calculated as if the CTR credit was a FDP credit; and
(c) If an imputation credit is also attached to the dividend, the combined imputation and FDP ratio of the dividend calculated as if the CTR credit was a FDP credit.

Company dividend statements must be filed with the CIR within the period allowed for filing the company’s income tax return for the income year of the company that corresponds to the tax year in which a dividend was declared.

Qualifying companies have special shareholder and company dividend statement requirements [see 1160.65].

**670.65 Annual and other imputation returns** [TAA, ss 69, 70]

An imputation credit account (ICA) company must file an annual imputation return in the prescribed form, following the end of each tax year and within the period allowed for filing the company’s income tax return for the corresponding tax year. This will normally be done as part of the company’s income tax return.

The return must show the opening and closing balances of the ICA for the tax year, the amount and source of all debits and credits to the ICA for the year, and any amounts of further income tax or imputation penalty tax payable, and such other information as the CIR may prescribe.

If the company is a branch equivalent tax account (BETA) company [see 670.290], the return must show the opening and closing balances and the amount and source of all debits and credits to the BETA for the tax year. If the company is a policyholder credit account (PCA) company [see 800.40], corresponding details for the PCA must be shown. A conduit tax relief (CTR) company must provide corresponding details of the entries for the tax year to its CTR account [TAA, s 69(1)(ea), see 215.50 to 215.60]. For annual return requirements for FDPA companies [see 670.190].

Qualifying unit trusts and group investment funds that derive category A income must show the opening and closing balances of the trust’s supplementary available subscribed capital account for the tax year and the amount and source of all credits and debits that have arisen in the trust’s or fund’s supplementary available subscribed capital account [see 1450.65].

If the company is a qualifying unit trust or a group investment fund that derives category A income, the opening and closing balances of the supplementary available subscribed capital account, along with all debits and credits arising to that account in accordance with ss OF 4 and OF 5 must be disclosed.

Other circumstances in which an imputation return is to be furnished [under s 70 of the TAA] are:

(a) As and when required by the CIR for any specified period (eg if Inland Revenue considers that ICA entries may be incorrect).

(b) Where the company ceases to be an ICA company (eg on liquidation), in which case it must furnish a return within two months of the cessation date, for the period from the start of the tax year and ending on the cessation date.

(c) An ICA company can choose to file a return for a period from the first day of a tax year up to a date within that tax year specified by the company. The company must file such a return within seven days of the date specified. The reason for doing this would normally be to establish the ICA balance at the specified date for tax refund purposes [see 670.70].
**670.70**  **Limits on refunds to company of income tax**  [ss LA 6, LA 7, LA 8, RM 13, RM 14, RM 15, RM 16, RM 17]

(1) **General position**

Rules that authorise the CIR to refund income tax paid in excess of the amount properly payable, for taxpayers generally, are set out in ss LA 6 to LA 8 [see 1215.30]. However, under ss RM 13 to RM 17, the amount of tax refund payable to an imputation credit account (ICA) company is limited to the credit balance (if any) of the company’s ICA at the later of:

(a) The end of the previous tax year; or

(b) The last day of any period for which the company has chosen to file an imputation return, or has been required by the CIR to file an imputation return, for a period other than a tax year, under s 70 of the TAA [see 670.65].

Notwithstanding these limitations, where a company files its imputation return prior to the end of the next tax year under an extension of time arrangement, the company is able to obtain a refund provided that the amount does not exceed the balance in the imputation credit account on the last day of the earlier income year for which the return was filed.

Refundable income tax paid in excess, for an ICA company, does not include any further income tax [see 670.95] paid under s OB 65.

Where a company has ceased to be an ICA company, and is entitled to a refund of income tax for an income year during which it was an ICA company, the refund is limited to any credit balance in the ICA at the time of cessation (ie the refund cannot exceed the debit to the ICA that arose on cessation).

Where the company receives more than one refund during the same tax year, its entitlement to a later refund is determined by reducing the relevant ICA credit balance by the earlier refunds of income tax or FDP received.

However, in the case of a qualifying company [see 1160.10] these restrictions on refunds of tax overpaid do not apply, except in circumstances where the tax was overpaid as part of an avoidance arrangement [s RM 32].

The ICA credit balance, for refund purposes, is deemed to be increased by the amount of any prior debit to the ICA under s OB 41 for breach of shareholder continuity provisions, where the continuity breach occurred after the first provisional tax instalment payment date for the income year to which the refund relates. This means that in such circumstances a company may receive a refund of income tax up to the amount of any ICA credit balance existing prior to loss of continuity (in addition to any ICA credit balance subsequently arising) [see TIB vol 3:7 (April 1992) at 17].

There is no restriction on refunds of tax paid if the payment of tax did not give rise to an ICA credit because of one of the exclusions listed in ss OB 4, OZ 1 [see 670.30].

For the provisions that apply to company amalgamations [see 180.110].

Where overpaid income tax is not refunded to the company because of the restrictions above, the amount not refunded is credited against any income tax or provisional tax liability of the company that has arisen for any income year. Any excess still remaining is retained by the CIR [ss RM 16, RZ 6].

Where such an amount not refunded is applied by the CIR to another income tax or provisional tax liability of the company, a further ICA credit is not permitted [see 670.30]. However, if the non-refunded amount is instead applied by the CIR to satisfy some other tax liability (eg GST) of the company, debits arise to the ICA [see 670.35].

To accommodate the comprehensive tax transfer rules, no debit or credit arises to the imputation credit account where an amount of tax paid in excess is credited against an amount of income tax or provisional tax payable by the company.

For similar rules applying to limit refunds of FDPs [see 670.140].
(2) **Anti-avoidance**

With effect from 16 November 2004, measures apply to prevent a company with overpaid tax but no, or limited, imputation credits from being sold to an imputation credit rich group of companies. The effect of such a transaction was that the overpaid tax was refundable to the new group notwithstanding that the benefit of that tax has already been enjoyed by the shareholders of the original group in the form of imputation credits attached to dividends.

Section OB 71 applies to companies which are leaving a wholly-owned group that have available net losses in excess of $1 million at the end of the previous tax year. Such companies are able to elect, immediately before leaving the group, that a debit balance in its ICA, or an amount of prepaid tax that exceeds the credit balance of its ICA, be transferred to another company in the group. Alternatively (but unlikely) the company may choose to pay additional income tax of an amount equal to the debit balance or excess amount of prepaid tax. This additional tax is a final tax and cannot be credited against other tax liabilities. Where a company fails to either make the transfer or pay the additional tax, s OB 72 requires the company to make payment of the additional tax after it has joined the new group. The same treatment is provided for consolidated groups under s OP 6.

**670.75 Shareholder continuity requirements** [ss GB 34, OA 8, OB 41]

For an imputation credit account (ICA) company (other than a qualifying company) [see 1160.68] to continue to carry forward imputation credits, it must satisfy the shareholder continuity provisions. If the shareholder continuity provisions are breached, a debit arises to the ICA at that time [see 670.35]. The debit extinguishes credits in the ICA which have not been cancelled out by a (prior or subsequent) debit. In other words, any ICA credit balance is effectively lost at the time of a breach of the shareholder continuity provisions. This is intended to prevent trafficking in ICA companies (ie to ensure that the benefit of imputation credit utilisation is restricted to substantially the same group (at least to the extent of 66 per cent continuity) of shareholders who effectively bore the company’s tax liabilities that gave rise to the imputation credits) [s OA 8].

Under s OB 41 a debit arises at any time, equal to the amount of any particular ICA credit (unless that credit has been cancelled out, before the specified time, by a prior or subsequent debit), unless there is a group of persons:

(a) Whose aggregate minimum voting interests in the company is at least 66 per cent for the period from the date on which the credit arose until the specified time; and

(b) If a market value circumstance exists at any time during that period, whose aggregate minimum market value interests in the company for the period is at least 66 per cent.

For this purpose, the minimum voting interest or market value interest of any person is equal to the lowest voting interest or market value interest held by the person in the company during the period [s OZ 4].

For the determination of voting and market value interests of a shareholder in a company, and whether a market value circumstance may exist [see 170.15 to 170.35], Essentially (subject to certain exceptions noted below), the ICA continuity provisions parallel the company loss carry forward rules (with the substitution of 66 per cent for 49 per cent) [see 940 LOSSES]. Special rules [ss YC 7 to YC 19] that apply in determining continuity of voting interests and market value interests of shareholders for both ICA and loss carry forward purposes are discussed in 170.35. See 940.20 for examples of determining the minimum voting interests of shareholders during a period where shareholdings in a company change.

The exceptions, where the determination of voting interests, market value interests, and market value circumstances under the ICA continuity provisions differ from those under the company loss continuity provisions, are contained in s YC 20. These relate to excluded securities (ie fixed rate shares and ss FA 2 and DB 10 debentures) issued after 30 July 1991. For ICA continuity purposes, such instruments are also taken into account as comprising shares in the company [see TEO Newsletter 43 (14 August 1991) at 4].

Debits to the ICA are offset against credits in the order in which the credits arose [s OZ 4].
ICA continuity anti-avoidance rules are contained in s GB 34. Where shares have been subject to arrangements, or have had rights extinguished or altered, to enable the company to meet the ICA continuity requirements, the company is deemed not to have met those requirements.

(1) Concessional tracing rules and continuity provisions

Concessional tracing rules exist in certain circumstances (as for loss continuity) [see 170.35]. These are principally for transfers under wills, interests of less than 10 per cent, widely-held companies or unit trusts, listed companies, building societies, statutory producer boards and subsidiaries [see 670.85], co-operative companies [see 670.90], and certain foreign companies.

(2) FDPA and BETA continuity requirements

Both the foreign dividend payment account (FDPA) and the branch equivalent tax account (BETA) of a company are subject to shareholder continuity requirements identical to those above [see 670.195, 670.325].

670.80 Record keeping [TAA, s 22]

Records relating to credits and debits to the imputation credit account (ICA), foreign dividend payment account (FDPA), and branch equivalent tax account (BETA) of a company are required to be maintained by the company [TAA, s 22(2)(b)], for a period of at least seven years as is the case for taxpayer record-keeping requirements generally. The records that must be maintained include those of the ICA, FDPA, and BETA, company dividend statements, and details of foreign dividend payments received. For the form in which records may be kept [see 1210 RECORDS OF TAXPAYERS].

670.85 Statutory producer boards [ss OB 73, OB 74, OB 75, OB 76, OB 77]

Statutory producer boards, which are companies for tax purposes and hence generally required to maintain an imputation credit account (ICA), are essentially primary producer and marketing boards and authorities. They are listed in sch 37 as being the New Zealand Horticulture Export Authority, the New Zealand Meat Board, and the New Zealand Pork Industry Board. They generally derive income by way of levies, and may purchase goods, from their members, and pay rebates to members. They are mutual associations subpart HE, but unlike other mutual associations they are able to deduct the entire amount of rebates paid to members for relevant member transactions [see 225 COOPERATIVES, STATUTORY PRODUCER BOARDS, MUTUAL ASSOCIATIONS, CLUBS, AND SOCIETIES]. As they do not have conventional shareholding structures, special provision is made for them to attach imputation and foreign dividend payment (FDP) credits to actual or notional distributions to members.

A member [s YA 1] of a statutory producer board for this purpose, in relation to a year of determination, must be a New Zealand resident who either was liable to pay a levy to, or entered into produce transactions with, the producer board in respect of that year. A year of determination is a 31 March year [s YA 1].

A statutory producer board that is an ICA company is authorised [s OB 73(1)-(3), (8)] to determine, for a year of determination, to distribute imputation credits to members by making either:

(a) A cash distribution that the producer board elects on or before the date of determination not to claim (wholly or partly) as an allowable deduction. The non-deductible amount is then treated as a dividend to which imputation credits may be attached; or

(b) A notional distribution with imputation credits attached for all persons who were members at any time during the year of determination.

For either type of distribution, the determination by the statutory producer board must be made during the six-month period that follows the 31 March end of the relevant year of determination. More than one such determination can be made, for any particular year.

(1) Cash distribution

A cash distribution must be made for all persons who were members at any time during the year of determination, and must be based on each member’s proportionate share of total produce transactions (supplies to the board of produce or goods that are trading stock), or on each member’s proportion of levies...
payable, or by some other CIR-approved method. The amount to be treated as a dividend must otherwise have been deductible to the producer board (eg as a rebate under s HE 3) [s DV 18]. Notice in writing of the election must be provided to the CIR within the period allowed for filing the producer board’s income tax return for the corresponding income year. The aggregate amount of imputation credits to be attached to a cash distribution is calculated by multiplying the actual cash distribution amount by a fraction equal to the maximum imputation ratio (currently 30/70) for the relevant income year [s OB 73(4)-(7)]. In other words, the amount of cash distribution is to be fully imputed.

The amount of imputation credit to be allocated to each member is calculated by multiplying the aggregate amount of imputation credits attached to the cash distribution by the proportion of the cash distribution paid to the member.

**Example:**

A member receives a payment of $15,000, out of a total cash distribution of $200,000. The aggregate amount of imputation credits to be attached to the total cash distribution is $85,714.29 ($200,000 × 30/70). The amount of imputation credits allocated to the member is $6,428.57 ($85,714.29 × 15,000/200,000).

**Notional distribution**

A notional distribution is simply a mechanism that allows the producer board to allocate imputation credits to members, without having to make actual cash payments (similar to a company making a taxable bonus issue of shares). When allocating imputation credits to members, different rules [s OB 74] apply for notional distributions. Here the producer board can choose any of the following alternative bases:

(a) Produce transactions with members;
(b) Levies payable by members;
(c) A combination of the above, where it is appropriate to take into account both produce transactions and levies payable; or
(d) Any other method that the CIR approves (eg if the profitability of different types of produce transactions varies).

Where the produce transactions allocation method is adopted, the amount of imputation credit to be allocated to each member is calculated by multiplying the aggregate amount of imputation credits attached to the notional distribution by the proportion of the member’s produce transactions to the total produce transactions of all members during the year of determination [s OB 74].

Where the levies payable allocation method is adopted, the amount of imputation credit to be allocated to each member is calculated by multiplying the aggregate amount of imputation credits attached to the notional distribution by the proportion of levies payable by the member to total levies payable by all members for the year of determination [s OB 74].

The CIR can override and recalculate the producer board’s allocation of imputation credits to members, where the CIR is satisfied that the producer board’s allocation method does not result in a fair and reasonable allocation of imputation credits to a member. This power could be used by the CIR to counter any streaming of imputation credits to particular members.

The amount of dividend that is deemed to be paid to each member by the producer board, and to have been derived by each member (on the date of the producer board’s determination) is [s OB 75]:

\[
\text{Dividend} = \left( \frac{\text{Credit attached}}{\text{Tax rate}} \right) - \text{Credit attached}
\]

Where:

“Credit attached” is the amount of imputation credit attached to the member’s distribution;

“Tax rate” is the basic rate of income tax for companies for the year of determination.

This formula effectively excludes the amount of the imputation credit from the amount of the notional deemed dividend (ie it notionally corresponds to the “paid” amount of a dividend). However, the amount of the imputation credit is also to be included in the member’s income [see 670.50], so that the member is entitled to receive a credit of tax for the imputation credit.
Details of a notional distribution must be supplied to the CIR with the producer board’s income tax return for the income year in which the board’s determination is made [s OB 75]. In addition, records must be maintained that will enable the CIR to determine whether any subsequent actual distribution (for the amount notionally distributed and notionally capitalised by the board) is to be exempted from tax under certain provisions of s CD 26 (these exemptions apply to a return of capital levies on any dissolution of the board, or a subsequent cash distribution under s DV 18 in respect of an amount that has already been treated as a notional distribution under s OB 75).

Where the statutory producer board maintains a foreign dividend payment account (FDPA), FDP credits can be passed on to members in the same manner as imputation credits. If the board determines to attach both imputation credits and FDP credits for any year of determination, then it must do so at the same time [s OB 76].

A statutory producer board is a special corporate entity [s YA 1], to which breach of shareholder continuity provisions will not apply, where the board has issued no shares [see 670.75].

670.90 Co-operative companies [ss OB 78, OB 79, OB 80, OB 81, OB 82]

The rules relating to the distribution of imputation credits by a co-operative company are set out in ss OB 78 to OB 82. As for statutory producer boards, the normal imputation credit allocation rules [see 670.45] do not apply to co-operative companies, and instead the co-operative company can make a determination to pay its shareholders an otherwise deductible cash distribution as a dividend, or to make a notional distribution to its shareholders, with imputation credits attached in either case.

A co-operative company (defined to exclude a statutory producer board) [s YA 1] will include any co-operative entity that is a company for tax purposes. Like statutory producer boards, such companies may enter into produce transactions with their members. They will normally be mutual associations, and hence able to deduct rebates paid to members under the rules contained in subpart HE [see 225 COOPERATIVES, STATUTORY PRODUCER BOARDS, MUTUAL ASSOCIATIONS, CLUBS, AND SOCIETIES].

The allocation rules apply for the shareholders of a co-operative company. “Shareholder” for this purpose includes a sharemilker who derives payment for produce transactions directly from a co-operative dairy or milk company [s YA 1]. In that capacity, the sharemilker may receive dividends with imputation credits attached under these rules.

For a year of determination, a co-operative company can make only one determination for each of the cash distribution and notional distribution alternatives [s DV 18]. However, it may make both a cash distribution and a notional distribution, both with imputation credits attached, in respect of a year of determination.

The imputation credit allocation rules for co-operative companies, and the income tax treatment of each type of distribution, are identical to those for statutory producer boards [see 670.85], except for the following:

(a) A cash distribution to shareholders can be based only on shareholders’ produce transactions with the company [s DV 18].

(b) Produce transactions [s YA 1] in this case include both sales by shareholders to the company and sales by the company to shareholders, if these are both a principal activity of the company (of produce or goods that are trading stock).

(c) For a cash distribution, the company’s election must be by way of notice in writing to the CIR on or before the day (during the period of six months following the end of the year of determination) it makes the distribution [s DV 18].

Details of a notional distribution must be supplied to the CIR with the co-operative company’s income tax return for the income year in which the company’s determination is made, and similar records of the distribution [see 670.85] must be subsequently maintained [TAA, s 64].

If the company maintains a foreign dividend payment account (FDPA) foreign dividend payment (“FDP”) credits may be passed on to shareholders in the same manner and at the same time as imputation credits.

A co-operative company will generally be a “limited attribution company” [s YA 1], for the purposes of the shareholder continuity provisions. This is relevant for imputation credit account (ICA), FDPA, and branch
equivalent tax account (BETA) shareholder continuity purposes for a company in which the co-operative company holds less than a 50 per cent interest [see 170.35].

670.95 Further income tax for company with ICA debit balance at year end or on ceasing to be an ICA company [ss OB 65, OB 66, OB 67, OB 68, OB 69, OB 70]

Further income tax is an amount of tax that is imposed if the imputation credit account (ICA) has a debit balance at 31 March or when the company ceases for any reason to be an ICA company. It is payable by the following 20 June for a company with a 31 March ICA debit balance, and by the date of ceasing to be an ICA company for a company that has a debit ICA balance at that date [ss OB 65, OB 66]. The amount of further income tax is the amount of the debit balance. It may arise, for example, if imputation credits in excess of company tax paid have been distributed to shareholders.

In addition, where a company has a 31 March ICA debit balance, imputation penalty tax (also payable by 20 June) of 10 per cent of the further income tax is also imposed [see 670.100].

Further income tax paid can be credited against any income tax or provisional tax liability of the company in relation to an income year that corresponds with a tax year in which the company was an ICA company. The credit for the payment arises on the date on which the CIR receives the further payment [s OB 7]. The payment, if made after the end of the tax year in relation to which the further income tax liability arose, may also be credited against the company’s liability to pay the further income tax [s OB 69].

Payment of further income tax gives rise to an ICA credit, on the date the tax is paid [s OB 4(4)]. However, payment of a subsequent tax liability by way of crediting further income tax previously paid does not give rise to a subsequent ICA credit [s OB 4]. It is not refundable to the company [see s RM 17 and 670.70].

Further income tax is not applicable where the debit balance arises solely because a debit amount arises from expenditure being transferred from the company, being a member fund, to a master fund in accordance with s DV 5.

A company that has a debit balance in its ICA at year-end may apply in writing to the CIR for a reduction in the amount of further income tax payable if:

(a) The company had a debit balance in its ICA at the end of the immediately preceding tax year; and
(b) The debit balance in the immediately preceding income year exceeds the total credits that have arisen to the ICA during the tax year.

The amount of the reduction is equal to the difference between the debit balance in the ICA and the total of credits that have arisen during the tax year.

Further income tax for a qualifying company may similarly be reduced or extinguished where a qualifying company’s ICA debit balance is attributable to income tax refunds received. Section OB 67 provides for any further income tax that the company is otherwise liable to pay to be reduced by the following amount:

\[ \text{refunds} - \text{credits} \]

Where:

“Refunds” is the total amount of all refunds paid to the company before the debit balance creating the liability for further income tax arises;

“Credits” is the total of all credits in the ICA for the period that runs from the tax year in which the first refund was received to the time the calculation is made.

This concessionary provision is intended to mitigate the potentially adverse impact of the imputation credit anti-streaming rules that apply to qualifying companies, where such a company has overpaid tax and subsequently receives an income tax refund. Because dividends paid by a qualifying company are deemed to have imputation credits attached to the fullest extent possible [see 1160.70], where such a company overpays tax and pays dividends in one tax year and then receives a refund in a subsequent income year, an ICA debit balance may result. The provisions grant relief from further income tax in these circumstances.
However, the ICA debit balance will remain, and so will roll forward into the subsequent tax year. See TIB vol 7.9 (February 1996) at 19, for examples of the application of these rules to qualifying companies.

**670.100 Liquidation of company** [ss OC 18, RM 18; TAA s 140B]

When a company is wound up, it ceases to be an ICA company on the day the Registrar of Companies declares the company to be dissolved. The liquidator must pay out any distributions to shareholders prior to this date. Any income tax liabilities [see 170.60] also need to be paid before this date, if credits are to arise to the ICA that can be attached to distributions to shareholders. See 270 DIVIDENDS for the rules that determine to what extent distributions on a winding up are dividends to which imputation credits can be attached. The normal imputation credit allocation rules apply, and a liquidator may need to file a ratio change declaration [see 670.45] for final distributions. The final imputation return must be filed within two months [see 670.65].

When a company is in the process of liquidation (ie liquidation duties have not been completed) and has an ICA debit balance at 31 March, both further income tax and the 10 per cent imputation penalty tax will be payable by 20 June. However, where the company has an ICA debit balance immediately prior to removal from the New Zealand companies register, further income tax is payable, no imputation penalty tax is charged [TAA, s 140B], and the further income tax is due for payment by the date of removal [see 670.95] (ie two months prior to the due date for furnishing the final imputation return). Normal late payment penalties apply [see 670.105, 670.110].

Where the company has overpaid income tax, any refund payable to the liquidator is limited to the amount of the ICA credit balance immediately before the date of removal from the NZ companies register [see s RM 14 and 670.70].

If the company maintains a FDPA and this has a credit balance, the liquidator can elect to transfer the FDPA balance to the ICA at either 31 March or immediately before the date of the company’s removal [s OC 18, see 670.165]. The liquidator may wish to do so to clear or reduce an ICA debit balance, or to increase an ICA credit balance so as to maximise the amount of any tax refund that is due to the company.

See also TIB vol 6:11 (April 1995) at 4-14, for examples of the application of these rules to companies in liquidation.

**670.105 Imputation credit account penalties and use of money interest**

[TAA, ss 120D, 139B, 140B]

Imputation penalty tax of 10 per cent of the amount of any further income tax for a 31 March ICA debit balance, payable by the following 20 June, applies under the penalty regime [TAA, s 140B]. If further income tax and the 10 per cent imputation penalty tax (of more than $100) are not paid by 20 June, late payment penalties will apply [TAA, s 139B]. The initial penalty is one per cent and a further four per cent six days later with an incremental penalty of one per cent per month thereafter (compounding) [see 1110.40].

In addition, use of money interest, calculated on a daily basis, is payable [TAA, s 120D] on any further income tax, imputation penalty tax, and late payment penalties, where payments (of more than $100) are made after due dates [see 1110.295]. Other general penalties potentially applicable include shortfall penalties [see 1110.185].

There are three situations where the CIR is required to remit imputation penalty tax (relating to a 31 March ICA debit balance) [TAA, s 180]:

(a) To the extent that the debit balance arose through the CIR debiting the ICA in reliance on the ss GB 35 and GB 36 anti-avoidance provisions, but that debit has subsequently been reversed [see 670.30];

(b) To the extent that the debit balance arose from an income tax refund having been sent but not received, or not known by the company to have been received, before the tax-year end; and
(c) To the extent that the debit balance arose because overpaid income tax or FDPs was applied by the
CIR against some other tax liability (eg GST) of the company or of a consolidated group, and the
taxpayer was not aware of this in sufficient time to clear the 31 March ICA debit balance position.

In these situations the CIR must also remit any corresponding late payment penalty that has arisen for the
imputation penalty tax. In situation (a) only, the CIR must also remit any late payment penalty that has arisen
on the corresponding amount of further income tax.

The CIR also has discretion to remit imputation penalty tax or a late payment penalty for reasonable cause
[see 1110.335]. The CIR’s policy as to what will be regarded as reasonable cause is set out in TIB vol 9:13
(December 1997) at 2. All requests for remission must be made in writing.

670.110 Anti-avoidance stapled stock provisions [ss GB 37, LE 1(5)]

The anti-avoidance provisions of s GB 37 prevent a company that is not entitled to impute credits to
shareholders from doing so by way of a “stapled stock” arrangement in which its shareholders are instead
paid a dividend with imputation credits attached from some other company. An example of a stapled stock
arrangement is where a non-resident company that is not entitled to maintain an imputation credit account
(ICA) has New Zealand shareholders and also has a New Zealand subsidiary company, issues shares to those
shareholders that are “stapled” to shares in the subsidiary, so that the shareholders become entitled to receive
imputed dividends from the subsidiary instead of dividends from its parent company. Various other “stapled
stock” scenarios are also possible, including where an ICA company has insufficient ICA credits to pass on
to shareholders.

There are two principal types of arrangement caught under the s GB 37 provisions. These are where an
arrangement has been entered into which has as one of its purposes (not necessarily its sole or dominant
purpose) that:

(a) A shareholder of a company may be paid a dividend by another company, whether directly or
indirectly by any means whatever; or

(b) A shareholder of a company may acquire shares in another company so that the other company may
pay a dividend to the shareholder.

The provisions also apply to similar arrangements where it is an associated person of the shareholder, or a
beneficiary of a trust of which the shareholder is a trustee, or a person associated with such a beneficiary,
who may become entitled to receive a dividend from that other company, or who may acquire shares in that
other company for which the other company may pay a dividend, as the case may be.

Where such an arrangement exists, the consequences are:

(a) Any dividend paid to the shareholder, or trustee, or associated person, as the case may be, is deemed
for imputation purposes to have been paid by the company, not by the other company;

(b) The amount of any imputation credit attached to a dividend is not available as a tax credit, or for
conversion into a carry forward tax loss, to the recipient (and is not included in gross income of the
recipient). However, if the company is an ICA company, its ICA is debited with the amount of the
imputation credit attached to the dividend by the other company.

Note: Shares, for s GB 37 purposes, can include a debenture to which s FA 2 (floating rate debenture issued
in substitution for shares) applies.

670.115 Anti-avoidance provisions tax advantage arrangements [ss GB 35,
GB 36, GB 37]

There are also more general imputation anti-avoidance rules, which apply to an “arrangement to obtain a tax
advantage”. Broadly, these are designed to counter two types of possible arrangements:

(a) The buying or selling of shares for the purpose of subsequently paying dividends with imputation or
foreign dividend payment (FDP) credits attached to persons best able to utilise them; or
(b) The streaming of dividends with imputation or FDP credits attached to different shareholders, or
different classes of shareholders, including where this takes place over more than one tax year, so as
to direct those credits to those shareholders to whom the credits are more useful.

In the case of the second type of arrangement, the anti-streaming provisions of s GB 35 reinforce the allocation
and benchmark dividend rules [see 670.45]. Those rules require only that any dividends paid within a tax
year are equally imputed (unless a ratio change declaration has been filed by the company, and no arrangement
has been entered into to obtain a “tax advantage” [s YA 1]). However, s GB 34 also catches the situation
where dividends are streamed to different shareholders across more than one tax year (eg through adopting
differing benchmark dividend imputation ratios in different years).

“Tax advantage” means either:

(a) Where a credit arises to the ICA or foreign dividend payment account (FDPA) of a company (eg
where the company receives an imputed dividend — this is termed an “account advantage”); or
(b) Where, for a shareholder (company or individual), a credit of tax is allowed for imputation or FDP
credits attached to dividends received, or where a non-resident or exempt shareholder obtains a refund
of such FDP credits (this is termed a “tax credit advantage”).

In terms of the types of arrangement that the provisions set out to counter, s GB 35 provides that there is an
“arrangement to obtain a tax advantage” where either:

(a) An arrangement for the issue or sale or other disposition of shares exists, and all of the following
apply:
   (i) Any person who is a party to the arrangement might reasonably have anticipated that a
       dividend would be paid for the shares in any income year;
   (ii) Any person who is a party to the arrangement might reasonably have anticipated that an
       imputation credit or a FDP credit would be attached to the dividend;
   (iii) Any person who is a party to the arrangement might reasonably expect either that a party to
       the arrangement will be able to obtain a tax advantage, or that a party to the arrangement will
       not be able to obtain a tax advantage, in relation to that imputation credit or FDP credit; and
   (iv) The purpose (not being an incidental purpose) of the arrangement is that a party to the
       arrangement would obtain such a tax advantage [s GB 35]; or

(b) The company streams the payment of dividends, or the attaching of imputation or FDP credits or
both to any dividends (for one or more distributions, including bonus issues, whether occurring in
the same tax year or over more than one tax year) in such a way as to give higher credit values to
persons who will obtain a tax advantage from them than to persons who will not so obtain a tax
advantage or who may reasonably be expected to derive a lesser benefit from any tax advantage.

For the purposes of (b) above, a dividend will have a “higher credit value” than another dividend if it has a
higher imputation ratio or FDP ratio than the other dividend, or if it has an imputation credit attached and
the other dividend does not, or if it has a FDP credit attached and the other dividend does not.

Where the CIR determines that such an arrangement to obtain a tax advantage exists, the CIR can make
determinations on the following matters:

(a) Whether the arrangement gives rise to an account advantage (ie credits to the ICA or FDPA), or to
a tax credit advantage (ie tax credits to the shareholder), or both;
(b) The amount of the imputation credit or FDP credit that is to be regarded as being the subject of the
arrangement;
(c) The tax year in which the arrangement is to be regarded as having occurred or commenced (which
is the year where the first reasonably identifiable step towards its implementation occurred); and
(d) For a dividend streaming arrangement to which some other person besides the company is a party
(ie where it is not the case that the company alone is responsible for the arrangement), whether it is
the dividend recipients or the company that should be penalised. This is determined by the CIR under s GB 36 (see below).

1) Application of s GB 36

The provisions apply to:

(a) Any arrangement for the issue of shares or the sale or other disposition of shares; or
(b) Any arrangement involving the streaming of dividends to which a person other than the company is a party (ie where the company is not solely responsible for the arrangement), unless the CIR decides that the arrangement should be dealt with (as below).

Under these provisions, the consequences are:

(a) No credit of tax, or refund of FDP, is available to a recipient of a dividend under the arrangement, for the amount of imputation credit or FDP credit that the CIR determines to be the subject of the arrangement; and
(b) A debit of that amount arises (at the end of the tax year determined to be the year in which the arrangement occurred or commenced) to the ICA or FDPA, as the case may be, of any company that would otherwise obtain an account advantage from the arrangement (ie any company that receives an imputed dividend under the arrangement).

2) Streaming dividends

The provisions apply to an arrangement involving the streaming of dividends where either:

(a) The company paying the dividends is the only party to the arrangement (ie it is solely responsible for the arrangement having been put into place); or
(b) The company is not the only party to the arrangement but the CIR determines that these consequences should apply to the arrangement.

The consequences are:

(a) A further debit arises to the ICA or FDPA, as the case may be, of the company that pays the dividends, at the end of the tax year determined to be the year in which the arrangement occurred or commenced. The debit is equal to the amount of imputation credit or FDP credit that the CIR determines to be the subject of the arrangement; or
(b) The recipients of dividends are not penalised.

In other words, whereas the first consequence denies the benefit of imputed dividends to recipients (and also penalises an ICA company that is a dividend recipient). The second consequence penalises only the company paying the dividends.

Note: Shares, for s GB 35 purposes, can include a debenture to which s FC 1 (floating rate) or s FC 2 (debenture issued in substitution for shares) applies.

These anti-streaming provisions also apply to conduit tax relief (CTR) credits attached to dividends [see 215.65]. For these purposes, and for the definitions of FDP ratio and combined imputation and FDP ratio, a CTR credit is treated as being a FDP credit, with corresponding consequences. However, to the extent that a further debit arises through a CTR credit being treated as if it was a FDP credit, the further debit is debited to the dividend-paying company’s CTR account [see 215.75] and not to its FDPA [s OD 18].

670.120 FDP rules [subpart OC]

1) FDP rules repealed

Following the exemption for most foreign dividends received by companies in the Taxation (International Taxation, Life Insurance, and Remedial Matters) Act 2009, from income years beginning on or after 1 July 2009, the foreign dividend payment (FDP) rules have been repealed. Foreign dividend payment accounts will be gradually phased out.
Subpart RG has been repealed for income years beginning on or after 1 July 2009 to remove the liability for resident companies to pay foreign dividend payments on dividends that they receive from foreign companies. As a result, most foreign dividends received by companies will be wholly exempt, but in some cases, income tax will be payable [see 270.80].

Sections OC 4, OC 5, and OC 30 to OC 34 have been amended to replace “further FDP” with “further income tax”.

Sections OC 6, OC 8, OC 9, OC 10, OP 56, OP 61 and OP 62 have been repealed to prevent new FDP credits from being generated.

Note: Inland Revenue advise in their special report on the changes to the international tax rules that companies will have five years to distribute their existing FDP credit balances to shareholders before any remaining balances are converted into imputation credits. This will be legislated for as part of a subsequent tax Bill.

(2) Previous rules

The foreign dividend payment (FDP) regime applies to foreign-sourced dividends received by a resident company, and is closely connected to the imputation regime. The company is required to make a deduction of FDP from the dividend received, and to pay the FDP deducted to the CIR on a quarterly basis. The amount of FDP then becomes available as either a FDP credit or an imputation credit (depending on whether the company elects to maintain a foreign dividend payment account (FDPA) [see 670.145] that can be attached to dividends paid by the company to its shareholders [see 670.170].

As for imputation credits, FDP credits attached to dividends paid are included in the shareholder’s income, and the shareholder is entitled to a corresponding credit of tax. However, unlike imputation credits, FDP credits in excess of the shareholder’s income tax or non-resident withholding tax (NRWT) liability are refundable to the shareholder [see 670.185].

When a company receives a foreign-sourced dividend, the FDP deduction required is calculated at the 30 per cent basic rate of income tax for companies, but with a credit for foreign withholding tax deducted at source. In addition, a credit against FDP payable is available under the underlying foreign tax credit (UFTC) rules, in respect of foreign income tax imposed on the profits of the dividend-paying company from which the dividend is sourced [see 670.130].

If the resident company elects to maintain a branch equivalent tax account (BETA), for attributed foreign income that it derives under the international tax rules from a shareholding of 10 per cent or more in a controlled foreign company (“CFC”), or from certain foreign investment fund (FIF) interests, then it can also offset credits for New Zealand income tax paid on its attributed foreign income against the FDP liability on a dividend that it receives from that CFC or FIF [see 670.130, 670.285]. This is to prevent double taxation arising when the company receives a dividend that is sourced from profits of the CFC or FIF that have already been subject to New Zealand income tax under the international tax rules.

The converse situation also applies for a BETA company (ie it is able to offset FDP paid on foreign dividends received against its income tax liability on attributed foreign income derived from a CFC and from certain FIF interests) [see 670.285]. This is to prevent double tax arising when the resident company pays FDP on a foreign dividend received before it pays New Zealand income tax on the attributed foreign income from which the dividend is sourced.

The FDP liability on a dividend received by a conduit tax relief (CTR) company is further reduced in proportion to its percentage of non-resident shareholders [see 670.130].

Any resident company can elect to maintain a FDPA. If it does so, FDP paid is credited to its FDPA rather than to its imputation credit account (ICA), and can then be attached as FDP credits to dividends paid to its resident or non-resident shareholders (subject to the rules that restrict the attaching of FDP credits to dividends paid to non-resident shareholders of a CTR company) [see 670.170]. A company is likely to maintain a FDPA if it has significant non-resident shareholders who would benefit from refunds of FDP credits in excess of New Zealand NRWT liability [see 670.145].
Imputation

Under the CTR rules, credits to a company’s FDPA also arise for New Zealand income tax payable on any foreign attributed income that it derives, by way of transfer of the credits from its ICA to the FDPA [see 670.35]. Accordingly, such credits can also be attached as FDP credits to dividends paid to the company’s shareholders [see TIB vol 10:4 (April 1998) at 13].

A FDPA credit balance can be transferred to a company’s ICA at tax-year end or immediately before a company ceases to be resident (provided the company is not a conduit tax relief company) [see 670.165].

670.125 Liability to deduct FDPs [ss RG 2, RG 3]

Every resident company that is paid a foreign-sourced dividend is obliged to deduct from it an amount of foreign dividend payment (FDP) [s RG 3, see also s BE 1(6)]. This applies to the following foreign dividends [s RG 2]:

(a) Dividends paid by a foreign company [s YA 1], which are exempt income to the resident company [ss CW 9 to CW 11]; or
(b) Dividends paid by a resident company, where that company was previously non-resident, if the dividend is exempt income to the recipient under s CW 10 (eg dividends within a wholly-owned group). Such a dividend is subject to a FDP deduction to the extent that the amount of dividend is less than the amount of retained profits that the payee company had available for distribution (less any similar dividends previously paid) immediately before becoming resident in New Zealand.

The provision in (b) is aimed at preventing a non-resident company from changing residence to New Zealand and then distributing tax-free profits accumulated overseas.

Note: FDP does not have to be deducted from a dividend arising from an interest in a foreign investment fund (FIF) for a period where FIF income or loss is calculated using either of the comparative value or deemed rate of return methods [s EX 59, see 850.155].

The FDP deducted must be paid to Inland Revenue, on a quarterly basis [see 670.135].

These rules apply to any dividend that arises for tax purposes, including non-cash dividends and bonus issues, subject to the same exclusions [see 670.40] that apply under the imputation rules (except for the inclusion for FDP purposes of dividends paid on specified preference shares).

A dividend will be “paid” to the resident company where it is distributed, credited, or dealt with in that company’s interest or behalf, and this includes the issue of shares or the giving of credit for a bonus issue [s YA 1].

Dividends subject to FDP include any “attributed repatriation” [s CD 21] arising from an income interest held in a controlled foreign company (CFC), that may arise from New Zealand investments made by the CFC (as being, in effect, a deemed return of funds to New Zealand) [see 270.20, 850.80].

670.130 Amount of FDP to be deducted [ss RG 4, RG 5, RG 7]

The amount of foreign dividend payment (FDP) to be deducted from a dividend is calculated as follows [s RG 4]:

\[(\text{dividend amount} + \text{foreign tax} + \text{underlying credit}) \times \text{tax rate}) – \text{foreign tax} – \text{underlying credit}\]

Where:

“Dividend amount” is the dividend paid (after any deduction of foreign withholding tax);

“Foreign tax” is the amount of any foreign withholding tax paid (exclusive of any such tax paid in a country specified in sch 27. Foreign withholding tax [s YA 1] means a foreign tax imposed that is substantially of the same nature as New Zealand NRWT;

“Underlying credit” is the amount of underlying foreign tax credit (UFTC) calculated under s LL 2 for the dividend. If the amount of UFTC is zero, then it is the amount of any imputation credit attached to the dividend. The UFTC for the dividend is an amount that is calculated under subpart LL by reference to foreign income tax imposed on the foreign country profits that are represented by the dividend [see 670.230]. At present there are no excluded countries specified in sch 27;
“Tax rate” is the basic rate of income tax for companies applying for the quarterly period in which the dividend was paid, or where the company is a Maori authority, the basic rate applying to Maori authorities.

**Note:** The amount of FDP liability for a conduit tax relief (CTR) company is reduced by the proportion of the company’s non-resident shareholders. This is explained below.

The above formula essentially calculates the FDP liability of the recipient company as being 30 per cent (company tax rate) of the dividend “grossed up” for foreign withholding tax deducted and the UFTC, less credits for the amounts of foreign withholding tax deducted and UFTC.

### Example:

A company receives a foreign-sourced dividend of $850, net of foreign NRWT paid of $150. Assume no UFTC is available.

The FDP deduction required is:

\[
((850 + 150 + 0) \times 30\%) - 150 - 0 = $150
\]

If there was UFTC available of $300, the FDP liability would be:

\[
((850 + 150 + 300) \times 30\%) - 150 - 300 = \text{nil.}
\]

(as it cannot be negative)

Generally, the UFTC rules (in subpart LL) allow companies that have an income interest of at least 10 per cent in the foreign company to take into account income tax paid by the foreign company when calculating the FDP liability on dividends received. Where the foreign company is resident in a grey-list country, the foreign company is generally presumed to have paid foreign tax of an amount equal to New Zealand income tax on its earnings, so that a nil FDP liability generally arises from the above formula. Different rules apply where a company’s income interest in the foreign company is less than 10 per cent, or when the foreign company is not resident in a grey-list country, as discussed at 670.245.

No credit is allowed against a FDP liability for foreign withholding tax paid on the dividend unless the CIR is furnished with all information necessary for determining the amount of the foreign withholding tax, within such period as the CIR may allow [TAA, s 32N]. This period is the same as for furnishing evidence of foreign taxes paid under ss 78B and 78C of the TAA (ie within four years of the end of the relevant income year, with an extension of up to two years if the CIR permits). Where the required information is not furnished, the CIR can recover the corresponding amount of credit claimed as if it were income tax payable by the company [TAA, s 32N].

When the company receiving the dividend is, at that time, either a branch equivalent tax account (BETA) company [see 670.290], or in the same group of companies as a BETA company, and the dividend is paid for an income interest [s YA 1] (10 per cent or greater) held in a controlled foreign company (CFC) [see 850.35], the company (or the other BETA company) can elect to offset any credit balance in the relevant company’s BETA to reduce or eliminate the company’s FDP liability [see 670.310].

For this purpose, the foreign dividend is deemed to be paid for an income interest in a CFC if the recipient company held such an interest at any time during the period from the start of the income year of the company immediately preceding the income year in which the dividend was paid up to the dividend payment date [s RG 5]. This is a concessionary provision applying where the company has ceased to hold such an interest at the time of receipt of the dividend.

Where FDP is required to be deducted from a dividend paid in foreign currency, the dividend is converted into New Zealand currency at either its actual conversion rate (if that rate is an arm’s length market exchange rate) or else at the close of trading spot exchange rate that applies on the day the FDP deduction is required to be made (or, at the company’s election, at the corresponding rate for the next day) [s EX 21].

\((1)\) **Conduit tax relief company**

The FDP liability for a CTR company [see 215.20] is reduced by the following amount:

\[
\text{percentage of non-residents} \times \text{amount of FDP}
\]

Where:

“Percentage of non-residents” is the percentage of the company’s non-resident shareholders;
“Amount of FDP” is the FDP liability otherwise applicable.

Conversely, it is the intention of the CTR rules that a CTR company can attach FDP credits only to dividends paid to resident shareholders [see 670.170]. In this case it is the gross (ie pre-CTR reduction) amount of FDP liability that is debited to the BETA of such a company [see 670.305].

The date for ascertaining the percentage of non-resident shareholders is the last date, before the receipt of the foreign dividend subject to FDP, that the company paid a dividend to all shareholders (a listed company may instead use the record date of shareholders’ dividend entitlement), or alternatively the end of the second income year before the year of receipt by the company of the foreign dividend if that date is later. If a company with more than one class of shares pays a dividend to all members of each class in an income year, the company is treated as if it had paid a dividend to all its shareholders on the latest such dividend date.

The percentage of non-resident shareholders is the lowest of:

(a) The percentage of direct voting interests held in the company by non-residents at the relevant date;
(b) The percentage of direct market value interests held in the company by non-residents at the relevant date, if a direct market value circumstance exists; or
(c) If the company has different classes of shares, the percentage of total dividends payable on a liquidation of the company to which non-resident shareholders would be entitled.

Treasury stock is disregarded in this calculation. In determining direct voting or market value interests for a company with different classes of shares, the relevant date is the date (see above) at which it is treated as if it had paid a dividend to all its shareholders, and the company is treated as having the same shareholders for each class of shares as it had on the most recent date in that income year on which a dividend was actually paid to all shareholders of that class. The rules for determining residence set out in ss YD 9 and YD 11 [see 215.25] apply [s RG 7].

670.135 Payment of FDP deductions and loss offset [ss RA 6, RA 15]

Foreign dividend payment (FDP) deductions required to be made in a quarter are payable to Inland Revenue no later than 20 days after the end of the quarter. A quarter is a three-month calendar quarter, so that the respective due dates for FDP to be paid to Inland Revenue are 20 April, 20 July, 20 October, 20 January.

Late payment penalties apply [see 670.210].

Note: A dividend arising from an attributed repatriation [see 670.125] is deemed to arise six months after the end of the accounting period of the controlled foreign company (CFC) for which it is calculated [s CD 21].

A company may elect to offset an amount of tax loss against its FDP liability. This applies where the company:

(a) Has a net loss from a prior year that is available for carry forward and offset against its net income for the income year of payment of the dividend; or
(b) Believes on reasonable grounds that it will have a net loss for the year of payment of the dividend that may be carried forward and offset against its net income for the succeeding income year.

The effect of the election is to reduce any such net loss, as far as it extends, by the amount of the reduction in FDP payable divided by 30 per cent (the basic company income tax rate applicable for the tax year in which the dividend was paid) [s IA 3(2)(b)].

Written notice of the election must be given to the CIR by the due date of the FDP liability. In practice, this is done by filling in the loss offset panel in the Foreign dividend payment return (IR4F). The CIR has discretion to accept a late notice. This discretion is intended to allow the election to be deferred until such time as the UFTC for a foreign dividend (and hence the FDP liability) can be ascertained. However, see 670.210 regarding two-way interest payable on estimated FDP liabilities and the penalties regime.

Note: Although the company is then deemed to have paid the corresponding amount of FDP by the relevant due date [TAA, s 120R], no credit arises to the company’s foreign dividend payment account (FDPA) (or imputation credit account (ICA)) for the FDP liability satisfied by loss offset [see 670.155 and 670.30].
Similar provisions permit a loss company in the same group of companies to elect to reduce its net loss to meet the FDP liability of the company that receives the foreign dividend.

When a company elects to satisfy a FDP liability by reduction of losses, and it does not in fact incur a net loss or have a sufficient net loss for this purpose, the CIR may disallow the election for so much of the FDP as is considered appropriate. This could also apply where the electing loss company and the company that received the foreign dividend are members of the same group of companies for only part of a relevant income year, so that only part of the electing company’s net loss was available for offset against the net income of the company with the FDP liability [see 940.31]. The company whose FDP liability was reduced by the loss election is then liable to pay the amount of FDP resulting from the disallowance, plus any late payment penalty [see 670.210] running from the original due date.

670.140 Refund of FDP overpaid or paid by loss company [ss RA 19, RM 18, RM 19, RM 20, RM 21, OD 25]

(1) Refund for FDP overpaid by company
A company that has overpaid its foreign dividend payment (FDP) liability may obtain a refund. However, where the refund relates to FDP overpaid during a previous tax year, the amount of refund cannot exceed:

(a) In the case of a foreign dividend payment account (FDPA) company [see 670.145], the amount of credit balance in its FDPA at the end of the tax year preceding that in which the entitlement to the refund arises; or

(b) In the case of an imputation credit account (ICA) company that is not a FDPA company, the amount of credit balance in its ICA at the end of the tax year preceding that in which the entitlement to the refund arises; or

(c) Where the company has ceased to be resident, the amount of credit balance in its FDPA (if it was previously a FDPA company) or ICA (if it was not previously a FDPA company) that was cancelled out by a corresponding debit immediately before it ceased to be resident [see 670.35 and 670.160].

Where the company receives more than one refund during the same tax year, its entitlement to a later refund is determined by reducing the relevant FDPA or ICA balance above by the earlier refunds of FDP received [see 670.70] which discusses refunds of income tax [s RM 18].

Where an amount of overpaid FDP is not refunded to the company because of the restrictions above, it is credited against any other FDP liability of the company for any tax year, including a prior tax year. No debit or credit arises to the FDP account where an amount of tax paid in excess is credited against an amount of income tax or provisional tax payable by the company.

An entitlement to a FDP refund may also arise under s CD 50, in relation to FDP previously paid on a deemed dividend “attributed repatriation” that arose in relation to a loan from a controlled foreign company (CFC) that subsequently is repaid within five years, or gives rise (through debt forgiveness) to a dividend [see 270.20]. In this case, the relevant FDPA or ICA credit balance that applies to restrict the amount of any FDP refund is deemed to be increased by the amount of any prior debit to that FDPA or ICA for breach of shareholder continuity provisions [see 670.75], if the breach occurred after the date of the original FDP payment [s RM 19]. See also 670.70 for a similar provision relating to income tax refunds. Where FDP is refundable under s CD 50, but the full amount of refund is not paid to the company because of the s RM 20 restrictions, the amount not refunded is to be offset against any subsequent income tax or provisional tax or FDP liability of the company. See 670.35 and 670.160 for debits to the company’s ICA or FDPA that arise in these circumstances. Any remaining excess is retained by the CIR.

(2) Refund for FDP paid by loss company
A company that has paid FDP, but which has a net loss available, may be able to obtain a FDP refund by an election to reduce the net loss [s RM 21]. This applies where the company has a net loss which may be carried forward and offset against its net income for the year following that in which the FDP was paid, or where another company in the same group has a net loss which may be offset against the net income of the company for the year the FDP was paid. The company must have filed its income tax return for the year of the FDP.
payment, and the loss company (ie the company or its fellow group company) must have filed its income tax return for the year in which the net loss arose. The company must make written application for the FDP refund, and if a group company’s net loss is to be utilised, then that company must elect in writing to the CIR to do so.

Where this is done, the company that paid the FDP is entitled to a refund. However, the refund cannot exceed either the company’s FDPA credit balance at 31 March in the most recently ending tax year, or an amount equal to the net loss available multiplied by 30 per cent (the basic rate of income tax for companies).

Note: There can be no refund when the company does not maintain a FDPA. The company is also entitled to a refund of any late payment penalty imposed for its FDP payment.

When such a FDP refund is made, the net loss of the relevant company is reduced by an amount calculated by dividing the amount of refund by 30 per cent (the basic rate of income tax for companies).

Any FDP refund in excess of the proper amount can be recovered by the CIR from the company as if it were income tax payable by the company [TAA, s 165A].

(3) Refund for credit balance transferred to conduit tax relief account

If a credit balance in a company’s FDPA is transferred to its conduit tax relief (CTR) account at tax-year end because a debit balance exists in the CTR account [see 215.80], the company is entitled to a corresponding amount of refund [s OD 25]. Such a refund does not cause a debit to arise to the FDPA [see 670.160].

670.145 Election to maintain FDPA [s OC 1]

Like the imputation credit account (ICA) [see 670.20], the foreign dividend payment account (FDPA) of a company is a memorandum account, that may be used to record the company’s payments of foreign dividend payment (FDP) and the allocation to shareholders of the benefit of those payments. However, unlike the ICA, maintenance of a FDPA is optional. Only a FDPA company can attach FDP credits to dividends paid to shareholders. If an ICA company does not also maintain a FDPA, any FDP payments that it makes, or any FDP credits attached to dividends that it receives, are credited instead to its ICA and result only in imputation credits to its shareholders. FDP credits in excess of the tax liability of a shareholder are, unlike imputation credits, refundable to the shareholder. For example, a company is likely to wish to maintain a FDPA if it has significant non-resident shareholders who would benefit from FDP refunds in excess of their non-resident withholding tax (NRWT) liability [see 670.185].

Any resident company can elect to maintain a FDPA for an tax year (eg by way of directors’ resolution to do so). Written notice of the election must be given to the CIR within 21 days of election date, or within such further time as the CIR may allow. A company that elects to maintain a FDPA must do so for the period from election date, and thereafter during every subsequent tax year until it ceases to be a FDPA company (eg on liquidation).

However, a company may, in a subsequent tax year, elect to cease to be a FDPA company, with effect from the start of the next succeeding tax year. This means that when a company elects to maintain a FDPA, it must continue to do so for at least the remainder of the tax year of the election and the following tax year. An election to cease to maintain a FDPA has no effect unless the company files its annual FDP return for the tax year of election within the time allowed for filing its annual income tax return and pays any further FDP that is payable for that year [see 670.200].

670.150 Information to be recorded in the FDPA [ss OA 2, OA 3, OA 7]

(1) Repeal of FDP rules

Several sections in subpart OC that give rise to FDP credits have been repealed as these sections are redundant with the repeal of the FDP rules in subpart RG for income years beginning on or after 1 July 2009.

Sections OC 6, OC 8, OC 9, OC 10, OP 56, OP 61 and OP 62 have been repealed to prevent new FDP credits from being generated.
Previous rules
The foreign dividend payment account (FDPA) must record for each tax year the 1 April opening balance for the year and credits and debits to the account as they arise. The rules in this regard, including the power of the CIR to correct any entry or omission [s OA 2(5); TAA, s 104B], are essentially the same as for the imputation credit account (ICA) [see 670.25]. For record keeping requirements [see 670.80].

670.155 Credits to the FDPA [Table O3]
Table O3 summarises the credits in a FDPA, the date the credit arises and the section reference pertinent to the credit. The table needs to be read in conjunction with the appropriate section, Table O3 features in the ITA 2007 after s OC 37. Each of the following transactions shall be stated in the FDPA. The row numbers are the same as those stated in Table O3 of the legislation.

1. **Opening credit balance**: The opening credit balance is the previous year’s closing balance if that was a credit balance. The ICA rules refresh this credit on first day of the tax year (ie 1 April irrespective of the balance date for the company) [s OA 7].

2. **FDP paid**: To be credited on the day of payment [s OC 6].

3. **Further FDP paid**: To be credited on the day of payment [s OC 6].

4. **FDP credit attached to dividend derived**: A credit arises for any FDP credit attached to a dividends paid to the company. The credit arises on the date that the dividend is paid [s OC 9].

5. **FDP paid on transfer from CTRA**: If the company maintains a CTRA, any amount of FDP that becomes payable under s OD 23 where a credit balance is transferred at the tax-year end from its CTRA to its FDPA on account of a year end debit balance in the FDPA [see 670.215]. The credit arises on 31 March [s OC 8].

6. **Transfer from ICA on account of net foreign attributed income for income year**: This refers to any amount debited to the company’s ICA on account of the company’s income tax liability on foreign attributed income [see 670.35]. The credit arises on the corresponding debit date in the ICA [s OC 9].

**Note**: The amount transferred from the ICA to the FDPA could be less than the actual income tax payable on foreign attributed income, as in the example below.

**Example**: A company that is 40 per cent owned by non-resident shareholders derives foreign attributed income of $5,000. An excess interest allocation of $2,000 is determined for the company under subpart FF [see 215.95]. It has no foreign attributed losses, CFC tax credits, or BETA debit balance offsets for its foreign attributed income, for the purpose of calculating the debit to its ICA and corresponding credit to its FDPA. The company does not maintain a CTR account. Income tax paid on the foreign attributed income is 30 per cent of $5,000, or $1,500. However, the amount to be transferred from the ICA to the FDPA is 30 per cent of ($5,000 – $2,000), or $900 [see 670.35, and the formula set out in ss LQ 1 and LQ 2]. The balance of $600 of actual income tax paid on the foreign attributed income remains as a credit in the ICA.

7. **FDP paid for debit balance in company’s CTRA**: If the company maintains a CTRA, this applies to any amount of FDP paid by the company under s OD 23, as a consequence of the cancellation of certain CTRA credits where the company ceases to be a CTR company, or where the company ceases to be a CTR group member for another CTR company or vice versa [see 670.215]. The credit arises in each case on the date that the FDP is paid [s OC 10].

8. **FDP attached to dividend and shown in credit transfer notice**: Credit transfer notices arise under the rules applying to share lending transactions [see 1340.90]. The credit arises on the day on which notice is given [s OC 11].

9. **Reversal of debt for tax advantage arrangement**: This applies to any amount previously debited to the FDPA for an arrangement to obtain a tax advantage [see 670.115], where it is subsequently established (eg by the CIR or a Court), that the CIR ought not to have done so. The credit arises on the same date the previous debit arose [s OC 12].

Staples Tax Guide 2012
No FDPA credit arises where FDP is paid by reducing a net loss. No debit or credit arises to the FDPA account where an amount of tax paid in excess is credited against an amount of income tax or provisional tax payable by the company.

670.160 **Debts to the FDPA** [Table O4]

Table O4 follows Table O3 in the ITA 2007 after s OC 39. Each of the following transactions refers to an explanation of the FDP debits that shall be stated in the FDPA and the date when the entry should be made. The row numbers are the same as those stated in Table O4 of the legislation.

1. **Opening debit balance**: The opening debit balance is the previous year’s closing balance if that was a debit balance. The FDP rules refresh this debit on first day of the tax year; (ie 1 April) irrespective of the balance date for the company [s OA 7].

2. **FDP credit attached to dividend paid**: A debit arises for the amount of FDP credit attached to a dividend paid by the company. The debit arises on the date the dividend is paid [s OC 13].

3. **Refund of FDP**: This applies to overpaid FDP refunded to the company during the year. However, this does not apply to the extent that a debit to the FDPA for breach of shareholder continuity requirements (see row 12 below) has already arisen after the date that the FDP was originally paid by the company. This is to prevent double debiting of the FDPA for the same amount of FDP. Similarly, no debit arises for a refund that the company becomes entitled to because of any year end transfer to its CTRA. The debit arises on the day of refund [s OC 14].

4. **Overpaid FDP applied to satisfy tax liability**: This applies to overpayments of FDP that the CIR applies to satisfy some tax liability of the company other than FDP (eg an income tax or provisional tax or GST liability). This does not apply to the extent that the amount applied does not exceed the amount of a previous debit to the FDPA for breach of shareholder continuity, if the overpaid FDP was paid before the date of that previous debit. The debit arises on the date that the CIR applies the overpaid FDP [s OC 15].

5. **Any tax refund to the company for FDP credits attached to dividends it receives (ie as a shareholder)**: The debit arises on the day of refund [s OC 16].

6. **FDP attached to dividend and shown in credit transfer notice**: Credit transfer notices arise under the rules applying to share lending transactions [see 1340.90]. The debit arises on the day of payment [s OC 17].

7. **Transfer of closing credit balance to company’s ICA**: This applies to the amount of the credit balance at the end of the tax year that the company elects to credit to its ICA [see 670.165]. The debit arises on 31 March [s OC 18].

8. **Transfer of credit balance to company’s CTRA**: If the company maintains a CTRA this applies to the amount of any credit balance in the FDPA that becomes transferable at the end of the tax year to the CTRA on account of a year end debit balance in the CTRA (in which case the company becomes entitled to a refund of the amount transferred [see 670.140]. The debit arises on 31 March [s OC 19].

9. **Transfer of credit balance to company’s PCA**: This applies to an amount of the credit balance in a life insurance company’s FDPA that the company elects under s OC 20 to credit to its PCA [see 800.50]. The debit to the FDPA and credit to the PCA arise on the date that the company elects to do so by recording the entries in these memorandum accounts [s OC 20].

10. **Transfer of credit to group FDPA**: This applies when an FDPA company has an FDP debit equal to the amount of an FDP credit under s OP 59 for transfer to the FDP of a consolidated group. The debit arises on the credit date in group account [s OC 21].

11. **Debit for breach of FDP ratio**: This applies to the allocation deficit debit that arises when the FDP ratio of a subsequent dividend differs from that of the benchmark dividend [see 670.175]. The debit arises on 31 March [s OC 22].
12 Breach of FDP ratio by FDPA company that is also a PCA company: This is the allocation deficit debit that arises for a life insurance company that is a PCA company, when the FDP credit transfer fraction for any transfers of credits from its FDPA to its PCA is less than the imputation credit transfer fraction for any transfers of credits from its ICA to its PCA [see 670.180]. The debit arises on 31 March [s OC 23].

13 Debit for loss of shareholder continuity: This applies to any credits existing in the FDPA (and not cancelled by a prior or subsequent debit) at any time where there is a breach of shareholder continuity [see 670.195]. The debit arises on the day of loss of continuity [s OC 24].

14 Debit for tax advantage arrangement: This is a further debit that may be imposed under the anti-avoidance provisions [ss GB 35 and GB 36], where the CIR determines that there is an arrangement to obtain a tax advantage [see 670.115]. The debit arises on the last day of the tax year in which the arrangement began [s OC 25].

15 Final balance when FDPA status ends: This cancels any credit balance in the FDPA if for any reason the company ceases to be a FDPA company (eg on ceasing to be resident or on winding up). The debit arises immediately before the company ceases to be a FDPA company, so that any credit balance in the FDPA is extinguished at that time [s OC 26].

670.165 Transfers from the FDPA to the ICA [s OC 18]

A company that has a foreign dividend payment account (FDPA) credit balance, either at the end of any tax year or immediately before a debit to the FDPA arises under s OC 26 when it ceases to be resident, can elect to transfer all or part of that credit balance to its imputation credit account (ICA). The company does so by recording a debit in the FDPA and a credit in the ICA, with effect from the relevant date in each of the above situations. For example, it may wish to do so to clear or reduce a 31 March ICA debit balance [see 670.95], or immediately prior to any liquidation when the foreign dividend payment (FDP) credits will otherwise be lost [see 670.36].

Note: A conduit tax relief (CTR) company cannot transfer credits from its FDPA to its ICA.

670.170 Attaching FDP credits to dividends [s OC 27]

A foreign dividend payment account (FDPA) company can attach a foreign dividend payment (FDP) credit to a dividend, should it choose to do so, on payment of the dividend [s OC 27], subject to the rules set out below that apply to dividends paid to non-resident shareholders of a conduit tax relief (CTR) company. If it does so, the total of the dividend paid plus the attached FDP credit (plus any imputation credit) will be included in the shareholder’s income [see 670.185]. As for imputation credits, the company is free to determine the amount of FDP credit attached, subject to allocation rules as to maximum permissible credits and benchmark dividends [see 670.175].

It is suggested that, as for imputation credits, the company’s decision to attach the FDP credit should be included in its resolution to pay the dividend.

Like the imputation credit account (ICA), the FDPA does not have to be in credit at the time that a debit arises for FDP credits attached to dividends, so that the company can anticipate payments of FDP liability after that date. However, a debit balance remaining at 31 March tax-year end is subject to further FDP liability and penalties [see 670.200].

Any dividend (including non-cash dividends) that arises for income tax purposes to which an imputation credit could be attached will also be a dividend to which a FDP credit can be attached [see 670.40].

1 Conduit tax relief company

The CTR rules [see 215 CONDUIT TAX RELIEF] are intended to restrict the attaching of FDP credits by a CTR company to dividends paid to its resident shareholders, with CTR credits instead being attached to dividends paid to its non-resident shareholders. Under s OC 27, a FDPA company that also maintains a CTR account cannot attach FDP credits to dividends paid to non-resident shareholders.
670.175 Allocation rules for FDP credits [ss OA 18, OC 27, OC 28, OC 29]

The two allocation rules contained in ss OC 27 to OC 29 essentially parallel those applying to imputation credits [see 670.45]. They apply by placing identical restrictions on the foreign dividend payment (FDP) ratio of a dividend (ie the ratio of the amount of attached FDP credit to the amount of dividend paid — exclusive of the FDP credit or any imputation credit).

Accordingly, the first allocation rule [s OA 18] is that the FDP ratio cannot exceed the 30/70 maximum fraction (based on the current rate of basic income tax for companies) that applies for imputation purposes. If it does, then as for imputation credits, the excess FDP credit attached to the dividend is not allowed as a credit of tax and is excluded from the amount of dividend [see 670.55]. However, the full amount of FDP credits attached is still debited to the company’s foreign dividend payment account (FDPA), so that the excess amount is effectively forfeited.

The second allocation rule, as for imputation credits, requires every subsequent dividend paid by the company during a tax year to have the same FDP ratio as that of the benchmark dividend, unless both of the following are satisfied [s OC 28]:

(a) A ratio change declaration [see 670.45] is filed with Inland Revenue before the date of payment of the subsequent dividend, or before such later date as the CIR may allow; and

(b) The subsequent dividend is not paid as part of an arrangement to obtain a tax advantage [ss GB 35, GB 36, see 670.115].

Non-cash dividends may have benchmark dividend implications [see 670.45].

On breach of the second allocation rule, an allocation deficit debit arises [s OC 22] to the FDPA, of an amount that is calculated (with the substitution of FDP credit for imputation credit) in exactly the same way as an allocation debit for imputation credits [see 670.45]. That is to say, the allocation deficit debit is effectively the difference between the total amount of FDP credits actually attached to dividends paid during the tax year, and the total amount of FDP credits that would have been attached if all such dividends had FDP ratios equal to the highest FDP ratio (not exceeding 30/70) that was actually adopted. The allocation deficit debit arises at the 31 March tax-year end, so that it might cause a FDPA debit year end balance to arise with consequential further FDP liability and penalties.

These two rules do not apply to statutory producer boards and co-operative companies [see 670.85, 670.90].

A third allocation rule [s OA 18] applies where the company pays a dividend with both imputation and FDP credits attached. The combined imputation and FDP ratio (ie the ratio of the total of attached imputation and FDP credits to the amount of dividend paid) cannot exceed the 30/70 maximum fraction. If it does, the excess credit amount is calculated under s OC 29, based on the difference between that ratio and the 30/70 maximum permissible figure. This amount is then applied [s LJ 1(3)] to reduce the credits of tax available to the shareholder, in such a way that FDP credits are lost first [see 670.55]. As the full amounts of imputation and FDP credits attached are still debited to the company’s imputation credit account (ICA) and FDPA respectively, the credits represented by the excess credit amount are effectively forfeited.

These allocation rules, and the definitions of FDP ratio and combined imputation and FDP ratio, also apply under the conduit tax relief (CTR) rules [see 215.75] as if a CTR credit attached to a dividend was a FDP credit [ss OA 18, OD 20, OD 22]. However, to the extent that an allocation deficit debit arises only through a CTR credit being so treated as if it was a FDP credit, the allocation deficit debit is debited to the company’s CTR account [see 215.60], not to the FDPA [s OD 21].

670.180 Allocation deficit debit for life insurance company [s OC 20]

A different kind of foreign dividend payment account (FDPA) allocation deficit debit can also arise where a life insurance company that is a policyholder credit account (PCA) company also maintains a FDPA, and transfers credits from its imputation credit account (ICA) and its FDPA to the PCA [see 800.50]. If the insurer is also a CTR company it cannot transfer credits from its FDPA to its PCA [s OC 20]. The debit arises when, for an tax year, the company’s FDP credit transfer fraction is less than its imputation credit transfer fraction.
Anti-avoidance rules that apply to prevent the streaming of credits are made up of:

(a) An allocation deficit debit to the FDPA;
(b) An imputation credit transfer fraction; and
(c) A FDP credit transfer fraction.

An allocation deficit debit arises when the “shareholder FDP ratio” exceeds the “policyholder FDP ratio” in a “FDP reference period”. The “shareholder FDP ratio” is the total FDP credits divided by the total dividends paid. The “policyholder FDP ratio” is the total of the FDP credits transferred to the policyholder credit account divided by the net policyholder income. The FDP reference period is the current tax year plus previous years since the date on which a dividend with FDP credits attached was last paid. The objective of the measure is to ensure that the ratio by which FDP credits are attached to shareholder dividends does not exceed the equivalent ratio for policyholders.

Where an allocation deficit debit arises in the FDP account, a corresponding credit arises in the policyholder credit account to the extent to which the FDP account has a credit balance.

Shareholder income and FDP tax credits and refunds [ss CD 15, LA 6, LF 8, OC 1(5), (6)]

As for an imputation credit [see 670.50], the amount of dividend derived by a resident taxpayer includes the amount of foreign dividend payment (FDP) credit attached to the dividend [s CD 15]. For non-resident withholding tax (NRWT) purposes, the amount of a dividend paid to a non-resident taxpayer also includes the amount of any FDP credit attached. The taxpayer obtains a credit of tax for the FDP credit [s LF 1]. However, the amount of FDP credit that applies in particular circumstances is modified by the provisions of s LB 1 [see 670.55]. As for imputation credits, the taxpayer is required to furnish the shareholder dividend statement [see 670.60] or other written evidence of the FDP credit to Inland Revenue [ss LF 10; TAA, 78D].

The FDP tax credit is credited against a resident shareholder’s income tax liability, after first crediting imputation credits, any foreign tax paid (eg NRWT), and resident withholding tax (RWT) credits [s LA 6]. Any excess FDP tax credit not utilised in this way is refundable, unlike imputation credits.

Note: Refundable credits (RWT and FDP) are offset last against income tax liability. Because of the ordering rule above, a company receiving a refund can determine what part of the refund comprises RWT (debited to the imputation credit account (ICA)) or FDP (debited to the foreign dividend payment account (FDPA)).

Part or all of a FDP credit may be disallowed in similar circumstances to those applying for imputation credits [see 670.50].

A non-resident shareholder is entitled to a refund of FDP credits in excess of NRWT imposed on the dividend. The amount of FDP credits attached to the dividend is included in the dividend amount on which NRWT is calculated, and the amount of FDP credits utilised to meet the NRWT liability is deemed to be NRWT paid [see 1020.20], so that the company paying the dividend reduces its NRWT payment to Inland Revenue accordingly. The balance of the amount of FDP credits is refundable. For this purpose, the amount of FDP credits (prior to NRWT offset) cannot exceed the amount that would be included in income if the shareholder was resident in New Zealand [see 670.55], so that any over-allocated FDP credits are not refundable.

The non-resident shareholder must apply annually to Inland Revenue to obtain the refund, no earlier than 31 May following tax-year end [TAA, s 78D], in a form authorised by the CIR (form IR3NR or an income tax return). The shareholder dividend statement, or other satisfactory evidence of the FDP credit refundable, must be supplied.

However, for a non-resident shareholder of a CTR company, the CTR rules preclude the attaching of FDP credits to dividends paid from 1 April 1998, subject to transitional rules applying to dividends paid [ss LF 8, OC 1(6), see 670.170].
670.190 Annual and other FDPA returns [TAA, ss 71, 72]
An annual foreign dividend payment account (FDPA) return in the prescribed form (IR4D) must be filed by a FDPA company following each tax year, within the period allowed for filing the income tax return for the company’s corresponding income year [TAA, s 71]. The FDPA return must show:
(a) The opening and closing balances of the FDPA for the tax year;
(b) The amount and source of all debits and credits that have arisen during the tax year;
(c) The amount of any further FDP payable [see 670.200];
(d) Any FDP penalty tax payable [see 670.205];
(e) Whether the company has elected to cease to be a FDPA company;
(f) The amount and source of every foreign withholding payment dividend paid to the company during the year, and the amount of any foreign withholding tax paid for each such dividend; and
(g) Such other information as the CIR may prescribe or require.
Other circumstances where a FDPA return is to be furnished [TAA, s 72] are where the company ceases to be resident in New Zealand (in which case it must furnish a return for the period up to cessation date within two months of the cessation date, as for its ICA return [see 670.65], or as and when required by the CIR for any specified period.)

670.195 FDPA shareholder continuity requirements [s OC 24]
For a foreign dividend payment account (FDPA) company to continue to carry credits in its FDPA, it must satisfy the 66 per cent shareholder continuity provisions contained in s OC 24. If it does not do so, a debit to the FDPA arises at the time that the shareholder continuity provisions are breached [see 670.160], that extinguishes credits in the FDPA at that time that have not been cancelled out by a (prior or subsequent) debit. Accordingly, any FDPA credit balance is effectively lost at the time of a breach of the shareholder continuity provisions.
The FDPA 66 per cent shareholder continuity requirements are identical to the imputation credit account (ICA) shareholder continuity requirements [see 670.75].
Note: As for the ICA, a credit to the FDPA can be cancelled by a prior debit (ie not just by a subsequent debit), before the time of any breach of shareholder continuity.

670.200 Further FDP for company with FDPA debit balance at year end or on ceasing to be resident [ss OC 30, OC 31, OC 32, OC 33, OC 34]
(1) Repeal of FDP rules
The foreign dividend payment (FDP) rules have been repealed in the Taxation (International Taxation, Life Insurance, and Remedial Matters) Act 2009, from income years beginning on or after 1 July 2009. Foreign dividend payment accounts will be gradually phased out.
During the phase out, if a company has an FDP debit at the end of the tax year [s OC 30] or when it migrates offshore [s OC 31], “further FDP” was payable under the previous rules. This liability has been replaced with a liability to pay further income tax. Sections OC 4, OC 5, and OC 30 to OC 34 have been amended to replace “further FDP” with “further income tax.”
Consistent with this change, s 140B of the TAA has been amended so that imputation penalty tax is payable when further income tax is payable under s OC 30.
(2) Previous rules
Further foreign dividend payment (FDP) is an amount of FDP liability that is imposed if the foreign dividend payment account (FDPA) has a debit balance at 31 March or when the company ceases for any reason to be resident (eg on liquidation). It is payable by the following 20 June for a company with a 31 March FDPA debit balance, and by the date of ceasing to be resident for a company that has a FDPA debit balance at that date [s OC 30]. The amount of further FDP is the amount of the debit balance.
Further FDP paid can be credited against any FDP liability of the company arising after its payment [s OC 34]. Payment of further FDP gives rise to a FDPA credit, on the date it is paid [s OC 33]. However, payment of a subsequent FDP liability by way of a crediting of further FDP previously paid does not give rise to a subsequent FDPA credit [s OC 1]. It is not refundable to the company.

In addition, where a company has a 31 March FDPA debit balance, FDP penalty tax (also payable by 20 June) of 10 per cent of the further FDP is also imposed (although not where a company has a FDPA balance on ceasing to be resident).

A further amount of FDP may also become payable by a CTR company in certain circumstances when debits to its CTR account arise [see 670.215].

A company that has a debit balance in its FDP account at the end of the tax year may apply in writing to the CIR for a reduction in liability if the company had a debit balance in its FDP account at the end of the immediately preceding tax year and that debit balance exceeds the total of FDP payments that the company has made during the tax year [s OC 32].

670.205 FDPA penalties and use of money interest [TAA, ss 120D, 139B, 140C]

(1) Repeal of FDP rules

The foreign dividend payment (FDP) rules have been repealed in the Taxation (International Taxation, Life Insurance, and Remedial Matters) Act 2009, from income years beginning on or after 1 July 2009. Foreign dividend payment accounts will be gradually phased out.

Consistent with this change, s 140B of the TAA has been amended so that imputation penalty tax is payable when further income tax is payable under s OC 30. Section 140C of the TAA has been repealed.

(2) Previous rules

Foreign dividend payment (FDP) penalty tax applies under the penalties regime [TAA, s 140C]. The penalty tax is 10 per cent of the amount of any further FDP liability for a 31 March FDPA debit balance. It is payable by the following 20 June.

If further FDP and the 10 per cent FDP penalty tax (of more than $100) are not paid by 20 June, late payment penalties [TAA, s 139B] of an initial five per cent and two per cent per month thereafter (compounding) will apply [see 1110.40].

These provisions parallel those that apply to further income tax for a 31 March ICA debit balance. Use of money interest provisions [TAA, s 120D] where payments are made after due dates, and other general penalties, also apply in the same way as for the imputation provisions [see 670.105].

There are three situations where the CIR is required to remit FDP penalty tax relating to a 31 March FDPA debit balance [TAA, s 181]:

(a) To the extent that the debit balance arose through the CIR debiting the FDPA in reliance on the ss GB 35, GB 36 anti-avoidance provisions, but that debit has subsequently been reversed [see 670.30];

(b) To the extent that the debit balance arose from a FDP refund having been sent but not received, or not known by the company to have been received, before 31 March; and

(c) To the extent that the debit balance arose because overpaid FDP was applied by the CIR against some other tax liability of the company or of a consolidated group, and the taxpayer was not aware of this in sufficient time to clear the 31 March FDPA debit balance position.

As for the corresponding imputation provisions, in these situations the CIR must also remit any corresponding late payment penalty that has arisen for the FDP penalty tax, and in situation (a) only, any late payment penalty on the corresponding amount of further FDP. The CIR similarly has discretion to remit FDP penalty tax or a late payment penalty for reasonable cause [see s 183A of the TAA and 670.105].
The s 120D (TAA), (two-way) use of money interest provisions, and penalties for late payment or underpayment, also apply to a company’s quarterly payments of FDP to the CIR [see 670.210].

**670.210 Two-way use of money interest and penalties on FDPs** [TAA, s 120D]

FDP deductions must be paid quarterly to the CIR [see 670.135]. However, companies may be forced to estimate FDP liabilities because details of the underlying foreign tax credit (UFTC) are not then available [see 670.230].

Any underpayments and overpayments of FDP are subject to the same use of money interest rules [TAA, s 120D] that apply to underpayments and overpayments of tax liabilities generally [see 1110.295]. Late payment penalties [TAA, s 139B] can apply in addition to interest, subject to the ability of the CIR to remit such a penalty for reasonable cause [see 670.105], and shortfall penalties [see 1110.185] are also potentially applicable.

Where a company elects to offset losses against a FDP liability [see 670.135], for the purpose of the s 120D of the TAA interest provisions a payment of the relevant amount of FDP is deemed to have been made by the required due date [TAA, s 120R]. TIB vol 8.7 (October 1996) at 7 states that this applies if the company’s notice of election is given to the CIR by the quarterly due date for the FDP liability. However, where the CIR accepts a late election [see 670.135], the s 120R (TAA) provisions appear to apply similarly.

**670.215 Further FDP payable for debits to conduit tax relief account** [s OD 23]

Under the conduit tax relief (CTR) rules, further amounts of FDP become payable by a CTR company under s OD 23, in the various circumstances (other than when the company attaches CTR credits to a dividend paid) where a debit arises to the company’s CTR account [see 215.60, 215.80].

In the following circumstances, the company must pay a further amount of FDP equal to the CTR account debit to the CIR within 20 days of the end of the quarter in which the debit arises and the payment of the further amount of FDP does not give rise to a credit to the company’s FDPA:

(a) Where an allocation deficit debit arises to the CTR account under s OD 17 [see 670.175];
(b) Where a further debit arises to the CTR account under s OD 18, as a consequence of the application of the ss GB 35, GB 36 anti-avoidance provisions [see 670.115]; and
(c) Where a debit to the CTR account arises under s OD 16 due to the company’s percentage of resident shareholders having increased by 34 per cent or more since a CTR account credit arose [see 215.60].

In the following circumstances, the company must similarly pay an amount of FDP equal to the CTR account debit to the CIR within 20 days of the end of the quarter within which the debit arises. However, such payments of FDP give rise to credits to the company’s FDPA [see 670.155]:

(a) Where a debit to the CTR account arises under s OD 14 to cancel a credit that had arisen under ss LQ 1 and LQ 2 the CTR rebate or the s RG 7 reduction in FDP liability provisions due to the deemed non-resident status of a CTR group member, and that status ceases to apply because a non-resident ceases to hold the direct voting interest or market value interest required under s YD 11 in the CTR group member or in another member of the same wholly-owned group [see 215.60];
(b) Where a debit to the CTRA arises under s OD 15 to cancel a credit that had arisen because the company was a CTR group member when it received a dividend with a CTR credit attached from another CTR company, and the company ceases to be a CTR group member for that other company because of a cessation of shareholding by a non-resident as in (a) above [see 215.60]; and
(c) Where the CTR account debit arises under s OD 19 because the company ceases to be a CTR company [see 215.60].

If a credit balance is transferred from the company’s CTR account to its FDPA at tax-year end under s OD 11 [see 215.80], the company must pay an amount of FDP to the CIR equal to the amount transferred.
670.220 Foreign dividend payment anti-avoidance provisions [ss GB 39, GB 41]

The general FDP anti-avoidance provision s GB 39 applies to an arrangement that the CIR considers has been entered into between persons with a purpose (not necessarily its sole or dominant purpose) of avoiding the application of the FDP rules. Where this applies, the CIR may deem part or all of a payment under the arrangement to be a foreign dividend payment subject to FDP deduction.

FDPA shareholder continuity anti-avoidance rules are contained in s GB 41, which parallel those in s GB 34 [see 670.75] for ICA shareholder continuity.

The imputation anti-avoidance rules contained in ss GB 36 and GB 37, that are aimed at preventing the streaming of credits to shareholders, also apply for FDP purposes [see 670.110, 670.115].

670.225 Offences relating to FDPs

See 1110.230 and 1110.235 for offences relating to failures to make a deduction required to be made by a tax law.

670.230 Underlying foreign tax credits

(1) Repeal of FDP

Following the exemption for most foreign dividends received by companies in the Taxation (International Taxation, Life Insurance, and Remedial Matters) Act 2009, from income years beginning on or after 1 July 2009, the foreign dividend payment (FDP) rules have been repealed.

Subpart LL has been consequentially repealed for income years beginning on or after 1 July 2009.

(2) Previous rules

The “underlying foreign tax credit” (UFTC) regime in subpart LL allows a company (other than a qualifying company) to reduce its FDP liability on foreign dividends received by taking into account tax paid by the foreign company on its earnings, provided the company has a “sufficient interest” (10 per cent or more) in the foreign company and certain other requirements are met [see 670.235, 670.240].

If the foreign dividend-paying company is resident in a grey-list country (currently Australia, Canada, Germany, Japan, Norway, Spain, UK, and USA [see 850.15]), the UFTC is a notional amount intended to eliminate the company’s FDP liability on the dividend. In this case, the company must maintain a “tracking account” to determine its entitlement for a full deemed-tax paid UFTC. The tracking account is a memorandum account that operates as an anti-avoidance device, to prevent dividends from non-grey-list companies being routed through grey-list companies to qualify for the full deemed-tax paid UFTC [see 670.255]. Otherwise, the UFTC is calculated based on actual tax paid by the foreign company [see 670.245].

Where the company does not qualify for a full deemed-tax paid UFTC to reduce its FDP liability to nil, provision is made for the UFTC available to include tax paid by a “lower tier” company in which the foreign dividend-paying company in turn has a shareholding, if that lower tier company has paid a dividend to the foreign dividend-paying company and the resident company has a required interest in both of those other companies at that time [see 670.270]. This means that foreign tax credits can effectively be passed up a chain of companies for UFTC purposes, through the payment of dividends from lower tier companies.

Various information requirements apply under the UFTC regime [see 670.275], for tracking account details (if applicable), evidence of foreign tax paid, and foreign company details relating to years prior to the introduction of the regime.
The regime also contains anti-avoidance provisions limiting the deductibility of interest paid offshore by the resident company under certain conduit financing arrangements, where in turn a dividend is received by the resident company from a grey-list company [see 670.280].

670.235 Eligibility requirements for underlying foreign tax credits [ss LL 2, LL 9]

An underlying foreign tax credit (UFTC) can only arise for a dividend for which there is a FDP liability (ie for a “foreign withholding payment dividend”) [see 670.125]. However, no UFTC is available for the taxpayer company receiving the dividend where:

(a) At that time, the taxpayer is a qualifying company;
(b) At that time, the taxpayer does not have a “required interest” [see 670.240] in the dividend-paying company; or
(c) The dividend is paid on a fixed rate share [s LL 9] (or if a fixed rate share is taken into account in calculating a dividend that is an attributed repatriation);
(d) The dividend-paying company can claim a deduction for the dividend in calculating its foreign income tax liability;
(e) From 21 December 2004, if as a result of paying the dividend, the company has no income tax liability in relation to an amount from which the dividend was sourced; or
(f) The dividend was sourced by the dividend-paying company, directly or indirectly, out of an amount that it derived from another company, and:
   (i) The dividend-paying company was not subject to foreign income tax on that amount; and
   (ii) That other company could claim a deduction for foreign income tax purposes for that amount.

670.240 Required interest in dividend-paying company [ss LL 1, LL 9]

No underlying foreign tax credit (UFTC) is available to offset the FDP liability of a resident company that receives a foreign dividend unless the company has a “required interest” in the dividend-paying company at that time. Furthermore, the period or periods for which the New Zealand company holds such a “required interest” in the dividend-paying company determine which accounting years of the dividend-paying company qualify as “eligible accounting years” [see 670.250], for the purpose of calculating the UFTC entitlement.

A company has a required interest in another company at a particular time only where:

(a) It has at that time a voting interest of 10 per cent or more in that other company, determined solely for its right to appoint or elect directors of that company. For this purpose, the normal tracing rules [s YC 4(1)-(3)], whereby the company is deemed not to hold those voting interests that are attributed to its shareholders, do not apply (ie all its voting interests are counted); and
(b) If a market value circumstance exists at that time for that other company, it also has at that time a market value interest of 10 per cent or more in that other company, again determined without applying the normal tracing rules that would otherwise exclude those market value interests that are attributed to its shareholders; and
(c) The other company must be at that time:
   (i) A CFC; or
   (ii) A foreign investment fund (FIF) for which the resident company is using the branch equivalent method to calculate FIF income or loss; or
   (iii) Resident in a grey-list country [see 850.15]; or
   (iv) A company resident in New Zealand that is not a company that is treated as not being resident in New Zealand under a double tax agreement. (This enables a resident company to hold a sufficient interest in another resident company, which is relevant where the other resident company is a lower tier company [see 670.270]); or

Staples Tax Guide 2012 805
(d) The company has an income interest of 10 per cent or more in the other company, and the other company is a CFC.

From 1 April 2006, companies that invest in “foreign hybrids” are able to receive “grey-list” treatment and foreign tax credits for tax paid overseas on income earned by a foreign hybrid that is either a controlled foreign company (CFC) or a branch-equivalent foreign investment fund (FIF). The underlying foreign tax credits and deemed underlying foreign tax credits are able to be used to offset the foreign dividend payment.

A foreign hybrid is an entity that has the characteristics of both a company and a partnership. It is treated as a company for New Zealand tax purposes, but is treated like a partnership (with “flow-through” tax treatment) or a branch of the parent company under another country’s tax system. A foreign hybrid that is a CFC does not pay the foreign tax because the tax is imposed on its members. Certain conditions apply to the treatment of foreign hybrids as grey-list CFCs [see 850.20, TIB vol 18:5 (June 2006) at 115-116].

670.245 Type of underlying foreign tax credit available [ss LL 2, LL 9]

The type of underlying foreign tax credit (UFTC) available depends on whether the foreign dividend is paid by a company that is resident in a grey-list country.

If it is, then, subject to certain conditions being met, the UFTC is calculated under s LL 3, and is a notional amount intended to eliminate FDP liability. This is based on the presumption that the foreign company will have paid tax in that country equal to New Zealand tax on its earnings from which the dividend is sourced [see 670.255].

However, if the foreign company is not resident in a grey-list country, or in any case where the conditions are not met, then the UFTC is calculated based on actual tax paid on its earnings by the foreign company, under ss LL 2 and LL 5 [see 670.265].

In either situation, it is necessary to determine which accounting years of the foreign company are, “eligible accounting years” in relation to the particular dividend. Such years may effectively determine the UFTC entitlement for a particular dividend.

670.250 Eligible accounting year [s YA 1]

An eligible accounting year is defined in relation to each dividend paid by the foreign company to the resident company, and by reference to “accounting years” [s YA 1] (the periods for which accounts are prepared) of the foreign company.

An eligible accounting year is an accounting year of the foreign company during which the resident company has at all times held a required interest in the foreign company, and which is either:

(a) The accounting year in which the dividend is paid;
(b) The immediately preceding accounting year; or
(c) An accounting year immediately preceding an eligible accounting year.

The simplest way to determine eligible accounting years in relation to a dividend is to first establish which of the year the dividend is paid or the immediately preceding accounting year, is the latest year during which required interest has been maintained throughout by the resident company. That year, and all preceding years during which required interest has been maintained, will be eligible accounting years.

Example:

A resident company obtained a required interest of 25 per cent in a foreign company on 28 December 20X1. The foreign company has a 31 May balance date, and paid a dividend to the resident company on 30 June 20X5. The accounting year ending 31 May 20X6 will be an eligible accounting year for that dividend only if the required interest continues to be held throughout that year. The preceding accounting years ending respectively on 31 May 20X5, 31 May 20X4, and 31 May 20X3 are eligible accounting years. The accounting year ending 31 May 20X2 is not an eligible accounting year, as required interest was not held throughout that year.
670.255 Underlying foreign tax credit for dividends from grey-list companies [ss LL 2, LL 3]

Subject to certain requirements being met, the intention of the s LL 2 provisions is to provide, in respect of a dividend paid from a grey-list jurisdiction, an underlying foreign tax credit (UFTC) equal to the amount of the FDP liability otherwise applicable. Accordingly, there will generally be no FDP liability on dividends sourced from grey-list companies.

The amount of the UFTC arising for such a dividend (unless there is a credit balance in the resident company’s “tracking account” as discussed below) is:

\[
\frac{(\text{grey-list dividend} \times \text{tax rate})}{(1 - \text{tax rate})}
\]

Where:

“Grey-list dividend” (see below) is the amount of the dividend (including foreign withholding tax); and

“Tax rate” is the basic rate of income tax for companies for the income year the dividend is paid.

Example:

An Australian company pays a dividend of $28,000 (subject to zero Australian withholding tax deduction) to its New Zealand parent company on 1 February 2009.

The UFTC is $28,000 × 30/70 = $12,000.

The FDP liability on the dividend [see 670.130] is:

\[
\frac{((28,000 + 0 + 12,000) \times 0.30) - 0 - 12,000}{12,000 - 12,000} = \text{nil}
\]

(assuming the parent company does not have a credit balance in its tracking account).

The required conditions [s LL 3] to be met are as follows:

(a) The dividend must be derived from a grey-list company; and

(b) For all eligible accounting years, that company must have been liable to income tax (see below) in a grey-list country by reason of its domicile, residence, place of incorporation, or place of management; and

(c) For all eligible accounting years, that company must have calculated its income liable to income tax without applying any of the concessional features of tax law specified in sch 24, Part B (except for the Part B, para (1) exemption for offshore business activities, where that exemption applies for the company only because of business activities carried on in another grey-list country); and

(d) The grey-list company must be either:
   (i) At the time the dividend is paid, a member of the same wholly-owned group of companies as the resident company; or
   (ii) A foreign company at all times during the period ending with the dividend payment date, and commencing at the beginning of that company’s accounting year which is three years before the accounting year in which the resident company first had a required interest in that company (or the date of incorporation of that company, if later).

(e) The resident company must have maintained, and be able to furnish to the CIR on request, the “tracking account” that is necessary to determine to what extent a UFTC calculated as above applies to the dividend. The tracking account must have been maintained for transactions occurring on or after the “first tracking date”, which is the latest of:
   (i) 20 October 1992;
   (ii) The first day of the first eligible accounting year; or
   (iii) If the resident company so elects, the first day of any subsequent eligible accounting year (in which case the tracking account is credited with the grey-list country’s retained earnings at that date [see 670.260].
Income tax [s YA 2], for the purposes of the UFTC rules, broadly speaking means any taxes imposed by a taxing authority, whether of New Zealand or elsewhere, that are substantially of the same nature as New Zealand income tax or non-resident withholding tax, and includes any capital gains tax and branch repatriation or remittance tax.

If any of these conditions are not met, the UFTC for the dividend is instead calculated under s LL 3 [see 670.265].

(1) Adjustment for credit balance in tracking account

The tracking account is a memorandum account that operates from the first tracking date as an anti-avoidance device, to prevent dividends from non-grey-list companies, and other dividends that would not qualify for a deemed-tax paid UFTC, from being routed through grey-list companies to avoid FDP liabilities that would apply if those dividends were derived directly by a resident company. It records such dividends received by the grey-list company, and similar transactions with that company, as credits to the account.

The account is debited with all dividends paid by that company for which a UFTC as calculated above does not apply because of the existence of a tracking account credit balance (see below), determined as if the resident company had derived all such dividends. For this purpose, where because of the tracking account adjustment formula (see below) a dividend paid by the grey-list company does not qualify for full deemed-tax paid UFTC as per the formula above, the portion of the dividend that does not qualify is treated as a separate dividend for which a UFTC is separately available under s LL 3, based on actual tax paid by the grey-list company [see 670.265]. The tracking account is also debited with other applicable payments paid by the grey-list company to another grey-list company, if the resident company also maintains a tracking account for that other grey-list company.

Where the tracking account has a credit balance at the last day of the accounting year in which a dividend is paid by the grey-list company to the resident company, the portion of the dividend that does not qualify for a deemed-tax paid UFTC. The grey-list dividend (see above) is subject to limitations, and is defined in the following formula [s LL 3]:

\[
person's\ dividend \times \frac{\text{tracking account balance}}{\text{total grey-list dividends}}
\]

Where:

"Person’s dividend" is the amount of a foreign dividend before FDP is paid or any reduction for foreign tax.

The dividend shall be liable for the UFTC accounting period to income tax in a grey-list country and at least 80 per cent of the company’s income has a source from that country. A tracking account shall be maintained.

The grey-list company shall not have had income tax reduced by virtue of the exclusions in sch 24, Part B, (i). The grey-list company is either part of the same wholly-owned group when the dividend is paid, or has been a foreign company for the whole of the period ending on the day that the foreign dividend is paid,

“Tracking account balance” is the credit balance in the tracking account at the end of that year;

“Total grey-list dividends” is the total dividends paid by the grey-list company during that accounting year.

Example:

A resident company receives two dividends totalling NZ$8,000 from its 100 per cent-owned grey-list subsidiary during an accounting year. At the end of that year, the grey-list company has a credit balance in its tracking account of NZ$2,400. This balance is 30 per cent of the total dividends paid by the grey-list company during the accounting year. Accordingly, 70 per cent of each dividend will qualify for a deemed-tax paid UFTC to offset against FDP liability, with the remaining 30 per cent of each dividend being subject to the non-grey-list UFTC calculation [see 670.265].

A separate tracking account is required to be maintained for each such grey-list company.

670.260 Credits and debits to the tracking account [s LL 4]

(1) Credit of applicable payments

The tracking account is credited with certain amounts (termed “applicable payments”) derived or received by the grey-list company on or after the first tracking date and before the end of the accounting year in which
that company pays a dividend to the resident company. However, no credits arise where the applicable payments are paid to the grey-list company by any company resident in New Zealand, or where the applicable payments would have qualified for a s LL 3 deemed-tax paid UFTC had they been dividends derived by the resident company itself.

These applicable payments are:

(a) Any standard dividend for which the grey-list company is not liable for income tax. A standard dividend is any dividend derived by a shareholder in the form of money, release of shareholder from a loan, property distributed to a shareholder at an under-value, or a taxable bonus issue.

(b) Any dividend paid by a relevant associate for which the grey-list company is not liable for income tax (except where that dividend is either a standard dividend, which is caught under (a) above, or an attributed repatriation [see 850.80], or a dividend arising from the interest payable on a loan differing from the interest rate specified in s CD 39 if the loan itself is caught as an applicable payment [see item “(d)” below]).

A relevant associate is another company which, at the time of payment of the dividend, is associated with both the resident company and the grey-list company, and which is either a CFC or a resident company.

(c) Any amount contributed by a relevant associate to the grey-list company as new equity capital, to the extent the relevant associate has retained earnings at that time.

(d) Any loan by a relevant associate to the grey-list company, to the extent that the relevant associate has retained earnings at that time, except where the loan is both repayable and repaid within five years.

(e) Any non-dividend amount paid by a relevant associate for which the grey-list company is not liable for income tax, if that amount would be income if the grey-list company was a resident.

An amount derived by a grey-list country is treated as not being liable for income tax if the tax law of the relevant jurisdiction provides a rebate, credit, deduction, subsidy, or similar benefit that directly or indirectly rebates an income tax liability on that amount. However, this does not apply where the reduction in income tax liability is due merely to a current year loss offset, or to provisions equivalent to New Zealand’s rules for loss carry forward or grouping, credits for foreign tax or limitation of taxes under a double tax agreement, or BETA tax offsets [s LL 4].

(2) Credit of retained earnings

Where the resident company has elected [see 670.255] to maintain the tracking account from the start of a later eligible accounting year, the tracking account is also credited with the retained earnings of the grey-list company as at the day before that date.

Retained earnings is defined to mean the aggregate of a company’s shareholders’ funds (calculated under generally accepted accounting principles), after deduction of:

(a) Paid-up share capital;

(b) Any share premium account;

(c) Any amount subscribed by the company for shares in another company that has been credited to that other company’s tracking account;

(d) Any outstanding principal balance of a loan by the company that has been credited to another company’s tracking account; and

(e) Any other non-dividend amount paid by the company that has been credited to another company’s tracking account.

However, amounts of paid-up share capital or share premium account resulting from bonus issues or dividend reinvestment are not deducted from retained earnings, except to the extent that such amounts are:

(a) Foreign withholding payment dividends; or
(b) Derived subject to income tax by a shareholder of the company; or
(c) Applicable payments derived by another grey-list company for which the resident company also maintains a tracking account from the first tracking date prior to the date of the bonus issue or reinvested distribution.

(3) **Debits to tracking account**

The tracking account is debited with three types of payments made by the grey-list company after the effective date. These are:

(a) Amounts credited as above that is a dividend that would be a grey-list dividend under s LL 3 if derived by that person, a dividend paid by another company resident in New Zealand.

(b) An amount paid on or after the first tracking date and before the end of the relevant accounting year to another grey-list company, if the resident company also maintains a tracking account for that company from an first tracking date prior to the time each amount is paid, to which the amounts are credited.

(c) Amounts of dividends paid before the start of the relevant accounting year (i.e. the year in which the grey-list company pays the relevant dividend to the resident company) that do not qualify for a deemed-tax paid UFTC because of the existence of a credit balance in the tracking account (determined as if all such dividends were derived by the resident company).

**Example:**

If the resident company holds 60 per cent of the shares in the grey-list company and has received since the first tracking date dividends of $6,000 from that company for which a deemed-tax paid UFTC was not available, the debit to the tracking account would be $10,000 (not $6,000).

(4) **Foreign currency accounts**

Where the accounts of the grey-list company are not kept in New Zealand currency, the tracking account is also to be maintained in the foreign currency. Any applicable payment made in a different currency must, for this purpose, be converted to the tracking account’s currency at the close of trading spot rate on the date of payment.

(5) **Grey-list life insurers**

If the grey-list company is a life insurer, credits to the tracking account for applicable payments are limited to amounts that are actuarially determined to be attributable to shareholders’ profit or loss, rather than to policyholders. This does not apply, however, if the CIR considers that the amounts determined are not reasonable and fair, or if the CIR has not received on request sufficient information to review the actuarial calculations [s LL 4].

**670.265 Underlying foreign tax credit for dividends in other cases [s LL 2]**

An underlying foreign tax credit (UFTC) based on actual underlying foreign tax (i.e. tax paid on the earnings of the foreign company), will apply where:

(a) The dividend-paying foreign company is not a grey-list company; or

(b) The foreign company is a grey-list company but the s LL 3 conditions [see 670.255] have not all been met in respect of the dividend; or

(c) The tracking account maintained in respect of a grey-list company has a credit balance, so that a portion of the dividend is treated as a separate dividend that does not qualify for a s LL 3 deemed-tax paid UFTC.

The UFTC for such dividends is calculated for actual income tax [see 670.255] paid on the earnings of the foreign company for eligible accounting years, by allocating the proportion of tax paid on earnings to the dividend paid on a pro rata basis. The calculation includes credits for underlying foreign tax on dividends paid to the foreign company by lower tier companies in which the resident company also has a sufficient interest.
The amount of UFTC is calculated under the following formula [s LF 3(1)]:

\[(\text{non-grey-list dividend} / \text{earnings amount}) \times (\text{total tax paid} + \text{total UFTCs})\]

Where:

“Non-grey-list dividend” is the amount of the foreign dividend before deduction of any foreign withholding tax;

“Earnings amount” is the amount of the person’s foreign dividend company net earnings under s LL 5;

“Total tax paid” is the total amount of income tax or foreign income tax paid or payable by the foreign dividend company for the UFTC accounting period [see 670.270];

“Total UFTCs” is the total of foreign dividend company lower tier UFTCs under s LL 6 less the sum of:

(a) The total of credits that the person would have under this subpart in relation to all dividends paid by the foreign dividend company during its UFTC accounting period, excluding dividends paid during the current accounting year, and treating the dividends as derived by the person at a time when they have the required interest in the foreign dividend company; and

(b) The total amount of credits that the person would have under the formula in s LL 2(3) [see 670.255] if all dividends paid by the foreign company in its current accounting year are treated as derived by the person at a time when they have the required interest in the foreign dividend company.

If the foreign company’s financial statements are not prepared in New Zealand currency, the UFTC is to be calculated in the foreign currency and converted to New Zealand currency at the close of trading spot rate for the dividend payment date.

After-income tax earnings (or losses) means after-tax accounting profits (or losses), including extraordinary items, calculated under New Zealand generally accepted accounting principles and detailed in audited financial statements subject to requirements set out in s YA 1. In the absence of such financial statements, there are alternative requirements for the use of audited financial statements calculated under generally accepted accounting principles of the foreign country, or otherwise financial statements (which, if audited, must not be qualified) used by the foreign company for reporting to a central or state government or to creditors of the company. See also 670.275 for the position where no such statements exist, or where the statements do not fairly present the profits or losses of the company.

670.270 Underlying tax on dividends from lower tier companies [s LL 6]

In calculating the underlying foreign tax credit (UFTC) based on actual underlying foreign tax paid by a dividend-paying foreign company, under s LL 2, provision is made for taking into account underlying foreign tax on any dividend that has in turn been received by that company from another (ie “lower tier”) company, during any eligible accounting year. This applies only when the resident company has a required interest in both of the other companies at the time the dividend is paid, and where the dividend is a standard dividend [see 670.260].

Under s LL 6 A person has a foreign dividend company lower tier UFTC if:

(a) A company pays a standard dividend to a foreign dividend company during that company’s UFTC accounting period; and

(b) The person has the required interest in the company and in the foreign dividend company when the company pays the standard dividend.

The amount of the foreign dividend company lower tier UFTC is equal to the credit that the person would have under this subpart for the standard dividend, treating:

(a) A dividend other than a standard dividend as not existing; and

(b) A standard dividend as a foreign dividend received by the person.

This amount is limited to the lesser of

(a) The imputation credits attached to the standard dividend if the company is resident in New Zealand and is an imputation credit account (ICA) company; and
(b) An amount calculated using the formula:

\[
((\text{relevant standard dividend} + \text{lower tier UFTC} + \text{tax withheld}) \times \text{company rate}) - \text{tax withheld}
\]

Where:

“Relevant standard dividend” is the amount of the standard dividend after the subtraction of tax withheld in relation to the dividend;

“Lower tier UFTC” is the amount of the foreign dividend company lower tier UFTC under subsection (2) for the standard dividend

“Tax withheld” means the tax withheld and paid in relation to the standard dividend

“Company rate” is the basic rate of income tax set out in sch 1, Part A, cl 2 for the tax year in which the standard dividend is paid.

If the lower tier company is a grey-list company, the amount of UFTC determined in relation to the lower tier company’s dividend could be a s LL 3 deemed-tax paid UFTC [see 670.255]. However, for this to be the case the resident company would have needed to have maintained a tracking account for the lower tier company.

It is possible for a lower tier company to be resident in New Zealand. If so, the amount of UFTC calculated for a dividend that it pays is further limited to the amount of any imputation credit attached to the dividend (unless it has never been required to maintain an ICA (eg where it is treated as non-resident under a double tax agreement) [see 670.20, s LF 6].

This effectively limits the maximum UFTC amount to the amount of New Zealand tax that would be payable on that dividend.

**670.275 Underlying foreign tax credit information requirements and procedures [TAA, s 78F]**

(1) **Claiming of underlying foreign tax credit against FDP liability**

Where the resident company reduces its “foreign dividend payment” (FDP) liability on a foreign dividend by an amount of “underlying foreign tax credit” (UFTC) under s LL 2, no such reduction is allowed unless the taxpayer supplies the CIR with all information specified by the CIR as being necessary to verify the UFTC calculation, including any tracking account details if requested, within such period as the CIR may allow [TAA, s 78F]. This is similar to the FDP requirements for evidence of foreign withholding tax paid on a dividend [see 670.130].

In practice, the taxpayer claims the UFTC reduction in the Foreign dividend payment (FFDP) Return (IR4F), and may subsequently file a FFDP Reconciliation (IR4FR) if FDP is initially paid on the basis of an estimated UFTC amount. See 670.210 regarding two-way use of money interest and penalties on FDP payments.

(2) **Evidence of foreign tax paid**

For the purpose of a UFTC calculated under s LL 2, the foreign company (or any lower tier company) is treated as having no amount of income tax payable on its earnings for an accounting year unless the resident company taxpayer can supply (if requested) to the CIR [TAA, s 78F]:

(a) A copy of a relevant revenue authority receipt evidencing the tax paid;

(b) A copy of the foreign company’s filed income tax return showing the tax payable;

(c) A copy of a statement of account from the relevant revenue authority requesting payment of that amount; or

(d) Other evidence, such as an auditor’s certificate, that satisfies the CIR.

(3) **Misreporting of foreign company earnings**

Where a company calculates a UFTC credit under s LL 2 and no satisfactory financial statements exist for that company, it may be deemed to have paid no income tax in certain eligible accounting years [TAA, s 78F].
This applies where:

(a) The taxpayer has reason to believe that the statements used to measure the after-income tax earnings (or loss) of the company for an eligible accounting year do not fairly represent actual profit or loss;

(b) The CIR has concluded to the same effect; or

(c) No statements of the company exist which meet the requirements set out in the definition of after-income tax earnings [see 670.265].

In each case, for s LL 2 UFTC calculation purposes, that company is deemed to have paid no income tax either for that accounting year or for the immediately preceding and succeeding accounting years.

**670.280 Interest paid in conduit financing arrangements [s LL 7]**

An anti-avoidance rule in s LL 7 places a limitation on the deductibility of interest that is paid offshore by a company, where the company (or an associate) derives a dividend from a grey-list company for which a s LL 3 deemed-tax paid underlying foreign tax credit (UFTC) arises. It is directed at curtailing the opportunity that would otherwise exist for foreign investors to create a New Zealand tax loss position for a company, by using that company as an offshore debt-financed conduit for equity investment into a grey-list country, whereby the company would derive dividends not subject to foreign dividend payment (FDP).

The limitation on deductibility arises for interest expenditure of a company for an income year if the following applies:

(a) In that year, or a prior year, a dividend for which an amount of s LL 3 deemed-tax paid UFTC has arisen is derived by the company, or by a resident company that is associated with the company at the time of derivation; and

(b) The interest is paid by the company to the foreign dividend-paying company, or to a foreign company that is associated at the time of payment with the foreign dividend-paying company (whether paid directly or indirectly or by a series of transactions); and

(c) The foreign company that receives the interest is not a controlled foreign company (CFC) at the time; and

(d) Non-resident persons have voting interests (or, if a market value circumstance exists, market value interests) aggregating 50 per cent or more in the foreign dividend-paying company (and, if it is an associated company that receives the interest, in the associate), at either the time of payment of the interest or the time of payment of the dividend.

In this situation, deductibility for such interest expenditure for the company for that income year is effectively limited to the amount by which that interest expenditure, together with any amounts of such interest expenditure similarly disallowed as a deduction under s DX 2 in any prior income year, exceeds the aggregate of the amounts of dividends derived by the company (or by its resident associate), in the current or prior income years, for which amounts of s LL 3 deemed-tax paid UFTC have arisen. In other words, the interest expenditure is non-deductible over the loan period to the extent of the grey-list company dividends.

**670.285 Branch equivalent tax account rules**

**(1) Repeal of FDP**

Following the exemption for most foreign dividends received by companies in the Taxation (International Taxation, Life Insurance, and Remedial Matters) Act 2009, from income years beginning on or after 1 July 2009, the foreign dividend payment (FDP) rules have been repealed.

Consequently branch equivalent tax accounts (BETA) for companies will be phased out. As income tax will continue to apply to foreign dividends received by non-companies, BETA accounts have been retained for Individuals.

**Note:** Inland Revenue advise in their special report on the international tax rules that companies with BETA debit balances will be able to continue to use these debits to relieve any double taxation on attributed income for a two-year period. Any remaining BETA debits will then be extinguished. The legislation to achieve this
Imputation

is contained in the Taxation (International Investment and Remedial Matters) Bill highlighted in Future Tax Developments.

Sections OE 12 to OE 16 and OP 105 to OP 108 have been repealed to prevent branch equivalent tax accounts (BETA) debit balances from increasing under the new rules.

Sections OE 16B and OP 108B provide a BETA debit to extinguish any existing BETA credit balances as BETA credits are no longer required to relieve FDP once FDP has been repealed.

Note: A new provision, s OE 11B (that applies for income years beginning on or after 1 July 2009), has been inserted to ensure that a BETA debit that arose in respect of FDP that was offset by conduit tax relief under s RG 7 is only available to be offset against pre-reform CFC income [see 670.305].

(2) Previous rules

Under the international tax rules, a resident taxpayer is taxed on attributed foreign income from an income interest (10 per cent or more) held in a controlled foreign company (CFC), and on foreign investment fund (FIF) income [see 850 INTERNATIONAL TAX REGIME]. The branch equivalent tax rules exist to prevent double taxation arising when the resident receives a dividend that is sourced from such foreign income.

The regime permits any resident taxpayer to maintain a branch equivalent tax account (BETA). The BETA is a memorandum account that is designed to record the taxpayer’s payments of income tax on attributed foreign income (including certain FIF income), and the offset of credits for those payments against the resident’s tax liability for dividends received from the CFC or FIF investment. If a resident company maintains a BETA, such BETA credits are offset against the company’s FDP liability on dividends received [see 670.130]. For a resident BETA person [see 670.340], BETA credits are offset against the person’s income tax liability on such dividends.

The BETA rules for companies permits the (converse) offset of FDP paid on dividends received against a company’s income tax liability on attributed foreign income. This prevents double taxation arising when a dividend was received before the company paid income tax on its attributed foreign income from a CFC. Payments of FDP are recorded as debits to the BETA (as well as credits to the FDPA), and can be applied to reduce the income tax liability on attributed foreign income [see 670.315].

The BETA rules are principally contained in subpart OE, and differ between companies and persons, as set out below.

670.285(2)

Election by company to maintain a BETA [ss OA 2, OE 1]

Any resident company can elect to maintain a branch equivalent tax account (BETA) for a tax year (eg by way of directors’ resolution to do so). The election must be made either within that 31 March year, or else within the period allowed for the company’s income tax return for the corresponding income year to be filed. The CIR has discretion to accept a later election. Written notice of the election must be given to the CIR within 21 days, or within such further time as the CIR may allow.

Note: Failure to notify the CIR does not make the election void, although it is an offence [see 1110.225, 1110.230]. See also 670.320 for the amended imputation credit account (ICA) return required if the company has filed its ICA return before it makes a BETA election.

A company that elects to maintain a BETA must do so for the tax year that is the subject of the election, and for every subsequent tax year until it ceases to be a BETA company (eg on liquidation). The company can, in a subsequent tax year, elect to cease to be a BETA company, with effect from the start of the next succeeding tax year. Accordingly, when a company elects to maintain a BETA, it must do so for at least two full tax years. An election to cease to maintain a BETA has no effect unless the company files its annual imputation return for the year of the election within the time allowed for filing its annual income tax return.

670.285 Information to be recorded in a company’s BETA [s OA 3]

The branch equivalent tax account (BETA) of a company must record for each tax year the 1 April opening balance for the year and credits and debits to the account as they arise. The rules in this regard, including the
powers of the CIR to correct any entry or omission [s OA 1; TAA, s 104B], are essentially the same as for the imputation credit account [see 670.25]. See also 670.80 for record keeping requirements.

670.300 Credits to the BETA of a company [ss OE 6, OE 7, OE 8, OE 9, OE 10, OE 11]

A BETA company has a branch equivalent tax credit [s OE 6] for an amount calculated using the formula:

\[ (((\text{CFC income for year} - \text{deductions for year}) \times \text{tax rate}) - \text{foreign tax credits} - \text{debit balances}) \]

Where:
- “CFC income for year” is the amount of attributed CFC income derived during the income year corresponding to the tax year referred to in s OE 6(3);
- “Deductions for year” is the total amount in the income year corresponding to the tax year of attributed CFC loss, and attributed CFC net loss, and FIF loss, and FIF net loss;
- “Tax rate” is the basic rate of income tax set out in sch 1, Part A, cl 2 if the company is not a Maori authority; or sch 1, Part A, cl 7 if the company is a Maori authority;
- “Foreign tax credits” is the amount of foreign tax credits allowed for the income year corresponding to the tax year referred to in s OE 6(3) under ss LK 1 to LK 7 (which relate to foreign tax credits of CFCs), as applicable.
- “Debit balances” is the total amount of all debit balances in a BETA applied to satisfy the company’s income tax liability for the income year corresponding to the tax year referred to in s OE 6(3).

The credit arises on the day the company files the return of income for the tax year.

A credit arises [s OE 7] when there is a debit balance in the BETA; and the income of the company includes an amount of attributed CFC income; and an amount of FDP that gives rise to a debit included in the debit balance has been paid directly, or by reducing a tax loss, or to reduce an FDP liability under s RG 7 for conduit tax relief.

Section OE 7 also applies in relation to a BETA company if another company (company B) that is part of the same group of companies has a debit balance in its BETA that arises in the above circumstances. The company or company B may choose to apply some or all of the debit balance according to s BC 8 to satisfy an income tax liability in relation to the attributed CFC income. The election is made by recording a credit in the BETA with the debit balance. The maximum amount that may be applied to satisfy the income tax liability must be no more than the amount that has the attributed CFC income [under s OE 6(1)] and treating the item debit balances as zero. The amount that is applied to satisfy the income tax liability is a credit in the BETA of the company that made the election.

If the amount that is applied to satisfy the income tax liability for attributed CFC income is more than the total income tax liability, then the unused portion is treated as a tax loss component of the company of an amount calculated using the formula:

\[ \frac{\text{unused portion}}{\text{tax rate}} \]

Where “tax rate” is the basic rate of income tax set out in sch 1, Part A, cl 2 if the company is not a Maori authority; or sch 1, Part A, cl 7 if the company is a Maori authority.

The income tax liability is calculated by applying the formula in s OE 6(1) on the basis that the item debit balances is zero; and is satisfied to the extent to which the liability is no more than the income tax payable in relation to the amount of the attributed CFC income. The credit arises on the day of the election.

A credit arises [s OE 8] when an income tax liability of a BETA company is satisfied by applying a debit balance in the company’s BETA, or in the account of another company in the same group of companies, and an unused portion of the debit balance remains after the income tax liability is satisfied. The unused amount is converted into a tax loss component and is calculated using the formula:

\[ \frac{\text{ unused amount}}{\text{tax rate}} \]

Where
- “Unused amount” is the amount of the debit balance remaining in the BETA;
“Tax rate” is the basic rate of income tax set out in sch 1, Part A, cl 2 if the company is not a Maori authority; or sch 1, Part A, cl 7 if the company is a Maori authority.

The company that has the tax loss is the company whose income tax liability is satisfied as set out in s OE 7(3).

A credit arises [s OE 9] for the amount of a refund of FDP paid to the company. However, the following provisions also apply: A refund must be a refund of a payment of FDP that gave rise to a debit under s OE 12. The amount of the credit is to be reduced to the extent to which the payment of FDP is made before a branch equivalent tax credit arises under s OE 10 in the company’s BETA; and the amount of the refund is no more than the amount of the credit for loss of shareholder continuity. The credit arises on the day the refund is made.

A credit arises [s OE 10] for the amount of a branch equivalent tax debit retained in the BETA and unused before the date on which shareholder continuity is lost. The credit arises on the day of loss of shareholder continuity.

A credit arises [s OE 11] for a debit balance in the BETA when the company stops being resident in New Zealand on the day when the company stops being a New Zealand resident.

670.305 Debits to the BETA of a company [ss OE 12, OE 13, OE 14, OE 15, OE 16]

A BETA company has a branch equivalent tax credit [s OE 12] for the amount of a payment of FDP that is calculated before a reduction of liability under s RG 7 for reduction of payments for conduit tax relief. It must have been payable in relation to a dividend derived from an income interest in a CFC; and may have been paid by choosing to reduce a tax loss. The debit arises on the day of payment.

A debit arises [s OE 13] when a BETA company may choose to use some or all of a credit balance in the BETA to reduce an FDP liability of the company or of another company that is part of the same group of companies when the dividend giving rise to the liability is derived. The amount of the reduction is a debit arising in the company’s BETA. The company makes the election by recording the amount of the credit balance that is used as a debit in the account. The debit date arises on the due date for the payment of FDP.

A debit arises [s OE 14] when a BETA company has a branch equivalent tax debit for the amount of a refund of income tax that is attributable to income tax paid for an income year on attributed CFC income derived during the income year. This is subject to the following provisions. The amount of the debit is reduced to the extent to which a debit arises in the company’s BETA under s OE 15; and the income tax was paid before the debit date for the debit for loss of shareholder continuity. The debit arises on the date the refund is made.

A debit arises [s OE 15] when there is a branch equivalent tax debit for the amount of a branch equivalent tax credit retained in the BETA and unused before the date on which shareholder continuity is lost. The debit arises on the day of loss of shareholder continuity. Section GB 40 may operate to exclude the application of this section [see 670.325].

A debit arises [s OE 16] when there is a branch equivalent tax debit for a credit balance in the BETA when the company stops being resident in New Zealand. The debit arises on the day the company stops being resident in New Zealand.

670.310 Use of BETA credit balance to reduce company FDP liability [s OE 13]

A branch equivalent tax account (BETA) company can elect to utilise part or all of any credit balance in its BETA to reduce its foreign dividend payment (FDP) liability, or the FDP liability of another company that is in the same group of companies at the time that the relevant dividend is paid [s OE 13]. For this to apply, the FDP liability must arise from a dividend paid by a CFC, in respect of an income interest (of 10 per cent or more) held by the recipient company [s RG 5].

To the extent that the BETA credit balance has arisen from income tax payable on attributed foreign income, under s OE 2(2), the FDP offset is permitted only in so far as the company has paid that amount of income
use of BETA debit balance to reduce company income tax liability [s OE 7]

A company can elect to utilise part or all of a debit balance in its branch equivalent tax account (BETA) to reduce its income tax liability, or that of another company that is in the same group of companies for the relevant income year, for attributed foreign income derived from a controlled foreign company (CFC). This offset prevents double taxation arising when a CFC paid a dividend (subject to FDP) before the recipient company paid income tax on its attributed foreign income from the CFC.

The BETA company’s election is made by recording a credit for the amount in its BETA.

The set off against the company’s income tax liability is available only to the extent that the CIR is satisfied that the company has paid the FDP (including by loss offset) [see 670.135] that gives rise to the BETA debit balance [s OE 7], or (in the case of a conduit tax relief company) has received a reduction in the FDP liability under s RG 7 [see 670.130].

If an election relates to an amount that exceeds the income tax liability of the company for the income year, the excess is a net loss of the company. The amount of the loss is calculated as the amount of the excess divided by the tax rate of the entity concerned.

670.320 Annual and other returns for BETA company [TAA, ss 69, 70, 77]

Requirements for a company to provide to the CIR details for a tax year of its branch equivalent tax account (BETA) (opening and closing balances, and the amount and source of all credits and debits) are set out in ss 69 and 70 of the TAA, on the basis that those details are to be supplied as part of the company’s annual (or other) imputation credit account (ICA) return [see 670.65]. A separate BETA return form (IR4X) is used as the BETA company return, and it must be filed with the company’s ICA return.

For the tax year of the company’s election to maintain a BETA, the company’s annual ICA return may have been filed before the election is made [see 670.290] and so may not contain the required BETA details. If so, then s 77 of the TAA stipulates that an amended ICA return for that year containing those details must be filed immediately after the election is made (ie in practice the BETA return form for that year must then be immediately filed).

670.325 Shareholder continuity requirements for BETA company [s OE 15]

For a company to continue to carry debits or credits in its branch equivalent tax account (BETA), it must satisfy the 66 per cent shareholder continuity provisions contained in s OE 15. If it does not do so, then at the time of the breach of the required shareholder continuity:

(a) A credit arises to the BETA that extinguishes those debits in the BETA at that time (eg for foreign dividend payment (FDP) paid that have not been cancelled out before that time by a subsequent credit (accordingly, any BETA debit balance is effectively lost) [see s OE 10 and 670.300]; or

(b) A debit arises to the BETA that extinguishes those credits in the BETA at that time (eg for income tax paid on attributed foreign income) that have not been cancelled out before that time by a subsequent debit (accordingly, any BETA credit balance is effectively lost) [see 670.305].

The BETA 66 per cent shareholder continuity requirements are identical to the imputation credit account (ICA) shareholder continuity requirements [see 670.75]. This includes the requirement for any uncancelled
pre-1 April 1992 credits to the BETA to satisfy both the pre-1 April 1992 continuity requirements (as if the then required continuity percentage was 66 per cent and not 75 per cent), and the current post-1 April 1992 continuity requirements.

**670.330 Branch equivalent tax account year end debit balance consequences for a BETA company**

The branch equivalent tax account (BETA) operates as a debit account (for foreign dividend payment (FDP) paid) as well as a credit account (in respect of income tax paid on attributed foreign income). Accordingly, unlike the rules applying to an imputation credit account (ICA) or foreign dividend payment account (FDPA), no further amount of tax or penalties become payable if the BETA has a debit balance at 31 March year end.

**670.335 Anti-avoidance provisions for a BETA company** [s GB 40]

Branch equivalent tax account (BETA) shareholder continuity anti-avoidance rules are contained in s GB 40, which parallel those applying in s GB 34 [see 670.75] for imputation credit account shareholder continuity.

**670.340 Branch equivalent tax account person** [ss OE 17, YA 1]

A branch equivalent tax account (BETA) person is a resident person other than a company who maintains a BETA pursuant to an election made under s OE 17 [see 670.345]. Such a person [s YA 1] may be an individual, or an unincorporated body of persons, or any entity that is not a company for BETA purposes.

For a BETA person, the only BETA credit entry that arises is for income tax paid on attributed foreign income from a 10 per cent or greater income interest in a controlled foreign company (CFC) (or on foreign investment fund (FIF) income calculated according to the branch equivalent method or the accounting profits method, or from certain other FIF interests [see 670.370].

Whereas a BETA company utilises a BETA credit balance to reduce its FDP liability on dividends received from a 10 per cent or greater income interest in a CFC (or from certain FIF interests, as above), a BETA person utilises a BETA credit balance to reduce the income tax liability on similar dividends.

A BETA person maintains the BETA on an income year (ie accounting year) basis, unlike a BETA company [see 670.345].

**670.345 Election by person to maintain a BETA** [s OE 17]

Any resident person (not being a company) can elect to maintain a branch equivalent tax account (BETA) for an income year (ie the person’s accounting year). The election must be made either during that income year, or else within the period allowed for that person to file the income tax return for that year. The CIR has discretion to accept a later election. Written notice of the election must be given to the CIR within 21 days, or within such further time as the CIR may allow.

A person who elects to maintain a BETA must effectively do so for at least two full income years [ss OE 17 to OE 18]. An election to cease to maintain a BETA has no effect unless the person furnishes the annual BETA return [see 670.365] for the year of the election, within the period allowed for filing the corresponding annual income tax return.

The BETA of a person must record, for each income year, the opening balance (carried forward from the previous year) and debits and credits as they arise [ss OA 5, OA 6].

**670.350 Credits and debits to the BETA of a person** [ss OA 5, OA 6, OE 19, OE 20, OE 21, OE 22]

Credits to the branch equivalent tax account (BETA) of a person arise solely for income tax payable for attributed foreign income derived by the person, calculated as follows:

\[
\text{tax liability} \times \left( \frac{\text{CFC or taxable income}}{\text{taxable income}} \right) - \text{foreign tax credits}
\]

Where:

"Tax liability" is the person’s income tax liability [s BC 6] for an income year;
“CFC or taxable income” is the lesser of the person’s attributed CFC income or taxable income for that income year;
“Taxable income” is the person’s taxable income for that income year; and
“Foreign tax credits” is the amount of any foreign tax credit allowed under ss LK 1 to LK 7 [see 850.95 to 850.110] for that income year (ie for attributed foreign income).
The credit to the BETA arises on the date the person files the income tax return for that year [s OE 19].
Debits to the BETA of a person for an income year arise from:
(a) Any amount of the BETA credit balance that the person elects to credit against the income tax liability on a dividend derived from a 10 per cent or greater income interest in a controlled foreign company (CFC). The debit arises on the date the person makes the election, by recording the debit in the BETA;
(b) The portion of any income tax refund that comprises a refund of income tax paid on attributed CFC income. The debit arises on the date the refund is paid; and
(c) The amount of the BETA credit balance where the person ceases to be resident. The debit arises on the date the person ceases to be resident [ss OE 20 to OE 22].

670.355 Offset by BETA person against tax on controlled foreign company dividend [s OE 20]
When a branch equivalent tax account (BETA) person’s income includes a dividend from a 10 per cent or greater income interest in a controlled foreign company (CFC), the person can elect to utilise part or all of a credit balance in the BETA at the time of election as an offset against the income tax liability on the dividend [s OE 20]. The election is made by recording a debit for the amount in the BETA.
The credit against the person’s income tax liability is allowed only to the extent that the person has paid income tax (including provisional tax) at least equal to the amount of BETA credit balance utilised, for the income year in which the corresponding BETA credits arose.

670.360 Branch equivalent tax account debit balance consequences for a BETA person
It is possible that a BETA debit balance could arise for a BETA person. However, no liabilities for payments of further tax or penalties arise if this situation does occur.

670.365 Annual and other returns for a BETA person [TAA, s 78]
A branch equivalent tax account (BETA) person must file an annual return in the prescribed form (IR3X) for each income year, within the period allowed for filing the income tax return for that year. The BETA return must show the opening and closing balances and the amount and source of all credits and debits for the BETA for that year, and such other information as the CIR may prescribe.
Other circumstances in which a BETA return is to be furnished are:
(a) As and when required by the CIR for any specified period; and
(b) If the person ceases to be resident, in which case the BETA return must be filed no later than the date of cessation of residency.

670.370 Extension of BETA regime to certain foreign investment fund interests [s OE 5]
Both resident companies and resident persons can also elect to maintain a branch equivalent tax account (BETA) in respect of certain foreign investment fund (FIF) interests [s OE 5]. This applies to:
(a) Any FIF interest held where the taxpayer’s FIF income is calculated under the accounting profits method [see 850.165] or the branch equivalent method [see 850.170];
(b) A FIF interest held through a controlled foreign company (CFC), in which case ss EX 50(6) or EX 58 applies to attribute FIF income or loss (calculated under any calculation method) to the resident company or person [see 850.50];

(c) A FIF interest held through another (ie higher tier) FIF, where the branch equivalent method has been used by the resident taxpayer to calculate FIF income or loss for the higher tier FIF, in which case s EX 50 similarly applies to attribute FIF income or loss (calculated under any calculation method) from the lower tier FIF to the resident company or person.

The BETA provisions contained in subpart OE apply in such circumstances as if the resident taxpayer’s FIF income was attributed foreign income from a CFC in which the taxpayer had a (10 per cent or greater) income interest.

In such circumstances, s RG 5 [see 670.130] also applies, so that a FDP liability can arise for a company on dividends received from the FIF interest. This should generally only be relevant in (a) above (ie where the FIF interest is directly held by the company).

670.375 Trans-Tasman imputation — overview

The imputation systems of New Zealand and Australia have been reformed to eliminate the problem of “triangular tax”. The problem arises because both New Zealand and Australia allow only tax paid in their own country to generate imputation or franking credits, and only resident companies to pass imputation or Australian franking credits to their shareholders. This resulted in New Zealand investors in an Australian company that carried on business in New Zealand being unable to claim an imputation credit for New Zealand tax paid by the company. The same applied to Australian investors in a New Zealand company that carried on business in Australia.

Under the trans-Tasman imputation regime, where a New Zealand company chooses to register under the Australian system, it is permitted to maintain an Australian franking credit account to record tax paid in Australia in addition to its New Zealand imputation credit account in which it will record tax paid in New Zealand. The same applies to an Australian company which chooses to register under the New Zealand imputation system. In both cases, imputation and franking credits are required to be allocated proportionately across all shareholders. Only New Zealand residents are able to claim a credit for imputation credits and only Australian residents are able to claim a credit for franking credits.

Australian companies are eligible to maintain a New Zealand imputation credit account from 1 April 2003 and pay dividends with New Zealand imputation credits attached from 1 October 2003.

Example:

An Australian company carries on business in both Australia and New Zealand. The company is owned as to 50 per cent by New Zealand shareholders and 50 per cent by Australian shareholders. The company’s Australian income is $2,500 with tax payable in Australia of $750. The company’s New Zealand income is $1,500 with tax payable in New Zealand of $450. The company pays a dividend of $1,400 cash.

From 21 July 2005, imputation credits are unable to be allocated to dividends that constitute interest under Australian tax law. This includes dividends paid on redeemable preference shares. Where these rules prevent imputation credits from being attached, the dividend may be ignored for the purposes of the benchmark dividend rules.

Grand parenting rules provide that the restriction does not apply to shares issued before 21 July 2005 where the shareholder is not a member of the same group of companies as the dividend-paying company or where the two companies are in the same wholly-owned group of companies but neither is resident in New Zealand [s OB 63]. There is a further exemption in s OB 63) for shares issued before 21 July 2005 where the two companies are in the same group of companies and the shareholder acquired the share under any one or more of the following circumstances:

(a) As part of a share-broking business;
(b) As an investment as part of an insurance business;
(c) As security for a loan given as part of a money-lending business;
(d) As a trustee for a beneficiary who is not a company in the same group of companies as the shareholder; or
(e) For other reasons which do not include the fact that the two companies were members of the same group of companies.
Prior to the reforms, the company could attach to the dividend only the franking credits arising from the tax paid in Australia. These credits could be used only by the company’s Australian shareholders. This resulted in the Australian shareholder receiving a fully-franked dividend of $700 and the New Zealand shareholder receiving a dividend of $700 with no credits attached.

Following the reforms, each shareholder would receive a $700 dividend with $300 franking credits and $225 imputation credits attached. The Australian shareholder would be able to claim the $300 franking credits (but not the imputation credits) and the New Zealand shareholder would be able to claim the $225 imputation credits (but not the franking credits).

670.380 Imputation groups

The concept of imputation groups has been introduced to alleviate the problem of imputation credits not being able to be passed through intermediate companies that are resident in countries other than Australia and New Zealand.

The concept of imputation groups allows any company that is resident in either New Zealand or Australia to pay an imputed dividend provided that any company within the group has paid tax in New Zealand or received imputed dividends from a company outside of the group.

There is no requirement to pay dividends up the chain of companies, thereby removing the necessity to pay a dividend up through a company not resident in New Zealand. Instead, imputation credits held further down the chain of companies can be accessed by the parent company.

670.385 Eligibility for membership of an imputation group [s FN 4]

Only companies resident in either Australia or New Zealand are eligible to be included in an imputation group. The criteria that must be satisfied differ depending on whether or not the company is a member of a consolidated group.

Where a company is not a member of a consolidated group, it is eligible to be a member of an imputation group where:

(a) Each member of the imputation group is a company that is:
   (i) Resident in either Australia or New Zealand, and is not treated by a double tax agreement as resident in neither Australia nor New Zealand;
   (ii) Either required under s OB 1, or has elected under s OB 2 to do so; and
   (iii) Is not a loss attributing qualifying company; and
(b) The members of the imputation group are a wholly-owned group of companies;
(c) Either no member of the imputation group is a qualifying company or all members of the imputation group are qualifying companies;
(d) Either no member of the imputation group is a mining company or all members of the imputation group are mining companies; and
(e) No shares in any company that is a member of the imputation group have been subject to an arrangement or series of arrangements, or had rights attaching to them extinguished or altered, in such a way as to enable the company to be a member of the imputation group.

A company that is a member of a consolidated group of companies is eligible to be a member of an imputation group if, at that time:

(a) All of the above requirements are or would be satisfied;
(b) All members of the consolidated group are or would be members of the imputation group; and
(c) If the imputation group contains or will contain members of more than one consolidated group, all of those consolidated groups have been part of a single wholly-owned group of companies at all times from the date on which a currently uncancelled imputation credit arose in the imputation credit account of a consolidated group or imputation group all of whose members are, or would be, members of the imputation group.
670.390 Forming, joining and combining imputation groups [ss FN 3, FN 4, FN 5, FN 6, FN 7, FN 8, FN 9]

In order to form or join an imputation group or to combine groups, it is necessary to make an election in a form acceptable to the CIR. The following elections may be made:

(a) An election by any two or more companies that are not members of a consolidated group to form an imputation group.

(b) An election by a company that is not a member of a consolidated group to become a member of an existing imputation group.

(c) An election by all members of consolidated group to form an imputation group with companies that are not members of that consolidated group. The election is made by the nominated company of the consolidated group.

(d) An election by all members of consolidated group to join an existing imputation group provided that all companies that are to be members of the proposed imputation group are at that time eligible to be members.

With the exception of (b) above, any election must nominate one of the companies to be agent of the group for the purposes of the imputation rules [see 670.395]. Any election has effect from the beginning of the tax year that contains the date on which the CIR receives the notice of election.

All companies that are members of an imputation group are jointly and severally liable for further income tax, civil penalties and interest arising from the operation of the imputation credit account of the imputation group. An imputation group cannot be formed with only one member. However, if the membership of the group falls to one, the group is able to continue in existence.

Where an imputation group includes one or more Australian companies, a resident imputation subgroup must be formed. The members of this subgroup are the New Zealand resident members of the trans-Tasman group. A resident imputation subgroup can be formed, and continue to exist, with only one member. However, if at any time the subgroup has no members, it ceases to exist.

670.395 Nominated company of an imputation group [s FN 6]

The nominated company for an imputation group must be a member of the imputation group. That company is the agent of the imputation group and of each company that is, at that time, a member of the imputation group.

The nominated company of a trans-Tasman imputation group, which must not be an Australian imputation credit account company, is also the nominated company for the resident imputation subgroup that is associated with the trans-Tasman imputation group.

Where the nominated company wishes to cease to act in that role, it may give the CIR notice that it is to cease to be the nominated company and that another company in the imputation group take over that role. The notice becomes effective 30 days after the date on which the CIR receives the notice.

670.400 Leaving an imputation group [ss FN 11, FN 12, FN 13, FN 14]

A company ceases to be a member of an imputation group if:

(a) The company elects in writing that it cease to be a member;

(b) The company ceases to be eligible to be a member;

(c) The company ceases to be a member of the same imputation group as the nominated company of that group; or

(d) The imputation group of which that company is a member ceases to have a nominated company.

Where the company has elected to cease to be a member, the election takes effect from the date (if any), specified in the notice of election. If no date has been specified, the election takes effect from the later of the beginning of the tax year in which the CIR receives the notice, or the time at which the company became a member of the imputation group.
Where a company ceases to be eligible to be a member of an imputation group, or ceases to be an eligible member of the same imputation group as the nominated company, the company may elect that cessation take effect from the date on which eligibility ceases. Any such election must:

(a) Be made in writing in an acceptable form; and

(b) Be received by the CIR within 30 days after the date on which the company ceases to be eligible to be a member of the group, or ceases to be eligible to be a member of the same group as the nominated company, or within such further time as the CIR may allow.

In order for the election to be effective, the CIR must not reasonably be able to conclude that an arrangement has been entered into to defeat the intent and application of the imputation rules. Where no such election is made, cessation takes effect from the later of the beginning of the tax year in which eligibility ceases or the date on which the company became a member of the imputation group.

A company that is not the nominated company and which ceases to be eligible to be a member of the same imputation group as the nominated company may make an election that cessation takes effect from the date on which eligibility ceased. Where no such election is made, cessation takes effect from the later of the beginning of the tax year in which eligibility ceases or the date on which the company became a member of the imputation group. The same election criteria apply as set out above.

Where an imputation group ceases to have a nominated company and no replacement is appointed, the companies in the group cease to be members of the group with effect from the beginning of the tax year.

If the nominated company is liquidated, the other companies in the group may elect another company in the group to fill that role from the date of liquidation. The is achieved by notifying the CIR within 30 days or such longer time as the CIR may allow.

In all cases, where a company ceases to be a member of an imputation group by virtue only of it being liquidated, the deemed date of cessation is not backdated to the beginning of the tax year.

**670.405 Australian resident imputation credit account companies**

Under the trans-Tasman imputation system, an Australian resident company is able to elect to maintain an imputation credit account (but not a foreign dividend payment account), and is able to distribute dividends with both imputation credits and Australian franking credits attached.

**Eligibility**

In order to be eligible, the Australian company must be excluded from the requirement to maintain an imputation credit account and be:

(a) Resident in Australia; and

(b) Not be treated under a double tax agreement as being resident in a country that is neither Australia nor New Zealand.

The term “resident in Australia” is defined in s YA 1 as meaning a company which is not resident in New Zealand but which would be resident in New Zealand under ss YD 2 and YD 3 if Australia was treated as being New Zealand under that provision.

**Election**

The election is made using form IR488. The CIR is able to decline an election for an Australian company to become an imputation credit account company if an election by that company has previously been revoked by the CIR, and the company does not satisfy the CIR that the company has taken adequate steps to prevent the recurrence of the type of situation that gave rise to that revocation.

A notice that accepted by the CIR comes is effective from the beginning of the tax year in which the election is received by the CIR for all purposes other than the attaching of imputation credits to dividends.

For the purposes of attaching imputation credits to dividends, the election is effective from:
(a) The beginning of the tax year in which the CIR receives the election if the company is formed, or
becomes eligible, in the tax year where the CIR confirms the election as being effective from the
beginning of the tax year; or
(b) In all other cases, 30 days following the receipt by the CIR of the election.

Once the company has made an effective election, it must establish and maintain an imputation credit account
until:

(a) For the purposes of attaching imputation credits, until the date on which it ceases to be eligible to be
an imputation credit account company or the date on which the election is revoked either by the
company or by the CIR; and
(b) For all other purposes until the end of the tax year of revocation or cessation of eligibility.

Any company that is in the same wholly owned group of companies with the electing company is jointly and
severally liable with the electing company for all further income tax, civil penalties and interest that arises
from a breach by the electing company of the imputation rules. The joint and several liability is subject to it
not being prohibited by an independent regulatory body.

Any election may be revoked by the company by way of notice in writing. Any such notice is effective from:

(a) The date on which it is received by the CIR for the purposes of attaching imputation credits to
dividends;
(b) From the end of the tax year in which the CIR receives the notice for all other purposes;
(c) If the election is revoked by the CIR, the revocation is effective from the date stipulated in the notice
for the purpose of attaching imputation credits to dividends; and
(d) From the end of the tax year in which the revocation takes place for all other purposes.

(3) Further income tax

Where an Australian imputation credit account company pays further income tax and, at the time of payment,
there is no possibility that the company will, in the future, have an income tax liability, the company may
elect that the payment be converted to a loss available to any company in the same wholly-owned group. The
amount is calculated by dividing the amount of the further income tax (to the extent to which it is not needed
to pay a liability of the company), by the basic rate of company tax (30 per cent).

**670.410 Dividends paid by Australian imputation credit account companies**

[ss OB 60, OB 61, OB 62, OB 63, OB 64; TAA, ss 29(1B),
67(1)(eb), 69(1B), 139A, 142(1)(d)]

Where an Australian company pays a dividend in Australian dollars, for the purposes of the imputation rules,
the amount is calculated as:

\[
\text{Australian dollar value} \times \text{exchange rate}
\]

Where:

“Australian dollar value” is the amount of the dividend in Australian dollars;

“Exchange rate” is the close of trading spot exchange rate for the Australian dollar:

(a) On the day the dividend is declared if that date is no more than three months before the dividend is
paid; or
(b) The day on which the dividend is paid if that day is more than three months after the date on which
the dividend was declared.

Imputation credits are not able to be attached where the dividend is treated as interest under Australian tax
law and is included in the Australian tax return of the company. The benchmark dividend rules do not apply
where the attachment of imputation credits is prohibited for this reason. The restriction applies to dividends
The restriction does not apply where the shares were issued before 21 July 2005, and either the shareholder company or dividend paying company are not members of the same group of companies, or are both non-resident. Nor does it apply where the shareholder acquired the shares before 21 July 2005 for business reasons. The business reasons must fall into one of the following categories:

(a) Part of a share-broking business;
(b) As an investment held as part of an insurance business;
(c) As security given for a loan as part of a money lending business;
(d) As a trustee for a beneficiary who is not a company in the same group of companies as the shareholder.

The business reasons must be independent of the relationship between the shareholder and the dividend paying company [s OB 63].

(1) Shareholder dividend statement
When issuing a dividend statement to shareholders, an Australian company is required to use the words “New Zealand imputation credit” to describe any imputation credit attached to the dividend.

(2) Company dividend statement
Where a dividend is paid in Australian dollars, the exchange rate used to calculate the imputation ratio must be shown on the company dividend statement.

(3) Imputation return
The last date for filing of the imputation return of an Australian imputation company is:

(a) Where the company is not required to file a return of income for the year that corresponds with the tax year (ie to 31 March), is required to file its imputation return by 1 July following the end of the tax year; or
(b) Where the company is required to file a tax return to 31 March, the last day for filing the imputation return is the date by which its income tax return is required to be filed.

Where the company fails to file its imputation return on time, a late filing penalty of $250 is payable. The due date for payment of the penalty is the later of the due date of the imputation return or such date as the CIR may specify. The date specified by the CIR must not be less than 30 days following the date of notification by the CIR.

670.415 Imputation credit account of Australian company [ss OB 27, OB 28, OB 29, OB 57, OB 58, OB 59]
In addition to the debits and credits which arise in the imputation credit account of a New Zealand company, an Australian company must record credit and debit entries.

Credit entries include:
(a) Non-resident withholding tax paid on resident passive income;
(b) Non-resident contractors withholding tax; and
(c) Tax paid for income as a non-resident insurer, shipper or film maker under ss CV 16 or CV 17.

The credits arise on the date of payment of the tax. Only one credit is allowed for any amount of tax payment.

Debit entries include any refund of:
(a) Non-resident withholding tax paid on resident passive income;
(b) Non-resident contractors withholding tax; and
(c) Tax paid in respect of income as a non-resident insurer, shipper or film maker under ss CV 16 or CV 17.

The debits arise on the date of on which the refund is paid.
670.420  **Consolidated imputation groups** [subparts FN and OP; TAA, s 74]

With effect from 1 April 2003, the imputation credit account (ICA) provisions relating to consolidated groups are extended to accommodate imputation groups, including trans-Tasman imputation groups.

1) **Terminology**

Three types of imputation groups are:

(a) “Consolidated imputation group”, which means an imputation group, a resident imputation subgroup, or a consolidated group, no member of which is a member of an imputation group [s YA 1];

(b) “Imputation group”, which means a group formed under s FN 7 [s YA 1, see 670.390];

(c) A “imputation subgroup”, relates to a trans-Tasman imputation group and means the members of the trans-Tasman imputation group that are not Australian imputation companies [s FN 8(2), see 670.390].

2) **Imputation credit accounts**

Where the members of a consolidated group elect to form an imputation group with a company that is not a member of another consolidated group, the ICA of the existing consolidated group is required to be used by the consolidated imputation group [s OP 3].

Where the members of a consolidated group that is a consolidated imputation group elects to form or join an imputation group with a company that includes the members of another consolidated group, the combined imputation group records in its ICA:

(a) All of the debits and credits that are recorded in the ICA of the consolidated group immediately before the election takes effect; and

(b) All of the debits and credits that arise from transactions undertaken by any member of the group after the election take effect [s OP 4].

A resident imputation subgroup that is associated with a trans-Tasman imputation group must record in its ICA all of the debits and credits that:

(a) Are recorded in the ICA of the trans-Tasman group; and

(b) Arise in relation to a company that at the time the debit or credit arises:

(i) Will be a member of the resident imputation subgroup (for debits and credits that arise before the formation of the resident subgroup); and

(ii) Is a member of the subgroup (for debits and credits that arise after the formation of the resident subgroup).

Where the members of an imputation group elect to cease to be an imputation group and to form a consolidated group that is a consolidated imputation group, the consolidated group must continue to use the ICA that was previously used by the imputation group.

The opening balance of the ICA of a consolidated group is:

(a) Nil if the consolidated group is formed during the tax year other than from members of a consolidated imputation group in existence immediately before formation of the consolidated group; or

(b) Where the consolidated imputation group is formed during a tax year from the members of a consolidated imputation group in existence immediately before formation, the amount stated in ss OP 3, OP 4 (see above).

3) **Imputation account entries**

Where a consolidated imputation group has an Australian imputation credit account company as one of its members, a credit arises to the ICA of the group for payments made by the Australian company of non-resident withholding tax, non-resident contractors withholding tax and tax paid for income as a non-resident shipper, non-resident film renter or non-resident general insurer.

826 Staples Tax Guide 2012
Any refunds of taxes of the type referred to above are debited in the ICA account of the group. The debit arises on the day on which the refund is made.

Also credited to the ICA are the following:

(a) The amount of any payment made by an intermediary into a tax pooling account from funds supplied by the group for that purpose;

(b) The amount of any transfer by an intermediary to the group of an entitlement to funds that are held in a tax pooling account.

(4) Tax refunds

Where a company that is a member of an imputation group is entitled to a refund of tax, the refund must be requested in writing. The requirement that the amount of the refund not exceed the credit balance of the ICA applies as if:

(a) The ICA of the imputation group were the ICA of the company; and

(b) The credit in the ICA for the purposes of s RM 13 were reduced by each refund to a member of the group.

(5) Imputation returns

The nominated company of a consolidated imputation group is required to file an imputation return when the consolidated imputation group:

(a) Ceases to be a consolidated imputation group;

(b) Ceases to be an imputation group and becomes a consolidated group that is a consolidated imputation group; or

(c) Ceases to be a consolidated imputation group and becomes an imputation group.

The nominated company of a resident imputation subgroup is not required to furnish an annual imputation return for the group if the group has no liability to make a payment of further income tax or imputation penalty tax under s OP 6 for that income year [TAA, s 74].
Chapter 710
Income

710.05 Overview
The word “income” is not defined in the ITA 2007. In order for an amount to be “exempt income” it must first be “income”: Commissioner of Inland Revenue v Brierley [1990] 3 NZLR 303, (1990) 12 NZTC 7,184 (CA).

Under the ITA 2007, an amount is not income unless it is included in Part C. However, as this includes “income under ordinary concepts”, what is (and what is not), income remains to a large extent a matter of common law principle.

Once an amount has been determined to fall within the meaning of “income” it is then necessary to determine how it is dealt with under the ITA 2007. Section BD 1 divides “income” into:

(a) Exempt income;
(b) Excluded income;
(c) Non-residents’ foreign-sourced income; and
(d) Assessable income.

Assessable income is income that is not exempt income, excluded income or non-residents’ foreign-sourced income. Only assessable income is subject to tax.
Amounts that are “exempt income” are located in subpart CW (Exempt income) or subpart CZ (terminating provisions).

Amounts that are “excluded income” are located in subpart CX (Excluded income) or subpart CZ (terminating provisions).

### 710.10 Income under ordinary concepts

The income of a person includes any amount that is included in income under ordinary concepts [s CA 1(2)].

A number of receipts are deemed to be included in “income”, but the ITA 2007 does not endeavour to define the term exhaustively. Consequently, the ITA 2007 gives little assistance in deciding whether a particular receipt, not expressly mentioned, is or is not income for income tax purposes. In *Scott v Commissioner of Taxes (New South Wales)* (1933) 3 ATD 142 (NSWSC), it was stated:

> “the word ‘income’ is not a term of art, and what form of receipts are comprehended within it, and what principles are to be applied to ascertain how much of those receipts ought to be treated as income, must be determined in accordance with the ordinary concepts and usages of mankind, except in so far as the statute states or indicates an intention that receipts which are not income in ordinary parlance are to be treated as income or that special rules are to be applied for arriving at the taxable amount of receipts.”

In *Lambe v Inland Revenue Commissioners* (1934) 1 KB 178, the Judge stated that:

> “Income may be of various sorts … but nonetheless the tax is a tax on income. It is a tax on what in one form or another goes into a man’s pocket.”

Income is what comes in, but in order to be taxable it must also be in a money form or capable of being turned into money.

These principles were stressed in *Dawson v Commissioner of Inland Revenue* (1978) 3 NZTC 61,252, (1978) 2 TRNZ 375 (SC), but have been overruled by s CC 7(1) insofar as it makes liable to tax any benefit other than in money form derived in consideration of the lending of money for use in a business where the borrowing is a commercial transaction under which interest would otherwise have been payable at current commercial rates.

Whether a gain is, or is not, income can also be dependent on who derives it. For example, a gain on the sale of a motor vehicle owned by a private individual will generally be a capital gain which is not subject to tax. A gain on the sale of a motor vehicle owned by and used in a business will give rise to a depreciation recovery which is taxable, but any amount above cost price will be a capital gain which is not subject to tax. A gain on the sale of a motor vehicle by a car dealer is revenue in nature and subject to tax.

#### (1) Case law

Decisions of the Courts in English-speaking countries given over the last half-century have built up a body of case law which provides standards for the settlement of most problems concerning the nature of income.

The nature, features, and characteristics of “income” were discussed by Quilliam J in *Reid v Commissioner of Inland Revenue* (1983) 6 NZTC 61,624 (HC). See also *Tennant v Smith (Surveyor of Taxes)* [1892] AC 150 (HL); *Federal Commissioner of Taxation v Dixon* (1952) 86 CLR 540 (HCA); *Scott v Federal Commissioner of Taxation* (1966) 117 CLR 514 (HCA), at 526, per Windeyer J.

In *Beare v Carter* [1940] 2 KB 187, (1940) 23 TC 353, the sum of £300, received in consideration of permission to publish a new edition of a book, was regarded as a capital receipt.

In *Billam v Griffith* (1941) 23 TC 757, a practising barrister had for some years spent his spare time in writing plays with the hope of selling them, but without success until he produced a particular play which ran successfully. In addition to royalties and other receipts from the performance of his play for which no question arose, a lump sum was received for the sale of motion picture rights. The decision of the Commissioners was upheld that the appellant was carrying on the vocation of dramatist, and all sums received were therefore
assessable. Where such a vocation is carried on, it is an ordinary incident of the disposition of plays either to realise them by royalties or by outright sale.
In *Des Blandford Ltd v Commissioner of Inland Revenue* (1983) 6 NZTC 61,605 (HC), it was held that a receipt from the assignment of timber cutting rights was not assessable.

In *Bowcock v Commissioner of Inland Revenue* (1981) 5 NZTC 61,062 (HC), breach of study bond payments were found to be assessable.

In *Brent v Federal Commissioner of Taxation* (1971) 2 ATR 563, (1971) 125 CLR 418, 71 ATC 4,195 (HCA), Mrs Ronald Biggs (wife of the “great train robber”) was held to be assessable in relation to moneys received from her life story, she being held to be retained as an employee consultant rendering services.

In *Commissioner of Inland Revenue v A Taxpayer* (1996) 17 NZTC 12,574 (HC), unrepaid funds stolen from an employer were characterised as income. On appeal in *A Taxpayer v Commissioner of Inland Revenue* (1997) 18 NZTC 13,350 (CA) the stolen funds were held to be not taxable. This matter has now been resolved by legislation [see 710.80].

In *Federal Commissioner of Taxation v Cooke* (1978) 9 ATR 310, 78 ATC 4685 (VSC), it was held that the value of holidays was not assessable.

In *Glasson (Inspector of Taxes) v Rougier* [1944] 1 All ER 535, payment received by an author in consideration of the granting by her of exclusive rights of publication of certain novels was held to be liable to taxation.

In *GPO Holdings Ltd v Commissioner of Inland Revenue* (1996) 17 NZTC 12,429 (HC), a trading profit of $7,641,000 had accumulated over the five months between the execution of a sale and purchase agreement for a business and its settlement. This was payable to the objector on settlement. It was held that only $102,564 of the trading profit was assessable. Until a “nomination agreement” had been entered into, the objector did not have a legally enforceable right to receive trading profits.

In *Hobbs v Hussey (Inspector of Taxes)* [1942] 1 All ER 491 (KB), a solicitor’s clerk, who had never carried on the profession of an author, received a sum of money from a newspaper for the serial rights of his life story. He retained no interest in the copyright of the articles but he did not part with his notes or diaries. He contended that the sum was not a revenue receipt since the transaction was the sale of the copyright of the articles and therefore resulted in the realisation of capital. It was held that the true nature of the transaction was the performance of services, the sale of the copyright being subsidiary thereto, and the sum received was, therefore, assessable as revenue.

The performance of services, though they may involve some subsidiary sale of property, are in their essence of a revenue nature since they are the fruit of an individual’s capacity which may be regarded in a sense as their capital, but are not the capital itself. It is possible that if the appellant had merely sold his notes and diaries, the price obtained for them would have been a receipt of capital, unless it consisted of royalties or similar payments.

In *Mason (Inspector of Taxes) v Innes* [1967] 2 All ER 926 (EWCA Civ), the taxpayer, a well-known and successful author who was about to publish a new book, assigned the rights in the book (valued at £15,425) to his father by way of gift. The taxpayer’s expenses of travelling to the Persian Gulf to gather material for the book were allowed as a deduction from his income for tax purposes, and it was found that the writing of the book and the disposal of the book took place in the course of the carrying on by the taxpayer of his profession of an author. The taxpayer, whose earnings were assessed for income tax purposes on a cash basis, was assessed to tax on the estimated value of the rights in the book assigned to his father as if it were the taxpayer’s income. It was held that the taxpayer was not chargeable to income tax on the gift which he made of the copyright in his book.

In *New Zealand Society of Accountants v Commissioner of Inland Revenue* (1985) 7 NZTC 5,122 (HC), it was held that professional societies setting up fidelity funds for the protection of members of the public were not trust funds for charitable purposes, and income derived by the trusts was assessable. The Court of Appeal in *New Zealand Society of Accountants v Commissioner of Inland Revenue* (1986) 8 NZTC 5,205 (CA) upheld the High Court decision in confirming that the funds lacked the necessary public character to be charitable.
In *Rank Xerox (New Zealand) Ltd v Commissioner of Inland Revenue* (1983) 6 NZTC 61,501 (HC), sale proceeds in excess of the cost of ex-rental equipment were deemed to be assessable.

In *TRA Case E27* (1981) 5 NZTC 59,174, it was held that the full amount of profit on the sale of a leased truck was assessable. This was upheld on appeal: *John Anderson Ltd v Commissioner of Inland Revenue* (1985) 7 NZTC 5,029 (HC).

In *TRA Case E99* (1982) 5 NZTC 59,532, it was held that the sale of scrap machinery was assessable as the intention was to make a profit.

In *TRA Case F43* (1983) 6 NZTC 59,775, an annuity was held to be income even though it was subsequently regarded as advance payments against a lump sum.

In *TRA Case F55* (1983) 6 NZTC 59,481, it was held that income from stock-car racing was not assessable. The taxpayer was engaged in this activity for sport, amusement, and prestige, with hope of casual prize money.

In *Trustees of Earl Haig v Inland Revenue Commissioners* [1939] SC 676, (1939) 22 TC 725 (IH (1 Div)), the amount realised on sale of a diary was held to be a capital receipt. The trustees possessed diaries of unique importance and great value, and the Court’s view was that these diaries were a capital asset and the trustees had realised some part of the asset. The Court did not have to consider the profits received by the author of the book. It could not be said that from the point of view of the trustees the sale was subsidiary to their performance of services.

In *Whitworth Park Coal Co Ltd v Inland Revenue Commissioners* [1959] 3 All ER 703 (HL), it was ruled that account must be taken of trading debts which have not yet been received when computing a trader’s income.

In *Withers (Inspector of Taxes) v Nethersole* [1948] 1 All ER 400 (HL), moneys for motion picture rights for a play written more than 30 years previously were found to have been received by a woman who was not carrying on the vocation of dramatist at the material time. Therefore she could not be assessed for “annual profits or gains” of that profession. It was held that the proceeds were not otherwise taxable because they were not in the nature of royalties, and that for income tax purposes the receipt was a capital one, being for the sale of property with a limited life.

In *TRA Case V1* (2000) 20 NZTC 10,001, Judge Barber found that the nature of an amount of compensation for items of a revenue nature is itself revenue and required to be included in gross income.

### 710.15 Exclusions from income

Some gains are not income in nature. These include such things as windfall gains, gifts, and capital gains.

1. **Windfall gains**

   Windfall gains include gains that are not earned but, rather, arise by virtue of luck, such as a win in a lottery, prizes and inheritances.

2. **Gifts**

   Gifts and payments made by way of personal esteem or testimonial, even if of a recurring nature, are not income. If a payment is in fact a gift, a mere repetition of payments cannot alter their plain character: *Louisson v Commissioner of Taxes* [1942] GLR 477 (CA).

Gifts in kind (not cash gifts) to employees are usually subject to FBT. Whether a cash payment by an employer to an employee is a gift is essentially a question of fact. Generally, a payment which would not have been made had the recipient not been an employee constitutes income to the donee.

In *Walker (Inspector of Taxes) v Carnaby, Harrower, Barham and Pykett* [1970] 1 All ER 502 (Ch), a firm of chartered accountants had been auditors to a group of companies for many years, in one case for 59 years. In 1952 they were told not to seek re-election, and were later given a sum of about £2,500, the equivalent of their fee for the last year of office, as compensation. They had not asked for any compensation, and they objected to being assessed for income tax on the amount. It was held that a voluntary gift made by a former client, not as consideration for services rendered, but by way of recognition of past services or consolation...
for termination of an appointment, was not a receipt of the business which consisted of rendering professional
services.

In Scott v Federal Commissioner of Taxation (1966) 117 CLR 514 (HCA) a loyal client’s gift to a solicitor
was held not to be assessable.

Tips, although of a voluntary nature, arise because of services performed and represent income to the
recipient.

Air New Zealand Airpoints Dollars resulting from expenditure incurred by the member’s employer on work-
related travel by the member and the redemption of those Airpoints Dollars do not result in either income
for the member or an FBT liability for the employer. The conclusions were reached in Product Ruling BR
PRD 09/09 [see TIB vol 21:8 (October /November 2009 at 4-8)].

Financial redress under a Treaty of Waitangi settlement is not income. Compensation paid under the Crown
Forest Assets Act 1989 (other than compensation based on market stumpage) is exempt from tax to the extent
to which it would be income. Similarly, claimant funding provided by the Crown is not income. These
conclusions were reached in an interpretation statement issued by the CIR [see TIB vol 16:10 (November
2004) at 8-30]. The CIR has also issued a statement to the effect that an amount described in the Deed of
Settlement as “interest” is a capital receipt and not taxable [see TIB vol 21:2 (April 2009 at 19-23).

Generally, gifts are not deductible when calculating the net income of the donor. However, forgiveness of
debts can be within the scope of a financial arrangement [see 470 FINANCIAL ARRANGEMENTS].

(3) Capital gains

Capital gains generally are not subject to income tax. Examples include:

(a) Gains from the sale of investment assets such as shares where the taxpayer is not in the business of
dealing in that type of asset and the asset was not acquired for the purpose of resale [see 1340 SHARE
SALES]. However, special rules apply to the sale of certain types of asset. One example is land sales
[see 710.55];

(b) Compensation for loss of a capital item. However, compensation for loss of revenue is, itself, revenue
in nature and subject to tax;

(c) Sale of an asset in excess of cost price [see 250.140]; and

(d) The revaluation of opening herd livestock [see 430.35].

710.20 Income deemed by legislation

In addition to income under ordinary concepts, the ITA 2007 can deem amounts that would ordinarily not
be regarded as “income” to be income for tax purposes. An example of this is certain types of “income” from
land sales [see 880 LAND SALES]. The ITA 2007 can also deem income that legally belongs to one person
to have been derived by another person for tax purposes. An example of this is the attribution of income rules
contained in ss GB 27 to GB 29 [see 740.30].

710.30 Exempt income

Exempt income is income which, but for exemption, would have been liable for income tax: Australian
Mutual Provident Society v Commissioner of Inland Revenue [1961] 3 All ER 1051 (PC). Therefore, before
an item can be “exempt income”, it must first be income according to general concepts: Commissioner of

Subpart CW provides an exemption from tax for a number of different income types [see 370.15]. Further
items of exempt income can be found in subpart CZ (Terminating provisions).

710.35 Excluded income

Subpart CX provides for a number of different income types to be “excluded income” [see 370.25] Further
items of excluded income can be found in subpart CZ (terminating provisions).
Income from employment

Income from employment is subject to tax in a number of different forms.

In addition to normal weekly or monthly cash earnings, the term “salary or wages”, includes such diverse things as:
(a) The value of board or lodgings;
(b) Expenditure on account of an employee;
(c) Any payment to a working partner of a partnership under a contract of service;
(d) Payments of income-tested benefits, veterans’ pensions, New Zealand superannuation, and living alone payments; or
(e) Payments of earnings-related compensation.

These items are subject to deduction of tax at source via the PAYE system [see 1080 PAYE].

Salary or wages paid to a shareholder-employee in a company are, in some circumstances, subject to deduction of PAYE and, in other circumstances, are taxed in the same way as business income which is subject to the provisional tax regime [see 1080.11].

Benefits in kind such as the free use of a motor vehicle, free or subsidised goods or services, and low or interest-free loans are not subject to income tax in the hands of the employee. However, they are subject to fringe benefit tax payable by the employer [see 540 FRINGE BENEFIT TAX].

Whether a benefit item is income in the hands of the employee or a fringe benefit, is most easily determined by deciding who would be sued if the good or service was not paid for. If the answer is the employee, the value of the good or service is likely to be income in the hands of the employee (for example, where the benefit is payment of the employee’s telephone account). If the answer is the employer, the value of the benefit is likely to be subject to FBT (for example, the gift by an employer to an employee of a television set).

Where an employee is a member of a subsidised superannuation fund, the employee’s contributions are paid from tax-paid earnings. However, the employer contribution can be subject to either PAYE or “employer’s superannuation contribution tax” (ESCT). Early withdrawal of superannuation can give rise to superannuation withdrawal tax where a withdrawal is made prior to 1 April 2011 [see 1390 SUPERANNUATION].

Members of the armed forces are subject to special rules [see 50 ARMED FORCES AND POLICE].

Income from hotels and motels — accommodation adjustments

All hotel and motel owners should make adjustments to their incomes on a factual basis that realistically reflects the private use of accommodation goods and services charged to the hotel, motel, or other similar business. The following method can be adopted:

\[(a \div b) \times c \times 50\%
\]

Where:

a is the area of the hotel or motel complex designated as the owner’s quarters;
b is the total area of the hotel or motel complex; and
c is the total expenditure on interest or rent, rates, power, telephone rental, insurance, and all other costs not solely attributable to the owner’s or lessee’s occupancy or to the carrying on of the business.

This formula is appropriate in most situations, but where it is unrealistic the matter should be discussed with the local Inland Revenue.

In *TRA Case C13 (1978) 3 NZTC 60,117, (1978) 2 TRNZ 385*, Inland Revenue, exercising its discretion, increased the value of the accommodation allowance of a manager so that it was based on normal rents for the area subject to reduction for abnormal factors, such as the employee not having any choice of residence. The value of free meals was also taken into account.
710.45  Income from trusts

Whether, and to what extent, a distribution from a trust is subject to tax in the hands of the recipient and the rate of tax that will apply depends on the type of trust that is making the distribution. Note that the term “trust” includes an estate.

If the trust is a “complying trust”, only “beneficiary income” is subject to tax in the hands of the beneficiary. This is taxed at the beneficiary’s marginal tax rate. “Beneficiary income” includes only revenue amounts that have been received by the trustee and which have not already been taxed in the trustee’s hands at the trustee rate of 33 per cent.

If the trust is a “foreign trust”, beneficiaries are taxed, not only on beneficiary income, but also on income derived by the trustee on or after 1 April 1988. Again, the rate of tax payable by the beneficiary is the beneficiary’s marginal tax rate.

If the trust is a “non-complying trust”, beneficiaries are taxed on beneficiary income at their marginal rate of tax. They are also taxed at the rate of 45 per cent on and post 1 April 1988 trustee income and distributions made from capital gains derived by the trustees.

See 1420 TRUSTS AND ESTATES for further explanation.

710.50  Investment income

(1)  Dividends

A dividend is a payment or other benefit provided to a person who is a shareholder in the company. The person’s capacity as a shareholder has to be considered when deciding whether any payment or distribution from, or a transaction with, the company is a dividend. The payment, distribution, or transaction is likely to be a dividend if the terms differ from those that the company would make with someone who was not a shareholder. However, other factors might also indicate that the amount is received in a shareholder capacity.

Dividends are subject to tax in the hands of the shareholder. However, imputation credits may be attached to the dividend giving the shareholder the benefit of tax already paid on the income by the company [see 270 DIVIDENDS and 670 IMPUTATION].

(2)  Foreign sourced income

New Zealand tax residents are subject to tax on their world-wide income. Non-residents are subject to tax only on income which has a New Zealand source. Many foreign investments such as shares in a foreign company or an interest in a foreign superannuation fund or life insurance policy will be subject to tax in New Zealand under the attributed foreign income rules. These rules are broken down into two parts being the “foreign investment fund” rules and the rules relating to “controlled foreign companies” [see 850 INTERNATIONAL TAX REGIME].

(3)  Loans and other financial arrangements

A financial arrangement arises where there is a difference in the amount and timing of the consideration for a transaction passing in one direction and the consideration passing the other way. A simple example is a loan where one party provides money now in exchange for the other party promising to pay a greater sum of money in the future. While the inclusion of interest in a transaction will generally point to a financial arrangement being in existence, this is not always the case. Neither do all financial arrangements involve “interest” in the way in which most people think of the term. The taxation of financial arrangements is a complex issue and is discussed at 470 FINANCIAL ARRANGEMENTS.

(4)  Rental income

Rental income is subject to tax [see 1220 RENT].

710.55  Land sales

In many circumstances, the sale of land will be on capital account and not subject to tax. However, where the taxpayer is in the business of dealing in land, or acquires land with the intention of resale, any profit on sale will be a normal trading profit.
Taxpayers who are in the business of erecting buildings, developing, or subdividing land are subject to tax on the profits if the land is part of their business activities. In addition, these taxpayers and their associates are taxable on profits from land sales where the land has been owned by them for less than 10 years (developers and subdividers) or has been sold within 10 years of the date on which improvements were completed (taxpayers in the business of erecting buildings).

Profits on the sale of land which has been subject to subdivision or development is often taxable in the hands of the person undertaking the subdivision or development activities.

A number of exemptions apply, particularly in relation to the taxpayer’s private dwelling, business premises or premises held for rental purposes.

See 880 LAND SALES for further explanation.

**710.60 Business income**

Income from any business is subject to tax. The taxation of business income is discussed in 130 BUSINESS.

There are a number of tax provisions that apply only to the income of certain industries. These industries include:

(a) Farming [see 430 FARMERS];
(b) Films [see 460 FILM INDUSTRY];
(c) Fishing [see 500 FISHING INDUSTRY];
(d) Forestry [see 520 FORESTRY AND TIMBER];
(e) Life insurers [see 800 INSURANCE];
(f) Mineral mining [see 980 MINING COMPANIES AND OPERATORS];
(g) Petroleum mining [see 980 MINING COMPANIES AND OPERATORS]; and
(h) Superannuation funds [see 1390 SUPERANNUATION].

**710.65 Property acquired for the purpose of selling** [s CB 4]

Where any personal property is acquired by a taxpayer for the purpose of resale, even if it is an isolated transaction unconnected with the normal trade or business, any resulting profit will be taxable and any loss deductible.

The most relevant factor under this limb is the purpose of the taxpayer with respect to the property as at the time of its acquisition: Hazeldine v Commissioner of Inland Revenue [1968] NZLR 747 (SC) and Henderson v Commissioner of Inland Revenue (1982) 5 NZTC 61,279 (HC).

The Courts have made it clear that they are concerned with the dominant purpose of the taxpayer when the entire property is acquired. In Commissioner of Inland Revenue v Walker [1963] NZLR 339 (CA), the taxpayer purchased 63 acres of land adjoining his existing farm. Three acres of the land consisted of road frontage within city limits. The taxpayer resold this three acre portion of land and made a profit. The Court of Appeal held that the profit from this resale was not assessable because the dominant purpose of the taxpayer in purchasing the 63 acres was to enlarge his existing farm. The Court declined to split the purpose of the taxpayer with respect to the three acre frontage and the main part of the land.

However, where the property consists of separate parcels of land or relates to two or more items that are different in character, separate purposes may be adduced by the Courts. In the case of Harkness v Commissioner of Inland Revenue [1975] 2 NZLR 654 (SC), three separate parcels of land were acquired contemporaneously. Two parcels consisted of smaller lots and subdivided sections but the third parcel was an undivided block of land that had not been approved for subdivision. The Court held that the profits from the sale of the two subdivided parcels were assessable but the profits from the sale of the third parcel (which had been subsequently subdivided) were not. The Court reached this decision on the basis of separate purposes.
In *Williams Property Developments Ltd v Commissioner of Inland Revenue* (1980) 4 NZTC 61,537 (CA), the Court of Appeal held that a conditional purpose may be a dominant purpose. In so doing, Richmond P expressed the view that, where a person acquired land believing it would go up in price and able to be resold at a profit, the dominant purpose could be regarded as resale at a profit notwithstanding such purpose was contingent upon a rise in value of the land.

It is clear that s CB 4 contemplates a positive act by the taxpayer in acquiring the property. It has been held by the Courts that the mere inheritance of property is not an acquisition for the purpose of resale and similarly the acceptance of a gift is not sufficient: *McClelland v Federal Commissioner of Taxation* [1971] 1 All ER 969, (1970) 2 ATR 21, 70 ATC 4115 (PC); *Federal Commissioner of Taxation v Williams* (1972) 3 ATR 283 (HCA); and *AG Healing & Co Ltd v Commissioner of Inland Revenue* [1964] NZLR 222 (SC).

In *Commissioner of Inland Revenue v National Distributors Ltd* (1989) 11 NZTC 6,346 (CA), the Court made several important points concerning the provision:

(a) It is necessary to determine whether the dominant purpose in acquiring the property is to sell it at a later date. The test of purpose is subjective. If resale is proposed, it matters not that it is only the means to an end. If the taxpayer’s purpose in acquiring the property is to sell it in the future at a price that (allowing for inflation), corresponds with, or is better than, its price at the time of purchase, their statutory purpose is to sell the property even though the motive is to protect the savings from inflation. The length of time the assets are held is of particular importance when considering purpose of acquisition (a holding period of 19 months for shares is not long-term);

(b) The provision is inapplicable where:

(i) Shares are acquired for the purpose of securing not only income from dividends but also growth in the value of the shares;

(ii) The dominant consideration is to provide and enlarge dividend income; and

(iii) There is solely an intention to buy with an expectation of benefiting financially in an unformulated way and without clear consideration of the advantages of either retention or resale sooner or later.

The property sold must be equivalent to that which was acquired although it need not be in the same condition.

In determining whether sufficient identity of interest exists: see *AG Healing* and *McClelland* (above); *Moruben Gardens Pty Ltd v Federal Commissioner of Taxation* 72 ATC 4147 (HCA); *Cowan v Federal Commissioner of Taxation* (1972) 3 ATR 474 72 ATC 4121 (VSC); and *AL Hamblin Equipment Pty Ltd v Federal Commissioner of Taxation* (1974) 131 CLR 570, (1974) 5 ATR 16 (HCA).

**TaxNote:** The principles of the above cases were not followed in *TRA Case L43* (1989) 11 NZTC 1,262, a case concerning the sale of part of an interest in land.

Many of the above cases concern the sale of land under previous legislation although the principles established remain applicable. In *Commissioner of Inland Revenue v Renouf Corporation Ltd* (1998) 18 NZTC 13,914 (CA), Renouf Corporation Ltd (RCL) took 50 per cent of the shares in Wellington Towers Ltd (WTL), a company set up to develop a city building site, with the intention of ultimately deriving profits by way of dividends. At a later date, RCL acquired a minority interest in Renouf Property Developments Ltd (RPDL) and, in so doing, transferred its beneficial interests (but not the shares themselves) in WTL to RPDL in return for a payment of $2.75 million. The Court of Appeal held that the $2.75 million payment was a capital payment and not income derived from a scheme under s 65(2)(e) of the ITA 1976 [now s CB 4].

**710.70  Profits or gains from any undertaking or scheme** [ss CB 3, DB 26]

Profits from the sale of personal property derived from the carrying on or carrying out of any undertaking or scheme entered into or devised for the purpose of making a profit is income.

A taxpayer who has derived income under s CB 3, from an undertaking or scheme entered into for the purpose of making a profit, is allowed a deduction for the cost of the property as if it were acquired from an unrelated third party immediately after the commencement of the undertaking or scheme for a cost equal to the market value of the property at the time.
Example:
A salary and wage earner, who is also an electronics enthusiast, has become involved in putting together a sound system for a business. She will be paid $30,000 for the system. This is a one-off project and is not likely to be repeated. The enthusiast is not in business. A number of components need to be purchased, but the enthusiast also owns various components that can go into the project. Some of these components originally cost the enthusiast $1,500 but other components were just acquired over a period of time without any record of how much they cost. Some were acquired without cost. The current market value of all of the components is $4,000, which she would have had to spend under other circumstances. As all these components were held personally, and because the income is taxed under s CB 3, a deduction is allowed for an amount of $4,000.

The purpose of the taxpayer must be a dominant purpose, and must be determined not at the time of the acquisition of the property but at the time at which the scheme or undertaking was entered into.

Profits of an income nature and not of a capital nature are assessable. The scheme must produce income and not a capital gain. Hence, the mere realisation of a capital asset to the best advantage as and when circumstances are most favourable is not assessable: McClelland v Federal Commissioner of Taxation [1971] 1 All ER 969, (1970) 2 ATR 21, 70 ATC 4115 (PC); Eunson v Commissioner of Inland Revenue [1963] NZLR 278 (SC); and Beetham v Commissioner of Inland Revenue (1972) 3 ATR 342 (SC). In both the latter cases, farm land which was no longer required and uneconomic was subdivided and sold off.

In Johnstone v Commissioner of Inland Revenue (1985) 7 NZTC 5,068 (HC) the taxpayer’s one-tenth share of profit from the dispoision of land was assessable. At the time of acquiring his interest, the taxpayer had an immediate purpose of making a profit by way of 10 per cent of the proceeds of sale. The taxpayer’s reward for arranging the sale of land was profit from a scheme in the nature of a business deal, and not the realisation of a capital asset.

It appears from the judgment of the Privy Council in McClelland that, before a transaction can be described as a “profit-making undertaking or scheme” within the meaning of s 26(a) of the Income Tax Assessment Act (the Australian equivalent), it must possess features which give it the character of a business deal. However, it is doubtful whether this view represents the New Zealand position. In the case of Beetham, Henry J expressed the view that the Australian legislation differed from the New Zealand legislation in so much as, in the first limb of the New Zealand provision [now s CB 4], the Legislature had expressly provided for business profits. This does not appear in the Australian legislation and this prompted the Court in McClelland to say that the notion of business was implicit in the words undertaking or scheme. Accordingly, an undertaking or scheme may give rise to an assessable profit even though it is uncharacteristic of a normal business venture.

In Wilson v Mannooch [1937] 3 All ER 120 (KB) a solicitor agreed with a builder that, in consideration of the solicitor lending or arranging to lend a sum of money to the builder for the purpose of buying a property, the solicitor should receive on its resale one-third of the profit with a limit of £1,000. There was another isolated transaction of the same nature. It was held that the sums received by the solicitor were assessable.

In IT Case No 640 (1947) 15 SATC 229 the taxpayer paid $500 for the option to buy a property for $40,000, the period of the option being about three weeks. Before the expiry of that period, the taxpayer assigned his option for $10,000. The taxpayer, who was assessed for the profit, claimed that he had intended to acquire the property as an income-producing investment. He had previously been engaged in the business and during the relevant year was a farmer. It was held that the profit was assessable.

710.75 Goodwill

Goodwill can be either taxable as income or non-taxable as a capital gain depending on the circumstances.

A capital gain will arise where the goodwill relates to:
(a) The sale of a lease unless the business of the taxpayer includes dealing in leases; or
(b) The sale of a business where the goodwill relates to the personal esteem of its customers.

Goodwill is taxable when received by an owner of land from any lease affecting the land. The amount received or the goodwill of the lease of licensed premises is the typical instance of goodwill being income [see 600.10].
710.80 Property obtained illegally [ss CB 32, DB 44]

Property obtained illegally is termed “possession or control of property without claim of right” and is included in the meaning of income [s CB 32]. A payment of restitution relating to property obtained without a claim of right is an allowable deduction [s DB 44]. The income is allocated to the year in which the property is obtained. The deduction is allocated to the income year in which the person makes restitution. A claim of right means:

“A belief that an act is lawful, although the belief may be based on ignorance, or mistake, of:

(a) Fact; or

(b) Any matter of law other than the enactment against which the offence is alleged to have been committed.”

An example of a transaction caught by this section would be funds obtained by fraud.

These provisions overcome the effect of A Taxpayer v Commissioner of Inland Revenue (1997) 18 NZTC 13,350 (CA) where the Court of Appeal held that the proceeds from criminal activity for financial gain are not income.

710.83 Child support and maintenance [s CW 32]

Child support and spousal maintenance under the Child Support Act 1991, and payments in the nature of maintenance received from a person’s spouse [see 960.10] or former spouse, are exempt income to the recipient. The paying spouse is not entitled to a deduction for the alimony or maintenance payments [s DA 2(2)]. This applies when a person pays the maintenance direct to the spouse, or former spouse, under a verbal or written agreement, or in compliance with a Court order, or where it is paid into Court.

Where assets are assigned absolutely to the spouse or to a trust to provide for the alimony or maintenance, the income is not payable out of moneys belonging to the person, and the amount received is not exempt: Dunn v Commissioner of Inland Revenue (1974) 1 NZTC 61,245, (1975) 1 TRNZ 9 (SC).

In TRA Case H25 (1986) 8 NZTC 251, a taxpayer wife and husband entered into a relationship property deed providing inter alia for the wife to receive $40,000 at a future date and, pending its receipt, the wife would receive interest on the principal sum. No maintenance was sought. The TRA ruled that for income to be exempt it must relate to payments “in the nature of maintenance” but, in this case, the deed clearly stated that the payments were for interest and nothing else. Consequently the payments could not be considered to be “in the nature of maintenance”.

Where a trust has been created by a person for the payment of maintenance, any amounts paid by the trustees from dividends retain their character as dividend income in the hands of the beneficiary, notwithstanding that they form part of the maintenance. The payments will also fall within the definition of annuity. Therefore if, in order to meet the full amount of the alimony, the trustee is compelled to resort to capital funds, the provisions of subpart HC do not apply. Such amounts form part of the annuity and are therefore assessable, even though paid out of capital funds. Section CC 5 specifically includes annuities as income.

A Court order, a deed, or an agreement, may provide for payment of alimony or maintenance to a spouse or former spouse for life, and binds the executor or administrator of the person making the payment to continue the payments after the death of the paying spouse. Such maintenance or alimony payments continue to be exempt income to the recipient: Ager v Commissioner of Inland Revenue (1988) 10 NZTC 5,175 (CA).

Alimony or maintenance payments made by the trustee of the estate are not deductible in calculating the net income derived by the trustee, and any income used to pay the alimony or maintenance is assessable to the trust. The recipient of the alimony or maintenance payment is not a beneficiary in the estate but is a creditor entitled to payment out of the estate by virtue of the Court order, deed, or agreement.

710.85 Home-based services [ss CW 61, DA 2(3)]

The CIR has the ability to determine a service performed by a natural person in their home, which involves duties normally carried out in a family household, to be a “standard-cost household service”. Taxpayers who derive income from a “standard-cost household service”, will have the option of either using the CIR’s
determinations, in which case the income derived is exempt from tax, or calculating their profit in the normal way.

Under s 91AA of the TAA, the CIR has the power to determine the following matters:

(a) The requirements for exemption under s CW 61 of income from standard-cost household services;
(b) The cost of earning the exempt income or a method of determining that cost. Taxpayers using this option are precluded from claiming any deductions in respect of the income; and
(c) That a standard cost can be applied against the income derived from the provision of the services or a method of determining that cost. Taxpayers may use the standard cost instead of the actual deductions.

No losses are allowed if standard costs are used as the income is exempt income [s DA 2(3)].

Determination DET 001: Standard-Cost Household Services for Childcare Providers sets out the rules for standard cost household services for childcare providers and the standard cost available to taxpayers providing standard cost household services [see 230.140, TIB vol 16:4 (May 2004) at 18-21].

Determination DET 05/03: Standard-Cost Household Service for Boarding Service Providers sets out the rules for standard cost household services for boarding service providers and the standard cost deductions available to taxpayers providing standard cost household services [see 230.143, TIB vol 17:10 (December 2005) at 54-64].

710.90 Scholarships and bursaries [s CW 36]

In TRA Case G56 (1985) 7 NZTC 1,247, the taxpayer received a bursary and became an employee of the Post Office. He was a full-time university student and was paid on the basis of the full salary that he would have received if he had been working full time. It was held that the bursary came under what is now s CW 36 and therefore the payments were not assessable. On appeal, the decision was reversed: Commissioner of Inland Revenue v Drew (1988) 10 NZTC 5,060 (HC). The Court held that the agreement referred to an employee/employer relationship and that the principal purpose of the bursary payments had been to secure the taxpayer’s services to the Post Office, the educational assistance being of a secondary nature. By choosing a salary option subject to PAYE and not a tax-free lump sum option, the taxpayer had accepted an income tax liability. Section CW 36 did not apply. See also Reid v Commissioner of Inland Revenue (1985) 7 NZTC 5,176 (CA).

In TRA Case M130 (1990) 12 NZTC 2,846, (1990) 15 TRNZ 289, the payment of a bursary that had a condition bonding the recipient to continue working for the payer for a period of three years after attaining a degree was treated as income not merely as monetary remuneration if that were a ground for assessment, but as income according to ordinary concepts.

Where an entitlement to an overseas postgraduate study grant accrued in consideration of certain prior services in New Zealand, the grant was income derived in New Zealand under s 243(2)(r) ITA 1976 (now s YD 4): TRA Case H6 (1986) 8 NZTC 147.

In TRA Case P23 (1992) 14 NZTC 4,166, (1992) 16 TRNZ 670, a financial analyst employed by the Department of State received a grant of $9,136.23 to complete his university studies in law and had PAYE amounting to $1,846 deducted. The analyst objected and contended that the money so received was within the scope of s 61(37) of the ITA 1976 (now s CW 36) and was therefore exempt. The objection was allowed as the objector was not an employee at the time he received money from the employer even though he did come to be employed pursuant to an entirely separate employment contract later on. The reference to the objector in the first agreement as a “study awardee” was merely a formula adopted by the parties to describe the identity and status of the objector. The “agreement for assistance” was not a contract of employment between objector and employer. The objector did no work of any description for the employer during the term of the assistance agreement. In providing the objector with funds to complete his law degree, the employer was not utilising the objector as a prospective employee other than in general terms. The monies paid to the objector were only an allowance for his attendance at an educational institution and were therefore within the exemption allowed for under s CW 36.
710.95  **Restrictive covenants and inducement payments**

A restrictive covenant payment is the consideration given for a restriction on a person’s right to perform services. An inducement payment is the consideration given by a prospective employer or contractor to a person to give up a particular status or position. Special tax rules apply to such payments [see 1265 RESTRICTIVE COVENANTS AND EXIT INDUCEMENTS].

710.100  **Authors’ income** [ss CC 9(1), EI 3]

Royalties constitute income. Royalties paid to authors by instalments over a period of years are assessable even though they may be instalments of the purchase price paid for the copyright. Where a lump sum payment is received, the treatment of that lump sum for taxation purposes depends on whether payment is for the performance of a service or the sale of property (ie the copyright).

An author’s receipts may take various forms, including:

(a) The sale of the manuscript, when completed, and the copyright in it, for a cash payment and a series of instalments of the sale price based on the sales of the work. In this case the agreement with the publisher is, in essence, an agreement to perform services and to be remunerated with royalties. The receipts (both the cash payment and the royalties) are income.

(b) The sale of the right to publish the work, but retain the copyright, in consideration of a cash payment together with royalties based on the sales of the work. In this case the writer is deriving income from the capital asset (ie the copyright) which is “farmed out” for profit (ie royalties). The writer’s receipts are income.

(c) The sale of the completed manuscript and the copyright in it for a fixed sum. It makes no difference whether it be by way of a lump sum, or payable in part by an instalment on handing over the completed manuscript, in part on publication, and in part by other instalments until the total sum agreed on has been paid. It is also not dependent on the number of sales of the work. In any of these cases, the writer is selling a capital asset and is not assessable for income tax thereon, unless the author’s occupation is authorship. If the author’s occupation is authorship, they would be held to be carrying on the business or vocation of a writer and the receipts would be assessable as such.

Under s EI 3 where an author of a literary, dramatic, musical, or artistic work is engaged on the work for more than 12 months, and receives a lump sum payment for the assignment of the copyright therein, or for the grant of an interest in the copyright by licence, on application the CIR may apportion that lump sum (which would otherwise be taxable in full in the year of receipt) for assessment purposes over the year of receipt and:

(a) The immediately preceding income year where the author was engaged on the work for two years or less; or

(b) The two income years immediately preceding the year of receipt where the author was engaged on the work for more than two years.

The application must be made in writing not later than six years after the end of the income year of receipt. Where the author derives any such payments that are not lump sum payments within two years after the first publication of the work, which would otherwise be assessable in full in one income year, the person may, on written application to the CIR within eight years after the first publication, apportion the payments equally between the year of receipt and the preceding year. This is intended to meet the position where the taxpayer receives peak royalties in the period following the first publication of the work. To give effect to this provision, the CIR is authorised to amend any assessment at any time.

The following further points are relevant:

(a) “Author” includes a joint author. It also applies to playwrights, composers, sculptors, and artists whose work is exhibited.

(b) “Lump sum payment” includes an advance on account of royalties.
(c) As regards the degree of proof required that the work took more than 12 months to produce (or more than 24 months, as the case may be), taxpayers are asked to state the dates (or approximate dates) on which the work was commenced and completed and to state also the name of any person (other than a family member) who is in a position to confirm those dates. If no confirmation is available, the taxpayer can be asked to furnish a statutory declaration. In the case of ordinary royalty payments, where the spread is dependent on their receipt within two years of first publication, taxpayers are asked to supply the actual date on which the work was first published, performed etc, and the name of the publisher (for literary works) or equivalent particulars (for other works). Expenses, including travelling expenses, must be incurred to enable the author to write the book. TRA Case D56 (1980) 4 NZTC 60,845, (1980) 4 TRNZ 165, provides useful guidelines on when an author’s travelling expenses are tax deductible.

(d) The concession afforded by s EI 3 also applies when an author publishes their own work, so that the peak income (usually received in the period following the first publication of the work), can be apportioned between that income year and the immediately preceding income year.

Royalties paid to authors are payments made for the right to publish and are not fees for services rendered. The payments constitute income other than salary or wages and are therefore not subject to PAYE tax deductions at the source. The author must pay provisional tax on the income. The sale of broadcasting rights in plays written by the taxpayer constitute income.

In TRA Case D56 (1980) 4 NZTC 60,845, (1980) 4 TRNZ 165 the dominant motive of the author in undertaking travel was to obtain the latest and most authoritative information on the subject being written and derivation of income from the book would not have followed had not the information been included, travelling expenses could be deductible. The nexus between the expenditure and the production of income was directly related and therefore deductible. However, the TRA sounded a note of caution, observing that the matter may have been seen in a different light had the author not engaged in updating a book in their special field and had merely incurred the travelling expenses in keeping in touch with developments. The cost of works of reference may be deducted if they are required for the purposes of writing the book. If there is a residual value, the deduction should be reduced by any value that exists.

710.105 Clergy

The income of a member of the clergy includes the gross stipend (basic salary) and the value of housing provided. The taxable value of housing supplied is one-tenth of the stipend less 15 per cent (which takes account of that part of the home used for vocational purposes). Gifts or unsolicited contributions from adherents to preachers are assessable, particularly if the preachers are not employed by the Church. In such cases the receipts are income, and associated expenses may be claimed as a deduction. The income is provisional income. The expenses of the preacher’s spouse [see 960.10] may be deductible to the preacher if the CIR is satisfied that an express invitation was made for the spouse to accompany the preacher as part of the preacher’s duties and that the congregation increased their gifts to cover the expenses of both husband and wife.

Under s CW 25 exempt income includes the value of personal board and lodging and other basic personal necessities received by a person whose sole occupation is in the service of a religious society, where the conditions of service are such that no payment or other rewards (other than those necessities) are given for those services.

Income of missionaries on furlough is deemed to relate to their activities in the foreign mission field and is, therefore, not liable for New Zealand income tax. However, if the activities of missionaries on furlough extend beyond genuine reporting by preaching, or by taking employment in New Zealand, the income is assessable.

Income derived by a fund created for the benefit of retired ministers is exempt: Presbyterian Church of New Zealand Beneficiary Fund v Commissioner of Inland Revenue (1994) 16 NZTC 11,185 (HC).
Chapter 740

Income Assigned or Alienated

740.10 Assignments of professional income

The leading case regarding the assignment of professional income is *Hadlee v Commissioner of Inland Revenue* (1989) 11 NZTC 6,155 (HC), where a partner in an accounting firm held 32 units out of a total of 452 in the partnership and, in 1981, assigned 12.8 units, for consideration, to a family trust (the trustee of which was a private company of which the subscribers and directors were partners of the partnership). In the 1981 and 1982 income years, the appellant returned income from 19.2 units and the trust returned income from 12.8 units. The arrangement was considered void by the CIR. The High Court held:

(a) There was in equity a valid assignment of an expectancy for consideration which took effect from the date on which income passed into the hands of the assignor;

(b) Partnership earnings were not solely the produce of the capital of the partnership and what was at issue was an assignment of income from personal services;

(c) The doctrine that income resulting from personal activities is incapable of assignment was approved;

(d) By virtue of the findings in paragraph (a) above, s 96 of the ITA 1976 [which became s FC 11 of the ITA 1994, now repealed] was not relevant, there being no subject matter assigned which arose from the ownership of property; and

(e) The general anti-avoidance provision, s 99 of the ITA 1976 [now s BG 1], was applicable and accordingly “the arrangement” was void.

The High Court decision was confirmed in *Hadlee v Commissioner of Inland Revenue* (1991) 13 NZTC 8,116 (CA) and *Hadlee v Commissioner of Inland Revenue* [1993] 2 NZLR 385 (PC). The Privy Council was in complete agreement with the conclusion that the income is derived by the person whose personal exertion earns it. Therefore, they held the deed of assignment to be ineffective in transferring the tax liability to the assignee. By implication, their Lordships accepted that there may well be a valid assignment of income and transfer of tax liability to an assignee where a partner’s right in a professional partnership depends upon a proprietary interest in the partnership, and not on personal exertion.

Income which is earned from personal exertion is unable to be assigned: *TRA Case S4* (1995) 17 NZTC 7,021.

740.15 Assignment of salary, wages, and royalties

Salary or wages cannot be assigned so as to render the assignor exempt from tax. Remuneration for services is derived by the person who performs the services. Any assignment of the right to receive payment is merely an application of the income after it is derived.
This must be contrasted with the High Court decision in *Webb v Commissioner of Inland Revenue* (1983) 6 NZTC 61,718, (1983) 7 TRNZ 49 (HC), where the taxpayers were university lecturers who published legal textbooks. The taxpayers assigned the royalty income derived to a trust for their children. The CIR issued amended assessments by adding back royalty income on the basis that royalties were paid for personal services which could not be the subject of an assignment. The taxpayers objected and the High Court held that the personal activities of the taxpayers did not effectively cause the royalties to be payable. The cause was the point of sale of texts which was an activity of the publisher. The taxpayers had effected an absolute assignment.

### 740.20 Assignment for benefit of creditors

Where a taxpayer assigns property to trustees in trust for creditors, and the creditors, in effect, agree to accept the dividends received from the trustees in satisfaction of their claims and to relinquish the debtor from personal liability, the income received by the trustees is, in general, assessed as trustee income.

Where the taxpayer’s services are retained in the business by the trustees and the settlor is paid for these services, the payments are regarded as salary and the appropriate PAYE tax deductions must be made by the trustees as employer. However, where the deed is not a deed of assignment but is, in reality, a deed of supervision under which the creditors merely appoint a person to supervise the management of the business, the profits of the business are still the income of the debtor. Accordingly, the debtor is assessable in the normal way on any profits derived. Any relinquishment of debt has potential consequences to the debtor by giving rise to income under the financial arrangements legislation.

### 740.25 Assignment of income to charities

The CIR is sometimes asked to approve schemes for donations in the form of assignments of income (eg interest, rents, dividends) for limited periods for charitable purposes. In some cases, farmers have undertaken that they will hold a stated number of livestock for a period and pay the income to or for the benefit of the charities or a particular charity. While it is not disputed that the donors, in consenting to such arrangements, may have a genuine desire to benefit the particular charities, they cannot escape taxation on the income so assigned. Further, it is not possible to assign future income:

> “As it is impossible for anyone to own something that does not exist, it is impossible for anyone to make a present gift of such a thing to another person, however sure he may be that it will come into existence and will then be his to give. He can, of course, promise that when the thing is his he will make it over to the intended donee. But in the meantime he may change his mind and when the time comes refuse to carry out his promise, even though it were by deed. A court of law could not compel him to perform it. A court of equity would not.” (Windeyer J in *Norman v Federal Commissioner of Taxation* (1963) 9 AITR 85 (HCA)).

To be immune from attack, the assignment or settlement of income must be accompanied by the transfer of the beneficial ownership of the corpus. An exception is an assignment or settlement under which the income is payable to, or to be applied for, any person during the whole of the assignee’s life. However, it is possible to assign the right to income without transferring the corpus.

The CIR has indicated it will be satisfied that schemes involving farmers, livestock, and recognised charities will not be liable to attack if the following elements exist:

(a) Transfer of livestock from farmer to charity is at market values and such values are returned by the farmer as gross income;

(b) Livestock transferred are to be separately identified by an earmark or other permanent mark belonging exclusively to the charity;

(c) Produce which is identified as being from those livestock will belong to the charity and sales must be made in the name of the charity;

(d) Progeny of the livestock must be separately identified;

(e) Livestock originally transferred and retained progeny are the property of the charity and any sales must be made in the name of the charity;
(f) If the livestock are replaced by the farmer, the cycle commencing with paragraph (a) above, starts again for the replacement livestock; and

(g) The charity must keep separate and complete records of all transactions just as an individual farmer would do.

740.27 Evidence of ownership

Taxpayers should ensure explicit evidence exists to ensure ownership of income producing assets is authentic and, if necessary, documented. For example, it cannot be presumed that income earned by assets held in the name of a person may be assessed for tax in the name of that person’s spouse [see 960.10]. The interest on a debenture in the name of Mr Smith is not able to be assessed to Mrs Smith without either the divesting of assets or the alienation or assignment of that income before it is earned.

In TRA Case M113 (1990) 12 NZTC 2,729, (1990) 15 TRNZ 91, an Inland Revenue officer had advised the winners of a Golden Kiwi lottery ticket that the interest income derived from investments could be split between the objectors (a husband and wife) and also between two daughters. The TRA held that Inland Revenue was entitled, in the absence of any explicit arrangement before the purchase of the ticket or the formal disposition afterwards, to reassess the income so that it was derived by the husband and wife.

An explicit arrangement can include: a relationship property split, a gifting arrangement, a sale and purchase agreement, an assignment or alienation of property by deed, a deed of trust, or a succession through inheritance by will or intestacy. These explicit arrangements are available for the legal rearrangement or divesting of a person’s capital and should be authentically performed as (if they are presumed), they are of no legal effect. Gift duty may arise when the title to an asset passes to another person through gifting.

740.30 Attribution of income [ss CE 8, DC 8]

The attribution of income rules were enacted with effect from the income year beginning 1 April 2000 to coincide with the raising of the top personal income tax rate to 39 per cent for income over $60,000. The rules apply where an entity such as a company, trust or partnership (“the associated entity”) is interposed between a person providing personal services (“the working person”) and the user of those services (“the buyer”). Where certain criteria are met, the rules deem the provider of the effort, and not the intermediary, to have derived the income from the services.
Example:
An employee has a salary of $100,000 per annum. Using the tax rates that apply for the 2011-12 income year, the total tax payable on the salary is $23,850. By interposing a company so that the $100,000 is received by the company (which has a 28 per cent tax rate) and taking a salary of any amount less than $100,000, the total combined income tax liability is reduced. For example, a salary of $70,000 would result in a saving of $1,500. A salary of $80,000 would result in a saving of $1,000.

The income that is attributed to the working person is the net income from the activity carried out by the associated entity thereby ensuring that expenses incurred by the associated entity are deductible to the working person. The amount attributed is income to the working person and an allowable deduction to the associated entity.

740.35 Criteria to be met [ss GB 27, GB 28]
The attribution of income rules apply only where all these five criteria are met:
(a) The working person and the associated entity are associated persons;
(b) At least 80 per cent of the associated entity’s income from personal services during the income year is derived through services provided to Person A or a person associated with Person A (ie the same customer or related customers);
(c) At least 80 per cent of the associated entity’s gross income from personal services during the income year is derived through services personally performed by the working person or a relative of the working person or a combination of them;
(d) The working person’s net income for the income year, after the application of the attribution rules, would be more than $70,000 (including the value of fringe benefits) ($60,000 prior to the 2008-2009 income year); and
(e) Substantial business assets are not a necessary part of the business structure that is used to derive the gross income concerned.

“Associated person” is defined in subpart YB at the time at which the services are performed.
The term “substantial business assets” is defined in s GB 28(6) as being depreciable property costing more than $75,000, or 25 per cent or more of the associated entity’s total income from services for the income year, and where not more than 20 percent of the use of the asset is for private purposes. The rules for calculating the private use percentage [s GB 28(9)] provide for calculation based on either the number of days in which FBT is payable as a percentage of the number of days on which the asset is owned or leased or, where FBT is not applicable to the asset, the proportion of operating expenditure that is non-deductible.
The attribution rules do not apply:

(a) Where both “the associated entity” and “the working person” are non-residents during all of the associated entity’s income year;

(b) If the associated entity is a natural person and is neither a partner of a partnership nor a trustee of a trust; or

(c) To the extent to which the services personally performed by the working person are essential support for a product supplied by the associated entity.

Where the associated entity is a CFC and the amount is an "attributable CFC amount" under s EX 20B(3)(h) [see 850.83], it is taxed under the CFC rules [see 850].

740.40 Calculation of the amount attributed [ss GB 27, GB 29]

Under the attribution rules, the associated entity must attribute to the working person the least of the following amounts:

(a) The associated entity’s net income from services;

(b) The associated entity’s net income;

(c) If the associated entity is a company or a trust, the associated entity’s net income reduced by losses brought forward. This provision applies only where those losses relate to the business of providing services. Losses from other group companies cannot be used to reduce the amount to be attributed.

Further rules for calculating the amount to be attributed are as follows:

(a) If the associated entity is a trust, the trustees are treated as not having made a distribution of beneficiary income to a beneficiary during the income year or before the end of six months after the end of the income year. The amount to be attributed is then reduced by the amount of any beneficiary income that has been distributed to the working person;

(b) If the associated entity is a trust and the amount attributable would cause the trust to have a net loss for the income year, the trust’s beneficiary income for that income year is reduced so that the trust’s taxable income for the income year is zero. The amount of beneficiary income distributed to persons other than the working person is then reduced according to the proportions determined by the trustees. If the trustees do not make such a determination, the amount is reduced proportionately;

(c) If the associated entity is a partnership, the associated entity is to be treated as if it were a taxpayer. The amount to be attributed is then reduced by the amount of any partnership income that has been received by the working person. If a partner in a partnership provides administrative services to a partnership that is subject to the attribution rule, the amount to be attributed is reduced by the market value of those services. This will often apply in a husband/wife partnership where one spouse [see 960.10] provides the services to customers of the partnership and the other spouse attends to bookkeeping and other administrative duties;

(d) If “the associated entity” is a company, the amount to be attributed is reduced by the amount of any dividends paid to "the working person" during the income year or within six months following the end of the income year where those dividends relate to that year’s income;

(e) Any remuneration package provided by the associated entity to the working person is allowed as a deduction in calculating the amount to be attributed. This includes wages, salary, directors fees, attributable fringe benefits and FBT on those benefits;

(f) Where there is more than one the working person in relation to the associated entity the amount to be attributed is to be fairly divided between them based on the relative value of work performed by each of them; and

(g) Where the total amount to be attributed by the associated entity to the working person is less than $5,000 the attribution rules do not apply. However, if there is more than one the associated entity in relation to a the working person the $5,000 exclusion applies only once.
For worked examples of the calculations [see TIB vol 12:12 (December 2000) at 54-57].

740.45 Effect on company imputation and dividends [ss OB 16, GB 27(4)]

Under the attribution of income rules, where amounts have been attributed by a company, the company is allowed a deduction for the amount attributed. However, from a commercial perspective, nothing has happened and the company retains the funds that it may later wish to distribute by way of dividend. As the income has been taxed in the hands of the person to whom it was attributed, the company will not have imputation credits to attach to the dividends. To solve this problem, 42.86 per cent of the amount of the attributed income is allowed as a credit to the company’s imputation credit account. This credit arises on 31 March of the year in which the attribution occurs.

Where the company’s financial statements are adjusted to reflect the attribution (eg by way of crediting the shareholder’s current account with the attributed amount), the additional imputation credit is cancelled.

From 1 October 2007, where the company actually pays a dividend to the shareholder, the company has a choice under s GB 27(4) to treat the dividend as if it was a dividend being paid by a qualifying company [see 1160.65]. To the extent to which the dividend would have had an imputation credit attached to it had the election to treat the dividend as a qualifying company dividend not been made, the credit is cancelled immediately before the payment of the dividend.

In order to access this concession, the company must meet all of the following criteria:

(a) Choose to have the dividend treated as if it were paid by a qualifying company;
(b) Not be a qualifying company; and
(c) Must have no net income for the tax year in which it pays the dividend which is not attributed income under the attribution rules, other than interest income that is merely incidental to the business.

740.50 Effect on provisional tax [s RC 34]

Where the taxpayers concerned anticipated that the attribution rules would apply, and in fact they do not apply, the associated entity may have paid too little provisional tax and the working person may have paid too much. The opposite would apply where the taxpayers failed to anticipate that the rules would apply.

Section RC 34 alleviates this problem. The section provides that, where the associated entity has paid provisional tax in excess of the residual income tax for the year, the associated entity may allocate all or part of that excess to the working person to the extent necessary to cancel out the working person’s provisional tax shortfall. The opposite applies where it is the working person who has paid too much provisional tax and the associated entity who has paid too little. The transfer can take place only on or after the later of:

(a) The day on which the excess tax was paid; and
(b) The day on which the first instalment of provisional tax becomes due and payable by the taxpayer making the allocation.

The allocation is made by giving the CIR notice in writing, within the time within which the return of income must be furnished by the person to whom the excess is allocated, or within such further time as CIR may allow [see 1150.33].
Chapter 750
Income — When Derived

750.10 Meaning of derived [s BD 3]

Income is taxable in the year in which it is derived. This is not necessarily the same year as that in which it is received. The Courts have developed a series of principles, largely based on accounting principles, to determine when an amount of income is derived.

In determining the timing of derivation, the ITA 2007 requires regard to be had to case law and specifically recognises the fact that the cash basis is appropriate for some taxpayers while the accruals basis is appropriate for others. The ITA 2007 also modifies some of the principles laid down by the courts to ensure that the income and related allowable deductions are matched.

(1) Cash basis

Derivation under the cash basis is determined by receipt. This basis is applicable to wage and salary earners and interest receipts in relation to cash basis holders of financial arrangements. However, the cash basis is modified by s BD 3, which deems an amount of income to be derived by a taxpayer if it is credited in their account or, in some other way, dealt with in the interest or on their behalf.

(2) Accrual basis

The accrual basis is normally applied to taxpayers carrying on a business. Under ordinary principles, derivation under the accrual basis occurs when a taxpayer has earned an amount or has an enforceable debt. This basis adopts commercial accounting principles for the recognition of revenues and takes little account of when the income is actually received: Commissioner of Inland Revenue v Farmers Trading Co Ltd (1989) 11 NZTC 6,007, (1988) 12 TRNZ 549 (CA); Arthur Murray (New South Wales) Pty Ltd v Federal Commissioner of Taxation (1965) 114 CLR 314 (HCA); Fincon (Construction) Ltd v Commissioner of Inland Revenue [1970] NZLR 462 (CA); Commissioner of Inland Revenue v National Bank of New Zealand Ltd (1976) 2 NZTC 61,150 (1976) 2 TRNZ 70 (CA).

750.15 Cheque payments

Where income is received by way of cheque, it is the date of receipt of the cheque and not the date of presentation that is crucial. In Ullrich v Commissioner of Inland Revenue [1964] NZLR 386 (SC), the taxpayer received in one income year a rental cheque which he did not present for payment until a later income year. The proceeds were held to be income properly assessable in the income year in which the cheque was physically received.
Barristers, but not solicitors, may furnish their returns on a cash basis. Claims for bad debts cannot be allowed where the income shown in previous returns has been made up from cash receipts only, as to do so would give rise to a double deduction.

Doctors

Returns may be made on a cash or earnings basis.

Doctors who agree to render medical services in the area prescribed in return for the remuneration stipulated in the agreement with the Minister of Health are not servants of the Crown but are independent contractors. Medical bursaries, other than full salary, provided by hospital boards to doctors employed by the boards to enable them to undertake special courses of study or training, are exempt [s CW 36].

The New Zealand Medical Research Council periodically provides foreign study leave for its medical staff for the purpose of bringing them up to date in overseas techniques, rather than as a means of study for a higher degree. It provides specifically for the New Zealand salary payable in full, a costs of living allowance, and full reimbursement for return fares of the recipient and the spouse [see 960.10] in return for an undertaking to remain in the service of the Council for two years after returning to New Zealand. Only the salary is taxable, the other receipts are reimbursements and not taxable.

Post-graduate study grants paid to junior medical staff to encourage them to give service in public hospitals after graduation are income when received. Any travel allowance portion of the grant is considered to be reimbursing and exempt. Junior medical officers absent overseas are to be treated as being in the service of the New Zealand Government and, therefore, resident in New Zealand.

Business income

The Court of Appeal in Commissioner of Inland Revenue v Farmers Trading Co Ltd [1982] 1 NZLR 449, (1982) 5 NZTC 61,200 (CA) comprehensively reviewed, inter alia, the taxation treatment of items sold on credit. The Court found that, where there is an outright sale of trading stock, the entire profit from the sale is required to be returned in that income year. The income earning process has been completed at that point in time.

Professional income

In Henderson v Federal Commissioner of Taxation (1970) 1 ATR 133 (HCA), the correct basis of returning the income of a professional practice, except for doctors and barristers, is the earnings or accrual basis, not the cash receipts basis.

The following general principles apply to businesses where services are provided. This includes accountants, architects, chiropractors, consultants, contractors, engineers, solicitors, surveyors, and veterinarians. Medical practitioners and barristers sole are not subject to these rules.

The income is derived when there is entitlement to bill. The different situations that may arise are set out below, together with an explanation as to when the income is earned. An express agreement may be in writing or oral.

When an express agreement exists, income is earned in terms of the agreement. The income may be derived either during the term of the agreement or at the completion of it, depending on when the agreement provides for entitlement to bill.

When no express agreement exists, but it is customary for the taxpayer to make progress billings, or it is acceptable to the client that progress billings can be made, the income is derived at such intervals as an entitlement to bill arises. When no express agreement exists and it is not customary for the taxpayer to make progress billings, or where the client does not agree to progress billings, the income is not earned until the client’s work is completed and an entitlement to bill is reached.

An “entitlement to bill” may occur either progressively and/or on completion. If, at balance date, there is an entitlement to bill but a bill has not been issued, the income is earned. This is regardless of when the bill is
dated or issued. Even though the determination of the quantum may occur after balance date following
assessment of hours and charge-out, and perhaps after discussion with the client regarding the fee, the income
has been derived as at balance date.

750.40 Directors’ fees
Where the fees are credited to the director’s current account, the CIR assumes that the director concerned is
able to operate the current account and make withdrawals at will. Where this assumption is correct, the
director’s fees are receivable when credited and properly represent income at that stage.
The fees may be paid or credited or otherwise dealt with in the income year following that in which the
services were given. In such cases they should generally be included as income in that following year.
However, where the taxpayer has followed the practice in past years of returning the fees as income of the
year in which the services were given, the CIR generally does not require a change to the cash basis.

750.45 Progress payments
Progress payments are not necessarily assessable when received. Where progress payments or advances are
received, they are assessable only to the extent to which they have been derived. The amount that is required
to be taken into account for income tax purposes is the amount that relates to work done up to balance date.

Example:
A contract was budgeted to take 120 hours and (as at balance date) only 30 hours had been completed (one-quarter complete).
The total fees anticipated from the contract are $6,000. The client had paid $3,000 at balance date. In such a case, only $1,500
would be assessable (ie one-quarter of $6,000).

In HW Coyle Ltd v Commissioner of Inland Revenue (1980) 4 NZTC 61,558, (1980) 4 TRNZ 1 (HC), the
taxpayer had prepared its accounts on the basis that only profits on completed building contracts were taken
into account, ie no profits on work in progress were included as income until the contracts were completed.
The question at issue was the correct method of bringing into the accounts the progress payments for work
which had been completed and for which the architects had certified payment. The High Court held:
(a) Where progress payments are received under a long-term contract, it depends on the terms of the
contract and the provisions for payment whether a profit has been derived at any particular stage;
(b) For income tax purposes, the progress payments received during any one year were income and not
capital. The surplus, after making the permitted deductions, was a profit or gain derived from a
business; and
(c) The CIR must calculate the income as being the total progress payments earned during the financial
year including payments for extras and final payments, plus interest earned and a proportion of the
establishment fee, less all items of expenditure actually incurred and deductible in the year, together
with any other authorised items of deduction such as depreciation.

Since this case, the unexpired portion of prepayments would also impact on net income [see 1140
PREPAYMENTS].

750.50 Supply of power
Electricity supplied by a power company but not metered or invoiced at balance date constitutes income
“derived” for tax purposes: Hawke’s Bay Power Distribution Ltd v Commissioner of Inland Revenue (1999)
19 NZTC 15,226 (CA). The reasons are as follows:
(a) The earning process is complete when the electricity is supplied to, and consumed by, consumers.
At that point, a legally enforceable right to the income from the “sale” arises;
(b) The electricity supplied and consumed is capable of reasonable estimation and is, in fact, quantifiable
at that point;
(c) The recognition of the income at this stage is supported by good accounting practice generally,
including the importance of matching the cost of supplying goods or services against revenue from
that supply; and
In the present case, the taxpayer had accrued unbilled sales of electricity for financial reporting purposes but not for tax purposes.

**750.55 Changing the method of returning income** [ss CH 4, DB 52, EG 2]

Where a taxpayer changes from a cash to an accrual basis of returning income (or vice versa) adjustments need to be made in the year of change.

Where the change is from cash accounting method to an accrual accounting method:

(a) Any amount owed to the person on the last day of the income year immediately preceding the year of change is income in the year of change; and

(b) Any amount owed by the person on the last day of the income year immediately preceding the year of change is an allowable deduction in the year of change.

Where the person is changing from an accrual accounting method to a cash accounting method:

(a) The sum of all amounts owing by the person in the year of change which have been allowed as a deduction in prior income years is to be included in income in the year of change; and

(b) The sum of all amounts owing to the person in the year of change which have been treated as income in prior income years is an allowable deduction in the year of change.

#### 760.10 Source of income and residence determines assessability [s BD 1]

The liability of a person for New Zealand income tax depends on the source of the income (where the income is derived from) and whether or not the person is a tax resident of New Zealand. In general, a person who is a New Zealand resident is liable for income tax on all the income they derive, whether that income is derived from New Zealand or from elsewhere, whereas a person who is not a New Zealand resident is liable for income tax only on income derived from New Zealand.

These principles are set down in s BD 1, which includes all income (as defined in Part C) of any person in the potential tax net, but then excludes from the net exempt income, excluded income and non-residents’ foreign-sourced income. The result is that residents are taxed on all assessable income, while non-residents are taxed only on assessable income derived from New Zealand.

In considering the taxation of cross-border income, it is also necessary to consider whether the terms of any double tax agreement may have an impact. For example, if a person is a tax resident of both countries that are parties to a double tax agreement, the rules set out in the agreement will be applied to determine which country the person is deemed to be resident in [see 310 DOUBLE TAX AGREEMENTS].

#### 760.15 Definition of New Zealand [s YA 1]

“New Zealand” is defined as the islands and territories within the realm of New Zealand, but does not include the Cook Islands, Niue, Tokelau or the Ross Dependency (Antarctica) [Interpretation Act 1999, s 29].

The definition of New Zealand for income tax purposes includes the continental shelf and the water and the air space above any part of the continental shelf that is beyond New Zealand’s territorial sea, if and to the extent to which:

(a) Any exploration or exploitation (including of natural resources), is or may be undertaken; and

(b) The exploration or exploitation involves any activity on, in, or in relation to the water or air space [s YA 1].
“Territorial sea” is defined in s 3 of the Territorial Sea, Contiguous Zone, and Exclusive Economic Zone Act 1977 (which is essentially the seabed and subsoil of the submarine areas extending beyond the territorial limits of New Zealand to the edge of the continental margin, or to a distance of 200 nautical miles, where the continental margin does not extend to that distance).

760.20 Income treated as having a New Zealand source [ss YD 4, YZ 1]

Persons not resident in New Zealand are not subject to income tax in New Zealand if the amount is a foreign-sourced amount. A foreign-sourced amount is an amount of income that is not treated as having a source in New Zealand under ss YD 4 and YZ 1 [s YA 1].

Thus, persons not resident in New Zealand will be subject to income tax in New Zealand when they are in receipt of income treated as having a source in New Zealand under s YD 4.

The following classes of income are treated as having a source in New Zealand:

(a) Income derived from a business that is wholly carried on in New Zealand;
(b) Income derived from a business that is partly carried on in New Zealand, to the extent the income is apportioned to a New Zealand source under s YD 5 (see below);
(c) Income derived from a contract that is:
   (i) Made in New Zealand, except to the extent to which the contract is wholly or partly performed outside New Zealand, and the income is apportioned to a source outside New Zealand under s YD 5 [see 760.25];
   (ii) Made outside New Zealand but the contract is wholly or partly performed in New Zealand, to the extent to which the income is apportioned to a New Zealand source under s YD 5;
(d) Employment income under s CE 1 [see 1300.10] earned in New Zealand, even if the employer is not a New Zealand resident;
(e) Accident compensation payments as defined in s CF 1(2) [see 20.60];
(f) Pensions or annuities payable by the New Zealand Government or out of a superannuation scheme established in New Zealand;
(g) Gratuitous payments made in return for services provided by a person or their relative [within the definition of “pension” in s CF 1(2)] if the services are provided in New Zealand;
(h) Income derived by a person as the owner of land in New Zealand;
(i) Income, other than a royalty, derived as consideration for the use of, or right to use, personal property in New Zealand if the income is paid by a New Zealand resident or by a non-resident (if the non-resident is allowed a deduction for the payment);
(j) Royalties that are paid by a New Zealand resident if they are not made in connection with a business they carry on outside New Zealand through a fixed establishment outside New Zealand;
(k) Royalties that are paid by a non-resident, if the non-resident is allowed a deduction for the payment;
(l) Income derived from shares in, or membership of, a company resident in New Zealand;
(m) Interest or a redemption payment derived from money lent in New Zealand;
(n) Interest or a redemption payment derived from money lent outside New Zealand:
   (i) To a New Zealand resident, unless the money is used for the purposes of a business they carry on outside New Zealand through a fixed establishment outside New Zealand;
   (ii) To a non-resident, if the money is used by them for the purposes of a business they carry on in New Zealand through a fixed establishment in New Zealand;
(o) Income from securities issued by the New Zealand Government;
(p) Income derived from debentures issued by a local authority or public authority;
(q) Income derived from a mortgage of land in New Zealand;
Income from New Zealand and Foreign Sources

(r) Income derived from the disposal of property situated in New Zealand;
(s) Income derived by a beneficiary from a trust to the extent to which the income of the trust fund has a source in New Zealand;
(t) Income derived from transporting people or property by air if the transportation leaves from New Zealand;
(u) Income derived from transporting people or property by sea if the transportation leaves from New Zealand, to the extent to which the income is apportioned to a New Zealand source under s YD 6 [see 760.30];
(v) Premiums for general insurance paid to a non-resident general insurer of the type described in s YD 8, to the extent set out in s YD 8(2) [see 800.75];
(w) Income of a non-resident life insurer calculated under s EY 48 [see 800.45];
(x) Income of a New Zealand partnership, if the income is treated as having a source in New Zealand under any other provision of s YD 4, with all the partners being treated as resident in New Zealand. A “New Zealand partnership” is defined as a partnership that:
   (i) Is a limited partnership; or
   (ii) Has 50 per cent or more of its partners’ interests (by value) in capital held by New Zealand residents; or
   (iii) Has its centre of management in New Zealand, ignoring s HG 2;
(y) Income derived directly or indirectly from any other source in New Zealand.

Paragraphs (m) and (n) apply to:
(a) Interest derived from money lent under a binding contract entered into on or after 29 July 1983; and
(b) A redemption payment made on a commercial bill if it was issued on or after 29 July 1983 and it was not issued under a binding contract entered into before that date [s YZ 1].

760.23 Apportionment of income [ss YD 5, YD 6]

(1) Derived partly in New Zealand [s YD 5]
An apportionment of income is required when any one or more of the following applies:
(a) A business is carried on partly in New Zealand and partly outside New Zealand;
(b) A contract is made in New Zealand and is performed, in whole or in part, by a person outside New Zealand; or
(c) A contract is made outside New Zealand and is performed, in whole or in part, by a person in New Zealand.

The amount of income derived from the business or contract, and the expenditure incurred in deriving that income, must be apportioned between New Zealand and overseas sources. The result of this apportionment, to the extent consistent with exclusions (a) and (b) below, must be that the person’s net income or net loss from the business or contract is the same as a separate and independent person would have if they were carrying out only the person’s New Zealand activities and dealing at arm’s length.

The apportionment rules in s YD 5 do not limit the effect of:
(a) Any of the source rules in s YD 4 [see 760.20] except for those in s YD 4(2) and (3), which relate to businesses carried on in New Zealand and contracts made or performed in New Zealand;
(b) The source rules in s YD 4(2) and (3) to the extent to which the income referred to is also income referred to in any source rule other than those in s YD 4(2) and (3).

(2) From sea transport [s YD 6]
When a non-resident derives income from transporting people or property by sea from New Zealand to a destination outside New Zealand, five per cent of the amount is treated as having a source in New Zealand.
and the remainder is treated as not having a source in New Zealand. For this purpose, the transport of people or property from a port in New Zealand is treated as transport to a place outside New Zealand even if the ship calls at another New Zealand port before leaving New Zealand.

The CIR may reduce the amount treated as having a source in New Zealand, to the extent to which the amount would be treated as exempt or not having a source in the country the person is resident in. The non-resident is denied a deduction under s DW 3 for expenditure or loss incurred in deriving the income.

760.25 **Income to be shown in New Zealand currency** [ss YF 1, YF 2]

All income derived by a New Zealand resident, wherever derived, is subject to income tax in New Zealand, and must be expressed in New Zealand currency.

Business income is often not quantified until after the end of the income year. In this case, the exchange rate used could be an average of the mid-month rates, or the rate applicable at balance date.

(1) **Currency conversion**

When an amount is paid or payable in a foreign currency and there is no specific rule prescribed for converting it into New Zealand currency, a number of alternative conversion methods are available. If none of the methods set out below applies, the amount must be converted using the close of trading spot exchange rate on the date the amount is required to be measured or calculated.

If the CIR allows it, or if there is a provision in the ITA that specifically allows it, the amount may be converted using the average of the close of trading spot exchange rates for the 15th day of each complete month that falls in the relevant period.

The amount may be converted using a rate set by the CIR, or a rate calculated using a method approved by the CIR, for general use.

A person may also convert the amount using a rate set by the CIR, or a rate calculated using a method approved by the CIR, specifically for that person’s circumstances [s YF 1].

If a provision in the ITA other than s YF 1 provides a rate or method for currency conversion, a person may, instead of using that rate or method, use a representative conversion rate set by the CIR [s YF 2].

(2) **Overseas investment income**

A taxpayer with overseas investment income should convert that income to New Zealand currency as follows:

(a) *Income remitted back to New Zealand as derived:* The gross amount (inclusive of any foreign tax) actually received in New Zealand currency is taken.

(b) *Income not remitted back to New Zealand:* Convert the income to New Zealand currency using the telegraphic transfer buying rate for the day the income was derived (ie paid or credited). Either the actual rate (obtainable from any trading bank) or the mid-month telegraphic buying rate (shown below) may be used.

Business income is often not quantified until after the end of the income year. In this case, the exchange rate used could be an average of the mid-month rates, or the rate applicable at balance date.

(3) **Exchange rates**

The following table shows the available mid-month exchange rates for converting common foreign currencies to New Zealand dollars.

The rates for February and March 2012 were not available at the time of publication.

A list of exchange rates for other currencies and a currency converter are available on Inland Revenue’s website or in Brookers *Tax Rates Guide 9-5000.*

**760.30 Allocation of income derived from countries with different income years [s EG 1]**

If a person derives foreign source income or incurs foreign expenditure, and the person’s income year in the country of source of the income differs from their New Zealand income year, the taxpayer may elect to return that foreign income and expenditure in the New Zealand income year in which the balance date applicable in the country of source of that foreign income falls.

**Example:**

A New Zealand person with a 31 March balance date derives business income from a country with a 30 June balance date. The taxpayer’s income and expenditure from that country for the year ended 30 June 20X1 would, on election, be included in the taxpayer’s return of income for the year ended 31 March 20X2. This is subject to the restrictions explained below.

The following definitions apply when making an election:

(a) “Foreign source income” means income that does not have a source in New Zealand and that is not exempt income.

(b) “Foreign expenditure” means expenditure that is incurred in deriving foreign source income.

The election is made by simply completing the tax return accordingly. An election will only apply to foreign source income and foreign expenditure which:

(a) Is taken into account in determining income tax payable in the foreign country, and has been included in the taxpayer’s income tax returns in that country; and

(b) But for the election would have been allocated to the taxpayer’s previous income year.

An election will not apply to income that is subject only to withholding tax in the foreign country.

A taxpayer cannot allocate foreign income and expenditure to an income year if that income and expenditure has already been included in the taxpayer’s return of income for the previous year. Once a taxpayer makes an election it continues to apply to all subsequent income years, unless Inland Revenue allows the taxpayer to revoke the election or unless the $100,000 limit, as explained below, is exceeded.

An election applies to all foreign source income and foreign expenditure except:

(a) Interest or income under the financial arrangements rules (unless Inland Revenue agrees);

(b) Dividends (unless Inland Revenue agrees and the taxpayer is not a company);

(c) Attributed controlled foreign company (CFC) income;
(d) Deductible foreign investment fund (FIF) income or income derived from an attributing interest; and
(e) Foreign expenditure relating to (a) to (d).

In deciding whether to consent to an election in relation to interest or dividends, Inland Revenue will take into consideration the taxpayer’s compliance costs, the risk to the revenue if the election applies, and any other relevant factors.

The rule in s EG 1 is principally a compliance cost mechanism that allows people with foreign income below a threshold to avoid the need to apportion the income and expenses to the correct equivalent New Zealand income year. The threshold for these purposes is $100,000 income from foreign sources. Thus, an election will not apply in any year in which net income from foreign sources exceeds $100,000. In these circumstances, or if the taxpayer does not make an election, an apportionment must be made [see TIB vol 6:12 (May 1995)].

**Example:**
If a person with a 31 March balance date derives rental income from a foreign country that has a 30 June year end, the foreign income and expenses for the year ended 30 June 20X1 will be returned in the person’s return for the year ended 31 March 20X2. However, if this amount exceeds NZ$100,000, it will have to be apportioned so that the income for the nine months to 31 March 20X1 is included in the 20X0-X1 income year and the income for the three months to 30 June 20X1 is included in the 20X1-X2 income year.

760.35 Foreign income derived by New Zealand resident

A New Zealand resident [see 1250 RESIDENCE] is assessable on all foreign income [s BD 1], subject to specific exemptions. Credit is given under s LJ 2 for foreign tax actually paid, so far as it does not exceed the New Zealand income tax applicable to the foreign income, and as long as it is substantially of the same nature as New Zealand income tax [see 760.40]. The foreign tax may be an income tax (whether imposed by a central, state, or local Government), or a non-resident withholding tax. Many countries with which New Zealand has a double tax agreement impose a withholding tax, which is the final liability in the foreign country. There is no provision for adjustments or variations of this rate.

In general expenses incurred in deriving foreign-sourced income are deductible. When expenses exceed the income the loss is deductible from other income, or carried forward, but in the latter case there is no credit allowed for the foreign tax, as the formula for determining the New Zealand tax attributable to that income takes the expenses into account [see 760.45]. If the income is exempt or not taxable because the person is in an overall loss position then it is likely that the CIR will take the view that there is no New Zealand tax payable on the income, even though it reduced losses.

A variety of special rules affect overseas investments by New Zealand residents [see 850 INTERNATIONAL TAX REGIME].

(1) Exemption for transitional residents

The foreign income of new migrants arriving in New Zealand (referred to as “transitional residents”) is exempt from income tax for the first 48 months of residence. The exemption also applies to returning New Zealanders who have not been resident for at least 10 years. The exemption, which does not apply to employment income and income from services, was introduced to remove a perceived barrier for skilled individuals to move to (or return) New Zealand [see 370.35].

760.40 Foreign tax credit rules [ss LJ 1, YA 2(5); TAA, s 225B]

New Zealand adheres to the general international tax principles of allowing the country of source of income to tax that income and the country of residence to give a credit in respect of that tax. Thus, a New Zealand resident who derives assessable income from a foreign country is allowed a credit against their New Zealand income tax liability for any foreign tax paid on that assessable income. This prevents the taxpayer from being taxed twice on the same income.

A credit is not allowed for income tax paid in a country listed in sch 27, to the extent the tax is paid on types of income listed in the schedule. There are currently no countries listed in sch 27. The schedule may be amended by the Governor-General by Order in Council [TAA, s 225B].
An amount that is deemed not to be income under s EX 59 (in relation to an attributing interest in a foreign investment fund) is treated as assessable income for the purposes of determining a person’s entitlement to a credit.

A dividend paid by a company resident in a country with which New Zealand has a double tax agreement is treated as being derived from a source in that country for the purposes of the double tax agreement if:

(a) The company is not resident in New Zealand; and
(b) The law of the other country imposes foreign tax.

The term “income tax” when used in relation to tax imposed by another country means a tax of substantially the same nature as income tax imposed under s BB 1. It includes a tax, imposed as a collection mechanism for the foreign tax, that is of substantially the same nature as provisional tax, PAYE, RWT or NRWT [s YA 2(5)].

**760.45 Amount of foreign tax credit** [ss LJ 2, LJ 3, LJ 4, LJ 5; TAA, s 165A]

A New Zealand resident who derives foreign-sourced assessable income has a tax credit for a tax year for an amount of foreign income tax paid on a segment of foreign-sourced income, calculated as shown below. The segment of foreign-sourced income is determined as if it were the net income of the person for the tax year.

The person’s credit must not be more than their notional income tax liability (see below). If a person who qualifies for a foreign tax credit is also liable to pay foreign income tax in the country from which the income was derived because they are a citizen or resident of, or are domiciled in, that country, the credit is limited to the amount of foreign income tax that would have been paid in the other country if the person were not treated as a citizen or resident of, or domiciled in, that country.

The amount of tax credit allowed to a multi-rate PIE and an investor in a multi-rate PIE is limited under subpart HM [see 1130 PORTFOLIO INVESTMENT ENTITIES].

For the purposes of subpart LJ, “foreign income tax” means an amount of income tax of a foreign country.

A “segment of foreign-sourced income” is an amount of assessable income derived from one foreign country that comes from one source or is of one nature.

**Example:**

Patsy, a New Zealand resident, derived interest income and dividend income from Australia during a tax year. The interest income and the dividend income are two separate segments of foreign-sourced income.

A person’s notional income tax liability is calculated as follows:

\[
(\text{net income} - \text{losses}) \times \text{tax rate}
\]

Where:

“Net income” is the person’s net income for the tax year;

“Losses” is the amount of tax loss (excluding any loss balance carried forward to the tax year) that the person must subtract from their net income. “Losses” must not exceed net income;

“Tax rate” is the basic rate of income tax set out in sch 1, Part A.

When a person has more than one source or type of foreign-sourced assessable income, the amount of New Zealand tax relating to each segment is calculated using the formula:

\[
\frac{(\text{segment} - \text{person’s deductions}) \times \text{notional liability}}{\text{person’s net income}}
\]

Where:

“Segment” is the amount of the segment of foreign-sourced income for the income year;

“Person’s deductions” is the amount of the person’s deductions for the tax year corresponding to the income year that is attributable to the segment of foreign-sourced income;

“Notional liability” is the person’s notional income tax liability as calculated under the above formula;

“Person’s net income” is the person’s net income for the tax year corresponding to the income year under s BD 4(1) to (3).
If the total amount of New Zealand tax for all segments of foreign-sourced income is more than the notional income tax liability, the amount of tax for each segment is adjusted by multiplying it by the following ratio:

\[
\frac{\text{Person’s notional income tax liability}}{\text{NZ tax}}
\]

Where:

“NZ tax” is the total of the tax calculated for each segment of assessable income from all sources, including income with a New Zealand source.

A tax credit under s LJ 2 must be applied for within four years after the end of the tax year in which the taxpayer is entitled to have the credit. The CIR may extend this four-year period by another period of up to two years. The taxpayer must provide the information necessary to determine the amount of the credit, when making application [TAA, s 78B].

If a person has been allowed a credit of tax in excess of the amount properly allowable under a tax law, the CIR may recover the excess from the person in the same manner as if the excess were income tax payable, subject to ss LA 3 to LA 5, LJ 7 and LK 4 [TAA, s 165A].

760.55 Use of foreign tax credits by beneficiaries [s LJ 6]

When a resident beneficiary derives a taxable distribution as a beneficiary of a trust, the beneficiary is not allowed a tax credit for any foreign income tax paid on the distribution unless the tax is similar to non-resident withholding tax. If the foreign tax paid meets this requirement, the person is allowed a tax credit equal to the amount calculated using the formula:

\[
\left(\frac{\text{person’s taxable distribution}}{\text{total distribution}}\right) \times \text{foreign tax paid}
\]

Where:

“Person’s taxable distribution” is the taxable distribution derived by the person in their capacity as a beneficiary of the trust, including the amount of tax;

“Total distribution” is the total distribution derived by the person in their capacity as a beneficiary of the trust, including the amount of tax;

“Foreign tax paid” is the amount of foreign tax paid.

The term “taxable distribution” is explained in 1420.95. If the amount of the tax credit changes after the taxpayer has applied for the credit under s 78B of the TAA, the taxpayer must provide the CIR with all relevant information [TAA, s 78C].

760.60 Foreign tax credits repaid [s LJ 7]

A person who receives a repayment or refund of foreign tax that has been claimed as a credit under s LJ 2 must pay the amount of the repayment to the CIR. This applies when the person receives:

(a) A refund or repayment of some or all of the foreign tax; or
(b) An amount or benefit, including the remission of a debt, determined directly or indirectly by reference to some or all of the amount of the foreign tax.

If the person has used a credit under s LK 1 relating to attributed CFC income, and the repaid tax relates to a CFC:

(a) The amount of the credit carried forward is extinguished to the extent of the reimbursement; and
(b) The person is liable to pay the CIR any repaid foreign tax remaining after the action in (a).

The due date for paying these amounts is 30 days after the later of:

(a) The date of the notice of assessment in relation to which the person has used the credit; or
(b) The date on which the person or another person who paid the tax (or a person associated with them) receives the refund.
**760.65 Evidence of foreign tax paid**

Where New Zealand has a double tax agreement containing a dividend article, and the other country imposes a tax on the dividend, Inland Revenue will accept claims for foreign tax credits on dividends without documentary evidence.

New Zealand’s double tax agreements generally limit the tax on dividends to 15 per cent. If a taxpayer wanted to claim a credit in excess of the tax rate applicable in the relevant DTA, the CIR will generally not allow the excess as the country of source of the income has charged tax in excess of the rate provided, and in this case the taxpayer’s best recourse may be to approach the tax authorities of the jurisdiction of source of the income and request a refund.

For other forms of foreign-sourced income, evidence of the amount of foreign tax paid must be provided before a tax credit is allowed. Where the foreign tax paid is less than $500, Inland Revenue will accept a chartered accountant’s certificate stating that documentary evidence has been sighted and that the tax claimed has not been subsequently refunded [see Inland Revenue *Technical Rulings Manual*, para 45.5.5 or PIB 90 (May 1997)].

**760.70 Interest from Australian companies and from Commonwealth Bonds**

A 10 per cent withholding tax is deducted by Australian companies from interest payable to non-residents. The withholding tax is a final tax in Australia. The interest is included in the New Zealand assessment of a New Zealand resident and credit allowed for the 10 per cent withholding tax up to the amount of the New Zealand tax on the interest. Commonwealth Bond interest is not subject to the withholding tax deduction, so no credit is allowable in New Zealand for Commonwealth Bond interest.

**760.75 Dividends from Australian companies**

Under the imputation system operating in Australia, dividends paid by Australian companies that have paid sufficient company tax carry franking credits and are known as franked dividends. Dividends paid by Australian companies that have not paid Australian company tax do not carry franking credits and are known as unfranked dividends. Australian residents are required to include the franking credits in their income, and are allowed a tax rebate up to the amount of the franking credits. New Zealand residents are not entitled to receive a refund of the franking credits from the Australian tax authorities. Fully-franked dividends are not subject to Australian non-resident withholding tax while unfranked dividends continue to be subject to Australian non-resident withholding tax.

As New Zealand residents are not entitled to the benefit of any franking credits they are not included in the amount of the dividends which are subject to tax in New Zealand. The franking credits would not qualify as a credit to be allowed against income tax payable in New Zealand as it is not income tax that the person was personally liable to pay [s YA 2(5)]. Therefore, New Zealand residents receiving franked dividends from Australia are taxed on the amount of the actual dividends paid by the Australian company, excluding the amount of any franking credits attached. As fully-franked dividends are not subject to Australian withholding tax, no credit is allowed for Australian tax in the New Zealand tax assessment (but see discussion below on Australian imputation credit account companies).

The gross amount of unfranked dividends received by New Zealand residents should be included in the New Zealand tax assessment with a credit being allowed for the lesser of:

(a) The Australian 15 per cent withholding tax paid; or
(b) The New Zealand tax payable on the Australian dividends.

A New Zealand shareholder may receive a dividend from an Australian company which is partly franked.

---

**Example:**

A New Zealand shareholder in an Australian company receives the following dividend statement:

| Franked amount | $100.00 |

---

860 Staples Tax Guide 2012
### Income from New Zealand and Foreign Sources

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unfranked amount</td>
<td>$80.00</td>
</tr>
<tr>
<td>Withholding tax</td>
<td>$12.00</td>
</tr>
<tr>
<td>Franking credit</td>
<td>$63.93</td>
</tr>
</tbody>
</table>

The amount that is taxable in New Zealand is $180. The amount that the taxpayer would have actually received from the Australia company is $168 ($100 + $80 − $12). The withholding tax credit of $12 is allowed as a foreign tax credit under s LC 1 [see TIB vol 4:1 (August 1992) at 10].

(1) **Australian imputation credit account companies**

Australian resident companies can elect to maintain an imputation credit account (ICA) in New Zealand and can distribute dividends with either or both imputation credits and franking credits attached [see 670.405, 670.410]. This would be of benefit to an Australian company carrying on business in New Zealand (eg through a branch) and paying New Zealand income tax on its New Zealand sourced income. Income tax paid in New Zealand would be credited to the company’s ICA. If the company has New Zealand resident shareholders, those shareholders can then take advantage of the imputation credits attached to a dividend. Australian resident shareholders of the company cannot, however, use the imputation credits.

The reverse also applies — New Zealand resident companies can elect under Australian tax law to be New Zealand franking companies and attach franking credits as well as imputation credits to their dividends. The franking credits can be used by Australian resident shareholders, but not by New Zealand residents.

### 760.80 Netherlands social security pensions

Netherlands social security pensions paid to New Zealand residents are taxed as follows:

(a) If the New Zealand tax resident who receives the pension is also a New Zealand citizen, the pension is taxable only in New Zealand.

(b) If the New Zealand tax resident who receives the pension is not a New Zealand citizen, the pension may be subject to tax in both the Netherlands and New Zealand. In this case, a credit of tax will be available in New Zealand for tax paid in the Netherlands [see 760.40, 760.45].

This treatment was confirmed in public ruling BR Pub 07/10, which applies from 1 December 2006. The ruling is based on art 19(2) of the double tax agreement between New Zealand and the Netherlands [see 310.130], which states that a social security pension may be taxed by the country from which it is paid, but the pension will be taxed only in the country in which the recipient is resident if the resident is also a national (citizen) of the country of residence. New Zealand does not have an exclusive right to tax the pension if the recipient is a New Zealand resident but not a citizen of New Zealand [see TIB vol 20:1 (February 2008) at 3].
Chapter 770
Income Year and Balance Date

770.10 Income year and tax year [s YA 1]
The “tax year” is the period starting on 1 April and ending on 31 March.
The “income year” is:
(a) The period (usually a year) ending on a date other than 31 March, for a person with an approved non-standard balance date [under s 38 of the TAA]; or
(b) The period starting on 1 April and ending on 31 March, for any other person.

Under s 38 of the TAA a taxpayer may elect to file a return for the year ending with the date of the annual balance date of the person’s accounts. Where a person elects to file a return that aligns with the annual balance date of the person’s accounts, the income year is the period ending on the annual balance date. In the year in which a person’s balance date changes, the income year will be a period of less than a full year.

770.20 Balance dates, accounting years, and income years [s YE 1; TAA, s 38]
Unless the context otherwise requires, references to persons with a standard balance date, or a standard accounting year, or a standard income year are references to those persons who furnish a return of income under s 33 of the TAA for a tax year ending on 31 March — being the tax year in respect of which the reference is made.

A reference to a tax year that is identified by a reference, in full or short form, to two successive years is a reference to a tax year that starts on 1 April of the earlier tax year and ends on 31 March in the later year. For example, “20X1-20X2 tax year” and “20X1-X2 tax year” are both references to the tax year ended 31 March 20X2.

A taxpayer may, with the consent of the CIR, elect to furnish a return based on a corresponding income year that ends with the date of the annual balance of the taxpayer’s accounts. Any election made by the taxpayer is to continue in force unless and until it is altered by the taxpayer with the prior approval in writing of the
CIR. A multi-rate PIE that does not calculate and pay tax using the provisional tax calculation option under s 44 must not make an election to adopt a non-standard balance date [TAA, s 38].

“Corresponding income year” is defined in s YA 1 as an income year that ends in the period starting on 1 October in the tax year and ending on 30 September immediately after the tax year. This concept aligns the “tax year” with a non-standard income year. References in the ITA 2007 to an income year are aligned with the corresponding tax year under this rule.

Example:
The corresponding tax year for a person with an income year ending on 30 June 20X2, is the tax year ending 31 March 20X2, as 30 June 20X2 is a date ending in the period starting after 1 October 20X1 and ending before 30 September 20X2. An income year ending 31 December 20X2 corresponds with the tax year ending 31 March 20X3.

A person to whom s 33A of the TAA applies (i.e., individuals not required to furnish returns and who will not receive income statements from the CIR), is unable to adopt a non-standard balance date [see 1270.70].

(1) **Non-standard balance dates**

A reference to a person with a non-standard balance date, or a non-standard accounting year, or a non-standard income year is a reference to a person who furnishes a return of income under s 38 of the TAA for a tax year on the basis of a corresponding income year ending on a date other than 31 March. Unless the context requires otherwise, the non-standard year is the accounting year that corresponds to the tax year for which the reference is made.

(2) **Early balance dates**

A reference to a person with an early balance date is a reference to a person who has approval under s 38 of the TAA to file a return of income for a tax year on the basis of a corresponding income year that ends between 1 October and the following 31 March, both days inclusive. Unless the context requires otherwise, the year with the early balance date is the accounting year that corresponds with the tax year for which the reference is made.

Example:
A balance date of 31 December, when approved by the CIR under s 38 of the TAA, is an early balance date, because it falls between 1 October and the following 31 March. The income year ended 31 December 20X1 corresponds with the tax year ended 31 March 20X2.

(3) **Late balance dates**

A reference to a person with a late balance date is a reference to a person who has approval under s 38 of the TAA to file a return of income for a tax year on the basis of a corresponding income year that ends between 1 April and the following 30 September, both days inclusive. Unless the context requires otherwise, the year with the late balance date is the accounting year that corresponds with the tax year for which the reference is made.

Example:
A balance date of 31 May, when approved by the CIR under s 38 of the TAA, is a late balance date, because it falls between 1 April and the following 30 September. The income year ended 31 May 20X1 corresponds with the tax year ended 31 March 20X1.

770.40 **Trustees with non-standard income year** [s HC 6(3), (4)]

When a trustee has a non-standard income year (i.e., an approved balance date other than 31 March) and an amount derived by the trustee in the income year is also beneficiary income, the beneficiary is treated as having derived the income in the same tax year as that corresponding to the trustee’s income year [s HC 6(3), (4)].

Beneficiary income includes not only income that vests absolutely in interest in a beneficiary in the income year, but also income that is paid to the beneficiary in the income year or by the later of the following dates:

(a) A date that falls within six months of the end of the income year; or
770.50 Income Year and Balance Date

(b) The earlier of:
   (i) The date on which the trustee files the return of income for the income year; or
   (ii) The date by which the trustee must file a return for the income year under s 37 of the TAA [s HC 6(1), (1B)].

Example:
A trustee has an approved 30 June balance date. For the 20X1 income year, beneficiary income includes any trust income paid to the beneficiary between 1 July and 31 December 20X1 (or later, if the trustee filed the return of income after 31 December 20X1). From the beneficiary’s perspective, this income will be treated as having been derived in the tax year ended 31 March 20X1 (because this is the tax year that corresponds with the trustee’s income year).

770.50 Election to change balance date [TAA, s 38]

A taxpayer may, with the CIR’s consent, elect to adopt a non-standard balance date for income tax purposes [see 770.20].

Standard practice statement SPS 08/04 [see TIB vol 20:11 (February 2009) at 9-17], which applies from 1 January 2009, sets out Inland Revenue’s practice for considering applications for the CIR’s approval for a change in balance date and replaces all previous Inland Revenue policy statements on this topic. Only taxpayers with an obligation to file returns under s 33 of the TAA (generally persons in business and those who receive income not taxed at source) may apply for a non-standard balance date. Portfolio tax rate entities that do not make payments under s HL 23 [since repealed] cannot elect to adopt a non-standard balance date. An approved non-standard balance date must be the last day of a month.

There is no right to challenge a decision by the CIR under s 38 of the TAA. Taxpayers who disagree with a decision can discuss it with Inland Revenue or seek a judicial review.

(1) Acceptable reasons for a change of balance date
The CIR will agree to a change in balance date in the following circumstances:

<table>
<thead>
<tr>
<th>Reason for change</th>
<th>Mode of election</th>
</tr>
</thead>
<tbody>
<tr>
<td>A business taxpayer elects to change a balance date and can present good business reasons as to why a 31 March balance date is impractical for returning income, or their circumstances have changed significantly and they should be permitted to further change a non-standard balance date previously consented to. This will include a consideration by the CIR of elections by new business taxpayers to adopt a non-standard balance date from their first tax year.</td>
<td>Long form</td>
</tr>
<tr>
<td>A business taxpayer elects to adopt a recognised industry balance date [see 770.55].</td>
<td>Short form</td>
</tr>
<tr>
<td>A franchise owner is required, as a condition of a franchise agreement, to use a non-standard balance date for financial reporting purposes and the applicable balance date has been recognised by agreement between the CIR and the master franchisor.</td>
<td>Short form</td>
</tr>
<tr>
<td>A shareholder-employee elects to adopt the same non-standard balance date as the company to which the shareholding relates and from which they derive their primary source of income.</td>
<td>Short form</td>
</tr>
<tr>
<td>A continuing estate wants to adopt a balance date that coincides with a deceased taxpayer’s date of death.</td>
<td>Short form</td>
</tr>
<tr>
<td>A subsidiary company elects to adopt the same non-standard balance date as used by the parent company.</td>
<td>Short form</td>
</tr>
<tr>
<td>A non-resident taxpayer, operating a business activity in New Zealand that has a centre of management outside New Zealand, elects to use a balance date for preparing annual accounts and returning income in their country of residence.</td>
<td>Short form</td>
</tr>
</tbody>
</table>
**Reason for change**

A business entity, with a close trading relationship with another business entity with a shared accounting system or central administration structure, elects to adopt a common non-standard balance date.

A managed fund elects to adopt a balance date in common with a fund manager or trustee when it can be demonstrated that a parent-subsidiary like relationship exists between the parties [see 770.60].

An entity deemed to be agent of a non-resident insurer is required to file “as agent” returns under s HD 16 [see 770.60].

(2) **Short form election**

The election to change a balance date may be made by telephone (0800 377 774) or in writing. The following details must be provided:

(a) The full name of the taxpayer seeking the non-standard balance date;
(b) Tax file number, if already registered;
(c) Reasons for the election to change balance date;
(d) The name of the tax agent (if applicable).

(3) **Long form election**

The election to change a balance date must be made in writing. The following information, where relevant, must be provided:

(a) The full name of the taxpayer seeking the non-standard balance date;
(b) Tax file number, if already registered;
(c) Reasons for the election to change balance date;
(d) The name of the tax agent (if applicable);
(e) Details of cash flows;
(f) Details of stock patterns;
(g) Details of any significant business transactions that will impact on the taxpayer’s tax liability for the current financial year;
(h) Other evidence to show that financial information prepared to the proposed balance date will be more appropriate to the entity;
(i) Where a new business is seeking a non-standard balance date (other than a recognised industry balance date);
(j) Where businesses claim that they have a close trading relationship and share a common accounting system or central administration structure, evidence of this.

(4) **Unacceptable reasons for a change of balance date**

The CIR will not agree to a change of balance date where the basis for the application is one or more of the following:

(a) The elected non-standard balance date is the anniversary date of the commencement of the business;
(b) A reason for changing the balance date is tax deferral or tax avoidance, or to take advantage of a tax incentive or concession;
(c) An election is made in order to smooth the workflow of a manager, trustee or tax agent;
(d) An election is made for reasons of administrative convenience; or
(e) Functions have been contracted out to a third party (eg a specialist administration manager) and the taxpayer elects to adopt the manager’s balance date.
(5) **Passive income**
Taxpayers whose primary source of income is from passive investments (e.g., rent, interest or dividends) are normally required to return this income to 31 March. However, there are two exceptions to this:

(a) When a taxpayer derives passive income from the business activity of a related entity with a non-standard balance date [see Example below]; and
(b) When a taxpayer with an attributing interest in a FIF calculates their FIF income using the accounting profits method or branch equivalent method. Section EX 69 provides specific rules for change of FIF balance dates and also require the CIR’s consent before a new accounting year can be used.

**Example:**
A family trust leases a factory to a family trading partnership. The family trust passively derives its primary source of income from the related family trading partnership, which has a non-standard balance date. In this case, the CIR will consent to the family trust adopting a common non-standard balance date.

(6) **Salary and wage earners**
Where a taxpayer has income from salary or wages as well as business income, the CIR may agree to a non-standard balance date for the business income under the normal rules.

**Example:**
A taxpayer earns a salary as a teacher and also derives business income from operating a small orchard. The taxpayer wishes to adopt a 30 June balance date. The CIR would agree to the change of balance date because it is an industry approved balance date. In this situation, the taxpayer will return her business income to 30 June, but will continue to return the income from her salary to 31 March.

(7) **Retrospective elections**
Normally the CIR’s consent for a change in balance date is required before the start of a new income year (i.e., the election cannot apply retrospectively). However, late applications for a change of balance date will be accepted if they are made before the earlier of the return filing date under s 37(1) of the TAA for the current balance date and that for the proposed balance date. Consent will be granted where taxpayers can show that:

(a) It is possible to file returns for all the income years;
(b) The late election was not made for reasons of tax deferral or tax avoidance, or to take undue advantage of any tax incentive or concession; and
(c) Any incidental tax deferral as a consequence of the proposed balance date is insignificant when compared with their tax liability for the year under their current balance date.

(8) **New business taxpayers**
The CIR will consider elections from new business taxpayers to adopt a balance date other than 31 March from their first tax year. Previously tax exempt activities that become new business taxpayers continuing the same activity may (with the CIR’s consent) retain the use of a non-standard balance date already used for existing financial reporting purposes.

**770.55 Industry-specific non-standard balance dates**
The CIR recognises a number of industry-specific non-standard balance dates. These dates have been determined following representations to the CIR by the industries concerned. Taxpayers within these industries, or closely aligned to them, may elect to adopt these approved industry balance dates [see 770.50], subject to the CIR’s consent in writing under s 38 of the TAA.

<table>
<thead>
<tr>
<th>Industry</th>
<th>Recognised balance dates</th>

<tr>
<td>Cattle farmers</td>
<td>31 May</td>
</tr>
</tbody>
</table>
Income Year and Balance Date

**Industry** | **Recognised balance dates**
--- | ---
Dairy farmers | 31 May, 30 June or 31 July (depending on regional variations within the dairy industry)
Education/childcare related services | 31 December
Fishing industries | 30 September
Horse breeders | 31 July
Kiwifruit | 31 January to 31 March
Meat processing and export | 31 August or 30 September
Orchardists, pip fruit | 31 March, 30 June or 31 December
Seed dressers | 30 November
Sheep farmers | 30 June
Tobacco growers | 31 July

Taxpayers aligned to an industry still have the option of applying for an alternative non-standard balance date if the industry balance date does not suit their circumstances [see SPS 08/04, TIB Vol 20:11 (February 2009) at 16].

Recognised balance dates for the kiwifruit industry were 31 March, 30 April, 31 May or 30 June prior to 21 December 2010 [see TIB vol 23:1 (February 2011), at 101].

**770.60 Managed funds and “as agent” returns for non-resident insurers**

Inland Revenue will consider elections for non-standard balance dates from the following entities:

(a) The trustee of a unit trust that wishes to align its balance date with that of its manager;
(b) The trustee of a group investment fund that wishes to align its balance date with that of its manager;
(c) The trustee of a superannuation fund that wishes to align its balance date with that of its trustee or, where the fund is administered by an employer for the benefit of its employees, the balance date of the employer; or
(d) A resident taxpayer required to file an “as agent” return that wishes to align the balance date of that return with the taxpayer’s own non-standard balance date.

These entities may adopt a non-standard balance date in the following circumstances.

<table>
<thead>
<tr>
<th>Reason for changing balance date</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>A unit trust [see 1450.10] wishes to align its balance date with that of its manager.</td>
<td>The manager is the entity with the responsibility for the management of the unit trust and is appointed under the trust deed. Adoption of the manager’s balance date is appropriate only if the manager has retained the responsibility for the day-to-day administration of the unit trust.</td>
</tr>
</tbody>
</table>

A group investment fund [see 620.10] wishes to align its balance date with that of its manager. | A group investment fund is administered and overseen by a manager. The fund may have a separate trustee, although there is no requirement that the trustee and manager be separate entities. Consent will only be granted to align the fund’s balance date with that of the manager. As with unit trusts, the concession applies when the manager has retained the responsibility for the day-to-day administration of the trust and for preparing the trust’s accounts. When these functions have been contracted out to a third party, it is not appropriate to adopt the manager’s balance date. |

Staples Tax Guide 2012
Reason for changing balance date

A managed fund wishes to align its tax balance date for financial reporting purposes.

Comment

A managed fund (including unit trusts, group investment funds and superannuation funds) may choose to align its balance date with that used for financial reporting purposes if it can be demonstrated that the alignment of the balance dates helps reduce the managed fund’s tax risks. The purpose of this concession is to promote voluntary compliance and good tax practices. Inland Revenue will examine the reasons for the change in balance date on a case-by-case basis. This concession does not apply if:

(a) The reason for changing the balance date is to improve the managed fund’s administration of staff (eg spreading workload);
(b) The managed fund cannot provide evidence of what the tax risks are and how the change of balance date helps mitigate these risks;
(c) The managed fund can identify some of its tax risks but the change in balance date would not mitigate these risks.

An employer superannuation fund wishes to align its balance date with that of the employer.

Any other superannuation fund [see 1390.10] (eg a wholesale or retail fund) wishes to align its balance date with that of its trustee.

A taxpayer who is an agent of a non-resident insurer wishes to align the balance date of its “as agent” return [see 40.50] to its own non-standard balance date.

Consent will be given for the fund to align its balance date with that of its trustee, provided the trustee’s role has not been contracted out to a third party.

A taxpayer who insures with a non-resident insurer is required to return part of the premiums paid as income in a return known as an “as agent” return [s HD 16]. Taxpayers with an approved non-standard balance date for their own returns will be granted consent to align the balance dates of their “as agent” returns to this date.

The way in which the election should be made is explained in 770.50 [see SPS 08/04, TIB vol 20:11 (February 2009) at 12-13].

770.70 Converting to a new approved balance date [TAA, s 39]

Section 39 of the TAA applies to determine the transitional year when a person changes their balance date under s 38 of the TAA to the balance date of their annual accounts. If the change is to a new balance date that is earlier in the year than the original balance date, the taxpayer has a transitional year from the original balance date up to and including the new balance date in the next succeeding year.

If the change is to a new balance date that is later in the year than the original balance date, the taxpayer has a transitional year from the original balance date up to an including the new balance date in the same year.

If a change in balance date means that a person has two corresponding income years for the same tax year, the figures for both corresponding income years are aggregated when the taxpayer’s net income or net loss is determined.

The CIR may make any assessment necessary for the purposes of giving effect to ss 38 and 39 of the TAA. This allows the CIR to make an assessment for a period of shorter or longer than 12 months, with any necessary adjustments to reflect this.

The taxable income for a period of greater or less than a year must be adjusted for the purposes of determining the applicable tax rate, using the following formula:
Income Year and Balance Date

770.75

\[
\frac{365 \times \text{taxable income}}{\text{income year days}}
\]

Where:

“Income year days” is the total days in the income year or years that correspond to the tax year;

“Taxable income” is the person’s taxable income for the tax year.

The examples in 770.80 and 770.85 illustrate the adjustments needed when converting to a new approved balance date. The adjustments arise because the taxpayer is assessed for a period greater or less than a year, and certain tax credits are proportionately increased or decreased as the case may be [see TIB vol 7:13 (May 1996) at 15-19].

**770.75 Tax credits adjusted when change in balance date [s LC 10]**

When a taxpayer has had an approved change of balance date and as a result provides a return of income for a period of more or less than a year, the tax credits available to the taxpayer under ss LC 3 to LC 6 are increased or decreased proportionately using the following formula:

\[
\frac{\text{person’s total credits} \times \text{days}}{365}
\]

Where:

“Person’s total credits” is the total of the person’s tax credits under ss LC 3 to LC 6;

“Days” is the number of days in the period in relation to which the person provides the return.

The tax credits available under ss LC 3 to LC 6 are the school child tax credit, the transitional tax allowance, and the housekeeper or child care tax credit [see 1395 TAX CREDITS]. Since only persons in business qualify for a non-standard balance date under s 38 of the TAA, it is unlikely that they will qualify for the school child tax credit or the transitional tax allowance. The adjustment under s LC 10 is therefore only likely to apply to the housekeeper or child care tax credit.

**770.80 Change to an earlier balance date [TAA, s 39]**

When the new balance date referred to in 770.75 is an earlier date than the original balance date, the transitional year is for the period from the original date up to the new date in the next succeeding year. For example, in the case of an individual taxpayer changing from a 30 June balance date to a 31 March balance date, a return for the nine-month period intervening between the two dates must be furnished. Income tax will be assessed on the income derived during the nine-month period at the rate for 12 months. The calculations are on a daily basis.

**Example:**

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Income for 274 days (1 July to 31 March)</td>
<td>$18,000.00</td>
</tr>
<tr>
<td>Gross up to 365 days</td>
<td></td>
</tr>
<tr>
<td>$18,000 × (365 / 274)</td>
<td>$23,978.00</td>
</tr>
<tr>
<td>Tax on $23,978 (at 2011-2012 tax rates)</td>
<td>$3,216.15</td>
</tr>
<tr>
<td>Therefore, tax on $18,000 at rate for $23,978</td>
<td></td>
</tr>
<tr>
<td>($18,000 / $23,978) × $3,216.15</td>
<td>$2,414.33</td>
</tr>
</tbody>
</table>

**770.85 Change to a later balance date [TAA, s 39]**

When the new balance date referred to in 770.75 is a later date than the original balance date, the taxpayer is required to furnish a return for a transitional year for the period from the original date up to the new date in the same year. For example, when a change of balance date is approved from 31 March to 30 June, the transitional period is from 1 April to 30 June. Technically, two returns of income are required to be furnished, one for the period ended 31 March and the other for the transitional income year 1 April to 30 June.
However, s 39(3) of the TAA now authorises a 15 month return by permitting the figures for both income years to be aggregated when the taxpayer’s net income or loss is determined. The following calculations are on a daily basis.

**Example:**
Income for 456 days (1 April to 30 June of following year) $20,000.00
Gross down to 365 days
$20,000 × (365 / 456) $16,008.00
Tax on $16,008 (at 2011-2012 tax rates) $1,821.40
Therefore, tax on $20,000 at rate for $16,008
($20,000 / $16,008) × $1,821.40 $2,275.61

**770.90 Share in partnership or estate return for more or less than 12 months**

In cases where the personal return is for a period of more or less than 12 months while the share of an estate or partnership is for a period of 12 months, the tax credits (if any) are increased or reduced by reference only to the period covered by the personal return. The rate of tax will also be calculated only by reference to the period covered by the personal return.

**Example:**
A personal return covers a period of eight months, and the partnership return covers a period of 12 months. The taxable balance is found by adding the two incomes. The rate of tax payable on that taxable balance is determined by increasing the personal income proportionately to bring it to 12 months, adding the partnership income, and finding the rate of tax payable on the resulting balance.

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Personal return for eight months</td>
<td>$8,000</td>
</tr>
<tr>
<td>Plus share partnership income for 12 months</td>
<td>$960</td>
</tr>
<tr>
<td>Total income</td>
<td>$8,960</td>
</tr>
<tr>
<td>Provisional tax paid</td>
<td>$225</td>
</tr>
<tr>
<td>Rate ascertained as follows:</td>
<td></td>
</tr>
<tr>
<td>Eight months’ income</td>
<td>$8,000</td>
</tr>
<tr>
<td>Add four months to bring to 12 months</td>
<td>$4,000</td>
</tr>
<tr>
<td>Plus partnership income</td>
<td>$960</td>
</tr>
<tr>
<td>Total</td>
<td>$12,960</td>
</tr>
<tr>
<td>Income tax on $12,960 (at 2011-2012 tax rates)</td>
<td>$1,360.80</td>
</tr>
<tr>
<td>Income tax on $8,960 at effective rate for $12,960:</td>
<td></td>
</tr>
<tr>
<td>($8,960 / $12,960) × $1,360.80</td>
<td>$940.80</td>
</tr>
<tr>
<td>Credit for provisional tax</td>
<td>$225.00</td>
</tr>
<tr>
<td>Tax payable</td>
<td>$715.80</td>
</tr>
</tbody>
</table>

When a personal return covers a period of 12 months, and the partnership return is for a period of more or less than 12 months, the tax credits and rate of tax are calculated in the ordinary manner, with no adjustment by reason of the fact that the partnership return is for an odd period.

The foregoing is the general practice. However, where the income of the taxpayer concerned is substantially all from an estate or partnership, the CIR will consider assessing on the basis of the period covered in the return for the estate or partnership.

**770.95 Partnership balance date differs from personal balance date**

When a partnership balances its accounts on a date other than 31 March, the income derived in the accounting year is deemed to be derived to the nearest 31 March (tax year). This applies irrespective of the balance dates
adopted by the individual partners for income other than from the partnership. It means that irrespective of
the balance dates adopted by the partners for other income, or by the partners for the partnership income, the
normal rules apply in determining the year in which the income is assessable.

**Example:**

In each of the following cases the share of the partnership income for the year ended 30 September 20X2 (which corresponds
to the year ending 31 March 20X2), will be returned as income derived during the individual partners’ accounting year
assuming with the income year ended:

(a) Partner “A” returns it with other income for year ended 31 October 20X1;
(b) Partner “B” returns it with other income for year ended 30 June 20X2; and
(c) Partner “C” returns it with other income for year ended 31 March 20X2.

In *TRA Case K27* (1988) 10 NZTC 251, a partnership with a 31 March balance date was dissolved on 31 May
1983 when a new partnership was created. A balance date of 31 May was approved for the new partnership.
Partnership returns were filed for the 14-month period from 1 April 1982 to 31 May 1983, which allocated
the individual partners’ shares of income on the basis of twelve-fourteenths to the income year ended
31 March 1983 and the balance to the income year ended 31 March 1984. The CIR’s reassessment of partner’s
income, whereby the partner’s shares of income for the full 14-month period were included in the income
year ended 31 March 1984, was upheld.

### Different overseas income years [s EG 1]

If a person derives foreign source income, and the person’s income year in the country of source of the income
differs from their New Zealand income year, the taxpayer may elect to return that foreign income and any
associated expenditure in the New Zealand income year in which the balance date applicable in the country
of source of that foreign income falls [see 760.30].

### Standard balance date for salary and wage earners

In the case of taxpayers whose sole or principal source of income is derived from salary or wages, returns of
income must be furnished to 31 March in each year. The CIR has no power in such circumstances to accept
a return to a date other than 31 March.

Provisional taxpayers who derive salary and wages must return the salary or wages to 31 March even though
they have a different balance date. The tax paid at source on the salary or wages should also be returned to
31 March in these cases.

### Only business income returned to non-standard balance date

[TAA, s 38]

Only those taxpayers that can demonstrate a need to furnish a return of income to the annual balance of the
taxpayer’s accounts may apply to furnish a return of income for a corresponding income year that is different
from 31 March. Thus, a non-standard balance date is likely to be granted only to taxpayers with business
income. Income that is not derived from a business (eg salary, wages) must be returned to 31 March.

In *TRA Case K41* (1988) 10 NZTC 348 the taxpayer operated a business that was given approval to have a
balance date of 1 October. The taxpayer in that case furnished a return to that date, and in so doing, returned
six months of his salary and a full 12 months PAYE deductions to the next 31 March. The taxpayer in that
case argued that s 38 of the TAA authorised a complete change of the income earning cycle, from 31 March
to 1 October. However, the TRA did not accept that position, finding instead that the balance date change
applied only for the income from the business, and not for the salary and wages. The TRA then stated that
what s 33 of the TAA requires is that a return or returns be furnished setting forth a complete statement
of taxable income. Thus, a taxpayer may file a number of returns, all with different balance dates. What
mattered was that the statement of taxable income included income from all sources, irrespective of their
respective balance dates.

**Note:** Section 33 of the TAA has been changed over the years and now only refers to “a return” and has
dropped the requirement for a taxpayer to set forth “a complete statement of taxable income.” However,
despite these changes, the scheme of the TAA makes it clear that a return of income for a tax year will include income derived from all sources with corresponding income years.

**Example 1:**
An individual taxpayer derives income from part-time employment and from a business. The taxpayer has an approved non-standard balance date of 31 May. Income from the business derived during the 12 months ended on 31 May will be included in the taxpayer’s return for the tax year ending on the previous 31 March. However, the taxpayer must include wages received during the year ended on 31 March (not 31 May) in his return.

The CIR is of the opinion that the decision in *TRA Case K41* applies to all taxpayers with non-standard balance dates. Thus, for example, a trust with a non-standard balance date, which receives both business and non-business income, must return the business income to that non-standard balance date but the non-business income must be returned to 31 March. For a taxpayer that is not an individual (such as a company), all income will normally be business income. Business income includes all income associated with the taxpayer’s business, including any interest or dividend income related to those business activities (eg interest on a business bank account). Business interest and dividends will need to be apportioned to the relevant non-standard income years. However, RWT credits may not be apportioned and must be applied to the income year in which the deductions are made [see TIB vol 4:6 (January 1993) at 10-11].

**Example 2:**
Rob is in paid employment and also has a part-time business. The business has an approved non-standard balance date of 31 October. Rob will return his income from employment and interest from personal bank accounts each 31 March. He will return the business income, including interest from any business bank accounts, to each 31 October. Income returned to a 31 October balance date is required to be included in the return for the corresponding tax year ending 31 March. Rob will therefore make one return of income as at 31 March, which will include his business income to the non-standard balance date of 31 October. For his 31 October 20X1 balance date, Rob will return his business income as at 31 March 20X2. At that date he will also return his employment income and non-business interest derived to 31 March 20X2 [see TIB vol 4:6 (January 1993) at 10-11].

780.10 Inland Revenue Department [TAA, s 5]

Inland Revenue is the State department charged with the administration and collection of revenue under the various legislation.

780.15 Responsibility of Ministers and officials to protect integrity of tax system

Every Minister and every officer of any Government agency who has responsibility under any Act for the collection of taxes and other functions under the Inland Revenue Acts must use their best endeavours to protect the integrity of the tax system. Integrity of the tax system is defined to include (but is not limited to):

(a) Taxpayer perceptions of that integrity;
(b) The rights of taxpayers to have their liability determined fairly, impartially, and according to the law, and to have their affairs kept confidential and treated with no greater or lesser favour than those of other taxpayers;
(c) The responsibilities of taxpayers to comply with the law; and
(d) The responsibilities of those administering the law to do so fairly, impartially, and according to the law, and to maintain the confidentiality of the affairs of taxpayers [TAA, s 6].

“Government agency” includes any department or Crown entity, and any public authority [TAA, s 3]. The “Inland Revenue Acts” are those listed in the Schedule to the Tax Administration Act 1994:

(e) Child Support Act 1991;
(f) Estate and Gift Duties Act 1968;
(g) Estate Duty Abolition Act 1993;
(h) Estate Duty Repeal Act 1999;
(i) Gaming Duties Act 1971;
(j) Goods and Services Tax Act 1985;
(k) Income Tax Act 1994;
(l) Income Tax Act 2004;
(m) Income Tax Act 2007;
(n) KiwiSaver Act 2006;
(o) Land Tax Abolition Act 1990;
(p) Stamp and Cheque Duties Act 1971;
(q) Stamp Duty Abolition Act 1999;
(r) Student Loan Scheme Act 1992;
(s) Tax Administration Act 1994;

780.20 Commissioner of Inland Revenue and staff

The person appointed as the chief executive of Inland Revenue is designated as the Commissioner of Inland Revenue (CIR). The CIR is charged with the care and management of the taxes covered by the Inland Revenue Acts and with any other functions conferred on the CIR. It is the CIR’s duty, notwithstanding anything in the Inland Revenue Acts, to collect over time the highest net revenue that is practicable within the law, having regard to:

(a) Resources available to the CIR;
(b) The importance of promoting compliance, especially voluntary compliance, by all taxpayers; and
(c) Compliance costs incurred by taxpayers [TAA, s 6A].

The Governor-General may, by Order in Council, issue directions to the CIR about the administration of the Inland Revenue Acts. In doing so, the Governor-General must have regard to ss 6 and 6A of the TAA and the provisions of the State Sector Act 1988 and the Public Finance Act 1989. The Governor-General is not able to give directions concerning the tax affairs of individual taxpayers or the interpretation of tax law. Every order made under this provision must be published in the Gazette and laid before the House of Representatives together with any accompanying statement of the reasons for the order and any advice from the CIR about it. An order becomes binding on the CIR on the seventh day after the date on which it is made [TAA, s 6B].

The CIR is able to delegate any or all of his powers to any officer or officers of Inland Revenue. Such delegations must be in writing. When the CIR ceases to hold office, any delegations of power made by that person remain valid until a successor amends them [TAA, s 7].

Sections 8, 9, 10, and 11 of the TAA, which authorise the CIR to appoint deputy commissioners, regional controllers, district commissioners, and other officers, were repealed with effect from 10 April 1995. The provisions providing for the establishment of these positions are redundant following the enactment of the State Sector Act 1988.

780.21 CIR’s power to take securities [TAA, s 7A]

The CIR has the authority to accept securities to secure the performance of tax obligations by taxpayers. In so doing, the CIR is authorised to:

(a) Require that securities be given on such terms (including the manner of payment of any costs and disbursements associated with the security) as the CIR specifies;
(b) Require that securities be transferred into the name of, and be held by, the CIR until the performance of a tax obligation or obligations;
(c) Call for additional or substitute securities, if the CIR considers that the existing securities are or may be or may become inadequate or insufficient;
(d) Enforce a security if a taxpayer defaults in the performance of the tax obligation in respect of which the security was taken;
(e) Grant discharges, releases, or transfers of securities on terms the CIR considers appropriate; and
(f) Recover from a taxpayer the costs of accepting, enforcing, discharging, releasing, or transferring any security.

The CIR is not to be liable for any loss suffered in relation to an asset or right that is the subject of a security, unless the CIR is guilty of wilful misconduct in dealing with the asset or right.

The CIR and the CIR’s successors in office are deemed to be a corporation sole, and as such are to have and may exercise all the rights, powers, and privileges, and may incur all the liabilities and obligations, of a natural person of full age and capacity.
The following powers or rights are not limited by the powers relating to the taking of securities described above:

(a) Any tax law which specifies the CIR’s entitlement to a charge or other security;
(b) The CIR’s rights under the terms of a document evidencing or constituting a security; or
(c) The CIR’s other rights to collect or recover tax or other amounts.

The High Court case of Peterson v Commissioner of Inland Revenue (2005) 22 NZTC 19,482 (HC) confirmed the CIR’s ability to enforce a guarantee under s 7A of the TAA in any available manner. The case concerned a the director of a company who had given a personal guarantee to the CIR in an attempt to stave off liquidation of the company. When the company reneged on its arrangement with the CIR regarding the payment of tax arrears, the CIR called in the guarantee.

780.30 Activities and addresses of Inland Revenue offices

Tax returns and payments should be sent to one of the following processing centres.

<table>
<thead>
<tr>
<th>Returns and correspondence</th>
<th>Payments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Northern Processing Centre</td>
<td>PO Box 1454 PO Box 1535</td>

<td>PO Box 5542 Auckland</td>
</tr>
</tbody>
</table>

All non-resident return forms (IR3NR) should be sent directly to:

Non-resident Centre
Inland Revenue
Private Bag 1932
Dunedin

Details of the structure of Inland Revenue and the functions of various business groups within it can be found in Brookers New Zealand Guide to Tax Audits (Brookers, Wellington, 1997), ch 2, “Inland Revenue Department Structure”.

780.40 Inland Revenue publications

Inland Revenue produces a range of publications for different types of users (the general public, tax agents, businesses, etc). The main categories of publications currently available are:

- Information booklets;
- Tax Information Bulletin (TIB);
- Regular newsletters for specific interest groups:
Business Tax Update

Agents’ Answers;

Large Enterprises Update.

[Note: GST News, FBT News and Payroll News were subsumed into the Business Tax Update in 2009; and Corporates Contact was replaced by the Large Enterprises Update in 2007.]

Information booklets are available on a wide range of topics, eg the GST Guide (IR375) and the Fringe Benefit Tax Guide (IR409). A complete list of the available booklets can be found in the back of the TIBs, on Inland Revenue’s website [see 780.50 for address] and Brokers Tax Service, an electronic database of tax information. Copies of booklets can be requested by phoning Inland Revenue. The booklets are also available in electronic form on the Inland Revenue website and in Brokers Tax Service.

The TIBs are available free of charge by completing the “Mailing list update form” in the back of any TIB and sending it to: TIB Mailing List, PO Box 31581, Lower Hutt. Alternatively, the TIBs (including all back copies) can be read or downloaded from the Inland Revenue website and Brokers Tax Service. TIBs can be viewed on the Inland Revenue website some time before the hard copy is distributed, and many items are posted on the site ahead of the monthly edition.

Determinations, rulings, and statements issued by Inland Revenue are published in the TIB and are also available in Brokers Tax Service. The various types of rulings are explained in 115 BINDING RULINGS.

The regular newsletters listed above are sent automatically to taxpayers whom Inland Revenue recognises as being in the interested group. For example, all employers registered for PAYE are automatically sent Business Tax Update. Other taxpayers can request these newsletters by contacting Inland Revenue. The newsletters are also available in electronic form on the Inland Revenue website and Brokers Tax Service.

The Public Information Bulletin (PIB), which preceded the TIB, was last published in July 1989 and much of its content is now obsolete or has been superseded. However, some parts of the PIB are still relevant to current tax practice. The PIBs are available in electronic form in Brokers Tax Service.

The Inland Revenue Technical Rulings Manual was previously available on request from Inland Revenue and has been republished in a number of electronic formats including Brokers Tax Service. In September 1998 Inland Revenue decided to cease updating the Technical Rulings Manual, except for the charitable donees list. According to Inland Revenue, the Technical Rulings Manual may, in some instances, be useful as background material, but the contents should not be relied on as representing Inland Revenue’s present views or practice [see TIB vol 10:9 (September 1998), at 10].

780.50 Inland Revenue website

Inland Revenue’s website www.ird.govt.nz contains information on a variety of topics including important dates, compliance and penalties information, Inland Revenue mission statement, frequently asked questions, publications, tax information for businesses, public rulings, child support, media releases, and TIBs.
Chapter 790

Inland Revenue Investigation Procedures

790.10 Tax audits
The objective of tax audits is to examine the returns of all business taxpayers in depth once within a five-year cycle, and to lower the emphasis on annual checking of returns [see PIB 82 (December 1982)]. Particularly in Inland Revenue’s Corporates unit, risk analysis techniques are used to identify risk areas for closer scrutiny.

Tax audits produce their own queries. These queries may be resolved by personal interviews with taxpayers and agents, rather than by correspondence. It assists both taxpayers and Inland Revenue if working papers used in preparing a return are on hand. One of the aims of the tax audit is to provide a more effective check for cases of evasion of tax.

Generally, tax audit inquiries are limited to the current year’s return, but if the inquiries prove unsatisfactory a full scale investigation is carried out. Errors of principle in the current year’s return do not necessarily mean that all earlier returns with similar errors are adjusted. Their significance is considered. The tax audit places more reliance on those who furnish returns.

A major benefit of tax audits to taxpayers or their agents is less time being spent on casual inquiries by correspondence and the settling of doubtful points by interview before formal inquiry is made.

Inland Revenue’s Taxpayer Audit unit is structured into segments to deal with particular segment groups. The segments are Business Direct, Business Link, and Corporates. Inland Revenue’s Corporates unit deals with businesses and groups with an annual turnover in excess of $100 million, Government departments, State-owned enterprises, local authorities and other specified industries.

The activities generally include:
(a) Checking for people outside the tax system who have not furnished returns, or people who omit untaxed income.
(b) Matching of employer tax deduction certificates and details of interest and dividends to taxpayer’s tax returns.
(c) A routine audit involving reviewing selected items from selected tax returns. Taxpayers or their agents may be asked for the source documentation to substantiate expenses claimed.
Inland Revenue Investigation Procedures

(d) An extended audit involving a review of the full accounts from selected tax returns. This involves interviews with taxpayers, who are questioned about their “operating procedures” such as the recording of sales, disposal of assets, payments of expenditure etc, as well as specific items contained in the accounts and tax return. Where a taxpayer has an agent it also reviews the agent’s working papers and questionnaire. The agent is invited to attend the interview with the client.

(e) Technical checking mainly revolving around specialist tax areas (ie financial arrangements, uneconomic ventures, share trading, new legislation, etc). Interviews may not be conducted.

For a comprehensive coverage of tax audits, see Brooker’s New Zealand Guide to Tax Audits.

See also Inland Revenue Booklet Inland Revenue Audits Guide (IR297).

It is the CIR’s practice to resolve disputes arising from tax investigations by a process of negotiation with taxpayers or their advisers. To ensure that all taxpayers are treated uniformly, Inland Revenue has issued standard practice statement INV-350 Finalising agreements in tax investigations [see TIB vol 10:8 (August 1998)]. The statement, which applies to all Inland Revenue Acts and to all Inland Revenue staff who complete tax investigations, sets out the principles and parameters that Inland Revenue will apply when finalising agreements with taxpayers following tax investigations.

In addition, Inland Revenue has now adopted the practice of taping some interviews as a measure to streamline administrative practices. To complement this practice, Inland Revenue has issued standard practice statement SPS 10/01: Recording Inland Revenue interviews that outlines Inland Revenue’s standard practice when taping an interview. Key features of SPS 10/01 are that Inland Revenue will advise the interviewee of the intention to audiotape the interview before the time of the interview and that interviews will be carried out fairly as recordings may be admissible as evidence in subsequent legal proceedings. Generally, an electronic copy will be made available to the interviewee. Where a recording of an interview is taken, it generally will be an audio recording. However, in some cases, a video recording will be taken, [see TIB vol 22:7 (August 2010) at 51-53].

790.20 Power to inspect books and documents [TAA, s 16]

The CIR, or any officer of Inland Revenue authorised by the CIR, has full and free access at all times to all lands, buildings, and places, and to all documents, for the purpose of inspecting those documents and any property, process or matter which the CIR or officer considers necessary or relevant for the purpose of collecting tax or duty under any of the Inland Revenue Acts. This applies to all documents (including, for example, customer records held by a bank or client records held by a chartered accountant), whether they are in the custody or under the control of a public officer, a body corporate, or any other person. The CIR or officer may make extracts from or copies of the documents without fee or reward. The CIR or officer may also use such access if they consider it necessary to carry out any other function lawfully conferred on the CIR or to provide information otherwise required for the purposes of the Inland Revenue Acts.

“Document” is defined to include an item of information in any form held on any sort of device, the device itself and any device associated with it which is required for the expression of the information.

When needing to take a copy of information that is stored electronically, the CIR can take an image of the electronic storage media. The CIR has issued Standard Practice Statement SPS 10/02 setting out Inland Revenue’s practice when taking an image of a taxpayer’s electronic storage media. A relevance search will be carried out to determine whether the electronic storage medium contains “necessary or relevant” information or it is likely to provide any information otherwise required. In some cases, such as where the data is encrypted or where there has been a claim of legal privilege or non-disclosure right, the medium will be imaged without carrying out a relevance search. In the event that a claim of legal privilege or non-disclosure right for tax advice documents is made, the electronic storage medium will either be sealed, or imaged and then sealed, so that the information is preserved. Imaging of the electronic storage medium is generally performed on-site. However, the CIR may remove the storage medium for the purpose of imaging it. The Standard Practice Statement can be found in TIB vol 22:7 (August 2010) at 54-60.

The occupier of any land, building or place entered, or proposed to be entered, by the CIR or an authorised officer must provide the CIR or officer with all reasonable facilities and assistance for the effective exercise
of the powers under s 16 of the TAA and answer all proper questions relating to the effective exercise of powers under s 16 of the TAA orally or, if required by the CIR or officer, in writing or by statutory declaration. A person whom the CIR or an authorised officer considers necessary for the effective exercise of powers under s 16 of the TAA (ie an expert or specialist) may accompany the CIR or the authorised officer to a place.

Despite the general power of entry, the CIR, an authorised officer or an accompanying person must not enter a private dwelling unless the occupant gives their consent or entry is authorised by a warrant. A “private dwelling” is defined as any building or part of a building occupied as residential accommodation. This includes:

(a) Any garage, shed and other building used in connection with the dwelling; and
(b) Any business premises that are, or are within, a private dwelling.

A warrant authorising entry to a private dwelling must:

(a) Be in a form prescribed by regulations (see below);
(b) Specify an authorised Inland Revenue officer, by name or in general, who may act under the warrant;
(c) Specify whether other persons may accompany the officer acting under the warrant;
(d) Be valid for a period of one month from the date of issue or such lesser period as the judicial officer considers appropriate; and
(e) State its period of validity or the date on which it expires.

Anyone exercising the power of entry conferred by a warrant must produce the warrant and evidence of identity on first entering the private dwelling and whenever subsequently reasonably required to do so.

A judicial officer is any District Court Judge, Justice, Community Magistrate, or Registrar of District Court. A person who is an officer or employee of Inland Revenue may not issue a warrant.

The Tax Administration (Form of Warrant) Regulations 2003 prescribe the form of warrant to enter private dwellings, for warrants issued on or after 15 May 2003.

For examples see TES 42 (October 2006) 635.

790.25 Power to remove and copy documents [TAA, s 16B]

The CIR or an Inland Revenue officer authorised by the CIR has the power to remove any document accessed under s 16 of the TAA, for the purposes of making copies. The books or documents removed for copying must be returned as soon as practicable. This measure is intended to prevent taxpayers from destroying records which the CIR considers necessary to an investigation.

The power to remove under s 16B of the TAA is only for the purpose of making copies. Any use, inspection, or examination of documents, by Inland Revenue staff after removal must only be for the purpose of determining which items to copy. However, the CIR does have the power to remove and retain documents for the purpose of inspection under s 17(3) of the TAA.

The owner of any document that is removed by Inland Revenue is entitled to inspect, and obtain a copy of that document at the premises to which it is removed, at the time of removal or any reasonable time subsequently. This means that the person is able to accompany the officer (though not necessarily in the same vehicle), at the time of removal in order to enforce this right. Copies of books or documents made and certified by or on behalf of the CIR are admissible in evidence in Court as if it were an original.

The CIR or an Inland Revenue officer authorised by the CIR has the power to remove any document accessed under s 16 of the TAA and retain it for a full and complete inspection including for use as evidence in Court proceedings. In order to exercise this power, the CIR must have either the consent of the occupier or a warrant issued by a judicial officer. A judicial officer is a District Court Judge, Justice, Community Magistrate, or Registrar of District Court. Items taken under this provision may be retained for as long as necessary but the owner is entitled to a copy either at the time of removal or at a reasonable time subsequently. Any copy certified by the CIR is admissible as evidence in Court as if it were the original.
(1) Cases

In *Avowal Administrative Attorneys Ltd v North Shore District Court* [2008] 1 NZLR 675, (2007) 23 NZTC 21,616 (HC) and *Avowal Administrative Attorneys Ltd v North Shore District Court* (2007) 23 NZTC 21,610 (HC) the High Court considered the procedure to be followed by the CIR when removing books or documents for copying. Baragwanath J found that the CIR is required to inspect, but not examine in detail, any books or documents that are reasonably believed by the CIR to be necessary or relevant. This inspection is to be carried out before the books or documents are removed. This means that the CIR is not permitted to remove everything that he comes across irrespective of its relevance to his investigation. Instead he must conduct a preliminary inspection and remove only those books and documents that are likely to be relevant to his inquiries. In *Avowal Administrative Attorneys Ltd v North Shore District Court* (2009) 24 NZTC 23,252 (HC) Venning J dealt with the remaining issues arising in the judicial review. He found that:

(a) The hard drive of a computer is included in the definition of “books or documents” for the purposes of ss 16 and 16B of the TAA 1994.
(b) Inland Revenue has power under ss 16 and 16B to copy and remove, and authority to require access to, hard drives, subject to first undertaking a relevance search.
(c) It is not unlawful to remove and copy the hard drives without first undertaking a relevance search if the taxpayer has made a blanket privilege claim.
(d) It is also reasonable for Inland Revenue to take copies on site or if necessary to remove an encrypted hard drive without undertaking a relevance test, where that encryption renders a relevance search ineffective.

The taxpayer unsuccessfully appealed the High Court’s decision: *Avowal Administrative Attorneys Ltd v District Court at North Shore* [2010] NZCA 183. The Court of Appeal held that:

(a) The search or cloning of the hard drives without performing a key word search was reasonable, given that the taxpayer had made a blanket privilege claim.

   (i) The legality of a search under s 16 of the TAA depended on the reasonableness of the search in the circumstances because the power under the section is subject to, and must be exercised in conformity with, the reasonableness requirement found in s 21 of the New Zealand Bill of Rights Act 1990.

   (ii) Although a preliminary search is good practice, it is not a prerequisite to a reasonable search or to a reasonable access operation under s 16.

   (iii) An investigation made prior to a s 16 procedure may give the CIR sufficient information so that he can consider whether it is necessary to inspect and/or copy a hard drive without first performing a preliminary screening of the hard drive on the premises on which the hard drive is located.

   (iv) The broad power under s 16(1) of the TAA is necessary because of the complexity that can be found in tax investigations and is not analogous to the search and seizure power found in provisions such as s 198 of the Summary Proceedings Act 1957. Therefore cases that have ruled against unspecific search warrants are not directly on point in a case involving s 16(1) of the TAA.

(b) Section 16B(1) refers to books and documents to which the CIR has full and free access because that subsection provides for copying of “books or documents accessed” rather than “books or documents which may be inspected”.

   (i) Once a blanket privilege claim has been made it is open for the CIR to conclude that it is necessary to inspect the files after the blanket privilege claim is dealt with by the District Court under s 20(5) of the TAA. That section does not limit the CIR’s power to remove a document and place it in the custody of the District Court.
Inland Revenue Investigation Procedures

(c) The Court of Appeal accepted the High Court’s findings that the CIR had intended to perform a key word search of the hard drives and that, given the CIR’s knowledge about the taxpayer and its activities, it was reasonable for the CIR to conclude that the hard drives were likely to provide information and needed to be inspected.

(d) The CIR was not required to seek the taxpayer’s assistance under s 16(2) of the TAA.

(e) On the evidence, the s 16 power had been used to obtain information that was necessary for or relevant to the investigation of activities that affected the tax liabilities.

(f) Computer hard drives come within the concept of “any other type of record whatsoever” in the definition of book and document in s 3 of the TAA.

The taxpayer sought leave to appeal the Court of Appeal decision to the Supreme Court. That application was declined as the taxpayer’s points did not have a sufficient legal basis and were in some respects inconsistent with factual findings made in the High Court and upheld in the Court of Appeal. There was no prospect of success: Avowal Administrative Attorneys Ltd v District Court at North Shore [2010] NZSC 104.

790.30 Information to be given to CIR on request [TAA, s 17]

The CIR has the power to require any person (including anyone employed by a Government Department, public authority, or other public officer), to provide any information in writing, and produce documents for inspection, if the CIR considers them necessary or relevant for any purpose relating to the administration or enforcement of:

(a) Any of the Inland Revenue Acts; or

(b) Any matter arising from or connected with any other function lawfully conferred on the CIR.

The CIR may:

(a) Require information in writing, or documents, to be produced at a particular office of Inland Revenue;

(b) Require that any written information or particulars provided be verified by statutory declaration or other means; or

(c) Make extracts from or copies of any documents produced for inspection, without fee or reward.

Information and documents that are in the knowledge, possession or control of a non-resident are treated as being in the knowledge, possession or control of a New Zealand resident, if the New Zealand resident directly or indirectly controls a non-resident. Any law in a foreign country that relates to secrecy of information law must be ignored.

In determining whether a non-resident is controlled by a New Zealand resident, anything held by a person who is resident in New Zealand, or is a CFC, and is associated with the New Zealand resident is treated as being held by the New Zealand resident.

The written information that may be required under s 17 of the TAA includes (but is not limited to), lists of shareholders of companies, with the amount of capital contributed by and dividends paid to each shareholder, copies of balance sheets and profit and loss accounts and other accounts, and statements of assets and liabilities. For examples see TES 42 (October 2006) at 636.

The CIR may remove and retain any documents produced for inspection for as long as is necessary for a full and complete inspection of them, including for use as evidence in Court proceedings. The owner of the documents retained by the CIR is, at reasonable times and subject to reasonable conditions set by the CIR, entitled to inspect those documents and obtain copies of them at their own expense.

The CIR’s power to require a person to furnish information and produce documents for inspection was considered in the following cases.

In Commissioner of Inland Revenue v Denby (1982) 6 NZTC 61,544 (DC), the taxpayers received a standard letter from Inland Revenue informing them a tax audit was going to be conducted and that certain business and private records would be examined. The taxpayers did not comply with the request and contended the CIR was not empowered to require information relating to non-assessable income and capital assets. Judge
Green held that the CIR may request this information if there was an indication that the taxpayer’s affairs were not all in order. In this case the CIR gave no reasons for the exercise of the discretion to require information which was considered “necessary and relevant”. Judge Green held that the discretion was exercised wrongly. Further, the Judge was not prepared, in the circumstances, to sever those parts of the notice which had been wrongly included and therefore the whole of each notice failed.

In *Schwass v Mackay* (1983) 6 NZTC 61,641 (HC), it was held that the District Court did not have the authority to review the CIR’s exercise of discretion as was done in the *Denby* case. Casey J held that the CIR is the sole judge of what is “necessary or relevant” and that unless the discretion was exercised improperly the Courts cannot review the decisions. This case upheld the decision of Judge Browne that a taxpayer must supply information, books, or documents requested even though they may assist to incriminate the taxpayer.

A notice to furnish information was issued and was followed by a second notice which covered documents referred to in the first notice as well as a number of further documents. This was followed by an amended assessment in which it was alleged that the taxpayer had an extra taxable income of $4.7 million. The High Court dismissed an application by the plaintiff taxpayer that the second notice and the amended assessment were invalid and unenforceable as the burden of proof as to the reality of the CIR’s thinking was upon the taxpayer, and it was an important function of the Court to ensure that the revenue officers were able to exercise their full powers. Although the application must be considered on the basis that allegations in the statement of claim can be proved, the criteria for striking out had not been met. At the heart of the application was the contention that the Inland Revenue action was triggered by an informer: *ER Squibb and Sons (New Zealand) Ltd v Commissioner of Inland Revenue (No 1)* (1991) 13 NZTC 8,096 (HC).

When the CIR issued notices seeking information in respect of the affairs of unnamed clients the Court of Appeal held that the CIR cannot be totally reliant on the taxpayer’s willingness to comply honestly and accurately with the reporting requirements of the legislation and often has regard to other information obtained from third parties. Inland Revenue may also require the provision of information in writing where no records are available and information sought is exclusively in the person’s mind. The power is amenable to judicial review which is conducted on a case-by-case basis: *Commissioner of Inland Revenue v New Zealand Stock Exchange* [1990] 3 NZLR 333 (CA). The case finally went to the Privy Council which held that it is not possible to insert any limitation as a matter of statutory construction: *New Zealand Stock Exchange v Commissioner of Inland Revenue* (1991) 13 NZTC 8,147 (PC). Limitation could only be inserted as a matter of policy by a process of judicial legislation on the grounds that Parliament could not have intended to confer a power so wide as not to be subject to such limitation. If the CIR had no power to obtain confidential information about taxpayers who may be negligent or dishonest, the whole rationale of taxation would break down and the whole burden of taxation would fall only on diligent and honest taxpayers. The Act imposes secrecy obligations on Inland Revenue. The search provisions cannot be said to be unreasonable, having regard to the secrecy provisions and to the fact that in the interests of the community the CIR is charged with ensuring that the income of every taxpayer is assessed and the tax is paid. The Court can only interfere if it is satisfied that in making a particular requirement the CIR exceeded or abused the powers available.

In *Russell v Latimer* (1990) 12 NZTC 7,321 (HC), it was held that the CIR was entitled to check whether taxpayers were fulfilling their tax obligations. The expenses incurred by the recipient of a search notice was not a basis for a review of Inland Revenue’s decision under the Judicature Amendment Act 1972. Inland Revenue is entitled to issue a notice and require it to be complied with notwithstanding that the information sought had already been complied with.

A taxpayer is not entitled to refuse to answer questions or provide information requested by the CIR under s 17 of the TAA on the grounds that the answers or information may lead to the taxpayer’s conviction. Such a refusal is a direct breach of s 17 of the TAA: *Singh v Commissioner of Inland Revenue* (1996) 17 NZTC 12,471 (HC).

A request by the CIR under s 17 of the TAA for the police to hand over books relating to a suspected drug dealer was not invalidated by the fact that the police had obtained the books during an unlawful search. The powers of the CIR under s 17 of the TAA override an application for the return of property under the Summary Proceedings Act 1957: *Wojcik v Police* (1996) 17 NZTC 12,646 (DC).
Inland Revenue Investigation Procedures

R v Gilchrist (2006) 22 NZTC 20,043 (CA) was an appeal by the taxpayer to the Court of Appeal against his District Court conviction for knowingly not providing information to the CIR as required by a s 17 Notice, with the intention of evading the payment of tax. The Court of Appeal dismissed the appeal. The taxpayer’s further appeal to the Supreme Court was also dismissed was also unsuccessful: Gilchrist v R (2007) 23 NZTC 21,150 (SC).

790.32 Inland Revenue standard practice statement on s 17 notices

Standard practice statement SPS 05/08: Section 17 notices (with application from 22 June 2005) sets out the procedures Inland Revenue will follow when issuing s 17 notices and third party information request letters [see TIB vol 17:6 (August 2005) at 37-51]. The main points of the statement are as follows.

Generally, where information is publicly available (eg from the Land Transfer Office, Companies Office, or Quotable Value New Zealand), Inland Revenue will not use s 17 and will meet the usual charges.

Before issuing a s 17 notice, Inland Revenue will have considered the following factors:

(a) The reason for requiring the information — only information considered necessary or relevant under the circumstances will be required;

(b) The impact of the demand on the suppliers of information — Inland Revenue will be reasonable in relation to the quantity and/or time-frame for providing the information. Reconsideration of the demand will occur where there is genuine difficulty in obtaining the information;

(c) Previous requests for information or attempts to resolve disputes — generally, where the taxpayer or their authorised adviser wishes to claim the right of non-disclosure, a s 17 notice will be issued only following a failure to provide information previously requested or attempted resolution of issues has failed;

(d) Whether the CIR requires disclosure of tax contextual information — the notice will generally advise that such disclosure if necessary will be required in a subsequent notice;

(e) The effect of the disputes resolution process — this process relies on full and prompt disclosure by both parties;

(f) Inland Revenue’s intention to ensure compliance with the notice — s 17 notices are generally used only where Inland Revenue are prepared to invoke statutory remedies in the event of non-compliance;

(g) The use of s 16 powers — in some cases Inland Revenue will use its powers to enter premises for the purpose of inspecting documents; and

(h) Requests for significant amounts of documentation — where the amount of required documentation is significant, it will generally be able to be sent to the nearest Inland Revenue office.

Generally, a s 17 notice will only be issued following a failure to provide information previously requested, or where specific issues have been identified and an attempt to resolve those issues has failed. Where non-compliance occurs, a follow up notice will be issued stating that the s 17 notice has not been complied with, Court orders are being sought, and/or prosecution action is being considered.

Where requests are made to persons other than the taxpayer, the procedure usually begins with a letter. It may follow a discussion. Where this request is not complied with, the above process is commenced to obtain the information.

See TIB vol 17:6 (August 2005) at 37-51 for the complete statement, including examples of s 17 notices and third party information request letters used by Inland Revenue.

790.33 Giving of notice by CIR [TAA, s 14]

Where the CIR is required to give a notice (for example, a s 17 (TAA) notice), to any person under the TAA or any other Act, the notice must be in writing and must be delivered to either the person or a representative who is authorised to act on behalf of the person.

There are various methods of delivery available to the CIR:

(a) Personal delivery where the addressee is not a corporate body;
Inland Revenue Investigation Procedures

(b) Where the person is a corporate body, personal delivery to the addressee’s office during working hours;
(c) By electronic means unless there are reasonable grounds to suppose that the notice will not be received;
(d) By post to the street address of the person’s usual or last known place of residence or business or to any other address where the person has notified the person that they accept notices at that address. A notice sent by post is deemed to have been received when it would have been delivered in the normal course of post.

In *Hieber v Commissioner of Inland Revenue* (2002) 20 NZTC 17,562 (HC), the High Court held that a post box could be a place of business, for the purposes of receiving mail, where that was the only address supplied. The Court expressed the opinion that an email address may also suffice as a place of business for the purposes of s 14 of the TAA. The wording of s 14 of the TAA is directory not mandatory — the word “may” must not be construed as “shall”. As a general rule, notice to one partner in a firm is notice to all other partners; and a notice to one trustee is notice to all trustees of a trust.

In *Commissioner of Inland Revenue v Thompson* (2007) 23 NZTC 21,375 (HC), the High Court held that the CIR had not complied with s 14 of the TAA by sending the NOR by post to the accountant who had served the NOPA, because the accountant was not the taxpayer’s designated agent. Another firm was clearly designated on the NOPA coversheet as being the taxpayer’s agent for service.

790.35 Court order for production of information or return [TAA, s 17A]

If a person fails to provide information to the CIR as required by a written notice under s 17 of the TAA within the time limit specified, or fails to provide a tax return on time, the CIR may apply to the District Court for an order requiring the person to produce the information for review or to provide the tax return. This option is available to the CIR as well as, or instead of, prosecuting the taxpayer. The CIR must give notice of the application to the person in respect of whom the order is sought and to any other person the District Court directs. The CIR and each person who is given notice of an application is entitled to appear and to be heard on the hearing of the application.

The District Court may order the information requested under s 17 of the TAA be produced to the Court. The Court will then review the information to determine whether to make an order requiring the taxpayer to produce the information to the CIR, whether the information is the subject of legal professional privilege (within the meaning of s 20 of the TAA or otherwise at law), whether the information is contained in a “tax advice document”, and whether the information is “tax contextual information” [see 790.61]. If the District Court is satisfied that the information is likely to be relevant to the administration or enforcement of a tax law or any other function lawfully conferred on the CIR, and it is not the subject of legal professional privilege, the District Court may order the person named in the application to produce the information to the CIR and order the taxpayer named in the application to provide a tax return.

The District Court may make such orders even if an enactment or rule of law obliges a taxpayer not to disclose information, or to keep information secret, or not to perform an obligation. A taxpayer cannot breach any enactment, rule, or obligation by complying with an order under s 17A of the TAA.

A person cannot refuse to produce information that is the subject of a Court order on the grounds that:
(a) Production of the information might be a breach of a tax obligation or subject the taxpayer to a fine, penalty, or conviction; or
(b) Another privilege could otherwise be claimed by the taxpayer in relation to production of the information in proceedings in a Court.

Information produced to the CIR as a result of a Court order under s 17A of the TAA may be removed and retained by the CIR for so long as is necessary to undertake a full review, and may be copied by the CIR without liability for a fee or payment. If the information is not in written form, the person who produced the information must ensure that the information can be viewed and copied by the CIR.
790.40 Inquiries before a District Court Judge [TAA, s 18]

The CIR has power to hold an inquiry before a District Court Judge for enforcing the tax legislation. The Judge may summon and examine on oath all persons whom the CIR or other interested persons may require to be called and examined. The inquiry is held in chambers.

790.50 Specific powers given to CIR [TAA, s 19]

The CIR may, in order to obtain any information to determine the tax or duty liability of any person, require any person to attend and give evidence and to produce all documents held by that person which contain or are likely to contain any relevant information. The CIR may also require any evidence to be given on oath and either orally or in writing.

A person commits an offence who refuses to give evidence, or refuses or wilfully neglects to appear or to take an oath, or if sworn in as a witness at an inquiry refuses or wilfully neglects to answer any question, or to produce any relevant document [TAA, s 214]. The perjury provisions of the Crimes Act 1961 are applicable to any inquiry. Persons required to attend an inquiry may be awarded reimbursement for travelling expenses and loss of time.

790.60 Legal privilege — the solicitor-client relationship [TAA, s 20]

The legislation was originally inspired by the case of Commissioner of Inland Revenue v West-Walker [1954] NZLR 191 (CA), when a solicitor was held to be entitled to decline to furnish to the CIR information protected against disclosure by common law privilege for professional advice and assistance without the previous assent of the client concerned.

The legislation provides that any information or document is privileged from disclosure if it is a confidential communication, whether oral or written, passing between a legal practitioner and another legal practitioner in their professional capacities; or between a legal practitioner in a professional capacity and a client. The evidence is privileged from disclosure if it was made or brought into existence to obtain or give legal advice or assistance, but not if it was made for committing some illegal or wrongful act.

Legal professional privilege is not, under s 20(1)(c) of the TAA, lost in respect of a communication, unless in the course of legal proceedings in which the evidence is tendered, it was definitely charged (rather than merely contended), that the communication was itself a step in the commission of a crime or preparatory to or in aid of the commission of a crime or in aid of civil fraud: TRA Case W17 (2003) 21 NZTC 11,172.

Where the evidence consists of the receipts (including investment receipts), payments, income, expenditure or financial transactions it is not privileged from disclosure if it refers to the trust account of the legal practitioner. The CIR may apply to a District Court Judge for an order determining whether or not the claim of privilege is valid in any set of circumstances.

Legal professional privilege, litigation privilege, and waiver of privilege were considered in Dinsdale v Commissioner of Inland Revenue (1997) 18 NZTC 13,244 (HC). This case arose as a result of a request by Inland Revenue, under s 17 of the TAA, for interview notes prepared by a firm of chartered accountants in the course of an audit of bank documents. The audit was conducted, at the request of the bank and under the supervision of a solicitor, for the purpose of satisfying Inland Revenue that all documents relating to a redeemable preference share transaction had been provided to Inland Revenue. Inland Revenue had threatened to prosecute the under (now repealed) s 199(1)(b) of the TAA for failure to disclose, and required the bank to provide a statutory declaration to the effect that all documents relating to the transaction had been made available to Inland Revenue. The bank, following advice, instructed its solicitor to carry out the audit. A letter from the solicitor requesting the assistance of the firm of chartered accountants stated that the purpose of the audit was to provide background information in relation to the threatened prosecution and to enable the bank to provide the statutory declaration confident in the knowledge that it was true. The letter further stated that all communications and inquiries relating to the audit would be subject to litigation privilege. In carrying out the audit, the firm of chartered accountants interviewed a number of present and former employees and professional advisers of the bank, and prepared notes of each interview. Following its audit, the firm of chartered accountants delivered a report to Inland Revenue setting out the work it had done,
providing further relevant documents it had found, and expressing the view that there had been no intention by the bank to mislead Inland Revenue. At the same time, the bank provided Inland Revenue with the requested statutory declaration. Inland Revenue then requested the notes of some of the interviews. The bank declined to provide these, claiming legal professional privilege and litigation privilege.

The Court found that Inland Revenue’s request for the interview notes under s 17 of the TAA was not invalid by reason of legal professional privilege or litigation privilege. Reasons given for the decision were:

(a) Legal professional privilege did not apply because the interview notes were communications between a solicitor and third parties, not between a solicitor and client.
(b) Litigation privilege also did not apply. There were reasonable grounds for the bank to apprehend that it would be prosecuted, but the claim failed on the dominant purpose test. While litigation was one of the purposes, the dominant purposes of the interview notes were to enable the bank to comply with the request for a statutory declaration and to explain to Inland Revenue why it had failed to provide all relevant material earlier.
(c) The bank had not impliedly waived its right to claim privilege by referring to the interview notes in the report but not making them available. The Court expressed the view that if the report had been produced as evidence in litigation, the result would have been different.

The decision provides a useful summary of the law relating to legal professional privilege, litigation privilege, and waiver of privilege.

In Dinsdale v Commissioner of Inland Revenue (1998) 18 NZTC 13,583 (CA) the Court of Appeal confirmed the earlier High Court decision that litigation privilege could not be claimed in respect of the interview notes because the dominant purpose of bringing them into existence was to help ascertain that all relevant documents in the possession or under the control of the bank had been or were made available to Inland Revenue. The parallel purpose of gathering information that might be helpful in the defence of a threatened prosecution was at best an equal purpose, not a dominant one. The presence of a lawyer at the interviews does not of itself confer privilege on interview notes, particularly when they are not the lawyer’s notes.

Litigation privilege is only available to a litigant when two criteria are met. First, litigation must be in train or at least reasonably apprehended. Privilege cannot be claimed for documents prepared before that time. Secondly, the relevant document must be one which was prepared with the dominant purpose of enabling legal advice to be received in relation to that litigation: Glenharrow Holdings Ltd v Commissioner of Inland Revenue (2002) 20 NZTC 17,792 (HC).

In TRA Case T32 (1997) 18 NZTC 8,221, legal opinions and reports prepared by Inland Revenue lawyers and used by Inland Revenue staff in the making of executive decisions were held to be protected by legal professional privilege. The opinions were not created as part of an executive function of Inland Revenue—their dominant purpose was providing legal advice. In writing the opinions, the Inland Revenue lawyers were acting as lawyers and not as employees. To determine whether a communication is privileged it is the role of the writer of the opinion which must be considered, not the consequence of the opinion. Privilege also attaches to drafts and preparatory notes prepared by the opinion writer.

At common law, no privilege exists to protect confidential communications between an accountant and their client. Professional privilege has traditionally been available only to lawyers in respect of confidential communications with their clients in relation to tax matters [see 790.60]. From 21 June 2005, all requests from the CIR or discovery obligations for tax advice documents are subject to a statutory privilege (ie a new non-disclosure right). The requests can relate to any tax periods.

(1) Who is protected? [TAA, s 20B(5)]

Statutory privilege applies only to tax advice provided by members of an approved adviser group, where the group has a significant function of providing tax advice and members are subject to a professional code of
(2) **What is protected?**

Statutory privilege applies to communications between tax advisers and their clients for the purpose of requesting or providing tax advice. However, this non-disclosure right is subject to a number of exclusions (i.e., factual information, debt collection advice, and accounting and tax work papers). Tax advice does not include valuation or investment advice. Similar to legal professional privilege, it does not apply in matters of fraud.

**TaxNote:** Legal privilege is not statutory privilege. While they might appear the same in some respects, they are not the same. The new statutory privilege rules do not affect common law legal privilege rules.

Statutory privilege applies to requests made after 21 June 2005 relating to any period.

Statutory privilege is extended to discovery proceedings during litigation. The extension applies to:

(a) Challenges commenced from 6 October 2009;

(b) Challenges commenced before 6 October 2009, if all of the following conditions are met as at 6 October 2009:

   (i) No case management conference or directions hearing for the challenge has been held by a Court or the TRA;

   (ii) No direction has been made by a Court or the TRA that a case management conference or a directions hearing be held; and

   (iii) The issues raised by the challenge are not substantially similar to issues being considered by a Court or the TRA in another challenge.

(3) **What is not protected?**

A statutory declaration may need to be provided to Inland Revenue where information contains factual information (e.g., advice on debt collection, or accounting and tax work papers). Section 20F of the TAA requires the tax adviser to provide a statutory declaration of tax contextual information not contained in a privileged document. The provision of a statutory declaration should be required only as a last resort. In most cases, only unprivileged material should be provided in response to a request for information and Inland Revenue should consider that material to assess whether it is sufficient to complete the investigation. A statutory declaration would generally be requested only if the non-privileged documents were not sufficient. In some cases, it may be necessary for Inland Revenue to accompany a request for information with a request for a statutory declaration of tax contextual information if the declaration is considered necessary for proper administration of the revenue.

(4) **What is a tax advice document?**

The right to non-disclosure applies only to a “tax advice document”. This is defined to mean a document that:

(a) Is confidential; and

(b) Has been created for the main purpose of instructing a tax adviser in the provision of advice regarding the operation and effect of tax laws; or

(c) Has been created by a tax adviser (or tax adviser’s employee) for the purpose of either recording research and analysis to enable the adviser to give the advice, or the giving of giving that advice; and

(d) In any case, has not been created for the purpose of committing or promoting an illegal act.

The term “tax law” includes the Revenue Acts, an Order in Council or regulation, a non-disputable decision and, in relation to the filing of returns, also includes ACC legislation. It does not include the tax laws of foreign jurisdictions.
The term “tax adviser” means a natural person who is subject to the code of conduct and disciplinary processes of an “approved adviser group”. The New Zealand Institute of Chartered Accountants has been approved as an approved adviser group.

In order for a tax advice document to be subject to non-disclosure, a valid claim for non-disclosure must be made under s 20E of the TAA. Where a valid claim is made, non-disclosure applies from the date on which the information request was made or the discovery obligation arises [TAA, s 20C]. Only the actual document and attachments that form part of that document will be protected from disclosure. Other attachments (i.e. a sale and purchase agreement) that do not form part of the document are not protected [TAA, s 20E].

In Commissioner of Inland Revenue v Blakeley [2008] DCR 415, (2008) 23 NZTC 21,681 (DC), the CIR obtained four tax opinions prepared by a chartered accountant. The CIR considered that the arrangement referred to in the opinion was tax avoidance. The accountant disclosed to the CIR that similar advice had been provided to other clients. A notice was issued under s 17 of the TAA requesting the accountant to provide the names of the taxpayers to whom the advice had been provided. The notice was not complied with and the accountant argued that providing that information would be in breach of his clients’ non-disclosure rights as the CIR would know the content of the advice that had been given to them. In finding for the CIR, the District Court found that the enforceability of the notice could not be avoided by an accountant advising that the same advice had been given to other clients and that s 20B of the TAA requires the identification of a particular book or document in respect of which the non-disclosure right is claimed. The High Court dismissed Mr Blakeley’s appeal and held that the District Court was correct to find that the statutory protection was not available, see (10) below.

(5) Tax contextual information [TAA, s 20F]

In most cases, a request will first be made for non-protected information. In the event that this is not sufficient for the completion of the investigation, a request for tax contextual information may be made. Where this occurs, tax contextual information included in the protected document will have to be disclosed by way of a statutory declaration. This declaration should reflect the tax adviser’s view of the relevant transactions. Alternatively, the adviser may disclose the information verbatim.

“Tax contextual information” includes such things as:
(a) Facts and assumptions provided in contemplation of actual transactions entered into by the taxpayer;
(b) Steps involved in a transaction;
(c) Advice on matters other than tax law;
(d) Advice on the collection of tax debts;
(e) Facts and assumptions relating to matters other than tax advice; accounting and tax workpapers.

Where the information request is made under s 17 of the TAA, the description of the tax contextual information must me provided by the later of the day prescribed by the CIR or 28 days following the information request. If the information demand is made under s 16 of the TAA (Commissioner’s right to enter premises), s 16B of the TAA (Commissioner’s right to seize documents) or s 16C of the TAA (Power to remove and retain documents for inspection) and the taxpayer claims the right of non-disclosure, the tax contextual information must be disclosed by the date determined by the CIR. Where the demand is made under s 17A of the TAA (Court order), s 18 of the TAA (District Court Judge) or s 19 of the TAA (Inquiry by CIR) a date will be set by which the information must be provided.

A tax adviser can be barred from making a statutory declaration if convicted of certain offences.

(6) Challenges [TAA, s 20G]

Both the taxpayer and the CIR have the right to apply to the District Court for an order as to:
(a) Whether a document constitutes a “tax advice document”;
(b) Whether information is “tax contextual information”;
(c) A more detailed or better description of the tax contextual information that is required.

The judge has the ability to require the document in question to be produced to the Court.
(7) **Secrecy [TAA, s 81B]**

Section 81B of the TAA provides the CIR with the ability to divulge information to an approved adviser group regarding a member who breaches the non-disclosure rules. The could result in the approved adviser group taking disciplinary action against the member.

(8) **Inland Revenue guidelines**

The CIR has issued a standard practice statement SPS 05/07: *Non-disclosure right for tax advice documents*, which outlines the process and operational guidelines to be followed when the CIR issues “Information Demands” to taxpayers, their agents, or to third parties [see TIB vol 17:6 (August 2005) at 23-36].

**TaxNote**: An Inland Revenue information demand may require disclosure of documents that contain tax advice and subject to the right to a claim of non-disclosure.

(9) **Summary of Process**

The process for claiming the right of non-disclosure is outlined below:

**Step 1**

Information Demand made under ss 16-19 TAA seeking documents which may be eligible to be tax advice documents. In special circumstances, Information Demand may include requirement to disclose the tax contextual information if the right to claim non-disclosure is claimed for tax advice documents.

**Step 2**

Taxpayer (or their authorised tax advisor) claims non-disclosure right for documents eligible to be tax advice documents by providing the completed IR519 form.

Taxpayer (or their authorised tax advisor) provides tax contextual information if requirement to disclose is included in the Information Demand by providing completed IR520 form.

CIR or taxpayer may challenge claim that a document is a tax advice document by making an application to the District Court, a Court, or TRA, where the claim is made in response to a discovery obligation in proceedings before that jurisdiction.

**Step 3**

Taxpayer (or their authorised tax advisor) provides tax contextual information if required to disclose in subsequent Information Demand by providing completed IR520 form.

Taxpayer (or their authorised tax advisor) may waive non-disclosure right and provide the tax advice documents to the CIR.

**Step 3**

District Court, a Court, or TRA will determine whether the document is a tax advice document.
(Cases)

In Commissioner of Inland Revenue v Blakeley [2008] DCR 415, (2008) 23 NZTC 21,681 (DC), the District Court held that the taxpayer accountant could not refuse to provide a list of client names to the CIR simply on the grounds that provision of such a list would enable the CIR to determine the persons to whom the taxpayer had provided tax advice relating to certain tax avoidance lease arrangements. Mr Blakeley appealed that decision. He contended that the list of names and IRD numbers of clients was protected from disclosure under s 20B of the TAA; (the other grounds of appeal were that there had been no waiver of privilege; and that it would have been impossible for him to comply with the notice): Blakeley v Commissioner of Inland Revenue (2008) 23 NZTC 21,865 (HC). The High Court dismissed the appeal and held:

(a) The powers that s 17 provides the CIR for the purpose of facilitating the proper discharge of his statutory functions are expressed in the widest terms, Commissioner of Inland Revenue v New Zealand Stock Exchange [1990] 3 NZLR 333 (CA) applied.

(b) Section 17 is subject to legal professional privilege, (ss 20B-20G of the TAA). The protection afforded by s 20B is much more confined than legal professional privilege. It is not a new substantive right of equivalent utility to legal professional privilege. The statutory protection created for tax advice documents is significantly narrower that the scope of legal professional privilege both as to the information protected from disclosure and the conditions attaching to its application. The statute should not be construed as if it were an extension to legal professional privilege. Sections 20B-20G provides taxpayers with a new but strictly circumscribed right to resist the exercise by the CIR of wide ranging information gathering powers. Unlike legal professional privilege It is not a response to public interest considerations but a creature of statute protecting defined parts of a limited category of written communications.

(c) The District Court was correct to find that the statutory protection was not available. The names and IRD numbers are not a tax advice document for the purpose of s 20B nor are they a document as stipulated in s 20B(2) and defined in s 3 of the TAA.

790.70 Offshore payment information requisitions

The CIR has wide powers to disallow deductions for offshore payments if a taxpayer fails to respond to information requisitions within the statutory time limit.

“Offshore payment” means an amount of expenditure or loss incurred or purportedly incurred by a taxpayer (on or after 1 August 1986) to a person outside New Zealand or to a person associated with a person outside New Zealand. The associated person may be either inside or outside New Zealand. An associated person includes a person acting for or on behalf of or in a fiduciary capacity in relation to a person outside New Zealand.

“Information requisition” means a written notification supplied by the CIR:

(a) Giving notice to a person of the exercise by the CIR of any power under s 17 of the TAA [see 790.30 and 790.32]; and

(b) Requiring the person to supply information in writing, produce documents for inspection, or to verify by statutory declaration (or otherwise) any information specified in the notice.

“Associated person” is defined in 70.20.

An information requisition may be sent by the CIR either to the taxpayer who is claiming the deduction for the offshore payment or to any other person who may have relevant information. If an information requisition is given to a person other than the taxpayer who is claiming the deduction, a copy of the requisition must be given to the taxpayer.

The CIR may wholly or partly disallow a deduction claimed for an offshore payment if:

(a) A taxpayer fails to respond to an information requisition within 90 days of the date the requisition was mailed to the taxpayer; or
790.80  

(b) The information requisition has been sent to a person other than the taxpayer, and both the taxpayer and that other person have failed to respond within the 90-day period.

A response that does not contain the information requested by the CIR in the requisition will be deemed not to be a response for the purposes of s 21 of the TAA. A taxpayer therefore cannot safeguard a deduction merely submitting a non-substantive response.

The taxpayer also loses the right to dispute an assessment, to the extent that it relates to an offshore payment, in any objection or challenge proceedings if the taxpayer, or other person, fails to respond to an offshore payment information requisition within 90 days.

Even if a taxpayer responds to an information requisition within the required time-frame, an evidence exclusion rule prevents the taxpayer from admitting, in any objection or challenge proceedings, any evidence not provided to the CIR prior to or in response to the requisition. However, this restriction does not prevent the CIR from adducing any evidence in any proceedings. In order for the evidence exclusion rule to apply, the CIR must issue a notice prior to or at the same time as an assessment notice informing the taxpayer that insufficient information has been furnished to support a deduction for the offshore payment.

An information requisition given by the CIR to an agent for a partnership or to a partner in a partnership is deemed to be given to every partner in the partnership. This applies whether the partnership is extant or defunct: *Hieber v Commissioner of Inland Revenue* (2002) 20 NZTC 17,562 (HC). Master Kennedy-Grant was also of the opinion that it was sufficient to address an information request to one trustee of a trust in order for it to apply to all trustees.

790.80  

Business group amnesties [TAA, s 226B]

In order to encourage voluntary compliance by taxpayers with their tax obligations, the CIR may declare a business group amnesty if the CIR considers that the amnesty is consistent with the protection of the integrity of the tax system and the collection over time of the highest net revenue practicable within the law. An amnesty applies to a group of persons each of whom carries on a specified type of activity as their main business (the “affected business”).

When declaring a business group amnesty, the CIR will announce the start and end days of the amnesty. The CIR may change these days by announcing the change on or before the day concerned.

A person is eligible to benefit from a business group amnesty if the person:

(a) Is carrying on the affected business when the amnesty becomes available;

(b) Has carried on the affected business throughout the three income years ending before the income year in which the amnesty becomes available;

(c) Has not previously benefitted from a business group amnesty; and

(d) Has not been notified of a pending tax audit or investigation before the amnesty becomes available.

During the period of the amnesty, a person wishing to take advantage of the amnesty must give the CIR a notice:

(a) Stating that they wish to benefit from the amnesty;

(b) Stating that they are carrying on the affected business;

(c) Stating the period for which, and the place where, they have carried on the affected business;

(d) Providing a statement of assets and liabilities for the income year ending before the income year in which the amnesty is available;

(e) Giving details of actions and omissions relating to the business that they consider might give rise to an assessment, amended assessment or prosecution if they did not benefit from the amnesty; and

(f) Providing any other information required by the CIR.

A person (an “affected person”) benefits from an amnesty if the person is eligible to benefit from an amnesty and gives notice as above.

Despite the business group amnesty, the CIR may investigate the financial affairs of an affected person for:
(a) The income year that ends before the income year in which the amnesty is declared; and
(b) The income year in which the amnesty is declared.

Following the investigation, the CIR may make an assessment or amended assessment of the affected person for the two years referred to above.

After an affected person gives notice to the CIR (as above), the CIR must not, for income years before the two income years referred to above:

(a) Begin an investigation of the income and deductions of the affected person relating to the affected business; or

(b) Make an assessment or amended assessment of the affected person based on figures other than those included in a return of income provided before the date of the notice referred to above (subject to the exception below).

After an affected person gives notice to the CIR, the CIR must not begin a prosecution of the affected person for an action or omission before, or in giving, the notice if the affected person provides information relating to the action or omission to the CIR.

Example:
The CIR declares a business group amnesty for a period of three months commencing on 1 May 20X4. A person (with a 31 March balance date) who is eligible under the amnesty provides the CIR with the required notice. The CIR may investigate the person’s financial affairs and, if applicable, issue assessments or amended assessments for the years ending 31 March 20X4 and 31 March 20X5. However, for earlier income year, the person is protected by the amnesty in relation to their affected business.

An amnesty does not protect an affected person from being assessed, reassessed or prosecuted if the assessment or prosecution arises from an investigation that the person was notified of, and that the CIR began, before the person gave notice to the CIR. The CIR is required to report in writing to the Minister on the results of a business group amnesty, and the Minister must lay a copy of the report before the House of Representatives.
Chapter 800

Insurance Industry

800.10 Income of life insurers
The ITA 2007 provides a comprehensive regime under which a life insurer calculates income from its underwriting function and its function as a financial intermediary for policyholders. The provisions also address consequences arising from changes in the capital structure of a life insurer (e.g., in a demutualisation) and in acquisition and merger activity. The taxation of life insurance was changed significantly with effect from 1 July 2010. The regime also extends the benefits of the Portfolio Investment Entity (PIE) regime to people who invest in insurance products [see 1130].

Transitional rules apply to facilitate the change to the new rules [see 800.55].

For income tax purposes, the life insurer’s taxable income is a benefit accruing to shareholders (the life insurer base). The life insurer is also taxable on income accruing for the benefit of policyholders (the policyholder base).

A “life insurer” is a person who carries on the business of providing life insurance. It does not include such a person while that person has full reinsurance. Mutual associations and trusts that provide benefits that are contingent on death or survival of a human being (other than in consideration of natural love and affection) are taxed as if they are in the business of providing life insurance and not as a mutual association [s EY 10].

800.15 Calculation of life insurer net income [ss CR 1, CR 2, CW 59C, DR 1, DR 2, DR 3, DR 4, subpart EY]
Life insurers determine their income and deductions under the normal rules contained in the ITA 2007. However, due to the particular nature of the life insurance contract and aspects of life insurance business, there are some specific provisions that govern what is assessable and what is deductible to a life insurer.

A life insurer is taxable on income attributable to both its policyholder base and its shareholder base [ss CR 1, CR 2].

The rules contained in subpart EY of the Act provide that certain amounts that may not be assessable or deductible under ordinary concepts are assessable or deductible to a life insurer. Sections DR 1 and DR 2 confirm the deductibility of these amounts.

A life insurer is not entitled to a deduction for life reinsurance premiums incurred unless the reinsurance policy was offered in New Zealand and/or entered into in New Zealand. Accordingly, the life insurer is not
taxable on the amount any life reinsurance claim under a reinsurance policy where the premiums paid are not deductible. The amount is, instead exempt income of the life insurer [ss DR 3, CW 59C].

Life insurers are entitled to a deduction for claims actually paid under a life insurance policy during the income year. They are not entitled to a deduction for any provision for outstanding claims that have not actually been paid (known as the “outstanding claims reserve”) [s DR 4]. The calculations contained in subpart EY relating to which income amounts are included in the policyholder base and which in the shareholder base include as assessable income premiums to the extent to which they relate to the life risk component of a life insurance policy. Taking these provisions together, the insurer is taxable on risk premium income and is allowed a deduction for life insurance claims paid.

800.20 Policyholder base [ss EY 15, EY 16, EY 17, EY 18]

The net income that is attributed to a policyholder base does not include the life risk component of premiums and claims. These belong in the shareholder base. Policyholder base income is the investment income that is fairly attributable to the savings element of policies. This means that investment income needs to be apportioned between the policyholder bases and the shareholder base. Section EY 15 provides an actuarial-based formula for this calculation for non-participation policies and s EY 17 provides an actuarial-based formula for profit-participation policies.

Deductions against this investment income also need to be apportioned between the policyholder base and the shareholder base. The basis for apportionment is the same as for the income [ss EY 16, EY 17].

800.25 Shareholder base [ss EY 19, EY 20, EY 21, EY 22]

The income of the shareholder base includes:

• The life-risk component of premiums;
• Fees and commissions;
• The life-risk component of life reinsurance claims; and
• Investment income that is not properly attributable to the policyholder base.

These amounts are governed by the provisions of s EY 19 in respect of non-participation policies and s EY 21 in respect of profit participation policies. Section EY 21 includes an actuarial-based formula to enable the apportionment of investment income to be done.

Sections EY 20 and EY 22 contain the basis for establishing the amount of deductions that are deductible against the shareholder base income.

800.30 Reserves [ss EY 23, EY 24, EY 25, EY 26, EY 27]

(1) General requirements

Although life insurers are taxed under normal tax principles, the nature of the industry gives rise to tax issues that are addressed by special rules. These rules include a number of provisions relating to reserves.

Claims may be incurred by reason of, for example, the death of the life insured. Where that claim has not been reported by the end of the income year, or has been reported but not paid, insurers are able to use the “outstanding claims reserve” under s EY 24 to account for the outstanding liability.

Some products produce uneven cash flows. For example, large amounts of premium income can be received in the early years of a policy’s life followed by large payouts for claims some years later. To alleviate the effects of these cash flows, the industry uses reserving methods, based on actuarial principles, to even out the net income effect. Sections EY 25 and EY 26 provide for the “unearned premium reserve” and the “premium smoothing reserve” to alleviate this problem.

Some policies provide a guaranteed minimum return. The “capital guarantee reserve”, provided under s EY 27, accommodates the top-ups provided by the shareholders for policyholders’ future claims under the guarantee.
Section EY 23 provides that the reserving provisions apply only to non-participating life products that are term insurance or savings products. They do not apply to annuities or products that include participation in profits.

All movements in the reserve balances must be calculated in accordance with actuarial principles.

2) Outstanding claims reserve [ss EY 23, EY 24]

Section EY 24 provides for the “outstanding claims reserve” (OCR) which relates to claims which have occurred but have not yet been reported or have not yet been paid out. Movements in the OCR are taken into account for tax purposes. Decreases in the reserve result in income. Increases in the reserve are an allowable deduction.

Claims that are recognised in an income year earlier than that in which they are paid out are required to be discounted to present value using the risk-free rate of return. Where the discount period is less than one year, no present value calculation is required. An appropriate risk margin is added to the estimated and actual values of the life risk claims incurred and reported unless the amount of the claim is known. Where the amount is known, no risk margin is added.

3) Unearned premium reserve and premium smoothing reserve [ss EY 23, EY 25, EY 26]

Insurers are able to elect to use one or the other of the “unearned premium reserve” (UPR) or the “premium smoothing reserve” (PSR). Once the choice of reserving method has been applied to a class of policy, the decision is irrevocable. The one exception is where the PSR has been chosen and is no longer able to be used. In this case, the UPR must be used from that point in time.

Restrictions apply to the use of the PSR. It can be used only for:

(a) Products that have level, or substantially level, premiums for more than one year; or
(b) Products that could result in a material mismatch in any one year between the life risk components and the timing of the payment of premiums. The period can be one or more years.

Policies can be grouped together if they have substantially the same terms and conditions (other than duration of the policy) and substantially the same pricing assumptions in respect of their life risk.

Decreases in the reserves result in income. Increases in the reserves are an allowable deduction.

4) Capital guarantee reserve [s EY 27]

The “capital guarantee reserve” (CGR) represents amounts provided by shareholders to top up policyholders’ future claims where the policy has a guaranteed return. Top-ups may be required when investment returns are low. When investment returns are high, amounts over the guaranteed return rate may be transferred to the reserve to support future demand. Increases in the reserve result in income for the shareholder base and a deduction in the policyholder base. Decreases give rise to an allowable deduction in the shareholder base and income in the policyholder base. Where shareholders are required to make an actual cash injection to the reserve, it will be deductible in the shareholder base but no corresponding adjustment is made in the policyholder base. However, any loss that caused the reduction in capital is not deductible.

800.35 Non-resident life insurer issuing policies in New Zealand [ss EY 48, EY 49]

Where a life insurer not resident in New Zealand offers; is offered or enters into life insurance policies in New Zealand, s EY 48 provides the basis for calculating the income from that business. The amount is then deemed to be New Zealand sourced income.

The items in the premium loading formula, mortality profit formula, discontinuance profit formula and policyholder income formula are applied only to:

(a) Policies that the insurer offered, was offered or entered into in New Zealand; and
(b) Life reinsurance policies held by the insurer that relate exclusively to life policies that the insurer offered, was offered or entered into in New Zealand.
Any other income of the life insurer which is derived from the business of providing life insurance is also
determined only in relation to the insurer’s New Zealand business.
Non-resident life insurers may elect with the approval of the CIR to be treated as though the business of
providing life insurance was carried on by a company resident in New Zealand.

**800.40 Superannuation schemes providing life insurance to members and
beneficiaries** [s EY 11]

The provision of life insurance by a trustee to members or beneficiaries of a superannuation scheme is treated
as if it were the provision of life insurance.

Superannuation funds are deemed not to carry on the business of life insurance if all of the following
requirements are met at all times during the income year:

(a) The fund is registered by the Government Actuary under the Superannuation Schemes Act 1989;

(b) No trustee of the fund is a company carrying on the business of providing life insurance to which
the Life Insurance Act 1908 applies;

(c) The fund is either established by an employer (or a group of employers who are associated) to provide
benefits to employees of the employer or associated employer or is constituted under an Act relating
to the National Provident Fund Restructuring Act 1990, the National Provident Fund Act 1950 or
the Government Superannuation Fund Act 1956;

(d) Each beneficiary of the fund is:
   (i) A natural person who is an employee of the employer;
   (ii) In the case of the National Provident fund, a natural person who is a beneficiary of the fund; or
   (iii) An employer of members of the fund, to the extent of the employer’s contingent interest in
        a fund surplus;

(e) Each employer is required by the trust deed or Act constituting the fund to make contributions to
provide to a significant extent the benefits payable by the fund and not merely nominal contributions
        towards the administration and investment management costs; and

(f) The fund must not have been established to defeat the intent and application of the life insurance
rules.

Written approval of the Government Actuary is required stating that the fund complies with all of the above
requirements.

Where a superannuation fund fails to meet the requirements of item (e) above, that fund is nevertheless treated
as complying if the Government Actuary is satisfied that each employer would be required to make
superannuation contributions to the superannuation fund to provide to a significant extent the benefits payable
by the superannuation fund were it not that the assets of the fund exceed the accrued benefits of all members
and other beneficiaries of the fund.

Where the Government Actuary ceases to be satisfied that the superannuation fund should qualify, it loses
that status as from a date specified by the Actuary. The Government Actuary must notify the trustee of the
superannuation fund in writing as soon as practicable after determining whether or not a superannuation fund
is a qualifying superannuation fund. Any person who is dissatisfied with any such determination may object
to the determination under the Superannuation Schemes Act 1989, but not under the TAA 1994.

Superannuation schemes administered by the Board of Trustees of the National Provident fund are not subject
to the life insurance tax rules.

**800.45 Foreign insurance companies not carrying on business in New
Zealand** [ss CR 3, DW 3, HD 16, HD 17, YD 8]

This applies to insurance premiums or reimbursements of insurance premiums paid to non-resident insurers
for assets or risks situated in New Zealand, and to insurance premiums paid offshore by resident persons.
Insurance Industry

Where any non-resident insurer:

(a) Derives a premium for any insurance contract which is deemed to have a source in New Zealand;

and

(b) The premium is not attributable to a fixed establishment in New Zealand through which the insurer carries on business,

the insurer is deemed to have derived taxable income equal to 10 per cent of the gross premium. Income tax is assessed and levied at the rate for non-resident companies.

The amount of income tax for which the insurer is liable is determined finally and exclusively under this method. The premium is not otherwise included in the income of the insurer.

No deduction is allowed to the insurer for any expenditure or loss incurred by the insurer in gaining or producing the premium including any amount claimable under the contract of insurance by the insured person.

The following persons are deemed to be the agent of an insurer deriving such a premium and are required to make returns and be assessable and liable for income tax accordingly:

(a) Any person (including a broker or agent) who pays the premium to the insurer or to any other person not carrying on business through a fixed establishment in New Zealand. The payer has the primary responsibility as agent to make returns and pay income tax for the derivation by the insurer of the premium.

(b) Any other person who pays the premium (whether or not through a broker or agent).

(c) The insured person.

Where the insurer, or any other person on behalf of the insurer, makes returns and pays income tax for the derivation by the insurer of the premium, no other person is liable. The insured person is required to make returns and pay the income tax where neither the insurer nor any other person who is liable as agent of the insurer has done so.

Where any bank makes a payment of a premium on behalf of another person to the insurer, or to any other person not carrying on business through a fixed establishment in New Zealand, that bank is not treated as the agent of the insurer under these rules and the person who provides the bank with the funds from which the premium is paid is treated as the agent.

Any person who is treated as the agent of a non-resident insurer is to disclose in the company income tax return the amount of the premiums paid to residents of Switzerland or the Netherlands. Disclosure is made in the appropriate panel in the IR4 company return of income.

800.50 CFC life insurers [s EX 21]

Where a “controlled foreign company” (CFC) carries on a business of providing life insurance, or is owned by a CFC carrying on the business of providing life insurance, its income or loss will be the amount that is actuarially determined to be its profit or loss with which the shareholders (and not the policyholders) are attributed. This does not apply where the CIR considers that the amount so determined is not a reasonable and fair reflection of the relevant profit or loss, or has requested and not received sufficient information to enable the review of the actuarial calculation.

Foreign investment fund income or loss relating to a CFC life insurer which is determined to be an entitlement of the policyholders is not attributed to the New Zealand shareholders in the CFC life insurer.

These provisions are necessary because a CFC foreign life insurer’s income is mostly attributable to its foreign policyholders rather than its New Zealand shareholders. Therefore, it is not appropriate to attribute the policyholder-related income of a CFC life insurer or its lower tier CFC or foreign investment fund interests to its New Zealand shareholders.
800.55 Grand-parenting of term life products [ss EY 30, EZ 53, EZ 54, EZ 55, EZ 56, EZ 57, EZ 58, EZ 59, EZ 60, EZ 62, EZ 63]

Existing policies entered into prior to the introduction of the new rules are grand-parented and subject to transitional rules for a period of up to five years. Under the transitional grand-parenting rules, the tax treatment of these policies continues to be governed by the old rules. The transitional period of five years runs from 1 July 2010. Where the insurer has elected that the new regime apply from an earlier date, it can also elect that the grand-parenting provisions apply from that date.

The five-year transitional period is directed at annual renewable term policies. These policies are also referred to as yearly renewable policies or age-related term policies. For policies that have a single premium, level premium or guaranteed premium, the grand-parenting runs for the life of the policy, or the term over which the premium is guaranteed, even where this is greater than five years. Where a policy is changed and that change is material, it is considered to be a new contract and grand-parenting will cease to apply. An example would be where the level of cover is increased. The grand-parenting provisions are optional and insurers can elect out at any time.

Where CPI adjustments are an agreed part of a level premium policy, they do not cause the policy to lose transitional relief.

Elements of a life policy that are capable of being sold separately are able to be treated separately where the grand-parenting rules provide different treatments for the different elements.

Existing reinsurance contracts are able to be grand-parented to the extent to which the underlying life policy is also grand-parented and there are no material changes in the terms of the reinsurance contract.

There are special grand-parenting rules for multiple life policies, workplace group policies, credit card repayment insurance and life reinsurance.

(1) Multiple life policies

Where a number of people are covered under the same life policy (excluding workplace policies and credit card repayment insurance policies), the grand-parenting rules apply by looking at each of the policies and applying the following criteria:

(a) The policy was issued or a deposit paid prior to the start of the grand-parenting period;
(b) The insurer has no policyholder base income or policyholder base allowable deduction for that policy;
(c) The premium for each of the lives covered does not fluctuate;
(d) The material terms and conditions of the policy do not change on or after the start of the grand-parenting period; and
(e) Any increase in the amount of cover is limited to the greater of 10 per cent of the opening cover or the movement in the consumer price index. Where the policy is a reinsurance policy, and not all lives covered under the policy meet this requirement, grand-parenting can be applied to the extent to which the requirement is met.

Where the insurer’s systems allow it, the insurer may look separately at each life covered under the policy to determine whether a breach of the transitional rules has occurred. If a breach has occurred in respect of one of the lives but not others, grand-parenting can be applied to the part of the policy in respect of which no breach has occurred. For example, it may be that two lives are covered under the policy and there has been an increase in the amount of cover for one of the lives but not the other.

Part-year grand-parenting is allowed where a breach occurs part-way through the year.

(2) Workplace group policies

Workplace group policies will continue to be taxed under the old rules for a maximum of three years from the application date of the new rules. This grand-parenting is dependent on there being no savings element in the policy. It is also dependent on the substantive and material terms of the policy not changing during the period. The application of the grand-parenting concession is limited to rates that are guaranteed as at the
application date of the new rules. Originally, these policies were referred to in legislation as “employer-sponsored group policies” and the grand-parenting provisions applied for a period of five years. The reduction to three years was a trade-off for a relaxation in the requirement to look through the policy to the individuals. This allows employees lives insured after 1 July 2010 under a compulsory employer-provided group life policy to be grand-parented. A further change ensures that policies provided to trade unions to cover the lives of their members are treated in the same way.

Grand-parenting of workplace group policy reinsurance is based on whether the underlying policy is grand-parented.

(3) Credit card repayment insurance

For credit card repayment insurance, grand-parenting applies for five years. There is no requirement that the cover for each life insured be in place before the commencement date of the grand-parenting. Neither is there any limit imposed with respect to credit limit increases. This is because the insurer has no power to control credit limit increases that may be granted by the credit card provider. The requirement that the cover be provided under a master policy has been removed.

Grand-parenting of credit card repayment insurance policy reinsurance is based on whether the underlying policy is grand-parented.

(4) Life reinsurance

The definition of “multiple life policy” in s EY 30(14) includes life reinsurance, but only to the extent to which it does not reinsure a workplace group policy or credit card repayment insurance. Under s EY 30(14), it is necessary to look through the reinsurance treaty to the terms applying to the individual re-insured policies in order to determine the extent to which the transition rules apply. A special transition rule is provided under s EZ 62 in respect of life financial reinsurance entered into prior to the date on which the insurer first applies the new rules. The maximum transition period for life financial reinsurance is the shorter of the life of the contract or five years.

(5) Premium payback policies

The transitional rules apply to premium payback policies and ensure that and the policies can be grand-parented where they are entered into before the application date of the new rules. This is achieved by excluding them from the definition of “savings product policy” where the surrender value arises solely from a premium payback amount.

800.60 General insurance [ss CR 4, DW 4]

General insurers are taxable on premiums received and obtain a deduction for claims paid. At the end of an income year, insured events will have occurred which the insurer either:

• Has been advised of but has not yet paid; or
• Has not yet been advised of.

These are known as “outstanding claims”. Insurers estimate the value of these outstanding claims based on historic records and account for them through their “outstanding claims reserve” (OCR). Movements in the OCR are taken into account for tax purposes. Decreases in the reserve result in income. Increases in the reserve are an allowable deduction. Amounts calculated are required to be net of reinsurance and net of any other recoveries.

Movements in an insurer’s OCR are either taxable income or an allowable deduction, depending on whether the change in the reserve balance is negative (income) or positive (deduction). Section CR 4 provides that income arises for the insurer of the amount by which the opening OCR exceeds the closing OCR. Section DW 4 provides that a deduction is allowed to the extent to which the closing OCR exceeds the opening OCR. No deduction for an upward movement in the reserve is allowed other than under s DW 4.

For an insurer that uses IFRS 4, the amount of the opening and closing balances is the amount used for the insurer’s financial statements under IFRS 4. Life insurers who also offer general insurance contracts use a modified version of the calculation used for non-participation policies under the life insurance regime.
The new rules apply from the 2009-2010 income year for an insurer who uses IFRS 4. However, taxpayers are able to elect to apply the new rules from the beginning of the first income year in which IFRS 4 is adopted for financial reporting purposes where this is earlier. For a life insurer, the rules apply from 1 July 2010 or, at the taxpayer’s option, from the beginning of the income year that includes 1 July 2010.

Where insurance companies buy and sell investments (including freehold properties) on a regular basis, profits made on disposal constitute income: *London Australia Investment Co Ltd v Federal Commissioner of Taxation* (1977) 138 CLR 106, (1977) 7 ATR 757, 77 ATC 4,398 (HCA). However, where the facts indicate that the insurance company is holding the investments outside the insurance business, sales of those investments are capital receipts: *State Insurance Office v Commissioner of Inland Revenue* [1990] 2 NZLR 444, (1990) 12 NZTC 7,035 (HC), *Commissioner of Inland Revenue v National Insurance Co of New Zealand Ltd* (1999) 19 NZTC 15,135 (CA).

Insurance underwriters [s CX 41]

An underwriter is a person who is named in a contract of insurance as liable, or who otherwise incurs liability under a contract of insurance, to pay or contribute towards payment of any amount that may become claimable by the insured person under the contract.

The income of an underwriter from insurance business carried on out of New Zealand is excluded income. This exemption (which affects Lloyd’s underwriters) does not extend to investment income derived in the course of carrying on that insurance business from specified sources in New Zealand.
Chapter 820

Insurance Policies

820.10  Life insurance [s EY 8]

Life insurance is a contract to pay a certain sum of money on the death of a person, or on the happening of some specified event connected with the life of a person, such as the attaining of a stated age, in consideration of the payment of certain premiums. It is not a contract of indemnity. It is called an “aleatory contract” because it depends, as it were, on the throw of a die. The most common types of life insurance are:

(a) Whole of life, where the benefit under the policy is payable on the death of the person insured. Where these policies are “participating policies”, the policyholder is entitled to bonuses that add to the amount of the benefits payable under the policy;

(b) Endowment, where the benefit under the policy is payable on the insured attaining a certain age, or in the event of the prior death of the insured;

(c) Annuity, where the benefit under the policy is payable in the form of fixed periodical payments at regular intervals during the life of the annuitant or for a certain term;

(d) Double indemnity, which refers to a provision under an insurance policy under which the normal benefit is doubled if death occurs as the result of an accident;

(e) Term or temporary, where the insurance cover ceases after a certain time if death does not occur within that time, and there are no other benefits paid under the policy;

(f) Investment bonds which are either backed by equity assets or have capital guarantees; and

(g) Unlinked policies where the policyholder shares directly in the returns from an asset pool with no performance guarantee.

The premiums for the policies may be payable either:

(a) For the term of the whole policy;

(b) For a stated number of years; or

(c) In a lump sum at the commencement of the policy, in which case the policy is known as a “single premium policy”.

For income tax purposes, the term “life insurance” is defined in s EY 8 to mean insurance under which a life insurer, in return for a consideration, provides a policyholder with:

(a) A benefit contingent on the death of one or more human beings, including an annuity the term of which is contingent on human life;
Insurance Policies

820.15  Deductions for life and accident insurance premiums

To qualify as a deduction for income tax purposes, life and accident policy premiums must be paid by the taxpayer and the policy must be owned or be held for the benefit of the taxpayer and be part of some business transaction or arrangement with a purpose of producing income.

A distinction must be made between “permanent” life insurance policies and “temporary” life insurance policies. Temporary life insurance policies do not build up an asset, but provide life insurance cover for a stated period. Once the period of cover has expired, no claims can be made under the policy. Permanent life insurance policies, on the other hand, build up an asset, and therefore are generally regarded as capital expenditure in the form of an investment. In the latter cases, each premium is an addition to the investment, with the consequence that the premiums are not deductible.

The main types of business assurance are: partnership assurance; company-shareholder assurance; key employee assurance; and special purpose assurance.

820.20  Business assurance

(1)  Partnerships

Each partner owns a policy or an interest in a policy on the life of each of the other members of a partnership. The purpose is to provide cash on the death of any partner to enable the surviving partner or partners to purchase the deceased’s share of the business. It is not intended to produce income for the partners. With either temporary or permanent assurance, the premiums are not deductible and the proceeds are not assessable.

If the partnership owns the policies and pays the premiums, the long-term effect is to put additional funds into the partnership, and the premiums payable on the policies relate to the enlargement of the partnership’s income producing assets, and not to the production of the profits. They are, therefore, outgoings of a capital nature. The proceeds received under the policies are a capital receipt to the partnership. Amounts paid out from the insurance proceeds by the partnership to the deceased’s spouse, children, family trust, or estate are not deductible in arriving at the partnership profits.

(2)  Company shareholders

Each shareholder in a company owns a policy or an interest in a policy on the life of each of the other shareholders. The purpose is to provide cash on the death of any shareholder to enable the surviving shareholders to purchase the deceased’s shares in the company. It is not intended to produce income for the shareholders.
Insurance Policies

(3) **Key employees**

An employer owns a policy on the life of an employee who has special abilities or skills that contribute materially to the financial success of the employer’s business. The purpose is to provide cash on the death of a key employee to meet the cost of securing the services of a suitable replacement, or to replace the income that would be lost as a result of the employee’s death. It is intended to produce income for an employer. Premiums payable under a temporary assurance policy are deductible. Premiums payable under a permanent assurance policy are not deductible. The proceeds of both temporary and permanent assurance are assessable.

(4) **Special purpose**

An employer may own a policy on the life of an employee. If the employee’s death occurs the employer will receive the proceeds and will be free to deal with them in whatever manner thought fit. The proceeds could be used, for example, to repay a mortgage or a bank overdraft, pay for new plant or equipment, or as a deposit on a new property. If the employer wishes, it may be used to make a cash payment to the employee’s dependants.

If the employee remains in the service of the same employer until retiring age, and if an endowment or whole of life policy is used, the employer may use the proceeds to pay the employee an appropriate cash retiring allowance. This type of assurance is not usually intended to produce income for an employer. With temporary assurance the premiums may be deductible and, if so, the proceeds will be assessable. With permanent assurance, the premiums are not deductible and the proceeds are not assessable.

In *Williams's Executors v Inland Revenue Commissioners* (1944) 26 Tax Cas 23 and *Carapark Holdings Ltd v Federal Commissioner of Taxation* (1967) 115 CLR 653, (1967) 10 AITR 378 (HCA), life insurance policy proceeds were held assessable to the companies. The companies respectively had insured a director and a key executive.

820.25 **Employer-provided insurance**

(1) **Temporary, term, and accident and sickness policies**

The following rules apply generally to temporary or term life insurance and personal accident and sickness policies:

(a) Where proceeds are payable under the policy to the employee, and the employer has no beneficial interest in the policy:

(i) The premiums paid by the employer are deductible by the employer.

(ii) Except where the employee can convert the premium into cash (as where the employee is able to cancel the policy and obtain a refund of that part of the premium relating to the unexpired period of the insurance), the premium (or the share of it in group policies) is not assessable to the employee, but may be subject to fringe benefit tax.

(iii) Where the employee is able to convert the premium into cash (even if this is not done) the annual premium should be treated as an “extra pay” and taxed to the employee.

(iv) Lump sum payments received by the employee are not assessable, and weekly benefits and sick pay are exempt from tax unless calculated according to loss of earnings of the employee [s CW 34].

(b) Where proceeds are payable under the policy to the employer:

(i) The premiums paid by the employer are deductible and the proceeds are assessable.

(ii) Where the employer voluntarily makes payments to the employee’s dependants, such payments are generally not deductible to the employer, but where the employer is contractually bound to pay the proceeds to the employee’s dependants (eg as a condition of employment), the payments are normally deductible.
Insurance Policies

(iii) Weekly benefits for temporary incapacity (as distinct from lump sum benefits on death or permanent disablement) received by the employer and paid to the employee are taxable in the employee’s hands, and should have PAYE deducted in the normal way.

(2) **Endowment and whole-of-life policies**

The following rules generally apply to endowment and whole-of-life assurance policies:

(a) Where the employer has no beneficial interest in the policy and the employee has an indefeasible right to the proceeds:
   
   (i) The premiums paid by the employer are deductible; and
   
   (ii) The premium (or the portion applicable to each employee in a group scheme) is an “extra pay” and taxed to the employee; and

(b) Where the proceeds are payable to the employer:
   
   (i) No deduction is allowable to the employer for the premiums, as they represent capital expenditure by building up an asset; and
   
   (ii) The assessability of the proceeds depends upon the purpose for which the policy was taken out. If it was for investment, there would be no income tax liability when the policy matures. If it was taken out on the life of a key employee to compensate the employer for loss of profits, the employer would expect to suffer on the death of the employee through the loss of the employee’s services, the proceeds would be taxable. No deduction would be allowed for any part of the proceeds paid over to the deceased employee’s estate unless the employer was contractually bound to do so.

It is the CIR’s view that premiums paid for an endowment policy taken out for the purpose of repaying a business loan are not deductible under s DB 5. The premiums paid constitute the accumulation of a capital sum to repay the loan, they are not expenses incurred in borrowing money [see TIB vol 10:5 (May 1998) at 25].

820.30 **Mortgage repayment insurance**

Mortgage repayment insurance may be taken out to repay a mortgage if the taxpayer dies or is injured, or to cover mortgage payments during a period of incapacity by the taxpayer. The CIR regards premiums paid for mortgage repayment insurance as deductible under s DB 5, provided the money borrowed is used to produce (gross) income [see TIB vol 6:9 (February 1995) at 19-20].

820.35 **Insuring the life of a debtor**

It is not uncommon for a creditor to insure the life of a debtor where the amount of the debt is substantial. The premiums payable on such policy are not allowable as a deduction to the creditor. When all or any part of the debt becomes bad, a claim for a deduction of such amount may be made in the year actually written off.

Where a debtor effects a policy on his or her life for the purpose of offering as collateral security for advances etc, or where an existing life policy is assigned for this purpose, no deduction of the premiums is allowable to the debtor, even though the transaction may be in connection with the business operations. This viewpoint might change with particular types of life insurance policies.

Where a creditor accepts a life policy on a debtor’s life in payment of a debt and decides to maintain the policy by paying the annual premiums, the surrender value of the policy at the date accepted should be credited to the debtor’s account and the balance written off as a bad debt. No deduction is permissible for premiums paid in future years, nor is the amount ultimately realised under the policy liable to tax.

820.40 **Personal life insurance policies**

Bonuses allotted in life insurance policies, whether added to the policies and paid out on maturity date, or whether the surrender value is taken in cash, are not “income” of the policy holders as such bonuses represent a refund of part of the premium paid by the policy holder.
820.45 **Premiums paid under accident and sickness policies**

If premiums are incurred in the course of gaining or producing income they are deductible.

Loss of earnings policy premiums are deductible as they are incurred in maintaining a process to earn income. This applies irrespective of whether the policyholder is an employee or is self-employed. The restriction which precludes employees from claiming deductions does not apply because the premiums are not incurred in gaining or producing “income from employment”.

Personal sickness or accident policy premiums are not deductible as they are not incurred in maintaining a process to gain gross income.

An apportionment is necessary for premiums paid under most mixed policies which provide for both personal sickness and accident and loss of earnings benefits.

In a mixed policy, if the amount of a premium that is paid for the flat sum personal sickness or accident benefits is two per cent or less of the total premium, the CIR accepts that the whole of each premium can be deducted [see TIB vol 6:4 (October 1994) at 8-11].

820.50 **Compensation payments** [s CW 34]

The following payments received are exempt:

(a) Any amount derived by any person, for any period of incapacity for work, from any payment received by way of a benefit under a personal sickness or accident policy of insurance, which is not a payment calculated according to loss of earnings or profits. The following three components [see TIB vol 6:4 (October 1994) at 8-11] are necessary for it to be exempt:

(i) The amount is derived from a personal sickness or accident policy;

(ii) It is derived during a period of incapacity for work;

(iii) The amount is not calculated according to loss or earnings or profits.

(b) Amounts received from a friendly society or sick, accident or death benefit fund not being:

(i) Weekly compensation under the Accident Insurance Act 1998 of that is not recovered or recoverable;

(ii) A payment under a policy of personal accident or sickness insurance under s 188(1)(a) of the Accident Insurance Act 1998 before its repeal; or

(iii) Compensation for loss of earnings or loss of potential earning capacity from a work-related personal injury under the Accident Insurance Amendment Act 2000.

(c) Income derived by any person for any period of incapacity for work, or paid by a friendly society or paid from any sick, accident, or death benefit fund to which the person was a contributor at the date of the commencement of that period of incapacity.

820.55 **Annuities paid under a life policy** [s CW 4]

Annuities paid under life insurance policies offered or entered into in New Zealand by a life insurer, or offered or entered into outside New Zealand by a New Zealand resident life insurer, are exempt from tax.

820.60 **Amounts received under loss of profits policies** [s CG 5B]

From 4 September 2011, where a person receives a payment of insurance, indemnity or compensation for business interruption or impairment following an event, the timing of the derivation changes. To the extent to which the payment is attributable to a loss of income resulting from the event, derivation occurs at the earlier of the income year in which the payment is received or the income year in which the amount is reasonably able to be estimated.

Prior to this amendment, the timing of the derivation was governed by the principles established in *Egmont Co-operative Dairies Ltd (in liq) v Commissioner of Inland Revenue* (1996) 17 NZTC 12,536 (CA). In this case, an insurance payment received by a dairy company under its loss of profits policy was derived when the loss occurred, not when the payment was received.
Chapter 830
Interest

830.10 Interest assessable [s CC 4]
The effect of the definition of interest is that all returns to the lender, other than the loan capital repayments, are interest for income tax purposes. This would include any premium received by the lender.

“Interest” means a payment (other than a repayment or a redemption payment) made to the person by another person for money lent to any person, whether or not the payment is periodical and however it is described or calculated.

“Money lent” means [s YA 1]:
(a) An amount of money that a person lends in some way, including by depositing it in an account, whether or not the lending is secured or evidenced in writing;
(b) An amount of credit that a person gives, including by not enforcing a debt, whether or not the giving is secured or evidenced in writing;
(c) An amount of money that a person lends, or credit that a person gives, under an obligation or arrangement, whether or not secured or evidenced in writing;
(d) An amount of money that goes from a person (Person A) to another person (Person B) in consideration for Person B’s promise to pay Person A an amount of money and that is less than the amount that Person B promises to pay Person A.

TaxNote: Person B includes any other person with whom Person B is an associated.

Both use-of-money-interest payable by the CIR on overpaid tax and interest paid to an intermediary where the tax pooling system is used are subject to tax. When any securities have been acquired during the income year, any interest due or accruing due at the date of the transfer and not then paid is apportioned between the transferor and the transferee.

Foreign sourced interest derived while a person is a transitional resident is exempt [see 370.35].

830.15 Benefit from money advanced [s CC 7]
Income includes any benefits from money provided to a borrower for use in any business carried on in New Zealand by the borrower if the borrowing was a commercial transaction under which interest would have been payable at current commercial rates having regard to the nature and term of the loan if it were not for that benefit provided.

The value of the benefit is the amount of interest that the borrower would have been liable to pay had the loan been made on normal commercial terms.
This means that the value of the benefit or advantage of the free use of an asset for money advanced for use in a business in New Zealand is taxable, even when the benefit is not convertible into money. A parent who makes an interest-free advance to a relative or to a family trust, or an advance of a benefit in kind, is not liable to tax unless the money is employed by the borrower in a business in New Zealand. A member of a sporting club who advances money to the club in return for free membership is also not liable to tax. However, a scheme that allows residents living in a retirement village to make interest-free loans to the owner of the village in return for reductions in tenancy charges could be assessable [see PIB 164 (August 1987)].

830.20 Interest from debentures [ss FA 2, DB 10]
Debentures which are a “profit-related debenture” are treated as shares for tax purposes [see 830.40]. The interest received by the debenture holder is treated as a dividend. No deduction may be claimed by the company for any expenditure or loss incurred in connection with the debenture or in borrowing the money secured by or owing under the debenture.

830.25 Interest compounded [s BD 3(4)]
In some debenture stock issues, investors are given the option of allowing the interest to be compounded and uplifted on maturity of the stock. Some bank term deposits also provide for annual interest to be added to the investment and attract additional interest in subsequent years. Interest must be returned year by year. This section states that income is deemed to be derived when it is credited in account, or dealt with in the person’s interest or on their behalf.

830.30 Life insurance proceeds
The Court of Appeal in Marac Life Assurance Ltd v Commissioner of Inland Revenue (1986) 8 NZTC 5,086 (CA) held that “gains” received by a holder of a life bond were to be treated as tax-free capital payments as the bonds were in the nature of life insurance contracts.

830.35 Interest from inflation-indexed instruments [s EI 2]
The purpose of s EI 2 is to impose income tax annually (rather than only on a payments basis), on the holders of inflation-indexed debt instruments for any inflation-linked amounts. It applies when:
(a) An amount of money lent is outstanding at the end of an income year; and
(b) In a future income year an amount is payable which is determined by a fixed relationship to one or more indices of general price inflation in New Zealand.

When, at the end of an income year, there is an increase between the indexed amount accrued and the indexed amount (if any) accrued either at the time of lending (if the money was lent during the current income year), or at the end of the previous income year (in any other case), it is treated as having been credited in account and capitalised by the borrower for the benefit of the lender on the day following the day on which the level of the relevant index at the end of the current income year becomes public knowledge.

This does not apply when, on account of the increase, an amount has previously been paid to the lender or credited to the lender or otherwise dealt with in the lender’s interest, or when the money lent has previously been repaid. It also does not apply to deem an increase in the accrued indexed amount when, over a previous income year, there was a decrease and the increase simply represents a recovery of that decrease. If the level of the relevant index is not calculated as at the end of any income year, these rules apply as if the date most closely preceding the end of the income year on which the level was calculated were substituted for the end of the income year.

830.40 Deductible interest — companies [ss DB 1(1), DB 7, DB 8, DB 10, DB 10B, FA 2, FA 2B]
Companies are generally allowed a deduction for interest incurred without the need to establish a nexus with the derivation of assessable or excluded income. However, there are a number of exceptions to this rule:
(a) The automatic deduction does not apply to qualifying companies.
Interest

(b) Automatic deductibility is denied to companies where the company or another company in the same wholly-owned group derives exempt income other than:

(i) Dividends;
(ii) Income that is exempt under s CW 58 (Disposal of company’s own shares); or
(iii) Income that is exempted under s CW 60 (Stake money) and is ancillary to the company’s business of bloodstock breeding.

(c) New Zealand resident companies with an income interest of 10 per cent or greater in a controlled foreign company are subject to interest allocation rules to prevent excess interest deductions being claimed in New Zealand [see 830.43].

(d) The automatic deduction applies to non-resident companies only in respect of interest incurred in the course of carrying on a business through a fixed establishment in New Zealand.

(e) The automatic deduction does not apply to interest which is payable under the laws of a foreign country and which is substantially the same as a civil penalty as defined in s 3 of the TAA.

(f) Debentures which are a “profit-related debenture” are treated as shares for tax purposes [s FA 2]. No deduction may be claimed by the company for any expenditure or loss incurred in connection with the debenture or in borrowing the money secured by or owing under the debenture. A “profit-related debenture” is a debenture with a rate of interest that is determined from time to time by reference to a dividend payable by the issuing company or by the profits of that company. The term does not include a debenture under which the interest is calculated by way of a fixed relationship to banking or commercial interest rates, or economic, commodity, industrial or financial indices. Neither does it include a debenture that is treated as a share under s FA 2B, which relates to staples debt securities.

(g) Where a company has issued debentures to its shareholders in substitution for shares (substituting debentures), the interest paid by the company is not allowable as a deduction to the paying company and is treated as a dividend in the hands of the shareholder [s DB 10]. A substituting debenture is a debenture where the amount of the debenture is determined by the number of shares held by the shareholder, the available subscribed capital of the company or any other reference to shares whether in that company or another company. The tests apply whether or not the company has been liquidated and whether or not the shareholder currently holds the shares. The term does not include a debenture that is a convertible note. Nor does it include a debenture that is treated as a share under s FA 2B, which relates to staples debt securities.

(h) Where a company has issued a stapled debt security which is stapled to a share in the company or to a share in another company and the share is not a fixed-rate share, no deduction is allowed for interest payable under the security, any expenditure or loss incurred in connection with the security, or any expenditure or loss incurred in borrowing the money secured by (or owing under), the security [s DB 10B]. For the purposes of this provision, a debt security is “stapled” to a share if it can, ordinarily, be disposed of only together with the share and the company which issued the debt security is a party to that arrangement. The term does not include a debt security which is stapled to a share using a shareholder agreement for a company that is not a widely held company [s FA 2B].

Companies are allowed a deduction for interest incurred on money borrowed to acquire shares in another company within the same group of companies. This deduction is denied if the companies are not in the same group at the end of the tax year for which the deduction is claimed. However, the deduction remains available when the company whose shares were acquired with the borrowed funds has ceased to exist on a qualifying amalgamation provided that the two companies were in the same group of companies immediately prior to the amalgamation. The grouping requirements are set out in s IC 3.

The expression “to acquire shares” should be given its plain and ordinary meaning. The deduction is available irrespective of the form of acquisition. For example, if the shares are obtained by subscription the deduction is not precluded. The deduction is allowed not only on the original acquisition of shares, but also where the shares were issued at an earlier date, but the company has not previously provided all consideration for those
shares, or where the borrowings to acquire shares has been refinanced. It should also be noted that expenditure
deemed to be incurred under a financial arrangement is also deemed to be interest.
Where the automatic deductibility of interest is not granted by ss DB 7 or DB 8, a company may still achieve
a deduction under the interest deductibility rules contained in s DB 6.

830.43  Interest apportionment rules when shares held in controlled
foreign company [subpart FE]

Editorial Note
At the time of publication of the Staples Tax Guide 2012, 72nd edition, the Taxation (International Investment and Remedial
Matters) Bill had not been passed into law. It is anticipated that the content of this paragraph will be changed following the
passing of the Bill. For an overview of the changes contained in the Bill, please refer to the “Future Developments” section of
this book.
When enacted, these changes will also be available in the Staples Tax Guide online at www.brookersonline.co.nz. The changes
will also be included in the Staples Tax Guide 2012 - Mid-Year Supplement.

With the change to the controlled foreign company (CFC) rules to tax only passive income of the CFC when
the active income test is failed, much of the income derived by CFCs remains outside the New Zealand tax
base. Dividends from CFCs are also now fully exempt in that the FDP rules will no longer apply.
To ensure excess interest deductions are not claimed in New Zealand against income from other sources, the
existing thin capitalisation rules in subpart FE have been extended for income years beginning on or after
1 July 2009 so that they also apply to outbound entities — being New Zealand residents with income interests
in a CFC of 10 per cent or greater.
The rules are referred to as the interest allocation rules, and like the existing thin capitalisation rules focus
on the debt levels of the New Zealand entity. A principal difference being that the focus of the thin
capitalisation rules is on New Zealand residents controlled by a non-resident (inbound investment), the focus
of the interest allocation rules is on residents that control a non-resident (outbound investment). Colloquially,
the rules are also referred to as the “fat capitalisation” rules as in effect they guard against New Zealand
residents over capitalising their CFCs and retaining the debt in New Zealand.

TaxNote: While these rules target people with an income interest of 10 per cent or greater in a CFC [see
paragraph (b) of “income interest” definition in s YA 1], once the rules apply, they apply to all financing
costs (as defined in s FE 6) of the New Zealand entity not just those used to acquire the interest in the CFC
(s).
The interest allocation rules build on the existing thin capitalisation rules in subpart FE. The existing safe
harbours apply. Interest deductions are not restricted unless the New Zealand group debt percentage is more
than 60 per cent (and, for a company or a trustee, is also more than 110 per cent of the worldwide group debt
percentage).
An outbound entity will not typically be required to apportion interest expenditure unless New Zealand group
assets are less than 90 per cent of the assets of the worldwide group and the total interest deductions of the
New Zealand group are more than $250,000. In addition, there is an adjustment mechanism for outbound
entities with finance costs of less than $2 million. This eliminates apportionment for outbound entities with
finance costs of up to $1 million and provides tapered relief for those with finance costs between $1 million
and $2 million.
Various changes have been made to the definitions of “debt” and “assets” in subpart FE. Fixed-rate foreign
equity and fixed-rate shares held by New Zealand residents are now included when determining total group
debt for the New Zealand group. Equity investments in CFCs are no longer included within the total group
assets of the New Zealand group. The rules for measuring the debt of the worldwide group have been aligned
with those for measuring the debt of the New Zealand group.
Sections FE 1 and FE 2 have been amended to ensure that the existing interest apportionment rules now apply
to New Zealand residents who have income interests in a CFC (referred to as the outbound entity) or who
control a New Zealand company with an income interest in a CFC.
The safe harbour rules set out in s FE 5 now apply to outbound entities as well as to entities controlled by non-residents. Thus, an outbound entity will not be subject to restriction of its interest deductions under subpart FE unless it has a New Zealand group debt percentage that is more than 60 per cent (and, for a company or a trustee, is also more than 110 per cent of the worldwide group debt percentage).

Additional carve-outs apply to outbound entities by virtue of s FE 5(1B). There is an exemption from the requirement to apportion interest expenditure when:

(a) The value of New Zealand group assets (measured under s FE 16) is 90 per cent or more of the value of the assets of the worldwide group (measured under s FE 18); or

(b) Total interest deductions of the New Zealand group allowed under ss DB 6 to DB 8 are not more than $250,000 (net of total deductions allowed in relation to interest payable intra-group) and the group does not include an entity with an income interest in a CFC that derives rent from land in the country or territory in which the CFC is resident.

Section FE 6 contains the formula for apportioning interest for an excess debt entity. The effect of the formula, when it applies, is to produce an additional amount of income for the entity that offsets the interest deduction. As well as interest, the formula now includes in ss FE 6(2) and FE 6(3(ab) dividends paid in relation to fixed-rate foreign equity or fixed-rate shares.

For outbound entities with finance costs of between $1 million and $2 million, the amount of the total deductions and FRD in the formula in s FE 6 is reduced by an amount calculated by subtracting the finance costs from $2 million. Thus, if the finance costs are $1.25 million, the item “adjust” will be $750,000. Thus, the item gradually reduces as financing costs increase to $2 million.

Various amendments have been made to the definitions of debt and assets in subpart FE. In particular:

(a) Fixed-rate foreign equity and fixed-rate shares held by New Zealand residents are included when determining total group debt for the New Zealand group under s FE 15.

(b) Equity investments in CFCs are excluded when determining total group assets for the New Zealand group under s FE 16.

(c) The rules in s FE 18 for measuring the debt of the worldwide group have been aligned with those for measuring New Zealand group debt. Accordingly, non-interest bearing liabilities and liabilities that do not provide funds are no longer treated as debt for the worldwide group, even if they are included as debt under generally accepted accounting practice.

Otherwise the normal rules in subpart FE that relate to measuring total group debt and assets apply, in particular, the New Zealand group debt percentage can be measured on various dates as set out in s FE 8 and the various bases in s FE 16 for the valuation of total group assets may also be used. Also the on-lending concession under s FE 13 applies to arm’s-length debt provided by an outbound entity to its CFCs.

As with the rules for inbound debt, the outbound debt rules require the New Zealand group to be established. This is done by first establishing the New Zealand parent. The New Zealand parent is identified under s FE 26(4B) by tracing ownership interests up the chain of companies on a tier-by-tier basis until no New Zealand-resident company has an ownership interest of 50 per cent or more in the last company in the chain. The New Zealand group comprises those companies for which control can be traced from the parent [s FE 28]. The meaning of “control” for these purposes is determined under s FE 27. If there is a natural person or trustee (described in s FE 2(10(g)) that has a 50 per cent or more ownership interest in a member of a New Zealand group that has a member that is an excess debt outbound company, and that natural person or trustee also has a 50 per cent or more ownership interest in another New Zealand group that has a member that is an excess debt outbound company, those groups are to combine to form one New Zealand group.

For an outbound entity that is an individual or a trustee, the New Zealand group is determined under s FE 3(2). It includes all associated persons who are residents or have a fixed establishment in New Zealand or who derive New Zealand-sourced income that is not relieved under a double tax agreement. Excess debt outbound companies, and those within the New Zealand group of such companies, are not included.
For the purposes of calculating the worldwide group debt percentage for excess debt outbound companies the rules in ss FE 31B and FE 32 apply. This includes the company, its New Zealand group, and its worldwide GAAP group (being all non-residents required to be included with the company in consolidated financial statements under generally accepted accounting practice). Under s FE 31C, if a natural person or trustee has a 50 per cent or more ownership interest in an excess debt outbound company that is a member of a world wide group, and also an income interest in a CFC that is not part of that worldwide group, the CFC is deemed to be a part of that group.

For a trustee, the worldwide group is determined under s FE 3 and includes the trustee, the trustee’s New Zealand group, and all CFCs in which either the trustee or another member of the New Zealand group has an income interest.

**830.45 Deductible interest — other** [ss DB 1(1), DB 6, subpart FE]

Interest incurred by non-companies, and by companies whose interest expense does not qualify for the automatic deductibility under ss DB 7 and DB 8 (see above) is subject to the normal rules of deductibility contained in the general permission. The deductibility is subject to all of the general limitations other than the capital limitation. No deduction is permitted in respect of interest which is payable under the laws of a foreign country and which is substantially the same as a civil penalty as defined in s 3 of the TAA.

**TaxNote:** For individuals and trustees of trusts settled by New Zealand residents, interest deductibility on money borrowed to purchase shares in a controlled foreign company may be affected by the rules in subpart FE [see 830.43].

When money is borrowed, it is the use to which those funds are put which determines the deductibility of any interest payable. There must be sufficient nexus between the interest expense and the derivation of assessable and/or excluded income.

The interest is deductible when:

(a) The related capital is used in the period in which the deduction is claimed to derive income in any tax year or equivalent income year; and

(b) No identifiable part of that capital is used for the whole or part of that period in other ways (such as private or domestic use, or a use that produces exempt income).

The interest is not fully deductible if part of the capital is used for a private or domestic use or a use that is incapable of deriving income in the period for which the deduction is claimed or in the future. In this case, only the portion of the interest that relates to the income producing purpose is deductible.

The onus is on the taxpayer to establish the degree to which the capital is used in the period in question in deriving income. The taxpayer must show the factual basis of the claim. If that onus is discharged, the entire amount of interest is deductible. Whether or not the taxpayer’s evidence discharges that onus is a matter of degree and a question of fact.

Section DA 1(1)(b) allows a deduction for interest incurred in carrying on a business for the purpose of deriving assessable and/or excluded income. It applies only to taxpayers in business. This provision allows additional deductions for taxpayers in business, since it covers interest that may not be able to be shown as actually deriving assessable and/or excluded income.

It is not essential that the income be derived in the same income year as that in which the deduction is claimed. It is necessary only that the interest relates to the derivation of assessable and/or excluded income for any income year.

Where interest is incurred to retain assets that are used in deriving assessable and/or excluded income, the interest is deductible provided that the taxpayer establishes that the capital was borrowed to meet involuntary expenditure to retain the assets. This principle was established in *Public Trustee v Commissioner of Taxes* [1938] NZLR 436 (CA) and applied in *Williams v Commissioner of Inland Revenue* (1988) 10 NZTC 5,078 (HC) and *Borlase v Commissioner of Inland Revenue* (2001) 20 NZTC 17,261 (HC). However, if the capital was borrowed for a different purpose, the interest is not deductible.
Where the interest expenditure is incurred to retain some assets that derive gross income and some which do not, it must be apportioned. The onus is on the taxpayer to establish that the interest is deductible, and what proportion of it is deductible.

The CIR has issued an interpretation statement analysing the principles of the Public Trustee case [see TIB vol 18:6 (July 2006) at 9-27]. The CIR considers interest will be deductible where:

(a) The liability that the borrowed funds were used to discharge was involuntary;
(b) The taxpayer definitely would have realised particular income earning assets if the taxpayer had not borrowed; and
(c) The liability that the borrowed funds were used to discharge arose in connection with the income earning assets retained.

**TaxNote:** The second and third conditions may give rise the necessity to apportion between business and non-business purposes. Where all three conditions are met, the taxpayer will be entitled to a deduction. However, it may be possible for a valid claim to be established where one or more of the conditions is not met.

Expenditure deemed to be incurred under financial arrangements is deemed to be interest payable. However, certain financial arrangements, which give rise to deemed interest expenditure, do not have any underlying capital (eg interest rate swaps). In these situations, the use of borrowed capital cannot determine whether the interest is deductible. Whether or not the interest is deductible, is a matter of degree and a question of fact. In all cases the focus of the inquiry is on whether there is sufficient relationship between the expenditure and the income earning process of the taxpayer claiming the deduction: Commissioner of Inland Revenue v Banks [1978] 2 NZLR 472, (1978) 3 NZTC 61,236, (1978) 2 TRNZ 323 (CA).

**Example 1:**
An individual borrows $10,000 at 10 per cent per annum to finance a purchase of shares in a company. No dividend is paid in the five income years following the purchase of the shares but the taxpayer pays interest on the loan in each of the five income years. The individual can deduct the interest in full in each of the five income years because the capital is used in each year in deriving income. Even though the company paid no dividends, the interest is deductible provided that the company has no restriction in its constitution preventing the payment of dividends in the future. The interest is deductible provided that the shares are expected to earn income. There is no requirement that income be derived in the year in which the interest deduction is claimed.

**Example 2:**
A taxpayer borrows a substantial amount of money and uses it to buy a house for investment as part of a retirement plan. The house is rented at a market rental but the interest exceeds the rental income earned. The interest is fully deductible in every year in which the property is let or is available for letting. The taxpayer’s possible intention to make a capital gain from the house does not affect the deductibility.

**Example 3:**
In a particular income year a self-employed taxpayer uses part of her home as an office in connection with her business. She has a mortgage on the house. There are two competing uses present: a private use and an income-earning use. The mortgage interest is deductible to the extent to which it is payable in deriving assessable and/or excluded income. There must be an apportionment between the two uses. In this situation, the CIR would generally accept apportionment on a floor area basis.

**Example 4:**
A New Zealand importer of sport shoes buys shoes from the US to sell in New Zealand. The importer pays for the shoes in US dollars, and then hedges the obligation to pay US dollars by a forward foreign exchange contract. This contract later results in a foreign exchange loss. The exchange loss is deemed to be interest and is deductible as it has a sufficient nexus with the taxpayer’s income earning process.

**Example 5:**
A taxpayer who is in business has insufficient funds to pay his tax. Rather than realise assets which derive gross income, he borrows money to make the payment. The interest is fully deductible as it is payable in carrying on a business for the purpose of deriving assessable and/or excluded income. The interest is payable in preserving assets required for the business of the taxpayer.
Interest

Example 6:
An individual, who is not in business, has an end of year tax liability and borrows to pay the tax. The individual’s assets comprise a house and a car. The interest is not deductible because there is no nexus with deriving income. If the same taxpayer has investments in government stock and, rather than realising the investments, borrows to meet the tax expenditure, the interest would be deductible to the extent to which it is payable in meeting an involuntary tax expenditure and to preserve income producing assets. To the extent to which the interest is paid to preserve non-income producing assets, it is not deductible. The method of apportionment of the interest depends on the facts of each case.

Example 7:
A taxpayer decides to buy a house to live in. She could finance the purchase by realising her income producing investments but instead she decides to borrow to finance the purchase. The interest is not deductible as the borrowed funds are not used in deriving assessable and/or excluded income. The expenditure is of a private or domestic nature.

Example 8:
A sole trader borrows to buy a luxury car for personal use rather than realise business assets to meet the cost of the car. The interest is not deductible as there is no nexus with the income earning process. The interest is not payable in deriving assessable and/or excluded income, nor is it payable in carrying on a business for that purpose. The expenditure is of a private or domestic nature.

The CIR has issued Public Binding Rulings 10/14 to 10/19 set out the CIR’s view on the deductibility of interest incurred on funds borrowed to repay and replace an amount which was previously invested in an income earning activity or business.

Ruling BR Pub 10/14 relates to funds borrowed by a partnership to return capital contributions to partners. In order for the ruling to apply, the partnership must be carrying on business for the purpose of earning assessable and/or excluded income both at the time at which the partnership borrows the funds and the time at which the interest on those borrowed funds is payable. In addition, the interest payable must be at an arms-length interest rate. The ruling provides that a partner’s share of the interest will be deductible to the extent to which that partner’s capital contribution was used directly in the partnership business or used to repay borrowed funds on which the interest was deductible. Interest on the funds borrowed to repay partner’s capital contributions will not be deductible to the extent to which the funds are used to pay current year income to the partner or to make a distribution of unrealised gains from asset revaluations or internally generated goodwill.

Ruling BR Pub 10/15 relates to the deductibility of interest paid on funds borrowed by a partnership to fund the return of profits to partners. In order for the ruling to apply, the partnership must be carrying on business for the purpose of earning assessable and/or excluded income both at the time at which the partnership borrows the funds and the time at which the interest on those borrowed funds is payable. In addition, the interest payable must be at an arms-length interest rate. The ruling provides that a partner’s share of the interest will be deductible to the extent to which the profits that are being distributed are past years’ profits that have been used directly in the partnership business or used to repay borrowed funds on which the interest was deductible. Interest will not be deductible to the extent to which the funds are used to pay current year income to the partner or to make a distribution of unrealised gains from asset revaluations or internally generated goodwill.

Ruling BR Pub 10/16 relates to the deductibility of interest paid on funds borrowed by a company to repurchase shares. In order for the ruling to apply, the company must be carrying on an activity or business for the purpose of earning assessable and/or excluded income both at the time at which the partnership borrows the funds and the time at which the interest on those borrowed funds is payable. In addition, the interest payable must be at an arms-length interest rate. The ruling provides that the interest will be deductible to the extent to which the funds are used to repurchase shares which were funded by shareholder contributions or past years’ profits that have been used directly in the company’s income-earning activity or business or used to repay borrowed funds on which the interest was deductible. Interest will not be deductible to the extent to which the funds are used to pay current year income to shareholders or to make a distribution of unrealised gains from asset revaluations or internally generated goodwill.

Ruling BR Pub 10/17 relates to the deductibility of interest paid on funds borrowed by a company to pay dividends to its shareholders. In order for the ruling to apply, the company must be carrying on an activity...
or business for the purpose of earning assessable and/or excluded income both at the time at which the partnership borrows the funds and the time at which the interest on those borrowed funds is payable. In addition, the interest payable must be at an arms-length interest rate. The ruling provides that the interest will be deductible to the extent to which the dividends are funded by past years’ profits or capital contributed by the shareholders and have been used directly in the company’s income-earning activity or business or used to repay borrowed funds on which the interest was deductible. Interest will not be deductible to the extent to which the funds are used to pay current year income to shareholders or to make a distribution of unrealised gains from asset revaluations or internally generated goodwill.

Ruling BR Pub 10/18 relates to the deductibility of interest paid on funds borrowed to repay debt. The ruling applies to a taxpayer or partnership carrying on an activity or business for the purpose of deriving assessable and/or excluded income both at the time at which the funds are borrowed and the time at which the interest on those borrowed funds is payable. In addition, the interest payable must be at an arms-length interest rate. The ruling provides that the interest will be deductible to the extent to which the funds that are repaid were:

• Used directly in the income-earning activity or business;
• Used by a company and the interest on those repaid funds was deductible under s DB 7 of the Act;
• Used by a company to repurchase shares and the interest on those repaid funds was deductible under s DB 7 of the Act;
• Used for an arrangement covered under any of the above four rulings (BR Pub 10/14 to 10/17) and met the test for deductibility contained in those rulings;
• Used to retain income-earning assets and satisfied the elements in Public Trustee v Commissioner of Taxes [1938] NZLR 436 (CA) (see above); or
• Themselves were used to repay borrowings in respect of which the interest was deductible.

Ruling BR Pub 10/19 relates to the deductibility of interest paid on funds borrowed by a company to make a payment to a group company that has a loss where the payment is made under s IC 5 of the Act (ie a subvention payment). The ruling provides that the interest will not be deductible.

None of the above rulings applies to companies in respect of interest which is deductible under s DB 7 [see 830.40]. Neither do they apply to avoidance arrangements. All of the rulings are subject to the thin capitalisation rules in subpart FE of the Act see 1000.85]. The rulings, all of which apply from 23 May 2010 to 23 May 2015, can be viewed in full on the Inland Revenue’s website www.ird.govt.nz.

830.50 Borrowing to purchase shares granting right of occupancy of business premises

Shares may guarantee the occupation of premises, such as in the case of flat owning companies, or provide premises from which to run a business. Usually, under the terms of the tenancy agreement, shareholders pay only a nominal rent plus a monthly levy to cover outgoings on the buildings. The company in these circumstances rarely pays a dividend. It has been claimed, in this type of transaction where the premises are used for business purposes, that the shares are not purchased as an investment but for the purposes of securing continued occupation of the premises, thus enabling the taxpayer to carry on business. As a general principle, where interest is paid on money borrowed to purchase shares and the primary right attaching to the shareholders is a right of occupancy of premises used in deriving income, the interest will be regarded as payable in carrying on business for the purpose of deriving income.

830.55 Case law

In TRA Case H10 (1986) 8 NZTC 160, the TRA held that there must be a direct and not an indirect link between the expenditure and the income earning process. Where a husband and wife received a legacy sufficient to repay three mortgages on their private dwelling but only repaid two, investing the balance, they could not claim deduction of mortgage interest on the grounds that the interest was incurred to produce the investment income.
In *TRA Case H2* (1986) 8 NZTC 105, the TRA held that, where a loan was raised to purchase a vehicle for business use and 80 per cent of the total use was business use, deductions for 80 per cent of interest paid were reasonable.

In *TRA Case H88* (1986) 8 NZTC 607, the taxpayer borrowed $370,000 to finance erection of building Y. The advance was subsequently refinanced as part of restructuring. The taxpayer then moved to premises Z and later sold premises Y. The TRA held that, when operations ceased at Y and no rent or interest was received from it, Y ceased to be employed in deriving income and the interest on the borrowings ceased to be deductible.

In *TRA Case M127* (1990) 12 NZTC 2,817, the interest associated with the finance raised to purchase a house was not deductible. The taxpayers had capital in their business but, if it was withdrawn, the business would need to either sell or borrow. The loan documents included a statement making reference that the purpose of the loan was to purchase a house.

In *Case 29* 4 NZTBR, the taxpayer and his wife put their house on the market but were unable to find a buyer at the time, and decided to lease it to a tenant with an option to purchase. They then bought another house and financed the purchase with a temporary overdraft. As the lessee of the first property declined to exercise his option, the taxpayer had to raise a first mortgage secured against both properties to repay the overdraft. The taxpayer claimed a deduction for his share of the interest on the temporary finance and mortgage, but the CIR rejected his claim on the ground that the raising of the mortgage was related to the purchase of the new home, which was not income-producing. The Taxation Board of Review agreed with this view. It is not enough merely to have a mortgage secured over an asset that produces income if the borrowed money is not in fact used in producing income.

In *TRA Case E12* (1981) 5 NZTC 59,069, (1981) 4 TRNZ 364, the taxpayer sold a motel and left part of the purchase price on mortgage to the buyer. It was agreed by the taxpayer and his mother-in-law that $12,000 of the profit on the sale of the motel was her share. The sum remained in the taxpayer’s hands interest-free and unsecured. The taxpayer purchased a home and subsequently the mother-in-law also bought a home. The taxpayer raised $16,000 to assist in the purchase of her home, secured by a mortgage over both properties. The taxpayer claimed a deduction of the interest on the $16,000 against the mortgage interest received from the motel. The CIR disallowed the deduction. The TRA held, that on completion of the sale of the motel, the business was wound up leaving only the taxpayer’s personal commitment to honour a verbal agreement to pay his mother-in-law part of the sale profits. The purpose of the $16,000 mortgage was to provide a home for her and the interest payable was not capital employed in deriving gross income.

In *TRA Case F41* (1983) 6 NZTC 59,767, a taxpayer sought to deduct interest on moneys borrowed to settle residual business debts that arose through the failure of a business. The TRA held that interest is only deductible on capital employed for the purpose of deriving gross income at the time the interest is paid. In this case, as the business had already failed, there would be no future income against which to offset the interest. Accordingly, the taxpayer’s claim was disallowed. See also *TRA Case J25* (1987) 9 NZTC 1,148.

In *Commissioner of Inland Revenue v Brierley* [1990] 3 NZLR 303, (1990) 12 NZTC 7,184 (CA), the taxpayer subscribed for additional shares in Brierley Investments Ltd and funded the purchase by way of substantial borrowings. Assessable dividends were paid from the revenue reserves in one year only. The Court followed its decisions in *Pacific Rendezvous Ltd v Commissioner of Inland Revenue* [1986] 2 NZLR 567, (1986) 8 NZTC 5,146 (CA) and *Eggers v Commissioner of Inland Revenue* [1988] 2 NZLR 365, (1988) 10 NZTC 5,153 (CA) and examined whether the borrowed money was fully employed in deriving income in that income year or future income years. If no identifiable part is employed for the whole or part of the year in other ways, the statutory test is met.

In *Federal Commissioner of Taxation v Total Holdings (Aust) Pty Ltd* (1979) 9 ATR 885, 79 ATC 4279 (FCA) and *Ure v Federal Commissioner of Taxation* (1981) 11 ATR 484, 81 ATC 4100 (FCA), the Federal Court of Australia considered the question of the quantum of interest allowed as a deduction where moneys borrowed are on-lent at a lower interest rate. In *Ure*, the deduction was limited to the lower interest rate at which moneys were on-lent because the predominant object of the taxpayer was a private and domestic
advantage. In Total Holdings, the deduction was allowed at the higher borrowing rate, the making of interest free loans being relevant to the derivation of income by the taxpayer.

In Begg v Deputy Commissioner of Taxation (1937) 1 AITR 78 (SASC), it was held that interest on unpaid legacies is not deductible against estate income as it is not an expense in earning income.

In Pacific Rendezvous Ltd v Commissioner of Inland Revenue [1986] 2 NZLR 567, (1986) 8 NZTC 5,146 (CA), the taxpayer company borrowed money to develop a motel complex for selling individual units on a unit title basis in 1976. The sale of the units was protracted and the CIR disallowed deductions for interest on borrowed funds over two of the seven relevant income years. The Court of Appeal held that the apportionment was inapplicable. The interest claimed had been paid on capital employed in the production of assessable income and was thus deductible. The fact that it could be said that the borrowed money was also employed for another reason (obtaining a capital gain) was held to be irrelevant.

In Stevens v Commissioner of Inland Revenue (1989) 11 NZTC 6,001 (HC), TRA Case J10 (1987) 9 NZTC 1,055 was applied. The High Court held that it was irrelevant to the deduction of interest in one income year that the investment had ceased to be profitable and that income was only produced in some income years.

In Federal Commissioner of Taxation v Jones [2001] FCA 1153, (2001) 47 ATR 638, the Federal Court of Australia held that interest incurred on a business was deductible notwithstanding that the business had ceased. The Court held that neither the cessation of the business, a change in the identity of lender, nor the passage of time broke the nexus between the expense incurred and the earning of business income. It is not known whether the New Zealand Courts will follow the reasoning of the Australian Court in this regard.

New Zealand’s international tax regime is comprised of three essential components:

850.05 General overview

New Zealand’s international tax regime is comprised of three essential components:
International Tax Regime

(a) A tax regime for controlled foreign companies (CFCs) [see 850.10 to 850.125];
(b) The foreign investment fund (FIF) rules for non-controlled foreign entities [see 850.130 to 850.290];
(c) The rules for foreign and non-complying trusts [see 1420 TRUSTS AND ESTATES].

Leaving aside the rules for foreign and non-complying trusts [see 1420 TRUSTS AND ESTATES], New Zealand’s international tax rules have undergone significant change in recent times:
(a) The FIF rules [see 850.130 to 850.290] were extensively rewritten from the 2007-2008 tax year;
(b) The CFC rules [see 850.10 to 850.125] have been extensively rewritten to exempt active income from the 2010-2011 income year; and
(c) Foreign dividends are (from the 2010-2011 income year) generally exempt.

With the decision to exempt most foreign dividends, the foreign dividend withholding payment rules [see 670.120], underlying foreign tax credit rules [see 670.230] and the branch-equivalent tax rules [see 670.285] are being phased out. The conduit tax rules [see 215 CONDUIT TAX RELIEF] are also being phased out with the changes to exclude active CFC from being taxable in New Zealand.

The international tax changes apply generally from the 2010-2011 income year. However, taxpayers with balance dates on or after 30 June 2009 can apply the new rules from the 2009-2010 income year. Thus, many of the changes have been made for income years beginning on or after 1 July 2009 to accommodate people with late 2009 balance dates that elect to use the new CFC rules for their 2009-2010 income year.

**Example:**
Company A has a standard 31 March income year. For Company A’s income year commencing 1 April 2009, Company A will apply the old CFC rules. Company B has a 30 September balance date. The new CFC rules will apply for the income year commencing 1 October 2009.

850.10 Controlled foreign companies [ss CQ 1, CQ 2, CQ 3, EX 1 to EX 27]

New Zealand taxes on the principles of residence and source. The income derived by a non-resident company from foreign sources is outside the tax jurisdiction of New Zealand, even if the foreign company is owned by New Zealand residents [s BD 1(4)]. However, when the foreign company is “controlled” by New Zealand residents (ie it is a controlled foreign company), New Zealand’s CFC rules may apply to the New Zealand shareholders in respect of their income interest in the CFC to attribute CFC income to the resident shareholder.

Under the CFC rules that applied until the 2010-2011 income year (or until the 2009-2010 income year for taxpayers with balance dates on or after 30 June 2009), New Zealand taxed resident shareholders of CFCs on their share of all income of the CFC. A credit was provided for tax paid by the CFC. Dividends were also taxed under the foreign dividend withholding payment rules with credits allowed for any underlying foreign tax paid.

The key exceptions were if the foreign company was resident in one of eight grey-list countries, or if the conduit exemption applied. If the foreign company was resident in a grey-list country, its New Zealand shareholders were not required to attribute income under the CFC rules. Conduit tax relief reduced tax payable under the CFC rules and on dividends from the CFC to the extent the extent the CFC was owned by a New Zealand company with non-resident shareholders.

New Zealand companies receiving foreign dividends were required to make a foreign dividend withholding payment (FDP). Credits were available against the FDP liability for foreign withholding taxes on the dividend. For non-portfolio dividends, foreign taxes on the underlying company profits were available. A company receiving a non-portfolio dividend from a grey-list country qualified for a deemed underlying foreign tax credit equal to its FDP liability on the dividend. Credits were also available under the branch equivalent tax account (BETA) mechanism to prevent double New Zealand taxation under the CFC and FDP rules.

The central features of the new rules are an active income exemption for the active income of CFCs, and an exemption for most foreign dividends received by New Zealand companies. Interest allocation rules (also known as fat capitalisation rules) are a feature of the new rules. These ensure New Zealand residents do not
over capitalise CFCs at the expense of the New Zealand tax base. The fat capitalisation rules place an upper limit on the amount of interest that can be claimed as a deduction in New Zealand.

The active income exemption now means that only passive income will be attributed back to the New Zealand shareholders of a CFC. Passive income will not be attributed when it is less than five per cent of the gross CFC income or when the CFC is resident in Australia. As with the FIF rule changes that took affect from the 2007-2008 income year, the grey-list of exempt countries has been removed.

A CFC is a foreign company (with certain qualifications) that is controlled by resident shareholders, who do not necessarily need to be individuals. The CFC regime is complemented by the FIF regime, which applies when a foreign company is not controlled from New Zealand.

850.15 CFC definition [s EX 1]

A foreign company is a CFC for any accounting period of the company if any of the following three tests are met:

(a) At any time during that accounting period, there is a group of five or fewer New Zealand residents whose total control interests [see 850.25 for the definition of a “control interest”] in the company in any one of the categories of control interest is greater than 50 per cent; or

(b) At any time during that accounting period a single New Zealand resident holds a control interest in the foreign company equal to or greater than 40 per cent unless, at that time:
   (i) Another person also holds a 40 per cent or more control interest in the same control category; and
   (ii) The other person is not a resident; or
   (iii) The other person is not associated with the New Zealand resident; or

(c) There is a group of five or fewer residents who have the power to control the exercise of shareholder decision-making rights [see s YA 1 definition] for the company and thereby control the affairs of the company in accordance with the wishes of that group.

If any of the above tests is met at any time in the foreign company’s accounting period, the foreign company is treated as a CFC for the whole of its accounting period [s EX 1(3)].

An exclusion from the CFC rules is made in s EX 1(2) if the foreign company is a foreign PIE equivalent and one of the New Zealand residents is:

(a) A portfolio investment entity;
(b) An entity that qualifies for PIE status;
(c) A life insurance company.

“Foreign company” is defined in s YA 1 as a company that is:

(a) Not resident in New Zealand; or
(b) Treated under a double taxation agreement as not being resident in New Zealand [s YA 1].

850.20 Residence [ss YD 2, YD 3]

The CFC rules apply only to New Zealand residents that have income interests in companies that are controlled “foreign companies”.

A company is a “foreign company” if it is not resident in New Zealand or is treated as a resident of another country under a double taxation agreement — that is, the company is resident in New Zealand, but residence is assigned to another country for the purposes of a DTA (as per the definition in s YA 1).

A company is resident in New Zealand if it is treated as resident under s YD 2 [see 1250.60]. Section YD 2 determines New Zealand residence only. Thus, a company that does not meet the tests in s YD 2 is not resident in New Zealand.
Foreign company residence

Section YD 3 defines the country of residence of a foreign company. The purpose of the definition is to determine which foreign country a CFC is resident in for the CFC loss and foreign tax credit quarantining rules and the foreign currency conversion rules. The foreign company definition is also relevant to the FIF rules, as foreign companies represent the main category of FIF entity types. A further purpose of the rule in s YD 3 was to determine which foreign country a CFC was resident in for the purposes of the grey-list exemption. However, as the grey-list is now repealed for the CFC rules this purpose is otiose. Section YD 3 will still be relevant in determining if a foreign company is resident in Australia.

Note: The rules for determining a CFC’s residence in a grey-list country were subsumed into the rules in s YD 3. The ITA 2004 contained a separate set of rules.

Section YD 3 provides that a foreign company shall be deemed to be resident in a particular country or territory if, at any time during that accounting period, the company is liable to income tax in that country or territory by reason of domicile, residence, place of management or any other criterion of a similar nature. If, in the case of any company, there are two or more countries or territories or the company is not resident in any country or territory, the company shall be regarded as being resident in the country or territory in which, if that country or territory were New Zealand, that company would be treated as being resident by applying the tests in s YD 2 for a New Zealand company [s YD 3(4)]. If, this does not result in that company being treated as resident in one country or territory only, that company shall be regarded as being resident in the country or territory in which its centre of management is located [s YD 3(5)]. If there is no single country or territory of residence able to be determined, that company shall be regarded as being resident in such country or territory as the CIR determines [s YD 3(6)].

850.25 Calculation of control interest [ss EX 2, EX 3, EX 4, EX 5, EX 6, EX 7]

In looking to determine whether a foreign company is a CFC the control rules are seeking to determine which New Zealand residents have control. The rules focus on narrowing down the smallest number of people with the requisite level of control required, as per the requirements of s EX 1. Thus the control rules look at a person’s direct and indirect interests and the control interests of associated persons.

Control interests are measured in terms of categories of interests [s EX 2]. A direct control interest in a foreign company can arise in each of four separate categories of rights, being:

(a) Shareholding in the foreign company;
(b) Shareholder decision-making rights for the foreign company;
(c) Rights to receive income from the foreign company; and
(d) Rights to receive distributions of the company’s net assets.

The control interest of any resident at any time in any foreign company in each of the categories of control interest is calculated by aggregating at that time, for that category:

(a) Any direct control interest held by that person in that foreign company; and
(b) Any direct control interest or interests held in that foreign company by persons associated with that person whether those associated persons are residents or not; and
(c) Any indirect control interest or interests held by that person in that foreign company; and
(d) Any indirect control interest or interests held in that foreign company by persons associated with that person, whether those associated persons are residents or not.

A resident who does not hold at any time any direct or indirect control interests in a foreign company, and a non-resident relative of that person, are not under s EX 4(1), associated persons. This provision ensures, for example, that a foreign student studying in New Zealand is, by virtue of the associated person’s rules, deemed not to have a control interest in a CFC and trigger the disclosure and income attributions rules, because the person’s non-resident parents own a foreign company.

Under s EX 5 (which expands on the broad categories of control interest under s EX 2), a person has a direct control interest at any time in a foreign company if they hold, or are entitled to acquire or extinguish:
(a) Any of the shares in the foreign company, and for this purpose the interest is measured as the percentage of the total available subscribed capital per share, calculated under the slice rule, of the shares held as a percentage of the total available subscribed capital per share;

(b) Any of the shareholder decision-making rights for the company, and for this purpose, if the percentage varies between the rights comprising the “decision-making rights”, the highest percentage is taken;

(c) A right to receive, or to control the application of, any of the income of the company for the accounting period in which the time falls. For this purpose it is assumed that income is distributed on the last day of that accounting period and the entitlement of that person to receive the income is the same at all other times during that accounting period. For this purpose a payment on a ss FA 2 and FZ 1 debenture is deemed to be a distribution of income;

(d) A right to receive, or to control the application of, any of the value of the net assets of the foreign company if they are distributed.

An interest of a person is taken into account if they hold the interest, or they are entitled to acquire or extinguish the interest [s EX 6]. A person is entitled to acquire or extinguish something if the entitlement is absolute or contingent and whether the entitlement arises under the company’s constitution, the terms of an option, convertible note, or any arrangement substantially similar to all of the aforementioned or in some other way. However, a person is not treated as being entitled to acquire something if the entitlement arises under an arm’s-length security arrangement that conforms to generally accepted commercial practice.

Note: In determining whether the requisite control percentage is met, when taking the interests of associated persons into account, the interest is only counted once [ss EX 4(2) and EX 6(4)]. For example, a husband and wife that each own 25 per cent will have a control interest of 50 per cent each under the associated persons rules. However, they will not have a control interest of 100 per cent. Thus, if they are the only New Zealand resident shareholders there will not be a group of five or fewer New Zealand residents with control interests exceeding 50 per cent, although there may be a single New Zealand resident with a control interest of 40 per cent or more.

Indirect control interests are direct control interest that a CFC has in another foreign company. Under the control tests, if a CFC owns another foreign company, the controls interests that CFC has in the other foreign company are attributed back under s EX 7 to the group of persons that triggered the control test for the CFC (ie that caused the foreign company to be a CFC). When there is more than one group of five or fewer people holding interests of greater than 50 per cent in a CFC, the rules allocate the indirect control interests to the smallest group with the largest holding.

The rules in s EX 7 are applied on a hierarchical basis to determine who of the group of people that hold control interests in a CFC, will hold the indirect control interests in another foreign company. In applying the rules, a group of persons can include one person [s YA 1] and, when there is more than one person in a group of persons, the indirect interests are held pro-rata to their respective income interest in the first tier CFC.

When a CFC has a direct control interest in another CFC (including direct control interests held by associates), the hierarchical basis used by s EX 7 allocate that interest as follows:

(a) If there is only one group of persons whose control interests have deemed the first foreign company to be a CFC, to that group;

(b) If there is more than one group of persons, whose control interests have deemed the foreign company to be a CFC, to the group smallest in number; or

(c) If there are two or more groups that are the smallest in number, the interests are allocated to the group that has the highest control interest in the first CFC.

If at this stage there is still more than one group of persons, then the indirect interest is allocated in full to each group.

Note: As with the associated person’s rules, if the rules in s EX 7 would result in a direct control interest (including entitlements to acquire or extinguish) being counted more than once, for example because an
interest of a person associated with the first tier CFC is attributed back, that control interest is counted only once.

The reason why this approach is taken is because, there could well be other New Zealand resident people that hold control interests in the underlying foreign company, such that when the control rules are applied, there is not a group of five or fewer people resident in New Zealand that own more than 50 per cent of that foreign company, even though the first tier foreign company is a CFC. Hence the statement in s EX 7(4) to “ensure that the attribution exercise does not dilute recognition of a factual chain of control”.

If, under s EX 7 a foreign company becomes a CFC, s EX 7 is then applied to that company in relation to any control interest it holds in any underlying CFC.

**Example:**

Alan, Bob, Cory, Damien and Eddie are all New Zealand residents. In this case, Alan and Bob hold more than 50 per cent. As does: Alan + Bob + Cory; Alan + Bob + Cory + Damien, and Alan + Bob + Cory + Damien + Eddie.

850.30 **Calculation of income interest** [ss EX 8, EX 9, EX 10, EX 11, EX 12, EX 13, EX 14]

If, under the control interest rules, a foreign company is a controlled foreign company, it is then necessary to measure a person’s income interest in the CFC. Only persons with income interests of 10 per cent or more have attributed CFC income or loss. The rules for determining control and income interests are based on similar concepts. However, there are differences. For example, only direct income interests are taken into account. The interests of associated persons are only taken into account in determining whether a person has an interest of 10 per cent or greater [see 850.45]. The calculation of indirect interests is different for income interests. Also, entitlements to acquire an interest, such as an option, are not taken into account — although there are rules that focus on a person’s option to acquire an interest in a CFC when the terms of the option are such that a person can avoid holding an income interest, but nevertheless still get all the upside of ownership [s EX 11].

Under s EX 8, the income interest of any person at any time in any CFC shall be calculated by aggregating:

(a) Any direct income interest held by that person in that CFC; and
(b) Any indirect income interest held by that person in that CFC.

Like control interests, income interests are measured by category of interest. Section EX 9 sets out the categories and provides that a person has a direct income interest in a CFC at any time if they hold:

(a) Any of the shares in the foreign company, and for this purpose the interest is measured as the percentage of the total available subscribed capital per share, calculated under the slice rule, of the shares held as a percentage of the total available subscribed capital per share;

(b) Any of the shareholder decision-making rights for the company, and for this purpose, if the percentage varies between the rights comprising the “decision-making rights” [s YA 1] the highest percentage is taken;

(c) A right to receive, or to control the application of, any of the income of the company for the accounting period in which that time falls, that the person would be entitled to receive or to have dealt with in that person’s interest or on that person’s behalf, if that income were distributed on the last day of that accounting period and the entitlement of that person to receive income or have income dealt with
were the same at all other times during that accounting period. For this purpose a payment on a s FA 2 debenture is deemed to be a distribution of income;

(d) A right to receive, or to control the application of, any of the value of the net assets of the foreign company if they are distributed.

The income interest is measured by the percentage of the above interests held by the person. When the percentages between the categories of interest differ, the income interest is the highest interest held.

When a person has a direct income interest in a CFC, and the first CFC has a direct income interest in another CFC, the person has an indirect income interest in the underlying CFC.

The indirect income interest is calculated by multiplying the person’s direct income interest in the first CFC by the income interest of the first CFC in the underlying CFC. If there are two or more CFCs interposed between the person and the underlying CFC, then the indirect income interest or interests of the person in the underlying CFC shall be calculated by multiplying the direct income interests of each interposed CFC in each chain of CFCs in like manner.

Generally, an option to acquire an interest is not recognised as an income interest. Thus ensuring only interests in the CFC that have an entitlement to income or assets or an ability to control an entitlement to income or assets are actually used as the basis for attributing income. However, options will be taken into account in circumstances when they are used to defeat the intent and application of the CFC rules, in subpart CQ, subpart DN and subpart EX.

Section EX 11 applies when:

(a) A person (or another person, for example an interposed CFC) has at any time an option to acquire one of the types of income interest listed in s EX 9 in a CFC, but does not hold that interest at that time; and

(b) If s EX 11 did not exist, and having regard to the economic benefit that the person gets as a result of the CFC deriving income, the effect of the option would be to defeat the intent and application of the CFC rules; or

(c) The consideration payable for the exercise of the option is less than the market value of the interest subject to the option; or

(d) The holder of the option (or an associated person) has directly or indirectly funded or assisted the actual holder to acquire or hold the interest subject to the option.

If these conditions are met, the person’s income interest is deemed to be calculated as if the option holder had exercised the option [s EX 11(5)].

The section does not apply if the actual holder of the interest subject to the option is a CFC or a New Zealand resident, unless they are a New Zealand resident whose income interest in the CFC is less than 10 per cent under ss EX 14 to EX 17.

When the income interest of any person in any CFC varies during any accounting period of the CFC, the income interest is calculated using the formula in s EX 17. The formula gives a weighted average interest to be applied for the full income year. The reason for this is because the CFC rules attribute CFC income using only one interest: separate calculations are not undertaken if the income interest varies.

When a person’s interest in a CFC varies during an accounting period, the person’s interest is calculated for each period that the person’s interest remains unchanged, by adding the amounts determined by the following formula:

\[
\text{income interest for day / days in period} = \frac{\text{income interest for day}}{\text{days in period}}
\]

**Example 1:**

A person with a 100 per cent income interest in a CFC with a 31 March balance date sells their full interest in the CFC on 30 September, being 183 days into the accounting period. The person’s interest in the CFC for the full year of the CFC is:

\[
\frac{100}{183} = 54.65\%
\]
In determining the income interest for day in the formula, the interest is the income interest for the day if the interest does not vary during the day. If the interest varies during the day the interest at the start of the day is used.

Note: This seems to differ from the formula used in the ITA 2004 which was income interest x (days when interest unchanged / days in the accounting period). If that formula were used the result was 100% × (183 / 365) = 50.13%

In terms of s EX 16(2), if a person is not resident in New Zealand at all times during a day, the person’s income interest in the CFC on that day is zero. The fact that the formula averages a person’s interest over the full year can sometimes cause anomalies.

Example 2:
If the vendor in the above example had been making losses, and under the new shareholders control the company makes a profit for the full accounting period, the vendor will have a 50 per cent income interest in the full year’s CFC income, even though the vendor has no economic interest in those profits.

850.35 Cases where aggregate income interests are greater than 100 per cent [s EX 12]

When the aggregate income interests used to calculate attributed CFC income or loss (which also included attributed repatriations prior to the repeal of those rules for all income years beginning on or after 1 July 2009 — see 850.80) of residents from any CFC for any accounting period exceeded 100 per cent, the income interest of that person shall be that percentage calculated in accordance with the following formula:

\[
\text{Income interest before reduction} \times \frac{100}{\text{total income interests before reduction}}
\]

Income interests in a CFC could exceed 100 per cent in total because a person with an income interest in the CFC is required to use the highest of any interest they have in the CFC in terms of s EX 9(3). For example, a person holds 100 per cent of the voting rights in a CFC, but another shareholder holds 100 per cent of the profit entitlement rights. This would give total income interests of 200 per cent.

850.40 Attribution of CFC income and loss [ss CQ 2, DN 2, EX 18]

Attributed CFC income of a person is income under s CQ 1. A deduction for an attributed CFC loss is available under s DN 1. The general rules for determining when a person is required to take attributed CFC income or losses into account are contained in ss CQ 2 (CFC income) and DN 2 (CFC losses).

A person has attributed CFC income from a foreign company in an income year, if:

(a) The foreign company is a CFC at any time during the foreign company’s accounting period (ie when the control test in ss EX 1 to EX 7 is met at any time during the foreign company’s accounting period);

(b) The accounting period of the foreign company ends during the person’s income year;

(c) The person has an income interest (under ss EX 8 to EX 13) of 10 per cent or more in the CFC at any time in its accounting period;

(d) The person is a New Zealand resident (not being a transitional resident) [see 370.35] at any time during the accounting period;

(e) There is net attributable CFC income for the accounting period calculated under s EX 20, or if the CFC is in receipt of a taxable distribution from a non-qualifying trust, the rules in s EX 19 that allocate the taxable distribution to the people with income interests in the CFC apply. Although the taxable distribution does not form part of the net attributable CFC income, it is nevertheless still treated as attributed CFC income;

(f) The CFC is not a non-attributing active CFC for the accounting period under s EX 21B (that is if less than five per cent of the CFC’s total income is attributable income); and

(g) The CFC is not a non-attributing Australian CFC under s EX 22 for the accounting period.

There are two special rules highlighted in s CQ 2 when income is always attributed regardless of the residence or active/passive status of the CFC. The first is when s CQ 2(2) applies. This provision mirrors the rule in s EX 19 that applies when a CFC receives a taxable distribution from a non-complying trust. The rule in s CQ 2(2) requires a person with an interest in a FIF and uses the branch-equivalent method of calculating FIF income, to treat a taxable distribution received by the FIF as attributed CFC income.
The second special rule is when s CQ 2(2B) applies. This provision applies when a CFC derives personal services income that is an attributable CFC amount under s EX 20B(3)(h). Such income or loss is always attributed, even if the CFC is a non-attributing active CFC or a non-attributing Australian CFC.

Attributed CFC income of a person who has ceased to be resident in New Zealand during the income year is treated as being derived by that person while resident in New Zealand. That is, attributed CFC income is not apportioned for their period of residence and non-residence: instead this is adjusted in the formula in s EX 17.

The rules in s DN 2 for taking an attributed CFC loss into account, leaving aside quarantining, are essentially the same as those for attributed CFC income (discussed above).

The calculation of the actual attributed CFC income or loss is undertaken in accordance with the formula in s EX 18. That section links back to ss CQ 2 and DN 2 and states that when the conditions in those sections are satisfied and a person has attributed CFC income or a loss, then the amount of the income or loss is determined by multiplying the person’s income interest in the CFC for the accounting period, by the net attributable CFC income or loss of the CFC for that accounting period.

850.45 Persons not required to calculate attributed foreign income and loss [ss CQ 2(1)(d), DN 2(1)(d), EX 14, EX 15, EX 19(5), EX 21(35), EX 58(7), EZ 31]

The general rule is that no person with an income interest in a CFC shall calculate attributed CFC income or attributed CFC loss for an income interest in a foreign company for any accounting period when:

(a) That person at all times in that accounting period is not a resident or is a person who is a transitional resident [ss CQ 2(1)(d) and DN 2(d)];

(b) That income interest for that accounting period is not an income interest of 10 per cent or greater [s EX 14]; or

(c) Section EZ 31 applies [ss EX 19(5), EX 21(35) and EX 58(7)].

For the purposes of s EX 14 [and also for the purposes of ss CQ 2, EX 21, EX 34 and EX 58], in determining whether the income interest of any person in a CFC for any accounting period is an income interest of 10 per cent or greater, s EX 15 provides that a person’s income interest in a CFC is increased by each income interest, for the relevant accounting period of an associated person. Interests held by an associated person that is a CFC are specifically excluded to avoid double counting the interest.

**Example:**

Company A and Company B are associated persons and they each hold an income interest in a CFC of five per cent, prima facie under s EX 14 they do not have a sufficient interest of 10 per cent in the CFC, and are thus not required to attribute CFC income or losses. However, because of the associated person rule in s EX 15, both Company A and Company B will be considered to have an income interest of 10 per cent. Thus, both Company A and Company B will have to attribute CFC income or losses. However, this is calculated on the basis of their actual interest of five per cent.

Prior to its repeal for all income years beginning on or after 1 July 2009, under s EZ 31, no branch-equivalent income or loss calculated under s EX 21, FIF income or loss calculated under s EX 58, or additional CFC income under s EX 19, arose when a CFC was resident in a grey-list country and the company was listed on a recognised exchange in that country whose rules prevented the New Zealand resident with the interest in the CFC obtaining sufficient information to calculate income under the CFC rules.

The s EZ 31 exemption originally applied from the 2001-2002 to the 2005-2006 income years, inclusive. The exemption did not apply for any income year for which a return of income was filed before 31 March 2003. The exemption was extended up to and including the 2010-2011 tax year [Taxation (Depreciation, Payment Dates Alignment, FBT, and Miscellaneous Provisions) Act 2006, s 103] and repealed by s 195 of the Taxation (International Taxation, Life Insurance, and Remedial Matters) Act 2009.
Exemptions from the attribution of CFC income and loss [ss CQ 2, DN 2, EX 21B, EX 21C, EX 21D, EX 21E, EX 22, EX 23]

A person with an income interest of 10 per cent or more in a CFC will not have to include attributed CFC income or loss in the person’s gross income if the CFC passes an active business test. A CFC will pass the active business test and be a non-attributing active CFC if it has attributable income that is less than five per cent of its total income. Attributable and total income (for the purposes of the test), are measured using either financial accounting or tax measures of income.

CFCs in the same country may be consolidated for the purposes of the calculation of the five per cent ratio calculation. A CFC will also be a non-attributing active CFC for a person with an income interest in the CFC, if the person has applied for and obtained a determination from Inland Revenue that the CFC is an active insurance business under s 91AAQ of the TAA.

The other principal exemption applies when the CFC is resident and subject to income tax in Australia, and meets certain other conditions in s EX 22. Thus, if the Australian exemption does not apply, it will be necessary to determine if the CFC passes the active business test.

Active business test — broad outline [ss EX 21B-EX 21E]

If the Australian exemption does not apply it will be necessary to decide if the active business exemption is met. The first decision in this regard is whether to use tax or accounting concepts (standards) of income. Section EX 21B contains the broad framework to be used in this regard. It states that a non-attributing active CFC is a CFC that:

(a) Meets the requirements of s EX 21D (ie has a ratio of attributable to total income, using tax measures of income of less than five per cent); or
(b) Is able to and chooses to apply s EX 21E, and meets the requirements of that section (ie has a ratio of attributable to total income, using accounting measures of income of less than five per cent); or
(c) Meets the requirements of a determination made by the CIR under s 91AAQ of the TAA (ie is a CFC with an active insurance business).

Section EX 21C sets out the rules that must be met in order to use accounting standards for the purposes of the rules in s EX 21E [see 850.58].

If accounting standards of measuring income are to be used, they can be used for a single CFC or for a test group of CFCs. If the measures are to be used for a test group, the income of the CFCs in the test group is consolidated for the purposes of calculating the five per cent ratio of attributable to total income. Consolidation of the group income for this calculation may be advantageous. It will of course be necessary to determine the test group, which for the purposes of the accounting measures test is contained in s EX 21E(2).

If accounting standards of measuring income is not able to be used for the CFC or the test group, tax measures of income will have to be used. These rules are found in s EX 21D and termed the “default test”. If tax measures of income are to be used (as with the accounting standards test), they can be used for a single CFC or for a test group of CFCs. The test group is determined by the rules in s EX 21D(1).

If an accounting standard is used, the formula in s EX 21E(5) is then applied. The formula is the ratio of attributable income to total income. There are six components in the formula in s EX 21E(7) to (12). Rules in s EX 21E(4) govern how the calculation is to be done. Section EX 21E(3) explains (based on the result of the calculation) whether the CFC or the CFCs in the test group qualify for the active business exemption. The accounting standards test is discussed at 850.57.

The formula for the default test is contained in s EX 21D(4). There are four components in the formula in ss EX 21D(6) to (9). Rules in s EX 21D(3) govern how the calculation is to be done. Section EX 21D(2) explains, based on the result of the calculation, whether the CFC or the CFCs in the test group qualify for the active business exemption. The default test is discussed at 850.56.
Note: There is no ordering rule for whether accounting standards or tax concepts for calculating the active business test are used. This all depends on which method is appropriate for the person with the income interest in the CFC. Technically, different people with income interests in the same CFC could use different methods.

850.56 Non-attributing active CFC — default test [s EX 21D]

Section EX 21D sets out the rules for calculating the ratio of attributable income to total income when using tax measures of income. The ratio may be calculated either for a single CFC or for a test group of CFCs. If the ratio is not less than zero and is less than 0.05, then the CFC, or in the case of test groups, all the CFCs in the test group, will be non-attributing active CFCs, unless prevented from being so for some other reason (eg the application of s GB 15C).

The ratio calculation, with only one exception, is based on amounts of income and no deductions for expenditure or losses incurred are included in the calculation. Section EX 21D(1) contains the requirements that must be met for the ratio to be calculated for a test group of CFCs. Essentially, the requirements for a test group of CFCs treats the group as a single consolidated entity. The requirements that must be met are:

(a) That all the companies must be resident in the same country. The test for residence in this case is that all of the companies are liable for income tax in the same country by reason of domicile, residence, place of incorporation, or centre of management. For example, a CFC that is liable for tax in a country because of the presence of a permanent establishment in that country will not make it resident for the purposes of this test.

(b) The person with the interest in the CFC holds an income interest of more than 50 per cent in each of the CFCs in the test group. This is intended to prevent a CFC being a part of a test group for more than one interest holder.

(c) All CFCs in the group must make the same choice of method and currency under s EX 21(4). They must either all make the choice to convert all transactions to New Zealand dollars at the applicable daily rate, or all make the choice to use the same reporting currency. If the reporting currency is used, s EX 21(5) and (6) must be observed in the normal way, and s EX 21(7) will apply to certain financial arrangements. The purpose of this provision is to limit the scope for manipulating the test by the deliberate choice of different reporting currencies for CFCs within the group.

(d) The CFCs in the test group must be consolidated for the purposes of the test (and only for the purposes of the test). Consolidation requires the elimination of all intra-group balances, transactions, income and expenses, and the use of like tax treatments for like transactions. For example, it would not be appropriate for different CFCs in the test group to use different options for calculating financial arrangement income for the same type of financial arrangement. Inland Revenue advises that it is expected that elimination of intra-group transactions will be carried out in a way that is consistent with accepted accounting principles. Thus it is not expected or intended that there will be rigid compliance with any particular set of financial accounting standards. The rules for consolidation in subpart FM are not to be used for the consolidation of CFCs.

Section EX 21D(2) designates a CFC (whether alone or as part of a test group) as a non-attributing active CFC if the ratio of attributable income to total income in s EX 21D(4) is less than 0.05 and, if zero, is not zero because of the application of s EX 21D(3)(f) (which sets the ratio to zero if the denominator is a negative number). The ratio may be zero because attributable income is zero and there is some total income. In that case, the CFC is a non-attributing active CFC. If the ratio is zero for any other reason (ie s EX 21D(3)(f) applies because the denominator is a negative number), the CFC is not a non-attributing active CFC. This is because a negative denominator implies either an unintended result or no activity. When this happens, attribution is required.

Section EX 21D(3) explains how to apply the ratio formula in s EX 21D(4). If the formula is being applied for a test group, the test group is notionally treated as a single consolidated entity for these purposes. Each item in the formula in s EX 21D(4) is determined for a test group after amounts that relate to income interests not held by the interest holder are removed; thus if the group is not wholly owned consideration of the shareholding of each company in the group will be required.
Consistent with the single-notional-entity approach, for the purposes of the formula in s EX 21D(4), rules apply to determine when the test group is associated with a company or in the same group of companies as a company. Essentially the rule treats any company associated to a test group company, or in the same group of companies as a test group company, as associated to the test group or a member of the same group of companies as the test group. Thus:

- A company is associated with the test group if the company is associated with a member of the test group but is not a member of the test group; and
- A company is a member of the same group of companies as a test group if the company is in the same group of companies as a member of the test group, but is not a member of the test group.

However, in both cases it is not necessary that the company is a member of the test group. As mentioned, these rules apply only for the purposes of calculating the formula. They do not affect, for example, the application of the loss offset rules in Part I.

If either the numerator or denominator in the formula is negative, the ratio is treated as being zero. The legislation does not anticipate a negative numerator or denominator. However, if a negative result is produced, the result is set to zero.

If the denominator in the ratio formula is zero, the ratio is set to zero and the CFC will not be a non-attributing active CFC. A nil denominator implies either an unintended result or no activity on the part of the CFC and so attribution is required.

The formula to calculate the ratio is contained in s EX 21D(4), which provides:

\[
\frac{\text{attributable} - \text{attributable adjustment}}{\text{gross} - \text{gross adjustments}}
\]

The numerator (attributable – attributable adjustment) contains the calculation of attributable income, being the attributable CFC amount for the CFC (or test group notionally treated as a single CFC) calculated under s EX 20B (using the rules in s EX 21), less two optional adjustments specified in s EX 21D(7). The two optional adjustments are:

(a) The interest holder may choose to remove amounts relating to personal services under s EX 20B(3)(h). These amounts are always attributable, but the adjustment means a CFC may qualify for the active business exemption in relation to its other income. It is not possible to remove the amount if it would also come within another paragraph of ss EX 20B(3) or EX 20B(4). The removal of the amount is only for the purposes of applying the active business exemption.

(b) The interest holder may choose to subtract the cost of revenue account property when there is an amount under s EX 20B(3)(k). This provision brings in income from the disposal of revenue account property (that is not a share, financial arrangement or life insurance policy), that is used by the CFC with a purpose or effect of giving rise to income of the CFC referred to in another paragraph of s EX 20B(3). The effect of the adjustment is that only a net amount is included in attributable income. The adjustment is limited to the part of the cost of the property that would be allowed as a deduction for the period under s EX 20C, but also may not be more than the amount under s EX 20B(3)(k). In this way, net losses on disposal are not possible. This is for partial consistency with the use of gross amounts in the ratio calculation. If any amounts would be required to be added back in relation to the deduction under subpart CH, they must also be added back in the formula.

The denominator (gross – gross adjustments) is defined in ss EX 21D(8) and EX 21D(9). “Gross” is the annual gross income for the accounting period. Annual gross income is calculated generally as if the CFC were a New Zealand resident. As with the calculation of the attributable CFC amount (under s EX 20B), s EX 21 applies to the calculation of annual gross income. The definition excludes income arising under s CQ as CFC’s do not calculate income under the CFC of FIF rules.

There are four adjustments contained in s EX 21D(9). The first is the amount of any optional adjustment made to the numerator under s EX 21(7). The second is the removal of any expenditure or loss included in the calculation of the attributable CFC amount under s EX 20B. In practice, it is unlikely that there would be any such amounts as s EX 20B includes only income; this adjustment is purely a protective measure. The third adjustment is the removal of income derived by the CFC from a company, if the CFC and the company
could be members of the same test group under s EX 20D(1). The purpose of this adjustment is to prevent the inflation of total income by transactions between associated entities.

**Note:** In determining whether the CFC and the company could be members of the test group, it is not relevant that the required consolidation has actually been undertaken or not. It is relevant that if a person were to undertake the required consolidation, the CFC and the company would be eligible to be members of the same test group.

The fourth adjustment is the removal of income derived by the CFC from a supply to a company that could not be a member of a test group with the CFC, if the supply was made with the purpose of inflating the measure of total income [s GB 15B].

The third and fourth adjustments have a similar purpose, with the following differences:

(a) The third adjustment applies to income derived by a CFC from a company that could be part of a test group with the CFC, while the fourth adjustment applies when the company could not be part of a test group with the CFC; and

(b) The third adjustment does not require any purpose, while the fourth adjustment requires the purpose of increasing the measure of total income.

850.57 **Active business exemption using accounting standards** [s EX 21E]

Section EX 21E contains the rules for calculating the ratio of attributable income to total income when using accounting measures of income. This section needs to be read in conjunction with s EX 21C as an applicable accounting standard must be able to be used for the purposes of s EX 21E.

The ratio is calculated either for a single CFC or for a test group of CFCs. If the ratio of attributable income to total income is less than 0.05, (its attributable income is not negative, and its total income is greater than zero), then the CFC (or every CFC in the test group) will be a non-attributing active CFC.

Under s EX 21E(2) a test group can be used for any CFC in that group if:

(a) The group consists of companies required under the accounting standard to consolidate;

(b) Each company is resident in the same country;

(c) The interest holder holds an income interest of more than 50 per cent in each company;

(d) Each company has the same functional currency; and

(e) There are audited and consolidated financial statements that include the accounts of the companies in the group (whether or not the accounts of companies not in the group are also included) and comply with the applicable accounting standards.

**Note:** Section EX 21E(13) states that the financial statements will be taken to comply with the applicable accounting standard if they meet the requirements of s EX 21C in relation to that standard [s EX 21C(9)]. Section EX 21E(13) also deals with compliance with accounting standards.

**Note:** Section EX 21C also imposes requirements relating to the sets of accounting standards (the applicable accounting standard) that may be used by the test group. It is possible that the requirements of s EX 21E(2) will be met, but that no applicable accounting standard will be available for use under s EX 21C. In that case, the ratio may not be calculated for the test group under s EX 21E.

If the ratio in s EX 21E(5) is calculated for a test group, the test group is generally treated as a single CFC for the purposes of the calculation. Amounts for the test group must be consolidated under the applicable accounting standard. This requires elimination of transactions, balances, income and expenses between the group members. If consolidated financial accounts exist that include the accounts of companies in the test group and only those companies, it may be possible to use those accounts without alteration. However, if consolidated accounts include entities that are not members of the test group, a sub-consolidation will be required for the test group. Information from consolidation worksheets may be used for this purpose, providing it meets the requirements of s EX 21E(13).
The test group is treated as a single entity for the purposes of s EX 21E, and, as with the default test in s EX 21D, there are rules for determining when a company who is not a member of the test group is associated with the test group, or is a member of the same group of companies as the test group.

Each item in the ratio formula in s EX 21E(5) is to be adjusted to remove amounts attributable to minority interests. “Minority interest” is not defined in the legislation. However, according to Inland Revenue a minority interest is an interest in the CFC held by a person who is not the interest-holder calculating the ratio.

Removal of amounts attributable to minority interests is most relevant for test groups. For an individual CFC, removal of these amounts is expected to affect all amounts equally so that the ratio in the formula is unchanged. For a test group, removal of minority interest amounts is necessary to prevent all the income of an active business that is only partly owned by a New Zealand resident from sheltering attributable income of a company that is wholly owned by that resident.

Section EX 21E(5) is the ratio formula provision. However, s EX 21E(4) explains how the ratio calculation in s EX 21E(5) is to be undertaken.

Amounts used in the calculation must be determined under the applicable accounting standard. Amounts are taken to be determined under the applicable accounting standard if they are actually determined under that standard, or if the requirements in s EX 21E(13) are met. Having said that, some of the adjustments to base measures of attributable income and total income in s EX 21E(5) require the use of tax measures of income or expenditure, and thus will not be determined under the applicable accounting standard.

Each item in the formula must be adjusted so that there is no double counting of amounts [s EX 21E(4)(a)]. Double counting could occur if an amount was income under more than one paragraph of s EX 21E(7). For example, income from a financial arrangement under s EX 21E(7)(f) and income from property used to back insurance assets under s EX 21E(7)(h).

Section EX 21E(4)(f) requires that amounts are to be determined for a CFC using the functional currency of the CFC. Thus, the formula is not undertaken in New Zealand dollars. The functional currency of a CFC is determined by the applicable accounting standard and cannot be freely chosen. The concept of “functional currency” is more restrictive than the concept of “the currency of the CFC’s financial accounts” in s EX 21E(4).

Amounts may have to be translated from a currency that is not the functional currency of the CFC, such as when the CFC makes sales outside its own country. In that case, conversion to the functional currency must comply with the applicable accounting standard. Translation under the applicable standard will frequently result in the recognition of an exchange rate gain or loss, which may need to be included in measures of attributable or total income. The one exception to the general rule is that exchange differences arising on monetary items that form part of a net investment of the CFC in a foreign operation are ignored. A monetary item that is part of a net investment in a foreign operation is an item for which settlement is neither planned nor likely to occur in the foreseeable future (eg see the definition in International Accounting Standard IAS-21).

A test group applies the same rules for exchange rate conversion as an individual CFC. That is, conversion to the functional currency must comply with the applicable accounting standard. Consolidated financial accounts are presented in a presentation currency, which may differ from the functional currency of any of the entities whose accounts are being consolidated. Because all the entities in a test group will have the same functional currency, conversion to a different presentation currency is unnecessary and the functional currency should be used. For the avoidance of doubt, the legislation requires that if a presentation currency is used to calculate amounts, translation of all amounts from the functional to the presentation currency must be undertaken using an average exchange rate for the year [s EX 21E(4)(g)]. The effect is that the amounts in presentation currency will be nothing more than a scaled-up or scaled-down version of the amounts in the functional currency.

Section EX 21E(5) contains the formula for calculating the ratio of attributable income to total income using accounting measures of income.

The formula is:
(reported passive + added passive – removed passive) / (reported revenue + added revenue – removed revenue)

The numerator in the formula consists of a base measure of attributable income (reported passive). There are subsequent compulsory upward adjustments (added passive), and then optional downward adjustments (removed passive). Double counting and double removal are prevented by requiring that amounts are included in added passive only to the extent they are not already included in reported passive. Amounts are included in removed passive only to the extent that they are already in reported passive or added passive.

The denominator in the formula consists of a base measure of total income (reported revenue). There are subsequent optional upward adjustments (added revenue) and compulsory downward adjustments (removed revenue). As with the numerator, double counting and double removal are prevented.

Section EX 21E(7) defines the terms in the formula in s EX 21E(5).

(1) Reported passive

Reported passive includes:

(a) Dividends;
(b) Interest;
(c) Royalties;
(d) Rental;
(e) Income from a finance lease or operating lease (that is not rent or interest);
(f) Income or loss from a financial asset, other than a derivative (as defined in NZIAS-39) or a share that is not revenue account property, in the form of:
   (i) A change in fair value of the asset;
   (ii) A gain or loss on derecognition, as defined in NZIAS-39;
   (iii) A foreign exchange gain or loss on the asset;
(g) Income or loss from a derivative, as defined in NZIAS-39 when:
   (i) The derivative is held in the course of a business for the purposes of dealing;
   (ii) The derivative is not entered in the ordinary course of a business of the CFC; or
   (iii) The derivative is part of a hedging relationship (as defined in NZIAS-39) and an amount would increase the numerator in the formula or when the derivative would produce such an amount of income or gain;
(h) Income or gains from the business of insurance, including income or gains from property used to back insurance assets.

Note: The terms derivative, derecognition and financial asset are all derived from NZIAS-39 for the reason that generally accepted accounting practice without IFRS does not adequately define the terms. However, once defined, the applicable accounting standard is then used to measure the income. For example, if generally accepted accounting practice without IFRS is used, NZIAS-39 is used to identify the assets of the CFC that are financial assets. Having identified the financial assets, generally accepted accounting practice without IFRS is then used to measure any income or loss.

The amounts of reported passive income are included on a gross basis, whether or not derived in the ordinary course of business. Importantly these terms have the meanings they have under the applicable accounting standard, rather than their tax meanings. For example, if generally accepted accounting practice with IFRS or IFRSEs is used, International Accounting Standard IAS-18 (Revenue) provides guidance about the recognition of dividends and royalties when received in the ordinary course of business. International Accounting Standard IAS-17 (Leases) provides some guidance about the recognition of interest, rents and other lease income under a lease. Inland Revenue advises that if the applicable standard provides no guidance, the meanings of dividend, royalty, rental and lease should be determined according to the general
understanding of accountants who would apply the standard. Presumably other authoritative statements could be relied on also if these were used in the preparation of the accounts.

**Note:** The label given to a component of income in the accounts or on the face of financial statements does not determine the character of the amount. For example, if an amount would be a royalty under International Accounting Standard IAS-18, but is included in “other income” in the statement of financial performance because it is not in the ordinary course of business, it is still a royalty for the purposes of s EX 21E(7).

Another example arises when reported passive income is interest income. This is measured on a gross basis (with no deduction for expenses). Interest income is recognised under generally accepted accounting practice with IFRS and IFRSEs under International Accounting Standard IAS-18, when the interest is received in the course of ordinary activities of the entity. That standard specifies that the effective interest method (set out in International Accounting Standard IAS-39) is to be used to calculate the amount of interest income (this is essentially yield-to-maturity). Interest income will also be recognised when not received in the ordinary course of the activities of the entity. Again, the effective interest method would normally be used. It is expected that similar principles would apply under generally accepted accounting practice without IFRS, although there is no relevant standard to spell this out.

When the income or loss is a change in the reported fair value of a financial asset, a gain or loss on the derecognition of the asset or a foreign exchange gain or loss on the asset [as per s EX 21E(7)(f)], income or loss is to be included regardless of whether or not it appears in the income statement or elsewhere in the accounts. Losses will occur if the reported fair value declines, there is a loss on derecognition of the asset, or there is a foreign exchange loss on the asset.

**Note:** Losses will not occur because expenditure (ie the cost of borrowing to purchase the asset) has been incurred in deriving income from the asset. Such expenditure is ignored for the purposes of the ratio calculation. Some items of income can fall under more than one category for the purposes of s EX 21E(7). For example, some interest income is recognised under s EX 21E(7)(b) even though it flows from the holding of a financial asset. If an amount is included under paragraph (f) and another paragraph, s EX 21E(4)(a)(ii) allows an adjustment to prevent double counting.

Other points to note are:

(a) Income or losses from shares that are not revenue account property are excluded from the ambit of s EX 21E(7)(f) because any gains or losses on these shares would not be income or loss if tax measures of income were used. The term “revenue account property” is defined in s YA 1.

(b) Income or loss from a derivative instrument is included only if the instrument is held for dealing, not held in the ordinary course of business, or is hedging the accounting measure of attributable income or a transaction that would give rise to such attributable income [s EX 21E(7)(g)]. Thus, in general, derivative income or losses will not be in reported passive when they are the result of hedges of active income.

(c) Section EX 21E(7)(g) requires any hedging relationship (that hedges the numerator in the formula, reported and added passive less removed passive) to be of a type defined in NZIAS-39. As with s EX 21E(7)(f), again, this applies to identify when there is a hedging relationship, not to measure any income or loss from the derivative instrument.

(d) It is not necessary for a hedging relationship to qualify for hedge accounting treatment under generally accepted accounting practice with IFRS or IFRSEs, which requires proper designation of the hedge and that the hedge be highly effective. If a hedging relationship is not effective or only partly effective, it may well be that any gain or loss from the hedge will be attributable income as it may not be held in the ordinary course of business or the business deals in derivatives.

(e) When a hedge is effective such that a hedging relationship exists, but the hedge is still partly ineffective, the part of the gain or loss that reflects the ineffective portion of the hedge is likely to be included in attributable income. This is because the legislation does not limit the income or loss to the amount attributable to the effective portion of the hedge. This is the case even though income or loss from the ineffective portion of the hedge may be presented in a different line item in the accounts.
(f) If a CFC uses a derivative to hedge a transaction that gives rise to both non-attributable and attributable income, the hedge gain or loss is recognised only to the extent it relates to the hedging relationship with attributable income. This will require apportionment on a reasonable basis. Further, any income or loss attributable to the ineffective portion of a hedge will usually be included in the amount to be apportioned and counted accordingly.

(g) Income or gains from a business of insurance includes premium income from insurance or reinsurance activities. It also includes income or gains from property used to back insurance assets, such as interest, dividends, rents or fair value changes flowing from assets held to satisfy future insurance claims.

(2) **Added passive**

Added passive is defined in s EX 21E(8) and is the compulsory upward adjustments to the base measure of reported passive. There are four adjustments:

(a) Income from a life insurance policy that is included in the attributable CFC amount for the accounting period under ss EX 20B(3)(g) and EX 20B(8) when there is a distribution from a life insurance policy or there is income from the disposal of life insurance policies held on revenue account. Life insurance policies are included as added passive income because they can be used as substitutes for interest bearing investments. The amount to be included is the tax concept of income.

(b) Income from the disposal of revenue account property that would be included in the attributable CFC amount under s EX 20B(3)(k). The adjustment does not apply to the disposal of a share, a financial arrangement or a life insurance policy, because they are covered by other provisions. The adjustment also does not apply unless the property is used in a way that gives rise to income or gains that increase the accounting measure of attributable income (the numerator in the formula). The amount of the upward adjustment is the same as the amount that would be included under s EX 20B(3)(k), except to the extent the amount is already included in reported passive. Section EX 21E(9)(d) allows a reduction (in the value of the numerator) for the cost of the property.

(c) Income from services (base company income) under s EX 20B(3)(l) to the extent to which the service is physically performed in New Zealand.

(d) Income from the supply of telecommunication services that arises under ss EX 20B(3)(m) and EX 20B(3)(n).

(3) **Removed passive**

Removed passive is defined in s EX 21E(9) and is an optional downward adjustment to the base measure of reported passive. There are four adjustments:

(a) Dividends that are not included in the attributable CFC amount under ss EX 20B(3)(a) to EX 20B(3)(c). The amounts removed are only removed to the extent they are already included in reported passive or added passive.

(b) Royalties that would have been included in the attributable CFC amount in s EX 20B(3)(d) but for the fact that they are excluded by ss EX 20B(5)(a) to EX 20B(5)(d). The amounts removed are the amounts determined using tax measures of income. Removal is permitted only to the extent the amounts were already included in reported passive or added passive.

(c) Rents that would have been included in the attributable CFC amount in s EX 20B(3)(e) but for the fact that they are excluded by ss EX 20B(7)(a) to EX 20B(7)(c). The amounts removed are the amounts determined using tax measures of income. Removal is permitted only to the extent the amounts were already included in reported passive or added passive.

(d) The cost of revenue account property that produced an attributable CFC amount under s EX 20B(3)(k). The amount included under s EX 20B(3)(k) was included on a gross basis in added passive. The effect of subtracting the cost ensures only the net amount from the sale is included in attributable income. The amount subtracted may not exceed the gross proceeds of the sale included in added passive. Further, any amounts that would have to be added back in relation to the deductions
under subpart CH, if the CFC were a New Zealand resident, reduce the amount of cost that is subtracted.

(4) Reported revenue

Section EX 21E(10) defines the base measure of total income (reported revenue) used in the ratio of attributable income to total income. In accounting terms, reported revenue is not always an exact science in terms of where it may be recorded in the financial accounts. Thus, there may be cases when the provisions of s EX 21E(1) pick these amounts up more than once. Regard should always be made to s EX 21E(4)(a) that excludes double counting.

At the heart of reported revenue for CFCs with active businesses will be “revenue” as per International Accounting Standard IAS-18 (Revenue) when using IFRS or IFRSE. If the applicable accounting standard is generally accepted accounting practice without IFRS, the amount of revenue to include is the amount reported as “operating revenue”. It is expected that revenue (under any standard) will usually include income from interest, dividends and royalties. Revenue is also expected to include most income from the supply of services, such as attributable CFC amounts under ss EX 20B(3)(l) to EX 20B(3)(n). Most lease income is excluded from IAS-18, so this income is included separately in s EX 21E(10)(b). Income from the business of insurance is also dealt with separately as International Financial Reporting Standard IFRS-4 (and its New Zealand equivalent) is explicitly excluded from IAS-18 (and its New Zealand equivalent).

Gains or losses on non-derivative financial assets are included at s EX 21E(10)(c). The description of this item is identical to the description in s EX 21E(7)(f).

Gains or losses on certain derivative instruments are included at s EX 21E(10)(d). The description of this component is very nearly the same as the description in s EX 21E(7)(g), except that s EX 21E(10)(d)(iii) refers to a gain or loss from a hedging relationship affecting an amount that would change the denominator, whereas s EX21E(7)(g)(iii) refers to the impact on the numerator. Thus the difference is that instead of the hedging relationship being with the accounting measure of attributable income, or transactions that would give rise to such attributable income, the hedging relationship is the accounting measure of total income. This last point is important as hedges of expenses or liabilities are (according to Inland Revenue) not related to the derivation of revenue and are thus excluded from reported revenue in the denominator.

Income or gains from the business of insurance are the final component of reported revenue.

(5) Added revenue

Section EX 21E(11) defines the optional upward adjustments to the base measure of total income. There are two adjustments. They add income from a life insurance policy that is included in the attributable CFC amount under s EX 20B(3)(g) or income from the disposal of revenue account property that is treated as an attributable CFC amount under s EX 20B(3)(k) and the property is not a share, financial arrangement or life insurance policy, and it is used in such a way so as to give rise to income or gains that increase the numerator. The reason these adjustments are separately identified is that they are not likely to be included in revenue or operating revenue, because they will often not arise in the ordinary course of business.

(6) Removed revenue

Section EX 21E(12) defines the compulsory downward adjustments to the base measure of total income. There are seven adjustments required.

The first is the removal of the cost of revenue account property, if it was also removed from the measure of attributable income under s EX 21E(9)(d).

The second is the removal of the amount of a dividend, if it was also removed from the measure of attributable income under s EX 21E(9)(a) (ie dividends not included in attributable CFC income under ss EX 20B(3)(a) to EX 20B(3)(c)).

The third adjustment is the removal of personal services income that would be an attributable CFC amount under s EX 20B(3)(h). This income is disregarded for the purposes of the ratio calculation, as it is still taxable under ss CQ 2(2B) and DN 2 if the CFC qualifies for the active business exemption. While this income was not explicitly removed from reported passive in the numerator, it is unlikely to have been included in any of
the categories of attributable income using accounting measures as it is a creature of our tax law and not a measure of income by accounting standards.

The fourth adjustment is the removal of income or loss from a share that is not revenue account property. “Revenue account property” is defined in s YA 1. The income or loss may have been included in reported revenue so an adjustment is necessary for greater consistency with the tax measure of total income (gross income).

The fifth adjustment in s EX 21E(12)(e) is the removal of income derived by the CFC from a second CFC, if the second CFC could be part of a test group with the first CFC. This prevents the inflation of total income by arrangements between associates.

The sixth and seventh adjustments apply only when the applicable accounting standard is generally accepted accounting practice without IFRS. They apply to correct things recognised as revenue (eg a reduction of a provision or revaluations). The adjustment is intended to provide a closer approximation to tax measures of income.

Section EX 21E(13) sets out the conditions when accounts are taken to meet the requirements of the applicable accounting standard. This provision states that the accounts must meet the requirements of s EX 21C for the relevant accounting standard used for the purposes of calculating the active business ratio. In particular, s EX 21C(9) sets out the requirements that must be met. Effectively they are that the accounts state that they comply with the relevant standard, the accounts have received an unqualified audit opinion by an independent chartered accountant, and there are not reasonable grounds to suspect fraud, intent to mislead or incompetence.

Inland Revenue advises in their special report on the CFC rules issued in October 2009 that “strict compliance at a detailed level with the requirements of the standard will often not be practical, and an unqualified audit opinion will usually require compliance only in all material respects”. Thus, Inland Revenue accepts that this provision does not require strict compliance with the applicable standard.

Section EX 21E(13)(b) deals with the situation when information is not always directly available from the published accounts. For example, consolidated accounts for a corporate group may only provide information in a relatively aggregated form. When more detailed information is required, this may have to come directly from the CFC’s internal accounting systems or other similar sources.

Section EX 21E(13)(b) states that this information will still be taken to comply with the relevant accounting standard, as long as:

(a) It is drawn from compliant accounts (even though not appearing on the face of financial statements), or that was used to prepare compliant accounts; and

(b) The information is consistent with the compliant accounts; and

(c) There is no evidence of fraud, intent to mislead or incompetence.

850.58 Compliance with accounting standards [s EX 21C]

(1) Accounting standards test of determining the active business test

When using accounting standards to determine the ratio of a CFC’s attributable income to total income, it is first necessary to consider s EX 21C to determine whether accounting standards can be used. That is, while taxpayers have a choice as to whether they use the accounting standards measures or the default tax test, use of accounting standards is not automatic; it is necessary that the standards are permitted by s EX 21C. Further, if s GB 15C, which relates to the use of the accounting standards rules in s EX 21E to avoid tax applies, it is not possible to use accounting standards, and the rules in s EX 21D must be used.

Under s EX 21C there are three types of financial statements that may qualify:

(a) Generally accepted accounting practice with IFRS (ie New Zealand IFRS equivalents) [ss EX 21C(2) and EX 21C(3)];

(b) International financial reporting standard equivalents (IFRSE) (ie non-New Zealand IFRS equivalents) [ss EX 21C(4) and EX 21C(5)]; or
(c) Generally accepted accounting practice without IFRS (ie the old GAAP rules) [ss EX 21C(6) and EX 21C(7)].

Each of these requirements is discussed below. The one requirement that all three types of financial reporting standards must adhere to is that the accounts must be audited by an accountant who is a chartered accountant or an accountant of equivalent professional standard in the country in which the accounts are prepared, and the auditor must be independent of the CFC. It is also necessary that the accounts are given an unqualified opinion by the auditor [s EX 21C(8)].

A further overarching design feature is that only one type of financial statement may be used [referred to in the legislation as the “applicable accounting standard” — see s EX 21C(1)] for a CFC or a test group of CFCs. That is, features of all three types of financial statements permitted under s EX 21C cannot be cherry picked to give preferential outcomes for any one CFC or a test group.

(2) Generally accepted accounting practice with IFRS

Under s EX 21C(2) the interest holder may use generally accepted accounting practice with IFRS for a particular CFC if the person with the CFC interest or another person has accounts that:

(a) Include the accounts of that CFC;
(b) Comply with generally accepted accounting practice with IFRS; and
(c) The audit requirements in s EX 21C(8) are met.

The accounts may be for the CFC alone or for a group of companies that includes the CFC. In the latter case, further work will be required to separate (deconsolidate) amounts relating to the CFC in order to apply s EX 21E. The accounts may be held by the person who holds an interest in the CFC or by someone else.

The term “generally accepted accounting practice with IFRS” means generally accepted accounting practice, as defined in s 3 Financial Reporting Act 1993, but with a requirement that the New Zealand equivalents to International Financial Reporting Standards must be used as the financial reporting standards referred to in that section. These New Zealand standards (referred to as “IFRS” in s YA 1), are initially issued by the International Accounting Standards Board (IASB), then approved, with modifications, by the New Zealand Accounting Standards Review Board. Some entities qualify to use a subset of these standards (the “framework for differential reporting for entities applying the New Zealand equivalents to the international financial reporting regime”). That subset is also acceptable for the purposes of s EX 21E.

While the accounts must comply with generally accepted practice with IFRS, often absolute compliance is not practical. However, Inland Revenue advises that audited accounts will be treated as complying.

Section EX 21C(3) allows a person to use generally accepted accounting practice with IFRS for a “test group” of CFCs if accounts exist that include the accounts of the CFCs in the test group. The “test group” is defined under s EX 21E(2) as a group of CFCs a taxpayer has an income interest of more than 50 per cent and that are resident in the same country or territory and:

(a) The group consists of companies required to consolidate, whether or not with companies that are not in the group;
(b) Each company has the same functional currency; and
(c) There are audited and consolidated financial statements that include the accounts of the companies in the group and comply with the applicable accounting standards.

If the complying accounts also include the accounts of other entities, such as all the entities in a worldwide group, further work will be required to separate amounts relating to the test group when applying s EX 21E. The accounts may be held by the person who holds an interest in the CFCs in the test group or by someone else.

(3) International financial reporting standard equivalents

“IFRSE” is defined in s YA 1 as “an International Financial Reporting Standard approved by the International Accounting Standards Board, as amended from time to time”. Section EX 21C(4) allows the use of accounts that comply with international financial reporting standards. In contrast, s EX 21C(2) (discussed above),
allows the use of New Zealand equivalents to international financial reporting standards. In most respects, international financial reporting standards and the New Zealand equivalents to those standards are identical. However, that will not always be the case. Hence the fact that compliance with both IFRSE and the New Zealand equivalents is permitted.

Section EX 21C(5) allows a taxpayer to use IFRSE accounts for a test group of CFCs if accounts exist that include the accounts of the CFCs in the test group.

(4) Generally accepted accounting practice without IFRS

Section EX 21C(6) allows a company to use generally accepted accounting practice without IFRS for a particular CFC if specific requirements in that section are met.

The term “generally accepted accounting practice without IFRS” means generally accepted accounting practice as defined in s 3 of the Financial Reporting Act 1993, but with the restriction that the financial reporting standards referred to in that section must not be New Zealand equivalents to international financial reporting standards. Pre-IFRS New Zealand financial reporting standards (usually referred to as FRSs) is what the rules in ss EX 21C(6) and EX 21C(7) are referring to.

Allowing the use of pre-IFRS accounting standards is necessary because a large number of small and medium-sized entities are not yet required to comply with New Zealand equivalents to international financial reporting standards, pending completion of a review of financial reporting requirements by the government. These rules may well be temporary — they may be replaced, or repealed as the future of reporting requirements becomes clearer or as FRSs become outdated. The rules are not to be used when accounts that comply with IFRS are available [s EX 21C(6)(e)].

The requirements that must be met to use “generally accepted accounting practice without IFRS” are that a company that is resident in New Zealand must:

(a) Hold accounts that include the accounts of the CFC, that comply with generally accepted accounting practice without IFRS, and meet the audit requirements of s EX 21C(8);

(b) Not have revenue under either Financial Reporting Standard FRS-34 or Financial Reporting Standard FRS-35 (the intent is that insurance businesses will not be able to use generally accepted accounting practice without IFRS for the purpose of s EX 21E);

(c) Not be an issuer under s 4 of the Financial Reporting Act 1993 in the current accounting period and not have been an issuer in the preceding accounting period;

(d) Not be required by s 19 of the Financial Reporting Act 1993 to file its accounts with the Registrar of Companies;

(e) Not be a large company under s 19A(1)(b) of the Financial Reporting Act 1993; and

(f) Not have accounts (and not be a subsidiary of a company having accounts) that are prepared and audited under generally accepted accounting practice with IFRS (if such accounts are available, generally accepted accounting practice with IFRS should be used for the purposes of s EX 21E).

Most, but not all, of the requirements match those in Accounting Standards Review Board Release 9 (ASRB-9). ASRB-9 specifies the entities that are permitted to defer compliance with New Zealand equivalents to international financial reporting standards. However, as these requirements are set out in s EX 21C, in the event that ASRB-9 is withdrawn, amended or superseded, the requirements in the legislation will prevail for these purposes.

Section EX 21C(7) allows a taxpayer to use generally accepted accounting practice without IFRS for a test group of CFCs if certain requirements are met. The requirements are mostly the same as those in s EX 21C(6), except that the accounts must include the accounts of all the CFCs in the test group. If the accounts include the accounts of other entities, in addition to the CFCs in the test group, additional work will be required to identify and separate amounts relating to the test group.

(5) Compliance with accounting standards

Under s EX 21C(9) accounts are treated as complying with the relevant accounting standard if:
(a) The accounts state that they comply with the accounting standard;
(b) The accounts meet the audit requirements of s EX 21C(8); and
(c) The CIR does not have reasonable grounds to suspect:
   (i) Fraudulent activity by the interest holder, the CFC, a CFC in the CFC’s test group, or the auditor;
   (ii) Preparation of the accounts with an intent to mislead; or
   (iii) Incompetence of the auditor.

850.60 The Australian exemption [s EX 22]
A CFC qualifies to be a non-attributing Australian CFC if it is resident and subject to income tax in Australia. The CFC must also not be treated as being resident in another country under a double taxation agreement that Australia has with that other country.
A further requirement is that the CFC’s liability for income tax has not been reduced by an exemption for income tax for income derived from business activities carried on outside Australia or the CFC avails itself of any special allowance, relief, or exemption with respect to offshore banking units.
If the CFC is resident in Australia and meets all the other criteria of s EX 22, then no attributed CFC income or attributed CFC loss arises from the non-attributing Australian CFC. However, s EX 22 does not prevent the FIF look through rule operating. The look through rule applies to tax any FIF income (when FIF interests are held by a CFC) directly back to the persons with the CFC income interests [see 850.70].

850.65 CFCs in receipt of taxable distribution from non-qualifying trust [s EX 19]
When a CFC receives a taxable distribution from a non-qualifying trust, s EX 19 provides that:
(a) The taxable distribution is not taken into account in calculating the branch equivalent income or loss of the CFC;
(b) The taxable distribution is taxed directly to the person with an income interest in the CFC at 45 per cent (the rate in sch 1 of the ITA); and
(c) The amount to be taxed is calculated by multiplying the person’s income interest in the CFC for that accounting period by the amount of the taxable distribution.

Section EX 19 only applies if the person with the income interest in the CFC in receipt of the taxable distribution would have been required to calculate attributed CFC income or loss in respect of that income interest. Thus, s EX 19 will not apply if the CFC is an unqualified grey-list CFC or an income interest of 10 per cent is not held.
Although the amount of the taxable distribution is taxed at the rate applicable to such distributions from non-qualifying trusts, the amount calculated under s EX 19 is actually deemed to be attributed CFC income, referred to as “additional attributed CFC income”.

Note: The rules relating to taxable distributions from non-qualifying trusts differ to those relating to interests in FIFs held through a CFC, that will always attribute FIF income back whether the CFC is resident in an unqualified grey-list country or not. FIF income derived in these circumstances also retains its nature as such, and is not deemed to be additional attributed CFC income.

850.70 CFCs with interests in foreign investment funds [ss CQ 5(3), EX 21(33), EX 58]
When a person has an interest of 10 per cent or more in a CFC, that has an interest in a FIF, the FIF income or loss does not form part of the attributed CFC income or loss, and instead is calculated directly to the person with the income interest of 10 per cent or more in the CFC [see 850.210].
When any FIF income or loss is not taken into account in calculating net attributable CFC income or loss the person has FIF income or loss for their income year in which the accounting period of the CFC ends, calculated...
International Tax Regime

by multiplying the income interest of the person in the CFC by the FIF income or loss calculated in respect of the CFC’s interest in the FIF.

Because the amount attributed to the person is be deemed to be FIF income or FIF loss of that person, the rules require that person to:

(a) Choose the calculation method for the FIF income or loss, as per the rules in ss EX 44 to EX 48; and
(b) Apply the calculation rules in ss EX 44 to EX 61 as though they held the FIF interest directly.

A further exclusion applies to any FIF that is a life insurer. As with the CFC rules, all income, profits and gains that are actuarially determined to be attributable to the policyholders are excluded from the CFC attribution rules. This exclusion is mirrored in s EX 58 when FIF income is calculated directly to the shareholders of the CFC.

Note: Section EX 21(33) contains three requirements that must apply when FIF income is to be excluded from net attributable CFC income or loss. These are:

(a) That the rights are not prevented from being an attributing FIF interest of the CFC because of the notional New Zealand residence given to the CFC by s EX 21(2) means that the FIF interest is actually an interest in a CFC of 10 per cent or more (see below for a further explanation);

(b) The FIF income or loss of the CFC in these circumstances is not taken into account in calculating the net attributable CFC income or loss; and

(c) Section EX 58 applies (discussed above).

The first of these three criteria (item (a) above), deserves a short explanation. Because the net attributable CFC income or loss is calculated as though the CFC were a New Zealand resident [s EX 21(2)], the interest of the CFC in the FIF could (notionally) be an interest in a CFC if it was an interest of 10 per cent or greater. Section EX 34 prevents an interest of 10 per cent or greater in a CFC from being a FIF interest. In effect, s EX 21(33)(a) provides that even if the notional residence of the CFC means that the CFC’s interest in the underlying company is an interest in a CFC, not a FIF, that will not on its own preclude s EX 58 from taxing the FIF income directly to the person with the interest in the CFC.

As with an income interest in a CFC, the FIF income or loss of a person who has ceased to be resident in New Zealand is treated as being derived while the person was a New Zealand resident (ie the income or loss is not apportioned further), as the period of non-residence is already taken into account in determining the income interest percentage applicable for the accounting period.

850.80 Calculation and attribution of CFC repatriation [ss CD 21, CD 45 to CD 52, CZ 10, GB 8]

The CFC attributed repatriation calculation rules were introduced to bolster the dividend withholding payment avoidance rule in s GB 39. The rules were targeted at arrangements to avoid the DWP rules by CFCs acquiring property in New Zealand that is made available for use by the New Zealand residents with interests in the CFC. The rules treated the increase in the New Zealand property amount of a CFC over its accounting period as a dividend. However, it could never exceed the amount of the unrepatriated income balance of the CFC.

These rules have been repealed for all income years beginning on or after 1 July 2009 by s 14 of the Taxation (International Taxation, Life Insurance, and Remedial Matters) Act 2009 as part of the reforms to the international tax rules. As most foreign dividends are now exempt there is no need for the rule.

850.81 Calculating attributable CFC amount and net attributable CFC income or loss [ss EX 20B, EX 20C, EX 20D, EX 20E, EX 21]

Under the rules that apply from the 2010-2011 income year, only the passive income of a CFC is attributed back when the five per cent threshold ratio is breached, either for the CFC concerned, or for a group of CFCs (referred to in the legislation as the consolidated test group). If the five per cent passive income threshold is not reached nothing is attributed back. These CFCs are referred to in the legislation as non-attributing active CFC.
Even when the passive five per cent threshold rule is breached, only passive income of the CFC is attributed back, as set out in s EX 20B. This income attributed back to the New Zealand residents with income interests of 10 per cent or greater in the CFC and, and is determined by multiplying the person’s income interest in the CFC by the net attributable CFC income (formerly the branch equivalent income).

The rules are quite a complex labyrinth that requires determination of what the passive income amounts are and the calculation of whether the five per cent threshold has been breached.

(1) Definitions

“Attributable CFC amount” is a gross term used to define the items of passive income in s EX 20B that become taxable if the passive income threshold is breached.

“Attributed CFC income or loss” is the person’s income interest x the net attributable CFC income or loss [s EX 18].

“Net attributable CFC income or loss” is attributable CFC amount adjusted for funding costs and deductions under s EX 20C.

850.82 CFC signposting provision [s EX 18A]

The starting point in the CFC rules is s EX 18A, which is a signpost provision to the CFC calculations required. Section EX 18A(1) sets out the key components of the formula for the determination of the persons attributed CFC income or loss. It states that the attributed CFC income or loss of a person is found by multiplying the person’s income interest in the CFC by the CFC’s net attributable income or loss. Further this amount may be increased by any taxable distribution derived by the CFC for a non-complying trust as per the rules in s EX 19. A person’s CFC income or loss may be reduced is the provisions of s EX 20 apply to reduce any loss of the CFC to the economic loss suffered by the person.

Section EX 18A(2) provides that a person with an income interest (termed the interest holder in the legislation) in a CFC that has an attributable CFC amount under s EX 20B (that defines the passive income types that can be attributed back when the five per cent threshold rule is exceed) [see 850.95] has attributable income or loss equal to their income interest multiplied by the CFC’s net attributable income or loss as determined by ss EX 20C to EX 20E and the rules in s EX 21 and ss EX 24 to EX 27. However, no attributed CFC income or loss arises if the CFC is a non-attributing active CFC under s EX 21B or a non-attributing Australian CFC under s EX 22.

Section EX 18A(3) states that a non-attributing active CFC is determined under s EX 21B using the tests, as applicable, in ss EX 21D, EX 21E or EX 21C and the rules in s EX 21 and ss EX 24 to EX 27.

850.83 Attributable CFC amount [s EX 20B]

Section EX 20B defines what income is regarded as passive. This is the income of the CFC that must be attributed back if the five per cent threshold is breached. The broad categories of passive income are:

(a) Dividends;
(b) Interest (or financial arrangement income);
(c) Royalties;
(d) Rents;
(e) Other passive income (income from offshore life and general insurance businesses, life insurance policies, personal services and the disposal of revenue account property);
(f) Certain income relating to telecommunications services; and
(g) Base company income.

However, within these categories of passive income exemptions apply when the income is associated with an active business and there is limited risk to the New Zealand tax base.
The approach taken in s EX 20B(1) to determine the passive income that will be attributable, if the five per cent passive income threshold is exceeded, is to apply the rules in s EX 21 to the income amounts that comprise the formula:

\[ \text{gross + arrangement} \]

Where:

“Gross” is the total amount of income derived in the accounting period by the CFC that is one or more of the items outlined below.

“Arrangement” is discussed below [s EX 20B].

1. **Dividends [s EX20B(3)(a)]**
   - A dividend that is paid when the CFC has a direct income interest of less than 10 per cent in a foreign company and when one of the following FIF exemption rules applies [see 850.145]:
     - The Australian-resident listed company [s EX 31];
     - Australian resident unit trusts with adequate turnover or distribution [s EX 32];
     - Venture capital company exemptions [ss EX 36, EX 37 and EX 37B]; and
     - The terminating provisions for interests in Guinness Peat Group Plc [s EX 39].

   The above dividends received by CFCs from non-attributing portfolio FIFs are included in passive income, otherwise there would be no tax on these investments. This mirrors the position if the interests were owned directly by New Zealand residents.

2. **Dividends paid from New Zealand not fully imputed [s EX 20B(3)(b)]**
   - A dividend paid by a company resident in New Zealand that is not fully imputed. This ensures that these dividends will be taxed in full when attributed.

3. **Deductible or fixed rate dividends [s EX 20B(3)(c)]**
   - An amount that is a deductible foreign equity distribution or a distribution for fixed-rate foreign equity. These dividends are taxed as passive income to buttress the integrity of the tax system to avoid these dividends exposing the tax base to tax planning risk.

4. **Royalties [ss EX 20B(3)(d), EX 20B(5)]**
   - A royalty paid, as per the definition in s CC 9 [see 1290 ROYALTIES]. However, royalties are not regarded as passive income in situations when it is considered that there are valid commercial reasons for the intellectual property to be owned by a CFC. Thus, third party and related party royalties have been excluded when the CFC has created, developed or added substantial value to the property and when it can be shown that the CFC is regularly engaged in the creation or development of intellectual property. Additionally, the intellectual property should not have a prior link to New Zealand, thus ensuring the intellectual property is not relocated from New Zealand for tax purposes.

   Royalties that meet one of the following four conditions under ss EX 20B(5) are excluded from passive income.

   - The first condition excludes royalties that are third-party active royalties. The condition is that the CFC is regularly engaged in creating, developing or adding value to property that produces royalties and the royalty is:
     - Paid by a person who is not associated with the CFC under s YB 2;
     - From property not linked to New Zealand [s EX 20B(13)]; and
     - From property that the CFC has created or developed or to which the CFC has added substantial value.

   The second condition excludes royalties that are related-party active royalties. The condition is that the CFC is regularly engaged in creating, developing or adding value to property that produces royalties and the royalty is:

International Tax Regime

(a) Paid by a person associated under s YB 2;
(b) From property not linked to New Zealand [s EX 20B(13)];
(c) From property that the CFC has created or developed or to which the CFC has added substantial value; and
(d) The amount of the royalty is an arm’s-length amount under s GC 13 [see 1000.70].

The third condition excludes royalties that are derived from within the same jurisdiction from an associated non-attributing CFC (which is defined in s YA 1 to be a related non-attributing CFC that is subject to the laws of the same country or territory as the other CFC). The condition is that the royalty is paid by a person who would be an associated non-attributing active CFC in the absence of ss EX 20B(5)(c), EX 20B(7)(c) and EC 20B(12)(a). This provision excludes royalties received by a CFC from a related CFC in the same jurisdiction when the related CFC would pass the active business test [see 850.84].

The fourth condition excludes royalties derived from intellectual property that is retained in New Zealand and licensed to a CFC, which may then sublicense the property to a third party offshore. The condition is that the royalty is:
(a) Paid to the CFC by a person not associated with the CFC under s YB 2, or by a CFC associated with the CFC under s YB 2 that has received a corresponding royalty payment from such a person; and
(b) From property owned by a New Zealand resident, who is not deemed for the purposes of a DTA to be resident in another country; and
(c) From property licensed to the CFC by the New Zealand resident for an arm’s-length amount under s GC 13.

(5) Rentals [ss EX 20B(3)(e), EX 20B(6), EX 20B(7)]

Rent from:
(a) A lease or sublease of land;
(b) A lease or sublease of personal property;
(c) A licence to use intangible property; or
(d) A hire or bailment.

As with royalties, rental income associated with an active business is excluded. For example, a CFC in the business of letting, or a CFC that leases property to a related CFC for the purposes of carrying on an active business.

The exclusions allow rent from third parties to be treated as active income if it is derived from a lease of real or personal property in the same jurisdiction as the CFC. The principle underlying this exclusion is that there should be a nexus between the jurisdiction in which the CFC is located and the source of income (e.g., the property from which the rents are derived) to prevent profits being sheltered from tax by shifting profits from a high tax jurisdiction to a low tax jurisdiction.

Section EX 20B(7) excludes rents from the definition of passive income in the following situations:
(a) Rent derived from land in a country or territory in which the CFC is liable to tax because of domicile, residence, incorporation or centre of management;
(b) Rent derived from property other than land to the extent to which the rent relates to the use of property in a country or territory in which the CFC is liable to tax because of domicile, residence, incorporation or centre of management; or
(c) Rent paid by a person who would be an associated non-attributing active CFC in the absence of ss EX 20B(5)(c), EX 20B(7)(c) and EX 20B(12)(a). This provision excludes rent received by a CFC from a related CFC when the related CFC would pass the active business test [see 850.100].

Payments under hire purchase agreements, finance leases and payments that fall within the definition of “royalty” under s CC 9 are not considered rent under the definition of passive income.
Furthermore, under s EX 20B(7)(g) a payment under a license to use intangible property that is not a royalty, or if it was a royalty would not be included in an attributable CFC amount under s EX 20B(5), is excluded from the definition of “rent”. The intent is that these license fees are treated in the same way as a royalty. Thus license fees that are not royalties are excluded if, had they been a royalty, they would have been excluded from the royalty rules [s EX 20B(5)].

(6) **Premiums derived by life and general insurers [s EX 20B(3)(f)]**

Income from a business of general insurance or life insurance that is a premium under an insurance contract or reinsurance contract.

This provision captures premiums from insurance contracts. Insurance premiums are captured as insurance contracts can be used to shift New Zealand-sourced income offshore. However, in many cases this type of income will form a core part of an active offshore insurance business. For this reason s EX 21B(3) deems an active insurance CFCs to be a non-attributing active CFC when Inland Revenue has made a determination to this effect under s 91AAQ of the TAA.

(7) **Distribution from a life insurance policy [ss EX 20B(3)(g), EX 20B(8)]**

A distribution of income from a life insurance policy if the income is not included in a calculation of FIF income or loss.

Income from a life insurance policy is included as passive income as it can be a substitute for investment returns. Note that income from a life insurance policy is probably targeting a distribution from a policy taken out in New Zealand as if the life insurance was a foreign policy of life insurance it would probably be FIF income. Thus, income from New Zealand insurance bonds, which is income under a life insurance policy, would be included under this category if derived by a CFC.

Income from “key person” insurance, when the CFC insures against the death or incapacity of a specified employee or member involved in the CFC’s business, is excluded from passive income provided it is not included in the calculation of FIF income or loss [s EX 20B(8)].

(8) **Income from the supply of personal services [ss EX 20B(3)(h), EX 20B(9)]**

Income from the supply of personal services if the personal services are performed by another person (referred to in the legislation as the working person), and:

(a) The working person is a New Zealand resident;
(b) The personal services are not essential support for a product supplied by the CFC;
(c) The working person is associated with the CFC under s YB 5 at the time the services are performed, or is a relative of that person at the beginning of the accounting period of the CFC;
(d) 80 per cent or more of the CFC’s total income in the accounting period from supplying personal services is derived through personal services of the working person in the circumstances discussed above, ie services that are not essential support for a product of the CFC; and
(e) To derive the income the CFC uses depreciable property that cost less than or equal to $75,000 or 25 per cent of the CFC’s total income from personal services derived in the accounting period.

This rule is based on that the domestic attribution rule found in ss GB 27 to GB 29 [see 740 INCOME ASSIGNED OR ALIENATED]. The domestic attribution rule is aimed primarily at situations when an entity is interposed into a de facto employer/employee relationship between a buyer and a working person in order to avoid the 39 per cent personal income tax rate. In the context of the CFC rules, the concern the rule in s EX 20B(3)(h) is addressing is the use of a CFC by a New Zealand resident to avoid tax on income from personal effort. The threshold for the top rate of personal income tax and the existence of employer/employee relationship are less relevant.

The only exception to the rules is when the services personally performed by the working person are essential support for a product supplied by the associated CFC. The provision is not intended to apply to income earned from services that are provided in relation to the sale of goods by a CFC. Therefore income from personal services is not treated as passive if the services are essential support for a product supplied by the CFC.
(9) **Revenue account property that is shares** [ss EX 20B(3)(i), EX 20B(10)]
Income from the disposal of revenue account property that is a share, except if the share is an attributing FIF interest and FIF income is calculated under one of the comparative value, deemed rate of return, fair dividend rate or the cost methods.

(10) **Revenue account property that is an option to acquire or dispose of a share** [ss EX 20B(3)(j)]
Income from the disposal of revenue account property that is an option to acquire or dispose of a share.

(11) **Income from the disposal of revenue account property that is not a share, financial arrangement or life insurance policy** [ss EX 20B(3)(k)]
Income from the disposal of revenue account property that is not a share, financial arrangement or life insurance policy, but rather is revenue account property that is used by the CFC with a purpose or effect of giving rise to income of the CFC referred to in another paragraph of s EX 20B(3). For example, a property held on revenue account that gives rise to rent under s EX 20B(3)(e).

(12) **Base company income rule** [ss EX 20B(3)(l)]
Income from a service, other than a telecommunication service, to the extent to which the service is physically performed in New Zealand. This source of passive income is also known as “base company income”. Much like the rule preventing the diversion of personal services income through a CFC at s EX 20B(3)(h), the base company income rule prevents the active income exemption being used to reclassify New Zealand-sourced income as foreign-sourced income. Arrangements which interpose a CFC between a service-performing entity in New Zealand and the party purchasing the service(s) could be used to achieve such a reclassification. Under the base company income rule, income derived by a CFC for a service that is wholly or partly performed in New Zealand is passive income of the CFC. Note that the rule specifically contemplates that the income attributable to the services performed in New Zealand can be apportioned. That is, if the services are only partially performed in New Zealand the amount paid for the services can be apportioned on a reasonable basis between the services performed in New Zealand and those performed outside New Zealand.

International telecommunications services are excluded from the base company income rule because of the difficulty of determining where a telecommunications service is performed, and because international telecommunications services have a logical connection with at least two jurisdictions.

(13) **Income from a service relating to the use of equipment to provide a telecommunications service** [ss EX 20B(3)(m)]
Income from a service relating to the use of equipment to provide a telecommunications service, to the extent to which the equipment is at the time:

(a) Physically located outside any country or territory; and
(b) Owned by a CFC or by another CFC that is associated with the CFC; and
(c) Not a mobile telephone handset or a radio receiver and transmitter for a ship or aircraft.

Income derived from the use of a telecommunications asset that is wholly or partly located outside any country will be passive income. Such income is of a character that it can be assigned to an arbitrary jurisdiction, and as such is considered passive. Where only part of the asset is located outside any country the rule contemplates that apportionment will be required.

Assets that will be subject to the rule above include, for example, submarine telecommunications cables, satellites, and associated plant and equipment. The types of income that will be derived from the use of such telecommunications assets include income from the transmission of telecommunications data using the asset; the lease of the asset; and the license or sale of rights to use the asset.
(14) Income from a telecommunication service to the extent to which the service is physically performed in New Zealand [ss EX 20B(3)(n), EX 20B(11)]

Income from a telecommunication service to the extent to which the service is physically performed in New Zealand. However, income from this source is not an attributable CFC amount if:

(a) The services is the transmission, emission, or reception of information between New Zealand and the country or territory in which the CFC is liable to income tax;

(b) The CFC is a network operator under the Telecommunications (Interception Capability) Act 2004, or a person who is a network operator under the aforementioned Act holds an income interest of 50 per cent or more in the CFC, or a person who holds a voting interest of 50 per cent or more in such a network operator holds an income interest of 50 per cent or more in the CFC;

(c) The service is not performed using equipment that at the time is physically located in New Zealand and in possession of the CFC or an associated CFC; and

(d) The service is not performed by a person who, at the time, is physically located in New Zealand and is an employee or contractor of the CFC or an associated CFC.

This provision clarifies the position taken in the base company income rule that income from the provision of telecommunications services is generally regarded as active income. However, subject to an exception for telecommunication services between the CFC’s jurisdiction and New Zealand, s EX 20B(3)(n) includes income from this source in passive income when the telecommunications service of the CFC is physically performed in New Zealand.

The exception to this rule, as mentioned, is provided in s EX 20B(11) and excludes telecommunication services between the CFC’s jurisdiction and New Zealand when the CFC is a network operator for the purposes of the Telecommunications (Interception Capability) Act 2004. The network operator can also be a person who holds a 50 per cent or more income interest in the CFC, or a person who holds a 50 per cent or more voting interest in a network operator and an income interest of 50 per cent or more in the CFC, thus accommodating the situation when the CFC and the network operator are under common control of a parent company.

Further, the exception applies only to the extent the telecommunication services between the CFC’s jurisdiction and New Zealand are not performed using equipment or staff of the CFC or of an associated CFC, that are located in New Zealand.

Note: The residence or source rules may in any event apply in this situation to tax the income derived in New Zealand.

(15) Arrangement [s EX 20B]

Section EX 20B(4) includes income from financial arrangements held by a CFC as passive income. It also includes income from a financial arrangement that is a short-term agreement for sale and purchase for which the CFC has made an election under s CW 8 to treat as a financial arrangement. However, in terms of s EX 20B(12), income from a financial arrangement that is not a derivative instrument (ie financial arrangement income referred to in s EX 20B(4)(a)) is not passive income if the financial arrangement is:

(a) A loan provided by the CFC to an associated active CFC in the same jurisdiction [see 850.100]; or

(b) An agreement for the sale or purchase of property or services or a hire purchase agreement that is entered in the ordinary course of business by the CFC, or for property or services produced or used in the CFC’s business.

Under s EX 20B(4)(b) income from financial arrangements that are derivative instruments is passive if the derivative instrument:

(a) Is held for the purpose of dealing in the derivative instrument;

(b) Is a hedge instrument of a type referred to in NZIAS-39 for passive income as defined in ss EX 20B(3) or EX 20B(4)(a);

(c) It is a derivative not entered in the ordinary course of the CFC’s business.
The term “ordinary course of business” is not defined. However, in the Official’s Report to the Finance and Expenditure Committee on the Taxation (International Taxation, Life Insurance, and Remedial Matters) Bill 2008, it was pointed out that the matter had been discussed in a commentary on the adoption of IFRS for tax purposes in TIB vol 20:3 (April 2008). That commentary observed that:

“Facts and circumstances of a taxpayer’s business would determine whether a financial arrangement has been entered into in the ordinary course of the taxpayer’s business. For example, a taxpayer who borrows in a foreign currency, say in US dollars, to fund its subsidiaries in the US would most likely be considered to have entered into the loan as part of its ordinary course of business. A taxpayer who enters into a derivative contract to hedge a particular business risk would also be considered as having entered into the derivative contract in the ordinary course of its business. For example, an energy company may enter into contracts for differences to fix the price of electricity.”

Financial arrangement income arising under s EX 20B(4) is included on a gross basis — if there is income under the financial arrangement for the accounting period it is included, but if there is expenditure it is not. There is no “netting off” of expenses incurred, or of expenditure on similar classes of financial arrangement. However, financial arrangement expenditure may be allowed as deductions in calculating net attributable CFC income or loss.

850.84 Exclusions for rent, royalties and interest received from an associated CFC in the same jurisdiction [ss EX 20B(5)(c), EX 20B(7)(c), EX 20B(12)(a)]

Certain royalty, rent and financial arrangement income from associated active CFCs in the same jurisdiction as the CFC is excluded from passive income. However, in determining whether the status of the associated CFC is active, the royalty, rent or financial arrangement income from the associated same jurisdiction CFC is counted as passive income.

Example:
CFC’s Alco Ltd and Belco Ltd are 100 per cent commonly owned and are both resident in the same jurisdiction. When it applies the active business test, Alco Ltd has a numerator of $49,990 and a denominator of $1 million, but only if it can exclude royalties of $50,000 received from Belco Ltd. Belco Ltd has a numerator of $99,980 and a denominator of $2 million, but only if it can exclude financial arrangement income of $100,000 received from Alco Ltd.

Alco Ltd can only exclude the royalties if Belco Ltd is active, and Belco Ltd can only exclude the financial arrangement income if Alco Ltd is active, but neither CFC is active until it applies the exclusion.

To resolve this, when a CFC (Alco Ltd) determines the status of an associated CFC (Belco Ltd), it will do so without applying any of the exclusions to Belco Ltd. That is, for this purpose only, Belco Ltd’s status is to be determined assuming that any royalty, rent or arrangement income it receives from an associated CFC in the same jurisdiction is passive income.

Alco Ltd would determine that Belco Ltd’s numerator was $199,980 and its denominator was $2,100,000, meaning that Belco Ltd would not be active for this purpose. Alco Ltd would then have to recognise the $50,000 of royalties as passive income. Similarly, Belco Ltd would be required to recognise the $100,000 of arrangement income as passive income.

850.85 Net attributable CFC income or loss [ss EX 20C, EX 20D, EX 21]

The rules for calculating net attributable income or loss are set out in ss EX 20C, EX 20D and EX 21:

(a) Section EX 20C provides that net attributable CFC income or loss is to be calculated using a prescribed formula and lays down the main rules concerning the deductibility of expenditure.

(b) Section EX 20D makes special provision regarding the deductibility of interest expenditure for excessively debt-funded CFCs.

(c) Section EX 21 applies the Act (subject to certain modifications) for certain specified purposes, which include the calculation of net attributable CFC income or loss, as though a CFC were a New Zealand resident.

Non-interest expenditure will be deductible in calculating net attributable CFC income or loss to the extent it is incurred for the purposes of deriving an attributable CFC amount [s EX 20B] and not incurred for the
purposes of deriving a non-attributable amount. This is consistent with the nexus test that applies to non-interest expenditure incurred in deriving assessable income in the domestic context.

For most resident companies, there is no nexus test for interest expenditure. However, this will not be the case with a CFC in calculating the net attributable CFC income or loss. Deductions for interest expenditure incurred by a CFC will be based on the proportion of a CFC’s assets that are used to derive an attributable CFC amount. This is designed to address the risk that allowing a CFC to deduct all interest would mean that debt giving rise to interest deductions could be used to shelter attributable income.

To prevent offshore debt being concentrated in CFCs with mainly attributable assets, thereby sheltering attributable income, special rules apply to CFCs that are excessively debt funded. A CFC will be treated as excessively debt funded if its debt-to-asset ratio is more than 75 per cent and its relative debt-to-asset ratio is more than 110 per cent. In this case, the CFC’s interest deductions will be based on the overall asset mix of all the interest holder’s CFCs.

850.86 Net attributable CFC income or loss

The CFC’s net attributable CFC income or loss for the accounting period is calculated using the rules in s EX 21 and the formula:

\[ \text{attributable CFC} - (\text{limited funding costs} \times \text{fraction}) - \text{other deductions} \]

Where:

“Attributable CFC”, is the CFC’s attributable CFC amount determined under s EX 20B for the accounting period [see 850.95]

“Limited funding costs”, has two meanings depending on whether the CFC has on-lent funds to an associated CFC. If the CFC has not on-lent funds to an associated CFC limited funding costs is the total of the amounts for which the CFC would have a deduction in the accounting period that relates to financial arrangements that have provided funds to a CFC or to shares (held by New Zealand resident company or a CFC) that are fixed rate foreign equity or a share giving rise to a deductible dividend. That is, essentially the CFC’s borrowing costs. In legislative terms, these amounts are those referred to in s EX 20C(5)(a), that directs the reader to the definition of “funding” in s EX 20C(6), which then directs the reader to ss EX 20C(7)(a) and EX 20C(7)(b).

“Fraction” is defined in s EX 20C(8) and is the fraction of the attributable CFC’s assets (the taxable assets deriving the income to which s EX 20B applies) to the total CFC’s assets. If the CFC is not excessively debt funded under s EX 20D, “fraction” is determined by a formula in s EX 20C(10). If the CFC is excessively debt funded [s EX 20D], “fraction” is the lesser of the amounts determined under ss EX 20C(10) and EX 20D. Section EX 20D is discussed below.

Section EX 20C(8) defines the item “fraction” that is applied under the formula in s EX 20C(2) to restrict deductions for limited funding costs. Section EX 20C(10) to (12) and ss EX 20D and EX 20E are also relevant.

If the CFC wishes to take advantage of the on-lending concession that gives a full deduction for the interest paid by a CFC when funds are on-lent to associated CFCs, then the limited funding costs are reduced by the cost of the funds on lent by using the formula in s EX 20C(5)(b), which is:

\[ \text{funding costs} \times ((\text{funding} - \text{group funding}) / \text{funding}) \]

Where:

“Funding” is the funding costs of the CFC (the figure that would have been used in the absence of the on-lending concession) as discussed above.

“Group funding” is essentially the amount of the funds on-lent to an associated CFC that produces passive income [s EX 20B(4)] obviously this latter requirement is to ensure funds on-lent for no consideration do not qualify for the concession.

The formula in s EX 20C(10) that applies when the CFC is not excessively debt funded is:

\[ (\text{attributable CFC’s assets} - \text{group funding}) / (\text{total CFC’s assets} - \text{group funding}) \]

Where:
“Attributable CFC’s assets” refers to the total value of those assets that produce an attributable CFC amount (passive income). However, the definition excludes assets that do not produce an attributable CFC amount, which would appear to exclude an apportionment when an asset produces both attributable CFC amounts and non-attributable CFC amount.

“Group funding” is the same as that used in the formula in s EX 20C(5)(b), which is the amount of the outstanding financial arrangement balances that are on-lent to associated CFCs.

“Total CFC’s assets” is the total value of the CFC’s assets [s EX 20C(11)].

The other provision to have regard to for this formula is s EX 20C(12) that requires the debts and assets of the CFC to be measured having regard to the rules in ss FE 8 to FE 11 as if the CFC were an excess debt outbound company and the only member of the CFC’s New Zealand group.

(1) Other deductions

The amount of expenditure or loss (not being deductions relating to financial arrangements) incurred in the accounting period by the CFC to the extent it is incurred for the purposes of deriving an attributable CFC amount, and not incurred for the purposes of deriving an amount that is not an attributable CFC amount.

When the deduction relates to a financial arrangement, the deductible amount is the amount that exceeds the amount of “limited funding costs” in s EX 20C(5). This will allow the balance of the interest attributable to an amount on-lent to an associated CFC to be deducted.

If the deduction relates to a financial arrangement not taken into account in determining “limited funding costs” [s EX 20C(7)(a)], a deduction is permitted if the financial arrangement gives rise to an attributable CFC amount under s EX 20B(4). This could include for example, financial arrangements that are derivatives that do not provide funds to the CFC (as required by s EX 20C(7)(a)). For example a derivative instrument that is not entered into in the ordinary course of a business of a CFC [s EX 20B(4)(b)(ii)].

**Example 1 (no on-lending):**

A CFC has the following balance sheet as at the end of the accounting period:

<table>
<thead>
<tr>
<th>Capital</th>
<th>Assets</th>
</tr>
</thead>
<tbody>
<tr>
<td>$900,000</td>
<td>$1,100,000</td>
</tr>
<tr>
<td>Debt</td>
<td></td>
</tr>
<tr>
<td>$200,000</td>
<td></td>
</tr>
</tbody>
</table>

The CFC has an interest expense of $14,000, the assets of the CFC that relate to income that is an attributable CFC amount is $150,000. The CFC incurred other expenses in deriving the attributable CFC amount of $3,000. The attributable CFC amount is $12,000.

Applying the formula in s EX 20C(2) the net attributable CFC income or loss is:

\[
\text{net attributable CFC} = \text{attributable CFC} - (\text{limited funding costs} \times \text{fraction}) - \text{other deduction}
\]

Step 1 is determining the attributable CFC amount which is $12,000.

Step 2 is determining the limited funding amount (which is the total interest deduction if no on-lending). This is found by the formula

\[
\text{limited funding costs} \times \text{fraction} = 14,000 \times 0.14 = 1,960
\]

The net attributable CFC income is:

\[
12,000 - (1,960) - 3,000 = 7,040
\]

**Note:** In the absence of the requirement to limit the interest expenditure to the assets of the CFC that produce the attributed CFC amount, the result would be an interest deduction of $14,000, which would have given a loss (before other expenses) as we have used interest deductions on amounts used to derive both non-taxable active income and taxable passive income.

The formula has assumed that 14 per cent of the debt of $200,000 at a funding cost of seven per cent is deductible.

**Example 2 (on-lending):**

Using the figures in Example 1 (above), but we assume that $100,000 was on lent to an associated CFC. Thus, the interest holder can choose to use the formula in s EX 20C(5)(b) to determine the limited funding cost.
Again starting with the formula in s EX 20C(2):

\[
\text{attributable CFC} = (\text{limited funding costs} \times \text{fraction}) - \text{other deduction}
\]

Step 1 is determining the attributable CFC amount which is $12,000.

Step 2 is determining the limited funding amount. This is found by the formula:

\[
\text{funding costs} \times \left( \frac{(\text{funding} - \text{group funding})}{\text{funding}} \right)
\]

\[
= \$14,000 \times \left( \frac{\$200,000 - \$100,000}{\$200,000} \right)
\]

And thus limited funding costs of:

\[
(\$14,000 \times 0.5) = \$7,000
\]

Step 3 is determining the fraction. This differs from the fraction when there is no on-lending. This is derived from the formula in s EX 20C(10):

\[
\frac{\text{(attributable CFC’s assets} - \text{group funding})}{\text{(total CFC’s assets} - \text{group funding})}
\]

\[
= \frac{\$150,000 - \$100,000}{\$1,100,000 - \$100,000} = 0.05
\]

Applying the formula in s EX 20C(2):

\[
\$12,000 \times (\$7,000 \times 0.05) - \$3,000 + \$7,000
\]

\[
= \$12,000 - \$350 - \$10,000 = \$4,650
\]

Note: With on-lending the interest attributable to the on-lending, being $7,000 in our example, has been deducted in full under “other deductions” in s EX 20C(9)(b). Of the $200,000 of debt, $100,000 had been on lent and of the balance (under the formula) only $5,000 at our funding rate of seven per cent was deductible.

Further adjustments to the deductible interest are necessary when the CFC is excessively debt funded.

**850.87 Adjustment of fraction for excessively debt funded CFC [s EX 20D]**

Section EX 20D applies to modify the term “fraction” as used in calculating net attributable CFC or loss under s EX 20C(2) if the CFC is excessively debt funded.

The “fraction” used in s EX 20C(2) is based on the proportion, by value, of the CFC’s assets that produce an attributable CFC amount [s EX 20C(10) and (11)]. The “fraction” limits the deductibility of funding costs of the CFC to those funding costs that produce attributable CFC amounts. Thus, a CFC that uses one-third of its assets to earn attributable CFC amounts will be able to claim one-third of its funding costs when calculating its net attributable CFC income or loss. When an asset is used to derive both attributable and non-attributable amounts, its value will need to be apportioned. Asset values are adjusted to reflect any adjustment for on-lending under s EX 20C(5).

As a backstop against structures that concentrate debt in CFCs with mainly attributable assets in order to maximise allowable deductions, s EX 20C(8)(b) caps the fraction for a CFC that is excessively debt funded at the amount calculated under s EX 20D.

Under s EX 20D(2) a CFC is considered to be excessively debt-funded if it has a debt-asset ratio, determined under s EX 20D(4), of more than 0.75 and also has a relative debt-asset ratio, determined under s EX 20E (see below), of more than 1.10.

The formula in s EX 20D(4) is:

\[
\frac{\text{(total CFC’s debts} - \text{group funding})}{\text{(total CFC’s assets} - \text{group funding})}
\]

For the purposes of the above formula, the measurement rules in ss FE 8 to FE 11 apply to the CFC if the CFC were an excess debt outbound CFC [s FE 4] and the only member of the CFC’s New Zealand group.

Total CFC’s debts is defined in s EX 20D(6) to be the total amount outstanding at the end of the CFC’s accounting period, determined under generally accepted accounting practice, of the outstanding balances of financial arrangements entered into by the CFC that provides funds to the CFC and gives rise to an amount for which the CFC would have a deduction. The definition also includes fixed rate foreign equity issued by the CFC (and held by a New Zealand resident or another CFC) and shares issued by the CFC that give rise to deductible distributions to a New Zealand resident company or another CFC.

Total CFC’s assets is the total value of the CFC’s assets determined under generally accepted accounting practice.
Group funding is the lesser of the total CFC’s debts (as discussed above) and the total of outstanding balances for financial arrangements that provide funds to an associated CFC [s YB 2] and which produce “arrangement income” [s EX 20B(4)]. The item group funding allows for on-lending.

If a CFC is excessively debt funded, that is if its debt-asset ratio is more than 0.75 and also has a relative debt-asset ratio, determined under s EX 20E (discussed below), of more than 1.10, then the item “fraction” in s EX 20C(2) is determined by the formula in s EX 20D(10):

\[
\frac{\text{attributable CFC assets}}{\text{total CFC assets}}
\]

Where:

“Attributable CFC assets” is the total value of assets (consolidated under generally acceptable accounting practice) for all of the interest holder’s CFCs and the accounting period when each asset is used to derive an attributable CFC amount and not used to derive an amount that is not an attributable CFC amount.

“Total CFC assets” is the total value of assets (consolidated under generally acceptable accounting practice) for all of the interests holder’s CFCs and the accounting period.

The above formula thus looks at all of interest holders CFC interests and looks at the debt to asset ration of the interest holder’s aggregate CFC assets that produce attributable CFC amounts compared with the total CFC assets. This means that item “fraction” used for s EX 20C(2) is based on the taxable CFC assets of all of the New Zealand resident’s CFC’s.

850.88 Relative debt-asset ratio for CFC [s EX 20E]

This section applies to determine if the CFC has a relative debt-asset ratio of more than 1.10.

It does this by comparing the group debt-asset ratio for the CFC’s group and comparing that with the debt asset ratio of the CFC.

For this purpose s EX 20E(2) sets out who the members of the CFC’s group are. The group members are the CFC and the members of the world wide group that the interest holder would have:

(a) Under ss FE 31B, FE 31C and FE 32, if the interest holder is a company;

(b) Under s FE 3(1)(b) if the interest holder is a trustee; and

(c) Under s FE 5(1C)(a) to (c) if the interest holder is a natural person.

The formula for calculating the CFC’s group debt to asset ratio is contained in s EX 20E(3). The formula is:

\[
\frac{\text{total group debts}}{\text{total group assets}}
\]

Where:

“Total group debts” is the total amount outstanding at the end of the CFC’s accounting period, consolidated under generally accepted accounting practice for the CFC’s group, of the outstanding balances of financial arrangements entered into by the group’s members that provides funds to the CFC and gives rise to an amount for which a group member would have a deduction. The definition also includes fixed rate foreign equity issued by a member of the group (and held by a New Zealand resident or another CFC) and shares issued by a member of the group that give rise to deductible distributions to a New Zealand resident company or another CFC.

“Total group assets” is the total value of the group’s assets consolidated under generally accepted accounting practice.

The group debt to asset ratio is then compared to the CFC’s debt to asset ratio, by dividing the CFC’s debt to asset ratio [s EX 20D(4)] by the group debt to asset ratio [s EX 20E(3)].

850.90 Attributable CFC amount and net attributable CFC income or loss [s EX 21]

With the changes to the CFC rules to tax only the passive income of a CFC when the active business test is breached, the rules in s EX 21 are now used for three purposes:

(a) First, to calculate the attributable CFC amount for a CFC under s EX 20B;
Secondly, to calculate net attributable CFC income or loss for a CFC under s EX 20C; and

Thirdly, in determining whether a CFC is a non-attributing CFC for the purposes of the rules in s EX 21D — that calculates the active business test ratio using tax concepts. For this purpose, s EX 21(1B) states that for the purposes of determining whether a member of a group of CFC’s is a non-attributing CFC, s EX 21 is used to calculate the consolidated annual gross income of the group, and the consolidated attributable CFC amount of the group is also to be calculated under the rules in s EX 21.

The rules in s EX 21 start from the general premise that the attributed CFC income or loss of any CFC for any accounting period shall be the amount that is equal to the income or loss that would be calculated for that foreign company were that foreign company at all times in that accounting period a New Zealand resident company. However, the rules in s EX 21 make a number of modifications to take into account the fact that the CFC is actually resident in a foreign country or to deal with the peculiarities of the CFC rules. Thus, calculating the attributed CFC income or loss of the CFC essentially requires restatement of the CFC’s income tax position to that which would have been the case if the CFC had been subject to New Zealand tax law, as modified by the rules in s EX 21.

When the attributed CFC income or loss figure is determined, that figure is then used in the s EX 18 formula to determine the persons net attributed CFC income or loss.

The specific rules that apply (to modify the general rule that the calculations are undertaken as though the CFC were a New Zealand resident) to calculate the attributed CFC income or loss are outlined below.

(1) Currency conversion [s EX 21(4)]

The taxpayer must choose under s EX 21(4):

(a) For all calculations to be done in New Zealand dollars; or

(b) For all calculations to be done in the currency in which the CFC prepares its financial accounts or, if it does not prepare such accounts, in the currency of the country or territory in which the foreign company is resident. The result is then converted into New Zealand currency at the average of the close of trading spot exchange rates for the 15th day of each complete month falling within that period.

“Close of trading spot exchange rate” for any foreign currency on any day [s YA 1] means:

(a) The rate of a spot contract for the purchase of New Zealand dollars using the foreign currency at any time on that day on a market approved, and obtained from the sources of information approved, by the CIR in Determination G6D (or any substitute determination) made under the financial arrangement rules and if no such rate can be ascertained for that day then such a rate on the next succeeding day (before a day not later than five working days after that day) upon which such a rate is able to be ascertained;

(b) If, for any foreign currency, no such rate of a spot contract can be so ascertained, the cross rate determined as at 3 pm NZST on that day by applying the method outlined in paragraph 6(3)(c) of the Determination G6D (or any substitute determination); or

(c) If paragraphs (a) and (b) above do not apply, then the rate determined by applying the method specified in paragraph 6(2) of Determination G9A (or any substitute determination).

Once a particular currency has been adopted by a taxpayer for calculating the attributable CFC amount and net attributable CFC income or loss, the same currency must be used by the taxpayer in all subsequent accounting periods for that CFC. The CIR may approve a change in the currency used if the change is for commercial reasons (other than reducing tax), and the change does not have the purpose or effect of defeating the international tax rules [ss EX 21(5) and (6)].

(2) Financial arrangements [s EX 21(7)]

The rule in s EX 21(7) applies to require financial arrangements to be expressed in New Zealand currency. The rule in s EX 21(7) overrides the rules in s EX 21(4) to (6). This is to stop CFCs that are associated persons
from entering into related-party financial arrangements when the currency of the respective CFC’s differs, thus giving different results depending on what currency is used by the CFCs.

Section EX 21(7) states that ss EX 21(4) to EX 21(6) do not apply to the calculation of attributable CFC amount and net attributable CFC income or loss from a financial arrangement if:

(a) The total value of all financial arrangements to which the CFC is a party, calculated under s EW 17(2)(b) (straight-line method) on any day during the accounting period, is more than $1 million; or

(b) The amount that would be the CFC’s total net foreign exchange loss for the accounting period, if the amount were calculated under s EX 21(4) to (6), for all financial arrangements to which the CFC is a party on any day during the accounting period, is more than $100,000.

In this case, the financial arrangement rules apply to measure the income or loss attributable to the financial arrangement as though the CFC were resident in New Zealand. As a compliance measure, this exclusion does not apply to a variable principal debt instrument if (essentially the bank account of the CFC):

(a) All rights and obligations under the instrument are expressed in the same currency as that used to calculate CFC income or loss; and

(b) No party to the instrument is associated with the CFC or enters into the instrument under an arrangement to defeat this limitation.

Inland Revenue has specified exchange rates acceptable for converting foreign currency amounts into New Zealand [see 760.25 and 850.220].

(3) Cost base of tangible assets [s EX 21(9) and (10)]

The cost at the beginning of the period of premises, plant, machinery, equipment, and trading stock shall be:

(a) The value at the end of that immediately preceding period as was used for the attributed foreign income or loss calculation for the immediately preceding period if the person for whom the calculation is being made had any attributed foreign income or loss for an income interest in that CFC for the immediately preceding period; or

(b) If the person did not have any attributed foreign income or attributed foreign loss for the immediately preceding period in that CFC, then at the option of the person, either:

(i) The historical cost of the asset less accumulated depreciation (if any) or other value used by the foreign company as the commencement value for that period for the purposes of income tax calculations in the country in which that foreign company is resident (being a value not higher than the market value of the asset at the beginning of that period); or

(ii) The value that would be used at the beginning of that period calculated as if the CFC had at all times been a resident.

(4) Cost base of financial arrangements [s EX 21(11)]

If the person did not have attributed foreign income or an attributed foreign loss from an income interest in the CFC for a period immediately preceding the accounting period, the consideration under the financial arrangement rules for a financial arrangement is calculated at the beginning of the accounting period and is, at the person’s option, either:

(a) The market value of the financial arrangement; or

(b) The absolute value of the result of the formula:

\[
\text{consideration paid to the CFC + expenditure} - \text{consideration paid by the CFC} - \text{income}
\]

Where:

"Consideration paid to the CFC" is the consideration paid to the CFC for all periods before the accounting period;

"Expenditure" is the expenditure that would have been incurred under the accrual rules for all periods before the accounting period as if the CFC had been resident in New Zealand;
“Consideration paid by the CFC” is the consideration paid by the CFC for all periods before the accounting period; and
“Income” is the income that would have been derived under the accrual rules for all periods before the accounting period as if the CFC had been resident in New Zealand.

(5) **Provisions of the ITA 2007 that do not apply** [s EX 21(13)]

The following provisions shall not apply in the calculation of branch equivalent income:

(a) The consolidation rules;

(b) Section CB 27 (income equalisation schemes) and subpart DQ (income equalisation schemes and environmental restoration accounts schemes) and subpart EH (income equalisation schemes);

(c) Sections CD 45 to CD 52 (which relate to the CFC attributed repatriation calculation rules) or subpart CQ (attributed income from foreign equity) or subpart DN (attributed losses from foreign equity) or this subpart to the extent to which any of the sections or subparts would result in attributed CFC income, attributed CFC loss, or attributed repatriation for the CFC;

(d) Section CW 8 (money lent to Government of New Zealand);

(e) Section CW 9 (dividends derived from foreign company);

(f) Section CW 10 (dividend within New Zealand wholly-owned group)

(g) Section CW 40(1) (local and regional promotion bodies);

(h) Sections DO 1 (enhancements to land, except trees) and DO 2 (erosion and shelter plantings);

(i) Sections EW 9 (persons to whom financial arrangements rules apply) and EW 11(b) (what financial arrangements rules do not apply to);

(j) Subpart FE (interest apportionment on thin capitalisation);

(k) Section GB 5 (arrangements involving trust beneficiaries); or

(l) Sections IA 2 to IA 9, subpart IC, and ss IP 3 to IP 7, IZ 4, and IZ 5 (which relate to the use of tax losses).

(6) **Provisions of ITA 2007 that do apply to the CFC as if the CFC carried on business in New Zealand** [s EX 21(14)]

The following provisions do apply in the calculation of the branch equivalent income as if the CFC’s business activities were carried on in New Zealand:

(a) Sections CT 1 to CT 3, CT 5 to CT 7, CX 42, CX 43, CZ 8, DT 1 to DT 15, DT 17 to DT 19, and IS 5 (which relate to petroleum mining):

(b) Sections DO 4 to DO 7, DO 12, DP 1 to DP 3, DP 8, and DP 11 (which relate to farming, aquacultural, and forestry expenditure):

(c) Section EZ 16 (amount of depreciation loss for plant or machinery additional to s EZ 15 amount):

(d) The definitions in subpart YA (general definitions) that specifically apply for the purposes of those sections.

(7) **Transfer pricing rules** [s EX 21(15)]

When a transaction has been entered into between a CFC and an associated party has the purpose or effect of defeating the intent or application of any of the jurisdictional ring-fencing rules, the rules set down in ss GC 6 to GC 14 shall apply with any necessary modifications. That is, the transfer pricing rules only apply to transactions that have a purpose or effect or defeating the jurisdictional loss and tax credit ring-fencing rules in ss DN 4, IQ 2, IQ 4, and LK 1 to LK 7.

(8) **Treatment of dividends** [ss EX 21(16)]

Dividends that are not part of the CFC’s attributable CFC amount are exempt income of the CFC.
(9) **Benefits from money advanced** [s EX 21(18)]
When s CC 7 (consideration other than money) is applied, that money advanced shall be assumed to be used for a business carried on in New Zealand by the borrower.

(10) **No tainting by association under the land sales rules** [s EX 21(19)]
Sections CB 9 to CB 13 and CV 1 shall not apply to treat any profits or gains as income if those profits or gains would not be treated as income except for the nature of the activities undertaken by associated persons of the CFC when those persons are not residents.

(11) **Crown acquisition of land** [s EX 21(20)]
The reference in s EI 8(1) to the Crown are assumed to include the Government of any country or territory other than New Zealand.

(12) **Depreciation loss recovered** [s EX 21(21)]
When ss EE 48 to EE 52 (which relate to the disposal of assets) are applied, then the CFC shall be assumed to have been allowed a depreciation deduction, and to have an adjusted tax value accordingly, if an amount of depreciation loss for any asset has been deducted when calculating the branch equivalent income or loss of the CFC for any period.

(13) **Accounting for GST** [s EX 21(22)]
In accounting for GST, references to output tax, input tax, or goods and services tax payable shall apply to similar concepts for any value added or other similar tax, in a country or territory other than New Zealand.

(14) **Government grants** [s EX 21(23)]
In accounting for subsidies and grants, reference to the Government of New Zealand shall include the Government of any foreign jurisdiction and payments of subsidies or grants shall be income if that would be the situation if they were derived by a resident company.

(15) **Subvention payments** [s EX 21(24)]
If an amount is paid as consideration for the transfer of tax losses, it is income derived by the CFC. However, it is only deductible if paid by the CFC to a person resident in the same country or territory as the CFC and not a non-attributing active CFC and provided it is deductible under the law of that country.

(16) **Life insurers** [ss EX 21(25) to (27)]
In calculating the net attributable CFC income or loss of any CFC that carries on the business of providing life insurance or in which any shares are held directly or indirectly by a foreign company (the parent) that carries on the business of providing life insurance, the life insurance rules do not apply. Instead, the net attributable CFC income or loss is actuarially determined to be the part of the CFC’s net income or loss to which the shareholders (and not the policyholders) are entitled. Exceptions apply when the CIR considers that the amount is not a reasonable reflection of the relevant profit or loss, or when sufficient information has been requested but not been received to enable the CIR to review the actuarial calculation.

(17) **Mineral and petroleum mining** [ss EX 21(28) and (29)]
The provisions applicable to a CFC carrying on mining activities or petroleum mining activities outside New Zealand are substantially the same as applicable in New Zealand.

(18) **Finance leases** [ss EX 21(30) and (31)]
No leases entered into by the CFC before the start of the first accounting period for which that company was a CFC shall be a finance lease or a specified leases, except if the finance or specified lease or leases are entered into between that company and any other CFC or a New Zealand residents.
(19) **Taxable distributions from non-complying trust** [s EX 21(32)]

When the CFC has received a taxable distribution under the trust regime, it shall not be taken into account in calculating the net attributable CFC income or loss of the CFC as a taxable distribution, but shall be accounted for under s EX 19 [see 850.65].

(20) **CFCs with FIF interests** [s EX 21(33)]

When the CFC would, if it were a resident, have an attributing interest in a FIF:

(a) No FIF income or FIF loss shall be taken into account in calculating the net attributable CFC income or loss; and

(b) Section EX 58 shall apply for such FIF income or loss.

This is also discussed at 850.70.

(21) **Transitional treatment of cross-border reinsurance** [s EX 21(34)]

Section CZ 12 (General insurance with risk period straddling 1 July 1993) applies as if the reference to New Zealand were a reference to the CFC’s country of residence.

850.95 **Foreign tax credits** [ss LJ 7, LK 1, LK 2, LK 3, LK 4, LK 5, LK 6, LK 7]

Section LK 1 sets out the broad rule that applies to tax credits relating to attributed CFC income. It provides that a person who has an amount of attributed CFC income shall be allowed a tax credit against the New Zealand income tax payable on that attributed CFC income. The tax credit is equal to the following amounts paid or payable in relation to the attributed CFC income:

(a) An amount of income tax paid by the CFC from which the income is derived;

(b) An amount of tax withheld and paid on behalf of the CFC from which the income is derived;

(c) An amount of foreign income tax paid by the CFC from which the income is derived; or

(d) The amount of foreign tax paid by the person under legislation of another country or territory that is the equivalent of the international tax rules:

A credit thus arises for the income tax imposed on that CFC in New Zealand, or any other country or territory in relation to attributed CFC income. This includes any withholding tax imposed on that CFC. If income tax is imposed in a country or territory outside New Zealand, on the New Zealand resident shareholder with an income interest in the CFC (as opposed to the CFC), the New Zealand resident with the attributed CFC income, can claim this tax as a credit.

Under s LK 3, if the income tax imposed on the CFC is paid or payable in a currency other than New Zealand currency it shall be converted into New Zealand currency at the option of that person either:

(a) By applying the close of trading spot exchange rate applicable on the date when the income tax was paid or became payable; or

(b) By applying the average of the close of trading spot exchange rates for the 15th day of each complete month falling within that period.

Inland Revenue has specified exchange rates acceptable for converting foreign currency amounts into New Zealand [see 760.25, *Brooker's Tax Rates Guide 10-900*].

For the purposes of s LK 1(1), the amount of the tax credit in respect of the attributed CFC income of any person is the product of the income interest used to calculate attributed foreign income and the income tax imposed on the CFC in any country or territory (including New Zealand) for that accounting period. A credit against income tax payable in New Zealand is not allowed for income tax paid or payable in the countries or territories specified in sch 27. No countries or territories are currently specified in sch 27 [s LK 2]. This is then claimed as a credit against the attributed CFC income and is limited to the income payable on that attributed CFC income — calculated as though that was the only income derived in that income year [s LK 1(3)].

Under s LK 1(3) a person entitled to a tax credit shall only be entitled to claim the credit against:
International Tax Regime

(a) Income tax payable for attributed CFC income derived by that person in that income year for that CFC; and
(b) Income tax payable for attributed CFC income derived by that person in that income year for any other CFC resident in the same country or territory in which the first-mentioned CFC was resident giving rise to the credit.

So far as it can not be so deducted or set off, the credit may be carried forward to the immediately succeeding income year under s LK 4, or transferred within the group of companies under s LK 6, subject in both cases to jurisdictional ring fencing.

If the person who has any credit allowable is a company, then under s LK 5 that credit may only be carried forward to any succeeding income year if and to the extent to which, had that credit been a loss, the carry forward of that loss would have been permitted and that credit shall be deemed to be a loss incurred on the last day of the income year for which the credit was initially allowable.

The tax credit rules for CFCs in subpart LK are also applied to branch equivalent FIFs by ss EX 50(8) and EX 50(9).

With the changes made in the Taxation (International Taxation, Life Insurance, and Remedial Matters) Act 2009, transitional rules have been inserted to deal with any remaining tax credits arising under the branch equivalent CFC rules. This is because the attributed CFC income under the new rules is calculated from a different base (passive income) to that used for the full branch-equivalent (BE) calculation used in the former rules, and thus any remaining tax credits need to be put on an equivalent footing.

In broad terms, the effect of these rules is that foreign tax credits accumulated under the old rules can be carried forward into the new system, but will be modified by the transitional rule in s LK 5B. The transition rule applies when:

(a) A person has a tax credit arising under the old branch equivalent rules (the available BE credit); and
(b) The BE credit relates to a CFC or FIF that is resident in a jurisdiction in which the credit arose; and
(c) The BE credit is carried forward to the first year of operation of the new rules (referred to in the legislation as the conversion year).

The credit relating to a jurisdiction carried forward under the previous rules is the available BE credit for that jurisdiction. The amount of available BE credit converted each year is the converted BE credit, which under s LK 5B(2)(a)(ii) is no longer available to be carried forward. Under s LK 5B(2) each year some or all of the available BE credit is converted into an equivalent tax credit, which is effectively treated as an ordinary credit under subpart LK.

A person has two choices. They can elect under s LK 5B(3) by giving a notice (in a form and at a time acceptable to the Commissioner) that the available BE tax credit (the historical credits) not be carried forward. The other alternative is to apply the provisions of ss LK 5B(4) to LK 5B(7) to convert the BE credits into an equivalent tax credit that is then effectively treated as an ordinary credit under subpart LK.

The approach is the same as that taken for losses under s IQ 2B (as discussed above). An election to fix the jurisdictional income ratio using the average ratios over a two-year period under s IQ 2B(8) also applies for tax credit purposes. As for losses, a person may also use net profit or losses from accounts, instead of BE income or loss, when determining the jurisdictional BE income [s LK 5B(8)].

The definitions of jurisdictional attributed income, jurisdictional BE income, jurisdictional income ratio and resident group member used in s LK 5B are located in s IQ 2B(9).

Example:
A person’s income tax liability in relation to their jurisdictional BE income is $400. The person’s available BE credit is $1,200. The tax liability on the person’s jurisdictional attributed income is $125. The jurisdictional income ratio is 3.2. Using the provisions of s LK 5B(4), the person’s converted BE credit is the lesser of $400 and $1,200, being $400. The person’s equivalent tax credit is the lesser of $125 and $375. Thus, the person will have a tax credit of $125 for the year, and will reduce their available BE credits by $400, leaving a BE credit to carry forward of $800.
850.100 Taxable distribution giving rise to attributed foreign income

When any CFC receives a taxable distribution, and for any person with an income interest of 10 per cent or greater in that CFC a taxable distribution gives rise to additional attributed CFC income, then a credit against income tax payable in New Zealand for that additional attributed CFC income shall be allowed only for any tax paid that is substantially of the same nature as NRWT.

The amount of the tax for which a credit is allowed for the additional attributed CFC income shall not exceed an amount calculated in accordance with the following formula:

\[
\text{person’s taxable distribution / total distribution} \times \text{foreign tax paid}
\]

Where:

“Person’s taxable distribution” is the amount of the taxable distribution derived by the CFC (including the tax which qualifies for the credit);

“Total distribution” is the total amount of the distribution (including the tax which qualifies for the credit);

“Foreign tax paid” is the amount of the foreign withholding tax that qualifies for the credit under s LK 7(2).

850.105 Refunds of income tax paid and tax credits

When a tax credit has been allowed against New Zealand income tax payable by any person, which has not taken into account any refund, amount, or benefit (determined directly or indirectly by reference to some or all of the payment of foreign income tax) received by the person that has not been taken into account in calculating the income tax liability, then under s LJ 7(3) the person is liable to pay the CIR the lesser of the refund of foreign tax or the amount of New Zealand tax payable on the foreign income calculated under s LJ 5. The date for payment is the later of the date the refund is received or 30 days after the date on which the person’s return of income for that year is filed. The refund is treated as having been received, whether it is received by the person or a person associated with person who paid the tax or a person associated with either person.

Note: The provisions of s LJ 7, apply from the 2008-2009 and later income years. Prior to this the rule, as it applied to tax credits against attributed foreign income, differed. Previously, in these circumstances, the amount of that excess (refund) was applied to reduce the balance of any tax credits carried forward for that CFC and to the extent that the amount of the excess is not applied to reduce the balance of the tax credits carried forward for that CFC, that excess shall be deemed to be income tax due and payable to the CIR on the 30th day after the date of the notice of assessment in which the credit is reflected or the date of the receipt by the CFC of that refund or repayment, whichever date is the later.

850.110 Group of companies’ foreign tax credits

When a company (company A) has for any income year a credit allowable for an income interest in a CFC (company B), or has carried forward to that income year such a credit, and that credit may not be utilised by the company A in that income year, then that credit may, so far as it extends, be allowed against income tax payable in New Zealand on attributed CFC income derived for that income year by any other company (company C) where that other company is a member of the same group of companies as the first company.

However, any credit to which this provision applies may only be allowed against income tax payable by company C on attributed CFC income derived from any CFC resident in the same country or territory as that in which company B was resident in the accounting period in which the income tax giving rise to the credit was paid or payable.

The tax credit rules also require the loss grouping requirements to be met before a tax credit can be offset by a company within the group. Specifically, s LK 6(4) states that company A may make an amount of a tax credit available to company C to use only if the amount would be able to be used under subpart IC (Grouping tax losses), reading the subpart by substituting:

(a) A wholly-owned group of companies for a group of companies;

(b) A credit of company A for a tax loss component of the loss company;
(c) The use of the credit to satisfy an income tax liability for the use of a tax loss component to reduce net income, in both subpart IC and s GB 4 (arrangements for grouping tax losses: companies);
(d) Company C for the company B
(e) The income tax liability of company C for the net income of company B; or
(f) Sections LK 1 to LK 5 for ss IA 3 to IA 5 (which relate to the use of tax losses generally).

Note: Among other things this restricts the tax credit group offset to wholly-owned groups.

**850.115 Change of CFC’s accounting date** [s EX 25]

If a person has an income interest in a CFC, and has calculated CFC income or loss, or attributed repatriation from the CFC on the basis of an accounting year (referred to as the old accounting year), and wants to use a different accounting year (the new accounting year) for the calculations, the person may make the change only with the approval of the CIR.

However, if the new accounting year ends in a later income year of the person than the old accounting year ends in, and that would result in attributed CFC income or attributed repatriation being derived in that later income year, that amount is not deferred to the later income year and instead is treated as derived in the previous income year. This rule applies only in the year of transition.

The CIR may consider any relevant factors in determining whether to approve a change, including:
(a) Whether the election results from a change in ownership of the foreign company;
(b) Whether the election results from the requirements of taxation or other laws of any jurisdiction in which the foreign company is resident or carries on business;
(c) Whether the election results from the requirement to have consistency in the accounting year balance dates of a group of companies; and
(d) Whether the election, if approved, would result, in any income year, in a postponement of liability to income tax on attributed CFC income, or to income tax or dividend withholding payment on an attributed repatriation dividend.

**850.120 Attributed foreign losses** [ss DN 1, DN 2, DN 3, DN 4, EX 20, IQ 2, IQ 4, IQ 9; TAA, s 92]

Under s DN 1, a person is allowed a deduction for an attributed CFC loss. This is subject to the jurisdictional ring-fencing rules in s DN 4. The rules in s DN 4 provide that if a person has an attributed CFC loss for an income year, a deduction is allowed for that year of no more than the total of:
(a) Any attributed CFC income in the income year for any other CFC resident in the same country as that in which the first-mentioned CFC was resident in the accounting period during which the attributed foreign loss arose; and
(b) Any FIF income calculated under the branch equivalent method derived by the person in the income year in respect of any FIF resident in the same country.

A person may only take an amount of attributed CFC income or FIF income for an income year into account to the extent that the person has not taken the amount into account in any other calculation for any other attributed CFC loss or FIF (branch equivalent) loss [s DN 4(2)].

If in an income year an attributed CFC loss of a person exceeds the amount allowed as a deduction as per the rules above, that amount becomes an attributed CFC net loss and able to be used under ss IQ 2, IQ 2B, IQ 4 and IQ 9: offset against net income in a future income year or against net income of another company in the current income year or in a future income year [s DN 4(3)].

Under s IQ 2, a person is allowed a deduction for an attributed CFC net loss carried forward that is no more than the total of:
(a) Any attributed CFC income of the taxpayer for that income year for:
   (i) The CFC for which the loss arose, if that company remains resident in the same country; and
(ii) Any other CFC resident in the same country; and

(b) Any FIF income calculated under the branch equivalent method, of the taxpayer derived in that
income year for any FIF resident in the relevant country.

A person may only take an amount of attributed foreign income or an amount of FIF income into account to
the extent it has not been taken into account elsewhere. When a person has an attributed CFC net loss and
(under s 38 Income Tax Amendment Act (No 2) 1993) it becomes an interest of the person in a FIF, then
with effect from that income year the attributed foreign net loss shall be treated as a FIF net loss, except if
the person calculates the FIF income or loss under the branch equivalent method. This provision [s IQ 9] was
inserted when the control rules were relaxed for CFCs, such that a foreign company that may have been a
CFC, ceased to be a CFC.

Under s IQ 2(1B) if a person’s attributed CFC net loss relates to an income year for which s IQ 2B applies
to the person (for income years beginning on or after 1 July 2009) and is carried forward to the tax year, a
deduction is allowed for that year under the general rules [s IQ 2]. This section deals with losses arising under
the new CFC rules that apply generally from the 2010-2011 income year: that is losses on passive account.
Losses incurred in prior income years, that is up to and including the 2009-2010 year (assuming the general
application date for the new rules of the 2010-2011 income year) are dealt with under s IQ 2(1C) and the
rules in s IQ 2B, as discussed below.

If, under s IQ 2(1), a person is unable to offset any part of the maximum amount that s IQ 2(1) allows to be
offset, because there is insufficient net income, the excess shall be treated as if it were a net loss for the
income year and will cease to be part of the attributed CFC net loss available to the person for that year and
becomes a tax loss component under s IA 2(4).

**Example:**
A person derives the following income in the 2008-2009 income year:

<table>
<thead>
<tr>
<th>Income Type</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Employment income</td>
<td>$40,000</td>
</tr>
<tr>
<td>Partnership loss</td>
<td>($50,000)</td>
</tr>
<tr>
<td>Attributed CFC income</td>
<td>$10,000</td>
</tr>
<tr>
<td>Attributed CFC loss carried forward</td>
<td>($5,000)</td>
</tr>
</tbody>
</table>

The ($5,000) loss balance is carried forward as a non-ring-fenced loss as there is a surplus of attributed CFC income against
which it could have been offset against. If the person with the attributed CFC income is a company, this amount could be grouped
with other wholly-owned group companies and offset under s IQ 4.

**850.123 Transitional rules for the use of attributed CFC losses accumulated under the branch equivalent rules**

With the introduction of the new CFC rules from the 2010-2011 income year, transitional rules have been
introduced to deal with attributed CFC net losses and FIF net losses carried forward from the previous rules.

Transitional rules are required because the measure of attributable income against which those losses can be
offset is now passive income only, whereas under the previous rules the branch equivalent income was
calculated on both active and passive income types. The value of the accumulated historical losses has
therefore been restricted under the new rules. This is achieved through s IQ 2B.

Importantly, when dealing with historical losses and attributed CFC income under the rules applying from
the 2010-2011 year, s IQ 2(1C) sets out the amount of the historical losses that can be offset and the amount
of the historical net losses that are lost (as the two do not necessarily equal one another). Specifically,
s IQ 2(1C) provides that the amount available for reducing the person’s net income is equal to the equivalent
CFC loss under s IQ 2B, and the amount of that attributed CFC net loss that is not available to the person
after the tax year (that is, the amount of historical losses that can no longer be carried forward) is equal to
the converted branch equivalent (BE) loss under s IQ 2B. Thus, in these situations, both the person’s
equivalent CFC loss and the converted BE loss will need to be determined.
Section IQ 2B(1) provides that the amount of attributed CFC net loss or FIF net loss from a jurisdiction that a person has carried forward from the previous rules is the person’s available BE loss for that jurisdiction. Section IQ 2B(2) provides that each year, some or all of this available BE loss is converted into an equivalent CFC loss, which is effectively an ordinary attributed CFC net loss under the new rules [s IQ 2B(2)(b)]. The amount of available BE loss converted each year is the converted BE loss that is then not available to be carried forward.

The amount of losses converted each year (and the conversion formula), is determined under s IQ 2B(4) to (7). Separate calculations are required for each jurisdiction. The conversion depends on the relationship between a person’s jurisdictional attributed income and the person’s jurisdictional BE income. These terms are defined in s IQ 2B(9). Jurisdictional attributed income only includes income from CFCs that is attributed under the new rules, whereas jurisdictional BE income includes the full branch equivalent income from CFCs that would have been attributable under the old rules. Full branch equivalent FIF income is included under both terms.

At this stage of the process it may be very tempting to exercise the choice available under s IQ 2B(3) and choose to give the CIR notice that the available BE loss for a jurisdiction not be carried forward. However, if it is decided to utilise accumulated BE losses, s IQ 2B(4) deals with the typical scenario in which a person’s jurisdictional BE income is greater than jurisdictional attributed income. In that case, the converted BE loss is equal to the person’s jurisdictional BE income (or to the available BE loss if this is lower). The equivalent CFC loss is equal to the person’s jurisdictional attributed income (or the amount calculated under s IQ 2B(4)(b)(ii) if this is lower).

Example:
A company has jurisdictional attributed income of $80, jurisdictional BE income of $200 and available BE losses of $1,000. The amount that may be offset against the jurisdictional CFC income is the equivalent CFC loss, which under s IQ 2B(4)(b) is the lesser of $80 and the amount obtained under s IQ 2B(4)(b)(ii), which is $400. The amount of losses accumulated under the old CFC rules must be reduced by the person’s converted CFC loss, is the lesser of $200 and $1,000. Accordingly, the loss offset for the year is $80, and the losses to carry forward reduce to $800.

Section IQ 2B(5) deals with the less common situation when jurisdictional attributed income exceeds jurisdictional BE income (which could be the case if there was a loss on active income account for example). In this situation the equivalent CFC loss is equal to the converted BE loss. Sections IQ 2B(6) and (7) deal with interest holders who are members of wholly-owned groups that include other resident members. For a member of a wholly-owned group, the conversion of historical losses to an equivalent CFC loss is done by reference to the jurisdictional income ratio of the group [s IQ 2B(9)].

Example:
Using the facts from the example above, but assume the taxpayer is a company that is a member of a wholly-owned group. We also assume that the group’s jurisdiction income ratio is 2. Under the standard situation in s IQ 2B(6) the outcome is:
(a) Under s IQ 2B(6)(a), the company’s converted BE loss is the lesser of $1,000 and the greater of $200 and ($80 × 2) $160, which is $200.
(b) Under s IQ 2B(6)(b), the company’s equivalent CFC loss is the amount calculated by multiplying the group’s jurisdictional income ratio by the company’s converted BE loss. This is: ($200 × 2) = $400.

A person or a wholly-owned group may elect, under s IQ 2B(8), to fix the jurisdictional income ratio using the average ratios over a two-year period, provided they had jurisdictional BE income in each of those years. Section IQ 2B(10) allows a person or a wholly-owned group to use the net profit or loss from financial accounts as a proxy for the branch equivalent income or loss of a CFC for the purposes of calculating their jurisdictional BE income.

850.125 Group of companies attributed foreign net losses
If a company (company A) has an attributed CFC net loss for any income year, or has carried forward to any income year an attributed CFC net loss, and the loss may not be offset by company A in the income year, company A may make the net loss available to company B. The loss grouping rules apply to the attributed CFC net loss as if it were a net loss arising on the last day of the income year for which it was attributed —
this is also the situation with attributed CFC net losses [s IQ 1(2)]. Therefore, if a company suffers a breach of continuity during an income year that breach will not affect any attributed CFC net losses for that year. The maximum attributed CFC net loss that any other company (company B) may offset against its net income for that income year may not be greater than the amount that company B would require as attributed CFC net loss for the same income year to produce a reduction in company B’s net income for the tax year equal the total of:

(a) Any attributed CFC income of company B for that income year in respect of any CFC resident in the same country or territory as that in which company A was resident in the accounting period for which the attributed CFC net loss arose; and

(b) Any FIF income of the company B calculated under the branch equivalent method and derived in that income year for an interest in a FIF resident in the relevant country.

An amount of attributed foreign income of company B may only be taken into account to the extent that it is not taken into account elsewhere.

If the company A is unable to offset any part of the maximum amount of attributed foreign net loss for the income year against net income of the other company for the year because there is insufficient net income, the excess shall be treated as if it were a tax loss component of company B for the year and will cease to be part of the attributed foreign net loss available to the first company. The rationale for this is the same as discussed at 850.120 (ie the maximum amount of the permitted offset is not reached, and as such the loss is no longer ring fenced).

(1) CFC losses exceed economic loss

Section EX 20 contains rules that reduce a person’s attributed CFC loss to the economic loss, if any, incurred in relation to that CFC interest. This rule is directed at, for example, situations when a person may have a right to require another person to purchase their interest in a CFC at a price set before the CFC incurred losses (ie the person has no economic loss from ownership of their CFC interest), but through the operation of the CFC attribution rules is entitled to attribute that CFC loss.

Section EX 20 applies in two situations, when:

(a) The person has an attributed CFC loss and the person suffers no, or substantially no, corresponding economic loss, whether because of a put or call option (as discussed in the Example above), or any other reason; or

(b) The person has an attributed CFC loss, and the amount exceeds the economic loss of the person because of the nature of the things taken into account in calculating the person’s income interest (through s EX 9) or for any other reason.

850.130 Foreign investment fund rules

The foreign investment fund (FIF) rules first applied from 1 April 1988 to entities resident in a prescribed list of low tax jurisdictions, and from 1 April 1989 to all entities not resident in grey-list countries. While the rules have been a feature of our tax landscape for over 20 years, the grey-list exemption has been effective in reducing the exposure of the FIF rules. However, from the 2007-2008 tax year generally, the FIF rules were substantially changed. The changes introduced new FIF income calculation methods for investment by a New Zealand resident in a FIF when the investor has a less than 10 per cent interest, referred to as a portfolio interest.

With the introduction of these changes, the FIF rules now apply differently to portfolio (less than 10 per cent) investment and non-portfolio investment. The new rules introduce new FIF income calculation methods for investment by a New Zealand resident in a foreign company when the investor owns less than 10 per cent of the company. Under the new rules for portfolio interests, the grey-list of countries is removed, and the fair dividend rate (FDR) income calculation method will be the default method for calculating FIF income. Generally, the FDR method taxes portfolio investment in foreign shares at five per cent of market value.

A number of exemptions have also been introduced. Investments in certain Australian-resident listed companies will be taxed as if they were New Zealand investments. The NZ$50,000 cost threshold continues
to apply (as it did before) for investments in offshore companies outside Australia, below which all investments continue to be taxable under general income tax rules.

For interests of less than 10 per cent the new FDR method will be the principle calculation method, with a cost method available when market value is unavailable. For interests of 10 per cent or more, the FIF rules apply essentially as they did prior to 1 April 2007.

(1) Application dates of portfolio FIF rules

For the majority of taxpayers (standard and late balance date taxpayers), the new rules apply from the 2007-2008 income year (ie 1 April 2007 for standard balance taxpayers or 1 July 2007 for a late balance date taxpayer with a 30 June balance date). However, for early balance date taxpayers the new tax rules apply from the start of their 2008-2009 income year (eg for a taxpayer with a 31 December balance date, the new rules apply from the start of their 2008-2009 income year on 1 January 2008).

A special application date rule applied for companies, group investment funds, or superannuation funds that intend to be portfolio investment entities. These entities were able to elect to defer the application of the new rules until 1 October 2007. For an election to defer the application date of the new rules, the taxpayer had to give a written notice to the CIR before 1 April 2007 (if the entity exists before that date) or within 1 month of the day on which the entity comes into existence (if the entity comes into existence between 1 April 2007 and 1 October 2007). This special application date rule for prospective portfolio investment entities is intended to align the start dates of the new offshore tax rules and the new tax rules for portfolio investment entities.

850.135 Definition of an interest in a FIF [ss EX 28, EX 29 and EX 30]

Deciding if something is an attributing interest in a FIF is a two-step process: first understanding what entities constitute FIFs, and second whether the interest held in that entity constitutes an interest in a FIF. The second step also requires an examination of the exclusions, which are listed in ss CQ 5 [see 850.140] and s DN 6.

A foreign investment fund (FIF), is a collective term used to describe any one of the following:

(a) A foreign company (which includes a unit trust);
(b) A foreign superannuation scheme;
(c) An insurer under a life insurance policy, but only if the policy is offered or entered into outside New Zealand; or
(d) An entity described in sch 25, Part A (of which no entity has ever been listed).

The following three categories of interests held by a person in a foreign entity (company, superannuation scheme or life insurance policy) are treated as an “attributing interest” in a FIF [s EX 29], unless an exemption applies:

(a) **Category 1**: A direct income interest in a foreign company, or in an entity described in sch 25, Part A;
(b) **Category 2**: Rights to benefit from a foreign superannuation scheme, as a beneficiary or member; or
(c) **Category 3**: Rights to benefit from a life insurance policy in relation to which the FIF is the insurer.

Categories 2 and 3 include rights that are contingent or discretionary, [s EX 29(5)]. That is, it includes rights to benefit from a superannuation scheme that are not only vested, but are contingent or discretionary. For example, a right or interest (in a superannuation fund) that does not vest until a certain date, or other event, but accrues income in the interim.

Section EX 30 sets out the rules that determine a person’s direct income interest in a foreign company. These rules are based on those used in determining a direct income interest for the purposes of the CFC rules [s EX 9, see 850.40]. For the purposes of the rules the term “company” includes an entity listed in sch 25, Part A. A company also includes a unit trust by definition.

A direct income interest in a foreign company is defined in s EX 30(1) as:

(a) Any shares in the foreign company;
(b) Any shareholder decision-making rights for the company [see 170.20];

(c) A right to receive or to apply any of the income of the company for the relevant accounting period;

or

(d) A right to receive or to apply any of the value of the net assets of the company if they are distributed.

The interest in the FIF is measured based on the rules used for measuring direct income interests in CFCs.

If a person becomes a resident or ceases to be a resident, the person’s interest is subject to the rules in ss EX 64. Under s EX 64 the person is treated generally as having acquired or disposed on the interest at market value depending on the circumstances. If the person is using the accounting profits or branch equivalent methods, the rules in ss EX 16 and EX 17 may adjust the size of the interest used to attribute the FIF income in these circumstances as a means of apportioning the FIF income subject to tax [see 850.225].

Note: Generally, an option to acquire an interest in a FIF is not recognised as a direct income interest. Only interests in the FIF that have an entitlement to income or assets or an ability to control an entitlement to income or assets are actually used in determining category 1 FIF interests.

850.140 When FIF income arises [ss CQ 4, CQ 5 and EX 45]

Section CQ 4 states that FIF income of a person is income.

Section CQ 5 sets out the circumstances when FIF income arises. This is identical to the circumstances when a person has a FIF loss as set out in s DN 6, and while the application of the FIF loss rules are discussed at 850.255, the discussion below on when FIF income arises applies equally to ss CQ 5 and DN 6, in relation to when FIF losses arise.

A person has FIF income if the person is a New Zealand resident (not being a transitional resident) and has rights in a foreign company, foreign superannuation scheme, rights under a life insurance policy issued by a non-resident, or rights in an entity listed in sch 25, Part A (which lists entities treated as a FIF — but to date no entity has been listed); and the rights are an attributing interest (direct income interest) in a FIF under s EX 29.

Given the broad definition of an interest in a FIF, deciding if FIF income arises is in large part determined by whether one of the exemptions applies. Thus, provided one of the exemptions listed below does not apply, and, in the case of natural persons (and a very limited number of trustees — not being trustees of a family trust), the FIF interest cost more than $50,000 [see 850.150], FIF income will arise.

FIF income does not arise if, at the time, the rights exempt from being an attributing interest under any of the following 15 exemption rules in s CQ(1)(c) [see 850.145].

In summary the exemptions are:

(a) The exemption for ASX-listed companies [s EX 31];

(b) The exemption for Australian unit trusts that turn over 25 per cent of profitable assets or distribute 70 per cent of their income [s EX 32];

(c) The Australian regulated superannuation savings exemption, for superannuation savings that are locked in [s EX 33];

(d) The CFC rules exemption [s EX 34];

(e) The exemption for 10 per cent or greater interest in a grey-list company exemption [s EX 35];

(f) The 10-year exemption for venture capital companies emigrating to a grey-list country [s EX 36];

(g) The 10-year exemption for a grey-list company that owns a New Zealand venture capital company [s EX 37];

(h) The exemption for shares in a grey-list company acquired under a venture capital agreement [s EX 37B];

(i) The exemption for an employee share purchase scheme of a grey-list company [s EX 38];

(j) The temporary exemption for interests in defined grey-list companies with a substantial number of shareholders resident in New Zealand [s EX 39];
(k) The temporary exemption for a grey-list company investing in Australasian Equities [s EZ 32];
(l) The foreign exchange control exemption [s EX 40];
(m) The exemption for a non-resident or transitional resident [s EX 41];
(n) The new resident’s accrued superannuation entitlement exemption [s EX 42]; and
(o) The non-resident’s annuity or pension exemption [s EX 43].

Section CQ 5(1)(d) excludes natural persons with FIF interests that cost $50,000 or less from the requirements to attribute FIF income [see 850.150]. Trustees of certain trusts (not family trusts) also qualify for the $50,000 cost threshold [s CQ 5(1)(e), see 850.150]. The $50,000 de minimis rule is not affected by the rules in ss EX 63, EX 65 and EX 67 that deem disposals and acquisitions at market value when, for example, a FIF exemption ceases to apply or a person changes a FIF calculation method. The $50,000 de minimis rule is affected when a person migrates to or from New Zealand [s EX 64, see 850.225].

Life insurance death benefits arising from insurance contracts entered into before 2 July 1992 are also excluded from FIF income under s EX 45, in either of the two following situations:
(a) The person (or deceased) entered into the policy that gave rise to the benefit when the person was not a New Zealand resident, and at that time had not been a New Zealand resident for at least the previous 10 years, and the benefit was not voluntarily increased after the person became a New Zealand resident; or
(b) The life insurance policy was taken out prior to 2 July 1992 and the benefit was not voluntarily increased on or after that date.

(1) Controlled foreign company with FIF interest
When a person has an income interest of 10 per cent or more in a CFC, a person can also have FIF income in an income year if the CFC holds an attributing FIF interest. This applies because FIF income of a CFC is attributed directly back to the persons with income interests of 10 per cent or more in a CFC under the rules for the calculation of branch equivalent income in ss EX 21(33) and EX 58 [see 850.210].

(2) FIF income of persons ceasing to be New Zealand resident
FIF income of a person who ceases to be resident in New Zealand is treated as being derived while the person was a New Zealand resident. This avoids the argument that the income is derived evenly over the income year [s EX 16(3)].

(3) Schedule 25
Schedule 25 contains three parts:
(a) Part A: that lists entities to be treated as FIFs;
(b) Part B: that lists entities that are excluded from the grey-list; and
(c) Part C: that lists entities that do not qualify for the accounting profits method.

The purpose of sch 25 was to provide flexibility to the FIF rules to deal with unforeseen eventualities. To date sch 25 has not been used.

850.145 When an interest in a FIF is not an attributing FIF interest
[ss CW 29, EX 31, EX 32, EX 33, EX 34, EX 35, EX 36, EX 37, EX 37B, EX 38, EX 39, EX 40, EX 41, EX 42, EX 43, EZ 32]

The concept of an interest in a FIF is very broad. In considering whether an interest is an attributing interest or not, regard must be had to the exemptions. These are discussed below. Regard must also be had to the investment threshold rule in ss CQ 5 and DN 6 [see 850.150]. An interest in a FIF is not an attributing FIF interest when one of the following exemptions applies.
**Australian-resident listed company exemption [s EX 31]**

Interests in shares in Australian resident companies listed on an approved index on the Australian Stock Exchange (that are not stapled stock shares per s EX 31(1)(b)) will continue to be taxed under general income tax rules — this means they will be taxed on dividends only if the shares are held on capital account, and on dividends and realised share gains if held on revenue account.

The key requirements are that:

(a) The person’s FIF interest is shares;
(b) The shares are not stapled stock;
(c) The company is resident in Australia at all times in the year when the person owns shares in the company;
(d) The shares are listed on an approved index at the beginning of the person’s income year or when the person first acquires the shares;
(e) The company is not listed in sch 25, Part B; and
(f) The company is required to maintain a franking account.

The Australian company must be resident in Australia at all times in the year. However, to meet the test, it is only necessary that that test is met during that part of the year when the New Zealand resident owned the shares: s EX 31(2)(a). Thus, if an Australian resident company migrated to another country and ceased being an Australian resident after a New Zealand person disposed of their rights in that company, then the exemption will still be met for that person in respect of that interest.

The exemption does not apply to an investment in an Australian resident company when, under an Australian double tax agreement, residence for treaty purposes is assigned to a country other than Australia. If residence for treaty purposes was a country other than Australia, the integrity of the Australian exemption would be compromised as the company may not be subject to full Australian tax. Like the general test of Australian residence, the test must be met at all times in the year when the person holds a right in the company. That is, if an Australian resident company was treated as a resident of another country after a New Zealand person disposed of their rights in that company, then the exemption will still be met for that person in respect of that interest as it was an Australian resident for the purposes of a DTA when the New Zealand resident owned the shares.

In considering the Australian ASX listing, it is necessary to be aware that the exemption for Australian resident companies is restricted to companies listed on an “approved” index of the Australian Stock Exchange (ASX). The approved ASX indices include the ASX All Ordinaries (the 500 largest listed companies), ASX 200 index, and ASX 50 Leaders. Answering this question may not be straightforward as companies do move on and off these lists. Inland Revenue now has a list (IR 871) on its website of the companies that are considered to meet the exemption. The website address www2.standardandpoors.com may also assist. Advice may need to be sought from a broker or financial adviser to check that the company was listed at the appropriate times.

The listing timing rules in s EX 31(2) are:

(a) Unless the taxpayer acquires the shares during an income year, the shares must be listed on the approved index at the beginning of the income year (being the New Zealand income year).

(b) For taxpayers who acquire the shares during the income year, then providing the taxpayer does not already own shares in that company, the shares must be listed on the approved index at the time of acquisition.

(c) The shares must be listed on an approved index at the beginning of the final month of the preceding income year if, in the first month of an income year, the shares are cancelled or are transferred under a scheme of arrangement entered into under Part 5.1 of the Corporations Act 2001 (Aust). This paragraph deals with situations when a company would have been listed on an approved index at the start of an income year, but has been removed as part of a Court-approved reorganisation. The effect is to allow shares that were listed at the start of the final month of a person’s income year, to be
regarded as listed at the start of a person’s income year when the shares were cancelled in the first month of an income year under a Court-approved arrangement.

**Example:**
Mark acquires shares in Australian Listed Company on 31 July 2008. Australian Listed Company is listed on the ASX All Ordinaries, and has been for many years. Mark is entitled to the Australian-resident listed company exemption as the company was listed on an approved index at the date of acquisition. The interest is thus not an interest in a FIF. However, if Australian Listed Company was not listed until subsequently, then the interest would be a FIF interest, until such time as it was listed on an approved index at the start of Mark’s income year next succeeding the date of listing.

The exemption does not apply if in the year when the person holds rights in the company, it is an entity described in sch 25, Part B.

Finally, the exemption only applies to interests in Australian resident companies that are required to have a franking account in accordance with Australian tax law. Generally, a New Zealand investor that receives a “franked” dividend from a company that is listed on the ASX All Ordinaries index will be entitled to this exemption. Similarly, if the dividend is not franked, this should alert the recipient to the fact that the exemption may not apply and further checks should be made.

Generally, interests in Australian unit trusts will not qualify for the Australian exemption because they are not required to have a franking account and are therefore subject to the new foreign investment fund rules. A limited exception for interests in certain Australian unit trusts is permitted by s EX 32. The exemption will not apply to any shares of an Australian company that are stapled to another security (being rights in another company), such that the securities can only be disposed of together.

**Note:** Investments in Australian-resident listed companies by portfolio investment entities will be taxable only on dividends, subject to the portfolio investment entity having full equity risk in the Australian share. This is because any realised share gains are treated as excluded income under s CX 55.

(2) **Australian resident unit trusts with adequate turnover or distributions [s EX 32]**

The tax treatment of Australian unit trusts, that are widely-held investment vehicles, differs from New Zealand unit trusts in that if the trust fully distributes its earnings the income is not taxed in the hands of the trustees, but rather in hands of the investors: on a flow through basis. Thus, if the trust invests in companies that pay no dividends, there may not be income to distribute. New Zealand investors in such trusts could, in theory, avoid the FIF rules by accumulating earnings growth in the unit value of the Australian unit trust, which could then be realised by selling units and avoiding a tax liability in both Australia and New Zealand — which was the very arrangement that the FIF rules were designed to target: although admittedly originally targeted at trusts in low tax jurisdictions.

For this reason Australian unit trusts were not regarded as eligible for the exemption from the FIF rules under s EX 31, which is restricted to investment in Australian resident companies listed on approved ASX indexes. However, investments in certain Australian resident unit trusts may be exempt if one of two conditions is met. The first (the turnover exemption) is that the unit trust turns over a minimum of 25 per cent of its profit-making assets (shares) each year. The second (the distribution exemption) is that the unit trust makes total distributions equal to or exceeding 70 per cent of the trust’s earnings for the trust’s year. In this regard, the reference to the trust’s year, is a reference to the accounting year of the trust that falls into the investor’s income year [s EX 32(1)(g)].

Both the turnover and the distribution exemption requirements ensures profit distributions (which are taxed as dividends in New Zealand) are made to New Zealand resident unit holders, and thus overcomes the concern with Australian unit trusts that essentially act as roll-up funds.

As with the Australian resident listed company exemption, the unit trust must be resident in Australia at all times in the year when the New Zealand resident holds a right in the trust. Also, at all times in the year when the New Zealand resident holds an interest in the unit trust, the unit trust cannot be treated as a resident of another country under a double taxation agreement that Australia has with that country.
The exemption does not apply, if the in the year when the person holds rights in the company, it is an entity described in sch 25, Part B.

In both cases, to qualify for the exemption, there must be an RWT proxy [TAA, s 15T, see 1260.15] in place when a distribution from the trust is made. With the exemptions linked to the RWT proxy requirement this gives assurance that New Zealand tax liabilities will be satisfied. It is also likely that the RWT proxy, who will generally be a New Zealand-based agent, should be in a position to advise investors on whether the Australian unit trust meets the exemption criteria. Nevertheless, it would be expected that an Australian unit trust offering investment in New Zealand would make it clear (perhaps in its offer documents) whether or not the unit trust qualifies for the exemption. This latter point is important as it would be very difficult for investors to be able self assess whether an Australian unit trust met this exemption.

(3) Turnover test [s EX 32(2) to (6)]

Investments in an Australian unit trust that meets the minimum turnover requirement and use the RWT proxy rules are exempt from the FIF rules. Importantly, this turnover requirement only applies to the shares held by the unit trust. That is, this exemption is not limited to Australian unit trusts that only have assets that are shares, rather the exemption is only applied to the assets of the trust that are shares.

The turnover exemption is also further restricted to those shares in profit. Share investments of the unit trust that are in loss will not count toward the turnover requirement. This is a deliberate policy design to ensure there is not an incentive to dispose of only loss making investments to meet the minimum turnover requirement. Thus, only investment in shares in profit is taken into account in determining whether 25 per cent of the total share investments of the unit trust are disposed of each year.

The 25 per cent minimum turnover test compares the realised gains of the Australian unit trust (for the trust’s accounting year that ends in the investor’s income year) with the unrealised gains of the “total profitable shares” held by the trust at the end of the trust’s accounting year. The realised gains must exceed 25 per cent of the net unrealised gains.

The realised gains are calculated in s EX 32(3) by the formula:

\[
\text{total disposal gain} - \text{total cost}
\]

Where:

“Total disposal gain” is the total amounts derived from disposal of the shares by the unit trust during the trust’s year; and

“Total cost” is the total cost of those shares to the unit trust.

This figure must exceed 25 per cent of the total net unrealised gains, calculated in the formula in s EX 32(5):

\[
\text{total profitable shares} - \text{total cost}
\]

Where:

“Total profitable shares” is the total of the market values of shares of the unit trust that are held at the end of the income year that have a market value greater than or equal to their cost to the unit trust; and

“Total cost” is the total cost of those shares to the unit trust.

For the purposes of the calculating the minimum turnover amounts, the turnover requirement relates to the unit trust’s accounting year that falls within the investor’s income year and the amounts are calculated in the currency in which the unit trust prepares its accounts. Inland Revenue advises that it has no problem with shares being sold and immediately repurchased for the purpose of satisfying the turnover requirement. This practice is sometimes referred to as “bed and breakfasting” [see TIB vol 19:3 (April 2007) at 33].

(4) Distribution exemption [s EX 32(7) to (9)]

Alternatively, the distribution exception could be applied to determine if the Australian unit trust is exempt from the FIF rules. The distribution exception applies when, during the trust’s year, the unit trust distributes 70 per cent or more of the total distributable gains calculated under the following formula:

\[
\text{closing equity + distributions} - \text{opening equity} - \text{contributions}
\]
Where:

“Closing equity” is the amount by which at the end of the trust’s year, the market value of the unit trust’s assets is more than the market value of the unit trust’s liabilities;

“Distributions” is the total amount of distributions to investors by the unit trust during the trust’s year;

“Opening equity” is the amount by which at the beginning of the trust’s year, the market value of the unit trust’s assets is more than the market value of the unit trust’s liabilities;

“Contributions” is the total amount of contributions by investors during the trust’s year.

Effectively, the exemption requires that the Australian unit trust distribute an amount during its year that equals or exceeds 70 per cent of the trust’s earnings for the year, calculated by reference to the market values of the trust’s assets.

Example:

Assume an Australian unit trust has an opening value of $5,000,000, and during the year receives contributions of $1,000,000, has a closing value on 30 June 2009 of $6,000,000 and derived $1,500,000 in gains on the disposal of equities.

$6,000,000 + $1,500,000 – $5,000,000 – $1,000,000 = $1,500,000

The trust would meet the distribution exemption in a New Zealand investor’s year to 31 March 2010 because it has distributed in excess of $1,050,000 (70 per cent of $1,500,000) during its year. In reality many widely-held Australian unit trusts should meet this exemption as they flow 100 per cent of their earnings to their investors. However, the unit trust will have to have an RWT proxy in place to qualify. This will limit the number of Australian unit trusts that will qualify.

(5) Exemption for Australian regulated superannuation saving [ss EX 33 and CW 29]

A person’s rights in FIF are not an attributing FIF interests if the person is a natural person and the right is an interest in a foreign superannuation scheme that is:

(a) An Australian approved deposit fund;
(b) An Australian exempt public sector superannuation scheme;
(c) An Australian regulated superannuation fund; or
(d) An Australian retirement savings account.

This exemption was introduced in the Taxation (Savings Investment and Miscellaneous Provisions) Act 2006 to recognise the problems people with interests in these schemes may face when they are resident in New Zealand, and is backdated to the commencement of the FIF rules (see application date below). The issue stems from the fact that individuals working in employment in Australia have compulsory contributions paid into a superannuation scheme made on their behalf by their employer. In general, Australian and New Zealand citizens cannot access these superannuation interests until they reach retirement age.

If these individuals migrate or return to New Zealand they could be subject to tax on these interests under the FIF rules if they continue to make contributions to the scheme after being resident in New Zealand for five years. If no further contribution is made the FIF interest will be exempt as an interest in an employment-related foreign superannuation scheme for New Zealand tax purposes [see discussion below on ss EX 41 and EX 42].

Anecdotally it was thought that individuals with Australian superannuation interests may not be complying correctly with their tax obligations under the FIF rules. In addition, the potential tax consequences under the FIF rules were thought to be a disincentive for individuals with interests in particular superannuation schemes to take up long-term or permanent employment in New Zealand.

Even though the FIF regime could be avoided by ceasing to make contributions to the scheme, members of defined benefit schemes must continue to contribute to preserve the expected value of their future entitlements. If they cease making contributions, the ultimate benefit payout could be significantly reduced from the level expected had contributions continued. If a member transferred his or her entitlements in a defined benefit scheme to another scheme, such as a defined contribution scheme, this transfer could also give rise to a tax liability under the FIF rules or general tax rules.
Section CW 29 provides roll-over relief in situations when an individual has withdrawn an amount from one of the listed superannuation schemes and reinvests the entire amount in another listed scheme. The amount withdrawn and reinvested will be exempt from income tax. This provision is necessary as, exemption from the FIF rules, does not equate to a total exemption from tax.

The scope of the new exemption will have wide coverage because most superannuation schemes in Australia (including schemes that receive compulsory employment superannuation contributions under Australia’s guarantee scheme) will fall within one of the schemes listed in s EX 33. These schemes are all subject to strict prudential standards and rules relating to the preservation and early release of superannuation benefits. A brief discussion on the schemes covered by the exemption is below.

In exempting these schemes from the FIF rules, the exemption should achieve the twin objectives of addressing trans-Tasman migration and compliance and tax costs arising under the FIF rules. Recall though that exemption from the FIF rules does not always exclude benefits paid from the scheme from New Zealand income tax — that is, it should not be assumed that an exemption from the FIF rules is an exemption for all purposes.

(6) Description of the Australian schemes

The schemes covered by the s EX 33 exemption are subject to strict preservation rules whereby benefits are generally locked-in until a person reaches retirement age. Individual schemes may have some capacity to pay benefits to people experiencing financial hardship and on compassionate grounds, but these payments are strictly limited. For example, payments may be made to treat life-threatening illnesses, to prevent foreclosure by a mortgagee or the exercise of an express or statutory power of sale over the family home. When a person dies the scheme will pay benefits in cash to the person’s dependents or the person’s estate. It is also possible to transfer benefits between superannuation schemes, but only to Australian schemes that meet certain regulatory standards, including the preservation of benefits.

The principal legislation governing the regulation of superannuation in Australia is the Superannuation Industry (Supervision) Act 1993 (SISA) and the Superannuation Industry (Supervision) Regulations 1994 (SISR).

(7) Approved deposit funds

Approved deposit funds were introduced in 1984 as an “approved” fund for receipt of superannuation lump sum payments. They were created as roll-over vehicles into which a member could transfer superannuation benefits so as to retain them in the superannuation system. ADFs thus receive hold and invest certain types of roll-over funds until the funds are withdrawn in accordance with the preservation rules in SISA. Due to subsequent legislative changes, superannuation funds can accept lump sum or roll-overs so ADFs have become less relevant.

(8) Exempt public sector superannuation schemes

Exempt public sector superannuation schemes provide for payments of superannuation, retirement or death benefits, and are established under:

(a) A Commonwealth, state or territory law; or

(b) The authority of the Commonwealth, state or territory government, or a municipal corporation, another local governing body or a public authority that is constituted by or under a Commonwealth, state or territory law.

These schemes are specifically listed in sch 1AA of SISR. Although these schemes are not regulated under SISA they conform to the principles of that Act.
(9) Regulated superannuation funds

These funds have made an irrevocable election for the regulatory provisions of SISA to apply to them. Most entities involved in the provision of superannuation in Australia will be regulated superannuation funds. They include:

(a) Corporate or employer funds, which are established and run by an employer (usually large) for its own employees;
(b) Industry funds, which are for employees of different employers in the same industry, for example — hospitality industry or building industry;
(c) Retail or public offer funds, which are open to anyone to join, and are usually run by large banks or life insurance companies; and
(d) Small funds approved by the Australian Prudential Regulation Authority and self-managed superannuation funds. These funds have five or fewer members and are predominantly used by the self-employed.

(10) Retirement savings accounts

These accounts are typically offered by banks or similar financial institutions and operate in a similar way to a bank account — accumulating small amounts deposited regularly by their members and by the member’s employer and paying interest on those deposits. The money is invested in assets that are low risk. The Retirement Savings Accounts Regulations 1997 contain preservation rules including restrictions on the early release of benefits from retirement savings accounts, which are identical to the preservation rules in the SISR.

(11) Preservation rules and restrictions on early release

Generally, superannuation benefits may be paid out only on the occurrence of one of the following events:

(a) Retirement on or after reaching preservation age. A person’s preservation age depends on his or her date of birth — if a person’s date of birth is before 1 July 1960, his or her preservation age would be 55 years. In addition, if a member is under 60 years of age the scheme must be satisfied that the member never intends to work again;
(b) Reaching age 65 years;
(c) Permanent incapacity;
(d) Termination, at any age, of gainful employment with an employer who had contributed to the scheme, as long as the benefits are paid in the form of a non-commutable lifetime pension.

The early release of superannuation benefits is not permitted on any grounds other than those specified by the relevant legislation. The final decision on whether a release is permitted on any grounds rests with the trustees of the applicant’s superannuation schemes, subject to the governing rules of the scheme.

There are two principal ways by which an individual can access his or her superannuation benefits before reaching retirement age. An individual can apply to his or her superannuation scheme’s trustee on the grounds of severe financial hardship; or alternatively, apply to the Australian Prudential Regulation Authority for release on compassionate grounds.

Benefits may be released on compassionate grounds in very limited circumstances. These circumstances are defined in relevant legislation or in the trust deed of the scheme and cover expenses for medical treatment, medical transport, modifications to the family home or motor vehicle because of severe disability, palliative care, and funeral expenses. Funds may also be released on compassionate grounds to prevent foreclosure of a mortgage or exercise of a power of sale over the member’s principal place of residence. Benefits can also be released to meet expenses in other cases where the release is consistent with one of these grounds.

The regulatory arrangements attempt to balance the need for superannuation benefits to be protected for retirement purposes against the need for access when superannuation fund members experience a personal emergency.
Non-preserved or unrestricted interests

The exemption applies to interests in superannuation schemes that are subject to preservation arrangements. However, some interests that were acquired before certain dates might not be preserved or restricted. This is because over the years the rules relating to accessing Australian superannuation benefits have been gradually tightened to encourage or enforce the preservation of member interests, but the general practice has been to grandparent any interests that members have had at the time of each change. Even so, these unpreserved or unrestricted interests should still qualify for exemption from the FIF rules as long as the scheme is listed in the new exemption provision.

CFC rules exemption [s EX 34]

A person’s interest in a foreign company will not be an attributing interest in a FIF if the interest constitutes an income interest of 10 per cent or more in a controlled foreign company for the relevant accounting period [see 850.40].

Exemption for 10 per cent or greater interest in a grey-list company [s EX 35]

Non-portfolio direct FIF interests of 10 per cent or greater in grey-list companies continue to be exempt from the foreign investment fund rules. The grey-list countries are: Australia, Canada, Germany, Japan, Norway, Spain, United Kingdom, and United States.

The grey-list exemption only applies if:

(a) The investor’s interest is at least 10 per cent at all times during the income year. If the interest drops below 10 per cent it will be necessary to consider if the exemption still applies for that year. Under s EX 65, a person is deemed to have sold their interest at market value if they used the CV, DRR, FDR or cost methods. If FDR can be used, there will be no income attributable to this interest until the following income year;

(b) The FIF is a grey-list company;

(c) The person is not a portfolio investment entity, a superannuation scheme, a unit trust, a life insurer, or a group investment fund. This is because these entities are seen as surrogate portfolio investments for their investors, and as such not entitled to the grey-list exemption for non-portfolio interests; and

(d) The FIF is not an entity listed in sch 25, Part B (which lists entities to which the grey-list exemption does not apply).

Note: In determining if the FIF is a grey-list company under s EX 33(2) of the ITA 2004, the FIF had to be liable to income tax in the grey-list country. Liability to income tax could either be by reason of domicile, residence, incorporation, or having its place of management in the grey-list country. The FIF was also considered to be liable to income tax if it was organised under the laws of the grey-list country and income tax imposed on the persons who held income interests in the FIF. For this latter purpose, 80 per cent or more of the FIF’s income must arise in that grey-list country. This does not seem to have been incorporated into ITA 2007, but is presumably an error to which the transitional rules would apply.

Venture capital company exemptions [s EX 36, EX 37 and EX 37B]

The offshore portfolio rules contain two principal exemptions for interests held in venture capital companies that would otherwise be FIF interests.

The first is an exemption targeted at venture capital investment in New Zealand: specifically resident start-up companies that subsequently migrate residence offshore to a grey-list country, but retain a presence in New Zealand through a fixed establishment. In the absence of this exemption, New Zealand investors with portfolio interests in such companies would find themselves subject to the FIF rules. Recall, New Zealand investors with interests greater than 10 per cent would be entitled to the grey-list exemption in s EX 35. The exemption only applies for a 10-year period.

This exemption recognises the commercial reality that venture capital companies may need to migrate offshore to gain access to additional equity funding or other resources not available in New Zealand. Further, venture capital investments do not compete with investment via New Zealand managed funds and therefore...
International Tax Regime

are not the target of the offshore portfolio rules. The exemption deals with interests directly in the venture capital company that migrated [s EX 36], and with interests in a grey-list company that controls a venture capital company [s EX 37], depending on the structure used.

The second venture capital exemption relates to New Zealand residents that co-invest in a FIF with the New Zealand Venture Investment Fund, and is contained in s EX 37B.

(16) Venture capital company emigrating to grey-list country: 10-year exemption

The criteria in s EX 36, for the venture capital exemption for shares held directly in the venture capital company, are:

(a) The rights are a direct income interest; and
(b) The FIF is a grey-list company; and
(c) The FIF is not an entity described in sch 25, Part B; and
(d) The person has held shares in the company at all times after a time when the company was resident in New Zealand and the shares were not listed on a recognised exchange; and
(e) The company became a grey-list company immediately after having, for 12 months or more:
   (i) Carried on business in New Zealand; and
   (ii) Had in New Zealand more than 50 per cent of its assets; and
   (iii) Had in New Zealand more than 50 per cent of its employees; and
(f) The year begins less than 10 years after the company became a grey-list company; and
(g) At all times in the year the company has a fixed establishment in New Zealand; and
(h) Through the fixed establishment:
   (i) The company incurs expenditure other than interest of at least $1 million, or if less than $1 million, at least 25 per cent of the total company expenditure (again ignoring interest) is incurred through the fixed establishment, or
   (ii) At all times in the year, at least 10 full-time equivalent employees or contractors are engaged by the fixed establishment, or if less than 10 FTE staff or contractors are engaged by the fixed establishment, at least 25 per cent of the total number of staff engaged by the company are engaged by the fixed establishment.

Section EX 36(d) could be a little confusing. The reference in s EX 36(d) to shares held in the company “at all times”, allows shares acquired both before and after the company migrated to be exempt from the FIF rules. It would also permit shares to be acquired after the company listed on a recognised exchange to benefit from the exemption. As originally enacted it was not certain what treatment applied when people who already held interests in the company acquired more shares after the company migrated or listed.

The “carried on business in New Zealand” test in s EX 36(e)(i) means that the company need not have been incorporated for more than 12 months prior to migration, only that it carried on business in New Zealand for more than 12 months.

The provisions of s EX 36(h) allow the exemption to apply if, through the fixed establishment, the company incurs at least 25 per cent of its expenditure in New Zealand (ignoring interest), or has 25 per cent of its employees in New Zealand. This criteria permits smaller start-up enterprises, that have trouble meeting the $1 million or 10 employee requirements, to satisfy the exemption.

The exemption applies for a 10-year period. The relevant year under consideration is the year begins less than 10 years after the company migrated. For example, if a company migrated on 18 May 2009, the last qualifying year for exemption would be the income year commencing 1 April 2019, being the year beginning less than 10 years after migration.

When the exemption expires, the shares will enter the FIF rules at market value at the end of the 10-year exemption period [s EX 65, see 850.250]. For example, if last qualifying year for exemption was the income year commencing 1 April 2019, the value of the shares on entry to the FIF rules would be the market value.
on 1 April 2020. The $50,000 de minimis rule is not affected by the deemed disposal and acquisition [ss CQ 5(1B) and DN 6(1B)].

(17) Grey-list company owning New Zealand venture capital company: 10-year exemption

The venture capital exemption also extends to shares acquired in a grey-list holding company that controls a New Zealand company that meets the criteria of s EX 36. This allows for the situation when, for example, a grey-list company has acquired the New Zealand venture capital company by issuing shares to the New Zealand resident shareholders of the New Zealand venture capital company in exchange for their shares in the New Zealand resident company.

The criteria as set out in s EX 37 are:

(a) The rights are a direct income interest;
(b) The FIF is a grey-list company;
(c) The FIF is not an entity described in sch 25, Part B;
(d) The person has held shares in the company at all times after a time when the shares were not listed on a recognised exchange; and
(e) At all times in the year, the company holds more than 50 per cent of the voting interests in a company resident in New Zealand (being the resident venture capital company) that, for 12 months or more has:
   (i) Carried on business in New Zealand; and
   (ii) Had in New Zealand more than 50 per cent of its assets; and
   (iii) Had in New Zealand more than 50 per cent of its employees; and
(f) The year begins less than 10 years after the grey-list company first owned more than 50 per cent of the voting interests in the resident company; and
(g) The resident company through a fixed establishment in New Zealand:
   (i) Incurs expenditure other than interest of at least $1 million, or if less than $1 million, at least 25 per cent of the total company expenditure (again ignoring interest) is incurred through the fixed establishment; or
   (ii) At all times in the year, at least 10 full-time equivalent employees or contractors are engaged by the fixed establishment, or if less than 10 FTE staff or contractors are engaged by the fixed establishment, at least 25 per cent of the total number of staff engaged by the company are engaged by the fixed establishment.

The criterion in s EX 37(d) is not immediately clear. As originally enacted this criterion stated that the person must have acquired the shares in the grey-list company when it was not listed on a recognised exchange. As with s EX 36, the question arose of the treatment of shares acquired after a listing. Section EX 37(d) allows shares acquired in the grey-list company after the company has listed on a recognised exchange to benefit from the exemption provided the person held shares in the grey-list company at all times after the time when the shares were not listed on a recognised exchange.

Similar to the provisions in s EX 36, the relevant income year must begin less than 10 years after the grey-list company first owned more than 50 per cent of the voting interests in the resident company. For example, if a grey-list company acquired all the shares of a New Zealand resident venture capital company on 18 May 2009, the last qualifying year for exemption would be the income year commencing 1 April 2019.

(18) Shares in grey-list company acquired under venture investment agreement

The second principal venture capital exemption is contained in s EX 37B. This exemption is for FIF interests held by New Zealand residents that co-invest in a FIF with the New Zealand Venture Investment Fund.

The criteria in s EX 37B provide that an interest in a FIF will not be an attributing interest if:

(a) The FIF is a grey-list company; and
(b) The person first acquires a share or option to buy a share in the company under a venture investment agreement, and the share or option was acquired at the same time and on the same terms as an acquisition of an interest in the FIF by the Venture Investment Fund or a company owned by the Venture Investment Fund.

The New Zealand Venture Investment Fund is a crown-owned company established to promote New Zealand’s venture capital industry. A related exemption for non-residents investing along side the New Zealand Venture Investment Fund is contained in s CW 13 [see 370.30]. That section also defines “venture investment agreement”.

(19) Employee share purchase scheme exemption [s EX 38]

There is a narrow exemption from the offshore portfolio rules for individuals who have shares in a grey-list company that was acquired through an employee share purchase scheme, and there are restrictions on the disposal of those shares.

The exemption applies when the following criteria are satisfied:

(a) The person is a natural person;
(b) The rights are a direct income interest;
(c) The FIF is a grey-list company;
(d) The FIF is not an entity described in sch 25, Part B;
(e) At the time the shares are acquired, the FIF is the employer of the employee or owns, directly or indirectly, the employer of the employee;
(f) The person acquires the shares under a share purchase agreement as defined in s CE 7 [see 340.30];
(g) The share purchase agreement includes a restriction on the disposal of the shares that affects for the income year the value of the benefit to the person under the agreement; and
(h) At the beginning of the year the period of restriction has not expired, or has expired for a period of less than six months.

If all the above criteria are met, the FIF rules will apply from the beginning of the income year after the income year in which the period of restriction ends. If at that time the period of restriction has not expired for more than six months, then the FIF rules will apply from the beginning of the next income year. The six-month period may allow some people the opportunity to dispose of their shares if they wish to avoid the FIF rules.

It is not a requirement of these rules that the restriction on the disposal of the shares affects their value. If the interest was a non-portfolio share investment, the grey-list exemption in s EX 35 would apply.

(20) Terminating exemption for grey-list company with numerous New Zealand shareholders [ss EX 39, EZ 32]

Temporary exemptions from the FIF rules are provided for five years and two years respectively for interests held in certain defined investment companies resident in a grey-list country.

(21) Five-year exemption [s EX 39]

Under the five-year temporary exemption, investments in companies that meet the required criteria (outlined below) are excluded from the offshore portfolio rules for a period of five years (ie for the 2007-2008 to 2011-2012 income years). The exemption was designed to give companies with significant New Zealand shareholding the opportunity to reconsider relocating to New Zealand.

For this exemption to apply the grey-list company must give notice to the CIR that on 17 May 2006 the company satisfied the requisite criteria. The notice must be given by 17 January 2007. Using the exclusion to the secrecy rules in s 81(4)(mc) of the TAA, Inland Revenue has advised that Guinness Peat Group Plc has given notice that it meets the criteria in ss EX 39(1)(b) and (1)(c) [see TIB vol 19:3 (April 2007) at 34]. GPG is the only grey-list company that meets this exemption. Effectively this exemption is closed to any other company, even if it meets the core criteria.
The criteria are:
(a) The rights are a direct income interest;
(b) The FIF is a grey-list company;
(c) On 17 May 2006, the company
   (i) Was a grey-list company; and
   (ii) Was not an entity described in sch 25, Part B;
   (iii) Had more than 20,000 shareholders who have addresses in New Zealand on the company’s
        share register;
   (iv) The shareholders in (iii) hold shares in the company carrying voting interests of more than
        50 per cent; and
   (v) Had assets of which more than 50 per cent in total value are shares in other companies carrying
       voting interest of more than 50 per cent; and
(d) On 17 May 2006 there share were listed on a recognised exchange in New Zealand and on a recognised
    exchange in a grey-list country.

In terms of s EX 39(4) a person may elect not to apply the exemption. Once made the election applies to the
subsequent income years subject to the exemption. The election is made by completing a return of income
on the basis that the election does not apply. A person may choose not to apply the exemption if the tax
outcome is lesser under the FIF rules than ordinary rules, for example, if tax would arise on gains made on
the disposal of GPG shares held on revenue account.

(22) Two-year exemption [s EZ 32]
A temporary exemption of two years (ie for the 2007-2008 and 2008-2009 income years), from the offshore
portfolio rules is provided for interests in grey-list companies that invest primarily in Australasian equities.
The purpose of this temporary exemption is to allow relevant grey-list companies time to relocate to New
Zealand and become portfolio investment entities.

As with the five-year exemption in s EX 39, for this exemption to apply, the grey-list company must give
notice to the CIR (by 17 January 2007) that on 17 May 2006 the company satisfied the requisite criteria.

Using the exclusion to the secrecy rules in s 81(4)(mc) of the TAA, Inland Revenue has advised that the New
Zealand Investment Trust Plc has given notice that it meets the criteria in s EZ 32 (or what was s
EX 33B(2)(b) of the ITA 2004) [see TIB vol 19:3 (April 2007) at 34]. As this exemption is now closed the
NZIT Plc is the only FIF that potentially qualified. However, the NZIT was liquidated on 29th February
2008. New Zealand residents with an interest in NZIT will not be covered by an exemption specific to this
FIF, and unless another exemption applies FIF income will arise under the FDR rules for the 2008 income
year.

(23) Foreign exchange control exemption [s EX 40]
This exemption applies if and to the extent to which the person is a natural person and acquired the rights:
(a) Before first becoming a New Zealand resident; or
(b) Before exchange controls applying to the person and the interest were imposed by a foreign country; or
(c) Before 8 pm NZST on 2 July 1992; and
exchange controls prevent the person from deriving amounts from the rights, or from disposing of the rights,
in New Zealand currency or for a consideration that is readily convertible into New Zealand currency.
This exemption was designed to ensure that natural persons unable to realise the benefit from the disposal
of any FIF interests because of exchange control regulations were not subject to tax under the FIF rules.
(24) Exemption for income interest of non-resident or transitional resident [s EX 41]

An interest that is a category 2 or category 3 right, as defined in s EX 29(3) and (4), as interests in foreign superannuation and life insurance, are not an attributing FIF interest if:

(a) The person is a natural person;
(b) The person acquires the rights in the FIF when non-resident or transitional resident; and
(c) At the time the person is not resident in New Zealand or is a transitional resident.

Note: The four-year exemption for interests in foreign superannuation and life insurance (category 2 and 3 FIF interests) is now subsumed by the transitional resident’s exemption [see 370.35].

(25) New resident’s accrued superannuation entitlement exemption [s EX 42]

This exemption (previously known as the employment-related foreign superannuation scheme exemption) is designed to give relief from the FIF rules to people who migrate to New Zealand, and who are unable to dispose of an interest in a foreign superannuation scheme acquired through their employment or self employment.

The exemption targets people with interests that are locked into an employment-related superannuation scheme under the terms of the scheme, or if they are able to get out of the scheme, there is a substantial cost in doing so. The types of superannuation scheme [defined in ss EX 42(5)-(8)] that qualify for this exemption are discussed below. Without the exemption, people with interests in these types of superannuation schemes (that are not exempted anywhere else) are effectively locked into the FIF rules and taxed accordingly.

The exemption excludes contributions to a foreign superannuation scheme made during any period of non-residence and contributions made during a period of residence in New Zealand that begins on the date a person becomes resident and ends before the first day of the fifth income year following the income year in which the person became a New Zealand resident. The exemption applies any time a person becomes resident in New Zealand. There is no minimum or other qualifying length of non-residence.

The two limbs of the exemption are illustrated in the following diagram.

If the person stops contributing to their foreign superannuation fund at any time within the five-year period [s EX 42(2)(b)], then no FIF income will arise in respect of the market value of the FIF interests acquired during those periods. However, if a person continues to contribute to the foreign superannuation scheme after the first day of the fifth year following the year the person became resident in New Zealand then FIF income will arise in respect of the FIF interest attributable to those contributions.

A formula is employed in s EX 42(3) to determine the value of the interest that is excluded from the FIF rules, and hence also the value of the FIF interest that is an attributing FIF interest if contributions continue to be made after the end of the five-year period. The formula is:

\[ \text{closing value} - \text{opening value} \]

Where:

“Closing value” is the market value of the rights on the day that ends the period; and
“Opening value” is the market value of the rights on the day that begins the period.
A question that often arises is whether, if a person continues to contribute after the period of five years, does this mean that all of the interests or rights of the person in the s EX 42 foreign superannuation scheme become an interest in a FIF? Alternatively, is it just the FIF interests acquired after the end of the five-year period? The intention of the rules is to exclude interests acquired during the periods set out in s EX 42(2). Accordingly, the formula should be applied to exclude the market value of the interests acquired during the period when the person was not resident in New Zealand and prior to the end of the five-year period in s EX 42(2)(b). This is confirmed in TIB vol 18:5 (June 2006) at 121, where it is stated that “the result of the formula is the value of the rights are permanently exempt from the FIF rules”. This view is also consistent with the intention to enable the exemption to apply whenever a person becomes a New Zealand resident.

**Example:**
A previously non-resident person becomes a New Zealand resident on 1 October 2006. The person then departed New Zealand on 23 December 2011 and returned again on 18 May 2018. The person continued to contribute to their foreign superannuation scheme at all times. Interests acquired in the FIF up to 31 March 2011 will be excluded. FIF interests acquired on and after 1 April 2011 up to 23 December 2011 will constitute an attributing FIF interest. Upon resuming New Zealand residence, contributions to the superannuation scheme during the period of non-residence are excluded, as are any contributions made for the period to 31 March 2023. Contributions made after this date will constitute attributing FIF interests.

**Note:** Attributing FIF interests acquired between 1 April 2011 and 23 December 2011 will be an attributing FIF interest when the person commences New Zealand residence again on 18 May 2018. See s EX 64 for treatment when a person ceases and reacquires New Zealand residence. If FIF interests are excluded from the FIF rules, they may very well constitute an interest in a trust or unit trust depending on the nature of the interest. This has implications if an amount were distributed from the fund.

To qualify for the exemption under s EX 42, the superannuation scheme must have the following characteristics:

(a) The scheme is one when the person’s rights can only be acquired through employment, or the person must be wholly or mainly self-employed when the rights were first acquired or when applying the exemption provision;

(b) The amount contributed to the scheme by or for the person must be calculated by some fixed relationship to the person’s income from employment or self-employment, or to provide benefits that bear a fixed relationship (ignoring inflation) to the person’s income from employment or self-employment;

(c) Contributions to the scheme for the person’s benefit must be made only by or for the person, the person’s employer (or a person associated with the employer), or a transfer from another superannuation scheme that would have qualified under s EX 42;

(d) The person’s future benefit under the scheme must not be able to be assigned or exchanged for a current receipt of cash, except if:
   (i) The person becomes physically incapacitated;
   (ii) The benefits are transferred to a similar scheme;
   (iii) When or after the person retires at normal retiring age;
   (iv) If the person is assigning the benefit rights to a spouse [see 960.10] under a relationship agreement; or
   (v) At the cost of a substantial decrease in the present value of the benefits.

If the entitlement rights to a superannuation scheme are transferred under a relationship agreement, the exemption will only apply if the transferor spouse would have been entitled to the exemption. Accordingly, the rights must be acquired when the spouse was a non-resident or during the five-year period under s EX 42(2)(b) [s EX 42(9)]. If a transfer is made from one superannuation scheme into another scheme, the transferor fund must qualify for the exemption [s EX 42(7)(c)].
As originally introduced, this exemption applied for contributions made when non-resident and for four years following the date of becoming a New Zealand resident. It also only applied on the first occasion a person became a New Zealand resident. This changed when s EX 36 of the ITA 2004 [now s EX 42] was amended in the Taxation (Depreciation, Payment Date Alignment, FBT and Miscellaneous Provisions) Act 2006 to extend the period of the exemption to five years following the date of becoming a New Zealand resident and to allow the exemption to apply on any subsequent occasion a person acquired New Zealand resident status. The change was made retrospective to the commencement of the FIF rules, being the 1991-1992 income year, for taxpayers with non-standard accounting years ending after 2 July 1992, or the 1992-1993 and subsequent income years for other taxpayers. Applying the change retrospectively recognises the reality that many taxpayers may not have been aware that the exemption did not apply to returning residents, and thus many people may have been unaware of their FIF obligations. Section EX 33 may well now exempt interests in certain Australia superannuation funds (see discussion above).

For the purposes of the $50,000 de minimis rule in ss CQ 5(1)(d) and DN 6(1)(d), the FIF interests that are not attributing interests under s EX 42, are not taken into account when determining the $50,000 cost (ie the exempted interests are disregarded).

(26) Non-resident’s pension or annuity exemption [s EX 43]

A category 2 or 3 interest [as per s EX 29] that is a right to benefit from a pension or annuity is exempt from the FIF rules if the non-resident’s pension or annuity exemption in s EX 43 applies.

This will be the case if the consideration for the entitlement was provided to the foreign entity:

(a) When the person was not resident in New Zealand; or
(b) When the person was resident in New Zealand but before the end of the third income year following the income year in which the person last became resident; or
(c) When the person was resident in New Zealand if the interest was commuted or transferred in anticipation of or following the person ceasing to be a New Zealand resident; and
(d) The person’s future benefits arising from the entitlement are not able to be assigned, or exchanged for a current receipt of cash (or other property), except to a spouse [see 960.10] under a relationship property agreement, or at the cost of a substantial decrease in the present value of the benefits.

See the Appendix to TIB vol 8:5 (September 1996) and TIB vol 13:2 (February 2001) at 38-39, for further details and examples of what was then the qualifying foreign private annuity exemption from the FIF rules.

Rights held to which this exemption applied could remain subject to the FIF rules if the rights were acquired before the 1996-1997 income year, and the person chose to treat the rights as an interest in a FIF for the 1996-1997 and later income years, by complying with the requirements in s CG 15(4) of the ITA 1994. This was because the income calculated under the FIF rules may have been less than the amount of the taxable pension or annuity.

There is a close relationship with s EX 42. The rules in ss EX 43 were introduced to target people who were resident in New Zealand and in receipt of a foreign pension or annuity, or who became resident in New Zealand at or about the time of retirement and were likely to be in receipt of a pension or annuity shortly thereafter. The rules were designed to tax pensions and annuities on a cash receipts basis, and thus avoid the complexities of the FIF rules for superannuitants. Thus, provided the criteria in s EX 43 is met, a pension or annuity is taxed in New Zealand on a cash receipts basis, rather than under the FIF rules.

Section EX 43 was designed to give the same result, only more explicitly. However, there are subtle differences between the rules. The principal difference is that the s EX 43 exemption is not limited to...
superannuation schemes defined for the purposes of s EX 42. Also, the five-year rule in s EX 42 was extended to five years and the rule in s EX 43 (that is supposed to align) was overlooked.

An interesting technical issue is the nature of the income for tax purposes. If the foreign superannuation scheme meets the definition of a unit trust, the receipt may actually be a dividend.

27) $50,000 Investment threshold rule [ss CQ 5, DN 6]

Under s CQ 5, a natural person with aggregate attributing FIF interests, other than in that person’s capacity as a trustee, with a cost of $50,000 or less (at all times during the year) are not subject to the requirements of the FIF regime. This applies to all FIF interests, including interests in foreign life insurance policies and foreign superannuation schemes. FIF interests that are specifically exempted from the FIF rules (discussed above), are not taken into account in determining the $50,000 cost de minimis. The $50,000 investment threshold rule is discussed in more detail at 850.150.

850.150 Investment threshold rule [ss CQ 5, DN 6 and EX 68]

If the original cost of all FIF interests is $50,000 or less at all times in an income year, the FIF rules do not apply for that year.

In determining cost, there is a special rule available in ss EX 68(10) and (11) to assist investors who have no record of the cost of their investments. Especially if the investments have been held longer than seven years (ie longer than the statutory period for holding on to tax records) [TAA, s 22(d) see 1210.10]. The rule applies for FIF interests acquired prior to 1 January 2000, that are still held at 1 April 2007. The rule allows investors to use half the market value of their FIF interests as at 1 April 2007 as a surrogate for cost when measuring the $50,000 cost threshold. The half market value is added to the cost of taxpayers’ other foreign shares to determine if the threshold is met for the year concerned. Treating the cost of pre-2000 interests as half of the market value is optional, but once elected cannot be changed in subsequent income years. If this option is chosen it must be used for all investments acquired before 1 January 2000.

Once the $50,000 threshold is breached all shares held in foreign companies that are not otherwise exempted become subject to the FIF rules. If the threshold applies (ie cost is less than $50,000) the taxpayer will continue to pay tax on dividends. No other tax is payable, provided the interest is not held on revenue account.

This minimum threshold also encompasses interests in foreign superannuation schemes and life insurance policies. Expenditure incurred on a person’s behalf, as well as expenditure directly incurred by the person, is taken into account in determining whether the $50,000 threshold has been reached. Employer contributions to foreign superannuation schemes are also taken into account for this purpose.

If the cost of a person’s offshore interests exceeds $50,000, all their interests are subject to the FIF rules — not just the excess costing more than $50,000. If in an income year the threshold is exceeded, a person cannot sell down their interest to bring themselves back within the threshold for that year. This is due to the wording of ss CQ 5(1)(d) and DN 6(1)(d) that refers to the threshold being breached “at any time during the income year”. However, a person could sell-down and bring themselves under the cost threshold for the following year.

In measuring the $50,000 threshold regard must be had to the rules in s EX 68. Section EX 68 also applies in determining cost for the purposes of the CV, DRR, FDR and cost methods. Section EX 68 sets out rules that apply in cases of share splits or similar, non-monetary costs and holding costs. In terms of s EX 68(9) holding costs (ie interest), are excluded from the cost of a FIF interest. However, costs of acquisition (ie brokerage), are most likely included [see TIB vol 19:3 (April 2007) at 31].

Note: In excluding holding costs from “cost” for the purposes of the FIF rules, this does not mean that these costs are not deductible. The exclusion is designed to prevent these costs from being double counted (ie as both an addition to cost under the FIF rules and as a deduction under the general provisions).

The exchange rate on the date of purchase of any shares in foreign currency should be applied for the purposes of the $50,000 minimum threshold. Inland Revenue advise that they will accept information obtained from websites that contain on-line currency conversion calculators [see TIB vol 19:3 (April 2007) at 31]. The key issue when applying the exchange rates is to use the rate applicable at the correct time.
The cost of shares held through a partnership will have to be taken into account in proportion to the person’s partnership interest (ie each partner’s proportionate share of the cost will be the amount to be considered). A married, de facto, or civil union relationship may qualify for a $100,000 threshold in aggregate if they purchase shares jointly. Each spouse adds half the cost of the jointly-owned shares to the cost of their individual shares to determine if they come within or exceed the threshold. However, married, de facto, or civil union relationship people cannot use any unused threshold amount of the others.

Example:
If each de facto spouse owns shares in their own name costing $10,000 and jointly own shares with their de facto spouse costing $60,000, then both de facto spouses would qualify for the threshold and remain outside the FIF rules until such time as they purchased additional foreign interests. Each spouse’s $50,000 total is calculated by adding the shares they individually own ($10,000) and half ($30,000) the shares they jointly own. However, if one spouse individually owned shares costing $40,000, then that spouse’s cost would exceed the $50,000 cost threshold and that person would be subject to the FIF rules from the time the $50,000 cost threshold was exceeded. The spouse’s total cost would then be $70,000 ($40,000 plus $30,000 share of jointly owned shares). The other spouse would still qualify for the threshold as their total cost would be $40,000.

Family trusts (other than those limited suite of trusts referred to immediately below) do not get the benefit of the $50,000 minimum threshold.

The $50,000 minimum threshold for the application of the new offshore tax rules also applies to the following small range of compensation-type trusts [ss CQ 5(5)DN 6(4)]:
(a) The trust is of the estate of a deceased person and the income year begins on or before the day that is five years after the person’s death;
(b) The settlor of the trust is a relative or legal guardian of the beneficiary, or a person associated with a relative or legal guardian of the beneficiary, and is required by a court order to pay damages or compensation to the beneficiary;
(c) The settlor of the trust is the estate of a deceased person and a court order requires the proceeds of damages or compensation to be settled on the trust for the beneficiaries of the trust;
(d) The settlor is the Accident Compensation Corporation (ACC).

Importantly, interests in foreign companies, that are covered by the various exemptions from the FIF rules (eg investments in Australian-resident listed companies), [see 850.140] do not count towards the $50,000 threshold.

If a person who holds FIF interests costing less than $50,000 is deemed to have disposed of and reacquired their FIF interest at market value under the rules listed below, the person is not deemed to have disposed of the FIF interests and reacquired them at market value for the purposes of the $50,000 cost threshold rule [s CQ 5(1B)]. The rules that deem disposals and reacquisitions in certain circumstances are:
(a) The rules relating to change of FIF calculation methods in s EX 63;
(b) Changes in the application of the FIF exemptions in s EX 65 [see 850.250]; or
(c) The rules in s EX 67 that apply when the FIF rules first apply to an interest for an income year beginning on or after 1 April 2007 [see 850.290].

For a discussion on the cost of inherited shares see 850.260.

850.155 Calculation methods and limits on choice of calculation methods
[ss EX 44, EX 46, EX 47; TAA s 91AAO]

(1) Calculation methods available
With the introduction of new rules for the taxation of offshore portfolio investments, there are now six FIF calculation methods available under the FIF rules — the original four methods: branch equivalent (BE), accounting profits (AP), deemed rate of return (DRR), and comparative value (CV) — plus the new fair dividend rate (FDR) and cost methods.

The new FDR method is likely to become the primary method used for calculating FIF income for foreign portfolio interests. However, the CV method will also be used when the return on the overall portfolio for

Staples Tax Guide 2012

981
The other FIF income calculation methods: branch equivalent, accounting profits, comparative value, deemed rate of return and cost can all be used if the conditions of those methods are satisfied.

Subject to the rules on the choice of calculation methods in ss EX 46, EX 47, EX 48 and EX 62, a person chooses their calculation method by completing and furnishing their return of income accordingly [s EX 44(2)].

Note: The FDR method generally applies on a pooled basis and not an investment by investment basis.

For interests in foreign companies, the FDR method is only available for interests of less than 10 per cent: in fact most non-individuals with portfolio interests are stuck with FDR unless the FDR method is excluded because the interest is a non-ordinary share [ie a share equivalent to debt in terms of s EX 46(10)] or a determination prohibits its use. However, a portfolio investment entity (PIE), an entity eligible to be a PIE or a life insurance company may use the FDR method for interests greater than 10 per cent if the FIF is a foreign PIE equivalent (essentially a non-resident PIE that is either a superannuation fund or a company).

(2) When calculation methods may be used — limits on choice

Section EX 46 sets out the circumstances when a particular calculation method can be used. After the introduction of the FDR method, most taxpayers will be interested in when that method must be used and the times when another method can be used. This is discussed below.

Note: Section EX 46 is not a complete code on when a method may be used. Rather, it sets limits in relation to the types of FIF interests that are the subject matter of that provision. For example, while it imposes limits on the use of FDR in relation to foreign companies, it is silent on the use of the method in relation to foreign life insurance and superannuation: there is nothing preventing the use of FDR for those types of FIF interests.

As a general rule, once a FIF calculation method is chosen for an interest in a FIF, s EX 46(1) contains a consistency rule that requires a person to use the same FIF calculation method if the person has two or more attributing FIF interests in the same FIF for the same period. The consistency rule does not apply when the interests are of different classes, in which case different methods may be used for the different classes. The consistency rule also does not apply if s EX 46 prevents the use of the same method. Despite the consistency requirements, a person may elect to change a FIF calculation method if the rules in s EX 62 permit this [see 850.240].

Importantly for people with portfolio interests, the rules allow natural persons and family trusts to change between FDR and CV (despite the consistency requirements) to allow tax to be paid on a lower return if that is less than five per cent. This is discussed under the FDR method discussion below.

(3) Fair dividend rate (FDR) method

The FDR method may only be used for interests of less than 10 per cent in foreign companies [s EX 46(7)(a)].

There are three exceptions:

(a) The shares in foreign companies are non-ordinary shares treated as equivalent to debt under s EX 46(10) [see ss EX 46(6)(d) and EX 46(8)(a)];

(b) When a natural person or the trustees of a family trust choose to use the comparative value for another attributing FIF interest that is a share. In this case all FIF interests that would have otherwise qualified for FDR must use CV person [s EX 46(8)(b)]; and

(c) When the FIF is a foreign PIE equivalent and the person is a PIE, an entity that qualifies for PIE status (ie a superannuation fund that is eligible to elect to be a PIE) or a life insurance company. These entities can use the FDR method for any level of interest they hold when the FIF is a foreign PIE equivalent. Because of the widely held nature of these investing entities, investments by these entities can be regarded as being in substance, portfolio investments, and always entitled to use the FDR method [s EX 46(7)(b)].
If a person’s interest in a foreign company equals or exceeds the 10 per cent threshold during the year (that is, the interest increases from less than 10 per cent to 10 per cent or more), then eligibility to use the FDR method for that year depends on whether the FIF interest is a grey-list FIF or not. This comes from the rule in s EX 46(7)(a) that states that a person may use the FDR method if the person’s direct interest in the FIF (including those of associated persons) is less than 10 per cent at:

(a) Any time in the income year if the FIF is a grey-list company; or
(b) All times in the income year if the FIF is not a grey-list company.

Thus, if a person’s interest increases to 10 per cent or greater during a year, the rules allow taxpayers to use the FDR method for that year if the FIF is a grey-list FIF (note the grey-list exemption in s EX 35 requires the interest to exceed 10 per cent for the full year so would not apply during the year a FIF interest increases to 10 per cent or more or reduces to less than 10 per cent). Allowing the person to use FDR in the year they increase their interest to 10 per cent or more avoids the person having to use another FIF calculation method (most likely the CV method) for the year they breach the less than 10 per cent threshold.

People with interests in non-grey-list FIFs, and who increase the size of their interest to 10 per cent or more (or for that matter, reduce their interest below 10 per cent), will not be eligible to use the FDR method for that year. For these people, they will use a FIF method other than FDR for the year in which the interest increases to 10 per cent or more (or reduces below 10 per cent as the case may be).

If a person’s interest in a grey-list company decreases to an interest that is less than 10 per cent during an income year, there is no FIF income at all for that year under the FDR method. This is consistent with the principles underpinning the FDR rules that purchases of shares during the year are ignored (quick sales aside). In other words, the rules treat the fall to a less than 10 per cent holding analogous to an acquisition. Thus, for example, if a person has a 20 per cent holding at the start of the year and they reduce this to nine per cent during the year, they are treated as acquiring the nine per cent interest during the year. Thus, when a person’s interest in a grey-list company falls below 10 per cent during an income year, and the FDR method could otherwise be applied to that interest (which would give a nil amount as the person did not have an interest of less than 10 per cent on hand at the start of the year [see s EX 52(5)(b)], the person will be subject to tax on this interest under the normal rules (ie not under the FIF rules). Sections CD 36(2), CD 36(3) and EX 59(1B) also support this by excluding from the FIF rules those situations when a person has a FIF interest in a grey-list company of 10 per cent or more at the beginning of the year and the person would otherwise be able to use the FDR method [see TIB vol 20:3 (April 2008) at 114].

Note: The above situation, when an interest in a grey-list company falls below 10 per cent during the year, does not apply to portfolio entities, entities eligible to be portfolio entities and life insurers that hold interests in a foreign PIE equivalent. This is because the grey-list exemption does not apply to those managed fund type entities. For those entities, the FDR method applies regardless of the level of investment held [see also s EX 46(7)(b)].

Persons (other than portfolio investment entities (PIEs), superannuation schemes, unit trusts, life insurers and group investment funds) do not have an attributing interest in a FIF if their rights are an interest of 10 per cent or more in a grey-list FIF for the full year; or in other words, they have grey-list protection [s EX 35, see 850.145].

The relationship between when FDR can be used, and FIFs in grey and non-grey-list countries, is illustrated in the following diagram:

<table>
<thead>
<tr>
<th>FIF interest size</th>
<th>Less than 10%</th>
<th>Greater than 10%</th>
<th>Grey-list list available</th>
</tr>
</thead>
<tbody>
<tr>
<td>Grey-list FIF</td>
<td>FDR can be used if FIF interest is less than 10% at any time in the year</td>
<td>FDR can be used if FIF interest is less than 10% at any time in the year</td>
<td>FIF interest must be 10% or greater for the full year</td>
</tr>
<tr>
<td>Non-grey-list FIF</td>
<td>FDR can only be used if FIF interest is less than</td>
<td>FDR can not be used for the year if the FIF interest is 10% or more at any time during the year</td>
<td>N/A</td>

</tbody>
</table>

Staples Tax Guide 2012 983
FIF interest size | Less than 10% | Greater than 10% | Grey-list exemption available
---|---|---|---
| 10% at all times during the year |

In determining whether a person’s shareholding in a FIF is less than 10 per cent, they are deemed to hold any interests held by associated persons. This is designed to prevent persons holding FIF interests greater than 10 per cent disaggregating their interests among associated persons to bring themselves into the FDR method. Disaggregating interests among associated persons potentially also risks gift duty. Note: Gift duty has been abolished in relation to all gifts made on or after 1 October 2011 see 315 DUTIES AND LEVIES.

Individuals (including family and charitable trusts) may choose between using either the FDR method or the CV method for all their “less than 10 per cent” shareholdings in FIFs. Investors are likely to use FDR when their return exceeds five per cent, and CV when the return is less than five per cent. However, investors must take a portfolio approach to applying the FDR or CV methods. Section EX 46(8)(b) provides that a person is not allowed to use the FDR method for an attributing interest for an income year if the person uses the CV method for any other attributing interest that is a share in a foreign company for which the person would be allowed to use the FDR method (ie it is a less than 10 per cent interest). Thus, for less than 10 per cent interests, if a person wants to use the CV method (eg because their return is less than five per cent), the person will not be entitled to use the FDR method for their other less than 10 per cent FIF interests.

Non-individuals (eg companies and trusts that are not family or charitable) are not eligible to switch between CV and FDR. A company must use FDR if the interest is less than 10 per cent unless the company is precluded from using FDR because the share is treated as equivalent to debt. Otherwise, a company can only use CV if the interest is 10 per cent or greater. There is an exception for non-individuals wanting to use FDR when their interest is equal to or greater than 10 per cent: s EX 46(7)(b) allows a PIE or an entity eligible to be a PIE or a life insurer to use FDR regardless of the size of the interest if the FIF is a foreign PIE.

Importantly, the FDR method does not apply to offshore portfolio share investments that are equivalent to debt. The policy intent is that the FDR method should not be used for investments which are in substance debt instruments. Otherwise New Zealand residents could avoid New Zealand tax on any return on a debt instrument that exceeds five per cent.

There are six types of guaranteed return type shares (debt equivalents) that specifically do not qualify for the FDR method under s EX 46(10). These shares are referred to as non-ordinary shares and are:

(a) Fixed-rate foreign equity [s YA 1];
(b) Non-participating redeemable shares [s CD 22];
(c) An interest in a non-resident entity holding (directly and indirectly) assets comprising 80 per cent or more by value at a time of fixed rate shares or financial arrangements that are denominated in New Zealand dollars or are hedged (under a highly effective hedge arrangement) under NZIAS39 to achieve the effect of New Zealand dollars;
(d) An interest in a non-resident if the non-resident holds (directly and indirectly) assets of which 80 per cent or more by value at a time in the income year consist of fixed rate shares or financial arrangements and the FIF interest is denominated in New Zealand dollars, under NZIAS 39, is a hedged item having a value in New Zealand dollars governed by a highly effective hedge arrangement.
(e) Shares that involve an obligation:
   (i) Of another person to provide to the investor, directly or indirectly, through an arrangement, an amount exceeding the issue price of the share; and
   (ii) That is non-contingent or subject to a contingency that is sufficiently remote to be immaterial.
(f) A type that the CIR has determined under s 91AAO of the TAA to be an interest for which the FDR method may not be used.

One of the reasons given for the rules in items (c) and (d) above is to counter instances when the rule in item (e) above may not be effective. For example, if the investment is in a foreign bond fund that invests back
into New Zealand Government debt. The New Zealand resident investor would have a direct interest in shares, not debt disguised as shares.

For the purposes of applying the rule in s EX 46(10)(d) (item (e) above) Inland Revenue states that the Australian “economic substance” test for determining whether an instrument is debt or equity provides guidance for determining whether an investment involves a non-contingent obligation to return an amount to the investor that exceeds the issue price of the investment, and therefore should not have the FDR method applied to it, because the investment is essentially debt. Contingencies that are immaterially remote are ignored for the purposes of this rule. Guidelines issued by the Australian Tax Office (ATO) provide guidance on understanding what is an “effectively non-contingent obligation”. These guidelines note that regard should be had to the terms, conditions, and pricing of the instrument [see TIB vol 19.3 (April 2007) at 43].

Under s EX 46(11), the CIR has discretion under s 91AAO of the TAA to make a determination that an investment qualifies for the FDR method even when technically the FDR method is precluded by [s EX 46(10)(a) to (d)] the legislation. This may be appropriate for investments that have returns that are contingent or that the investment is closer to equity in nature rather than debt.

The authority given to the CIR under s EX 46(10)(e) to make a determination under s 91AAO of the TAA precluding use of the FDR method is to buttress the boundary between debt and equity and try to ensure that the FDR method only applies to investment in foreign portfolio equity, and not to investments in foreign entities that provide investors with a return similar to a New Zealand dollar denominated debt instrument.

When s 91AAO of the TAA was first enacted, the provision required the CIR to take into account the economic relationships created by the arrangement and the principles that the FDR method may be used to calculate FIF income from an arrangement giving an investor an interest in the business profits and losses of a FIF, and that the FDR method not be used when the arrangement gives the investor a return not dependent on the business profits and losses of the FIF.

To assist in interpreting these rules, Inland Revenue set out criteria in TIB vol 19:3 (April 2007) at 42 that will be considered for the purposes of making a determination under that provision. The criteria were:

(a) The proportion of the foreign entity’s assets that comprise debt or other fixed return instruments (such as fixed rate shares);
(b) The extent to which the entity’s investments comprising debt or other fixed rate instruments are denominated in New Zealand currency;
(c) In relation to investments of the entity that are not denominated in New Zealand currency, the extent to which the exchange rate risk has been removed by swaps, forward currency contracts or other derivatives;
(d) The whole arrangement, including any interposed entities or financial arrangements, in ascertaining whether the investment in a foreign entity provides investors with a return similar to a New Zealand dollar denominated debt instrument;
(e) The degree of credit risk of the entity’s debt investments is not a relevant factor in the determination process;
(f) The economic relationships created by the whole arrangement and the principle that the fair dividend rate method should only be used for an in-substance equity investment where the investor has an interest in the business profits and losses of a foreign entity. This is intended to provide sufficient flexibility to deal with cases close to the boundary.

However, the operative provisions of s 91AAO of the TAA were rewritten with retrospective effect from 1 April 2007 by the Taxation (Business Taxation and Remedial Matters) Act 2007, which altered the wording of the provisions. In particular, s 91AAO of the TAA now states that in making the determination the CIR may have regard to the criteria set out in s 91AAO(2). Thus, the CIR can make a determination that does not have regard to the statutory criteria of s 91AAO(2).

Accordingly, the approach taken in s 91AAO of the TAA leaves room for some uncertainty. Given the absence of material available on when the CIR may use the determination powers, the reference to the TIB criteria...
may be helpful for taxpayers when considering the circumstances in which the CIR may make a determination under s 91AAO of the TAA. It may also be observed that some of the criteria used in the TIB item also now appear in the replacement s 91AAO(2).

The provisions in s 91AAO(2) that the CIR may have regard to when making a determination are:

(a) The principle that the FDR method should not be used for attributing FIF interests that are economically equivalent to a loan denominated in New Zealand currency;

(b) The extent to which the assets of a FIF:
   (i) Are loans, fixed rate shares or arrangements with a fixed economic return;
   (ii) Are denominated in New Zealand dollars; or
   (iii) Have a value substantially unaffected by variations in currency exchange rates;

(c) The compliance costs incurred by the person required to use the FDR method;

(d) Arrangements affecting the assets of a FIF and interests held directly and indirectly in a FIF.

A person precluded from using the FDR method for an attributing interest because it comes within one of the five categories of debt equivalent shares or because a determination precludes its use, must use the CV method for that interest, or the DRR method if the CV method is not practical, because the person cannot obtain the opening market value for the interest [s EX 47]. Because CV must be used in these circumstances, a loss can be claimed under the CV formula.

The CIR has issued a number of determinations. These are located at: www.ird.govt.nz/technical-tax/determinations/other/.

Importantly, s 91AAO states that if the determination applies after the start of an income year, then it will not apply for that year. Thus, it is important when considering the application of any determination to check the application date.

(4) Cost method

The cost method is the back-up method to the FDR method. The cost method is available when [s EX 46(9)]:

(a) The person’s FIF interest (increased by interests held by associated persons) is less than 10 per cent. Consistent with the FDR method, if the interest is in a grey-list FIF the interests must be less than 10 per cent at any time during the year. Otherwise it must be less than 10 per cent at all times during the year to qualify.

(b) Use of the FDR method is allowed, but it is not practical because the person cannot determine the market value of the interest at the start of the year except by an independent valuation.

The cost method caters for less than 10 per cent interests in foreign companies where use of the FDR method is allowed, but market values of the attributing interest are not readily available (eg investments are in unlisted foreign companies).

A common situation when cost is likely to be used will be FIF interests held in private or closely-held foreign companies and the like. Even if resident in Australia, the Australian ASX listing exemption will not apply, and the shares are not likely to have a readily quoted market value.

(5) Comparative value (CV) method

A person may use the CV method for an attributing interest that is a share in a foreign company only if:

(a) The interest is 10 per cent or more at any time in the income year (for this purpose, a person’s interests are increased by any interest held by associated persons);

(b) The interest is a non-ordinary share (ie treated as debt) under s EX 46(10) for which the CV method must be used under s EX 47;

(c) The person is a natural person or the trustee of a trust that is a family or charitable trust. The type of trust is defined in the legislation as a complying trust established mainly for the benefit of natural
persons for whom the “gifting settlors” have natural love and affection (or did have natural love and affection when alive) or is mainly for the benefit of charitable organisations or trusts that qualify for an income tax exemption. All settlors of the trust that are “gifting settlors” [s EX 46(1)] must be natural persons or deceased persons.

When a person increases an interest to 10 per cent or more, FDR may still be used in that year if the FIF is resident in a grey-list country. However, if the FIF is not resident in a grey-list country, people who increase their interest to 10 per cent or more may have to use CV for that year as FDR will not be available.

(6) Deemed rate of return (DRR) method

The general rule states that DRR can not be used for interests in a FIF that are a “direct income interest” of less than 10 per cent. Thus, for FIF interests that are shares, DRR can only be used when the interest is 10 per cent or more. Even then, DRR can only be used if:

(a) It is not reasonably practical to use either the CV or AP methods;

(b) If the person is a natural person and at all times during the income year the total value of attributing FIF interests held by the person is $250,000 or less, determined either on the basis of the book value of the interest at the end of the previous income year if the DRR method was used, or the market value in any other case;

(c) It is required as the default method under s EX 48, or

(d) The person is required to continue to use that method by virtue of s EX 62. That is, when they do not qualify to be able to change the method of calculating FIF income away from the DRR method to another method.

However, there is one circumstance when DRR can be used for shares that are not interests of 10 per cent or more. Under s EX 47 the DRR method must be used if the person is precluded from using the FDR method for an attributing interest because the interest is equivalent to debt and it is not practical to use the CV method because the person cannot obtain the market value of the attributing FIF interest.

Thus, with the changes to the FIF rules made consequentially with the introduction of the FDR method, the use of the DRR method is likely to be very limited. Essentially, for FIF interests that are shares that are an interest of 10 per cent or more in a foreign company, DRR is only likely to apply as a back up to CV (when a person would otherwise use CV but cannot determine market value for example) or AP.

For FIF interests that are not shares, such as interests in foreign superannuation and life insurance (category 2 and 3 interests) DRR can be used without restriction, (recall s EX 46(4) only applies to FIF interests that are shares). However, again, with the deemed rate of return exceeding 10 per cent, it is unlikely people will choose this method over FDR.

(7) Accounting profits (AP) method

The accounting profits method may be used if:

(a) The FIF is a company;

(b) The interests in the FIF (or similar interests to the person’s attributing interest) were quoted on the official list of a recognised exchange or offered widely by the FIF to the public in one or more countries;

(c) The net after-tax accounting profits or losses are calculated under generally accepted accounting practice (or their equivalent in the country of residence of the FIF);

(d) The net after-tax accounting profits or losses are detailed in financial statements:

(i) Sent or made available to shareholders in the company;

(ii) Readily available to interested members of the public;

(iii) Audited by a chartered accountant (or accountant of equivalent standard in the FIF’s country of residence);
An accountant has given a standard unqualified audit opinion to the effect that the financial statements represent the income and financial position of the FIF to the standard normally required in the FIF’s country of residence;

(e) The net after-tax accounting profits or losses are calculated on a consolidated basis if the FIF has one or more subsidiaries;

(f) The net after-tax accounting profits or losses include any extraordinary items;

(g) The person has no reason to believe that the net after-tax accounting profits or losses of the FIF do not fairly represent the net after-tax profits for the accounting period;

(h) The FIF is not included in sch 25, Part C, which lists entities for which the AP method cannot be used; and

(i) The CIR has not concluded that the net after-tax accounting profits or losses do not fairly represent the net after-tax profits of the FIF for the accounting period.

Unlike the CV and DRR methods (which can only be applied to interests of 10 per cent or more), the AP method has no limit on the size of the interest and can be applied to interests greater or less than 10 per cent. This is because s EX 46 does not prohibit the use of the AP method for interests that would otherwise be eligible for the FDR method (ie interests less than 10 per cent). However, the AP method is still subject to the consistency rule requirements [s EX 46(1)] discussed above.

850.155(8) Branch equivalent (BE) method

Provided the requirements of s EX 46(3) are met, that is the FIF is a company and the person can supply information to the CIR to enable the branch equivalent income or loss calculations to be checked, there is no explicit statutory prohibition from using the BE method.

However, there are practical restraints on the use of the BE method as it requires the investor to have sufficient information to undertake the calculations required by s EX 50 (ie the branch equivalent income and loss calculations). Unless sufficient control can be exercised over the FIF it may be very difficult to do the calculations required for that purpose.

850.160 Default calculation method

Subject to the ability to use a particular FIF calculation method [see 850.155] a person can choose which FIF method they will use. However, when a method is not chosen, the FIF rules allocate a default calculation method. The default method does not prescribe the method that must be used. Rather, the default method provides calculation rules that give the CIR a basis for assessing an investor’s income arising from an attributable FIF interest (ie if no tax return is filed and the CIR wishes to prepare a default assessment).

For FIF interests that are shares that are an interest of less than 10 per cent, the FDR method if the FDR method is allowed under s EX 46(7). Otherwise, the cost method if it is not practical to use FDR.

For any other interest, such as those interests that are 10 per cent or greater or for which FDR is not permitted:

(a) The accounting profits method if that method is permitted under s EX 46(2) [see 850.155] and it is practical to use AP.

(b) The comparative value method: if it is practical to use it and the AP is not allowed or practical; or

(c) The deemed rate of return method: if neither the AP nor CV methods are allowed or practical.

The order in which the default methods are set out in the section is, other than the branch equivalent method, from the more accurate method of measuring FIF income to the least. It is not possible to set the branch equivalent method as a default method as that method requires significant input from the taxpayer.

Note: Section EX 48 does not appear to set a default rate for FIF interests that are category 2 and 3 interests (ie interests in foreign superannuation and life insurance). However, this was not the case under s EX 41, and would appear to be a drafting error. Regard should be had to the transitional rules in these circumstances.

850.165 Accounting profits method

Under the accounting profits (AP) method, FIF income or loss is calculated by the formula:
accounting profit or losses – foreign tax × income interest

Where “accounting profit or losses” is defined as the net after-tax accounting profits or losses of the FIF for the accounting period, and “foreign tax” is for the accounting period, the total tax paid on the FIF income for which the person is liable under the laws of the a country or territory outside New Zealand.

The income interest is calculated under the rules that apply under the CFC rules as if the interest in the FIF were an interest in a CFC: specifically, ss EX 8 to EX 11, EX 16 and EX 17, and EX 26.

Because the income interest is based on the CFC rules, the measurement of the interest will be either daily or quarterly. However, for the purposes of the AP method a taxpayer can elect under s EX 49(6) to use a simplified measurement of income interest method that measures an income interest at 31 March only. The election is made by completing their return of income on this basis. However, any such election is irrevocable and applies to all their attributing interests in that FIF in subsequent years. The anti-avoidance rules in ss GB 9 to GB 16 that restrict a person’s ability to vary the interest apply once the election is made.

When a person incurs a FIF loss under the AP method in excess of the economic or financial loss suffered by the person, the amount of the FIF loss is limited to the amount of the actual economic or financial loss. These rules are similar to those used in the CFC rules [see 850.60].

Under s OE 5, the branch equivalent tax account provisions apply to FIF income calculated under the AP method as if:

(a) The FIF income were attributed CFC income;
(b) The FIF were a CFC; and
(c) The FIF interest of the holder were an income interest.

The person with FIF income or loss calculated under the AP method can choose for the calculations to be undertaken in the currency of the FIF’s financial accounts or New Zealand dollars. If the foreign currency of the FIF accounts is used, the result is then converted into New Zealand dollars at the average of the close of trading spot exchange rates for the 15th day of each complete month that falls in the accounting period.

850.170 Branch equivalent method [s EX 50]

Foreign investment fund income or loss calculated under the branch equivalent (BE) method uses the same rules (with some modifications) as are used to calculate branch equivalent income or loss under the CFC regime. The rules for losses and tax credits also mirror those applying to an income interest in a CFC [ss DN 5(2), DN 7, DN 8, EX 50(8) and (9)]. Under s OE 5, the branch equivalent tax account regime is also extended to FIF income calculated under the BE method [see 850.175].

The BE method is regarded as the most accurate determination of a FIF’s income or loss under New Zealand tax rules. The other FIF income or loss calculation methods are really only estimates of the income a person derives through a FIF and can therefore be viewed as proxies for the BE method. The BE method, however, requires the investor to have sufficient information about a FIF to be able to use that method. A person would have to have the ability to exert some influence over the BE FIF to be able to access information sufficient to undertake the BE calculations. It is also a requirement in s EX 46 that the person can provide information to the CIR to be able to check any BE calculation.

Foreign investment fund income or loss is calculated under the BE method using the formula:

\[
\text{branch equivalent income or loss} \times \text{income interest}
\]

Where:

“Branch equivalent income or loss” is the branch equivalent income or loss of the FIF for the period, calculated by applying s EX 21 of the CFC rules as if the FIF were a CFC, and excluding any taxable distribution from a non-qualifying trust and any FIF income of the BE FIF, as is the case when branch equivalent income or loss of a CFC is calculated;

“Income interest” is calculated under the rules that apply under the CFC rules as if the interest in the FIF were an interest in a CFC [ss EX 8-EX 11, EX 16, EX 17, EX 26].
Similarly to a person with an income interest in a CFC, if a person incurs a FIF loss in excess of the economic loss suffered, whether because of a put or call option or any other reasons, the amount of FIF loss is limited to the amount of the actual economic loss. This also applies if the FIF loss is more than any corresponding economic loss suffered by the person because of the rules applying to calculate the person’s income interest. For a discussion on the equivalent CFC rules see 850.60.

When a FIF derives a taxable distribution from a non-complying trust, the taxable distribution is taxed directly to the person with the interest in the FIF as additional attributed FIF income, specifically the:

(a) The taxable distribution is excluded when calculating the branch equivalent income or loss of the FIF;
(b) The person has additional attributed CFC income calculated by multiplying the taxable distribution by the person’s income interest in the FIF; and
(c) The person is liable for income tax on the additional attributed CFC income at 45 per cent (the rate in sch 1, Part A, cl 4).

If the FIF has an interest in a foreign company, the person has additional FIF income or loss calculated by multiplying the interest of the person in the BE FIF by the FIF’s FIF income or loss. For this purpose the rules in s EX 58(4) and (5) apply as if the BE FIF were a CFC, and notwithstanding the rules in s EX 34 that could potentially apply to exclude the interest from the FIF rules because it is regarded for these purposes as a deemed income interest in a CFC.

The rules in ss EX 58(4) require the person to choose the FIF calculation method and apply the FIF calculation rules in ss EX 44 — EX 61 in the same way as they would if they held the interest in the underlying FIF directly. Essentially the scheme of the rules treats the BE FIF as though it were a New Zealand resident. Thus, the person with the interest in the BE FIF would need to consider the exemptions and FIF rules accordingly in relation to that interest. For example, whether the interest is an interest of less than 10 per cent and entitled to FDR, or whether FDR is excluded because the FIF interest is regarded as equivalent to debt in terms of s EX 46(10). If the BE FIF’s interest was 10 per cent or more the grey-list could apply to exclude attribution.

Interestingly, if the BE FIF were a CFC, the person would have to have an income interest of 10 per cent or more in the CFC before they had to calculate FIF income directly under the CFC rules from any FIF underlying the CFC. However, this is not the case with the BE FIF rules.

The loss quarantining rules in s DN 8 apply to any BE FIF loss that is determined under s EX 50(6) and (7).

850.175 Extension of branch equivalent tax account regime [s OE 5]
The branch equivalent tax account procedures available under the CFC regime also apply to FIF income calculated under the accounting profits or branch equivalent methods. It applies as if:

(a) The FIF income were attributed CFC income of the person;
(b) The FIF were a CFC; and
(c) The FIF interest were an income interest within the meaning of the CFC regime.

The extension of the branch equivalent tax account regime to AP and BE FIF interests and calculation methods is intended to avoid double taxation of dividend flows by allowing branch equivalent tax account credit balances to be used to offset dividend withholding payment or other liabilities.

A taxpayer holding an interest in a second tier FIF is allowed a branch equivalent tax account credit for tax paid under the FIF regime when a CFC or a FIF using the BE method is interposed between the taxpayer and the second tier FIF interest.

850.180 Comparative value method [ss EX 51, LE 1, LJ 1(3), LJ 2]
The comparative value (CV) method is one of the principal methods used to calculate FIF income. In general terms, the CV method can be used if the person’s FIF interest is 10 per cent or more. For people with FIF interests of less than 10 per cent (portfolio FIF interests) the FDR will be the principal method used.
FIF interests of less than 10 per cent may qualify for the CV method when natural persons (including trustees of family or charitable trusts) elect to use CV under s EX 46(6).

**Note:** Corporate trustees of family trusts do not disqualify the trust from using CV.

However, it would be expected that they will only elect to use CV when the return from their total portfolio is less than five per cent (otherwise FDR gives a lesser taxable result) [see 850.155]. CV is also the method required to be used when the FIF interests are treated as debt under s EX 46(10) [see 850.155].

The CV method taxes the increase or decrease (note the limits on losses under the CV method — see below) in the value of a person’s interest in a FIF over an income year, as a surrogate for the underlying income accumulated by the FIF. A person’s FIF income or loss is calculated on the last day of the person’s income year, using the formula:

\[
\text{FIF income or loss} = (\text{closing value} + \text{gains}) - (\text{opening value} + \text{costs})
\]

Where:

“Closing value” is the market value of the person’s FIF interest at the end of the income year, calculated using the exchange rate applying under s EX 57 for that previous year. The value is zero if the person has disposed of the interest or is applying another FIF calculation method to that FIF interest.

“Gains” is the total of all amounts that the person derives during the income year from holding or disposing of the interest. This includes any foreign withholding tax or amount allowed as a credit under s LE 1 (credit of tax for imputation credit) and s LJ 2 (tax credit for foreign withholding tax). The reference to s LE 1 includes imputation credits received under the trans-Tasman imputation rules.

“Opening value” is the market value of the interest at the end of the preceding income year. The value is zero if the person does not hold the interest at that time or was then applying another calculation method to that FIF interest.

“Costs” is the total of all expenditure that the person incurs during the income year in acquiring or increasing the interest. It also includes any income tax paid in the accounting period on the income of the FIF for which the person is personally liable under the laws of a country or territory outside New Zealand.

**Note:** “Cost” is further defined in s EX 68 [see 850.260].

In relation to “gains” in the formula in s EX 51, the scheme of the FIF rules is that foreign withholding tax on any dividends received from the FIF is allowed as a tax credit. However, in calculating the amount of the credit allowable, the credit is calculated on the FIF income: not the dividend. Thus, the foreign withholding tax allowed as a credit is included as a gain under the formula in s EX 51(4). Section LJ 1(3) provides that for the purposes of calculating the withholding tax credit, it is the FIF income that is used for this purpose, despite the fact that it is not otherwise taxable.

The reference to s LE 1 in the definition of “gains” is to ensure the gain is grossed up to include trans-Tasman imputation credits allowed as a credit to a person with a FIF interest in an Australian company.

Under s EX 59, when a person calculates FIF income or loss using the CV method, no dividend or income is otherwise deemed to be derived. However, aggregate amounts derived from holding or disposing of a FIF interest in excess of total FIF income in respect of that interest may [s EX 61, see 850.195] be assessable when the FIF interest is disposed — although the application of s EX 61 is now limited as it only applies to FIF interests held on 2 July 1992.

The acquisition cost of a FIF interest cannot be claimed as a deduction outside the FIF regime, nor can the interest be treated as trading stock [s EX 59(3) and (4)]. Holding costs are excluded as a cost under s EX 68(9). These provisions essentially ensure there is no double deduction available for the costs of acquiring and holding FIF interests subject to the CV method. For example, the cost of acquiring the FIF interest is accounted for only in the FIF formula, and any interest incurred on money borrowed to purchase the FIF interest is deductible under the ordinary rules, and not through the FIF income/loss formula.

The formula allows a deduction for expenditure incurred on the person’s behalf in acquiring a FIF interest as well as for expenditure directly incurred by the person. Therefore, only the proportion of the underlying...
income of a foreign superannuation scheme attributable to the FIF interest, and not the employer
ccontributions, is taxed as it accrues.

Because the comparative value method relies on an interest’s market value, it may not be possible to use this
method if market value of the interest is not available. In the case of life insurance and superannuation there
are rules in s EX 70 that may assist in certain circumstances. In relation to life insurance, a policy’s surrender
value may be used in determining the market value of the interest when the person becomes a resident
[s EX 64(4)] or if any one of the FIF exclusions ceases to apply [s EX 65(2)]. When the interest is a right to
benefit under a superannuation scheme, the person may use the costs incurred (by or for the person) up to
that time in acquiring the rights if it is not reasonably practicable to calculate actual market value and the
person has not derived any material gain from the rights up to that time.

Note: Under s EX 71, the rule in s GC 4 applies when FIF interests are acquired and disposed of in the
circumstances set out in that provision. Essentially s GC 4 buttresses the requirements to use market value
when FIF interests are acquired and disposed.

If the CV method gives a better result (ie a lesser income amount) for the taxpayer (natural persons and
trustees of family and charitable trusts with FIF interests of less than 10 per cent) than the FDR method, the
CV method is available for the investor to use. The option to use the CV method in these circumstances
essentially allows holder of portfolio interests in offshore shares to recognise any decline in the value of their
investment.

Thus, natural persons (including trustees of family and charitable trusts) may choose between using either
the FDR method or the CV method for all their portfolio shareholdings in FIFs. Investors are likely to use
FDR when their return exceeds five per cent, and CV when the return is less than five per cent. However,
investors must take a portfolio approach to applying the FDR or CV methods. Section EX 46(8)(b) provides
that a person is not allowed to use the FDR method for an attributing interest for an income year if the person
uses the CV method for any other attributing interest that is a share in a foreign company for which the person
would be allowed to use the FDR method (ie it is a less than 10 per cent interest). Thus, for less than 10 per
cent interests, if a person wants to use the CV method (eg because their return is less than five per cent), the
person will not be entitled to use the FDR method for their other less than 10 per cent FIF interests.

However, in the above circumstances, when a taxpayer chooses between CV and FDR for their less than
10 per cent interests, the taxpayer cannot claim a FIF loss under the CV method — this is reduced to zero
under s EX 51(8). Under that provision, no person with a FIF interest of less than 10 per cent can have a loss
under the CV method. However, taxpayers with FIF interests that are treated as debt (referred to as non-
ordinary shares in the legislation) can have a FIF loss, as they are subject to the full rigors of the CV method
for both profits and losses.

Note: The rule in s EX 51(8) applies to all forms of FIF interest for which FDR can be used (ie FIF interests
in foreign life insurance and superannuation are also subject to this rule). Section EX 51(8) as enacted only
applied to portfolio interests, which did not include interests in foreign life insurance and superannuation.
Section EX 51(8) was amended with application to the 2009-2010 and later years to ensure that if a CV loss
arose from portfolio interests or interests in foreign life insurance and superannuation, that the losses would
be reduced to zero.

Non-individuals (ie companies and trusts that are not family or charitable) are not eligible to switch between
CV and FDR. A company must use FDR if the interest is less than 10 per cent unless the company is precluded
from using FDR because the share is treated as equivalent to debt under s EX 46(10). Otherwise, a company
can only use CV if the interest is 10 per cent or greater.

850.185 Fair dividend rate method [ss EX 52, EX 53]

(1) Overview

The fair dividend rate method (FDR) method applies to portfolio investments (ie direct income interest of
less than 10 per cent) in offshore shares and interests in foreign superannuation and life insurance policies.
That is, it applies to all categories of FIF interest as set out in s EX 29, except in the case of shares in a foreign
company s EX 46(7) limits the use of the FDR method to interests of less than 10 per cent. For a full discussion on the limits on the use of the FDR method see 850.155.

In its simplest form FDR is a tax on the market value of a persons stock of attributing FIF interests. The FDR method imposes income tax on five per cent of the opening market value of a persons attributing FIF interests held at the beginning of the year.

Taxpayers who are natural persons and trustees of family and charitable trusts can, however, elect to use the comparative value (CV) basis. Therefore, if these investors can show their total actual return is lower than five per cent, they can switch their calculation method to the CV basis such that the lower amount will be the amount subject to tax. No loss is available under the CV method in these circumstances. The actual return is calculated under the comparative value method [s EX 51].

For non-natural persons (other than family and charitable trusts) such as companies, the FDR method imposes a five per cent flat tax charge on the opening market value of the FIF interests. No adjustment is made if the overall return is less than five per cent. Thus, even in years when the investments are in loss, non-natural persons must pay tax on a notional return of five per cent. Non-natural persons that value investor’s units may apply the income calculation formula for periods that link to their unit valuation periods. For example, they can calculate income daily, monthly or quarterly [see 850.190].

The FDR method ignores acquisitions and disposals of shares during a year, except when an acquisition and disposal of a FIF interest is made within the income year. FIF interests acquired and disposed during an income year, referred to as “quick sales” are subject to tax on the lower of five per cent of the average cost of the FIF interest acquired and sold, or the actual gain (based on sales less average cost). Otherwise there is no FIF income calculated in relation to shares acquired (or deemed to be acquired under s EX 65 when an exemption ceases), after the start of the income year. Conversely, there will be full attribution on foreign shares held at the start of the year that are disposed during the year.

Under ss CD 36 and EX 59 dividends are not taxed separately, although any withholding tax credit accompanying the dividend and any imputation credit received under the trans-Tasman triangular rules is still available as a credit — although this is not that clear in the legislation.

**Note:** If a person acquires a FIF interest part way through a year, any dividend received in the intervening period will not be taxable if the person elects (by furnishing a return of income) to use the FDR method in respect of that interest. Thus, ss CD 36 and EX 59 will apply and the dividend will not be subject to tax under the ordinary rules. However, there is nothing stopping the person using the CV method in respect of that FIF interest if they are eligible, and, if they did elect the CV method, then ss CD 36 and EX 59 would apply to the dividend.

FIF interests that are akin to debt (ie have non-contingent returns), are not eligible to use the FDR method, and must use the comparative value (CV) method [ss EX 46(8) and EX 46(10)]. The CIR is authorised to issue determinations that an investment is akin to debt and not eligible for FDR [s EX 46(10)(c) and TAA, s 91AAO]. A determination can also be issued if a FIF interest is caught under the broad definition of debt used for these purposes, but should be taxed under the FDR rules [s EX 46(11)]. If the CIR issues a determination that specifies a type of attributing FIF interest that may use or may not use the FDR method, this determination must be notified in the *Gazette* within 30 days of the date of the determination and be published in an Inland Revenue publication as soon as possible.

FIF interests that are fixed rate shares [defined in s LL 9] or non-participating redeemable preference shares [defined in s CD 22] are specifically excluded from the FDR method, as are investments in FIF interests in an entity whose assets comprise 80 per cent or more by value of financial arrangements denominated in New Zealand dollars.

Attributing FIF interests that are shares with the following characteristics will also be denied the FDR method. The shares involve an obligation:

(a) Of another person to provide to the investor an amount exceeding the issue price of the share;  
(b) Is direct to the investor or indirect through an arrangement; and  
(c) That is not contingent or subject to a contingency that is sufficiently remote to be immaterial.
Together, ss EX 46(10) and 91AAO of the TAA provide very wide scope for the CIR to determine that an attributing FIF interest has to use the CV method [see 850.155].

(2) Application to natural persons and family trusts

Natural persons and trustees of family trusts (eg complying trusts established mainly for the benefit of a natural person whom the settlor has natural love and affection, or mainly for the benefit of a charitable organisation or trust, and with no settlor who is not a natural person or a deceased person, and not including a superannuation scheme) are allowed to calculate their FIF income for portfolio interests under the CV method.

Note: Corporate trustees of family trusts do not disqualify the trust from using CV.

Thus, if the CV method gives a better result for the taxpayer than the FDR method, the CV method is available for the investor to use. The option to use the CV method in these circumstances essentially allows holder of portfolio interests in offshore shares to recognise any decline in the value of their investment. However, the taxpayer cannot claim a FIF loss — this is reduced to zero under s EX 51(8).

The comparative value formula is contained in s EX 51(1) and is:

\[
\text{closing market value of shares held} + \text{gains} - \text{opening market value of shares held} + \text{costs}
\]

Where:

“Gains” is defined as all amounts derived during the year from holding or disposing of the shares. That is, dividends (including withholding tax credits) and sales proceeds.

“Costs” is the expenditure incurred on acquiring or increasing the interest.

(3) The FDR income calculation

The FDR calculation differs between taxpayers that are unit valuing funds (essentially managed funds) and others. The principal difference is the period over which the FDR income calculation is applied. For unit valuing funds it is applied over the period or periods in which the fund measures the value of investors’ interests. For other taxpayers, it is an income year calculation (unless they elect to apply the daily valuation rules).

Section EX 52 provides the basis for people that are not unit valuing funds. Section EX 53, provides the FDR rules for unit valuing funds. In most cases, particularly natural persons, it would be expected that the FDR method set out in s EX 52 will be used. However, people who are not unit valuing funds can choose to apply the method in EX 53. This allows taxpayers other than unit valuing funds to use the daily basis. The key advantage is that the quick sale rules will not apply to that person, but the trade off is the requirement to undertake daily FDR calculations. It is unlikely that many taxpayers will use the daily valuation method, which appears to be designed more for investment entities.

For FIF interests that are subject to a returning share transfer [see 1340.90], if an attributing FIF interest is an original share subject to a returning share transfer, the attributing interest is treated as being held by the share supplier. Thus, share-lending transactions are disregarded for all FDR purposes.

(4) The FDR formula [s EX 52]

The following formula is applied to the total of the person’s FIF portfolio interest in shares:

\[
0.05 \times \text{opening} + \text{quick sale adjustment}
\]

Where:

“Opening” is the total market values of the attributing FIF interests for which the person holds at the beginning of the income year, not including FIF interests that form part of an interest of 10 per cent or more in a grey-list FIF at the beginning of the income year. The exclusion for FIF interests of 10 per cent or more in a grey-list company at the start of the income year allows interests that exceed 10 per cent at that time, but reduce to below 10 per cent during the year to be excluded from the FIF rules altogether for that year. Effectively this treats the value of that interest at nil at the beginning of the year.
“Quick sale adjustment” is required only when, in the income year, the taxpayer disposes of or reduces their attributing interest in the FIF after acquiring it or increasing it. The quick sale adjustment is zero in any other case. This is discussed in more detail below.

Ignoring quick sale adjustments, the FDR income for the year will be no more than five per cent of the opening market value of the investment.

Example 1 (Standard case):
Steve holds shares in a German company that has an opening market value of $70,000. During the year the company paid a dividend of $400 less $67.50 withholding tax. Steve also holds shares in a company in Spain that has an opening market value of $12,000 and in a Canadian company that have an opening market value of $8,000. Steve’s income is $90,000 × 0.05 = $4,500. The dividend of $400 is not taxed [ss CD 36 and EX 59], although Steve is allowed a foreign tax credit of $67.50 under ss LJ 1(3) and LJ 2). Steve could choose to use the CV method if the formula in s EX 51 gave a lower FIF income amount.

Example 2 (Standard case modified for purchases and sales after the commencement of the income year):
Same facts as Example 1. However, assume Steve also purchased some additional shares in the Canadian company for $4,000 and sold some shares in the English company to pay for the Canadian shares. Steve’s income is unchanged, it remains $90,000 × 0.05 = $4,500 with an allowance for the foreign tax credit of $67.50. This is because the FDR formula only looks at the stock of portfolio interests in offshore companies on hand at the beginning of the year. Any changes made after the year commences are not taken into account unless they are subject to the quick sale adjustment. The quick sale adjustment does not apply here as in each case there was not an acquisition or disposal of an interest in the FIF concerned in the income year.

Example 3 (Total return exceeds five per cent):
Imogen holds offshore shares that have a market value $60,000 at the start of the year. At the end of the year the shares have a market value of $67,000. A dividend of $200 is received during the year. Imogen’s total gain for the year is $7,200. However, her taxable FIF income based on the FDR method is $60,000 × 0.05 = $3,000. The dividend is not taxed separately.

Example 4 (Total return between zero per cent and five per cent):
John and Sue, a couple in a de facto relationship, own shares in a Scottish company with an opening market value of $140,000. The shares were purchased from funds in their joint bank account. The shares have a market value of $142,800 at the end of the year. A dividend of $700 is also received. Under the FDR method, John and Sue would each have $3,500 to return as FIF income, being $70,000 × 0.05. While John and Sue also have a dividend of $350, this is not taxed separately as a dividend, but rather is subsumed by the FDR calculation. However, their respective total returns are $1,750: being half the gain of $2,800 plus half the dividend of $700. This represents a return 2.5 per cent. If John and Sue each choose to use the comparative value method for their total portfolio of FIF interests, they will pay tax on the lower FIF income amount. Although not relevant for the example, if the purpose of determining whether the interest is an interest of 10 per cent or more, John and Sue’s interests are looked at collectively as they are associated persons. If collectively their interests constituted an interest of 10 per cent or more, the interest could not be taxed under the FDR method. However, they would then be entitled to the grey-list exemption in s EX 35 if their interest was an interest of 10 per cent or more for the full year.

Example 5 (Overall loss):
Angela has a portfolio interest in a French company. At the start of her tax year the interest had a market value of $112,000. However, this reduced to $102,000 at the end of the year. A dividend of $1000 was also received. Angela also had other FIF portfolio interests that made gains of $2,000 and $4,000. Overall, under the formula in s EX 51 (the CV method), Angela made a net FIF loss of $3,000 for the tax year. Accordingly, by electing to use the CV method, no tax is payable for the year for her FIF interests. However, no loss is available either under ss EX 51(7) and (8), which reduces the loss to zero.

Note: While s EX 62(8) allows a natural person (or the trustee of a trust established mainly for the benefit of family or a charitable organisation), to change their FIF income calculation methods from the FDR method to the CV method (and vice versa), taxpayers will generally only want to use the CV method if the total return on the portfolio is less than five per cent. Although there is no rule preventing use of the CV method if that gives a higher taxable income amount, FDR caps the FIF income to five per cent.

Note: The rule in s EX 46(8)(b) prevents a person from using FDR method for part of their portfolio and the CV method for other parts, and thus cherry picking the most desirable results on an interest by interest basis. Effectively, it is not possible to use the FDR method for some FIF interests that produce a return in excess of five per cent (and get the benefit of the five per cent cap under that method), and the CV method for FIF interests that produce a return lower than five per cent. For all other taxpayers (ie taxpayers other than natural
persons and family trusts), there is no general ability to elect to use the CV method and the taxpayer will pay tax based on the opening value multiplied by five per cent.

(5) **Quick sale adjustment**

The FDR income calculation formula focuses on the value of offshore portfolio shares as at the commencement of a person’s tax year. Rules (known as quick sales rules), exist to stop people purchasing shares and selling down around balance date, and were thus developed to buttress the FDR rules. That is, in the absence of the quick sales rules, taxpayers with a standard balance date could purchase shares after 1 April and sell before the following 31 March with no tax impost. Nor would the shares be reflected in the value of the shares on hand at the start of the next tax year.

The quick sale rules achieve this by targeting shares purchased and disposed of within the same year (ie for standard balance date taxpayers, shares purchased after 1 April and sold before the following 31 March). The rule does not apply to deemed sales and acquisitions when there is a change in the method of calculating FIF income or loss from FDR to CV, and vice versa, under s EX 63(5) and the rule in s EX 67 that applies when a person first enters the FIF rules.

These share transactions will be taxed on the lower of five per cent of the average cost of the FIF interest (the peak holding adjustment) and the total gain on all FIF interests purchased and sold during the period (taking a pooled approach) — calculated by taking the total amount derived from holding and disposing the interest (thus including dividends) and subtracting the average cost of the FIF interests so acquired and disposed.

The quick sale rule requires taxpayers (who purchase and sell an interest in a FIF in an income year) to undertake two calculations: the peak holding adjustment and the quick sale gain amount. Essentially this is comparing an amount that would have been taxable FIF income had the acquired shares been taxed under the FDR rules (the peak holding adjustment) with the gain on sale (the quick sale gain amount). The lesser of these two amounts represents the taxable quick sale adjustment.

Another way of thinking about this is that the quick sales adjustment will never exceed the peak holding adjustment: which is five per cent of the average costs of the shares purchased and sold in that year. In essence, for natural persons and family and charitable trusts at least, this is consistent with the FDR philosophy that taxes the lesser of five per cent of the value or the actual gain.

The peak holding adjustment is the total of the amounts calculated for each foreign company using the following formula [s EX 52(8)]:

\[
5\% \times \text{peak holding differential} \times \text{average cost}
\]

Where:

“Peak holding differential” is the lower of:

(a) The difference (in numbers of shares) between the largest number of shares held in the FIF in the tax year and the number of shares held at the beginning of the year; and

(b) The difference (in numbers of shares) between the largest number of shares held in the FIF in the tax year and the number of shares held at the end of the year.

“Average cost” is defined to be (assuming no share reorganisation) [see 850.200] the total amount of expenditure that the person incurs during the income year in acquiring or increasing the attributing interest in the FIF divided by the total for the income year of the increase in the attributing interest in the FIF for each acquisition or increase.

The quick sale gains is the greater of zero and the total of the amounts calculated for each attributing FIF interest that is both acquired and disposed of in the income year using the following formula [s EX 52(12)]:

\[
\text{return} - (\text{interest} \times \text{average cost})
\]

Where:

“Return” is the total amount derived by the person during the year from holding or disposing of the interest:

“Interest” is the shareholding that is both acquired and disposed of in the income year:
“Average cost” is the total amount of expenditure that the person incurs during the income year in acquiring or increasing the attributing interest in the FIF divided by the total for the income year of the increase in the attributing interest in the FIF for each acquisition or increase.

Example 1 (Standard case):
Bob owns 21,000 shares in a FIF. During the year Bob purchased two parcels of additional shares, one of 2,000 and a later one of 3,000. Bob subsequently sold 7,000. The peak holding adjustment is the lesser of 5,000 (being the difference between the largest number of shares held less shares at the beginning of the year: 26,000 – 21,000) and 7,000 (being the difference between the largest number of shares held less shares at the end of the year: 26,000 – 19,000). The “average cost” for the purposes of the peak holding adjustment formula is the total amount of expenditure that the person incurs during the year in acquiring or increasing the attributing interest in the FIF divided by the total number of shares acquired during the year. Using the average cost approach avoids the need to trace the cost of the shares that are subsequently sold. The first parcel of shares acquired of 2,000 was acquired at $1.10 per share and the second parcel of 3000 at $1.20 per share. Thus, the average cost is $5,800 / 5,000 is $1.16. The peak holding adjustment for these transactions is thus 0.05 × $500 × $1.16, which is $290.

The amount of $290 is compared to the quick sale gain amount. The quick sale gain amount, determined under s EX 52(12), is the greater of zero and the aggregate of the gains made from holding and disposing of these shares in the income year. The “holding gains” represent any dividends received that relate to the quick sale shares and the “disposal gains” the total gain on sale, that is, sale proceeds less average cost incurred in acquiring the FIF interests. The 7,000 shares were sold for $1.24 per share. Bob advised that a dividend of $1,000 was received after he held all 26,000 shares. The quick sale amount (holding gains) is thus the prorated dividend attributable to the shares acquired and sold (5,000/26,000 × $1,000) which gives a holding gain of $192.30 plus the gain on sale of ($6,200 - $5,800) $400 (the disposal gain), which gives a quick sale gain amount of $592.30. The lesser of the peak holding adjustment and the quick sales gain is then added to the FDR amount calculated for the 21,000 shares on hand at the start of the year as calculated under ss EX 52(3) to (6). In Bob’s case, $290 is the lesser amount and constitutes the “quick sales adjustment” in s EX 52(3).

In calculating the quick sales gain amount, s EX 52(14) requires a last in first out or LIFO approach to be used to determine whether shares in a foreign company sold in a year were purchased in that year. Thus, in the examples above, of the 7,000 shares sold, the gain was calculated on the 5,000 last acquired (i.e. 3,000 @ $1.20 and 2,000 @ $1.10). This is consistent with an approach that seeks only to measure gains on FIF interests acquired and disposed of during the year.

Example 2 (Quick sale rules when both gains and losses):
Scotty is preparing his return of income for a tax year and gathers the following information to return his income attributable to his FIF interests. Market value of his foreign share portfolio (excluding his exempted shares) at the beginning of the income year is $120,000. Of this, $20,000 related to 22,000 shares in Biomunch Ltd and $30,000 to 60,000 shares in Agripop Ltd. During the year he purchased an additional 3,000 shares in Biomunch Ltd for $1.05 per share and sold 1,000 for $1.05 per share. He also purchased 5,000 shares in Agripop Ltd for $1.50 and sold 7,000 for $1.25. Scotty received a dividend of $500 from Agripop Ltd in respect of his 60,000 shares. No dividend was received from Biomunch Ltd. The FDR calculation is:

\[
0.05 \times \text{opening value} + \text{quick sale adjustment}
\]

Scotty determines that his standard FDR income for the year to 31 March, being 0.05 × opening (0.05 × $120,000), is $6,000. However, to this he needs to consider whether there is an amount attributable to his quick sale adjustment (i.e. the shares he acquired and disposed of during the year). The quick sale adjustment taxes the lower of the peak holding adjustment and the quick sale gains. Scotty calculates his peak holding adjustment as follows:

\[
0.05 \times \text{peak holding adjustment} \times \text{average cost}
\]

Peak holding adjustment is the lesser of the difference between the largest number of shares held less shares held at the beginning of the year, and the difference between the largest number of shares held less shares held at the end of the year. For Biomunch Ltd, Scotty’s largest holding was 25,000, with 22,000 held at the start of the tax year and 24,000 at the end. Thus, the peak holding is 1,000, being the lesser of the largest holding and the shares held at the start and end of the tax year. The average cost of the shares sold was $1.05/share. For Agripop Ltd, Scotty’s largest holding was 65,000, with 60,000 held at the start of the tax year and 58,000 held at the end. Thus, the peak holding is 5,000 for Agripop Ltd, with an average cost of $0.50/share. For Biomunch Ltd the peak holding adjustment is: 0.05 × 1,000 × $1.05 = $52.50. For Agripop Ltd the peak holding adjustment is: 0.05 × 5,000 × $0.50 = $125. Scotty’s peak holding adjustment is the total of the amounts from applying the peak holding adjustment formula for both Biomunch Ltd and Agripop Ltd, which is $177.50. Scotty compares this to his quick sales gain amount.

The quick sale gain amount is determined by ss EX 52(12) and (13) as the greater of zero and the total (aggregate) amounts derived from holding or disposing of each FIF interest less the average cost incurred in acquiring the interest sold. For Biomunch Ltd the quick sale gain is (sale proceeds of $750 less their cost of $1,050) a loss of ($300). For Agripop Ltd, the quick sale gain is (sale proceeds of $6,250 less their cost of $2,500) $3,750. No part of the $500 dividend received relates to the shares sold: the dividend was paid on the shares held at the commencement of the year and is subsumed by the FDR method — recall that dividends received from a FIF are not taxable outside the FIF rules [s EX 59 and CD 36]. Combining the quick sale results for...
Biomunch Ltd and Agripop Ltd gives a total quick sale gain of ($3,750 - $300) $3,450. The quick sales adjustment for the purposes of the principal FDR formula in s EX 52(3) is the lesser of $3,450 and $177.50. The FDR income is then $6,177.50.

Note: When calculating the quick sale adjustment in s EX 52(3), the formulas are applied to each FIF interest, but the results are aggregated when comparing the peak holding adjustment and quick sale gain amount, as was done in the example above.

Suppose the quick sale gain on the Agripop Ltd shares yielded an overall loss instead. If this were the case the outcome would be that Scotty’s FDR income would be $6,000, as the quick sale adjustment in the formula in s EX 52(3) is the lesser of the peak holding adjustment and the quick sale gains. The quick sale gain amount cannot be less than zero under s EX 52(7). For the purposes of the FDR formula in s EX 52(3) the quick sale adjustment would be zero.

Example 3 (Quick sale gains and losses, but overall return on portfolio less than five per cent):

Suppose the value of Scotty’s foreign portfolio shares had reduced to $112,000 during the year. Under s EX 50(8) a natural person, or the trustee of a trust established mainly for the benefit of family or a charitable organisation, may change their FIF income calculation methods from the FDR method to the CV method and vice versa. If the overall return from the portfolio was less than five per cent, the CV method will tax the lower amount — although a loss is not available. The comparative value formula under s EX 51 is:

\[(\text{closing value} + \text{gains}) - (\text{opening value} + \text{costs})\]

Closing value is $112,000, the gains are $10,000 (ie gains = sale proceeds + dividends = $750 + $8,750 + $500 = $10,000), opening value is $120,000, and costs are $3,550 ($2,500 + $1,050 = $3,550). The CV calculation is therefore:

$112,000 + $10,000 - $120,000 + $3,550

Overall the portfolio made a loss of ($1,550) which s EX 51(8) is reduced to nil. In this instance it would be in the taxpayer’s interest to use comparative value for this year, as the FDR result is $6,177.50.

Note: When undertaking the CV method calculation to determine if the overall result is lower under FDR (which includes quick sale gains) or CV, the “gains” figure includes all gross gains made, not just those gains that are considered for the purposes of the quick sale adjustment. That is, it includes gains made on sales when the sale relates to purchases in previous income years and not caught under the quick sales rules. This is illustrated in the example above that included the gains of $8,750 from the sale of the 7000 Agripop Ltd shares, when only 5000 Agripop Ltd shares were subject to the quick sales adjustment.

Note: When using CV in respect of an attributing FIF interest that would otherwise qualify for the FDR method (ie because it is a portfolio interest), it must be used for the total portfolio [s EX 46(8)(b), see 850.155].

(6) Other tax implications [ss CD 36, EX 57, EX 59, LJ 1(3) and LJ 2]

In a general sense, the FDR method meshes well with the provisional tax rules, as provisional taxpayers should be able to determine their provisional income from their FIF interests (subject to the FDR rules), with relative ease. Especially, if there are no quick sales. By default, the provisional tax rules take the previous year’s residual income tax and increase that by five per cent for the purposes of the current year’s provisional tax. Taxpayers using the standard uplift method to pay provisional tax should be paying sufficient provisional tax to cover FIF obligations under the FDR method.

(7) Dividends and withholding tax credits [ss CD 36, EX 59 and LJ 2]

Dividends derived by a person with an interest in a FIF are not taxed separately if the person uses the FDR, CV, DRR or cost methods. Rather, the dividend is subsumed by the FIF income calculation method. While dividends received from an attributing FIF interest are not taxed, a foreign tax credit can still be claimed for any withholding tax deducted from the dividend. The withholding tax credit is calculated by reference to the FIF income returned. When a person is using the FDR method, then this will always give rise to income. However, if the person is a natural person or a trustee of a family trust, and they have opted to use comparative value for as their FIF calculation method and that produces a loss that is limited to nil under s EX 51, (then providing there is an overall New Zealand tax payable position) a credit for foreign tax may still be claimed for those FIF interests that show a positive return using the CV method. This is because foreign tax credits are calculated on a segment of foreign sourced income. Not the net foreign income position.

A purpose of s EX 59 (and the associated belts and braces provision, s CD 36) is to ensure that once an interest is subject to tax under the FIF rules that there is no additional tax liabilities arising or additional deductions allowed. Thus, dividends, or gains taxable on FIF interests under s CB 4, received from an interest in a FIF are not taxed separately [s EX 59(2)]. Similarly, no deduction is allowed if another provision of the Act could...
potentially also apply [s EX 59(3)]. Questions often arise in relation to interest incurred in acquiring FIF interests. Section EX 59 does not deny a deduction for the interest expense. Section EX 68 does exclude interest from the measurement of “cost” for the FIF rules, but again, this does not prohibit a deduction under ordinary rules.

850.190 Application of fair dividend rate to managed funds [s EX 53]

For New Zealand managed funds (ie unit trusts and superannuation funds — referred to as “funds” [defined in s EX 53(1)(b)]) and people who elect under s EX 53(1B) to apply the FDR rules on a daily basis (collectively referred to as the interest holder), the five per cent fair dividend rate is applied to the FIF portfolio for each unit valuation period used by the entity to determine the value of their attributing FIF interests, or of the interests of investors in the entity.

The term unit valuation period is defined as each period within the income year of the entity for which it determines the value of the attributing interests or of investors’ interests in the entity. That is, the period that either the entity uses in valuing its interests, or those of the investors in the entity. For people other than funds that elect to calculate their FDR income on a daily basis, the unit valuation period is daily [s EX 53(1B)(c)(i)].

For an entity that calculates the value of its investments and those of their investors units on a regular basis, the taxable income for each valuation period (which could range from a day to a quarter) is calculated using the following formula in s EX 53(3):

\[
5\% \times \text{opening} \times \left(\frac{\text{number of days in the period}}{\text{number of days in the income year}}\right) + \text{quick sale adjustment}
\]

Where:

“Opening” is the total market value of FIF interests for which the person uses the FDR method at start of the relevant period.

\textbf{Note:} As with the formula in s EX 52, this does not include FIF interests that form part of an interest of 10 per cent or more in a grey-list FIF at the beginning of the income year. FIF interests of 10 per cent or more in a grey-list company at the start of the income year that reduce to below 10 per cent during the year are excluded from the FIF rules altogether for that year. Effectively this treats the value of that interest at nil at the beginning of the year.

“Period” is the number of days in the unit valuation period, and “year” is the number of days in the income year.

By applying the formula to the interest holders’ valuation period, it essentially means that the FDR applies to an average value of the interest holders’ portfolio of foreign share investments over the year. Inland Revenue have advised that the values that are used by managed funds for unit pricing purposes are acceptable to them for purposes of applying the fair dividend rate method provided a consistent approach is taken [see TIB vol 19:3 (April 2007) at 37].

The same quick sale adjustment applies to taxpayers covered by s EX 53 as it does to others, and thus the discussion on quick sales adjustments for the purposes of s EX 52 is just as relevant to quick sales adjustments under s EX 53. The only difference is that the quick sales adjustment applies to the unit valuation period used by the interest holder, instead of an income year basis. Thus, if a managed fund values its units quarterly, then the quick sales rules are applied to the quarter. An exception applies to interest holders that have a unit valuation period of one day, (ie an entity that values investors units daily or a person who is not a fund who has elected under s EX 53(1B) to do daily valuations). In this case, as the FDR formula is applied to the daily value of the portfolio of attributing FIF interests, all changes in the value of the portfolio are picked up in the FDR formula, no quick sales adjustment is necessary [s EX 53(8)].

\textbf{Example:}

SuperInvestor fund values its units monthly. Each month it is required to apply the FDR rate to the market value of its portfolio of foreign shares. In one month the SuperInvestor fund acquires and disposes of some shares to take advantage of an opportunity to make a gain on some shares the fund manager regarded as under valued. The market value of the fund as at 1 June was $14 million. The fund had 100,000 shares in Undervalued Foreign Company Ltd. During June, it acquired an additional 40,000 shares
in UVC Ltd at $5 and disposed of 20,000 at $7. The quick sale adjustment is the lesser of the peak holding adjustment and the quick sales gain amount. The peak holding adjustment is:

\[ 5\% \times \text{peak holding differential} \times \text{average cost} \]

Peak holding differential is calculated under s EX 53(12), as the lesser of the difference between the largest holding and the holdings at the start and finish of the unit valuation period, which is 20,000 shares. Average cost is $5. The peak holding adjustment is thus

\[ 5\% \times 20,000 \times $5 = $5,000. \]

The quick sales gain is $40,000 (ie the sales proceeds of $140,000 less the average cost of 20,000 \(\times\) $5). Thus, the quick sales adjustment is $5,000 and is added to the income amount calculated for that unit valuation period. The FDR income for June is then:

\[ 5\% \times $14,000,000 \times 30/365 + $5,000 = $62,534.25 \]

Managed funds and entities other than natural persons and certain family trusts are not able to access the comparative value method for less than 10 per cent FIF interests, so they cannot switch to that method if the value of its portfolio reduces.

850.195 Cost method [s EX 56]

(1) Overview

A new cost-based method (a variant of the FDR method) is available for portfolio interests when it is not practical to obtain a market value and use the FDR method [s EX 46(9)]. Although s EX 46(9) limits the application of the method to interests of less than 10 per cent for interests in foreign companies, it is otherwise silent on category 2 and 3 interests (foreign life and superannuation).

However, while there seems to be nothing in principle stopping the application of the cost method to category 2 and 3 interests, the method is principally designed to cater for shares in foreign companies not listed on an exchange, and thus do not have readily identifiable market values as required by the FDR method.

Although there are a number of options for valuing the initial opening value, in general it would be expected that taxpayers would use the independent valuation option as the initial cost base when the interest was not an attributing FIF interest for the person for the previous income year. The valuation is a one-off valuation that allows investors to commence applying the cost method. However, the rules allow a revaluation of the attributing FIF interest every five years if the cost base is getting out of alignment with the actual value of the interest, for example, if the value decreased. No adjustment to prior year’s FIF income arises if a revaluation is undertaken and the value is lower than that used in prior years to calculate FIF income under this method: so it is important that the initial valuation is undertaken with due care.

The key features of the cost method are:

(a) It taxes five per cent of the cost (referred to as opening value in the legislation) of the portfolio investment each year;

(b) Cost is automatically increased by five per cent (being the deemed FIF income of the previous year) each year as a proxy for the increase in value of the interest;

(c) The cost base in each subsequent year is adjusted for sales and purchases in the previous year. If shareholding size has increased, the cost base is increased accordingly, similarly if shareholding is decreased;

(d) No tax liability arises in the year the interest is acquired (similar to FDR method), as there is no cost base at the beginning of the year;

(e) Dividends are not taxed separately, but rather are subsumed by the cost method. No allowance is made for dividends received in the opening value — ostensibly for the reason that the value of the shares should increase by more than five per cent in the long run. Therefore it is inappropriate to reduce the value by dividends received. However, withholding tax credits attached to dividends can be claimed against the tax on this FIF income;

(f) The quick sales rules apply to the cost method as with the FDR method;

(g) The cost method applies on an interest by interest basis, rather than the pooled approach as used in the FDR rules; and

(h) No foreign investment fund losses can be produced under the cost method.
(2) **Cost method formula [s EX 56(1)]**

The formula to be applied when using the cost method is:

\[
0.05 \times \text{opening value} + \text{quick sale adjustment}
\]

Opening value takes its meaning from s EX 56(3) and is central to the operation of the cost method. The opening value is adjusted if a person increases or decreases the size of their interest during the year.

“Opening value” is:

(a) Zero: if the year is the year that the interest is acquired;
(b) The net asset value of the FIF interest: if (a) does not apply and the amount is shown as the net asset value of the FIF interest in publicly available audited accounts if the FIF also has publicly available audited accounts; or
(c) The cost of the interest: if (a) and (b) do not apply, and the person acquired the interest in the 2005-2006 or 2006-2007 income years; or
(d) An independent valuation: if (a), (b) and (c) do not apply, and
   (i) The interest was not an attributing FIF interest in the previous year; or
   (ii) The person has used the cost method for at least the previous four income years prior to the current year;
(e) Opening value used for the immediately previous year + the previous year’s FIF income: if (a), (b), (c), and (d) do not apply, and the attributing FIF interest is the same as the person’s attributing FIF interest for the previous year. This is the opening value that will be applied when the interest neither increases nor decreases. In the absence in changes in shareholding in the FIF, this is likely to be the principal method used;
(f) Opening value used for the immediately previous year + the previous year’s FIF income + (increase × average value): if (a), (b), (c), and (d) do not apply, and the amount of the person’s interest at the beginning of the current income year is more than the person’s attributing FIF interest for the preceding year. This is the opening value that will be applied when the size of the interest has increased over that of the immediately preceding year. The formula increases the cost base of the FIF interest accordingly;
(g) Amount of the attributing FIF interest at the beginning of the current year / amount of attributing interest for the preceding year × (opening value used for the immediately previous year + the previous year’s FIF income): if (a), (b), (c), and (d) do not apply, and the amount of the person’s interest at the beginning of the current income year is less than the person’s attributing FIF interest for the preceding year. This is the opening value that will be applied when the size of the interest has decreased over that of the immediately preceding year. The formula decreases the size of the FIF interest accordingly. Presumably because the method is based on cost, the actual sales value of the interest is not used to reduce the cost. Instead the formula applies a ratio of the current year holding to the previous year’s shareholding, and reduces the previous year’s holding accordingly. If the person thought this did not correctly reflect the remaining value of their FIF interest they may be able to use the revaluation basis in s EX 56(3)(b) if they have used the cost method for four or more years.

**Example 1 (Standard case):**

Paul is an expatriate Australian and holds a less than 10 per cent interest of 13,000 shares in a family holding company resident in Australia that is used to hold the wider family’s interests in Asia Pacific. As the company is not listed on an approved index of the Australian Stock Exchange (ASX) (that is the ASX All Ordinaries, ASX 50 Leaders and ASX 200) the interest in the company is an interest in a FIF. When the new rules apply from 1 April 2007, Paul opts to use the cost method and obtains an independent valuation of his interest, which is $65,000. This is the opening value. Paul’s FIF income for the 2007-2008 year will be $3,250. For the 2008-2009 year Paul’s FIF opening value will be the preceding year’s opening value increased by the FIF income of $3,250, which is $68,250. His FIF income for 2008-2009 is then $3,412.50. Assuming Paul’s FIF interest does not change, his FIF income calculation under the cost method will continue on the same basis.
Example 2 (Interest increase):
During the 2009-2010 income year Paul acquires an additional 1,000 shares at a cost of $5.50. Because Paul did not hold these shares on 1 April 2009, they do not affect his 2009-2010 FIF income calculation. For the 2009-2010 income year, Paul uses the standard formula. His income is: (0.05 × $71,662.50) $3,583.12. However, for the 2010-2011 year, as the interest held at 1 April 2010 is larger than the interest held as at 1 April 2009, Paul has to adjust his opening value. The formula required for this purpose [s EX 56(3)(d) and (5)] is:

opening value used for the immediately previous year + the previous year’s FIF income + (change × average value)

For the 2010-2011 income year the opening value is:
$71,662.50 + $3,583.12 + (1000 × $5.50) = $80,745.62

The FIF income for the 2010-2011 income year is:
0.05 × $80,745.62 = $4,037.28

Example 3 (Interest decrease):
During the 2011-2012 income year Paul disposes of 2000 shares. Paul’s income for the 2011-2012 income year is calculated under the standard formula. His income is based on the previous year’s opening value increased by the five per cent FIF income. His income is therefore 0.05 × ($80,745.62 + $4,037.28) $84,782.90 = $4,239.14. However, as his opening FIF interest for the next year is lower than the preceding year, he is required to adjust the opening value. The formula required for this purpose [s EX 56(3)(e) and (6)] is:

amount of the attributing FIF interest at the beginning of the current year / amount of attributing interest for the preceding year × (opening value used for the immediately previous year + the previous year’s FIF income)

For the 2012-2013 income year the opening value is:
12,000/14,000 × ($84,782.90 + $4,239.14) = $76,304.60.

The FIF income for the 2012-2013 income year is:
0.05 × $76,304.60 = $3,815.23.

Example 4 (Revaluation):
Paul is concerned that the value of his FIF interest in their family company has decreased due to some downward movements in the value of the FIF’s assets. Paul has used the cost method for four or more years before the 2013-2014 income year, and is entitled to have his interest revalued under paragraph (d)(ii) of the definition of “opening value” (above). The interest is revalued by an independent valuation to $68,500. The FIF income for the 2013-2014 year is:
0.05 × $68,500 = $3,425

(3) Cost method and quick sales
Shares that are purchased after the start of the income year and sold before the end of are subject to a quick sale adjustment. Consistent with the FDR method, these rules are designed to ensure taxpayers are unable to buy and sell FIF interests and escape tax under the FIF rules.

The quick sale rules in the cost method are similar to those used in the FDR method, except that the quick sale adjustment is not limited to the lower of five per cent of the average cost of the FIF interest or the actual gain made, as it is in the FDR rules. Rather the quick sale adjustment simply taxes the shares acquired and disposed in the same year at five per cent of their average cost. This is consistent with the liability that would have been imposed under the cost method had the shares been taxed using that method. The formula is:

peak holding differential × average cost

Using the average cost approach takes account of the situation when different parcels of shares are purchased during the year at different prices, and avoids the need to trace costs. The “average cost” is the total amount of expenditure that the person incurs in acquiring or increasing, during the relevant income year, the attributing interest in the FIF, divided by the total for the relevant income year of the increase in the interest for each acquisition or increase.

In determining the shares subject to the quick sales adjustment, the rules are based on those used in determining the peak holding adjustment in the FDR rules.
Example 5 (Cost method and quick sales):
Paul owns 13,000 shares in a FIF. During the year Paul purchased 200, 300 and 500 shares respectively at $5, $5.25 and $5.50 and subsequently sold 2,000 in the same year. The peak holding differential under s EX 56(17) is the lesser of 1,000 (being the difference between the largest number of shares held less shares at the beginning of the year: 14,000 – 13,000) and 2,000 (being the difference between the largest number of shares held less shares at the end of the year: 14,000 – 12,000). The first parcel of shares acquired of 200 was acquired at $5 per share, the second parcel of 300 at $5.25 per share and the third parcel of 500 at $5.50 per share. Thus, the average cost is: $5,325 / 1,000 = $5.32. Although the quick sale adjustment is incorporated into the principal cost method formula in s EX 56(1), the effect is: 0.05 × 1,000 × $5.32 = $266. If this is related back to example 1 above, the FIF income for the year would be:

\[
0.05 \times $65,000 + 266 = $6,086
\]

850.200 Share reorganisations

There are rules to deal with situations when an investor buys and sells shares during an income year (or valuation period for managed funds) and there is a share reorganisation (share split) between when the shares were purchased and when they were sold. The rules essentially adjust the numbers of shares and their values taken into account for the quick sales rules so the results correctly reflect the share numbers and values after the bonus issue or share split. The rules also apply when a person is using the cost method and acquires more shares in the FIF that are subsequently affected by a share split. Thus, they are likely to have a narrow application.

The term “share reorganisation” is defined in s YA 1 as “an action of the FIF that causes an increase or reduction, other than for consideration, of the attributing interests held by the person, including the person, who holds attributing interests in the FIF immediately before the action”. Inland Revenue refers to share splits in this context. Shares acquired under an options arrangement do not constitute a share reorganisation for the purposes of s EX 54 as consideration passes.

The overriding objective of the share reorganisation rules is to ensure that the FDR and cost method formulas are correctly applied to give the right result when a share reorganisation has occurred and the quick sales rules apply.

The figures adjusted for the share reorganisation are used in:
(a) The item “peak holding differential” as applied in calculating the quick sale adjustment for the FDR method;
(b) The item “average cost” used in calculating the quick sales amounts in the FDR and cost methods; and
(c) The item “increase” used in calculating the application of the cost formula when an interest has increased from one year to the next.

Example:
SuperInvestor fund values its units monthly. Each month it is required to apply the FDR rate to the market value of its portfolio of foreign shares. In one month the SuperInvestor fund acquires and disposes of some shares to take advantage of an opportunity to make a gain on shares regarded as under valued. The market value of the fund as at 1 June was $14 million. The fund had 100,000 shares in undervalued Foreign Company Ltd. During June it acquired an extra 40,000 shares in UVC Ltd at $5. UVC Ltd reorganises its shares with a 1:1 share split. Following the split, the fund disposed of 40,000 shares at $3.50. As a share reorganisation has occurred, the rules in ss EX 53(12)(b) and EX 53(13)(b) that define “peak holding differential” and “average cost” respectively, for the purposes of determining the peak holding adjustment, direct us to s EX 54 to define these amounts.

Under s EX 54(4) “peak holding differential” is now defined as the lesser of the following:
(a) The difference between the “equivalent shareholding” that is the greatest for the period and the equivalent shareholding for the beginning of the period; or
(b) The difference between the “equivalent shareholding” that is the greatest for the period and the equivalent shareholding for the end of the period.

Using the rule in s EX 54(3), the “equivalent shareholding” is an amount treated as corresponding to an amount equal to the attributing FIF interest that the person would hold at the end of the affected period if the...
person did not increase or reduce the FIF interest other than by way of a share reorganisation. Effectively, this is the FIF interest size adjusted for the share reorganisation. The greatest equivalent interest size is thus 280,000 shares. The equivalent interest size at the start and end of the affected period is 200,000 and 240,000 shares respectively.

Peak holding differential, as adjusted for the share reorganisation, is now 40,000 shares. The definition of “average cost” is taken from s EX 54(5) as the total of the expenditure that the person incurs in the affected period in acquiring or increasing the FIF interest divided by the total of the “equivalent acquired shareholding”. Under s EX 54(3)(b) the “equivalent acquired shareholding” is an amount treated as corresponding to the difference between the equivalent interest size for the time of the acquisition or increase (280,000) and the amount that would be the equivalent interest size (200,000) if the person were not to have acquired the interest. Average cost is thus: $200,000 / 80,000 = $2.50 per share.

The peak holding adjustment formula in s EX 53(10) (ie 0.05 × peak holding differential × average cost) now gives:

\[
5\% \times 40,000 \times 2.50 = 5,000
\]

The funds FDR income for June is:

\[
5\% \times 14,000,000 \times 30/365 + 5,000 = 62,534.25
\]

This income figure has not changed from that used in the example at 850.190, when no share reorganisation occurred. This is what you would expect as the overriding objective of the share reorganisation rules is to ensure the correct result arises despite the share reorganisation.

The rules in s EX 54 appear complicated at first sight. However, when the end result is understood, a commonsense application of the equivalent shareholding rules should ensure a sensible result that is consistent with the objectives of the share reorganisation rules.

850.205  **Deemed rate of return method** [s EX 55]

The deemed rate of return (DRR) method for calculating FIF income or loss involves applying a deemed rate of return to the book value of a person’s FIF interest. The method was designed for those cases when the investor has insufficient information about the FIF to use any of the three other calculation methods, as is likely in cases of interests in foreign life insurance policies and foreign superannuation schemes for example.

With the introduction of the FDR method, the use of the DRR method is now likely to be very limited. This is because, for interests in foreign companies it can only be used if the interest is 10 per cent or greater and when it is not practical to use CV or AP, or when the interest has a book value of less than $250,000. DRR may be used if a person cannot use FDR (for a less than 10 per cent interest) because the interest is regarded as debt under s EX 46(10) and the CV method cannot be used. Even when DRR can be used, given the relatively high rate of deemed income (see below for the rates), there will be a natural reluctance to use it if other methods, such as FDR or cost, can be used. The circumstances when the DRR method can be used are also discussed at 850.155.

If a person’s interest has not changed throughout the income year, the formula employed in the Act to calculate DRR FIF income is referred to as the standard formula [s EX 55(3)], and if the person’s interest has changed during the year, the person’s income is determined by totalling the amounts determined under the part-year formula [s EX 55(5)].

A person’s interest in a FIF is regarded as changing during an income year if the person:

(a) Acquires or increases their interest; or
(b) Disposes or reduces their interest (although annuity receipts are not regarded as a disposal).

The FIF income of a person using the DRR standard formula is:

\[
\text{opening book value} \times \text{deemed rate}
\]

Where:
“Opening book value” of the interest is the value at the end of the previous income year calculated under s EX 55(7); and

“Deemed rate” is the rate set by the Governor-General by Order in council for the relevant income year, (see below).

The FIF income of a person using the DRR part-year formula (when a person’s FIF interest changes) is:

\[ \text{(opening book value + costs)} \times \frac{\text{(deemed rate \times days)}}{365} \]

Where:

“Opening book value” is the book value (if any) of the interest at the end of the period before the part of the income year, calculated under s EX 55(7);

“Costs” is the total for the part of the income year of all expenditure (if any) that the person incurs in acquiring or increasing the interest. Cost also includes the income tax on the FIF income that the person is liable under the laws of a country or territory outside New Zealand, and which is paid by the person in the income year or part of the income year;

“Deemed rate” is the rate set by the Governor-General by Order in council for the relevant income year; and

“Days” is the number of days in the part of the income year, and for this purpose, an acquisition or increase is treated as occurring at then start of a day and a disposal or reduction is treated as occurring at the end of a day.

In relation to the part-year formula, the formula requires a deemed rate of return calculation to be made each time there is an acquisition or disposal of an interest or a part of an interest (eg for an interest in a foreign superannuation scheme a separate calculation will be required in respect of each contribution). The part-year calculation will be based on the previous part-year’s closing book value.

For interests in foreign superannuation schemes and life insurance policies, the part year calculations can be particularly onerous. If monthly contributions were made, 12 calculations would be required. In this regard Inland Revenue allow a simplified calculation method as per Inland Revenue’s Technical Rulings Manual 39.8.4.3 — which although a little out of date, has not been withdrawn.

In order to simplify the calculation of such income under this method, the Department will allow taxpayers to calculate FIF income using a single calculation, based upon the book value of their interest at the mid point of their income year (ie when half of the contributions for the year have been made).

**Example (based on that in the Inland Revenue Technical ruling):**

A person first becomes liable to the FIF rules and is deemed to acquire the FIF interest on 1 April 2007 at $40,000. The person makes contributions of $1,000 each month. For the 2008 year the FIF income is based on the deemed acquisition cost of $46,000. FIF income = $46,000 \times 10.87\% = $5,000.

**Note:** For each subsequent year in respect of which the interest continues to be held, this value will take into account contributions covering the second half of the previous income year and those covering the first half of the current income year (ie a full years contributions). For example, the person’s income for the 2009 year under the policy (assuming the contributions remain unchanged) will be based on a 2008 closing book value of $63,000 (being $46,000 + $5,000 + $12,000).

Inland Revenue state the policy will only apply under the following circumstances:

(a) The person is a natural person;
(b) The FIF concerned is a foreign superannuation scheme or a foreign life insurance policy;
(c) Payments made by or on behalf of the person must be regular and equal throughout their entire income year;
(d) There must be no additional or lump sum payments made to the FIF at any time during the person’s income year;
(e) There must be no distributions made to or withdrawals made by the person from the FIF at any time during their income year.
Both the standard and part-year formulas rely on the closing book value formula in s EX 55(7), which is pivotal to the operation of the DRR method. In determining closing book value, the formula looks back to the opening value used for the previous income year and adds costs and FIF income determined for that year and subtracts any gains. The closing book value is:

\[(\text{opening book value} + \text{costs} + \text{deemed income} + \text{top-up amounts}) - \text{gains}\]

Where:

“Opening book value” is the book value (if any) of the interest at the end of the previous income year (or part year), (ie it could be nil if the interest was not owned in the previous income year or part year) calculated under s EX 55(7);

“Costs” is the total for the part of the income year of all expenditure (if any) that the person incurs in acquiring or increasing the interest. Cost also includes the income tax on the FIF income that the person is liable under the laws of a country or territory outside New Zealand, and which is paid by the person in the income year or part of the income year;

“Deemed income” is the FIF income from the interest for the income year or part year calculated under the standard formula or part-year formula in s EX 55(3) and (5) respectively;

“Top-up amounts” are amounts (essentially the difference between the actual gain and the deemed income from FIF interests to which the DRR method applies) that are top-up FIF income under ss EX 60 or EX 61; and

“Gains” is the total of all amounts that the person derives during the year or the part income year from holding or disposing of the interest, including any foreign tax credits allowed under s LJ 2.

Example:

A FIF interest was acquired on 1 April 2006 at a cost of $155,000. The book value for the purposes of calculating 2006-2007 DRR FIF income is: $0 + $155,000 + $0 + $0 = $155,000. The formula in s EX 55(7) includes the $155,000 as a cost. As the FIF interest was not owned during the previous income year the opening value is nil. DRR for the 2006-2007 year is: $155,000 × 10.27% = $15,918.50.

The opening book value for 2007-2008 is the prior year’s closing value, which is $155,000 (FIF cost) + $15918.50 (being the 2006-2007 FIF income) + $0 + $0 = $170,918.50. Thus, you will notice that in determining the prior year’s closing value, the formula looks back to that year’s (or part year’s) opening value and adjusts that to get to the closing value for the prior year. DRR for the 2007-2008 year is: $170,918.50 × 10.87% = $18,578.84. Closing book value for 2007-2008 is then: $170,918.50 + $18,578.84 = $189,497.34. DRR for the 2008-2009 year is based on: $189,497.34.

Note: The top-up amounts (particularly dividends) may well equal the gains: this prevents the book value of an interest falling below its original cost price unless a portion of the interest is disposed of.

The closing book value is zero if a person uses a calculation method different from the deemed rate of return method at the end of the income year: thus, no income is attributed under the DRR method. When a person changes from the DRR FIF method, the interest is deemed to be disposed of at the previous year’s closing book value under s EX 63(4)(c)(ii) if the person uses another cost method, or, if the person uses a look-through method, its market value under s EX 63(2).

Sections EX 55(10) and (13) contain adjustments to DRR income when a FIF interest is disposed of and, either inadequate income, or excess income has been returned in prior income years. Where a disposition occurs and the book value is less than nil following the disposition, FIF income is deemed to be derived equal to the amount that book value is less than nil. While this may seem counter-intuitive at first glance, recall that “gains” are subtracted in arriving at the closing tax book value. Closing tax book value is likely to be less than zero when the FIF interest (or part interest) is disposed of.

Similarly, if a person disposes of the whole of an attributing FIF interest (not just by way of receipt of an annuity) and the closing tax book value for the relevant income year is more than zero, the excess is subtracted when the FIF income is calculated under the DRR method for that year [s EX 55(13)]. The amount of the book value above zero is subtracted in the year of disposal as the person has over returned FIF income.
Note: Section EX 55(13) only applies when the whole FIF interest is disposed of. Thus, if a person was to dispose of half their interest for a loss, no adjustment is permitted even if a loss would arise if the entire interest was disposed of.

Example (book value less than nil):
The book value of an interest as at 31 March 2007 is $52,000. The deemed rate of return for the 2008 year is 10.87 per cent. The interest sold on 1 November 2007 for $57,500. Income for the part-year to 1 November 2007 = $52,000 + 10.87% × 215 / 365 = $3,329.50. Book value of interest as at 1 November 1994 [s EX 55(7)] = $52,000 + 0 + $3,329.50 + 0 - $57,500 = ($2,170.50).

Income for part-year ended 1 November 1994 [s EX 55(10)]:
= $3,329.50 + $2,170.50
= $5,500 (or $57,500 - $52,000)

Example (book value greater than nil):
The book value of an interest as at 31 March 2007 is $52,000. The deemed rate of return for the 2008 year is 10.87 per cent. The interest sold on 1 November 2007 for $47,500. Income for the part-year to 1 November 2007 = $52,000 × 10.87% × 215 / 365 = $3,329.50. Book value of interest as at 1 November 2007 [s EX 55(7)] = $52,000 + 0 + $3,329.50 + 0 - $47,500 = $7,829.50.

Income for part-year ended 1 November 2007 [s EX 55(13)]:
= $3,329.50 – $7,829.50
= ($4,500) (or $47,500 - $52,000)

However, if the aggregate book value of a person’s FIF interests is less than $250,000 at the end of the preceding income year, and any gain would not have been assessable if not for the FIF rules, no wash-up adjustment is undertaken for either overstated or understated income. Specifically, under ss EX 55(11) and (14), a disposal will not give rise to an adjustment under ss EX 55(10) and (13) to the DRR income if:

(a) The person is a natural person;
(b) The value of the FIF interest is $250,000 or less (being either the closing tax book value at the end of the income year if the person used the DRR to calculate FIF income for all attributing FIF interests in the previous year, or the market value in any other case);
(c) If the closing tax book value is less than zero, the deficit arises only because the person disposed of some or all of the interest; and
(d) The gain derived (or if a gain had been derived) from disposing of the interest, or part interest as the case may be, would not be assessable income under ordinary rules (ie were it not for the FIF rules the gain would not have been income).

This is essentially a compliance cost savings method for those natural persons who would, but for the FIF rules, have had no tax liability in respect of any gain made on the disposal of the interest and the value is below $250,000. Under s EX 55(12), a person can have further FIF income if a person calculating FIF income under the DRR method derives an amount from holding or disposing of the FIF interest that would, but for the FIF rules in s EX 59(2), be otherwise assessable income (ie dividends or revenue account property gains). This adjustment is calculated under s EX 60 and brings to income all gains from the FIF interest less total FIF income returned to date.

Example (holding gains):
A FIF interest was acquired on 1 April 2006 at a cost of $10,000. On 1 July 2006, the FIF paid a dividend of $2,000. The DRR was 10.27 per cent for the 2006-2007 income year. The 2006-2007 income from the fund under s EX 60 will be $973 ($2,000 less $1,027 assessed under s EX 56). If the dividend was received in the 2007-2008 income year instead, the DRR for that year was 10.87 per cent, there will be no income under s EX 60 because the income under s EX 56 ($1,027 for 2006-2007 and $1,198.63 for 2007-2008) would exceed the proceeds from the dividend.

Note: While this amount increases the closing tax book value formula in s EX 55(8)(d), it will also reduces the closing tax book value in s EX 55(8)(e) by the gains. However, additional income will arise under s EX 60.

Section EX 60 applies to both full and partial disposals. Its intention is to ensure the operation of the FIF regime does not result in a more advantageous tax treatment of gains received by taxpayers from a FIF interest.
International Tax Regime

than would have been the case if the FIF regime did not apply to them. As above, this may occur when a
dividend or other assessable income is received from the FIF that in aggregate exceed FIF income as
calculated under the DRR. Sections EX 55(12) and EX 60 operate to ensure the higher amount is assessable
in the case of DRR. Section EX 60 is discussed at 850.215.

Note: Rules apply to determine the “cost” of an interest acquired under a share split or non-taxable bonus
issue [s EX 68]. Rules also apply [s EX 57] to determine the New Zealand dollar amount of the FIF income
calculated under the DRR method. Essentially, the exchange rate is, at the choice of the person, either:

(a) The rate applying on the day an amount is incurred or derived; or
(b) For all such foreign currency amounts converted into New Zealand dollars on the average of the close
   of trading spot rate of exchange for the 15th day of each complete month falling in the income year.

The deemed rate of return is set by Government regulation each year and applies to all types of investments
for which a taxpayer uses the DRR method, including interests in superannuation schemes and life insurance
policies. The rates are as follows:

<table>

**850.210 Additional FIF income or loss if CFC owns FIF** [ss CQ 5(3),
DN 6(3) and EX 58]

If a person has an income interest of 10 per cent or greater in a CFC for an accounting period, and the CFC
has an interest in a FIF, and because s EX 21(33) applies, the FIF income or loss is not taken into account in
calculating the branch equivalent income or loss of the CFC. Instead the FIF income or loss is calculated
directly to the persons with the income interests (of 10 per cent or more) in the CFC as though they owned
the interest in the FIF directly.

Because the owners of the income interests in the CFC are treated, in effect, as owning the interest in the
FIF, the FIF income is attributed back even if the CFC is resident in an unqualified grey-list country.

The person that has the FIF income or loss under these rules calculates the income similarly to that for the
CFC except that the income interest is multiplied by the FIF income or loss calculated by reference to the
CFC’s interest in the FIF, as per the formula:

\[
\text{income interest} \times \text{CFC's FIF income or loss}
\]

In calculating the FIF income or loss, s EX 58 requires the person with the interest in the CFC to:

(a) Choose the FIF calculation method; or
Otherwise apply the calculation rules in ss EX 44 to EX 61 (the central rules that determine FIF income or loss) as if the person held the interest directly; and

Apply the loss ring-fencing and jurisdictional ring-fencing rules in s DN 8 respectively as if the person held the interest directly.

If the underlying FIF is a life insurer, the FIF income or loss excludes the actuarially determined amount attributed to the policyholders or another company.

No FIF income arises under this section if s EX 31 applies [see 850.70 and 850.75].

**850.215 Top-up of FIF income** [s EX 60 and EX 61]

**(1)** *Deemed rate of return [s EX 60]*

The purpose of s EX 60 is to buttress the FIF regime to ensure the FIF rules do not result in a more advantageous tax treatment of gains received by taxpayers from a FIF interest than would have been the case if the FIF regime did not apply to them. This may occur for example if a dividend or other assessable income is received from the FIF that in aggregate exceed FIF income as calculated under the DRR.

Sections EX 55(12) and EX 60 thus operate to ensure all gains (both holding gains and gains on disposal) derived in respect of a FIF interest are assessable when the person accounts for FIF income under DRR. It does this through the formula in s EX 60(2). That formula states that a gain is FIF income if it results in a positive amount under the formula:

\[
\text{total income gains} - \text{total FIF income}
\]

Where:

“Total income gains” is the total of amounts, including the amount in question, derived by the person until that time from holding or disposing of the interest that would have been income if s EX 59(2) had not applied;

“Total FIF income” is the total FIF income, reduced by the total of FIF losses, derived by the person from the interest until, and including, the relevant period.

Essentially, this formula ensures that the results that would be obtained under DRR and CV are the same.

**Example (revenue account property gains):**

A FIF interest was acquired on 1 April 2006 at a cost of $155,000. DRR for the 2006-2007 year is $155,000 × 10.27% = $15,918.50. On 1 September 2007 the taxpayer sells 50 per cent of the FIF interest for $120,000. DRR for the 2007-2008 year based on two part years is:

(a) 1 April to 1 September: $170,918.50 × 10.87% × 154/365 = $7838.75.

(b) 2 September to 31 March: $170,918.50 + $7,838.75 = $178,757.25 × 10.87% × 211/365 = $11,232.67.

Top-up income calculated under s EX 60 is: total gains - total FIF income:

(a) Total gains: $120,000 - $77,500 = $42,500.

(b) Total FIF income: $15,918.50 + $7,838.75 = $23,757.25.

(c) Top-up income under s EX 60: $42,500 - $23,757.25 = $18,742.75.

Thus, DRR income for 2007-2008 is FIF income + top-up amount: $7,838.75 + $11,232.67 = $19,071.42 + $18,742.75 = $37,814.17.

Closing book value for 2007-2008 (which is the 2008-2009 opening value) is calculated as:

\[
\text{(opening book value + costs + FIF income + top-up amounts) - gains}
\]

\[
(\text{($178,757.25 + 0 + 11,232.67 + 7,510.08) - 120,000 = 77,500}}}
\]

Overall in respect of the 50 per cent interest sold, it cost $77,500 and realised $120,000 and thus made a gain of $42,500. The DRR and top-up income amounts to the end of the 2007-2008 year totalled $42,500. The opening balance for the 2008-2009 year is $77,500 — which is precisely 50 per cent of the original cost, which is the result that you would expect as that is the cost of the remaining FIF interest on which DRR should apply going forward.

Importantly in determining the figure that is “total income gains” for the purposes of s EX 60, the amount that goes in that figure in the case of disposals is the net gain (ie the disposal value less the cost, which in the
example is $42,500). In looking at the closing book value formula for 2007-2008, the FIF income for the first part-year calculation is not included (ie $7,838.75) as this was already incorporated in determining the closing tax book value for that part year.

(2) 1 April 1993 uplift interest [s EX 61]
Section EX 61 was necessary when the FIF rules were reintroduced with effect from 1 April 1993, and is now largely historical. The provision was designed to ensure taxpayers were unable to use the step up in market value to the FIF opening value for the purposes of the FIF rules to shelter an otherwise taxable distribution from a FIF.

Section EX 61 applies when a person:
(a) Has an attributing FIF interest;
(b) Held the interest as at 29 July 1992;
(c) Calculated FIF income using either the comparative value (CV) or deemed rate of return (DRR) method from 1 April 1993;
(d) Was treated as having reacquired the FIF interest at that time for its then market value under either s CG 23(1)(d) of the ITA 1994 or s EZ 7 of the ITA 2004; and
(e) Would, but for the FIF rules, have derived an amount from holding or disposing of the interest that would have been income if s EX 59(2) had not applied.

When these circumstances apply, FIF income (not losses) is deemed to arise under the formula:

\[
\text{Total income gains} - \text{Total FIF income}
\]

Where:

“Total income gains” is the total of amounts, including the amount in question, derived by the person until that time from holding or disposing of the interest that would have been income if s EX 59(2) had not applied;

“Total FIF income” is the total FIF income, reduced by the total of FIF losses, derived by the person from the interest until, and including, the relevant period.

The section applies to partial disposals as if they were separate interests [s EX 61(4)].

Example:
A person had an interest that was purchased for $60,000 in June 1990 and held the interest such that as at 1 April 1993 the opening FIF value was the market value of the interest, which was $100,000. The person disposed of the interest on 1 October 1993 for $102,000.

<table>
<thead>
<tr>
<th>Closing value</th>
<th>Nil</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gains</td>
<td>$102,000</td>
</tr>
<tr>
<td>Opening value</td>
<td>Nil</td>
</tr>
<tr>
<td>Costs</td>
<td>$100,000</td>
</tr>
</tbody>
</table>

The FIF income for the period is:

\[
(\text{closing value + gains}) - (\text{opening value + costs})
\]

\[
(0 + $102,000) - (0 + $100,000)
\]

FIF income is $2000. However, if the retained earnings of the FIF of $40,000 been distributed prior to the application of the FIF rules, the income would have been $40,000. A similar analogy applies of the FIF interest was held on revenue account.

850.220 Timing of FIF income or loss [ss CQ 5(2), DN 6(2)]
A person’s FIF income or loss calculated under the AP or BE method is treated as being derived or incurred in the person’s income year in which the accounting period of the FIF ends. This rule is similar to that used in the CFC rules in s CQ 2(1)(b). For example, if a standard balance date of, say, 31 March 2009, and the person has an interest in a FIF with an accounting year ended 31 December, the FIF income determined under the AP or BE methods for the FIF's accounting period ended 31 December 2008 will be taxable in the person’s year ended 31 March 2009.
Note: Section CG 16(3) of the ITA 1994 contained a rule that stated that a person’s FIF income or loss calculated under the comparative value (CV) or deemed rate of return (DRR) method is treated as being derived or incurred in the income year for which it is calculated. This was dropped in the ITA 2004.

For methods other than AP or BE, the general rules apply (ie the relevant calculation rules in ss EX 51 to EX 56). Generally, these rules require FIF income to be measured over a person’s income year regardless of the balance date of the FIF. For example, in relation to FIF interests to which the FDR method is used, s EX 52 brings income to account by multiplying the market value of the FIF portfolio at the start of a person’s income by five per cent. If a person has a 30 June balance date, then FDR income would be calculated by reference to the market value on 1 July of the relevant year.

FIF income of a person who has ceased to be resident in New Zealand is treated as being derived while the person was resident: thus avoiding an argument that the income is derived evenly over the income year and apportioned over the period of residence and non-residence [s CQ 5(4)]. Also see the rules in s EX 64 when people become and cease being resident in New Zealand.

850.225 Entry and exit rules [s EX 64]

(1) Leaving New Zealand

If a person holding an attributing FIF interest uses the comparative value (CV), deemed rate of return (DRR), fair dividend rate (FDR) or cost method ceases to be resident in New Zealand, the person is treated as having sold the interest in the FIF for its market value immediately before their change of residence. The person is also treated as not holding the FIF interest when they become non-resident [s EX 64(2)(b)], thus ensuring only income derived in respect of the FIF interest while resident in New Zealand is subject to income tax in New Zealand.

(2) Coming to New Zealand

If upon becoming a resident of New Zealand or upon cessation of the 48-month period of transitional residence, a person holds an attributing FIF interest and for the period after the change in residence or status uses any one of the CV, DRR, FDR or cost methods in respect of the FIF, the person is treated as having bought the interest in the FIF for its market value immediately after their change of residence or status. In this situation, the notional acquisition at market value does apply for the purposes of the $50,000 investment threshold rule [ss CQ 5 and DN 6]. Rather, the cost of the shares will be their market value at the relevant time under s EX 64.

The person is also treated as not holding the FIF interest when they were not resident or a transitional resident. Thus, ensuring only income derived in respect of the FIF interest while resident in New Zealand is subject to income tax in New Zealand.

(3) Look-through calculation methods and change of residence

The reference to look-through methods is a reference to the accounting profits (AP) or branch equivalent (BE) methods of calculating FIF income or loss.

When a person ceases or becomes a resident of New Zealand, or ceases to be a transitional resident, and at the time holds an attributing FIF interest, and uses either the AP or BE method for the accounting period in which the change in residence (or status in the case of a transitional resident) occurs, the matter is dealt with through the income interest calculation rules in ss EX 16 and EX 17. These rules modify the measurement of the income interest in the foreign entity.

Under s EX 16, when a person becomes or ceases to be resident in New Zealand, the person’s income interest is deemed to be zero for that part of the accounting period during which the person is not resident in New Zealand. Section EX 17 then applies to calculate an income interest for the accounting period that is then used to determine the FIF income or loss. An example of this calculation and further explanation is provided at 850.40.
International Tax Regime

850.225(4)

Note: Section EX 16 specifically provides that s CQ 5(4) will still apply to deem any FIF income as being derived while the person is a New Zealand resident. This avoids any debate about the income being spread over the periods of residence and non-residence (or transitional residence) and apportioned further.

(4) Death of a person holding FIF interests

Note: Section EX 55 ITA 2004 deemed a disposal at market value when a person used a method other than the AP or BE methods. The Taxation (Base Maintenance and Miscellaneous Provisions) Act 2005 repealed s EX 55 ITA 2004 from the 2005-2006 income year, and introduced changes to the tax treatment of assets held on death, which may change the law in this regard. Subpart FC should be consulted if an issue arises for consideration.

850.230 Dispositions and acquisitions of FIF interests not at market value [ss GC 4 and EX 71]

If a person disposes of an attributing interest in a FIF and they used the comparative value (CV), deemed rate of return (DRR), fair dividend rate (FDR) or cost method prior to disposal and they received either no consideration, or a consideration that was below market value, the person is treated as disposing of the interest for an amount equal to market value at that time.

Similarly, if a person acquires an attributing interest in a FIF and they use the CV, DRR, FDR or cost method for the period after acquisition and the consideration is not equal to market value of the interest at that time, then the person is treated as having acquired the interest for its market value at that time.

850.235 Relationship between CV, DRR, FDR and cost methods with other provisions [s EX 59]

When a person calculates a FIF income or loss under the comparative value (CV) method, deemed rate of return (DRR) method, fair dividend rate (FDR) method (provided the FIF is not a grey-list FIF and the FIF interests falls to below 10 per cent during the year), or cost method:

(a) The person is treated as not having any income from the interest for the period other than FIF income, and in particular, any dividends derived and gains made on disposal of the interest are disregarded (essentially removing any potential for double taxation);

(b) The person is denied a deduction for any amount incurred in the period on acquiring some or all of the FIF interest, except to the extent allowed under the FIF rules (ensuring that deductions only arise under the FIF rules); and

(c) The FIF interest cannot be treated as trading stock.

The purpose of s EX 59 is to ensure that income that is counted as FIF income is not taxed under any other provisions, nor does it give rise to a double deduction or other advantage if a loss arose.

Section CD 36 also applies to prevent any amount distributed from a FIF (when the above FIF calculation methods are used) from being a dividend. Essentially the dividend is subsumed into the FIF income calculation.

The section puts some limits on FDR to cover those instances when, were the FDR method to be used, no FIF income arises and thus the ordinary rules should apply. The rule states that for the FDR method, s EX 59 only applies if:

(a) The FIF is a grey-list company; and

(b) The person holds a direct income interest of 10 per cent or more in the FIF at the beginning of the income year or period.

Essentially, s EX 59 is allowing the ordinary rules to apply (such that dividends will be treated as per normal and any capital/revenue gains on the disposal of the FIF interests are taxed accordingly) when a person has a FIF interest of 10 per cent or more in a FIF that is a company, and that interest falls to below 10 per cent during the income year. This is also discussed at 850.155 under the FDR method.
Example:
If a person has an interest in a grey-list FIF that is 12 per cent, and during the year the interest drops to seven per cent, the grey-list exemption will not apply for that year. The FDR method will only apply to the market value of the interest from the start of the next income year as the interest was not a less than 10 per cent interest at the start of the income year, as required by the FDR rules. Thus there may be a year when no FDR calculation is made, and thus, no case to include the interest within s EX 59 (ie the ordinary rules should apply to any dividend and gain or loss on disposal).

Section EX 59 does not apply to FIF interests subject to AP and the BE methods as under those methods dividends remain taxable and there is no reason to prohibit the ordinary rules applying to the acquisition and disposal of interests subject to those rules.

850.240 Change of calculation method [s EX 62]
The general rule is that once a person uses a particular FIF income or loss calculation method, they must use the same method for interests in the FIF for subsequent income years unless they are permitted to change. However, there are rules that do permit changes, although there are restrictions on changing methods in order to prevent persons from gaining a tax advantage by changing between methods when that would produce the lowest FIF income or highest FIF loss in a particular income year or accounting period.

Changes of FIF income or loss calculation methods fall into two categories: changes for practical reasons, such as when a particular method cannot be used, and when a person chooses to change. With the introduction of the FDR rules, there is an exception for changes between FDR and CV. For natural persons and trustees of family or charitable trusts, there is no limit on changes between these two methods. This is discussed further below.

(1) Change on practical grounds
A person may change if it is not practical to continue with the same method because:
(a) In the case of the accounting profits (AP) method, s EX 46(2) prevents its continued use, or it is impossible to obtain sufficient information to continue to use it;
(b) In the case of the branch equivalent (BE) method, it is impossible to obtain enough information to continue to use it;
(c) In the case of the comparative value (CV) method, it is impossible to obtain a market value at year end;
(d) In the case of the deemed rate of return (DRR) method, either the $250,000 threshold for its use [in s EX 46(4)(b)] is exceed or, if it was the default method because s EX 48 required DRR to be used as the default method, the need or reason for using it as the default method ceases to be applicable;
(e) In the case of the fair dividend rate (FDR) method, it is impossible to find out the start-of-year market value of the interest except by way of an independent valuation; or
(f) In the case of the cost method, if it was the default method under s EX 48 and it ceases to be the default method.

(2) Choosing to change
Other than changes between FDR and CV as discussed below, there are really very limited circumstances when a person can choose to change FIF income or loss calculation methods for reasons other than those set out above.
The two key situations are:
(a) If the person is a natural person and the value of the interest, at the end of the income year or accounting period before the year or period from the end of which the change takes effect, is less than $250,000; or
(b) The change is to and from the BE method.
In both situations it is necessary to give notice to the CIR that must:
(a) Give the reasons for the change;
(b) Comply with the CIR’s notice requirements;
(c) Be given before the end of the first income year or accounting period for which the change is to take effect, unless the CIR agrees to a retrospective notice; and
(d) In the case of a natural person with interests valued at less than $250,000, be given before the end of the year or period that is before the one that, at the end of which, the change takes effect.

Natural persons with interests valued at $250,000 or less can change FIF income or loss calculation methods to suit. Provided they meet the requirements of the particular method, they can change if they want to (eg they may anticipate a lower FIF income amount under another FIF method). However, the catch is in the CIR’s notice requirements in s EX 62(4)(d). These require a person to give a full one year’s notice before the change can be made. Section EX 62(4)(d) requires a notice of change to be given to the CIR “before the end of the period that is before the one from the end of which the change takes effect”. The year’s notice period is designed to stop people flip flopping between income or loss calculations methods to deliberately arbitrage between results obtained under the different methods. However, having given notice of the intent to change methods, there is no rule in s EX 62 that says the taxpayer has to change if the taxpayer decides not to.

In changing to and from the BE method, the following conditions apply:
(a) A person may change to the BE method if it is the first time for the change;
(b) A person may change from the BE method if they are changing back to a calculation method they used in respect of the FIF interest previously and this is the first time they have chosen to change;
(c) A person can elect to change more than once to or from the BE method, if they are unable to obtain sufficient information to calculate BE income or loss and the change is not undertaken principally to alter the persons income tax liability.

The rules around moving to and from the BE method are designed to be a little more flexible to recognise the reality of the BE rule requirements, but also because BE is regarded as the more accurate method in assessing a person’s FIF income.

(3) Changes between the fair dividend and comparative value methods
A person that is a natural person or the trustee of a complying trust that is a family trust or a trust (or other organisation) that is a charity (ie with income that is exempt under ss CW 41 or CW 42) may change to and from the FDR and CV methods, provided use of those methods is permitted.

This is to allow those people that have a return on their portfolio of less than five per cent to pay tax on that lower amount. The FDR method cannot be used for any FIF interests when the person uses the CV method for any interest that could have otherwise been subject to FDR. That is, once a person elects to use CV for a FIF interest, they have to use CV for all interests that they are eligible to use FDR for.

Note: When changing between methods the rules generally treat the interest as having been disposed of and reacquired at market value. However, there are exceptions [see 850.245].

850.245 Consequences of changing methods
Entering and exiting the FIF rules generally requires market value adjustments. A similar approach is taken when changing from one FIF calculation method to another.

(1) Changing from a cost-based method to a look-through method
In terms of changing FIF calculation methods, there is a general rule that applies when a person changes from (what the legislation refers to as) a cost-based calculation methods, which comprise the comparative value (CV), deemed rate of return (DRR), fair dividend rate (FDR) and cost methods, to (what the legislation refers to as) a look-through method, which comprise the accounting profits (AP) and branch equivalent (BE) methods.

The rule states that if a person is changing from a cost-based calculation method to a look-through calculation method or vice versa, then the person is treated as having:
(a) Disposed of the interest to an unrelated third party immediately before the start of the accounting period to which the new method applies;
(b) Reacquired it immediately after the start of the period; and
(c) Received for the disposal and paid for the reacquisition and amount equal to the FIF interest’s market value at the time.

(2) Changing from CV or FDR to DRR or Cost method

The same rule as the rule for moving from a cost-based method to a look-through method applies. That is the person holding the FIF interest is deemed to have:

(a) Disposed of the interest to an unrelated third party immediately before the start of the accounting period to which the new method applies;
(b) Reacquired it immediately after the start of the period; and
(c) Received for the disposal and paid for the reacquisition and amount equal to the FIF interest’s market value at the time.

(3) Changing from Cost or DRR to CV or FDR method

In this circumstance the rules differ from the standard market value approach. As with the rules above, there is still a deemed disposal and reacquisition on the last day of the previous income year and the start of the next income year respectively. However, the consideration deemed to be received and paid is not market value, but rather:

(a) If a person changes from the cost method: the value that would have been the person’s opening value under s EX 56 if the person had applied the cost method for that year. For examples that illustrate this value see 850.195; or
(b) If a person changes from the DRR method: the value is the closing book value under s EX 55 for the preceding income year [see 850.205].

(4) Changes between CV method and FDR method

When a person changes from the fair dividend rate method to the comparative value method, or vice versa, the general market value disposition rule applies. That is that the person holding the interest is deemed to have:

(a) Disposed of the interest to an unrelated third party immediately before the start of the accounting period to which the new method applies;
(b) Reacquired the interest at the start of the income year; and
(c) Received for the disposal and paid for the reacquisition and amount equal to the FIF interest’s market value at the time of disposal.

850.250 Changes in application of FIF exemptions

The general approach taken in the rules when an exemption ceases to apply or commences applying is to deem market value dispositions and acquisitions in the case of interests to which the comparative value (CV), deemed rate of return (DRR), fair dividend rate (FDR) or cost methods did or will apply, and a FIF income or loss apportionment approach if either the accounting profits (AP) or branch equivalent (BE) methods did or will apply.

The exemptions are contained in the following sections:

(a) CFC rules exemption [s EX 34];
(b) Ten per cent or greater interests in grey-list companies exemption [s EX 35];
(c) Venture capital company emigrating to grey-list country: 10-year exemption [s EX 36];
(d) Grey-list company owning New Zealand venture capital company: 10-year exemption [s EX 37];
(e) Shares in grey-list company acquired under venture capital agreement [s EX 37B];
(f) Exemption for employee share purchase scheme of grey-list company [s EX 38];
(g) Terminating exemption for grey-list company with numerous New Zealand shareholders [s EX 39];
(h) Foreign exchange control exemption [s EX 40];
(i) Income interest of non-resident or transitional resident [s EX 41];
(j) New Resident’s accrued superannuation entitlement exemption [s EX 42]; and
(k) Non-resident’s pension or annuity exemption [s EX 43].

The $50,000 de minimis exclusion is located in ss CQ 5(1)(d) or (e) and DN 6(1)(d) or (e) as part of the requirements to either take FIF income or losses respectively into account.

Note: The above list of exemptions omits the exemptions in ss EX 31 Exemption for ASX listed securities, EX 32 Exemption for Australian unit trusts with adequate turnover or distributions, EX 33 Exemption for Australian regulated superannuation savings and EZ 32 Terminating exemption for grey-list FIF investing in Australasian listed equities.

(1) Exemptions ceasing to apply

When a person has an interest in a foreign entity that would (but for one of the exemptions in ss EX 34 to EX 43), constitute an interest in a FIF, and the relevant exemption ceases to apply, or the person starts having FIF income or loss because the cost of their FIF interests increases above the $50,000 de minimis in ss CQ 5(1)(d) or (e) or DN 6(1)(d) or (e), then:

(a) If the person uses the CV, DRR, FDR or cost method to calculate FIF income or loss for the period following the change, the person is treated as having:
   (i) Disposed of the rights to an unrelated person immediately before the change;
   (ii) Reacquired them immediately after the change; and
   (iii) Received for the sale and paid for the repurchase an amount equal to their market value at that time.

(b) If the person uses the AP or BE method to calculate FIF income or loss for the period following the change, the FIF income or loss is reduced by subtracting the amount calculated in accordance with the formula:

\[
\text{FIF income or loss} \times \left(\frac{\text{days before change}}{\text{days in period}}\right)
\]

(2) Exemption starts to apply

When a person holds an interest in a FIF that ceases to be an attributing FIF interest because one of the exemptions in ss EX 34 to EX 43 (as listed above) starts to apply, or the person ceases having FIF income or loss because the cost of their FIF interests falls below the $50,000 de minimis in ss CQ 5(1)(d) or (e) or DN 6(1)(d) or (e), then:

(a) If the person uses the CV, DRR, FDR or cost method to calculate FIF income or loss for the period before the change, the person is treated as having:
   (i) Disposed of the interest to an unrelated person immediately before the change;
   (ii) Reacquired it immediately after the change; and
   (iii) Received for the sale and paid for the repurchase an amount equal to their market value at that time.

(b) If the person uses the AP or BE method to calculate FIF income or loss for that period, the FIF income or loss is reduced by subtracting the amount calculated in accordance with the formula:

\[
\text{FIF income or loss} \times \left(\frac{\text{days after change}}{\text{days in period}}\right)
\]
850.255 Foreign investment fund losses [ss DN 5, DN 6, DN 7, DN 8, IA 7(6), IQ 2 to IQ 4, IQ 6 to IQ 9]

Section DN 5 states that a FIF loss is allowed as a deduction. Prior to the introduction of the fair dividend rate for portfolio interests, from the income years commencing on or after 1 April 2007, all FIF losses were quarantined. For non-BE FIF losses, these could only be offset to the extent of FIF income returned in the same or prior income years. These losses can now be offset and carried forward in the same way as other losses. BE FIF losses, on the other hand, continue to be, quarantined jurisdictionally in the same way as CFC losses, as is discussed further below.

The FIF loss rules supplement the general permission and override the capital limitation. Section DN 6 sets out the circumstances when a person has a FIF loss in an income year. This is identical to the circumstances when a person has FIF income as set out in s CQ 5, and thus regard can be had to the discussion on when FIF income arises [see 850.140].

(1) Removal of ring-fencing rules for non-BE FIF losses

As mentioned above, the loss ring-fencing rules for FIF losses (other than FIF losses calculated under the branch equivalent method) no longer apply. If a person has an interest in a non-grey-list FIF that is above 10 per cent, (or the person uses CV for a share that is treated as equivalent to debt) any loss calculated under the CV method will be fully deductible without restriction.

If a taxpayer has a ring-fenced FIF loss from the 2006-2007 or an earlier income year that is still to be offset, it will be deductible in full in 2007-2008. The only FIF losses that continue to be subject to ring fencing are those arising under the branch equivalent method.

(2) CFC with FIF interest

As with the calculation of FIF income, when a person has an income interest of 10 per cent or more in a CFC, a person can also have a FIF loss in an income year if the CFC holds an interest in a FIF. This applies because FIF income of a CFC is attributed directly back to the persons with income interests of 10 per cent or more in a CFC under the rules for the calculation of branch equivalent income in ss EX 21(33) and EX 58.

(3) Branch equivalent FIF losses

FIF losses calculated under the branch equivalent (BE) method are treated very similarly to attributed CFC losses in that they are ring-fenced and only able to be offset against income arising from an income interest in a CFC or FIF resident in the same country as the CFC or FIF with the loss in the accounting period when the loss was incurred. In other words, BE FIF losses can generally only be offset against the CFC or FIF income arising in the same country and the BE FIF that gave rise to the loss.

Under s DN 8, if a person has a FIF loss calculated under the BE method, the deduction allowed for the loss in the income year is no more than:

(a) Any attributed CFC income of the person from a CFC resident in the same country as the FIF for the relevant accounting period of the CFC; and

(b) Any FIF income of the person for the income year that is calculated under the BE method from another FIF resident in the same country.

Once the attributed CFC income or FIF income has been reduced by the amount of a BE-FIF loss, that income may not be used again for loss offset purposes [s DN 8(2)]. Any amount not able to be deducted is a FIF net loss able to be used under s IQ 3.

(4) FIF losses carried forward

If a person has carried a BE FIF loss forward, under s IQ 3, the maximum amount that can be offset against the person’s net income must be no more than the total FIF income that they derive in the tax year from a FIF resident in the country in which the loss arose.

If a person has FIF losses to carry forward, but cannot offset the losses because the attributing FIF interest no longer gives rise to FIF income due to the value of the person’s FIF interests dropping below $50,000 at
all times in the income year (that is the rule in s CQ 5(1)(d) or (e) applies), the FIF loss may be offset against the person’s assessable income in respect of those attributing FIF interests that would, but for the $50,000 de minimis, give rise to FIF income in that income year. That is, the FIF losses can be offset against other income to the extent that there would have been FIF income, but for the exemption [s IQ 3(2)].

If a person is unable to offset any part of the maximum amount calculated because there is insufficient net income, the excess is treated as if it were a loss subject to the general loss rules in ss IA 2 to IA 4. This is due to the operation of s IA 7(6) that states that the general rules do not apply to FIF losses “except a surplus under s IQ 3”. Thus the excess can be carried forward as an ordinary loss or grouped as an ordinary loss.

(5) FIF losses grouped
Section IQ 5 sets out the circumstances when FIF losses can be grouped. Section IQ 5 allows FIF losses to be grouped when the companies are members of a wholly-owned group and the FIF losses (whether for that year or carried forward) have not been able to be grouped under s IC 5 — presumably because the general loss rules do not apply to FIF losses, except when there is a surplus loss carried forward and available under s IQ 3.

Section IQ 5(2) allows the FIF loss to be grouped. However, if the FIF loss is a BE FIF loss, s IQ 5(3) states that the net FIF loss can only be offset to another company that has attributed FIF income similarly calculated from an entity resident in the same country as that in which the loss arose.

If the other company has insufficient net income to fully absorb the BE FIF loss, then the surplus is treated as an ordinary loss of the other company, which can then be carried forward accordingly. The loss company is not able to carry forward the excess amount. Because the loss falls into the general loss rules, it no longer ring fenced to other FIF income from the same jurisdiction.

850.260 Determining the expenditure or cost of acquiring property
[s EX 68]
The following rules apply when it is necessary to determine the cost of a person’s attributing FIF interest for the purposes of the:
(a) $50,000 de minimis in ss CQ 5(1)(d) and (e) and DN 6(1)(d) and (e);
(b) Comparative value (CV) method;
(c) Deemed rate of return (DRR) method;
(d) Fair dividend rate (FDR) method;
(e) Cost method.

(1) FIFO cost flow identification
Other than when the LIFO rules are necessary in calculating the quick sales gains amounts in ss EX 52(12) and EX 53(16), when it is not possible to specifically identify the expenditure incurred on or cost of the FIF interest, as a result of multiple acquisitions or disposals, the taxpayer must use the “first in, first out” method of cost flow identification.

(2) Share splits or similar
If the FIF interest results from a share split, non-taxable bonus issue, or similar event, and the acquisition is not income of the person, the expenditure incurred on or the cost of the interest is a fair allocation of the cost of the original property that is split, based on the market values at the time of the split. In other words, the cost of the original FIF interest is deemed to encompass both the original interest and the new interest. For the income year of the split and subsequently the cost is then treated as follows:
(a) The cost allocated to the interest is no longer the cost of the original property that was split;
(b) The person is treated as having incurred the allocated amount on acquiring the interest when the original property was acquired; and
(c) The person is treated as not incurring any other cost on the interest merely because the original property ceases to exist.
(3) **Non-monetary cost**
If the expenditure or cost incurred by the taxpayer is in kind rather than in money, the amount of expenditure or cost is the market value of that in-kind expenditure or cost. The market value is measured at the time the expenditure or cost is incurred.

(4) **Exclusion of term life premiums**
If the FIF interest is an entitlement to a benefit under a foreign life insurance policy, the expenditure or cost incurred excludes any premiums paid in prior years to the extent that the premiums relate only to term life insurance attributable to those earlier years and do not result in an increase in the surrender value.

(5) **Exclusion of holding costs**
The expenditure or cost of acquiring an interest in a FIF excludes any expenditure under the financial arrangement rules or interest incurred on money borrowed to acquire the property, or any other holding costs incurred after acquisition. These costs could be claimed outside the FIF rules if the relevant nexus is met.

(6) **FIF interests acquired before 1 January 2000**
Sections EX 68(10) and (11) contain the rules that allows interests acquired before 1 January 2000 to be valued at half their market value at 1 April 2007 for the purposes of determining whether the person has FIF interests costing in excess of $50,000 [see 850.150].

(7) **Cost of inherited shares**
A common question that arises is how inherited shares are treated for the purposes of the $50,000 cost threshold rule. There is no specific statutory rule dealing with this issue and no one easy answer. However, there are some statutory rules in the ITA 2007 that may apply (see below). In the absence of a statutory rule applying, case law would suggest that there is no cost. This is most likely to arise in the case of former grey-list shares (discussed below). Generally, if the inherited FIF interest was a taxable FIF interest to the deceased, then the statutory provisions will provide the answer — but if not, case law will need to be relied upon.

The four main statutory rules to consider are:

(a) For FIF interests acquired from 1 October 2005, the death and asset transfer rules in subpart FC may apply to deem the FIF interest to be transferred from the deceased to the surviving spouse or close relative at either market value or existing tax book value, depending on whether roll-over relief is applicable [ss FC 1, FC 2, FC 3 and FC 4]. The rules in ss FC 1 to FC 4 only apply when the interest is an attributing FIF interest [s FC 1(2) definition of “tax base property”, see 1420.197]. For example, this rule may not assist if the shares are covered by an exemption. This is because they would not be attributing FIF interests at the time of inheritance. Interestingly, s EX 55 (which was repealed when subpart FC was enacted), deemed a FIF interest to be disposed of and reacquired on the date of becoming a New Zealand resident or on the expiry of the 48 month transitional resident rule.

(b) For shares invested in FIFs that were or are subject to the FIF rules, ss EX 71 and GC 4 could apply to deem an acquisition at market value, if the consideration provided for the shares was not equal to their market value at the time of acquisition [see 850.230]. Sections EX 71 and GC 4 only apply to taxable FIF interests. This rule will not apply if at the time of inheritance the FIF interest was not subject to tax under the FIF rules (eg if the deceased benefited from the grey-list exemption in respect of the FIF interest concerned). The former grey-list countries were Australia, Canada, Germany, Japan, Norway, Spain, UK and USA. The rules in ss EX 71 and GC 4 apply from the commencement of the FIF rules (ie from 1 April 1993).

(c) If a person becomes a New Zealand resident or ceases to be a transitional resident, s EX 64 deems the person’s FIF interests to be disposed of and reacquired at the relevant time for market value [see 850.225]. For example, if a person owned shares that had been inherited and later moved permanently to New Zealand, the shares would be deemed to be disposed of and reacquired on the date of becoming a New Zealand resident or on the expiry of the 48 month transitional resident rule. The rule in s EX 68(7) may also be relevant (see above). Although it was not designed to target
Inheritance, it could be relevant if FIF interests were left to someone in a will, because of some act or other value provided by the transferee to the deceased.

(d) For shares that are not FIF interests, s EX 67 may deem the share disposal and acquisition at market value (e.g., a similar approach to the former grey-list shares). For example, a person who holds their offshore shares on revenue account before those shares enter the FIF rules, or who lends their shares under the share lending rules at the time the person becomes subject to the FIF rules. Section EX 67 does not apply to interests of $50,000 or less [s CQ 5(1B), see 850.150]. For example, inherited shares worth $50,000 or less.

If the above rules do not apply, consideration of the common law will be necessary, as s EX 68 is not a code that covers all eventualities and the term “cost” is not generally defined for income tax purposes. The most likely scenario when recourse to case law will be required is when the inherited FIF interest was not a taxable FIF interest in the hands of the deceased. A common scenario would be in the case of an inheritance of former grey-list shares. In the cases that have gone before the Courts on this issue, the CIR has consistently argued that assets that are inherited either have no cost or the cost is nil.

In Halliwell v Commissioner of Inland Revenue (1991) 13 NZTC 8,197 (HC) the taxpayer inherited land that was considered by the CIR to be subject to the land tax rules and subject to tax on sale. One of the issues considered by the Court was the cost of the inherited land to be deducted from the sale proceeds. The Court held that the value of the land at the time of inheritance was to be deducted from the sale proceeds otherwise the capital itself would be taxed, not merely the profit on sale. Savage J stated (at 8,202):

“In my view, to arrive at the profit or gain that a person derives from a sale of property one must start with the cost or value of the property at the time the person acquired it and deduct that figure from the amount received on the sale. Obviously, if the person bought the property then the purchase price fixes the cost and thus the figure to be deducted; but if the person did not buy it but received it by way of gift or inheritance then it is the value of the property at the time of the acquisition by gift or inheritance that is to be deducted.”

For the purposes of the FIF rules this reasoning would suggest that the value of inherited shares at the date of inheritance should be used in establishing the cost of shares that are FIF interests. However, Halliwell was a case when it was necessary to measure the profit or gain on sale, not whether there was a “cost”, so is unlikely to be determinative in this context.

The other type of case in which the CIR has argued inherited assets have no cost is GST input tax cases on inherited assets and whether inherited assets qualify for an input tax credit.

In TRA Case S66 (1996) 17 NZTC 7,412, Judge Barber was asked to consider whether the transfer into a trading partnership of land that had been inherited gave rise to an input tax adjustment. The taxpayer claimed a credit on the basis of the market value of the property at the time of transfer. The Commissioner argued that as the property was inherited, the cost was nil. Judge Barber concluded that the taxpayer did not acquire or inherit the farm for a “nil cost”, as the Commissioner contended, rather he acquired it at no cost. As there was no cost, the market value option was the only one available to determine the value of the supply. The taxpayer won the case on a technicality, but for the issue at hand Judge Barber did find that there was no cost.

In Wilke v Commissioner of Inland Revenue (1998) 18 NZTC 13,923 (HC) the objector inherited 144 hectares of farmland from her deceased husband. Before her husband’s death, the land was leased by her husband to the farming partnership of the objector and her husband. The farming partnership was registered for GST in October 1986. On 12 March 1995 the objector’s husband died and she inherited the land absolutely and commenced farming in her own name. Panckhurst J found that no input tax deduction is available on inherited land when there is no cost.

Based on the reasoning in the above cases, it would appear that the Courts are prepared to accept that inherited property has no cost. Accordingly, it could be argued that the cost of inherited shares are not counted when considering the $50,000 investment threshold rule. However, the statutory rules will always prevail over the
common law if applicable. Subpart FC in particular needs to be considered. However, the deeming provisions of the FIF rules cannot be overlooked.

Note: The Taxation (International Investment and Remedial Matters) Bill proposes a statutory deemed disposition and reacquisition of inherited FIF interests from date of enactment. This is discussed in Future Tax developments and readers with an interest in this change should familiarise themselves with the changes and there may be impacts on the way the FIF interest and associated dividends are taxed.

850.265 Entities emigrating to or from New Zealand [ss EX 66, EX 66B]

Section EX 66 applies when a person holds rights that become an attributing FIF interest because the entity in which the interest is held emigrates from New Zealand.

In this circumstance the person is treated as having:

(a) Disposed of the interest immediately before the change to an unrelated person;
(b) Repurchased it immediately after the change; and
(c) Received for the sale and paid for the purchase an amount equal to the market value of the interest at the end of the business day on which the change occurred.

If the interest is one in respect of which the person is using the accounting profits (AP) or branch equivalent (BE) methods, s EX 24 does not apply and the FIF income or loss calculated for the full year is reduced under the following formula:

\[
\text{FIF income or loss} \times \left( \frac{\text{days before change}}{\text{days in period}} \right)
\]

Section EX 66B contains an identical set of rules that provide for a deemed disposal and reacquisition of an interest in a FIF if the rights in that FIF cease to be an attributing FIF interest because the entity ceases to be a FIF. The most common example of this would be if a foreign company or unit trust migrated to New Zealand. This happened with two ING funds, the Diversified Yield Fund and Regular Income Fund that migrated to New Zealand on 26 June 2009. This and some related issues were discussed in the Chartered Accountants Journal, vol 89, June 2010 at 38.

850.270 Change of FIF’s balance date

A person whose FIF income or loss is calculated under the accounting profits (AP) or branch equivalent (BE) method may elect, with the CIR’s approval, to base the calculation on a different accounting year of the FIF, referred to as the new accounting year.

The CIR may take any relevant factors into account, including:

(a) Whether the change is sought because ownership of the FIF has changed;
(b) Whether the change is sought because of taxation or other legal requirements in a country where the FIF is resident or does business; and
(c) Whether the change would postpone liability to income tax on FIF income.

In making the transition, if the transitional accounting period is more than one year and ends in a later income year of the person than the previous accounting period did, and as a consequence, FIF income was derived in that later income year (ie in effect skipping an income year), then the FIF income is divided by the number of days in the transitional period and the resulting amount is the FIF income derived on each day in the extended transitional accounting period. In considering this issue, regard should also be had to the rules as to when FIF income and losses arise under the BE and AP methods [see 850.220].

850.275 Conversion into New Zealand currency [s EX 57]

The rules for converting amounts from foreign currency into New Zealand currency have been standardised for the comparative value (CV), deemed rate of return DRR, fair dividend rate (FDR) and cost methods and are contained in s EX 57. The branch equivalent (BE) and accounting profits (AP) methods have their own conversion rules.

For the FDR, CV, DRR and cost methods there are two options for performing exchange rate conversions:
International Tax Regime

(a) Conversion using the exchange rate on the day for which market value is determined or on which each amount is derived or incurred; or

(b) Conversion at the average of the close of trading spot exchange rates for the 15th day of each month that falls in the year.

Having chosen a currency conversion method for an attributing interest in a FIF, a person must use the same method for that interest in subsequent income years. There is no provision to change methods [s EX 57(3)]. Further, s EX 57(3) requires the same currency conversion method to be used for all attributing interests that use the same FIF calculation method. For example, if a person chooses to use only the fair dividend rate method for their offshore portfolio share investments they must use the same currency conversion method — the actual (spot) exchange rates or an annual average rate — for all those investments. It will not be possible to change currency conversion methods from year to year for the same attributing interests.

For the AP method, the person must choose for all the calculations of the net after-tax accounting profits of the FIF to be in New Zealand dollars, or in the currency of the FIF’s accounts. If calculated in the currency of the FIF’s accounts, the result is then converted at the average of the close of trading spot exchange rates for the 15th day of each complete month that falls in the accounting period [s EX 49(8)]. The currency conversion method for BE FIFs is essentially the same as for AP FIFs [s EX 21].

Exchange rates acceptable to Inland Revenue for converting foreign currency amounts into New Zealand currency under the CFC and FIF rules are published six-monthly in the TIB. The rates for the first six months of each income year are published following the end of the September quarter, and the rates for the full 12 months are published at the end of the income year [see 760.25, 7000.170, Brookers Tax Rates Guide 10-900].

850.280 Deferral of FIF tax liability [TAA, s 183]

In certain circumstances some taxpayers are able to elect to defer their FIF income tax liability until they have received income from their FIF interests in cash (including proceeds of sale). This concession is subject to interest under Part 7 of the TAA being paid on the amount of deferred tax. The option is targeted at certain small investors and is designed to alleviate the cash flow difficulties such investors may experience from being taxed on an accrual basis.

The requirements of this deferral option are:

(a) It is limited to a natural person who has a FIF tax liability in an income year from FIF interests acquired before 2 July 1992 or before the person first became a resident;

(b) The person cannot realise the FIF interest, or should be subject to a significant economic loss if that happened;

(c) The person’s income for the income year (after deducting the aggregate of the total income tax payable by the person and the FIF income) must be less than $20,000;

(d) The person elects, by notice in writing to the CIR in such form as the CIR allows, to defer the payment of an amount of tax in the income year calculated by the formula:

\[
\text{person’s total income tax payable in the income year} \times \left( \frac{\text{person’s FIF income in the income year}}{\text{person’s total gross income in the income year}} \right)
\]

(e) The amount of tax deferred is subject to the interest regime;

(f) The amount of any interest imposed is itself deferred;

(g) Payment of the amount of tax (and interest) deferred is suspended until the earliest of when:

(i) The person disposes of the FIF interest; or

(ii) The FIF interest ceases to exist; or

(iii) The person is able to realise the FIF interest without significant economic loss.

(h) The amount of tax deferred is reduced by the amount of any cash distribution received by the person during the term of the investment.
850.285 Disclosure of foreign company or FIF interests [TAA, s 61]
Any person with an interest in a FIF or an income or control interest in a foreign company at any time during an income year is required to disclose that interest with their tax return for that year. The following information must be disclosed:

(a) The existence and nature of the interest; and
(b) Any other information about the interest required by the CIR.

Under s 61(2) of the TAA, the CIR is able to exempt persons or classes of persons from the requirement to disclose such interests.

With the changes to the FIF rules from 1 April 2007, the International Tax Disclosure Exemption (which is published annually) now reflects these changes. The first disclosure exemption that reflected the new rules was ITR19 [published in TIB vol 20:4 (May 2008) at 4]. The disclosure exemption for the 2010 year is ITR21. Reference should be made to the disclosure exemption notice to check what disclosure is or is not required, as there are penalties for non-disclosure.

If you use any of the following methods to calculate your FIF income or loss then the disclosure requirements are unchanged from prior years:

(a) Deemed rate of return (DRR);
(b) Accounting profits (AP); or
(c) Branch equivalent (BE).

However, the new tax rules have meant a change to or a development of the cost method, the fair dividend rate (FDR) and comparative value (CV) method, and the disclosure method, which are described below.

(1) Cost method
If you use the new cost method to calculate your FIF income, you will need to complete and file the Cost method foreign investment fund disclosure (IR449) form. Information to be disclosed on this form includes:

(a) Name of investment;
(b) Country of incorporation, organisation or registration (as appropriate);
(c) Opening value of the investment in New Zealand dollars; and
(d) Basis of opening value.

(2) FDR and CV methods
The disclosure requirements for the fair dividend rate (FDR) and comparative value (CV) methods vary depending on whether you are:

(a) An individual, trustee of a trust, closely-held company, other entity not covered below; or
(b) A widely-held company, widely-held superannuation fund, widely-held group investment fund, portfolio investment entity (PIE).

(3) Individuals and non-widely-held entities
If your FIF investment is in a country that we do not hold a double tax agreement (DTA) with as at 31 March 2008 and you use the new fair dividend rate or comparative value methods, then you will need to complete and file the relevant disclosure forms:

(a) IR447 for the fair dividend rate; or
(b) IR448 for the comparative value.

These forms require you to disclose:

(a) Name of security;
(b) Stock exchange code (if known);
(c) Country of incorporation or tax residence; and
(d) Opening market value at the beginning of your income year in New Zealand dollars.

(4) **Widely-held companies, widely-held superannuation funds, widely-held group investment funds, or PIEs**

For each calculation method used, separately disclose the end of year market value of your investments — split by the jurisdiction in which the attributing interest in the FIF is held or listed. Alternatively, a split by the currency in which the investment is held will be accepted as a reasonable proxy, as long as it is at least 90 to 95 per cent accurate for the underlying jurisdiction.

If your investments are denominated in euros you will need to split these into the underlying jurisdictions. The disclosure forms are:

(a) IR445 for the fair dividend rates; or
(b) IR446 for the comparative value.

850.290 **Transitional rules** [s EX 67]

(1) **Values at which offshore interests enter the new rules**

All investments that become subject for the first time to the new foreign investment fund rules, or rights for which the person is a share supplier in a returning share transfer [see 1340.90], enter the new rules at their market value on the start date of the new tax rules. For most individuals this will be 1 April 2007.

This entry into the new rules at market value is achieved under s EX 67(2) by a deemed disposition and reacquisition of the interests at their market value on the start date of the new FIF rules for the investor. This deemed disposition and reacquisition applies only for transitional purposes.

The rule does not set a new cost basis for the purposes of the $50,000 cost threshold for application of the FIF rules in ss CQ 5 and DN 6. The original cost basis applies for the purposes of the $50,000 threshold [ss CQ 5(1B) and DN 6(1B)].

A person who holds their investments on revenue account (ie a managed fund), and which becomes subject to the new FIF rules may have a resultant tax liability because of the deemed disposition and reacquisition under s EX 67(2). This liability can spread over three years beginning with the first year of application of the new FIF rules. At least one-third of this tax liability must be paid in the first year, half of the balance paid in the second year and the remaining balance paid in the third year [s EX 67(3)(a)].

A person who has a tax liability because of the deemed disposition and reacquisition under s EX 67 is not liable to pay any penalty or interest for an inaccuracy in an estimate (or shortfall in the payment), of provisional tax if the inaccuracy or shortfall arises because of the deemed disposal [s EX 67(3)(b)].
Chapter 860

KiwiSaver

860.05  Background

This chapter provides an outline of KiwiSaver and explains the obligations of employers, employees and Inland Revenue under the KiwiSaver scheme. Further information on KiwiSaver can be found on the

Staples Tax Guide 2012
KiwiSaver, which was first announced in the 2005 Budget, is part of a package of initiatives designed to increase the level of savings by individuals and support them in their retirement. KiwiSaver was introduced by the KiwiSaver Act 2006 (KA 2006), which received the Royal assent on 6 September 2006 and came into force on 1 December 2006 under the KiwiSaver Act Commencement Order 2006. The scheme came into operation on 1 July 2007.

The stated purpose of KiwiSaver is to “encourage a long-term savings habit and asset accumulation by individuals who are not in a position to enjoy standards of living in retirement similar to those in pre-retirement. The Act aims to increase individuals’ well-being and financial independence, particularly in retirement, and to provide retirement benefits” [KA 2006, s 3]. KiwiSaver is intended to complement New Zealand Superannuation, enabling a person to enjoy more than a basic standard of living in their retirement.

Main features

The main features of KiwiSaver are:

(a) The scheme is not compulsory. Employees aged 18 or over, but less than 65, who start a new job from 1 July 2007 with a new employer are automatically enrolled into KiwiSaver (unless their employer is exempt — see below) but can opt out if they want to. Opting out can only be done within a timeframe of two to eight weeks after employment commences. A late opt-out is possible in certain circumstances. If an employee does not opt out during this timeframe, they are locked into KiwiSaver until age 65, although it is possible to take a contributions holiday of up to five years (renewable) and to withdraw funds to purchase a first home. See 860.20, 860.25.

(b) The scheme only applies to individuals who are citizens or residents of New Zealand and who normally live in New Zealand. See 860.15.

(c) The scheme only applies to employers who are resident in New Zealand or who operate from a fixed establishment in New Zealand. However, from 1 April 2008 employers who do not meet these requirements can choose to participate in KiwiSaver. See 860.15.

(d) Private domestic workers may be treated as both employers and employees for KiwiSaver purposes. See 860.65.

(e) Existing employees, and individuals who are not employed (eg the self-employed) can opt in to KiwiSaver at any time. Individuals who are not employees contract directly with a KiwiSaver scheme provider. Children under the age of 16 may only be enrolled in KiwiSaver by their legal guardians. Children aged 16 and 17 must co-sign with their legal guardians to enrol. Children aged 16 or 17 may opt in to KiwiSaver by contracting directly with the scheme provider if they are married, in a civil union or living with a de facto partner. See 860.35.

(f) Employees can choose which KiwiSaver scheme they wish to join. If a new employee does not choose a scheme, they will automatically be allocated to a default scheme by their employer or Inland Revenue. See 860.45, 860.50, 860.55.

(g) Special rules apply when a person is invalidly enrolled in the KiwiSaver scheme.

(h) Employers with an existing staff superannuation scheme as at 6 October 2009, approved by the Government Actuary, are exempt from automatically enrolling new employees into KiwiSaver. However, the employer’s employees may still opt in to KiwiSaver. See 860.30.

(i) Employers are required to make contribution deductions at the rate of two per cent or, if the employee so chooses, four per cent or eight per cent of the member’s gross salary or wages and forward the deductions to Inland Revenue. Inland Revenue forwards the contributions on to the appropriate KiwiSaver scheme. KiwiSaver contributions are not tax deductible. See 860.65, 860.70.

(j) Employers are required to make compulsory contributions for each employee who belongs to a KiwiSaver scheme or complying superannuation fund. The amount of the contribution is two per
cent of the employee’s gross salary or wages. The compulsory employer contributions must be paid in addition to gross salary or wages (ie employers cannot reduce salary or wages to offset the compulsory contribution). See 860.87.

(k) For the year ended 31 March 2009 only, to offset the cost of employer contributions (voluntary or compulsory) to employee KiwiSaver schemes and complying superannuation funds, employers were entitled to a tax credit equal to the amount of the employer contribution, up to a maximum of $20 per week per employee. This tax credit is not available after 31 March 2009. See 860.145.

(l) After the first 12 months of membership, members can take a contributions “holiday” of up to five years. At the end of the holiday period, a new holiday can be applied for. See 860.90.

(m) Members’ funds in KiwiSaver schemes are not government guaranteed. See 860.110.

(n) Savings are locked into the scheme until the age of eligibility for NZS (currently 65 years old). If an individual joins the scheme within five years of age of eligibility for NZS, savings are locked in for five years. However, funds may be released early if the member is making their first home purchase, is in significant financial hardship, has a serious illness or is emigrating permanently. See 860.95, 860.100.

(o) For members who applied before 1 June 2009, after 12 months of membership, up to half of a member’s contributions may be diverted to repayment of amounts secured by mortgage over their principal residence, if the scheme they belong to offers this facility. See 860.102.

(p) The Government makes a $1,000 start-up contribution to each new member’s account. A fee subsidy of $40 per year was payable before 1 April 2009. See 860.112.

(q) Members of KiwiSaver schemes and complying superannuation funds are entitled to an annual tax credit equal to the lesser of their total annual contributions and $521.43. For years ending before 1 July 2011, the maximum annual credit was $1,042.86. The tax credit is paid by the CIR to the member’s fund provider and credited to the member’s account. See 860.135.

(r) Qualifying members who have contributed to KiwiSaver for at least three years may receive a first home subsidy towards a deposit on their first home. The subsidy, which is administered by Housing New Zealand, is $1,000 for each year of contributing to KiwiSaver, up to a maximum of $5,000. For a couple saving together to buy a home, the combined subsidy could be up to $10,000. This subsidy is not covered by the KA 2006.

(s) KiwiSaver schemes are run by the private sector and must be registered by the Government Actuary. KiwiSaver schemes receive contributions from members, Inland Revenue and third parties (including PAYE intermediaries), and invest those contributions on behalf of members. Providers are able to offer a range of investment products within their KiwiSaver scheme, such as conservative, balanced and growth (with different risk profiles). See 860.115, 860.120.

(t) Existing registered superannuation schemes can convert to KiwiSaver schemes, continue operating independently of KiwiSaver, or establish a KiwiSaver scheme under an umbrella trust that also governs the registered superannuation scheme.

(u) Inland Revenue is the central administrator of KiwiSaver. It receives most of the contributions through the PAYE system. Inland Revenue has a number of other roles in relation to the KiwiSaver scheme, including providing information packs for employees, allocating new employees to default schemes, sending investment statements to employees, paying the $1,000 government contribution to new members’ accounts, administering contributions holidays and administering early withdrawals through financial hardship or serious illness.

(v) If an employer deducts a contribution from an employee but fails to pay the contribution to Inland Revenue, Inland Revenue will nevertheless pay the amount of the contribution to the employee’s KiwiSaver account and recover the arrears from the employer, in the same way as for unpaid PAYE deductions. See 860.70.
(w) Employer’s superannuation contribution tax (ESCT) is not payable on compulsory employer
collections.

(x) KiwiSaver members are able to transfer the balance in their KiwiSaver scheme to an Australian
complying superannuation fund if they emigrate permanently to Australia. Similarly, a person
emigrating to New Zealand from Australia can transfer their retirement savings from an Australian
complying superannuation fund to a KiwiSaver scheme. See 860.150.

860.15 Application [KA 2006, s 6]
The KiwiSaver scheme applies only to employees and other individuals who are New Zealand citizens or
are entitled (under the Immigration Act 2009) to be in New Zealand indefinitely, and are either:
(a) Living, or normally living in New Zealand; or
(b) State services employees serving outside New Zealand in jurisdictions where offers of KiwiSaver
scheme membership are lawful, and employed on New Zealand terms and conditions.

KiwiSaver only applies to employers who:
(a) Are resident in New Zealand [see 1250 RESIDENCE];
(b) Carry on business from a fixed establishment in New Zealand; or
(c) From 1 April 2008, do not meet the requirements of (a) or (b), but chose to participate in KiwiSaver.

860.20 Automatic enrolment [KA 2006, ss 10, 11, 12, 13, 14, 15, 22, 23, 23A]
Whenever an employee (who is aged 18 or over but less than the New Zealand superannuation qualification
age (currently 65), and is not a secondee) starts new employment with a new employer, the automatic
enrolment rules apply to the employee unless the employer is exempt [see 860.30]. The effect of automatic
enrolment is that all future salary and wages paid to the employee are subject to automatic deduction of
contributions, unless the employee opts out. This applies to salary or wages paid by the current employer
and by any subsequent new employer. In addition, the employee must become a member of a specific
KiwiSaver scheme. The automatic enrolment rules do not apply to an employee who is already a member of
a KiwiSaver scheme.

The employee must continue to be a member of a KiwiSaver scheme until the earlier of the following dates:
(a) The date an opt-out notice takes effect;
(b) The KiwiSaver end payment date (normally the age of entitlement to NZS);
(c) The date the provider terminates the employee’s membership because the employee has a zero
account balance; or
(d) The date the employee’s account balance is withdrawn or transferred to a foreign scheme, where the
employee emigrates permanently.

“New employment” does not include:
(a) Temporary employment;
(b) Employment where the employee remains on the same payroll (eg following promotion or the taking
up of a new position with the same employer);
(c) Employment with an employer who takes over an existing business in which the employee was
employed (eg as a result of company amalgamation or by the sale of the business as a going concern);
(d) Employment, at the end of a period of secondment, by the employer from whom the secondee
was seconded.

“Temporary employment” means employment as a casual agricultural worker, employment under a contract
of service for a period of 28 continuous days or less, or (from 1 April 2008) employment that is intermittent
or irregular.
A “secondee” is an employee whose employment is transferred temporarily from one employer to another,
and the employee is on that other employer’s payroll.
The automatic enrolment rules do not apply to:
(a) Persons who are employees only because they receive payments as working partners or working owners, parental leave payments or certain ACC payments;
(b) New employment as an election day worker or private domestic worker;
(c) Employees who are not required to have PAYE deducted from their salary or wages (eg where salary or wages is exempt income); or
(d) Employees who are absent from New Zealand in the service of the New Zealand Government and have PAYE deducted from their earnings because s YD 1(7) applies to them [see 1250.50].

An individual who starts new employment must advise their employer (or PAYE intermediary) whether or not they are already a member of a KiwiSaver scheme, and provide their name, address and tax file number. If they are already a KiwiSaver member, they must give their employer (or PAYE intermediary) either:
(a) A KiwiSaver deduction notice; or
(b) A copy of the notice from the CIR granting a contributions holiday.
If the employer (or PAYE intermediary) is satisfied that the automatic enrolment rules apply to a new employee, they must advise Inland Revenue of the employee’s name, address and tax file number with the next required employer monthly schedule.
A person who is in temporary employment and who is a member of a KiwiSaver scheme may give their temporary employer a KiwiSaver deduction notice.

860.25 Opting out [KA 2006, ss 16, 17, 18, 19, 20, 21]
All employees to whom the automatic enrolment rules apply may opt out of KiwiSaver, but they must do so between the 13th and 55th days after the date on which they started new employment, unless an extension of the opt-out period applies.

Example:
Jeff starts a new job on 8 October. None of the exclusions apply. Jeff is automatically enrolled in KiwiSaver from 8 October and his employer will begin to make deductions of contributions from Jeff’s first pay. Jeff received an information pack from his employer on 10 October. Jeff can opt out of KiwiSaver any time between 21 October and 2 December.

An employee opts out of KiwiSaver by giving an opt-out notice to the CIR or their employer. An opt-out notice must contain all the information required by the CIR. An opt-out takes effect on the date the notice is accepted by the CIR or received by the employer, as applicable. Opt-out cannot take place earlier than the 13th day after the date on which new employment started. An employer who receives an opt-out notice must advise the CIR by the due date for the next employer monthly schedule [see 1080.80, 1080.95].

The CIR may accept a late opt-out notice, if it is received by the CIR or the employer, no later than three months after the date the CIR receives the first contribution for that employee if one or more of the following applies:
(a) The employer failed to supply the employee with an information pack within seven days of employment commencing;
(b) The CIR failed to send an investment statement to the employee (where the CIR has provisionally allocated the employee to a default scheme);
(c) The employer did not supply an investment statement for the employer’s chosen KiwiSaver scheme (if applicable);
(d) Events beyond the control of the employee meant that the opt-out notice could not be given within the time limit;
(e) The employee was automatically enrolled when they should not have been (eg because they were under 18 or one of the exemptions applied).

If the opt-out notice is given to the CIR rather than the employer, the CIR must, as soon as practicable, advise the employer that the employee has opted out and that the employer should make no further deductions of
contributions. The way in which the CIR will exercise the discretion to accept or decline a late opt-out request is set out in SPS 07/04 [see TIB vol 19:6 (July 2007) at 48-52].

The effect of opting out is that:
(a) The employee does not become a member of a KiwiSaver scheme; and
(b) The employer must not make deductions from future salary or wage payments and refund to the employee any deductions already made and not paid to the CIR.

The CIR will refund to the employee any deductions held.

A PAYE intermediary is an employer for the purposes of the opt-out rules.

An opt-out notice only terminates automatic enrolment for the particular employment for which it was given. If the employee subsequently starts another new job, the automatic enrolment rules will apply and the employee will have to opt out again if he/she does not wish to join KiwiSaver.

860.30 Exempt employers [KA 2006, ss 24, 25, 26, 27, 28, 29, 30, 31, 32]

A person who starts new employment with an exempt employer is exempt from the automatic enrolment rules. However, this does not prevent an employee of an exempt employer from opting in to KiwiSaver [see 860.35]. In addition, an employee who is already a KiwiSaver member remains liable for automatic deduction of contributions from their salary or wages paid by an exempt employer.

An employer is eligible to be approved as an exempt employer if the Government Actuary is satisfied that the employer provides access to a superannuation scheme for its employees that complies with the following rules:

(a) Every person who (from 1 July 2007) becomes a permanent employee (see below) of the employer, and who is aged 18 or over but less than the New Zealand superannuation qualification age, is eligible on commencing employment to become a member of the scheme and to transfer to the scheme the employee’s accumulation from other superannuation schemes (if those schemes permit transfers out);
(b) The scheme is a registered superannuation scheme (a superannuation scheme registered under the Superannuation Schemes Act 1989) on or before 6 October 2009;
(c) The employer entered into the relevant participation agreement before 7 October 2009;
(d) The trust deed of the scheme permits a member who satisfies the scheme’s requirements for a withdrawal benefit to transfer their accumulation to another registered superannuation scheme or a KiwiSaver scheme (if those schemes permit transfers in); and
(e) The trust deed of the scheme requires that at least four per cent of the annual gross base salary or wages of each member is contributed to the scheme.

The four per cent minimum does not apply if an employee is temporarily relieved from contributions at that rate (eg because of financial hardship), or if the scheme is a defined benefit scheme that effectively accrues for the member the same benefits as if the contributions were at the rate of at least four per cent. The four per cent minimum may consist of employee contributions, employer contributions, or a combination of both.

A “permanent employee” is an employee who is not employed:
(a) As a casual agricultural worker; or
(b) Under a contract of service for a period of 28 continuous days or less;
and to whom the automatic enrolment rules would otherwise apply.

If contributions are a combination of employee and employer contributions, the four per cent minimum requirement is satisfied if the sum of the following amounts is at least four per cent of the annual gross base salary or wages:
(a) The minimum amount that the employee must contribute;
(b) The maximum amount that the employer would be required to contribute if the employee contributed the maximum amount.
An employer contribution does not count towards the four per cent minimum unless the employer is legally bound to make the contribution and the contribution vests completely in the employee within five years.

**Example:**

Company A provides access to a superannuation scheme for its employees. The trust deed provides that employees, if they decide to become members, must contribute at either one per cent or three percent of annual gross base salary. The employer is obliged to match the employee’s contributions (eg if the employee contributes one per cent, the company must contribute one per cent).

The scheme complies with the four per cent minimum rules as follows:

| Minimum amount employee member must contribute | 1% |
| Maximum amount employer must contribute if an employee member contributed the maximum amount | 3% |
| **Total** | **4%** |

From 7 October 2010, a person may apply to the Government Actuary for approval of an employer (the current employer) as an exempt employer if:

(a) An application (the old application) was received by the Government Actuary on or before 19 November 2009;

(b) As a result of the Government Actuary’s consideration of that old application under s 30 of the KA 2006 an employer was approved as an exempt employer; and

(c) Either that exempt employer is the current employer or the current employer is a succeeding employer for that exempt employer.

“Succeeding employer” means:

(a) An employer who succeeds the exempt employer due to a merger or acquisition of the exempt employer;

(b) Another employer who succeeds a succeeding employer for the exempt employer due to a merger or acquisition of that succeeding employer.

The application must include the following information:

(a) Information confirming that the scheme complies with the criteria for exemption (set out above);

(b) The name, address and tax file number of the employer;

(c) The names, addresses, tax file numbers and payroll arrangements of any other companies in the same group of companies as the employer, if the Government Actuary so requests.

The Government Actuary must process the application within 28 days and advise the employer as soon as possible thereafter whether it is approved or declined. If the application is approved, the Government Actuary must advise the employer of the effective date of exemption. The exemption may be revoked if the employer ceases to offer a superannuation scheme that meets the exemption criteria.

**860.35 Opting in** [KA 2006, ss 33, 34, 35, 36, 37]

A person may opt in to the KiwiSaver scheme if they are:

(a) Aged less than the New Zealand superannuation qualification age (currently 65);

(b) Not already a member of a KiwiSaver scheme; and

(c) Not subject to the automatic enrolment rules.

A person who is 18 years or more opts in to the KiwiSaver scheme by either or both:

(a) Contracting directly with a provider of a KiwiSaver scheme; and

(b) Giving their employer (if applicable) a KiwiSaver deduction notice.

An employee who opts in to the KiwiSaver scheme by giving their employer a deduction notice must provide the employer with their name, address and tax file number. If the employer is satisfied that the employee is eligible to opt in, the employer must provide the employee’s name, address and tax file number to the CIR by the due date for the next employer monthly schedule.
A PAYE intermediary is treated as an employer for the purposes of opting in.

The following opt-in rules apply to children aged under 18:

(a) Children who are under 16 may opt in only if all their guardians contract directly with the provider.
(b) Children who are 16 or 17 years old with a guardian may opt in if the child and one of their guardians jointly contract directly with the provider.
(c) Children who are 16 or 17 years old with no guardian (i.e., who are married, in a civil union or living with a de facto partner) may opt in by contracting directly with a provider.

In each case the child is treated as 18 years old for the purposes of the Minors’ Contracts Act 1969.

If a person who is less than 16 years old wishes to opt in, they can do so if all their guardians contract directly with a provider in the name of the person. If the person is 16 or 17 years old with a guardian they may opt in if the person and one of their guardians jointly contract directly with a provider in the name of that person.

In either of those circumstances if the provider accepts the person then that person will be treated as contracting directly with the provider and being 18 years for the purposes of the Minors’ Contracts Act 1969 and opting in under s 34(1)(a) of the KA 2006. A person who is 16 or 17 with no guardian may opt in if the person contracts directly with a provider. If the provider accepts the person in those circumstances then the person will be treated as being 18 years old for the purposes of the Minors’ Contracts Act 1969 and opting in under s 34(1)(a).

A further amendment has been made to the KiwiSaver rules to ensure that, if no PAYE deduction from the salary or wages of a child is required because they receive the child tax credit [s LC 3], no KiwiSaver deduction needs to be made either.

An employee who opts in is liable to deduction of contributions from salary or wages paid by the current and any future employers, and must become a member of a KiwiSaver scheme. If an employee has more than one employer at the same time, the employee can choose any one or more of the employers who must make KiwiSaver deductions.

**Example:**
Ashley, a 40-year-old New Zealand citizen, has been working with the same firm for 20 years and wants to join KiwiSaver. He advises his employer that he wants to opt in to KiwiSaver and provides his employer with a notice requiring deductions of contributions. Ashley is subject to deductions of contributions from his next payment of wages. Ashley gets a second job so he can save for an overseas holiday. He is also subject to deductions of contributions from his new job.

A person (whether or not an employee) who opts in cannot opt out and must continue to be a member of a KiwiSaver scheme until the earliest of:

(a) The KiwiSaver end payment date (normally the age of entitlement to NZS);
(b) The date the provider terminates the employee’s membership because the employee has a zero account balance; or
(c) The date the employee’s account balance is withdrawn or transferred to a foreign scheme, where the employee emigrates permanently.

An employee who opts in is liable for automatic deduction of contributions from salary or wages until the earlier of:

(a) The three dates shown above;
(b) The date on which a contributions holiday commences; or
(c) The date from which a tax deduction is not required under the PAYE rules.

Special rules apply when a person, who did not meet the criteria for membership at the time of joining, becomes a member of a KiwiSaver scheme. These rules apply when, because of a mistake:
A person who does not meet the requirements of s 6 of the KA 2006 [see 860.15] is enrolled in KiwiSaver;
(b) The automatic enrolment rules have been applied to a person who does not meet the requirements for automatic enrolment; or
(c) A person who does not meet the requirements for opting in has, in fact, opted in [KA 2006, s 59A].
The person who discovers the mistake is required to notify the CIR or the KiwiSaver scheme as soon as practicable.
The mistaken enrolment is treated as initially valid from the date the person was wrongly enrolled in the scheme (either by automatic enrolment or by opt-in) until the earlier of:
(a) Three months after the mistake is discovered by the KiwiSaver scheme provider;
(b) Three months after the mistake is notified to the provider by the CIR or another person; or
(c) The day the provider pays the member’s accumulation less the amount transferred from an Australian complying superannuation scheme, to the CIR [ KA 2006, s 59B].

(1) Validation confirmed [KA 2006, s 59C]
If, during the period of initial validation, the person meets the requirements of s 6 of the KA 2006, is less than 65 years old, and does not opt out, the person is treated as if they had met the requirements to join KiwiSaver from the date they were wrongly enrolled in the scheme. The CIR must notify the provider that validation has been confirmed, and the provider is not required to pay the member’s accumulation to the CIR.

Example:
After Kate completed her final year of school she started working at her local bakery over the summer before starting university. Kate’s employer automatically enrolled her in KiwiSaver. Two months later Kate became aware of the fact that she had been automatically enrolled. As she was only 17 (less than the age of eligibility for KiwiSaver membership) the enrolment was invalid. By the time Kate learned that she had been invalidly enrolled, she had already turned 18. This meant that her enrolment could be validated or Kate could choose to opt out. An opt-out has to be made within three months of when the CIR receives the first KiwiSaver contribution for Kate. Source: The new KiwiSaver legislation (Inland Revenue Policy Advice Division, Special Report, 21 December 2007) at 20.

(2) Validation not confirmed [KA 2006, s 59D]
If validation is not confirmed under s 59C by the end of the period of initial validation, the provider and the CIR have certain obligations. The provider must notify the CIR of the following information relating to the person:
(a) The amount of contributions received directly by the provider (not via the CIR), when they were received and (if available) who they were paid by;
(b) The amounts paid out by the provider under a mortgage diversion facility, and when they were paid; and
(c) The amounts paid to the person as permitted withdrawals, when they were paid out, the types of permitted withdrawals, and the amount of Crown contributions included in the permitted withdrawals.
The provider must also:
(a) Pay the amount of the member’s accumulation, less the amount transferred from an Australian complying superannuation scheme, to the CIR if the provider has not already done so; and
(b) Pay the amount transferred from an Australian complying superannuation scheme (the transferor scheme) or the amount of the member’s accumulation (whichever amount is smaller) to:
   (i) The transferor scheme;
   (ii) The Australian complying superannuation scheme chosen by the person; or
   (iii) An Australian complying superannuation scheme chosen by the CIR, if the person does not choose one and it is not appropriate to pay it to the transferor scheme.
The “member’s accumulation” [KA 2006, s 4(1)] is the net value of the total of:
(a) The member’s contributions;
(b) Any vested employer contributions;
(c) Any fee subsidies paid; or
(d) The Crown contribution.

The CIR must refund an amount equal to the total of:

(a) The contributions received by the provider (either directly or via the CIR), less the total of:
   (i) The amounts paid out by the provider under a mortgage diversion facility;
   (ii) The amounts paid out by the provider to the person as permitted withdrawals, excluding Crown contributions included in the withdrawals;
   (iii) Crown contributions;
   (iv) The amount that was transferred from an Australian complying superannuation scheme.

(b) Any contributions held by the CIR in the holding account and not passed on to the provider, net of interest;

(c) Interest payable under s 84 of the KA 2006 on the above contributions, from the day the CIR or the provider received the contributions until the day the CIR pays the refund.

The refund must be paid to the person, their employer, the Crown, or any other person that made a contribution, in proportion to the CIR’s best estimate of what they each contributed.

The members’ accumulated interest paid to the CIR by the provider and any contributions in the holding account must be paid by the CIR into the Crown Bank account.

860.40 Information packs [KA 2006, ss 40, 41, 42, 43]

The CIR is required to initially supply KiwiSaver information packs to employers and to any other person who requests them. The CIR is only required to supply the number of packs sufficient for the employer’s needs. Each information pack must contain:

(a) A description of the overall KiwiSaver scheme;
(b) A statement that membership of the scheme is at the member’s own risk;
(c) A summary of what could happen under the default allocation rules or if an employer has a chosen KiwiSaver scheme;
(d) A description of how to obtain information about KiwiSaver schemes;
(e) A statement that potential members should seek financial advice from an independent professional financial adviser (rather than an employer) if they want information on: their personal financial circumstances, deciding whether or not to opt in or opt out, choosing a KiwiSaver scheme or investment product of a KiwiSaver scheme, or the overall KiwiSaver scheme or its financial concepts;
(f) An opt-out notice form;
(g) An information privacy statement; and
(h) Any other prescribed information.

Employers are required to supply information packs to:

(a) All new employees who are subject to automatic enrolment, within seven days of employment starting;
(b) All employees who opt in, within seven days of the employee providing the deduction notice; and
(c) All employees who request one.

In addition, employers who have chosen a default KiwiSaver scheme must at the same time provide the above employees with:

(a) An investment statement for the scheme; and
KiwiSaver

(b) A statement that the employee will be allocated to the employer’s chosen KiwiSaver scheme if the employee does not choose their own.

860.45 **Choice of KiwiSaver scheme** [KA 2006, ss 44, 45]

People are allocated to KiwiSaver schemes in one of three ways:

(a) By the person choosing their own scheme;

(b) By the person being allocated to the employer’s chosen KiwiSaver scheme, if the person does not choose their own scheme and their employer has a chosen KiwiSaver scheme; or

(c) By the person being allocated to a default KiwiSaver scheme nominated by the CIR, in any other case.

A person may, at any time, choose a KiwiSaver scheme by contracting directly with the provider.

860.50 **Employer choice of KiwiSaver scheme** [KA 2006, ss 46, 47, 48]

Employers can choose a KiwiSaver scheme for their employees to belong to if the employee does not choose their own scheme. Membership of the chosen scheme must be open to all permanent employees.

A “permanent employee” is an employee who is not employed as a casual agricultural worker or under a contract of service for a period of 28 continuous days or less, and to whom the automatic enrolment rules apply, or would apply, but for the application of s 14 of the KA 2006 [see 860.20].

The employer must arrange access for its employees directly with the provider of the KiwiSaver scheme and give notice to the CIR of the name, address and tax file number of the employer and its chosen provider. The employer’s choice of KiwiSaver scheme is effective from the date the notice is accepted by the CIR, although the employer can specify a later date in the notice. The employer’s choice remains effective until:

(a) The employer notifies the CIR of an alternative choice of scheme;

(b) The employer notifies the CIR that the employer no longer has a chosen scheme; or

(c) The CIR notifies the employer that the employer’s choice has been revoked because it is not eligible.

An employee becomes a member of the employer’s chosen KiwiSaver scheme on the first day that the following conditions are met:

(a) The employer’s choice of KiwiSaver scheme is effective under s 47 of the KA 2006 (as explained above);

(b) The employee has not directly contracted with a provider of a KiwiSaver scheme to be a member of that scheme;

(c) The employee is automatically enrolled or opts in to KiwiSaver;

(d) More than three months have passed since the CIR received the first contributions for the employee; and

(e) There is no relevant dispute under ss 212 or 213 of the KA 2006.

The CIR is responsible for advising the provider of the employee’s details.

860.55 **Default KiwiSaver schemes** [KA 2006, ss 50, 51, 52]

An employee who is automatically enrolled or who opts in to the KiwiSaver scheme will be provisionally allocated to a default investment product of a default KiwiSaver scheme nominated by the CIR unless:

(a) The employee’s employer has a chosen KiwiSaver scheme;

(b) The employee has opted out; or

(c) The employee has contracted directly with a provider to become a member of a KiwiSaver scheme.

When a person is provisionally allocated to a default scheme, the CIR must notify the person of the name and address of the provider of the scheme, and the name of the default investment product of that scheme. The CIR must also provide the person with an investment statement relating to that product and advise the person what will happen if they do not choose their own KiwiSaver scheme.
Even though the person has been provisionally allocated to a default scheme, they still have the option of selecting their own KiwiSaver scheme provided they do so within three months after the CIR receives the first contribution for that person. Once the three months has expired, if the employee has not chosen their own scheme, the allocation to the default scheme becomes final (“complete”) and the CIR will advise the provider that the person has been allocated to the scheme. The allocation is legally binding on the member and the provider.

The default KiwiSaver schemes are:
(a) AMP Services (NZ) Ltd;
(b) ASB Group Investments Ltd;
(c) AXA New Zealand (National Mutual Corporate Superannuation Services Ltd);
(d) Mercer (NZ) Ltd;
(e) OnePath (NZ) Ltd; and
(f) Tower Employee Benefits Ltd.

860.60 Transfers between KiwiSaver schemes

A person may be a member of only one KiwiSaver scheme at a time. However, a person can have more than one account or investment product of a KiwiSaver scheme. A person may at any time transfer from one KiwiSaver scheme to another, or from a complying superannuation fund to a KiwiSaver scheme, by contracting directly with the provider of the new scheme. The provider of the new scheme must notify the CIR that the person has transferred to the new scheme, and notify the provider of the old scheme:
(a) That the person has ceased to be a member of the old scheme and the effective date of the transfer;
(b) The new scheme’s name and address; and
(c) That the provider of the old scheme must transfer the funds and information (as detailed below) to the new provider.

The provider of the new scheme must provide evidence to the provider of the old scheme that the member wishes to transfer. The provider of the old scheme must, within 35 days of receiving notice of transfer (or such longer period as is agreed):
(a) Transfer the member’s accumulation to the new scheme;
(b) Advise the member of the amount transferred; and
(c) Notify the provider of the new scheme:
   (i) Of the date on which the member first became a member of a KiwiSaver scheme (if the old scheme is a KiwiSaver scheme);
   (ii) Whether the member has made a withdrawal in order to purchase a first home;
   (iii) Of any contribution holiday in force;
   (iv) As to whether the $1,000 Crown contribution is included in the member’s accumulation transferred to the new scheme; and
   (v) Of any information that would be relevant to a provider of the new scheme when making a claim for KiwiSaver tax credits, including information about periods already claimed for.

A person may be required to transfer from one KiwiSaver scheme to another or from a complying superannuation fund to a KiwiSaver scheme involuntarily. For example, if an employee ceases to be eligible to be a member of an employer’s chosen scheme or because a KiwiSaver scheme is being wound up. The rules for allocating the person to a new scheme in these circumstances are set out in ss 57 to 59 of the KA 2006.

A “complying superannuation fund” means a superannuation fund that is approved as a complying superannuation fund by the Government Actuary under s 35 of the Superannuation Schemes Act 1989 [s YA 1].
860.65 **Requirement for employers to deduct contributions** [KA 2006, ss 60, 61, 62, 63, 63A]

An employer is required to deduct KiwiSaver contributions from the salary or wages of any employee to whom any one or more of the following apply:

(a) The employee commenced employment with the employer and the automatic enrolment rules apply;
(b) The employee has given the employer a KiwiSaver deduction notice;
(c) The CIR has given the employer a notice requiring the deduction of contributions from the employee’s salary or wages.

An employer is not required to make deductions from an employee’s salary or wages:

(a) If the employee opts out;
(b) For the duration of a contributions holiday; or
(c) If no tax deduction is required under the PAYE rules (eg when salary or wages are exempt). However, this exclusion does not apply to salary and wages paid for a private domestic worker.

The requirement to make deductions of contributions applies also to PAYE intermediaries [see 1090 PAYE INTERMEDIARIES]. References to the employer are to be read as if they were references to the PAYE intermediary.

For the purposes of making KiwiSaver deductions, a private domestic worker is treated as making payments of salary or wages to themselves in the capacity of employee. Consequently, the private domestic worker may be both employer and employee.

860.70 **Deduction of contributions from salary or wages** [KA 2006, ss 64, 65, 66, 67, 68, 69]

An employer who is required to make deductions of contributions from salary or wages, as explained in 860.65, must deduct from each payment of gross salary or wages an amount equal to the contribution rate.

The employer contribution must be an employer’s superannuation contribution as defined in s RD 65(1), and must vest completely in the employee immediately after the contribution is made.

(1) **Contribution rate**

The contribution rate from 1 April 2009 is:

(a) Two per cent of the employee’s gross salary or wages; or
(b) Four per cent of the employee’s gross salary or wages (if the employee so elects); or
(c) Eight per cent of the employee’s gross salary or wages (if the employee so elects).

The default contribution rate is two per cent. If an employee elects to join KiwiSaver or is automatically enrolled, but does not elect the four per cent or eight per cent rate, contributions are deducted by the employer at the two per cent rate.

An employee may change their contribution rate from their current rate to either of the other two rates by giving notice to their employer.

Where an employee changes their contribution rate, the new rate applies to the next payment of salary or wages calculated after the employer receives the notice. An employee cannot change their contribution rate more than once every three months, unless the employer agrees.

(2) **Accounting for deductions**

The PAYE rules apply to deductions of contributions as far as applicable. This means, among other things, that the deductions must be paid to the CIR along with tax deductions under the PAYE rules [see 1080 PAYE].
Money paid by a member to a provider for things other than KiwiSaver contributions (eg life insurance) does not count as a KiwiSaver contribution and cannot be paid via Inland Revenue. An employer is not required by the KiwiSaver Act 2006 to make deductions for such payments. If an employer makes a deduction of contributions but does not pay the deduction to the CIR by the due date for PAYE deductions, the amount of the deduction is treated as having been received by Inland Revenue on the 15th of the month in which the deduction was made. The amount is therefore forwarded by Inland Revenue to the provider(s) of the scheme even though it has not received that amount from the employer. Inland Revenue will then seek to recover the amount in arrears from the employer under the PAYE rules.

860.75  **KiwiSaver holding account**  [KA 2006, ss 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 81B, 82, 83, 113]

Deductions from salary or wages and other contributions paid to Inland Revenue under the KA 2006 must be held in the Inland Revenue KiwiSaver Holding Account (“holding account”) until they are paid to the provider of the relevant KiwiSaver scheme, or otherwise dealt with. Amounts entered in the holding account must be paid to the relevant KiwiSaver scheme as soon as practicable following receipt. However, contributions received by the CIR during the first three months of membership must be retained in the holding account until the end of that three-month period. The three month period commences on the earlier of the day the CIR receives the first contribution or the day the CIR is advised of the new membership. Those contributions must then be paid to the provider of the person’s KiwiSaver scheme as soon as practicable after the expiry of the three months. This allows for the fact that a person entering the KiwiSaver scheme has up to three months to choose a scheme.

Inland Revenue may hold contributions relating to a person in the holding account until the total amount meets a minimum threshold that Inland Revenue has agreed with the provider of the scheme. The amount is then paid to the provider. Inland Revenue can refund a contribution to a person in relation to whom a contribution was made, or from whose salary or wages it was deducted if:

(a) The person opts out and the contribution is in the possession of Inland Revenue;
(b) The contribution exceeds the amount required to be deducted and the contribution is in the possession of Inland Revenue; or
(c) The person has opted out and the contribution was not refunded to the person by the employer or paid to Inland Revenue.

If the CIR can not process an amount held in the holding account in the way set out above, or the amount is in excess of what the KiwiSaver Act 2006 or a Revenue Act requires to be in the holding account, then the CIR may refund the amount to a person that the CIR considers has the best claim to it.

The provider must refund to the CIR any amount that the CIR pays to the provider in excess of the amount required to be paid under the KiwiSaver scheme.

860.80 **Interest on contributions**  [KA 2006, ss 84, 85, 86, 87, 88, 89, 90, 91]

Interest is payable by Inland Revenue on contributions for the period from the day the contributions are received (or treated as received) by Inland Revenue until the day the contributions are paid to the provider or refunded. The rate of interest is:

\[
\text{CIR’s paying rate} \times (1 - \text{lowest tax rate})
\]

The “CIR’s paying rate” is the rate of interest set under the use-of-money interest rules [see 1110.290] on the day the contribution is received. The “lowest tax rate” is the basic rate of tax in sch 1, Part D, Table 2, row 7, column 3, expressed as a decimal. The interest rate calculated using the above formula is rounded to two decimal places.

**Example:**

Assuming the CIR’s paying rate at the time a contribution is received by the CIR is 2.18 per cent, the rate of interest payable on contributions would be 1.95 per cent calculated as follows for the 2011-2012 tax year (lowest tax rate is 10.5 per cent):

\[
2.18 \times (1 - 0.105)
\]
For the purpose of calculating interest:

(a) Contributions that are deducted from salary or wages are treated as received by the CIR on the 15th day of the month;

(b) Employer contributions are treated as received on the first day of the month in which the CIR receives them.

If the contributions that are paid to the provider of the person’s KiwiSaver scheme, the interest is paid at the same time as the contribution to which it relates. In the case of refunds of contributions, the interest is paid together with the refunded contribution.

Interest is not charged on money held in the holding account if the member notifies the CIR in writing that they do not wish to be paid interest.

**860.85 Other contributions** [KA 2006, ss 92, 92A, 93, 94, 95, 96, 97, 98, 99, 100, 101]

Employer contributions must be paid to Inland Revenue, and must be accompanied by a PAYE payment form. The contributions must be paid to Inland Revenue within the time limit for the payment of PAYE tax deductions, as if the contribution were an amount of tax. The employer must include details of employer contributions paid for each employee on the employer monthly schedule for the period. Failure to do so constitutes a short payment for the PAYE period. Private domestic workers are treated as employers when making payments of salary or wages to themselves in the capacity of employees.

If an employer intends to make voluntary contributions via Inland Revenue, the employer must advise both the provider of the KiwiSaver scheme and the employee, if the employer has a contractual obligation to the employee to pay those contributions.

A person other than an employer (including the member) can make a contribution to a person’s KiwiSaver scheme via Inland Revenue if the payment is accompanied by the member’s name, address and tax file number, and any other information Inland Revenue may require. If an employee opts out after an employer contribution has been paid to Inland Revenue, then Inland Revenue may refund the contribution to the employer.

(1) **Requirement to make compulsory employer contributions** [KA 2006, ss 101A-101C]

Employers are required to make compulsory employer contributions for employees who are:

(a) Paid salary or wages from which the employer is required to deduct employee contributions for a KiwiSaver scheme or complying superannuation fund;

(b) Aged 18 years or over;

(c) Not entitled to withdraw an amount from the scheme or fund on retirement; and

(d) Not a defined benefit scheme member.

A “complying superannuation fund” means a superannuation fund that is approved as a complying superannuation fund by the Government Actuary under s 35 of the Superannuation Schemes Act 1989 [s YA 1].

Compulsory employer contributions are payable in addition to the employee’s gross salary or wages. The parties to an employment contract are prohibited from contracting out of this rule. During the period from 13 December 2007 to 14 December 2008 (both dates inclusive) the parties to an employment agreement were able to agree contractual terms that disregarded this rule. However, bargaining for terms and conditions relating to compulsory contributions must be based on the duty of good faith.

Compulsory employer contributions made before 1 April 2012 are not subject to employer’s superannuation contribution tax (ESCT) [s RD 65(4)] See 1390.45.
(2) **Grace periods [KA 2006, s 101FB]**

An employer is not required to pay a compulsory employer contribution for a payment of gross salary or wages to an employee in a grace period if, for the whole of the grace period:

(a) One or both of the following apply:
   (i) The automatic enrolment rules apply to the employee;
   (ii) The employer does not receive a notice under ss 34(1) or 39 of the KA 2006 that the employee has opted in;

(b) The employer does not deduct any amount of contributions required to be deducted from an employee’s salary or wages; and

(c) The employer does not receive a notice under s 61 of the KA 2006 that requires the deduction of contributions for the employee.

The grace periods are:

(a) The period starting on the day the employee starts new employment and finishing on the earlier of the day that:
   (i) Is one year after the day the employee starts new employment;
   (ii) The employee ceases employment.

(b) The period starting on the day that is one year after the day the employee starts new employment and finishing on the earliest of the day that:
   (i) Is before the day on which the employer receives a notice under ss 34(1) or 39 of the KA 2006 that the employee has opted in;
   (ii) Is before the day on which the employer receives a notice under s 61 of the KA 2006 that requires the deduction of contributions for the employee;
   (iii) The employee ceases employment.

(3) **Amount of contribution [KA 2006, s 101D]**

The amount of compulsory employer contribution is the positive amount calculated using the formula:

\[
\text{payout of gross salary or wages} \times \text{CEC rate} - \text{other contributions} - \text{hybrid schemes amount}
\]

Where:

“Payment of gross salary or wages” is the amount of gross salary or wages from which the employer is required to deduct an amount for the employee’s KiwiSaver scheme or complying superannuation fund.

“CEC rate” is the applicable one of the following rates:

<table>
<thead>
<tr>
<th>Year during which the pay period falls</th>
<th>Percentage of gross salary or wages</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year ending 31 March 2009</td>
<td>1%</td>
</tr>
<tr>
<td>Year ending 31 March 2010 and subsequent years</td>
<td>2%</td>
</tr>
</tbody>
</table>

According to Inland Revenue, the rate for a year applies only if the whole pay period is in the year specified. For example, if a pay period spans 1 April 2009, then the one per cent rate will apply. The two per cent rate will apply to the next pay period [see Inland Revenue Policy Advice Division Special Report, *The new KiwiSaver legislation* (21 December 2007) at 9.]

“Other contributions” means the total of:

(a) Voluntary employer contributions to a KiwiSaver scheme or a complying superannuation fund;

(b) Employer contributions to a registered superannuation scheme, registered before 17 May 2007, that meets certain criteria [KA 2006, s 101D(5)(b)];

(c) Employer contributions for an employee who is a member of Parliament, a judicial officer, constable, or a class of employee prescribed in regulations made under s 230A of the KA 2006.
“Hybrid schemes amount” is the amount (calculated using the formula below) of the contribution an employer makes to a registered superannuation scheme, where contributions are not paid each pay period, but rather the retirement benefits are calculated by adding to employee’s total contributions a percentage of those contributions. The amount of the contribution for the pay period is calculated as follows:

\[
\text{member’s contribution} \times \text{vesting percentage}
\]

Where:

“Member’s contribution” is the amount of the employee’s contribution for the pay period.

“Vesting percentage” is the percentage of the employee’s total contributions to be added to those contributions five years after the employee first became a member of the scheme [KA 2006, s 101D].

(4) **De minimis [KA 2006, s 101FC]**

An employer does not have to pay a compulsory employer contribution for a payment of gross salary or wages if, in respect of the payment, one of the following amounts is equal to or more than the relevant CEC rate in s 101D(4) of the KA 2006:

(a) The amount of the other contributions (as defined above) that meets the requirements of s 101D(5)(b) of the KA 2006 divided by the employee’s salary or wages;

(b) The hybrid schemes amount (as defined above) that meets the requirements of s 101D(6)-(8) of the KA 2006 divided by the employee’s salary or wages.

(5) **Allocation between schemes and funds [KA 2006, s 101E]**

If an employee belongs to both a KiwiSaver scheme and one or more complying superannuation funds, the compulsory employer contribution is first allocated to the KiwiSaver scheme, up to the maximum required to meet the employer’s compulsory contribution obligation, with any remaining amount being allocated on a pro rata basis between the complying superannuation funds. However, the employer and the employee may agree on a different basis for allocating the compulsory employer contributions.

(6) **Payment rules [KA 2006, s 101F]**

Compulsory employer contributions for an employee’s KiwiSaver scheme must be paid by the employer to Inland Revenue along with the PAYE tax deductions for the salary or wages to which they relate [see 860.85].

Compulsory employer contributions for an employee’s complying superannuation fund must be paid to the fund provider no later than one month after the payment of salary or wages to which they relate.

(7) **Rules for providers [KA 2006, s 101G]**

Compulsory employer contributions must be allocated by the provider across the investment products to which a member has subscribed or been allocated. The contribution vests in the member immediately after it is paid to the provider.

The provider of a KiwiSaver scheme must notify Inland Revenue of the date that a member will be entitled (under cl 4(3) of the KiwiSaver scheme rules) to withdraw their accumulated interest in the scheme. This must be done within the period of two months before the withdrawal date. Inland Revenue will then notify the employer of the date so that the employer can cease making compulsory employer contributions.

The provider of a complying superannuation fund must notify the member’s employer of the date that a member will be entitled (under a rule equivalent to cl 4(3) of the KiwiSaver scheme rules) to withdraw their accumulated interest in the fund. This must be done within the period of two months before the withdrawal date.

(8) **Complying superannuation funds [KA 2006, s 101H-101K]**

If an employer fails to pay a compulsory employer contribution to a complying superannuation fund the provider must, as soon as practicable, give notice to the employer requesting payment of the outstanding amount. A copy of this notice must be sent to the Government Actuary. If the employer does not pay the
outstanding contribution within one month, and the total unpaid compulsory employer contributions exceeds $500, the provider must immediately give notice to the Government Actuary. This notice must show:

(a) The employer’s name, address and tax file number (if known);
(b) The amounts of compulsory employer contributions unpaid;
(c) The names, addresses and tax file numbers of the employees to whom the failure to pay relates, and the relevant pay periods and amounts for each employee; and
(d) Other information required by the Government Actuary.

Where such a notice has been issued, the provider must immediately notify the Government Actuary of the details of any subsequent payment of overdue compulsory employer deductions made by an employer.

Upon receipt of a notice issued under s 101H(3) of the KA 2006, the Government Actuary must determine the amount of short payment by the employer, and then issue the employer with a notice containing the following details:

(a) The amount that the employer is required to pay to pay (liable amount);
(b) The relevant months and amounts;
(c) That the employer must pay the liable amount within 28 days after the notice is issued;
(d) The employer’s name, address and tax file number (if known);
(e) The relevant employees to whom the failure to pay relates, and their tax file numbers and addresses;
(f) The pay periods and relevant amounts for the employees to whom the failure to pay relates;
(g) That failure to comply with the notice will result in Inland Revenue receiving notice of the failure to comply; and
(h) Other information required by the CIR.

If the employer does not pay the overdue amount with 28 days (and the employer has not objected to the Government Actuary’s decision under s 186 of the KA 2006), the Government Actuary must immediately notify Inland Revenue of the following information:

(a) That the employer has failed to comply with notices under ss 101H(3) and 101I(3) of the KA 2006;
(b) The information set out in (a) to (h) above;
(c) The extent to which the liable amount remains unpaid;
(d) The relevant employees to whom the unpaid amount relates, their tax file numbers and addresses; and
(e) The pay periods and relevant amounts for the employees to whom the unpaid amount relates.

Where Inland Revenue is notified of unpaid compulsory employer contributions to a complying superannuation fund, the liable amount is treated as an amount due and payable by the employer to Inland Revenue on the 20th working day after Inland Revenue receives the notice. Inland Revenue will then notify the employer of the amount due and the due date.

Payments of overdue contributions received by the Government Actuary or Inland Revenue from the employer must be paid to the relevant provider, and the overdue amount is reduced accordingly.

An employee who is a member of a KiwiSaver scheme or a complying superannuation fund may apply for a contributions holiday. An employee can only apply for a contributions holiday once they have been making contributions for at least 12 months, unless the employee is suffering, or likely to suffer, financial hardship. Unless the employee is applying on the basis of financial hardship, the employee does not have to give a reason to apply for a contributions holiday. Provided the employee has been making contributions for at least
12 months, Inland Revenue must grant the application. When applying for a contributions holiday, the applicant must provide Inland Revenue with the following details:

(a) Their name, address and IRD number;
(b) The name and address of each employer to whom the holiday will apply;
(c) The period for which the holiday will apply (maximum five years);
(d) Details of the financial hardship (if applicable); and
(e) Any other information required by Inland Revenue.

If an employee has more than one employer, they can apply for a contributions holiday in respect of any one or more of those employers. If Inland Revenue is satisfied that the applicant has been making KiwiSaver contributions for at least 12 months or, if less than 12 months, is suffering or likely to suffer financial hardship, Inland Revenue must grant the applicant a contributions holiday. The way in which the CIR will exercise the discretion to accept or decline an application for a contributions holiday on the grounds of financial hardship is set out in SPS 07/04 [see TIB vol 19:6 (July 2007) at 56-58].

A contributions holiday granted for financial hardship is for a period of three months, although Inland Revenue can agree to a longer period. A contributions holiday granted in any other case must be for a minimum of three months and a maximum of five years. At the end of the holiday period, the employee can apply for a further contributions holiday. There is no restriction on the number of times a holiday can be applied for.

As soon as practicable after granting the contributions holiday, Inland Revenue must advise the applicant, each relevant employer and the provider of the KiwiSaver scheme. Each relevant employer must cease making deductions of contributions from the next payment of salary or wages that the employer calculates following receipt of the notice from Inland Revenue. An employee may use a contributions holiday, once granted, in respect of any other employer even if that employer was not named in the original application.

Before the end of a contributions holiday, Inland Revenue must notify the person to whom it relates and each affected employer known to Inland Revenue. The notice to an employer must advise the date on which the holiday ends and that deductions must recommence from that date. The employer must start making deductions of contributions from the next payment of salary or wages that the employer calculates following receipt of the notice from Inland Revenue.

A person who has been granted a contributions holiday may, at any time within the period of the holiday, revoke or reinstate their contributions holiday by notifying their employer accordingly provided they do not do so more frequently than once every three months.

If an employee who has a contributions holiday commences new employment but fails to provide the new employer with a copy of the notice from Inland Revenue granting the holiday (eg because the employee has lost or misplaced it), the employer will be required to make deductions of contributions. Once the employee finds or obtains a copy of the notice and shows it to their employer, the employer may then refund any deductions made previously. If the contributions have been paid to Inland Revenue, Inland Revenue may refund the money to the employee.

860.95 Refund due to financial hardship or serious illness [KA 2006, ss 113, 126, sch 1]

A person who is suffering, or likely to suffer, significant financial hardship or is suffering serious illness can apply to Inland Revenue for a refund of contributions being held in the holding account for the initial three-month period. There is no specific method for applying for a refund, provided the application tells Inland Revenue:

(a) The person’s name, address and tax file number;
(b) Details of the significant financial hardship or serious illness; and
(c) Any other information Inland Revenue requires.

Inland Revenue must refund the contributions if satisfied that:
(a) The applicant is suffering, or likely to suffer, significant financial hardship or is suffering serious illness; and
(b) Reasonable alternative sources of funding have been explored and exhausted.

Inland Revenue cannot refund employer contributions. The amount refunded may be limited to the amount that, in the CIR’s opinion, is required to alleviate the particular hardship.

“Significant financial hardship” is defined to include significant financial difficulties that arise because of:
(a) A member’s inability to meet minimum living expenses;
(b) A member’s inability to meet mortgage repayments on their principal family residence resulting in the mortgagee seeking to enforce the mortgage;
(c) The cost of modifying a residence to meet special needs arising from a disability of a member or a member’s dependant;
(d) The cost of medical treatment for an illness or injury of a member or a member’s dependant;
(e) The cost of palliative care for a member or a member’s dependant;
(f) The cost of a funeral for a member’s dependant; or
(g) The member suffering from a serious illness.

“Serious illness” means any injury, illness or disability that:
(a) Results in the member being unable to engage in work for which he or she is suited by reason of experience, education or training, or any combination of these things; or
(b) Poses a serious and imminent risk of death.

The way in which the CIR will exercise the discretion to refund or not refund contributions is set out in SPS 07/04 [see TIB vol 19:6 (July 2007) at 52-55].

(1) Persons affected by Canterbury earthquake aftershock – 22 February 2011

When considering an application for a refund of contributions due to significant financial hardship by a person affected by the Canterbury earthquake aftershock on 22 February 2011, the CIR must take into account financial difficulties caused by the following matters, in addition to those listed under (a) to (g) above:
(a) The destruction of or damage to the person’s property as a result of the aftershock;
(b) The person’s loss of employment as a result of the aftershock;
(c) Costs incurred by the person as a result of the aftershock (including costs associated with relocating to a new home or dealing with trauma).

Persons affected by the Canterbury earthquake aftershock are defined as KiwiSaver members residing in the district of one of the following territorial authorities at the time of the aftershock:
- Ashburton District Council
- Christchurch City Council
- Hurunui District Council
- Selwyn District Council
- Waimakariri District Council

These special rules apply only to applications received during the period 22 April 2011 to 22 January 2012. Refer KiwiSaver (Significant Financial Difficulties–Canterbury Earthquake) Regulations 2011.

860.100 Withdrawal to purchase first home [KA 2006, s 126, sch 1, cl 8]

A person who has been a member of a KiwiSaver scheme for at least three years may withdraw an amount not exceeding their accumulated balance in the scheme (excluding any Crown contribution and any amount transferred from an Australian complying superannuation scheme) to purchase their first home provided:
(a) The member has not made a withdrawal for this purpose before;
(b) The property is intended to be the principal place of abode of the member and their family (if any); and
(c) The member has not owned or had an interest in land before. The following estates in land are ignored for this purpose:
   (i) The person holds the estate in land as a bare trustee;
   (ii) The estate in land is a leasehold estate; or
   (iii) The person holds the estate in land as a trustee who is a discretionary, contingent or vested beneficiary under the trust, but has no reasonable expectation of being able to occupy the land as the principal place of residence of themselves or their family until the person who currently occupies the land, or their survivor, dies.

Any withdrawal for this purpose must be paid to the member’s solicitor and the trustees of the KiwiSaver scheme may require from the solicitor, before payment of the withdrawal:
(a) A copy of the sale and purchase agreement showing the member as purchaser;
(b) An undertaking that the agreement is unconditional; and
(c) An undertaking that the funds will be paid to the vendor or, if settlement is not completed, repaid to the trustees on account of the member.

Clause 8, sch 1 to the KA 2006 (which sets out the rules for withdrawal of contributions for the purchase of a first home), is subject to the terms of any participation agreement that restricts or prevents the withdrawal of employer vested contributions in relation to the member.

Note: Prior to 7 September 2010, a KiwiSaver member who had been a party to a rental lease agreement was prevented from withdrawing their contributions to purchase a first home. From that date, members with an interest or past interest in a leasehold estate are eligible for a first home withdrawal and are not excluded from eligibility for a first home deposit subsidy.

860.102 Mortgage diversion facilities [KA 2006, s 229, regs 21-29 KiwiSaver Regulations 2006]

Mortgage diversion facilities allow contributions to be withdrawn from a member’s KiwiSaver scheme or complying superannuation fund and applied towards the payment of amounts secured by certain mortgages over the member’s principal residence. The KiwiSaver scheme provider and the mortgagee must choose to participate in the facility.

Note: Mortgage diversion facilities were closed to new participants from 1 June 2009. The facility continues to be available to participants who applied before that date.

Any mortgage diversion facility must be in accordance with the following principles:
(a) There is no compulsion on providers to provide a mortgage diversion facility.
(b) There is no compulsion on mortgagees to allow KiwiSaver and complying superannuation fund contributions to be used to pay amounts secured by mortgages.
(c) The mortgage diversion facility is available at any time after 12 months have expired since the CIR or the provider (whichever is the earlier) receives the first contribution from the member.
(d) Mortgage diversion is available only in relation to a mortgage over the person’s principal residence.
(e) The mortgage diversion may apply for the remainder of the term of the mortgage after the diversion is made available, but only to the extent to which the mortgage continues to be over the person’s principal residence.
(f) After the total amount secured by the mortgage is paid, subsequent contributions are not diverted from the person’s KiwiSaver scheme or complying superannuation fund.
(g) If the person chooses to stop the mortgage diversion facility before the amount secured by the mortgage is repaid, the contributions are redirected towards retirement savings.
(h) The provider (not the CIR) is responsible for paying the amount diverted under the mortgage diversion facility.

(i) The amount diverted from a person’s KiwiSaver scheme or complying superannuation fund is a fixed dollar amount, capped at not more than the total of:
   (i) Half of the total contributions received by the KiwiSaver scheme provider; and
   (ii) Half of the person’s contributions to their complying superannuation fund, but limited to four per cent of their annual gross base salary or wages for each complying superannuation fund.

(j) Amounts received before the provider received the request to divert amounts under the mortgage diversion facility cannot be diverted.

(k) Employer contributions may not be diverted.

(l) An amount that was transferred from an Australian complying superannuation scheme may not be diverted.

(m) The facility is available for both new and existing mortgages [KA 2006, s 229].

A mortgage qualifies for participation in the mortgage diversion facility if:

(a) It is a mortgage over the mortgagor’s principal residence; and

(b) It secures obligations that arise under a home loan facility, even if the mortgage also secures other obligations.

A “home loan facility” specifically excludes a revolving credit contract that does not expressly provide for a credit limit that reduces over the term of the contract.

Diverted contributions may only be used to pay amounts (including principal, interest or other amounts payable) owing under the home loan facility secured by the mortgage. The member must not be able to access, withdraw or redraw any diverted contributions (in whole or in part), without making specific application to the mortgagee. This restriction applies even if the home loan facility:

(a) Is a reducing revolving credit contract; or

(b) Permits amounts that have been paid by that person over and above any repayment amount or minimum payments amount specified, or amounts that have been paid in advance of any specified schedule of repayments, to be accessed, withdrawn or redrawn or otherwise advanced to that member [KiwiSaver Regulations 2006, reg 29].

Regulations 24-28 of the KiwiSaver Regulations 2006 set out the procedures for a member to participate in a mortgage diversion facility, and the obligations of the member, provider and mortgagee in relation to the setting up and operation of the facility.

**860.103 First home deposit subsidy**

A person who has contributed to a KiwiSaver scheme or a complying superannuation fund for at least three years is eligible to apply for a first home deposit subsidy. The subsidy is $1,000 for each full year of contribution, up to a maximum of $5,000 per member. For a couple buying their first home, the maximum subsidy would therefore be $10,000.

To be eligible for the subsidy, a person must:

(a) Be 18 years of age or older;

(b) Not have received a first home deposit subsidy before;

(c) Be a member of a KiwiSaver scheme or a complying superannuation fund;

(d) Have contributed at least the minimum percentage of their income (four per cent between 1 July 2007 and 31 March 2009; two per cent from 1 April 2009) to a KiwiSaver scheme or a complying superannuation fund for at least three years. The three years of contributions do not need to be successive;
(e) Have a combined annual income of $100,000 or less before tax (for one or two buyers), or $140,000 or less before tax (for three or more buyers);

(f) Be buying one of the following property types:
   • Fee simple;
   • Stratum estate freehold and leasehold;
   • Cross-lease (freehold and leasehold); and
   • Leasehold land.

If the person is buying a building, they must also:

(a) Be buying their first home;

(b) Be buying a house within the maximum house price cap for the area. The cap is $400,000 for Auckland City, North Shore City, Rodney District, Wellington City and Queenstown Lakes District and $300,000 for all other areas;

(c) Be planning to live in the house.

If the person is buying land and planning to build a house on it, or buying an apartment that is being built, they must also:

(a) Be planning to live in the house or apartment;

(b) Have a house built within 12 months of purchase of the land;

(c) Be able to show that:
   • They will have funding for the construction of the building;
   • The total cost of the land and house or apartment is within the house price caps set out above; and
   • The land or site is ready to build on.

The first home deposit subsidy is a social assistance suspensory loan for the purposes of s EW 45 and is therefore tax-free [Schedule to Income Tax (Social Assistance Suspensory Loans) Order 1995, cl 1A].

For further information, see the Housing New Zealand Corporation website (www.hnzc.govt.nz).

860.105 Fees to be reasonable [KA 2006, ss 126, 189B, 189C, 225, sch 1, cl 2]

The KiwiSaver scheme rules require persons involved in the provision of the KiwiSaver scheme (such as the trustees, administrator, investment manager, and promoter) not to charge fees that are unreasonable. The Government has indicated that it will negotiate with scheme providers to keep fees as low as possible.

A KiwiSaver scheme provider who increases a fee must give notice of the increase to the Government Actuary as soon as reasonably practicable after the increase takes effect [KA 2006, s 189B]. The High Court may, on the application of a scheme member or the Government Actuary, order that a fee that is unreasonable be annulled or reduced. The application must be made within one year of the day the fee is imposed or debited [KA 2006, s 189C].

860.110 No Crown guarantee [KA 2006, ss 205, 206]

The Crown does not guarantee any KiwiSaver scheme or investment product of a KiwiSaver scheme.

The Crown or any other person does not perform a financial adviser service for the purposes of the Financial Advisers Act 2008 if the Crown or that person:

(a) Supplies an information pack;

(b) Gives a factual description to another person of the features of a KiwiSaver scheme or of KiwiSaver schemes (for example, information about admission as a member or termination of membership);

(c) Gives information of the type referred to in paragraph (b) in the course of promoting the benefits of retirement savings in general;

(d) Acts only as an intermediary who transmits information about a KiwiSaver scheme; or

(e) Otherwise exercises or carries out a function, duty, or power under the KA 2006.
The Crown must pay a contribution of $1,000 to the first KiwiSaver scheme of which a person is a member. The contribution must be paid before the member reaches the New Zealand superannuation qualification age. The contribution is paid only once — a person who ceases to be a member of a KiwiSaver scheme (eg because they leave New Zealand) and subsequently joins a KiwiSaver scheme again is not entitled to receive another contribution.

However, if a person ceases to be a member of the first KiwiSaver scheme they join, because the CIR accepts an opt-out notice outside the time limit or because the person’s enrolment is invalid, and the $1,000 Crown contribution was never paid, then the next KiwiSaver scheme of which the person is a member is treated as their first one for the purposes of the entitlement to the Crown contribution.

The contribution must be paid as soon as practicable after the earliest of the following dates:

(a) In the case of an employee, three months after the date on which Inland Revenue receives the first contribution for the person;

(b) In any other case, three months after the date on which Inland Revenue is given notice or otherwise knows that the person is a member of the KiwiSaver scheme.

If the person has transferred to their first KiwiSaver scheme from a complying superannuation fund, and they were a member of the fund for more than three months, the applicable date is the day on which Inland Revenue is notified that the person has transferred.

If the member has subscribed or been allocated to more than one investment product of a KiwiSaver scheme, the Crown contribution must be credited by the provider among the investment products using the contribution allocation. The contribution must vest in the member immediately after it is paid to the provider. The “Crown contribution” is defined to include both the initial $1,000 contribution explained above and the KiwiSaver tax credit under s MK 1 [KA 2006, s 4(1)].

Detailed rules govern the eligibility, registration, and operation of KiwiSaver schemes and their providers. Coverage of these rules is beyond the scope of this publication. Refer to Part 4 of the KA 2006 for details.

The KiwiSaver scheme rules in sch 1 to the KA 2006 are implied in every trust deed that establishes a KiwiSaver scheme. They apply despite anything to the contrary in the trust deed and are enforceable by the trustees, the manager, or any member of the scheme. The KiwiSaver scheme rules are in addition to (and are not overridden by) the provisions implied in the trust deed of a KiwiSaver scheme by ss 8 to 10 of the Superannuation Schemes Act 1989.

The KiwiSaver scheme rules cover the following matters:

• Application;
• Trustee’s duties;
• Manager’s duties;
• Scheme investments and property;
• Manager to provide information to trustee;
• Investment of scheme money;
• Fees charged by trustees, promoters, and so on, must not be unreasonable;
• Minimum contributions for employee members;
• Lock-in of funds until end payment date;
• Amounts from Australian complying superannuation schemes (not yet in force);
• Permitted withdrawals must be paid as lump sums;
• Evidence of right to make permitted withdrawal;
• Release of funds required under other acts;
• Withdrawal to purchase first home [see 860.105];
• Withdrawal on death;
• Withdrawal in cases of significant financial hardship or serious illness [see 860.95];
• Withdrawal or transfer to foreign scheme in cases of permanent emigration;
• Contributions holidays;
• Transfer of membership to another KiwiSaver scheme; and
• Restriction on the withdrawal of Crown contributions arising from a KiwiSaver tax credit.

860.125 Penalty for failure to provide information [KA 2006, ss 214, 215]
An employer who fails to provide information as required under Parts 2 or 3 of the KA 2006 is liable for a penalty. The penalty is $50 for small employers and $250 for other employers. The penalty cannot be imposed unless Inland Revenue has, within the preceding 12 months, sent the employer a notice stating that:
(a) A penalty will be imposed if the employer does not provide the required information; or
(b) The employer has been liable for the penalty in the preceding 12 months.
A “small employer” is an employer whose gross PAYE and ESCT deductions in the previous tax year were less than $100,000 in total. If the person was not an employer in the previous tax year, they are a small employer until the time when their gross PAYE and ESCT deductions in the current tax year exceed $100,000 in total.
An employer is not liable for more than one such penalty per month. The penalty is due and payable on the day the next tax deduction required to be made by the employer under the PAYE rules is due to be paid to Inland Revenue after the end of the PAYE period in which the failure occurred.
The penalty under s 215 of the KA2006 applies in addition to any penalties arising under the TAA.

860.135 Member tax credits [ss CX 50, MK 1, MK 2, MK 4]
(1) Entitlement [ss CX 50, MK 1, MK 2]
Persons who are members of a KiwiSaver scheme or a complying superannuation fund are entitled to a tax credit of 50 cents for each $1 contributed by the member, up to a maximum of $10 per week ($521.43 per year). The credit is paid to the member’s fund provider, not to the member directly. Tax credits paid under Subpart MK are excluded income of the person deriving them [s CX 50].

Example:
Andrew joined KiwiSaver on 1 July 2011. For the year ended 30 June 2012, he earned gross wages of $32,875. He contributed four per cent of his wages ($1,315) to a KiwiSaver scheme. The member tax credit is the lesser of 50 per cent of his contributions ($657.50) and $521.43. At the end of the year he will be entitled to a tax credit under s MK 1 of $521.43. The total contributions to his KiwiSaver scheme for the year (not including any employer contributions) are therefore $1,836.43.

Note: For years ending before 1 July 2011, the maximum member tax credit was $1,042.86 a year.
A person qualifies for the credit for the year ended 30 June if the person:
(a) Has creditable membership of a KiwiSaver scheme or a complying superannuation fund (see below);
(b) Is 18 years or older;
(c) Is not entitled to withdraw an amount from the scheme or fund because the end payment date has been reached; and
(d) Has their principal place of residence in New Zealand (but see the exceptions below).
A person whose principal place of residence is not in New Zealand still qualifies for the tax credit if:
(a) They are a State services employee who is serving outside New Zealand; or
(b) They work overseas as a volunteer (or for token payment) for a charitable organisation listed in 1380.20 and the work is of the following type:
   (i) Work to relieve poverty, hunger, sickness or the ravages of war or natural disaster;
(ii) Work to improve the economy of a country that is recognised by the United Nations as a developing country; or

(iii) Work to raise the educational standards of a country that is recognised by the United Nations as a developing country.

Written evidence must be given to the fund provider showing why and for what period they satisfied one of these exceptions.

“Creditable membership” means membership in a KiwiSaver scheme or a complying superannuation fund. For this purpose, membership (and therefore eligibility for the member tax credit) commences on the earlier of:

(a) The first day of the month in which contributions are deducted from an employee’s salary or wages;

(b) The first day of the month in which a contribution is first received by Inland Revenue for a person; or

(c) The first day of the month in which securities are allotted by the KiwiSaver scheme or a complying superannuation fund.

A special transitional rule applies when contributions are received by either Inland Revenue or a KiwiSaver scheme between 1 July and 31 October 2007. In this situation, membership commences on the first day of the month in which a KiwiSaver scheme receives a valid application for membership.

(2) **Calculation [s MK 4]**

The calculation of the member tax credit for a member credit year (a year ended 30 June) involves two steps:

(a) Step 1: Calculate the amount of member credit contributions per day using the following formula:

\[
\frac{\text{member credit contributions}}{\text{included days}}
\]

If the result of this calculation is less than $1.429 (\$521.43 / 365) the member tax credit is equal to the member credit contributions for the year. If the result of this calculation is equal to or greater than $1.429, go to Step 2.

(b) Step 2: If the result of the calculation in Step 1 is equal to or greater than $1.429, the member tax credit is equal to the amount calculated using the following formula:

\[
\frac{\$521.43 \times \text{included days}}{365}
\]

“Member credit contributions” means the total of the person’s member credit contributions to all of their complying superannuation funds and KiwiSaver schemes for the member credit year, together with amounts received and held by the CIR but not passed on to the scheme provider until after the end of the member credit year. Specified superannuation contributions (employer contributions) withdrawn under a mortgage diversion facility [s YA 1].

“Member credit contribution” means an amount of a superannuation contribution to the person’s KiwiSaver scheme or complying superannuation fund, including an amount received and held for the person by the CIR in the holding account, but excluding:

(a) An employer’s superannuation cash contribution made for the person;

(b) A contribution withdrawn under a mortgage diversion facility;

(c) Crown contribution for the person.

“Included days” means the number of days in the member credit year on which the person satisfies the requirements of s MK 2 (as explained above).

**860.140 Payment, treatment and claiming tax credits [ss MK 3, MK 5, MK 6, MK 7; TAA, 68C]**

(1) **Payment [s MK 3]**

The CIR pays the tax credit by direct credit to the member’s fund provider. The fund provider must claim the credit (see below). The credit must be paid by the CIR to the fund provider within 30 working days of
receipt of the claim form. The CIR is not allowed to deduct or set-off, against the tax credit, any amounts owing to the CIR by the member or the member’s fund provider.

If a member transfers to a new fund provider, the CIR can pay the credit to the new fund provider. The credit can be paid directly to the member (or their estate) if the member dies or their account with the provider is closed.

(2) **Treatment** [ss MK 5, MK 6, MK 7, MK 8]

The tax credit is treated as a Crown contribution and is subject to the relevant KiwiSaver scheme rules and complying fund rules. The fund provider is treated as having received the tax credit, for recovery purposes. The fund provider must credit the amount of the tax credit across all the investment products to which the member has subscribed or been allocated, on the same basis as the contributions are allocated. The tax credit vests in the member immediately after it is received by the fund provider.

If an amount of tax credit is overpaid, the fund provider may remove the overpayment from the member’s account in order to repay it to the CIR. This overrides any rules to the contrary in the KiwiSaver scheme or complying superannuation fund.

If a person emigrates permanently from New Zealand to a place other than Australia and requests a withdrawal or transfer from their KiwiSaver scheme or complying superannuation fund, the fund provider must pay the CIR the lesser of the following amounts:

(a) The total amount of the tax credits that have been paid for the person and are held by the fund provider;
(b) The amount of the employee’s superannuation accumulation (for a complying superannuation fund); or
(c) The amount of the member’s accumulation.

A person who emigrates permanently from New Zealand to Australia is unable to withdraw their KiwiSaver savings in cash but may transfer their account balance (including member tax credits and Crown contribution) to an Australian complying superannuation fund. See 860.150.

The “member’s accumulation” means the net value of the total of:

(a) The member’s contributions;
(b) Any vested employer contributions;
(c) Any fee subsidies; and
(d) The Crown contribution (including both the initial $1,000 and the s MK 1 tax credits).

(3) **Claiming tax credits** [TAA, s 68C]

The fund provider must claim the tax credit by completing a member credit claim, in the form prescribed by the CIR. The claim must contain the member’s name, address, and (if known) tax file number, the amount of the person’s member credit contributions (as defined in 860.135) for the year, and any other information required by the CIR. The claim must be furnished by the due date (yet to be advised by the CIR).

The fund provider must claim the tax credit for each person who is a member of the fund on 30 June each year, or who ceases to be a member during the year due to permitted withdrawals other than transfers. Before claiming the credit, the fund provider must:

(a) Be “reasonably satisfied” of the number of days that the member had their principal place of residence in New Zealand; and
(b) Have no knowledge that the person does not meet the other requirements of s MK 2.

A fund provider can claim a credit for a member for an earlier year if not previously claimed.

**Employer tax credit**

The employer tax credit, of up to $20 per week per employee, was available to employers who (between 1 April 2008 and 31 March 2009) made voluntary or compulsory contributions to KiwiSaver schemes and
complying superannuation funds for their employees. The employer tax credit was repealed from 1 April 2009. See Staples Tax Guide 2009 860.145 for details.

860.150 Trans-Tasman portability of retirement savings [s CW 29B; KA 2006, sch 1, cl 4B, 14B]

Note: The following rules are not yet in force. See the information on the application date below.

(1) Introduction
A person who moves permanently from New Zealand to Australia is able to transfer their KiwiSaver contributions to an Australian complying superannuation fund. Conversely, a person emigrating to New Zealand from Australia can transfer their retirement savings from an Australian complying superannuation fund to a KiwiSaver scheme. This arrangement is intended to make it easier to transfer retirement savings across the Tasman, to improve labour mobility between the two countries.

The portability arrangements are the only way for KiwiSaver members to take their accumulated savings with them when they move permanently to Australia. Consequently, KiwiSaver members who emigrate to Australia will not be able to withdraw their accumulated savings in cash.

(2) Qualifying schemes
Retirement savings may only be transferred between a KiwiSaver scheme and an Australian complying superannuation fund regulated by the Australian Prudential Regulation Authority. Members of New Zealand complying superannuation funds are not able to transfer their savings to Australia.

An “Australian complying superannuation scheme” is an entity that is a complying superannuation fund for the purposes of Part 5, Division 2 of the Superannuation Industry (Supervision) Act 1993 (Aust) and that is regulated by the Australian Prudential Regulation Authority [s YA 1; KS, s 4].

(3) Transfer optional
A KiwiSaver member emigrating to Australia can choose whether or not to transfer their KiwiSaver balance to Australia. Providers of savings schemes do not have to accept a transfer.

(4) Permanent emigration
A transfer can be made only if the KiwiSaver member is emigrating permanently to Australia; proof of emigration must be supplied to the Australian provider. The requirements for proof of permanent emigration, which must be supplied to the scheme provider before the savings can be transferred, are set out in cl 14, sch 1 of the KA 2006.

(5) Tax implications on transfer
Income derived in an income year by a natural person from an Australian complying superannuation scheme is exempt income if, in the income year, it is contributed to a KiwiSaver scheme [s CW 29B]. This means there are no income tax implications for a person transferring their savings from an Australian complying superannuation scheme to a KiwiSaver scheme.

Transfers of savings from New Zealand to Australia are not subject to tax in Australia. Distributions from a KiwiSaver scheme to Australian non-residents are not treated as dividends and so are not subject to NRWT.

(6) Australia’s excess non-concessional contributions tax
Australia imposes a tax-free limit (a “non-concessional contributions cap”) of A$150,000 on the amount of superannuation contributions that an individual can make from non-wage sources in a particular year. Contributions that exceed this cap are taxed at a rate of 46.5 per cent. The tax is intended as a disincentive for people to accumulate excessive contributions in superannuation funds, because Australian superannuation funds are taxed on their earnings at concessional rates (15 per cent) and pensions paid out of such funds are typically tax-free after 60.

Transfers from KiwiSaver to an Australian superannuation scheme are subject to the non-concessional contributions cap on initial entry into the Australian system. This is intended to maintain the integrity of the
Australian superannuation system. The cap does not apply to New Zealand-sourced or Australian-sourced superannuation contributions re-entering Australia.

However, an individual under 65 can bring forward the contributions for the next two years, so can in fact contribute up to A$450,000 in any particular year without breaching the contributions cap. The cap will be indexed to inflation from 2010-2011.

(7) **Prohibition on cash withdrawal**

Generally, KiwiSaver members who permanently emigrate overseas are able to withdraw their savings in cash one year after emigration. Any member tax credits that the person has accumulated cannot be withdrawn, and will be recovered by the Crown (KA 2006, cl 14, sch 1).

However, KiwiSaver members who permanently emigrate to Australia cannot withdraw their savings in cash. They must either transfer them to an Australian complying superannuation fund or leave them in the KiwiSaver scheme.

(8) **Amounts transferred**

A KiwiSaver member can request that their savings be transferred any time after supplying the provider with proof of their permanent emigration to Australia. The member must transfer the full amount of their savings — partial transfers are not permitted.

KiwiSaver members transferring their retirement savings to Australia can take their accumulated member tax credits (up to $1,042.86 per year) and $1,000 Crown contribution with them. Member tax credits are recovered by the Crown if a member withdraws his or her savings following permanent emigration from New Zealand to any country other than Australia.

The transferred retirement savings must be separately identifiable within the account established in the country to which the savings are transferred.

(9) **Prohibition on transfer to a third country**

New Zealand-sourced retirement savings may not be transferred from Australia to a third country. Similarly, Australian-sourced retirement savings may not be transferred from New Zealand to a third country.

(10) **Rules applying to transferred funds in Australia**

Retirement savings transferred from KiwiSaver to Australia remain locked in until the member reaches the age of entitlement to New Zealand Superannuation (currently 65).

Any New Zealand-sourced retirement savings that are transferred to Australia are not be able to be transferred from Australia to a third country.

(11) **Rules applying to transferred funds in New Zealand**

A person who is retired may withdraw their Australian-sourced retirement savings from KiwiSaver at age 60 (KA 2006, sch 1, cl 4B). This is consistent with the Australian rules on the withdrawal of retirement savings, and ensures that an individual is not disadvantaged by moving from Australia to New Zealand.

The member tax credit of up to $1,042.86 per year is not paid on contributions to KiwiSaver schemes consisting of Australian-sourced retirement savings.

Australian-sourced retirement savings may not be withdrawn to purchase a first home, diverted to a member’s mortgage repayments under the mortgage diversion facility, or used to count towards eligibility for the deposit subsidy. However, any earnings on Australian-sourced savings may be withdrawn for the purchase a first home.

(12) **Application date**

The new rules will apply from the first day of the second month after the month in which the Governments of New Zealand and Australia exchange notes, as provided by cl 21 of the Arrangement between the two Governments on trans-Tasman retirement savings portability.
# Chapter 880
## Land Sales

### 880.05 Definitions

The term “land” includes:

(a) Any estate or interest in land; and

(b) Any option to acquire land or any such estate or interest in land, but does not include a mortgage.

The definition encompasses all of the following:

(a) Some or all of a parcel of land;
Land Sales

(b) Land together with any other land. Thus, a person could acquire an undivided interest in a parcel of land with the purpose or intention of disposing of it and be liable for tax on any profit, notwithstanding that the owner of the other undivided interest would not be taxable because that other person did not acquire the interest for disposal. All buildings on the land are included in the definition of “land”;

(c) A legal estate or interest, being that proprietary interest which has been acquired with all of the formalities required by common law or statute for conferring complete ownership;

(d) An equitable interest, being one under which there is no legal estate or interest vested in the person having the interest, but the person may have entered into a binding contract to purchase the property;

(e) Corporeal property, being something tangible as opposed to incorporeal property. Actual possession of land would be corporeal but an undivided interest, or a right as a remainderman in an estate, would be incorporeal;

(f) Freehold interests being interests that gives the owner the largest rights of use and enjoyment allowed by the law together with the fullest power of alienation; and

(g) Chattel interests, meaning something less than the freehold (e.g., leasehold). “Disposition” of land includes compulsory acquisition under any Act by the Crown or by any public authority or by any local authority. This provision is necessary because otherwise a landowner could avoid the tax by simply refusing to negotiate voluntarily, thus forcing a compulsory acquisition.

“Improvements” means improvements to land that are not minor and which are made by a taxpayer or by an associated person of the taxpayer. The improvement may be by way of erecting a building or otherwise. The definition applies for the purposes of s CB 7 (disposal land acquired for purposes of a business relating to erecting buildings on land) and s CB 11 (disposal by a person in the business of erecting buildings (or associate) where the land is sold within 10 years of completing the improvement) [see 880.35].

880.10 Meaning of associated persons in land transactions
The “1973 version provisions” definition of associated persons applies for the purposes of the land sales provisions [see 70.25].

880.15 Legislation
Although ss CB 6 to CB 15 apply specifically to land sales, other provisions in the legislation may be used to impose income tax on land sale transactions such as:

(a) Business profits [s CB 1];

(b) A profit-making undertaking or scheme [s CB 2];

(c) Income under ordinary concepts [s CA 1(2)].

In TRA Case S86 (1996) 17 NZTC 7,538, these provisions were considered in the sale of 20 properties within a three-year period. The gains were held to be not liable for income tax because the sales were made to wind down a real estate portfolio rather than to make a profit.

880.20 Sale of land acquired for disposal [s CB 6]
Income includes all profits or gains derived from the disposition of any land if the land was acquired for the purpose or intention of selling or otherwise disposing of it. If, at the time of acquisition of the land, one of the purposes or intentions of the acquisition was a resale of all or part of that land, the profits are assessable. The purpose or intention would have to clearly evidence itself at the time of acquiring the land.

There are no time limits. If, at the time the land was acquired, there was a clear purpose of selling, any profit ultimately made is taxable.

Difficulties may arise by reason of the fact that an eventual sale at some future date may be contemplated whenever any land is acquired. However, it is to the more prominent purposes and intentions of the taxpayer at the time of acquisition that the legislation is directed. The taxpayer must, at least, demonstrate that it was not the dominant or main purpose or intention to acquire the land for resale. Such a conclusion is drawn from the sequence of events surrounding and following the acquisition, such factors being:
(a) The period lapsing before the land is sold;
(b) What the land was used for in the period between acquisition and sale;
(c) The intervening circumstances and any changes occurring; and
(d) Realistic rates of return at the time of acquisition from an investment point of view.

These events would be examined as a measure of consistency with those intentions and purposes as expressed by the taxpayer.

Exclusions from the operation of s CB 6 are provided for the taxpayer’s residence [s CB 16] and the taxpayer’s business premises [s CB 19, see 880.40].

(1) Case law

In *Junior Farms Ltd v Commissioner of Inland Revenue* HC Auckland CIV-2009-404-2870, 22 July 2011 the taxpayer company owned land which it had used for dairy farming since 1964. Over time, the local authority rezoned the land such that some of it was designated light industrial and some flood plain. In November 1994, the company entered into an agreement to sell the land. Two agreements and a side letter from the buyer to the seller were signed. The first agreement sold the entire land, buildings, plant and livestock to the buyer for approximately $2.7 million. The second agreement, dated the following day, sold back to the company around 14 hectares of the land (being the flood plain) for $100. The side letter clarified certain aspects of the contracts. The flood plain was later sold to the local authority for $3 million. The CIR assessed a profit of $2,999,900. The CIR’s basis of assessment was that the taxpayer had acquired the land for $100 with the intention of disposing of it to the local authority. Brewer J found for the taxpayer. He held that the two agreements and the side letter should be read as one agreement. The taxpayer had not sold the flood plain but had maintained beneficial ownership of it. The two agreements had created a constructive trust over the legal title to the flood plain in favour of the taxpayer. The taxpayer had continued to own and farm the flood plain until such time as it was eventually sold to the local authority. Therefore, the taxpayer had not acquired the land in 1994 with the intention of disposing of it. Rather, the taxpayer had acquired the land in 1964 with the intention of using it in a farming business.

In *Commissioner of Inland Revenue v Boanas* (2008) 23 NZTC 22,046 (HC) the taxpayers sold rural freehold land to their family company and were each assessed on their share of the sale price on the ground that they had acquired the land with the purpose or intention of disposing of it. The land had previously been farmed under a pastoral lease granted by the Crown. The High Court found in favour of the taxpayers. Dobson J stated that the process of reconstructing purpose or intention at the time of acquisition should begin with, and in most cases be answered by, the attribution of purposes or intentions to the partnership, not to individual partners. It is the partnership that undertakes transactions such as acquisition and disposal of land, and individual partners cannot be divergent to the partnership rationale, except in limited circumstances, which might amount to a breach of fiduciary obligations to the remaining partners.

In *TRA Case C22* (1978) 3 NZTC 60,218, (1978) 2 TRNZ 545, a taxpayer purchased a block of land with the intention of disposing of it at some indeterminate time in the distant future. It was claimed that the land was purchased as an investment for retirement. However, the TRA was satisfied that, when the block was purchased, the dominant purpose of the taxpayer was to sell it, the only question being as to when it would be sold. The purpose went beyond being a mere hedge against inflation. In fact, the sale took place eight years after the date of purchase. The decision was given under the old s 88(1)(c) of the ITA 1954 when the test of assessability was the dominant purpose of sale. There would be a stronger case for assessment under s CB 6 since it now applies even where only one of the purposes is to sell the property.

The fact that a venture proved unworkable cannot be used in considering intention at time of acquisition: *TRA Case L72* (1989) 11 NZTC 1,419.

Evidence of intention at date of acquisition was obtained by reference to a bank manager’s diary notes and the reasons for purchase disclosed on a statutory Land Valuation Court declaration filed at time of purchase: *TRA Case H101* (1986) 8 NZTC 683.
Reference was made to a bank memorandum outlining intention at time of acquisition: TRA Case H108 (1986) 8 NZTC 720.

Reference was made to a brochure prepared for potential investors and to a special partnership agreement for the purpose of eliciting the intention of directors of a private company at time of purchase of land: Aotea Group Securities Ltd v Commissioner of Inland Revenue (1986) 8 NZTC 5,052 (HC).

Reference was made to a bank manager’s memorandum concerning a “spec house”: TRA Case K21 (1988) 10 NZTC 218.

Profits on sale were not assessable, the intention of sale only crystallising after acquisition: TRA Case K34 (1988) 10 NZTC 302.

A principal shareholder and director of a stevedoring company formed a syndicate to purchase a six-acre block adjacent to a wharf in 1965. In 1968 his syndicate share was transferred to his family trust which derived the profit when the land was sold in 1969. The CIR included the profit in the trust’s income and claimed the property had been purchased with the intention of resale. The Court held that the dominant purpose of purchase was to retain the land for the benefit of the stevedoring company and not for the purpose of resale: Maritime Trust v Commissioner of Inland Revenue (1983) 6 NZTC 61,537 (HC).

A builder in partnership with his wife had built four residential properties in succession on 10-acre blocks with the average time of ownership for each being 30 months, using short term finance to assist in the purchase of land and erection of the houses and temporary accommodation between the moves from house to house. It was held that the objectors had failed to show on the balance of probability that, at the time of acquisition of each of the pieces of land, they did not have a significant purpose or intention of selling or otherwise disposing of that land and thus it was assessable. Furthermore, all sales produced income that could be assessed as a sale of land by a builder with no exemption available: TRA Case M102 (1990) 12 NZTC 2,634.

Profits made from properties sold in order to terminate a property letting business (necessary through unforeseen financial commitments) were not part of the letting activity nor an “ordinary incident” of that activity, but were a “one-off transaction package of a capital nature” to wind down that letting business. Therefore, the profits were capital rather than revenue: TRA Case S36 (1995) 17 NZTC 7,237.

In TRA Case W2 (2003) 21 NZTC 11,003, the taxpayer failed to prove that a property that had been sold at a loss had been acquired with the intention of resale. Any intention that the majority of the partners may have had was irrelevant because it could not be enforced without the consent of all of the other partners.

880.25  Sale of land by dealer or associated person [ss CB 7, CB 9]

Special rules apply to the sale of land by either:

(a)  A person who is in the business of dealing in land at the time at which the land is acquired; or

(b)  An associated person of a person who is in the business of dealing in land at the time at which the land is acquired.

The test of association is applied only at the time at which the land is acquired.

The impact of the rules depends on whether or not the land was acquired for the purpose of the land dealing business.

Where the land was acquired for the purpose of the business, the proceeds of any disposal will be subject to tax regardless of the number of years for which the land has been owned [s CB 7].

Where the land was acquired other than for the purpose of the business, the proceeds will be taxable only where the land is disposed of within 10 years of the date on which it was acquired [s CB 9].

A sale by an “associated person” of a dealer ranks on all fours with a sale by the dealer personally, except that the profit is assessed to the associated person and not to the dealer.

Exclusions from the operation of these provisions are provided for the taxpayer’s residence [s CB 16] and the taxpayer’s business premises [s CB 19, see 880.40].
Case law

The accepted test under which to determine whether or not a person is a land dealer is found in Bates v Commissioner of Inland Revenue (1955) 6 AITR 283 (SC), where Henry J said:

“A person may engage in more than one business at the same time, and the Court is concerned only with the question of whether or not at any material time the appellant was engaged in the business of dealing in land. It is to be noted that it must be a business of dealing. ‘Dealing’ connotes buying and selling or exchanging land. To constitute a business of dealing when a person does not hold himself out as carrying on such business, generally speaking, the law requires a reasonable frequency of transactions or some continuity of effort for the buying, selling or exchanging of land. Even where there are a number of transactions concerning land, they may well have some other explanation. The sales and purchases may be entirely for personal reasons. They may constitute a form of investment or change of investment with the object of getting a return from the property in preference to other forms of investment of money. It is a question of fact or inference from fact in each case. Sometimes it is difficult to draw the dividing line, and other times it is clear that the case falls on one side or the other. Each case must be decided on its own facts.”

This principle was confirmed by the Court of Appeal in Williams Property Developments Ltd v Commissioner of Inland Revenue (1980) 4 NZTC 61,537 (CA), where a dealer company which transferred to an associated company land acquired three years previously was held to be transferring trading stock.

Where a land dealer acquired land which was aggregated to a farm prior to the gifting of the farm to a family trust, it was held to constitute trading stock disposed of without consideration: Margan v Commissioner of Inland Revenue (1978) 3 NZTC 61,259 (SC).

A taxpayer company was assessed on profits arising from the sale of lots from a block of land. The deciding issue was whether another company, with mutual shareholders, was carrying on the business of dealing in land at the time the taxpayer acquired the block of land. The TRA held that the “other” company was at the relevant time a dealer in land and, because it was “associated” with the taxpayer, the profits from the sale of the land were assessable: TRA Case 45 (1980) 3 TRNZ 647.

In Kenneth James Ltd v Commissioner of Inland Revenue (1983) 6 NZTC 61,565 (HC), the taxpayer was engaged in two activities:

(a) Dealing in land, the proceeds of which were assessable; and
(b) Acquiring investment properties, the profits from which were treated as capital.

The CIR assessed profits on sale of five properties as belonging to the former category. The High Court held that the circumstances of acquisition and sale of each property should be examined in the context of the development of the taxpayer’s business and their characteristics to determine liability.

The nature, pattern, financial result, character, statements connected with, and extent of the taxpayer’s property dealings left no doubt the taxpayer was in business as a dealer in real property: TRA Case F154 (1984) 6 NZTC 60,330.

Hotel managers were held to be in the business of buying and selling farm properties, and farming being only incidental in intent and results: TRA Case K42 (1988) 10 NZTC 354.

Sale of land by developer or associated person [s CB 7, CB 10]

Special rules apply to the sale of land by either:

(a) A person who, at the time at which the land is acquired, is in the business of developing land or dividing land into lots; or

(b) An associated person of a person who, at which the land is acquired, is in the business of developing land or dividing land into lots.

The test of association is applied only at the time at which the land is acquired.
The impact of the rules depends on whether or not the land was acquired for the purpose of the business.

Where land was acquired for the purpose of the business, the proceeds of any disposal will be subject to tax, regardless of the number of years for which the land has been owned [s CB 7].

Where land was acquired other than for the purpose of the business, the proceeds will be taxable only where the land is disposed of within 10 years of the date on which it was acquired [s CB 10].

A sale by an “associated person” of a dealer ranks on all fours with a sale by the developer or subdivider personally, except that the profit is assessed to the associated person and not to the developer or subdivider.

Exclusions from the operation of these provisions are provided for the taxpayer’s residence [s CB 16] and the taxpayer’s business premises [s CB 19, see 880.40].

880.35 Sale of land by builder or associated person [ss CB 7, CB 11]

Special rules apply to the sale of land by either:

(a) A person who carries on the business of erecting buildings; or
(b) An associated person of a person who carries on the business of erecting buildings.

The impact of the rules depends on whether or not the land was acquired for the purpose of the business of erecting buildings.

The type of business with which ss CB 7 and CB 11 are concerned is the business of erecting buildings. A builder may be in the business of building only things other than buildings (eg fences) in which case that person is not carrying on the type of business with which the provision is concerned. Whether or not a person is a qualified builder is irrelevant.

1) Land acquired for the purpose of the business [s CB 7]

If the land was acquired for the purpose of the business of erecting buildings, any disposal of the land will be taxable where:

(a) At the time at which the land was acquired the person or an associated person carried on a business of erecting buildings; and
(b) Either before or after acquiring the land, the person or the associated person made improvements to it.

The proceeds of any disposal will be subject to tax regardless of the number of years for which the land has been owned.

2) Land acquired other than for the purpose of the business [s CB 11]

Where the land was acquired other than for the purpose of the business, the proceeds will be taxable only where all of the following apply:

(a) The person carries out improvements to the land;
(b) The land is disposed of within 10 years of the date on which the improvements are completed; and
(c) At the time at which the improvements were commenced, either the person or an associated person of the person carried on the business of erecting buildings.

The test of association in this case is applied at the date on which the improvements are commenced.

TaxNote: The definition of “improvements” excludes improvements of a minor nature.

Exclusions from the operation of these provisions are provided for the taxpayer’s residence [s CB 16] and the taxpayer’s business premises [s CB 19, see 880.40].

3) Case law

Profits were assessable on the sale of land acquired 35 years previously for the purpose of constructing houses which would be let at nominal rental to long-term employees. It was held that the provision of employee
housing was part of the company’s income earning process and that the land had been acquired for the purpose of the company’s business: *TRA Case L65* (1989) 11 NZTC 1,381.

The capacity in which a taxpayer acts when carrying on the business is important to the associated persons test. In *TRA Case L72* (1989) 11 NZTC 1,419, the taxpayer was a trustee of a family trust and also controlled and managed MA Ltd. The trust purchased sections and contracted for MA Ltd to erect flats on them at cost price. Financial pressures caused the trustees to sell the land at valuation to the taxpayer personally. The CIR assessed the trustees on profits on the basis that the taxpayer carried on the business of erecting buildings or an associated person of the taxpayer carried on that business. It was held that the taxpayer was the trustee and it did not carry on the requisite business. Although A managed MA Ltd he did so in his personal capacity and although the taxpayer, in this personal capacity, and the company were associated persons, the company and the trustees were not.

880.40 Dwellings and business premises exempted from tax on sale

[ss CB 16, CB 19]

The sale of domestic dwellings and business premises are exempt in the foregoing circumstances [ss CB 6 to CB 11] except where a regular pattern of such transactions has emerged.

Section CB 19 allows an exemption for land which is acquired and occupied by the taxpayer primarily and principally as premises from which substantial business is carried on by the taxpayer. Premises used for storage only of materials, for example, are not premises from which substantial business is carried out. Premises from which rental income is derived are not within the term “business premises” and therefore not within the exemption: *TRA Case D20* (1979) 4 NZTC 60,558.

Section CB 16 allows an exemption for land on which a dwelling house is acquired and occupied, or erected by the taxpayer primarily and principally as a residence for the taxpayer and (if applicable) the taxpayer’s family. The land area is not to exceed 4,500 square metres, or such larger area as is required for the reasonable occupation and enjoyment of that dwelling house. This exemption is sufficient to cover most residences and holiday homes.

The CIR has stated that, where a taxpayer has purchased a section for possible future erection of a residence, holiday dwelling, or perhaps for recreational use, its subsequent sale will not normally attract tax. However, if it is clear that the original purchase included a greater area than was required for this primary purpose, and it was intended from the outset that this surplus area would be sold, the subsequent sale would come within s CB 5 purpose and intention to sell.

Neither of the exemptions applying to residential land and business premises is available where a regular pattern of purchase and sale transactions has emerged.

In *Parry v Commissioner of Inland Revenue* (1984) 6 NZTC 61,820 (HC), the taxpayers were shareholders in a company which carried on business as a builder. They purchased a 10-acre block on which they built their home. When they sold the property the CIR assessed the profits on sale as it was the fourth property the taxpayers had bought and sold in 14 years. The CIR submitted the exemption was not available as the land occupied by the dwelling was larger than reasonably required. He further submitted that a regular pattern of transactions had emerged. The High Court held that:

(a) The area of land was necessary for the reasonable enjoyment of the dwelling house; and
(b) Although a “pattern” of transactions had emerged they were not “regular”.

Hence the profit on sale of the property was not taxable.

A “regular pattern” of transactions was found to exist where a builder had on three occasions acquired a vacant situation, erected a family residence, and lived there for a short while before selling the property. Inferences of a regular pattern may be drawn from a period in which similar actions displaying a definite course of action or conduct are taken, although not necessarily in an identical manner, on at least two or more occasions: *TRA Case M102* (1990) 12 NZTC 2,634.
880.45  **Sale of land in scheme of development or subdivision within 10 years** [ss CB 12, CB 17, CB 20, CB 21, CB 23]

Income of a taxpayer includes all amounts derived from disposing of land where all of the following apply:

(a) An undertaking or scheme (whether or not in the nature of business) is carried out on, and involves the development of, the land or the division of the land into lots;

(b) The development or division work on or relating to the land is carried on by or on behalf of the taxpayer;

(c) The work is not minor; and

(d) The undertaking or scheme was commenced within 10 years of the date on which the taxpayer acquired the land.

The undertaking or scheme need not be an adventure in the nature of a trade or business. It had been accepted that the scheme or undertaking must involve the activity of subdivision or development with a view to sale. The CIR had indicated that it regarded an undertaking or scheme as existing where the scheme involves the sale of the property. For the profit to be assessable under the paragraph the undertaking must have been carried out with a view to sale.

Exclusions from the operation of s CB 12 are provided under the following four circumstances:

(a) Taxpayer’s residence;

(b) Business premise;

(c) Farm land; and

(d) Investment properties.

1) **Taxpayer’s residence** [s CB 17]

The following two circumstances each provides an exclusion from the operation of s CB 12:

(a) The purpose of the development, division or improvement to provide a private residence for the taxpayer and any member of the taxpayer’s family living with the taxpayer; or

(b) An area of land of not more than 4,500 square metres, which was occupied mainly as residential land for the taxpayer and a member of the taxpayer’s family, has been divided into two or more lots and it is one of those lots that has been disposed of.

2) **Business premise** [s CB 20]

Section CB 12 does not apply where the purpose of the work is to create or effect a development, division or improvement for use in the taxpayer’s business (not being the undertaking or scheme).

3) **Farm land** [s CB 21]

Section CB 12 does not apply where all of the following tests are met:

(a) Land which was used or occupied by the taxpayer, taxpayer’s spouse [see 960.10], or both of them mainly for the purposes of a farming or agricultural business has been divided into lots;

(b) The lot that has been sold is one of those lots;

(c) The lot that has been sold is of such area and nature that it is capable of being worked as an economic farming or agricultural unit; and

(d) The land was disposed of mainly to be used in a farming or agricultural business.

For discussion on what constitutes an “economic unit” [see 880.55].

Matters to be taken into account when deciding whether the last of these criteria has been met are:

(a) Consideration for the disposal;

(b) Current land prices in that area;

(c) Terms of the disposal;
(d) Zoning or classification of the land; and
(e) Proximity of other land being used or developed for non-farming, non-agricultural purposes.

(4) **Investment properties** [s CB 23]

Section CB 12 does not apply where the division, development or improvement is for use in deriving from the land income from a lease, licence or easement or the granting of a right to take profits from the land.

(5) **Case law**

The concept of carrying on business on or from the land conveys something more permanent than the use of the land as a building site for buildings to be sold on with the subdivided lots: *TRA Case J37* (1987) 9 NZTC 1,219.

An undertaking or scheme may be entered into where no physical work has begun and no contacts have been entered into for the work. The commencement date of a scheme or undertaking may vary and must depend upon an analysis of all of the circumstances: *Smith v Commissioner of Inland Revenue* (1987) 9 NZTC 6,045 (HC); and on appeal *Smith v Commissioner of Inland Revenue* [1987] 1 NZLR 727, (1987) 9 NZTC 6,118 (CA). An undertaking or scheme is a project or enterprise directed to an end result: *Smith v Commissioner of Inland Revenue* (1989) 11 NZTC 6,018 (CA).

The dictionary definition was accepted as being properly attributable to the word scheme, namely, “a plan design or programme of action, hence a plan of action devised in order to attain some end; a project; an enterprise”, *Wellington v Commissioner of Inland Revenue* (1981) 5 NZTC 61,101 (HC).

A taxpayer contended that profits derived from the sale of units had not involved an “undertaking or scheme” because:

(a) It never intended to develop town houses;
(b) The CIR had allowed as non-taxable the profits on the first two units and therefore should not seek to tax profits from the sale of the other two units;
(c) Operations occurred “haphazardly” and were not the result of any firm plan or undertaking, the whole enterprise was opportunistic rather than even speculative; and
(d) The company was forced into the situation of haphazardly completing the units in order to rid itself of an unwanted land investment.

In *TRA Case F6* (1983) 6 NZTC 59,591 the TRA, in finding that the activity was “quite clearly” an undertaking or scheme, cited a previously adopted meaning:

“A scheme presupposes some programme of action, a series of steps all directed to an end result. Similarly an undertaking is an enterprise directed to an end result.”

This view was taken in the case of *O’Toole v Commissioner of Inland Revenue* (1985) 7 NZTC 5,045 (HC), where it was noted that a bare subdivision of land did amount to a “scheme or undertaking”.

A profit motive is not essential. The word “development” does not include the construction of buildings. The paragraph cannot be read as “development into lots or division into lots”: *Dobson v Commissioner of Inland Revenue* (1987) 9 NZTC 6,025 (HC). See also *TRA Case K68* (1988) 10 NZTC 544.

The commencement date of the undertaking is generally deemed to be the first step that is taken of a reasonably definite nature and of a continuing series leading to the development or subdivision. This could be the initial preparation of a plan if the succeeding steps leading to the actual subdivision and sale follow on immediately. On the other hand, the mere preparation of a plan would not be regarded as constituting the commencement of the scheme if there was an appreciable delay between the preparation of the scheme and its eventual implementation.

In *Wellington v Commissioner of Inland Revenue* (1981) 5 NZTC 61,101 (HC), division work or development work must be taken to indicate different though possibly overlapping categories of work. Other types of professional work (eg fencing or planting), which necessarily precedes the legal separation of one part of the land from the other, is division work. The legal separation into lots of land includes submission for Council approval and registration with the Land Transfer Office and all the related surveying and engineering work.
This decision, by implication, disapproved of an earlier decision in TRA Case D24 (1979) 3 TRNZ 477 that procedural requirements such as the preparation and deposit of land transfer plans did not amount to “work” that is to be taken into account.

It then fell for a factual consideration as to whether the work was more than of a minor nature. Cost was considered as one such factor to consider. Although no singular piece of work was great, the combination of all those could not be seen to be work of a minor nature. The development and division work comprised surveying and engineering works and legal matters costing over $9,000. The land and buildings cost $12,000. The Judge concluded that a scheme costing approximately 75 per cent of the value of the projects could hardly be said to have been of a minor nature.

In TRA Case E41 (1982) 5 NZTC 70,140 the TRA followed the Wellington case and held on the facts that although the division work was not that extensive by comparison with subdivisional work in general, the combination of survey legal and fencing work was something more than of a minor nature.

In Woolston v Commissioner of Inland Revenue (1987) 9 NZTC 6,010 (HC) the taxpayers purchased a freehold property of a motel and land. Two years after acquisition the taxpayers tried selling the motel as a going concern. Lack of success led to an agent recommending the units be sold off separately under a cross-lease development. After depositing a cross-lease plan, separate units were sold. The CIR’s assessment of sale profits holding that the flats plan showed a division of land was confirmed.

In contrast, doubts were expressed that any of the following circumstances would constitute more than minor work:

(a) A plan prepared merely to bisect a rectangular plot;
(b) A plan prepared merely to create a street access by two boundary lines connected by an arc; and
(c) Preparation of a flats plan for two units, either by itself or in connection with plans for either paragraph (a) or (b) above.

In Dobson v Commissioner of Inland Revenue (1987) 9 NZTC 6,025 (HC), the fact that the demolition of existing houses was an essential feature of the development work carried out was found to be determinative of the action not being work of a minor nature.

The amount assessable is the full amount of the gains or profits derived from the sale of “that land”: Lowe v Commissioner of Inland Revenue (1981) 5 NZTC 61,006 (CA). In this case a taxpayer argued that the words “that land” referred to the land sold, so that if only one lot were sold, that lot could not be said to be developed or divided. The Court rejected this argument and stated the section recognises that subdivisional schemes run over two or more income years. Accordingly, assessability applies to parts of, or lots of land sold, so long as that land is the whole or part of a block on which the development or subdivisional work has been done.

Subdividing a block of flats into nine unit titles is not work of a minor nature: Costello v Commissioner of Inland Revenue (1993) 15 NZTC 10,285 (HC); Costello v Commissioner of Inland Revenue (1994) 16 NZTC 11,253 (CA) [see TIB vol 6:2 (August 1994) at 27].

The CIR has issued an interpretation guideline on what constitutes work of a minor nature [see TIB vol 17:1 (February 2005)]. For examples see TES 17 (July 2004) 245, 246, 247, 248.

880.50 Sale of land in scheme of development or subdivision [ss CB 13, DB 27]

Section CB 13 applies only to schemes or undertakings that are not taxable under any of ss CB 6 to CB 12 or CB 14. The provision targets any undertaking or scheme commencing at any time after the acquisition of the land where the profits or gains are derived from the scheme of development or subdivision. The scheme must involve significant work on earthworks, contouring, levelling, drainage, roading, kerbing, channelling or on any amenity, service or work customarily undertaken in major projects involving the development of land for commercial, industrial or residential purposes.
There are two views as to the application of s CB 13. One is that it applies only to subdivision or development work commenced more than 10 years following the acquisition of the land. The other is that it would apply where s CB 12 (development or division within 10 years of acquisition) would apply but for an exclusion from that provision (eg the exclusion for business premises or rental properties).

Profits or gains are assessable under s CB 13 only to the extent to which they are derived from the development or subdivisional undertaking or scheme, as the value of the land at the date of the commencement of the scheme is allowed as a deduction [s DB 27].

In Mee v Commissioner of Inland Revenue (1988) 10 NZTC 5,073 (HC), the taxpayer was required by the local authority to pay for roading, water, and sewerage work of $12,760. The taxpayer’s total expenditure (including the payment to the Council) was $16,204 for a 22-section subdivision. The High Court held the subdivision was carried out by the Council, it having the entire say as to when the work was done or indeed whether it should be done. The payment to the Council (in effect a reserve fund contribution) could not be taken into account as being “expenditure”. The relevant expenditure, quantified at $3,750, was not significant, being some two per cent of the block’s unsubdivided value. Accordingly, the profits were not assessable.

Once a scheme or undertaking has commenced, s CB 13 applies in that income year whether or not the scheme has been completed and whether the scheme is carried out on the whole or only part of the land to which the scheme relates. The Court of Appeal in Cross & Goulding v Commissioner of Inland Revenue [1987] 1 NZLR 498 (1987) 9 NZTC 6,101 (CA) considered the commencement date of an undertaking or scheme involving earthworks or division of land to be when some act is done for the purposes of its implementation upon which a date can be established for valuation purposes. Preparation of a scheme (ie the process of arriving at the formulation of the means of the objective) is not part of the scheme itself. Implementation commenced when a contract was let and work began with local body approval.

Applying the decision in Cross, the High Court in Smith v Commissioner of Inland Revenue (No 2) (1988) 10 NZTC 5,042 (HC) held “the first positive step or overt act” of carrying out a scheme to be a specified departure application. This was confirmed by the Court of Appeal in Smith v Commissioner of Inland Revenue (1989) 11 NZTC 6,018 (CA). Dobson v Commissioner of Inland Revenue (1987) 9 NZTC 6,025 (HC) was applied by the High Court in Smith, where it was held that not only does development work not necessarily entail physical work on the land but also there is also no requirement that there be evidence that the whole undertaking or scheme could immediately be brought to fruition. Undertakings or schemes often necessitate staged processes which are interdependent.

880.55 Subdivisions excluded [ss CB 17, CB 20, CB 21, CB 23]

Exclusions from the operation of s CB 13 are provided under the following two circumstances:

(a) Taxpayer’s residence; or
(b) Business premises;
(c) Investment land; and
(d) Farm land.

(1) Taxpayer’s residence [s CB 17]

The following two circumstances each provides an exclusion from the operation of s CB 13:

(a) The purpose of the development, division or improvement to provide a private residence for the taxpayer and any member of the taxpayer’s family living with the taxpayer;
(b) An area of land of not more than 4,500 square metres, which was occupied mainly as residential land for the taxpayer and a member of the taxpayer’s family, has been divided into two or more lots and it is one of those lots that has been disposed of.

(2) Business premise [s CB 20]

Section CB 13 does not apply where the purpose of the work is to create or effect a development, division, or improvement for use in the taxpayer’s business (not being the undertaking or scheme).
(3) **Investment land [s CB 23]**

Section CB 13 does not apply where the division, development, or improvement is for use in deriving from the land income from a lease, licence or easement, or the granting of a right to take profits from the land.

(4) **Farm land [s CB 21]**

Section CB 13 does not apply where all of the following tests are met:

(a) Land that was used or occupied by the taxpayer, taxpayer’s spouse [see 960.10, or both of them mainly for the purposes of a farming or agricultural business has been divided into lots;

(b) The lot that has been sold is one of those lots;

(c) The lot that has been sold is of such area and nature that it is capable of being worked as an economic farming or agricultural unit; and

(d) The land was disposed of mainly to be used in a farming or agricultural business.

Matters to be taken onto account when deciding whether the last of these criteria has been met are:

(a) Consideration for the disposal;

(b) Current land prices in that area;

(c) Terms of the disposal;

(d) Zoning or classification of the land; and

(e) Proximity of other land being used or developed for non-farming, non-agricultural purposes.

(5) **What is an economic unit?**

It is not necessary that the unit be capable of providing the sole support of the purchaser. Many such holdings are in fact operated on a part-time basis with the owner also being involved in another business or in employment. However, the property must be capable of providing sufficient income to cover all outgoings and also provide a reasonable return on capital and possibly labour.

In *Bruhns v Commissioner of Inland Revenue* (1988) 10 NZTC 5,033 (HC) the High Court held that land is capable of being worked as an economic unit when, having regard to its area and nature, it is capable of producing a profit in that it produces an excess of income over expenditure after taking into account the cost of working the unit, including the cost of any borrowed capital and of any labour required to work it. The Court held that the land in question was capable at the time of sale of being developed to form economic horticultural units, and that the proceeds of the sale were, therefore, exempt. On appeal the High Court decision was overturned and it was held the test must be demonstrated to be satisfied at time of sale when the land must then have the present capability of being worked as an economic unit: *Commissioner of Inland Revenue v Bruhns* (1989) 11 NZTC 6,075 (CA). Each of the lots in question required expenditure of at least nine times its sale price over at least seven years to make it into an economic agricultural unit. The Court of Appeal declined to comment upon whether it preferred the definition of “economic unit” in the High Court or the *O’Toole* decision, as the High Court had erred in an earlier step by departing from the statutory requirement that the land should have a capability of being worked as an economic unit at the time of sale.

In *O’Toole v Commissioner of Inland Revenue* (1985) 7 NZTC 5,045 (HC), the High Court said that an economic unit is one in which it is capable of making reasonable profits on a stable basis. To define it somewhat differently, a property which is capable of yielding a reasonable standard of living for the owner without him or her having to resort to secondary employment, and after making due return on the capital invested. In that case it was found that, of the 11 lots sold, only one could meet these tests. The Ministry of Agriculture and Fisheries advice was to the effect that, although it was marginal, that particular lot could probably be farmed as an economic unit.

The exemption was considered in *TRA Case E41* (1982) 5 NZTC 70,140, where the taxpayer carried on a farming business on a property of 279 acres and subdivided six lots out of a block of 277 acres. Three lots were disposed of which were subject to s 67 (as it was referred to at the time). The TRA held that the exemption applied. One lot was acquired as a horse breeding stud for a short period of time, a second as a mixed farm...
that was almost self-sufficient, and the third for grazing purposes. The blocks were large in comparison with other farms in the area and of excellent quality.

In TRA Case S90 [1996] 17 NZTC 7,565, a farming couple who subdivided their farm was taxed on the profits from the sale of two lots because neither lot was capable of being worked as an “economic unit”. The TRA commented:

(a) The figures put forward by the taxpayer would not provide both an adequate return on capital and an adequate return for labour; and

(b) It was relevant that neither purchaser farmed their lot on a full-time basis and that the land was not well suited to growing the pasture contemplated by the taxpayers’ expert witness.

For the purposes of the exemption in s CB 21, the CIR considers that the phrase “farming and agriculture” includes:

(a) Animal husbandry;
(b) Beekeeping;
(c) Dairy farming;
(d) Forestry;
(e) Fruit growing;
(f) Grain and seed growing;
(g) Market gardening;
(h) Poultry farming;
(i) Sharemilking;
(j) Tobacco growing;
(k) Vegetable growing.

Activities which are not considered by the CIR to be farming and agriculture are:

(a) Aerial top-dressing;
(b) Dealing in livestock;
(c) Leasing or bailing livestock by the bailor;
(d) Providing services to persons carrying on a farming or agricultural business (eg services provided by agricultural contractors and seed cleaners).

**880.60 Deduction for value of land — major subdivision or development**

[s DB 27]

Where income arises under s CB 13, the land is deemed to have been sold to an unrelated third party immediately before the commencement of the undertaking or scheme and immediately reacquired at market value [s DB 27].

The method of valuation and allocation of that value over the subdivision is important in determining the deduction available against the proceeds of the sale. The Courts have stated that a reasonable basis must be used. Thus, an arbitrary assessment would not be acceptable.

In many situations, especially involving subdivisions, a logical apportionment of the cost price could be particularly difficult. However, it is clear from the legislation that the proceeds of disposal are income and that a deduction is allowed for the value of the land at the commencement of the scheme. Therefore, a profit figure must be arrived at, notwithstanding the difficulties or the fact that the result may not be arrived at with precision.

In Lowe v Commissioner of Inland Revenue [1981] 5 NZTC 61,006 (CA) the Court of Appeal stated that profits are to be arrived at by ordinary commercial practice and generally accepted accounting principles. The CIR assessed profits on an averaging method that gave an average cost of $2,300 per section which was
deducted from the amount received upon sale to give the assessable profits. The taxpayers objected but the Court upheld the CIR’s assessment and accepted the method of arriving at the profit. The taxpayers further contended that the effect of the change in the value of money in the interval between the acquisition of the land and its sale in lots should be taken into account in calculating the taxable profits on the sale of the sections. The Court rejected this contention and firmly established that inflationary effects on the calculation of profit are to be disregarded in assessing the amount of profits.

Assessable profits must be evaluated on the basis of historical cost (i.e., dollars expended and dollars received). Current cost accounting is inapplicable: *Lowe v Commissioner of Inland Revenue* (1984) 6 NZTC 61,712 (PC).

The method of determining assessable profits or gains was considered in *Holdaway v Commissioner of Inland Revenue* (1985) 7 NZTC 5,104 (HC). The taxpayer sought to exclude from assessable profits factors such as inflation, zoning changes, provision of amenities to the area, and other factors which influenced value but were not directly attributable to carrying out the scheme or undertaking. The CIR successfully challenged this approach and profits were assessed on an historical cost basis.

Each case is dealt with having regard to its own facts. However, the CIR generally accepts the government valuation of the sections sold as being a reasonable basis. This may not always be practical. For example:

(a) Where the period of development is so protracted that some sections will be sold before the total costs of the development are known; or

(b) Where an apportionment on an area basis may not be appropriate because the cost of developing some sections is greater than others due to topographical features.

880.65 **Sale of land which has been rezoned** [ss CB 14]

A taxpayer’s income includes gains from land sold within 10 years of acquisition, where at least 20 per cent of the gains were due to one or more of the following factors (commonly referred to as betterment factors):

(a) The rules of an operative district plan under the Resource Management Act 1991 (RMA) or a change in those rules following acquisition of the land.

(b) The likelihood of such rules being imposed or changed.

(c) A consent granted in relation to the land under the RMA, or a decision of the Environment Court under the RMA, following acquisition of the land.

(d) The likelihood that such a consent will be granted or a decision made.

(e) The removal of any condition, obligation, restriction, prohibition, or covenant (including a designation or heritage order) in relation to the land following acquisition.

(f) The likelihood that such a condition, obligation, etc will be removed.

(g) An occurrence or change similar to paragraphs (a) to (f) above, or the likelihood of such an occurrence or change.

Such gains are assessable only if they are not assessable under any of ss CB 6 to CB 12.

In *Swan v Commissioner of Inland Revenue* (1979) 4 NZTC 61,515 (SC), the taxpayer purchased land and, shortly after completion of the contract of sale, applied for and obtained local authority consent to a specified departure to change the zoning from rural use to residential. It was held that the Court, in deciding whether a likelihood existed at the time of the sale of a change of zoning, is entitled to take account of matters occurring after the sale provided that they were relevant to the existence of a “likelihood” at the time. The meaning of the term “likelihood” was considered to be variable according to the context of its use; and in the context of the legislation it required something more than a bare possibility but something less than a probability. A “reasonable probability” was adopted by the Court for the purpose of the case. The Court observed that, where a property has zoning potential at the time of acquisition by the taxpayer, though to a lesser degree than at the time of its resale, it is the increase of that potential over the period that the land is held by the taxpayer that must be reflected in the gain of at least 20 per cent on resale.
In *TRA Case X9* (2005) 22 NZTC 12,123, the proceeds from the sale of the property were due to the granting of a resource consent for the subdivision, so were taxable under s CD 1(2)(e) of the ITA 1994 (now s CB 14).

Exclusions from the operation of s CB 14 are provided for the taxpayer’s residence [s CB 18] and for farmland [s CB 22, see 880.70].

### 880.70 Land exempted from the rezoning provisions [ss CB 18, CB 22]

Income from the sale of rezoned land is (under certain circumstances) assessable under s CB 14 [see 880.65]. However, two exceptions apply.

The first is s CB 18 which provides an exception where:

(a) The taxpayer (and/or spouse [see 960.10] acquired the land with the intention of using it as a residence; and

(b) It was disposed of as a residence for the purchaser.

The second is s CB 22 which provides an exception where:

(a) The taxpayer (and/or spouse) acquired the land with the intention of using it in a farming or agricultural business; and

(b) The land was disposed of mainly for use in a farming or agricultural business and the sale was due to circumstances or events (other than the rezoning) which arose after the land was acquired by the taxpayer [see Public ruling BR Pub 04/04 (expired 1 June 2004) in TIB vol 16:4 (May 2004) at 4-5].

In both cases, it is not necessary that the taxpayer used the land for its intended purpose, provided the requisite intention existed at the time of acquisition.

### 880.75 Tax relief from the rezoning provisions [s DB 28]

A deduction from the profits or gains which are assessed through the provisions of s CB 14 is allowed for the greater of an amount of $1,000 or of 10 per cent of the gain for every complete year the land was held.

**Example:**

Land costing $80,000 is sold (after being held for six years) for $200,000 and is taxable under the provisions of s CB 14. The taxable gain is $48,000 less the costs of holding the land. The $48,000 is arrived at as follows: ($120,000 less $72,000). The $72,000 reduction represents 10 per cent pa of $120,000 for six years.

### 880.77 Land used for landfill [s CB 8]

Owners of land that has been used as landfill are able to elect that the land be held on revenue account. All of the following conditions must be met in order for the election to be valid:

(a) The land is used as a landfill prior to its disposal;

(b) The land is not being used as a landfill at the time of disposal;

(c) The land is not disposed of to a person who is an associated person under subpart YB [see 70.20];

(d) An election is filed in respect of all landfill sites of the taxpayer;

(e) Any person associated with the taxpayer also makes an election in respect of land used as a landfill; and

(f) The elections are filed by 24 June 2006 or 12 months after the date on which the person acquires the land, whichever is later.

While the election results in any proceeds from the sale of the land will be assessable, the cost of the land will be deductible. In the likely event that the land is sold at a loss, that loss is able to be offset against other income.
880.80 **Inherited land**

In calculating the profit or gain on the disposal of land, the cost of the land is taken as the market value as at date of acquisition. Where land is inherited, so that there is no cost price, the profits or gains are calculated on the basis of deducting from the proceeds of the sale the value of the land at the time at which it was inherited. The passive acquisition of land is included in the word “acquired”: Halliwell v Commissioner of Inland Revenue (1991) 13 NZTC 8,197. If a property is bought, the purchase price fixes the cost and thus the figure to be deducted. However, if the property is received by gift or inheritance, it is the value of the property at the time of the gift or the inheritance that must be deducted: Curran v Federal Commissioner of Taxation 74 ATC 4296 (HCA).

880.85 **Capital gains are taxable**

Profits and gains which under ordinary taxation concepts are gains of a capital nature are taxable under s CB 6 to CB 15. This issue was specifically raised in the Court of Appeal case of Love v Commissioner of Inland Revenue (1981) 5 NZTC 61,006 (CA), where it was contended that s 67 of the ITA 1976 does not apply where land sales are nothing more than a realisation of a capital asset. The Court rejected this contention stating that the section specifically sets out to tax identified situations of land transactions and, if liability arose by virtue of that fact, the Courts have the duty to give effect to that legislation. Quite clearly the Legislature has intended to create a tax liability on profits traditionally known as capital and as such traditionally not taxable.

880.90 **Land is not trading stock** [ss EA 2, YA 1]

In calculating income in the normal course of events, land is not included as trading stock and is therefore not covered by the trading stock rules in subpart EB. However, expenditure on land acquired on revenue account is “revenue account property” and its cost cannot be deducted for tax purposes until the property is disposed of or ceases to exist [s EA 2(2)]. For example, if a land developer has acquired land for development and resale, the portion of the acquisition and development costs relating to any part of the land which is unsold at year end is unable to be taken as a deduction: Thornton Estates Ltd v Commissioner of Inland Revenue (1998) 18 NZTC 13,577 (CA).

880.95 **Land disposed of for less than market value** [s GC 1]

Where “trading stock” is disposed of at less than market value, is treated as having been sold at its market price on the date of disposition. The term “trading stock” in these circumstances includes any land the disposal of which would produce income under ss CB 6 to CB 15.

880.100 **Date when land acquired and date when sold**

Except when the land is transferred from an “associated person” (in which case the land is deemed to have been acquired by the transferee on the same date as the transferor acquired it), land is considered to have been acquired or sold for income tax purposes at the moment when the beneficial ownership passed, which is the date of execution of an enforceable agreement for sale and purchase. The question of when land is sold was addressed in Mills v Commissioner of Inland Revenue (1985) 7 NZTC 5,025 (HC) in which it was held that, for a sale of land to take place, there must be an unconditional agreement for sale as it is only then that the equitable estate passes. The Mills decision was applied in TRA Case K60 (1988) 10 NZTC 487.

880.105 **Land transferred to an associated person** [s CB 15]

When land is transferred between a transferor and a transferee who are associated persons, the transferee is deemed to have acquired it on the day on which it was acquired by the transferor.

Where:

(a) Any land is transferred to an associated person; and
(b) The transferee subsequently sells that land at a profit; and
(c) The amount derived from the disposition would have been income of the transferor if the transferor had retained and then disposed of the land,
the proceeds of the disposition are taxable in the hands of the transferee.

Example:
D Ltd is in the business of developing land into commercial estates. R Ltd owns a number of retail outlets throughout New Zealand. D Ltd and R Ltd are associated persons. R Ltd purchases from D Ltd a block of land which forms part of one of D Ltd’s commercial estates. R Ltd has a retail outlet erected on the land and commences to trade from the premises. D Ltd pays tax on the profit in the normal way. Twenty years later, R Ltd sells the land and building in order to acquire more modern premises. R Ltd will be taxable on any difference between the sale price and the amount that it paid for the property 20 years earlier. The exclusion for the sale of business premises will not apply, as it is the circumstances of D Ltd (not R Ltd), that are relevant. The disposal proceeds would have been income in the hands of D Ltd had D Ltd retained the land (rather than selling it to R Ltd) and had later sold it.

880.110 Meaning of acquired

The word “acquired” connotes some element of intent or positive action on the part of the person acquiring the property. Therefore, a person who is the passive acceptor of a gift of land cannot be said to have acquired the land with any purpose or intent, and the donee is free to dispose of the land without any tax implications. This does not apply where the land is transferred from an associated person. It appears from the Australian case of Tikva Investments Pty Ltd v Federal Commissioner of Taxation (1972) 3 ATR 458 (HCA) that a donee who accepts financial obligations along with the gift (as when liability is assumed for a mortgage back to the donor or to another person) cannot be said to be a passive acceptor of the gift, and would be regarded as a purchaser of the land rather than a donee.

880.115 Repossession of land sold under agreement for sale and purchase

Where a vendor sells under an agreement for sale and purchase and later rescinds the contract because of default by the purchaser, the property is not “acquired” by resuming possession: Cowan v Federal Commissioner of Taxation (1972) 3 ATR 474, 72 ATC 4121 (VSC).

880.120 Land acquired or disposed of with other property [s DB 29]

Where any land is acquired together with any other real or personal property, the cost of acquisition must be apportioned between that land and that other real or personal property.

880.125 Sale of property on extended terms

When land is sold, the long established general rule is that the earnings basis of assessment is appropriate for business income. Consequently, where a person is in the business of selling land, the price of the land should be included in the taxpayer’s income for the year in which the land is sold (ie when the contract becomes unconditional). Where the taxpayer is a private individual whose income is earned in the form of salary and wages, and in the case of some professionals, the cash basis may be more appropriate.

Where a vendor mortgage is granted, the accrual rules will need to be considered in relation to the mortgage asset.

880.130 Mortgagee sale

A sale or disposition is deemed to include a mortgagee sale made as a consequence of the default of a taxpayer under a mortgage.

880.135 Spreading of income derived when land bought by the Crown [s EI 8]

Where a taxpayer derives income from a disposal of land to the Crown (including a compulsory acquisition) written application can be made to the CIR to spread the profit over the income year of disposal and the following three years. Written application should be made by or on behalf of the taxpayer within 12 months after the end of the tax year in which the disposal takes place, or within a further period if the CIR agrees.

Where the income is spread over two or more income years, any deduction for the cost (or deemed cost) must be allocated over the same income years and in the same proportions.
Any apportionment may be cancelled by the CIR at any time, in which case the balance of income not then assessed becomes taxable in one sum in the income year immediately preceding the year in which the apportionment is cancelled.

Before granting the application, the CIR may require the taxpayer to lodge suitable security for the payment of the taxation which becomes payable over the period of the apportionment. The legislation does not mean that profits on dispositions of land to the Crown are taxable in all cases. It merely provides for a concession (by the spreading of the profit over a maximum period of four years) to those persons who would otherwise be taxable on the profit in one sum in the year of disposal.

880.140 Loss on sale of land

There is no specific provision for the deduction of losses on the sale of land against other income. In TRA Case H20 (1986) 8 NZTC 212, it was held that the taxpayer had purchased a property with the intention of sale and, therefore, the profits were assessable. The deductibility of a loss on sale was allowed because the CIR had not argued that the loss was a capital loss.

TRA Case H20 was cited with approval in TRA Case L41 (1989) 11 NZTC 1,256, but it was stated that the true test of deductibility is the character of the relevant loss. A doctor had purchased property adjacent to his rooms and intended to renovate it prior to its sale as a tenanted property to an investor. Obtaining tenants proved difficult and the property was sold semi-complete to a private company of which the doctor was the major shareholder. The substantial loss was held deductible, having been incurred in the course of endeavouring to gain income.

In TRA Case M109 (1990) 12 NZTC 2,690, the taxpayers sought to claim as a loss the expenditure on the purchase of land. The Court held that, although the expenditure had been incurred, it could not be treated as a loss because a loss had not transpired.
Leased Assets

Chapter 900

900.10 Overview of leased assets

Leases with financing characteristics are known as “finance leases” and taxed as a financial arrangement [see 900.15]. All leases that are not finance leases (commonly referred to as operating leases) are excepted financial arrangements and thus excluded from the financial arrangements rules [s EW 5(9)].

Advance rental payments for the hire of leased property as at balance date may be prepaid expenditure [see 1140 PREPAYMENTS]. However, specific provisions exist to ensure that advance rental payments under operating leases are spread over the term of the lease [900.35].

The taxation of hire purchase agreements has separate specific provisions [see 640 HIRE PURCHASE AGREEMENTS].

Leases entered into before 20 May 1999 are excepted financial arrangements and fall outside the financial arrangement rules. Leases entered into between 6 August 1982 and 19 June 1999 are classified for taxation purposes as either specified leases or non-specified leases. The definition of “specified leases” only applies to leases entered into before 20 May 1999 [see 900.45].

A “lease” [s YA 1] is a disposition that creates a leasehold estate and, in the rules applying to finance leases, specifically means an agreement under which a lessor transfers to a lessee, for the term of the lease, a personal property lease asset or the right to possess a personal property lease asset in consideration for a lease payment. A lease includes:

(a) A hire or bailment, and a sublease; or
(b) A licence to use intangible property.

A hire purchase agreement and an assignment of a hire purchase agreement are excluded from the definition of “lease”.

The CIR may treat two or more successive leases of the same lease asset to the same lessee (or to an associate of the lessee) as one lease.

A “personal property lease asset” is any personal property (other than livestock and bloodstock) that is subject to a lease [s YA 1].

900.15 Finance leases [ss FA 6, FA 7, FA 8]

The finance lease rules apply to leases entered into on or after 20 May 1999.
A “finance lease” is a lease of a personal property lease asset, entered into on or after 20 May 1999, that satisfies any one or more of the following conditions (a) to (c):

(a) At the time the person enters into the lease, the lease involves or is part of an arrangement that involves:
   (i) The transfer of the ownership of the asset to the lessee, or an associate of the lessee, during or at the end of the lease term;
   (ii) The lessee or an associate of the lessee having the option of acquiring the asset for an amount that is likely to be substantially lower than the asset’s market value on the date of acquisition; or
   (iii) A right of an associate of the lessee to acquire the asset, or a right of the lessor to require an associate of the lessee to acquire the asset, during the term of the lease under an arrangement that does not entitle the associate to receive all of the personal property lease payments that may fall due after the acquisition;

(b) At the time the person enters the lease, or from a later time, the lease has a lease term that is more than 75 per cent of the asset’s estimated useful life, as defined in s EE 63 [see 250.60];

(c) The person enters the lease on or after 20 June 2007 and the lease is, or is part of, an arrangement that, when the person enters the lease (or when a change in the terms of the arrangement changes the allocation or size of the risks and rewards incidental to ownership of the lease asset):
   (i) Involves the use of the asset outside New Zealand for all or most of the term of the lease; and
   (ii) Involves income of a person other than the lessor, arising from the use of the asset by any person, that is exempt income, or excluded income, or non-residents’ foreign sourced income; and
   (iii) Is a finance lease under NZIAS-17 for the lessor, or for a company that is in the same group of companies as the lessor and derives assessable income from the arrangement, or is an arrangement under which persons other than the lessor bear substantially all the risks and rewards incidental to ownership of the lease asset, determined as at the time the person enters the lease and taking into account later changes to the arrangement [s YA 1].

A finance lease is treated as a sale of the lease asset by the lessor to the lessee on the date that the lease starts. The lessor is treated as giving the loan to the lessee for the lease asset, and the lessee is treated as using the loan to buy the lease asset. The depreciation and financial arrangement rules apply to the recharacterised arrangement [s FA 6]. For the lessor, the amount of the loan (ie the consideration) is determined under s EW 32. For the lessee, amount of the loan is determined under ss EW 32 and EW 33 [s FA 7, see 470.90]. For the purposes of the depreciation rules, the lessee (not the lessor) is treated as the owner of the leased asset [s FA 8]. This means that the lessee can claim depreciation on the asset and the lessor cannot.

**900.20 Treatment when finance lease ends** [ss CC 11, CC 12, FA 9, FA 10]

(1) **Lesse acquires asset** [ss CC 11, FA 9]

When the lessee under a finance lease acquires the lease asset on or before the end of the lease term, the acquisition is treated as the same sale as occurred under s FA 6 [see 900.15], with the result that no further tax adjustment is required.

If the lessee under a finance lease, or a person who is associated with the lessee at the time of acquisition, acquires the lease asset and later disposes of it for more than the consideration they paid for it, the excess is income under s CC 11. The excess is income of the lessee in the income year in which the lessee or the associated person disposes of the asset. The excess is not income under s FA 9 if the consideration derived on the disposal is income under another provision of the ITA 2007.

(2) **Lessor acquires asset** [ss CC 12, FA 10]

If the lessee under a finance lease does not acquire the lease asset by the end of the lease term, the lessor is treated as having acquired it on that date at the asset’s guaranteed residual value. If there is no guaranteed
residual value, the consideration is treated as zero. For the purposes of s FA 10, the consideration is called the “notional sale price”.

The “guaranteed residual value” is the amount to which both of the following apply:

(a) It is equal to the value of the lease asset as agreed in the lease by the lessor and the lessee; and
(b) Its receipt by the lessor, on the expiry of the lease term, is asserted and guaranteed by the lessee [s YA 1].

When the lessor sells, assigns or leases the lease asset to another person under another finance lease after the end of the original lease term, the following rules apply:

(a) If the consideration is more than the notional sale price:
   (i) To the extent that it is paid by the lessor to the lessee under the original finance lease, the notional sale price is increased by the amount of the difference; and
   (ii) To the extent that it is not paid by the lessor to the lessee under the original finance lease, the difference is income of the lessor under s CC 12 in the income year in which the original lease term ends.

(b) If the consideration is less than the notional sale price, and the lessee is required to pay the deficit to the lessor, the notional sale price is reduced by that amount.

If the lease is terminated before the end of the lease term and the lessee does not acquire the lease asset, the lessor is treated as acquiring it for an amount calculated using the formula:

\[
\text{outstanding balance} - \text{release payment}
\]

Where:

“Outstanding balance” is the amount of the outstanding balance of the loan on the date the lease is terminated.

It includes the principal, interest and penalties that are owing by the lessee on the date of termination [s YA 1].

“Release payment” is the amount the lessee paid to be released from their obligations under the lease.

The provisions in s FA 10 override s EE 45, which determines consideration for purposes of a disposal under the depreciation rules.

**900.25 Adjustment when lease becomes finance lease [ss CH 6, DB 51B, FA 11]**

A lessor and a lessee must make an adjustment if either:

(a) The lease is a consecutive or a successive lease:
   (i) That is treated as one lease (see below);
   (ii) With a term that the lessor and lessee do not contemplate, at the start of the term, will be more than 75 per cent of the estimated useful life of the personal property lease asset; and
   (iii) With a term that is more than 75 per cent of the asset’s estimated useful life; or

(b) The lease is an operating lease that becomes a finance lease under para (c) of the definition of “finance lease” in s YA 1 [see 900.15].

Two or more consecutive or successive leases are treated by the CIR as one lease if the same personal property lease asset has been leased to the same lessee or an associated person under the consecutive or successive leases [s YA 1 definition of “lease”, paragraph (d)(v)].

The lessor and lessee must each calculate an adjustment for the lease and include the adjustment in their tax return for the income year in which the lease becomes a finance lease.

The adjustment is calculated for the period (from the start of the term of the lease to the end of the income year in which the lease becomes a finance lease) using the following formula:

\[
\text{finance income} - \text{finance expenditure} - \text{unadjusted income} + \text{unadjusted expenditure}
\]

Where:
“Finance income” is the income that the lessor or lessee would have derived under the lease if the lease were a finance lease for the period;
“Finance expenditure” is the expenditure that the lessor or lessee would have incurred under the lease if the lease were a finance lease for the period;
“Unadjusted income” is the income that the lessor or lessee actually derived under the lease;
“Unadjusted expenditure” is the expenditure that the lessor or lessee actually incurred under the lease.
A positive adjustment amount is income under s CH 6 in the income year in which the lease becomes a finance lease. A negative adjustment amount is a deduction under s DB 51B in the income year in which the lease becomes a finance lease.

**900.30 Adjustments for certain operating leases entered into before 20 June 2007 [ss CH 6, FA 11B]**

A lessor must make an adjustment if a lease is an operating lease that:

(a) Was entered into on or after 20 May 1999 and before 20 June 2007;
(b) Is an arrangement, or part of an arrangement that, on 20 June 2007, meets the requirements of paragraph (c)(i) to (iii) of the definition of “finance lease” [see 900.15];
(c) Has a lease term ending after the end of the income year in which 20 June 2007 falls (the “adjustment year”); and
(d) Does not meet the requirements of s FA 11(1) before the end of the income year after the adjustment year.

The lessor must adjust their income and expenditure calculated for the lease asset by including an adjustment in their return of income for the tax year corresponding to the income year after the adjustment year. The adjustment is calculated using the following formula:

\[
\text{total depreciation losses} / 6
\]

Where:

“Total depreciation losses” is the total amount of depreciation loss for the lease asset allowed to the lessor in the period from the start of the term of the lease to the end of the adjustment year.

The adjustment is income of the lessor under s CH 6 in the income year after the adjustment year. The ATV of the lease asset at the beginning of the income year after the adjustment year is the total of the adjustment and the ATV the lease asset would otherwise have had. For income years beginning after 20 June 2007 in which the lease is an operating lease, the depreciation loss allowed for the lease asset, other than on disposal, is five-sixths of the depreciation loss that would otherwise be allowed.

**900.35 Lessee’s deductions under an operating lease [s EJ 10]**

When a lease of personal property is not a finance lease or a specified lease, s EJ 10 applies to allocate the payments under the lease to the respective income years over the life of the lease. The allocation is made under the following formula:

\[
(\text{part of term} / \text{term of lease}) \times \text{total of payments}
\]

Where:

“Part of term” is that part of the lease term that falls within the income year;
“Term of lease” is defined in s YA 1, but is generally the lease term; and
“Total of payments” is the total of the personal property lease payments.

Hence, prepaid lease installments under leases that are not finance leases or specified leases are not deductible in the year incurred and must be spread over the term of the lease.
Example:
On 1 October 20X1 a taxpayer with a 31 March balance date entered into a lease agreement and paid a deposit of $20,000 with monthly payments thereafter of $1,000 over a period of five years so that total payments amounted to $80,000. The lease is not a finance or a specified lease. Using the formula in s EJ 10(3) the amount allocated to each income year is as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Formula</th>
<th>Amount allocated</th>
</tr>
</thead>
<tbody>
<tr>
<td>20X1-X2</td>
<td>$8,000</td>
<td></td>
</tr>
<tr>
<td>20X2-X3</td>
<td>$16,000</td>
<td></td>
</tr>
<tr>
<td>20X3-X4</td>
<td>$16,000</td>
<td></td>
</tr>
<tr>
<td>20X4-X5</td>
<td>$16,000</td>
<td></td>
</tr>
<tr>
<td>20X5-X6</td>
<td>$16,000</td>
<td></td>
</tr>
<tr>
<td>20X6-X7</td>
<td>$8,000</td>
<td></td>
</tr>
</tbody>
</table>

A non-specified lease of a vehicle was considered in TRA Case J67 (1987) 9 NZTC 1,399. The lessor was entitled to rental of $1,260 per month for 18 months and, irrespective of when the lease was terminated by the lessee, was also entitled to $26,190 reduced by the rent previously paid. Private usage of the vehicle was 20 per cent. The taxpayer in the 1984-1985 income year paid rental of $1,455 but claimed to deduct $26,190. The TRA held that although s BD 2 of the ITA 1994 [now s BD 2] may have allowed deduction of $26,190, s EO 2 of the ITA 1994 [now s EJ 10] allows a deduction of the $1,455 paid in the 1985 income year which was incurred in deriving gross income.

900.40 Leased assets purchased and later sold at profit [ss CG 7, FA 5]

If a taxpayer acquires an asset that the taxpayer had previously leased, rented, or hired, and then sells the asset for more than the amount paid by the taxpayer for its acquisition, the taxpayer must include in their income (under s CG 7) the lesser of the amount by which the consideration on disposal is more than:

(a) The sum of the payments made; or
(b) The total deductions previously allowed for the lease, rental, or hire payments.

This only applies if the consideration on disposal is not income of the lessee under another provision of the ITA 2007. The amount is included in income in the income year in which the asset is sold.

This provision applies only to plant, machinery, or other equipment, motor vehicles, and temporary buildings. The provision also applies when an associated person of the lessee acquires the asset (otherwise than under a relationship agreement) and then sells it at a profit. In this case the lesser of the excess and the total amount of the lessee’s deductions is treated as income of the lessee.

If the leased asset was disposed of together with other assets, the total consideration must be apportioned between the leased asset and the other assets so as to reflect their respective market values. The amount apportioned to the leased asset is treated as being its cost of acquisition or its sale price, as applicable.

If a leased asset is sold or disposed of without consideration or for less than its market value (other than under a relationship agreement), the asset is deemed to have been sold for its market value at the date of sale.

900.45 Specified leases and non-specified leases

The taxation treatment of a specified lease is regarded as a sale of the asset that is subject to the lease, with a loan from the lessor to the lessee.

A “specified lease” [s YA 1] is a lease of a personal property lease asset if any one or more of the following apply:

(a) The lease is entered into between 6 August 1982 and 19 May 1999 (inclusive), and the lease has a guaranteed residual value, or a term that is more than 36 consecutive months, or a term that is the economic life of the asset because the CIR considers that the asset has an economic life of less than 36 months, and

(i) The lessee becomes the owner of the asset at the end of the lease term;
(ii) The lessee has the option to purchase the asset at the end of the lease term at a price the CIR considers will be significantly lower than the market value of the asset at that time;

(iii) The total of all personal property lease payments and the guaranteed residual value is more than or equal to, or slightly less than, the cost of the asset; or

(iv) The lessor and the lessee agree that the lessee is liable for the payment of all, or nearly all, expenditure incurred for the costs of repair and maintenance of the asset and any other incidental costs arising during the lease term for the use of the asset;

(b) The lease is entered into between 6 August 1982 and 19 May 1999 (inclusive), and the lessee acquires ownership of the asset by any means, whether from the lessor or another person; or

(c) The lease is entered into between 28 October 1983 and 19 May 1999 (inclusive), and a person associated with the lessee acquires the asset.

A “personal property lease asset” is any personal property (other than livestock or bloodstock) that is subject to a lease [s YA 1].

The “guaranteed residual value” means an amount:

(a) That is equal to the value of a personal property lease asset as agreed in the lease by the lessor and the lessee; and

(b) The receipt of which by the lessor, at the end of the lease term, is guaranteed by the lessee [s YA 1].

Two or more consecutive leases (or successive leases which, in the opinion of the CIR ought to be regarded as consecutive leases) to the same lessee (or lessees who are associated persons) for the same lease asset shall be deemed to be one lease of that asset the term of which runs from the commencement of the first lease to the expiry of the last.

A “non-specified” lease means any lease other than a specified lease.

900.50 Taxation of specified leases [ss FZ 2, FZ 3, FZ 4]

On entering into a specified lease:

(a) The lessor is deemed (at the commencement of the lease term):

   (i) To sell the asset to the lessee at cost price (Inland Revenue may accept market price where cost price cannot be determined in the normal manner); and

   (ii) To advance the lessee an amount equal to the cost price (or market price if appropriate) of the asset.

(b) The lessee is deemed to have:

   (i) Incurred capital expenditure equal to the cost price of the leased asset; and

   (ii) Raised a loan to finance the purchase of the lease asset.

On the expiry of the lease term of a specified lease:

(a) Where the lessee does not purchase the lease asset then it is deemed to have been sold to the lessor:

   (i) At a GRV specified in the specified lease; or

   (ii) At nil where there is no GRV specified in the lease;

(b) If the asset is subsequently sold, assigned, or leased under a specified lease by the lessor to another person for a consideration different to the deemed sale price and an adjustment is made to the residual credit (if any) received by the lessee under the first lease agreement, then the deemed sale price is to be adjusted accordingly [s FZ 2].

On early termination or cancellation of a specified lease:

(a) The leased asset is deemed to be sold on the termination date to the lessor by the lessee at a value that equals the amount by which the outstanding balance of the loan, deemed to be advanced by the lessor to the lessee, exceeds any amounts payable by the lessee to the lessor for release from the
Lessee’s obligations under the lease. Where no such excess arises the lease asset is deemed to be sold for no consideration; or

(b) Where the consideration payable by the lessee to the lessor on termination exceeds the outstanding balance of any loan, that excess is deemed to be income derived by the lessor in the income year of termination.

Under s FZ 2(8), if a lessee (or an associated person of a lessee), purchases or acquires a leased asset and then subsequently sells it, any excess in consideration between sale and purchase is income to the lessee.

**900.55 Income of lessor under specified lease [s FZ 3]**

The income of a lessor from a specified lease is deemed to be interest. The sum of the lease payments and the GRV (if any) less the cost price of the asset is the amount of interest which is assessable over the full lease term. The assessable interest is deemed to be derived during the initial period and during each instalment period calculated either:

(a) On the outstanding balance in such a manner and rate that ensures that the total amount is equal to the sum of the lease payments and the GRV (if any), less the cost price of the lease asset; or

(b) By another method “commonly applied in commercial usage” which, in the opinion of the CIR, results in a fair allocation of amounts which equal the sum of the lease payments and the GRV (if any), less the cost price of the lease asset.

Depreciation may not be claimed as a deduction by a lessor (under specified lease) [s FZ 2(3)]. If the lessor is a non-resident, then the specified lease rules apply to override the rules in the withholding payments regulations (ie because of the deemed sale to the resident lessee), and also the interest derived under the specified lease will be subject to non-resident withholding tax and subject to the limits in any relevant DTA.

**900.60 Deduction to lessee under specified lease [s FZ 4]**

When the lease asset is used or available for use in deriving income, depreciation is allowed in accordance with the depreciation regime in Subpart EE [see 250 DEPRECIATION]. A deduction is not allowed for the lease of an asset which is solely for personal use.

The lessee is also allowed a deduction for the interest content of all instalments paid. The interest is calculated using one of the methods which the lessor is required to use when determining income under the specified lease. The lessee and the lessor do not have to use the same methods. One such method is the “Rule of 78” [see 900.65], which is an alternative to an actuarial method. The Rule of 78 method is not appropriate for specified leases involving large sums and when it may be anticipated that the lessee has sufficient expertise to apply an actuarial method.

**900.65 The Rule of 78**

The “Rule of 78” may be used as a means of allocating the interest attributable to specified leases to income years.

**Example:**

A lease agreement was entered into on 1 April 20X1 for a machine which is to be leased for a period of 36 months. The cost price of the machine is $100,000. Lease payments are $4,000 per month, and at the end of the lease on 31 March 20X4, the lessee may purchase the asset at a guaranteed residual value of $5,000. The lease is a specified lease.

When the lease commences, the lessor records a loan to the lessee for $100,000 and the lessee records a loan from the lessor. Over the lease term the total interest income is equal to the lease payments received plus guaranteed residual value less the cost of the asset:

\[ ($4,000 \times 36) + 5,000 - 100,000 = 49,000 \]

Interest of $49,000 is allocated to the three income years covered by the lease term on a basis which gives a fair and reasonable allocation. If the Rule of 78 was used the allocations would be:

<table>
<thead>
<tr>
<th>Year</th>
<th>Income</th>
</tr>
</thead>
<tbody>
<tr>
<td>20X1-2X2</td>
<td>$49,000 × 366/666 = $26,927</td>
</tr>
<tr>
<td>20X2-3X3</td>
<td>$49,000 × 222/666 = $16,333</td>
</tr>
<tr>
<td>Lease Term</td>
<td>Principal</td>
</tr>
<tr>
<td>------------</td>
<td>-----------</td>
</tr>
<tr>
<td>20X3-X4</td>
<td>$49,000</td>
</tr>
</tbody>
</table>

The sum of the number of digits of the whole lease term over a period of 36 months is:

36 + 35 + 34 + 33 + …. + 1 = 666

In the year ended 31 March 20X2 the sum of the digits of months is:

36 + 35 + 34 + 33 +…. + 25 = 366

In the year ended 31 March 20X3 the sum of the digits of months is:

24 + 23 + 23 + 22 + …. + 13 = 222

In the year ended 31 March 20X4 the sum of the digits of months is:

12 + 11 + 10 + 9 + …. + 1 = 78
Chapter 910
Legal Expenses

910.10 Legal expenses — general position [ss DA 1, DB 5, DB 18]
The general question of deductibility of legal expenses is determined by s DA 1 requiring a nexus between the income-earning process and the expenditure. There are also specific provisions allowing a deduction for the costs of borrowing money used for the purpose of deriving gross income and for the costs of preparation, registration or renewal of leases of property. The deduction is not limited to legal expenses. While there is no section in the ITA 2007 which is specific to legal expenses, there are a number of cases which provide some guidance.

910.20 Lease agreements [s DB 18]
Legal expenses incurred during the income year for the preparation and registration of any lease of property used in deriving gross income, or in the renewal of any such lease, are deductible.
Provided there is a nexus between the expenditure and the income-earning process, legal and other costs of acquiring a lease by purchase and the cost of transfer of a lease would also be deductible.
Expenses incurred in the preparation and registration of easements. Payments made to the owner of the land for the granting of the easement are not deductible. Where expenditure is incurred in the period from 1 January 1999 to 31 March 2002, Public Ruling BR Pub 98/7 applies [see TIB vol 10:12 (December 1998) at 47-51]. This ruling has not been reissued, but an interpretation statement [see TIB vol 14:9 (September 2002) at 30-32], continues to apply for expenditure incurred after 31 March 2002.

910.25 Borrowing money [s DB 5]
Legal expenses incurred in borrowing money to be used by the taxpayer as capital in deriving assessable or excluded income are deductible.
The word “borrowing” contemplates the creation of a debt and the relationship of debtor and creditor. It does not contemplate establishing an equity (shares or capital) relationship.
Section DB 5 overrides the capital limitation but the other general limitations such as the inability to deduct private or domestic expenditure remain and the general permission in s DA 1 must still be satisfied.
The following legal expenses are within the scope of s DB 5 and are deductible if there is a nexus between the expenditure and the income-earning process:
(a) Expenses incurred by a company in raising money by the issue of debentures, including the cost of preparing and issuing prospectuses;
(b) Loan procuration fees;
(c) Expenses incurred in borrowing by way of mortgage even when the mortgage is raised contemporaneously with the purchase of property.
Expenses incurred on the discharge of a mortgage or in the repayment of a loan or debenture generally are not deductible. However, where legal expenses are incurred in the discharge of a mortgage or debenture under a scheme of financial reconstruction (ie an old mortgage or debenture is paid off and a new loan raised), the legal expenses incurred for the discharge of the old debt and for the new loan are allowable as a deduction.
The new lenders would require the discharge of the old encumbrance in order that their security would be a first mortgage and so the costs relating to the discharge are incurred in the borrowing of money. However, costs incurred in transferring an existing mortgage when land is purchased would not be deductible as it is an expense in the transfer of a mortgage encumbrance and not in actually borrowing money.

**910.30 Deductible legal expenses**

From 1 April 2009, a taxpayer whose legal expenses for the year do not exceed $10,000 is able to deduct those expenses in full, provided the general permission is satisfied, without the need to consider the capital limitation. To be eligible for this concession, the legal services must be legal services as defined in the Lawyers and Conveyancers Act 2006 and must be provided by a person who holds a practising certificate issued by the New Zealand Law Society or an Australian equivalent. Where the legal expenses for the year do exceed $10,000, both the general permission and the capital limitation must be considered.

The following legal expenses are deductible for tax purposes under the general permission [s DA 1]:

(a) Changes to the constitution of a company and the cost of appointing company directors.
(b) Breach of contract, where a trader defends an action for breach of contract arising out of the sale of goods.
(c) Breach of traffic or other regulations or other infringements of the law by employees. However, if the employer is also implicated in the illegal acts of the servants, or where the expenditure is not directly associated with the carrying on of the lawful business of the employer, the costs are not deductible: *Magna Alloys and Research Pty Ltd v Federal Commissioner of Taxation* (1978) 9 ATR 188 (NSWSC). Traffic fines or penalties are non-deductible, being of a private rather than business nature: *TRA Case K62* (1988) 10 NZTC 504.

In *TRA Case L15* (1989) 11 NZTC 1,113 a real estate agency manager failed in claiming a deduction for legal costs incurred in defending a driving charge for which he was ultimately convicted and disqualified from holding a driving licence. The expenditure was not incurred to preserve the taxpayer’s income-earning capacity and, in so far as the income would be increased by licence retention, he had failed to provide a basis for apportionment between private and work elements. Legal fees payable by an importing company for charges brought under the Trade and Industry and Customs Acts were held deductible: *Nicholas Nathan Ltd v Commissioner of Inland Revenue* (1989) 11 NZTC 6,213 (HC). It was held commercially necessary and prudent to take advice as to whether a breach of law had occurred and as to the best way to minimise penalties. A sufficient nexus was established between the carrying on of the taxpayer’s business and the legal expenses. Fines or penalties imposed by Courts for breaches of the law are non-deductible as a matter of public policy to prevent business law-breakers gaining a preference over others.

(d) Expenses incurred in applying under the Tenancy Act for the fixing of a fair rent for premises, the Trade Practices Act for inquiries into the taxpayer’s own position and the Commerce Act regarding inquiries into the taxpayer’s position.
(e) Appearing before Commissions and Tribunals (eg Commerce Commission, Licensing Control Commission or Price Tribunal). Defending one’s rights before any Commission for established licences are deductible. Costs incurred in defending applications by competitors are not deductible.
(f) Debt collection, including the costs of unsuccessful attempts at collection.
(g) Defending libel actions.

**Example:**

In *Cox v Commissioner of Inland Revenue* (1992) 14 NZTC 9,164 (HC) a chartered accountant who was a director in the collapse of a substantial merchant banking group of companies, was able to claim legal expense as a defendant in a damages claim by the liquidator of the merchant banker.

Legal expenses incurred in response to an offensive newspaper article to preserve the reputation of a local body councillor who was also a director of public and private companies were deductible as there was a sufficient nexus to the income-earning processes: *TRA Case M121* (1990) 15 TRNZ 231. See also *Herald and Weekly Times Ltd v Federal Commissioner of Taxation* (1932) 48 CLR 113 (HCA).
Expenses incurred by a university lecturer (who was also a part-time freelance journalist) in seeking legal advice for a comment by a Crown Minister who described his work as politically motivated was deductible even though no action was taken: TRA Case H38 (1986) 8 NZTC 334.

(h) Expenditure incurred in creating or amending superannuation schemes for employees. A superannuation fund is for the benefit of employees and, as such, is part of the wage structure mechanism.

(i) Legal costs for objections to land valuations for rating purposes or to the classification of land made by a local authority.

(j) Patents: registration, renewal of and defending existing patent rights.

(k) Reducing or avoiding a liability for expenditure which, if paid, would have been deductible.

(l) Removal of an obstacle to trading or safeguarding or preserving an existing business.

(m) Litigation expenses incurred in an attempt to have a service contract reinstated. In TRA Case W42 (2004) 21 NZTC 11,387, the taxpayers sought a deduction for legal expenses incurred in an attempt to have a service contract reinstated on the basis that they had been unfairly treated in relation to the contract process.

(n) Royalties, being expenses incurred in connection with any trade agreement fixing the royalties payable on each article assembled in New Zealand.

(o) Costs of preparation of sharemilking agreements.

(p) Costs of dealing with enquiries from Inland Revenue for current or past year assessments.

(q) Tax return preparation costs and legal fees, Court costs, witnesses fees and accounting costs, in contesting a tax assessment and in pursuing a challenge [s DB 3].

(r) Renewal of trademarks and the costs of defending existing trademarks. The cost of registering new trademarks is not deductible.

(s) Intellectual property. In TRA Case H35 (1986) 8 NZTC 312, legal fees incurred to defend an action brought against a former employee over intellectual property were held deductible because if the expenses had not been incurred he might not have been able to earn his existing income in his new position.

(t) Improving employment contract. In TRA Case H35 (1986) 8 NZTC 312, legal fees incurred to obtain better terms of a consultancy arrangement were deductible even if the ultimate goal sought was not achieved.

(u) Costs incurred in appearing before a professional disciplinary committee are deductible if related to a successful hearing where the taxpayer has been faced with the risks of being suspended from his practice: A v Commissioner of Inland Revenue (1985) 7 NZTC 5,074 (HC). A solicitor’s claim to deduct a fine imposed by a law society disciplinary committee was denied in Robinson v Commissioner of Inland Revenue [1965] NZLR 246 (SC). See the obiter comments in TRA Case K50 (1988) 10 NZTC 411, where the success of the hearing was considered immaterial.

### 910.40 Non-deductible legal expenses

The following legal expenses are not deductible for tax purposes as they fall outside the provisions of ss DA 1, DB 5 and DB 18:

(a) Acquiring capital assets (eg legal expenses incurred in acquiring a hotel licence). The acquisition of a licence to sell fermented liquors is the acquisition of a capital asset. However, the cost of raising money to buy an asset is deductible.

(b) Forming, registering, or liquidating a company.

(c) Increasing, reducing or altering the capital structure of a firm. Expenses aimed at altering or improving the capital structure of an organisation so as to obtain a permanent and enduring advantage are not deductible on the grounds that the expenditure is of a capital nature. A deduction for legal costs...
Legal Expenses

incurred in issuing debentures with a floating rate of interest, or in substitution for shares or in issuing convertible notes is also precluded.

(d) Expenses incurred in connection with the manner of distribution of income among shareholders. This would include such matters as disputes between various classes of shareholders as to their rights or regarding the method of appropriating the company’s profits after they were derived. A further example would be expenses incurred by preference shareholders regarding the payment of dividends out of profits instead of the appropriation of the profits to a reserve. Such expenses are not incurred in deriving income but in ascertaining its appropriation.

(e) Legal expenses of drawing up a partnership deed or trust deed.

(f) Protection of a capital asset. For example:

(i) In defending allegations of evasion of its obligations, a club incurred legal expenses in being represented before a commission appointed to investigate its affairs. The commission found that the allegations were without substance. It was held that the expense was incurred in order to protect the existence of the club and not to earn its income and consequently was not allowable as a deduction: IT Case No 488 (1942) 12 SATC 64.

(ii) Expenses incurred in the original registration of a trade-mark are capital and non-deductible; but those incurred in renewing registration are revenue and deductible: Case 78 (1955) 5 CTBR (NSW) 480.

(iii) Defending or prosecuting a case to have a business suppressed as a nuisance.

(iv) Legal costs and other expenditure incurred by a taxpayer operating in a licensed industry in appearing in defence of a licence.

(v) Expenditure incurred in opposing applications for licences by other firms wishing to carry on similar business in the district.

(vi) Appeals against modification of the terms of a vehicle authority.

(g) Legal expenses incurred in the sale of a business. The cost of valuing trading stock is however deductible.

(h) Litigation or unlawful acts. For example:

(i) Unlawful acts of a taxpayer or of the directors of a limited liability company. However, expenses incurred by a taxpayer arising from the negligence of an employee are deductible if the expenditure bears a direct relationship between its incurrence and deriving income (e.g., legal costs in connection with a breach of traffic regulations by an employee driver).

(ii) Defending a prosecution for a breach of the law in connection with the business, except in the case of breaches by employees. However, if the suit is successfully defended, no breach of the law has occurred and the expenses are then allowable.

(iii) Legal fees for advice to a company’s sole shareholder and director concerning an investigation by the CIR and the police were held non-deductible in TRA Case K8 (1988) 10 NZTC 149. The benefit of the advice was more private, relating to the shareholder’s personal and private reputation and less directly relating to his business reputation.

(iv) Legal costs incurred by a partnership in connection with criminal proceedings against one of the partners: Spofforth and Prince v Golder (Inspector of Taxes) [1945] 1 All ER 363 (KB).

(v) Promoting legislation, irrespective of whether the passing of such legislation will increase income or reduce expenditure.

(vi) In TRA Case U30 (2000) 19 NZTC 9,286 the TRA held that legal costs incurred in defending a criminal charge were not an allowable deduction because the expenditure was of a private and personal nature. Section DA 2(1) prohibits a deduction being allowed for expenditure having a private or domestic nature.

Staples Tax Guide 2012 1083
(i) Expenses incurred in opposing an application by a lessee for a reduction in the rental payable, where the lease has more than one year to run. Where the lease has only one year to run, or is an annual lease, the expenses are deductible.

(j) Expenses incurred in deriving income from employment [s DA 2(4)].

(k) In TRA Case Z18 (2009) 24 NZTC 14,199, it was determined that legal expenses incurred in challenging the differential between the milk payouts to the taxpayers of a merged dairy co-operative were capital in nature and non-deductible.

**910.50 Legal expenses for negligence of taxpayer**

No deduction is allowed for a fine inflicted on a taxpayer: *Commissioners of Inland Revenue v EC Warnes and Co Ltd* (1919) 12 TC 227. However, a distinction must be drawn between a fine imposed in criminal or quasi-criminal proceedings and a fine imposed on a member by professional or trade organisations. Whether costs incurred in answering charges of unfair trade practices, or negligent or unskilful work (and any fine imposed by a trade or professional disciplinary body), are deductible depends on the facts of each case. As a general rule, they will not be deductible.

Losses arising out of the negligence or unlawful act of a taxpayer are, in some circumstances, deductible for tax purposes. In *Commissioner of Taxes v Webber* [1956] NZLR 552 (SC) a solicitor was negligent when he invested money for a client and the money was lost. He refunded the money to the client and, in his return of income, claimed a deduction on the basis that it was a loss exclusively incurred by him in the production of his income. The CIR refused to allow a deduction, contending that the loss was not exclusively incurred by the taxpayer in the production of income, but that it was capital expenditure incurred to protect the goodwill of the practice rather than the earned income. It was held that a loss was distinguishable from expenditure. Further, while in some New Zealand cases, notably *Ward and Co Ltd v Commissioner of Taxes* [1923] AC 145 (PC), and *Aspro Ltd v Commissioner of Taxes* [1932] AC 683 (PC), the purpose of the expenditure has been referred to as being a useful or appropriate test, in the present case the court was dealing with a loss which was incurred involuntarily. It was therefore meaningless to inquire as to the purpose of the loss. Where, in New Zealand, a claim is made for a loss as distinct from an expenditure, the inquiry must be simply whether the loss was incurred in the course of producing income. The loss must be fairly incidental to the carrying on of the business.

In *A v Commissioner of Inland Revenue* (1985) 7 NZTC 5,074 (HC), a medical practitioner was found guilty by the Medical Council of misconduct. He had previously been found guilty in the District Court and the Court of Appeal subsequently allowed the taxpayer’s appeal against sentence. The taxpayer claimed, as deductions from his income, legal fees incurred, fines imposed, and the costs awarded against him. The claim was disallowed by the CIR. The Court held that the claims for deduction of the fines and costs payable to the Medical Council were properly disallowed by the CIR because the expenditure was a penalty imposed on the taxpayer for dishonest activities. In order to claim a deduction for the legal costs incurred in the defence of the taxpayer, it must be established that they were incurred so that the taxpayer could go on earning his income. The legal expenses of defending the criminal charges were disallowed as there was insufficient evidence to enable any apportionment to be made between personal and business expenditure.

However, in TRA Case K50 (1988) 10 NZTC 411, a veterinarian’s entitlement to deduct legal expenses and an ordered contribution to disciplinary tribunal expenses was discussed. In obiter comment, the right to deduct expenses was upheld and the success or otherwise of the hearing was considered irrelevant.

On the other hand, there has never been any doubt that a liability incurred by a taxpayer through the negligence or unlawful acts of employees is deductible. In earning income, the employer must undertake the risk of liability for the wrongful acts of employees and, if the employer incurs expenditure to make good the loss, it may properly be claimed as a deduction in the year in which it is incurred.
Chapter 920

Look-through Companies

920.10 Overview

The look-through company (LTC) regime, contained in Subpart HB of the Act, applies for income years commencing on or after 1 April 2011. The regime effectively replaces the qualifying company (QC) and loss-attributing qualifying company (LAQC) regimes [see 1160]. Entry into the QC and LAQC regimes is not available for income years starting on or after 1 April 2011.

The company is transparent for tax purposes. Income, expenses, gains, losses, tax credits and rebates pass through to the shareholders and are taxed at the shareholders’ marginal tax rates. Some tax matters are dealt with at the company level such as GST, PAYE and other withholding taxes and matters related to the amalgamated companies regime [see 920.40].

As income tax is not payable at the company level, memorandum accounts under the imputation regime are not required.

920.15 Eligibility criteria

The look-through company (LTC) regime is available only where the entity meets the s YA 1 definition of “look-through company”. The following criteria apply:

(a) The entity is a body corporate or other entity that has a legal existence separate from that of its members, whether incorporated or created in New Zealand or elsewhere (para (a) of the definition of “company”);

(b) The entity is resident in New Zealand for tax purposes, including under the various double tax agreements;

(c) The entity has five or fewer “look-through counted owners” with relatives being counted as one;

(d) The entity is not a “flat-owning company”;

(e) All owners have only “look-through interests”; and

(f) A valid election has been received by the CIR.

The company must have only one class of shares. This requirement comes from the s YA 1 definition of “look-through interest” which requires all shares to carry the same voting rights as to company distributions, the company constitution, capital variations and director appointments, and also the same rights to receive company distributions and assets.

While the company must be resident in New Zealand for tax purposes, there is no requirement that the shareholders be New Zealand tax resident.
A “look-through owner” is defined in s YA 1 as:
(a) A natural person (other than a trustee) who has a look-through interest for the entity;
(b) A natural person who is a beneficiary of a trust and has, for the current income year or one of the
    previous three income years, derived beneficiary income that arose from an LTC;
(c) A trustee of a trust that:
    (i) Has either a look-through interest in an LTC or a beneficial interest in an LTC (direct or
        indirect); and
    (ii) Has not distributed as beneficiary income all of the income that arose from a direct or indirect
        beneficial interest in the entity for the current income year and all of the immediately prior
        three income years;
(d) A natural person shareholder of a company that has derived beneficiary income that arose (directly
    or indirectly) from an interest in an LTC for the current income year or one of the previous three
    income years.

Only natural persons, trustees or another look-through company are able to be shareholders. A company that
is not a look-through company is not able to be a shareholder in a look-through company.

920.20 Counting the shareholders
An LTC must have no more than five “look-through counted owners”. Where an LTC is a subsidiary of
another LTC, it is the owners of the parent LTC that are counted. In other words, the count is made based on
the ultimate shareholders of the company.

In counting the shareholders, relatives are counted as one person. Relatives are two persons who are connected
by being:
(a) Within the second degree of blood relationship;
(b) In a marriage, civil union or de facto relationship with each other;
(c) In a marriage, civil union, or de facto relationship with a person who is within the second degree of
    blood relationship to the other;
(d) An adopted child of the other;
(e) An adopted child of a person who is within the first degree of relationship to the other; or
(f) A trustee of a trust under which a relative has benefited or is eligible to benefit.

The following relationships are within two degrees:
(a) Spouses, parent and child (1st degree).
(b) Brothers and sisters, parent and stepchild, grandparent and grandchild (2nd degree).

The relationships that give rise to shareholders being counted as one survive death or dissolution of marriage.
Provided the company was an LTC, and those shareholders were counted as one at the time of death or
dissolution, they remain counted as one following the event.

(1) Natural person shareholders
The key to identifying the greatest number of shareholders that can be counted as one lies in finding a pivot
shareholder. Take the following family tree as an example:
Example

If all of these individuals were shareholders in an LTC, they would be counted as two shareholders. The first pivot is Josh. The second is Joe.

Josh’s grouping is:
1st degree: Mike and Sue (parents) Toni (spouse).
2nd degree: Alice (stepchild) John and Mary (grandparents).

If Josh was Alice’s adoptive father, rather than stepfather, their relationship would be first degree.

Joe’s grouping is:
1st degree: Anne (spouse) Cath (child).
Second degree: Jerry (son-in-law).

Joe is also within one degree of John and Mary (his parents) and within two degrees of Mike (his brother). Different groupings should be tried where minimising the number of “look-through counted owners” is desired.

If Josh and Toni were to divorce, and Toni remained a shareholder, she would still be counted as part of Josh’s grouping provided that the company was an LTC and both Josh and Toni were shareholders at the time at which the divorce occurred. Similarly, if Josh were to die, all of the members of his group would continue to be counted as a single shareholder subject to the same two tests.

(2) Trustee shareholders

Trusts must also be examined for the “look-through counted owner” test. The count is made on the basis of the number of beneficiaries that have received beneficiary income sourced from the LTC in the current income year or any of the three immediately prior income years. Where any income from the LTC has been retained in the trust (as trustee income) in the current income year or any of the immediately preceding income years, the trustees are also counted as one look-through beneficiary. Where a beneficiary of the trust is a company or a QC, the look-through is made to all of the natural persons who have a direct or indirect voting interest in the company.

Example

Uptown Co Ltd is an LTC. The various interests are as follows:
• All of the shares in Uptown Ltd are owned by the Upland Family Trust.
Look-through Companies

- The trustee of the trust is UpTrust Ltd.
- The shareholders of UpTrust Ltd are John and Mary Upland.
- The beneficiaries of the trust are the members of the Upland family (see above example and family tree).

Over a four-year period, the trust distributed beneficiary income and retained income within the trust as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Alice</th>
<th>Cath</th>
<th>Josh</th>
<th>Trustee (retained)</th>
</tr>
</thead>
<tbody>
<tr>
<td>20X1</td>
<td>Alice</td>
<td>Cath</td>
<td>Josh</td>
<td>Trustee</td>
</tr>
<tr>
<td>20X2</td>
<td>Alice</td>
<td>Cath</td>
<td>Josh</td>
<td>Trustee</td>
</tr>
<tr>
<td>20X3</td>
<td>Alice</td>
<td>Cath</td>
<td>Josh</td>
<td>Trustee</td>
</tr>
<tr>
<td>20X4</td>
<td>Alice</td>
<td>Cath</td>
<td>Josh</td>
<td>Trustee</td>
</tr>
</tbody>
</table>

The shareholder count in each of the years is as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Shareholders</th>
</tr>
</thead>
<tbody>
<tr>
<td>20X1</td>
<td>3 Alice / Josh (2nd degree)</td>
</tr>
<tr>
<td>20X2</td>
<td>3 Alice / Josh / Mike (2nd degree through Josh)</td>
</tr>
<tr>
<td>20X3</td>
<td>3 Alice / Josh / Mike / Toni (1st and 2nd degree through Josh)</td>
</tr>
<tr>
<td>20X4</td>
<td>3 Alice / Josh / Mike / Toni (1st and 2nd degree through Josh)</td>
</tr>
</tbody>
</table>

920.25 Election to be an LTC [ss HB 1, HB 3]

Inclusion in the look-through company regime is voluntary. If all of the eligibility criteria are met, the company can elect to be an LTC. Entry is gained by way of a valid election filed with Inland Revenue.

A director of the company or other authorised agent of the company must sign and date the election and confirm that all owners have signed it. The election must state the income year for which it is to first take effect. All owners of the company are required to sign a notice of election. Where an owner is under the age of eighteen or does not have legal capacity, the person’s guardian or legal representative must sign for them. Where a person holds shares as nominee or bare trustee for the beneficial owner, that person may sign in accordance with the instructions of that beneficial owner. In addition to the notices signed by or on behalf of the owners, there must also be attached to the election evidence of unanimous agreement of the owners that the company become an LTC. In practice, if all of the shareholder election notices and the signed and dated notice by a director or authorised agent are filed with the CIR at the same time, this will provide sufficient evidence of unanimous agreement.

The election must be received by the CIR before the start of the income year specified in the notice. If the company has not previously been required to file a return of income (a newly incorporated or inactive company), the election must be received by the last day for filing the company’s return of income for the income year specified in the election. If the company is transitioning from the qualifying company regime, the election must be received by within six months of the start of the relevant transitional income year. A transitional income year is one of either the income year commencing 1 April 2011 or the income year commencing 1 April 2012.

The CIR has discretion to accept an election that is filed late or is invalid in some way (eg not all owners have signed it). However, this discretion can be exercised only in exceptional circumstances and provided the deficiency is rectified in the income year in which the election is first to take effect.

Once an election has been accepted, it remains in force until the company ceases to qualify to be an LTC or the election is revoked. A company will cease to qualify for LTC status if, at any time in an income year, it fails to meet the qualifying criteria.

920.30 Revoking an election to be an LTC [ss HB 1, HB 3]

Any owner of an LTC can revoke the election at any time. The revocation notice must be received by the CIR before the start of the income year in which it is to take effect. A copy of the revocation notice should
Look-through Companies

be sent to the director of the company so that all other owners can be informed of the revocation. Late notices of revocation can be accepted by the CIR but only where exceptional circumstances exist.

Where an owner files a revocation notice and then sells their shares in the company, the new owner or owners of those shares can reverse the revocation election. This action must occur before the start of the income year for which the revocation notice was to apply. Where this occurs, the original revocation notice is ignored.

Where revocation occurs, the company cannot again become an LTC for either of the following two income years.

920.35 Tax payable when electing to become an LTC [ss CB 32C, CX 63, HB 3]

When a company becomes an LTC, any loss carried forward balance is extinguished. The same applies where a company that is not an LTC amalgamates with a company that is an LTC [ss HB 3].

Where a company that is already in existence becomes an LTC, a tax calculation is required at that time. The same applies where a company that is not an LTC amalgamates with a company that is an LTC. The reason for the tax on entry is that the reserves of an LTC are not subject to tax on distribution. This tax on entry to the LTC regime does not apply to a company which is a qualifying company and is transitioning into the LTC rules.

The tax on entry into the regime arises in the form of income deemed to be derived by the owners of the LTC in the first year in which the company is an LTC. The income arises in proportion to each owner’s look-through interest in the company. The formula under which the calculation of deemed income is undertaken is:

\[ \text{dividends} + \text{balances} - \text{assessable income} - \frac{\text{balances}}{\text{tax rate}} - \text{exit exemption} \]

Where:

“Dividends” is the amount that would be taxable dividends of the company if:

(a) All of the company’s property other than cash was disposed of to an unrelated person at market value for cash;

(b) All of the company’s liabilities, other than income tax payable as a result of disposing of the property and meeting the liabilities, were satisfied at market value; and

(c) The company was liquidated and the remaining cash distributed to shareholders without imputation credits or FDP credits attached.

TaxNote: The amount that is a dividend on liquidation of a company does not include available subscribed capital [see 270.40] or the available capital distribution amount [see 270.40].

“Balances” is the sum of:

(a) The balance in the company’s imputation credit account;

(b) The balance in the company’s FDP account; and

(c) The amount of unpaid income tax for an earlier income year less refunds due for an earlier income year but not yet received.

“Assessable income” is the assessable income less allowable deductions arising from the deemed disposal and liquidation.

“Tax rate” is the company tax rate for the income year immediately before the company becomes an LTC or, in the case of an amalgamation, for the income year that includes the amalgamation date.

<td>Revenue reserve</td>
<td>10,000</td>
</tr>
<tr>
<td></td>
<td>Realised capital gain</td>
<td>13,000</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>13,000</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td>80,000</td>
<td></td>
<td>80,000</td>
<td></td>
</tr>
</tbody>
</table>

### Additional information:

- The market value of the building is $75,000.
- The market value of the plant is $10,000.
- A 10 per cent penalty applies if the mortgage is repaid early.
- The balance of the imputation account is $3,000.

Using the formula:

\[
\text{dividends} + \text{balances} - \text{assessable income} - \left(\frac{\text{balances}}{\text{tax rate}}\right) - \text{exit exemption}
\]

### Dividends

**Market value of property:**

<table>
<thead>
<tr>
<th></th>
<th>Building</th>
<th>75,000</th>
<th>Plant</th>
<th>10,000</th>
<th>Cash</th>
<th>12,000</th>
<th>97,000</th>
</tr>
</thead>
</table>

| Market value of liabilities: Mortgage 10,000 + 10 per cent | 11,000 |

**Net cash available for distribution** $86,000

Once the amount of cash available for distribution has been calculated, amounts that are not taxable as a dividend on liquidation of a company are deducted to arrive at the dividend amount:

**Net cash available** $86,000

**Less:**

Available subscribed capital

Subscribed shares $30,000 + taxable bonus issue $5,000 | 35,000 |

Available capital distribution amount (Capital reserve $10,000 + notional gain on building $15,000) | 25,000 |

**“Dividends”** = $16,000

**“Balances”** (imputation account) = $3,000

1090 Staples Tax Guide 2012
**Assessable income:**

Depreciation recovered on building: \(5,000\)

Less loss on sale plant: \(-3,000\)

Less mortgage penalty: \(-1,000\)

"Assessable income" = \(920.40\)

**Tax rate** = 28 per cent

\[
\text{dividends + balances - assessable income - balances/tax rate - exit exemption} = \\
16,000 + 3,000 - 1,000 - 3,000/0.28 = \\
18,000 - 10,714 = \\
7,286
\]

This amount is then allocated to the owners in proportion to their shareholdings and is required to be included in their individual returns of income.

**Exit exemption**

Although not specifically stated in the Act, “exit exemption” does not apply where a company is entering the LTC regime for the first time. Where a company has been an LTC, exited the regime, and then enters it for a subsequent time, the balance of the formula, being the “exit exemption” must be calculated to ensure that no double taxation occurs.

Where a company enters the LTC regime for the second or subsequent time, the calculation demonstrated in the above example is carried out but the “exit exemption” is also required to be calculated.

“Exit exemption” is the amount arrived at using the formula in s CX 63(2). This formula calculates the amount to be treated as excluded income where a person derives a dividend from a company after it has ceased to be an LTC. The amount is excluded income because the underlying income that gave rise to the dividend has already been taxed in the hands of the shareholders of the LTC while it was in existence, or through the application of the entry tax calculation the first time that the company became an LTC. The formula is:

\[
\text{exit dividends - dividends after look-through}
\]

Where:

“Exit dividends” is the sum of all amounts that would be dividends if the company ceased to be an LTC and then immediately:

(a) Disposed all of all of its property to an unrelated person for cash at market value;

(b) Met all of its liabilities at market value (other than income tax payable as a result of disposing of the property and meeting the liabilities); and

(c) Were immediately liquidated with all remaining cash being distributed to shareholders without imputation credits or FTC credits.

“Dividends after look-through” is the total dividends paid by the company after it ceases to be an LTC and before it pays the dividend described in (c) of “exit dividends” (above).

**920.40 Tax treatment of net income of a look-through company**

[ss CB 32B, DV 22, GB 23(2), GB 24, GB 25B, GB 27, GB 28, GB 29, HB 1, HB 2]

The following matters continue to be dealt with at the company level:

- Goods and services tax (GST);
- Fringe benefit tax (FBT);
Look-through Companies

- PAYE;
- Resident withholding tax (RWT);
- Non-resident withholding tax (NRWT);
- Employer’s superannuation contribution tax (ESCT);
- Retirement scheme contribution tax (RSCT); and
- The amalgamated companies regime (Subpart FO).

The income and expenses of a look-through company are taxed in the hands of the owners of the company in proportion to their percentage interest in the company. Similarly, tax credits, rebates, gains and losses are dealt with at the owner level. Although this means that the LTC will not have taxable income, it is required to file a return of income specifying the amount of income and deductions allocated to each owner. The IR7 return is used for this purpose.

Where the percentage interest of the individual look-through owners changes during an income year, the items are allocated on the basis of each person’s average interest in the company. However, owners have the option of using the weighted average basis instead. These two options are based on the assumption that the company’s income and deductions arise evenly over the course of the income year.

A third option is to prepare accurate accrual accounts as at the date of a change in ownership interests. Income, expenses and other items are allocated for the first part of the year on the basis of these accounts. Separate accounts are prepared for the part of the income year following the change in ownership interests and these are used to allocate items for that period. Each owner will return the total of the two allocated amounts in their return of income for the year.

If the company has a market value circumstance during the income year, the effective interest of the owners is calculated as the average of their voting interest [see 170.20] and market value interest [see 170.25] for the income year.

Examples of the calculation of owners’ look-through interests under the various methods can be found in TIB vol 23:1 (February 2011) at 51 and 52.

(1) Working owners

Where an owner of an interest in an LTC is also employed by the company under a written contract of employment, and personally performs their duties under that contract, they are termed a “working owner”. PAYE applies to the salary paid to the working owner. The gross amount of the salary is an expense that is allocated to the owners under the look-through treatment of income and expenses. The amount is not income of the LTC for the look-through treatment. In other words, the salary is treated in the same manner as a salary paid to an arms-length employee.

This treatment is not available where the LTC is wholly or mainly engaged in investing money, holding or dealing in shares, securities, investments, or estates or interests in land.

(2) Livestock [s EC 12(4)]

For livestock valuation purposes, any livestock owned by an LTC is treated separately from any interest that an owner may have in livestock. Separate valuation elections are required and different valuation methods can be applied to each.

(3) Anti-avoidance provisions

(a) Owners under the age of 20 years [s GB 25B]

The CIR has the power to adjust the look-through interests and, as a consequence, the allocation of income and deductions where he considers that the standard methods result in an excessive allocation of income to a person under the age of 20 years. The provision applies only where two or more of the owners are relatives and one of them is under 20 years old. In exercising his discretion, the CIR may take into account the nature and extent of services rendered and the value of contributions made by way of capital, services or otherwise, and any other matters that the CIR considers relevant.
(b) **Excessive remuneration to relatives** [ss GB 23, GB 24]

Where an LTC employs a relative of an owner, the CIR can adjust the income allocations where he believes that the remuneration paid to that relative is excessive. The provision does not apply where all of the following conditions are met:

(i) A written employment contract has been entered into which is binding for a minimum of three years;
(ii) The relative is over the age of twenty years at the time of signing the contract; and
(iii) Each party to the contract has real and effective control of their entitlement to the remuneration.

(c) **Income from personal services - attribution of income rules** [ss GB 27, GB 28, GB 29]

The income attribution rules apply where an entity such as a company, trust or partnership (“the associated entity”) is interposed between a person providing personal services (“the working person”) and the user of those services (“the buyer”) [see 740.35]. For the purpose of applying these rules, an LTC is an “associated entity”.

### 920.45 Tax treatment of losses of a look-through company [ss HB 11, HB 12]

Net tax losses are dealt with in the same way as net income with each owner being allocated their proportionate share of the income and the expenses. As the income and expenses are allocated to the owners for inclusion in their respective returns of income, an LTC will not have any loss carry-forward.

There is an anti-avoidance provision that restricts the amount of an owner’s share of an LTC loss that can be offset against their other income for the year. The aim of the provision is to prevent an owner from claiming tax losses that exceed their economic loss. An owner cannot offset an LTC loss against other income to the extent to which it exceeds the amount calculated under the following formula:

\[
\text{investments} - \text{distributions} + \text{income} - \text{deductions} - \text{disallowed amount}
\]

Where:

(1) **Investments**

“Investments” is the sum of:

(a) The market value of the person’s shares at the time of acquisition;
(b) Amounts owed by the LTC to the person (eg shareholder current account credit balance or other loan); and
(c) The “secured amounts” not included in (b).

“Secured amounts” is the amount of any debt of the LTC that is guaranteed by the owner or an associated person of the owner. It is the least of the following:

(a) The amount of the secured debt. Where there is more than one guarantor, the amount of the debt is divided by the number of guarantors.
(b) The market value of the property against which the guarantee may be enforced. Again, this is apportioned where there is more than one guarantor.

(2) **Distributions**

“Distributions” is any amount paid by the LTC to the owner. It includes dividends, loans and shareholder current account debit balances. It does not include any salary or wages that the person has received in their capacity as a working owner.

(3) **Income**

“Income” includes all income and realised capital gains allocated to the person under the regime to the person in all income years (including the current income year) since the company became an LTC. It includes both exempt and excluded income. It also includes any assessable income that the person derived by contributing goods or services that the person has supplied to the company provided that the amount is not included in “investments” (see above). It excludes dividends paid by a foreign investment fund (FIF) to the extent to which the person had FIF income in the year in which the dividend was received.
(4) **Deductions**

“Deductions” is all expenditure or loss (including realised capital losses) in previous income years (excluding the current income year) in which the company was an LTC. It includes any deductions that the person has had in respect of goods and services that the person has supplied to the company. It excludes any amount for which the person was denied deduction under this provision.

(5) **Disallowed amount**

“Disallowed amount” is the total of “investments” (see above) made in the last 60 days of the income year if they have been distributed or reduced in the first 60 days of the following income year. As the wording is “if” and not “to the extent to which”, any reduction in the investment made within the timeframe will cause the entire amount to be included in “disallowed amount”. There is an exclusion from the treatment where the total amount reduced or distributed in the first 60 days of the following income year does not exceed $10,000.

A comprehensive example of the loss limitation rule calculation can be found in TIB vol 23:1 (February 2011) at 54.

To the extent to which the loss limitation rule results in a loss is not being able to be claimed by the person, it is carried forward and can be used in a subsequent income year subject again to the application of the loss limitation rule in that year.

Where a person ceases to have a look-through interest in the LTC (eg disposes of their shares in the company), any losses carried forward cannot be offset against other income. These losses are not extinguished. Instead, they continue to be carried forward and can be used in the normal way if and when the person again has an interest in the LTC.

If the company ceases to be an LTC, but continues in business, any losses carried forward by owners can only be offset against dividends that the person receives from the company. These losses cannot be offset against other income. If the company again becomes an LTC, any remaining losses are reactivated and can be used in the normal way.

There is relief from the loss limitation rules where a person disposes of their interest in the LTC. The loss is denied only to the extent to which it exceeds the amount that the person derives from the disposal of their interest in the LTC.

920.50 **Disposal of shares in an LTC** [ss FB 1, FB 10B, FC 1, HB 4, HB 5, HB 6, HB 7, HB 8, HB 9, HB 10]

For tax purposes, owners of an LTC are treated as holding anything that the LTC holds (eg the assets of the company and liability for debt). For this reason, when they sell shares in the company, they are deemed to have sold their share of the underlying property and tax consequences arise. However, certain thresholds apply that limit the requirement for shareholders to calculate and return this income.

(1) **Deemed disposals** [s HB 4]

The following result in an owner being deemed to have disposed of their interests in the LTC to a single third party for market value:

(a) Where the LTC ceases to exist through liquidation, court order or otherwise;

(b) To the extent to which the owner’s capital is reduced by a cancellation or buy-back by the LTC that is not pro rata for all owners.

These situations give rise to a deemed disposal of all of the underlying property and the tax consequences that flow from it.

(2) **General exemption** [s HB 5]

A $50,000 general exemption from the requirement to account for the tax consequences of the deemed sale of a person’s interest in the underlying assets of an LTC. The test for whether or not the exemption applies is carried out by way of applying the following formula:

\[
\text{disposal payment + previous payment - (gross tax value - liabilities) - $50,000}
\]
Where:
“Disposal payment” is the total consideration paid or payable to the exiting owner for their current owner’s interests in the company.

“Previous payments” is the total consideration paid or payable to the exiting owner for other disposals of some or all of their owners’ interests in the previous twelve months.

“Gross tax value” is the total of:
(a) The tax value of the person’s interests at the time of disposal (both current interests and any disposed of in the previous twelve months) to the extent to which those interests are revenue account property, depreciable property, or financial arrangements;
(b) The market value of the person’s interests at the time of disposal (both current interests and any disposed of in the previous twelve months) to the extent to which those interests do not fall within (a) above.

TaxNote: “Revenue account property” includes trading stock, emissions units, and other assets that would result in income for tax purposes if disposed of. The term does not include depreciable property or certain assets previously subject to a lease.

“Liabilities” is the exiting owner’s share of liabilities at the time of disposal of the interests (both current interests and any disposed of in the previous twelve months) calculated according to generally accepted accounting practice.

Where the result of applying the formula is less than zero, the tax effect is as follows:
(a) The amount received by the exiting owner for the disposal of their interests in the LTC is excluded income and no deduction is allowed in that income year or in later income years to the extent to which the person acquiring the interest (the “entering owner”) is allowed a deduction.
(b) The entering owner is denied any deduction for the amount paid to the exiting owner for the interests acquired and is instead treated as if they had acquired the interests at the time and for the value paid for them by the exiting owner. In other words, the entering owner steps into the shoes of the exiting owner in respect of those interests.

The effect of this provision is that, if the net value of the exiting owner’s interests is $50,000 or less, no assessable income or deduction arises in respect of the disposal of the interest in the LTC.

(3) Trading stock (excluding livestock) [s HB 6]
Where the turnover of the LTC for the income year in which a person disposes of an interest is $3 million or less, the exiting owner is not required to perform a revenue account adjustment in respect of the trading stock. Instead, the treatment is as follows:
(a) The amount of consideration payable to the exiting owner for their interest in trading stock is excluded income and no deduction is allowed in that income year or in later income years to the extent to which the person acquiring the interest (the “entering owner”) is allowed a deduction; and
(b) The entering owner is denied any deduction for the amount paid to the exiting owner for the trading stock and, instead, is treated as stepping into the shoes of the exiting owner in respect of it.

The effect of this treatment is that the exiting owner is not required to perform a revenue account adjustment in respect of the trading stock.

(4) Depreciable tangible property [s HB 7]
Where a person disposes of an interest in an LTC which owns depreciable tangible property with a total historical cost of $200,000 or less, the person is not required to account for depreciation recovery or loss on their share of those assets. Instead, the treatment is the same as that provided for trading stock (see above).

(5) Financial arrangements and certain excepted financial arrangements [s HB 8]
Where a person disposes of an interest in an LTC which owns:
(a) A financial arrangement; and/or
(b) An excepted financial arrangement that is an interest-free loan which is in New Zealand currency and repayable on demand, the person will not be required to perform a base price adjustment in respect of those items. The exemption is dependent on the following two factors:
