(a) The financial arrangement or excepted financial arrangement was entered into for a purpose that was necessary and incidental to the business of the LTC; and

(b) The owners do not derive assessable income from a business of holding financial arrangements.

Provided the above requirements are met, the exiting owner is not required to perform a base price adjustment in respect of those underlying assets. Instead, as for trading stock and depreciable tangible assets (see above) the entering owner simply steps into the shoes of the exiting owner in respect of those assets.

TaxNote: The provision requires that “the owners do not derive assessable income from a business of holding financial arrangements”. Such income could arise by virtue of the LTC deriving it (due to the look-through nature of LTCs) or it could arise by virtue of the individual owners deriving it. However, as the section uses the plural “owners”, it is unclear what the effect would be of some (but not all) of the owners deriving such income, whether or not that includes the person who is disposing of their interest in the company. We have checked this point with Inland Revenue and they advise us that the policy intent is that it is only the assessable income from the particular LTC that is examined for this purpose. They agree that this is not reflected in the current drafting and that legislative amendment may be required.

(6) Short-term agreements for sale and purchase [s HB 9]

Exiting owners are not required to account for any tax effect of the sale of any underlying asset that is a short-term agreement for sale and purchase of property [see 470.30]. The part of the consideration for the disposal of the exiting owner’s interest in the LTC that relates to these assets is excluded income and, as with the other exemptions referred to above, the entering owner simply steps into the shoes of the exiting owner in respect of them.

(7) Livestock [s HB 10]

If the underlying assets of the LTC include livestock that is female breeding stock valued under either national standard cost scheme or the cost price method, the exiting owner has a choice as to how those items are dealt with.

One of the options is for the exiting owner to apply s EC 26B [see 1050.27] which results in the entering owner stepping into the shoes of the exiting owner is respect of that livestock. This is designed to reduce compliance costs for the LTC. Alternatively, the exiting owner can choose to treat the sale of their interest in that livestock as a normal disposal and account for the tax effect of that treatment.

TaxNote: The application of the s HB 5 formula for determining whether or not the $50,000 general exemption applies is used for that purpose only. This leaves a problem in that the term “consideration” is not defined for the purposes of the other exemptions outlined above which require the total consideration to be allocated to the various items and to any other item not covered by one of the exemptions. Logically, “consideration” should include the value of the proportion of liabilities of the company which are effectively taken over by the new owner of the shares. However, the wording of the provisions points to “consideration” being only the amount paid for the net value of the shares. Inland Revenue agrees that the provision is unclear and is looking into the matter. This lack of clarity prevents us from providing a worked example of the operation of the provisions.

920.55 Ceasing to be a look-through company [ss CD 43, CX 63, HB 4]

A company can cease to be an LTC either because the election has been revoked or because the company ceases to qualify as an LTC. Where cessation occurs but the company remains in existence, the normal tax rules for companies apply from that time forward.

Any retained earnings derived while the company was an LTC would have been taxed in the hands of the shareholders. Any retained earnings that existed in the company before it became an LTC would have been
subject to tax on entry into the regime. To ensure that these retained profits are not subject to tax in the hands of the shareholder for a second time when they are distributed as dividends, an ordering rule applies. This results in dividends being deemed to arise firstly from these retained earnings. The dividends are treated as excluded income in the hands of the recipients. It makes no difference whether the shareholders who receive the dividends are the same persons as those who were owners of the LTC.

The calculation of the amount of the dividends that can be distributed as excluded income of the recipient shareholders involves performing a notional liquidation similar to the one carried out on entry into the regime.

The formula for the calculation is:

\[
\text{exit dividends} - \text{dividends after look-through}
\]

Where:

1. **“Exit dividends”**
   - “Exit dividends” is the sum of the amounts that would be dividends if, immediately after ceasing to be an LTC:
     
     - (a) All of the company’s property other than cash was disposed of to an unrelated person at market value for cash;
     
     - (b) All of the company’s liabilities, other than income tax payable as a result of disposing of the property and meeting the liabilities, were satisfied at market value; and
     
     - (c) The company was liquidated and the remaining cash distributed to shareholders without imputation credits or FDP credits attached.

**TaxNote:** The amount that is a dividend on liquidation of a company does not include available subscribed capital [see 270.40] or the available capital distribution amount [see 270.40]

2. **“Dividends after look-through”**
   - “Dividends after look-through” is the total of all dividends paid by the company after it ceases to be an LTC.
   
   The “exit dividends” figure will remain constant. The “dividends after look-through” figure will increase each time a dividend is distributed. Once the formula results in a zero answer, all of the previously taxed retained earnings have been distributed and the normal rules for taxation of dividends apply to future distributions.
Chapter 940

Losses

940.10 Losses under the global-gross approach [ss BC 2, BC 3, BC 4]

In the context of taxation, the term “losses” has been used to refer to:

(a) A tax loss incurred from a specific transaction, eg losses arising from specific share transactions; and
(b) The overall tax loss incurred in a year when total deductions allowed in an income year exceed total assessable income for that year.

Generally, all amounts of assessable income are totalled and result in the taxpayer’s annual gross income for the year [s BC 2]. Similarly, all allowable deductions are totalled and result in the taxpayer’s annual total deduction for the income year [s BC 3]. The difference between the two amounts is either the person’s net income for the year, or the person’s net loss for the year [s BC 4(3)]. For some transactions, rather than applying the global-gross approach, the profit or loss arising is taken into account in calculating the net income for a tax year (eg under the provisions relating to financial arrangements) [see 470 FINANCIAL ARRANGEMENTS ].

An overall tax loss is now referred to as an available tax loss. The amount of available tax loss for a tax year is the amount by which annual total deductions exceed annual gross income. However, the continuity and commonality rules remain unaltered [see 940.20 and 940.30].

The requirement for a company seeking to carry forward a year’s loss to a later tax year is a 49 per cent minimum continuity. The minimum shareholding commonality for grouping of company losses is 66 per cent. This may be done either by payment or by election. The shareholder continuity for carry-forward of imputation credits, dividend withholding payment credits, and branch equivalent account tax credits is 66 per cent.

940.15 Loss rules for taxpayers generally [ss BC 4(4), IA 7, IA 4]

Generally, where a taxpayer’s annual total deductions exceed annual gross income for a tax year, the taxpayer has a net loss. However, the following net losses are treated differently because of special characteristics of the taxation provisions allowing those net losses:

(a) Losses incurred under the international tax regime [see 850 INTERNATIONAL TAX REGIME];
(b) Mining losses [see 980 MINING COMPANIES AND OPERATORS];
(c) Losses of loss attributing qualifying companies [see 1160 QUALIFYING COMPANIES];
(d) Policyholder net losses [see 800 INSURANCE ];
(e) Investment funds’ excess expenditure [see 370 EXEMPT AND EXCLUDED INCOME];
(f) Attributed CFC losses [see 850 INTERNATIONAL TAX REGIME];
(g) FIF net losses [see 850 INTERNATIONAL TAX REGIME];
(h) Petroleum net losses [see 980 MINING COMPANIES AND OPERATORS];
(i) Net losses of multi-rate PIEs [see 1130 PORTFOLIO INVESTMENT ENTITIES]; and
(j) Amounts remitted as a condition of a new start grant [see 430 FARMERS].

A taxpayer with a net loss for a tax year is entitled to carry that loss forward to the immediately succeeding tax year as an available tax loss. The taxpayer may then deduct it from, or offset against, the net income for that immediately succeeding tax year. The taxpayer may not offset net losses in excess of the net income for that succeeding tax year. However, where the available net loss exceeds the net income for that succeeding tax year, the taxpayer may carry forward that excess to the next succeeding tax year, and so on [s IA 4]. A limit of $10,000 per annum applies to losses incurred in certain specified activities before the 1991 income year [s IZ 1].

There is no time limit on when a net loss can be carried forward, but a net loss cannot be carried back to a previous year. Where net losses are incurred in two or more tax years and carried forward, they are deducted or offset in the order in which they arose [s IA 4].

940.18 Losses in a partnership [s HR 1]

Losses incurred in a partnership, except for special partnerships, are allocated to the partners who then include that share of the loss in their own personal income tax returns [s HR 1]. Additional rules apply to special partnerships [see 1050.70].

940.20 Losses carried forward — companies [s IA 5]

A company taxpayer (“the loss company”) that has incurred a net loss in an income year may only carry forward the whole or any part of that loss to any later income year where there is a group of persons:

(a) Whose aggregate “minimum voting interests” in the loss company in the period from the beginning of the year of loss to the end of the year of carry-forward (“the continuity period”) are equal to or greater than 49 per cent; and

(b) Whose aggregate “minimum market value interests” in the loss company in the continuity period are equal to or greater than 49 per cent in any case where at any time during the continuity period a market value circumstance exists for the loss company.

The minimum voting interest or the minimum market value interest, as the case may be, of any person in the loss company in the continuity period is equal to the lowest voting interest or market value interest in the loss company which that person has during the continuity period. See 170 COMPANIES for the measurement of minimum voting interests and minimum market value interests.

The shareholder continuity requirements for a group of persons are measured by looking at the continuity of minimum voting interests (and also minimum market value interests where a market value circumstance exists) during the period throughout which the continuity must be maintained. In calculating the lowest percentage, the lowest voting interest or market value interest for each person during the period is used.

Example 1:
If a shareholder’s voting interest in Loss Ltd during an income year is at various times 40 per cent, 20 per cent, 55 per cent, and 25 per cent, the lowest voting interest of the shareholder during that year is 20 per cent.
Example 2:  
A company with a standard balance date incurs a loss in the 20X1-X2 income year. The shareholding proportions equivalent to the voting or market value interest percentages are as shown below. The only changes occurred on 30 June 20X2.

<table>
<thead>
<tr>
<th>Shareholder</th>
<th>Loss company shareholding</th>
<th>Lowest percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1 April 20X1</td>
<td>30 June 20X2</td>

<tr>
<td></td>
<td>100%</td>
<td>100%</td>
</tr>
</tbody>
</table>

The result is that the 49 per cent test is breached. The minimum continuity in the example is 30 per cent. The loss company cannot carry forward the loss incurred in the 20X1-X2 income year to the 20X2-X3 income year.

940.21 Part-year losses of companies when 49 per cent continuity not maintained for full year [s IP 3]

Part-year net losses may be carried forward (or grouped with other companies) where the continuity requirements are satisfied for only part of a continuity period, provided that the part-year net loss and the part of the net income against which the loss is to be offset are substantiated by adequate financial statements. These financial statements must sufficiently show the parts of the net loss and net income that are fairly attributable to that part of the income year in which the continuity requirements are satisfied, using the appropriate taxation rules as if each part-year were a full income year. An anti-avoidance provision exists. Inland Revenue has no provision to exercise discretion in the allocation of losses or profits.

Example 1:  
On 30 September 20X2 a standard balance date company incurred a change of shareholding of 52 per cent that breached the continuity requirement. In the 20X1-X2 income year it made a loss of $2 million. In the 20X2-X3 income year it made a loss of $1 million, but adequate accounts disclosed that the loss attributed to the period prior to 30 September 20X2 (when the continuity requirements were breached) was $600,000 and the loss attributed to the period after 30 September 20X2 was $400,000. The result is that the net loss incurred in the part-period ending 30 September 20X2 is not available to be carried forward, meaning that the amount of net loss able to be carried forward to the 20X3-X4 income year is restricted to that part of the loss incurred after 30 September (ie $400,000).

In a similar way, part-year losses may be carried forward to a subsequent income year and offset against part-year profits of the later income year where the continuity requirements (or the carry-forward provisions applicable to an earlier period) would not have prevented the carry forward. The carry-forward amounts must also be substantiated by adequate accounts.

Example 2:  
On 30 August 20X2 a standard balance date company incurred a change of shareholding of 52 per cent that breached the continuity requirement. In the 20X1-X2 income year it made a loss of $2 million. In the 20X2-X3 income year it made a profit of $1.5 million, but adequate accounts disclosed that the profit attributed to the period prior to 30 August 20X2 (when the continuity requirements were breached) was $700,000 and the profit attributed to the period after 30 August 20X2 was $800,000. The result is that the net loss offset is restricted to $700,000 in the 20X2-X3 income year, and the excess net loss is no longer available to carry forward to any later period, including the part-period after 31 August 20X2.

940.22 Company losses incurred in 1991-1992 and prior years [ss IZ 5, IZ 6]

Net losses incurred in the 1991-1992 and earlier income years may be carried forward and offset against the net income for 1992-1993 and later income years (or, where applicable, carried forward for offset against the net income of other companies within a group) if:

(a) The 40 per cent continuity test under s 188 before its repeal by the Income Tax Amendment Act (No 2) 1992 (including the lowest percentage interest modification from 8 pm on 30 July 1991) is met at all times from the beginning of the year of loss to the end of the year of offset; and
(b) From the first day of the 1992-1993 income year to the end of the year of offset, there is a group of persons, the total of whose lowest percentage of voting interests (and market value interests, where a market value circumstance exists) in the loss company, in each case, is at least 49 per cent.

The minimum voting interest or the minimum market value interest (as the case may be) of any person in the loss company in the continuity period is equal to the lowest voting interest or market value interest (as the case may be) in the loss company which that person has during the continuity period [s 1A 5].

An interpretation statement issued by the CIR is published in TIB vol 9:9 (September 1997) at 16-18.

**940.30 Offsetting losses within a group of companies** [ss IC 1, IC 2, IC 3, IC 4, IC 6, IC 13]

In broad terms, a company may only offset a net loss against the net income of another company if, at all times during the income year in which the loss was offset, both the loss company and the profit company are at least 66 per cent commonly owned (whether or not always during such period by the same group of persons) [ss IC 1, IC 2].

There is a dual test in order for two or more companies to be within a group of companies, relating to thresholds for voting interests and market value interests. Two or more companies can only be within a group of companies where, for those companies, there is at any time a group of persons with a total of at least 66 per cent of each person’s lowest percentage of voting interests. And if a market value circumstance exists, those companies must at any time also have a group of persons with a total of at least 66 per cent each person’s lowest percentage of common market value interests in each company [s IC 3].

Additional rules apply in relation to two or more companies, one of which is a multi-rate PIE. In order to form a group, the multi-rate PIE must own 100 per cent of the voting interests in the other companies and each company that is not a multi-rate PIE must be a land investment company [s IC 3(2B)].

Measuring whether a group exists may be done for any point in time, and for any income year or other period, as the case may be. Where the measurement is done for an income year or other period, the 66 per cent test must apply at all times during that period. The 66 per cent commonality rule must be met at all times from the commencement of the loss company’s income year in which the net loss was incurred to the end of the loss company’s income year in which the net loss was offset [s IC 6].

Where the percentage of interests held by a person in two or more companies differs, the lowest percentage interest that the person holds in either company is taken into account [s IC 3(3)].

---

**Example 1:**

Companies A to C are all standard balance date companies. There is no change in shareholding during the income year. A market value circumstance exists, in that a debenture with a floating rate of interest is issued (which was issued after 30 July 1991). Therefore, the shareholding proportions are equivalent to voting and market value interest percentages.

<table>
<thead>
<tr>
<th>Shareholder</th>
<th>A Ltd</th>
<th>B Ltd</th>
<th>C Ltd</th>
<th>Lowest common voting or market value interests</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>30%</td>
<td>20%</td>
<td>20%</td>
<td>20%</td>
</tr>
<tr>
<td>2</td>
<td>30%</td>
<td>40%</td>
<td>30%</td>
<td>30%</td>

<tr>
<td>100%</td>
<td>100%</td>
<td>100%</td>
<td>90%</td>
<td></td>
</tr>
</tbody>
</table>

The aggregate of lowest common voting or lowest market value interests is at least 66 per cent. Therefore, these three companies qualify as a group of companies for the income year.

**Example 2:**

Companies E to F are all standard balance date companies. There is no change in shareholding during the income year. A market value circumstance exists, in that a debenture with a floating rate of interest is issued (which was issued after 30 July 1991). Again, the shareholding proportions are equivalent to voting and market value interest percentages.

</table>

The aggregate of the lowest common voting or market value interests is less than 66 per cent. Therefore, these three companies do not qualify as a group of companies for the income year. However, D Ltd and F Ltd on their own qualify as a group.

“Wholly-owned group of companies” means any two or more companies with 100 per cent common voting interests. Where a market value circumstance exists, 100 per cent common market value interest are also required [s IC 4].

Shares are held by a trustee for employees through the operation of any employee share purchase scheme are ignored in the calculation provided that the shares represent no more than three per cent of the voting interests or three per cent of the market value interests in the company where a market value circumstance exists [s IC 4].

An anti-avoidance provision exists to prevent companies from using the wholly-owned group provisions to avoid tax on certain transactions. For instance, an investment company could incorporate a wholly-owned subsidiary to hold certain shares on a long-term basis and thereby avoid paying tax on profits derived from the sale of those shares. Section CV 1 provides that any amount that a company derives that would not otherwise be income is treated as income if:

(a) The company is part of a wholly-owned group of companies for that income year; and

(b) Had the group of companies been a single company, the amount would have been income of that single company.

In order for a profit company to be allowed to offset a net loss from another company in the same group of companies, the following requirements must also be met [s IC 5]:

(a) Another company in the same group of companies (a loss company) must have either a net loss in the offset year or an available net loss (a net loss carried forward from a preceding income year) [ss IA 2, IC 1];

(b) The loss company either gives written notice that the whole or part of the loss be offset against the net income derived in the offset year by another company, or receives a payment from another company under an agreement providing for the other company (the profit company) to bear or share in the net loss. The offset may, therefore, be made by payment or written election [ss IC 5, IC 9];

(c) The profit company and the loss company must be in the same group of companies for the year when the loss company makes the offset. The profit company and the loss company must also be in the same group of companies for the year when the profit company makes the offset, where the year of offset for the profit company ends on a date later than the last day of the year of offset of the loss company [ss IC 5, IC 2(2), IC 6]. Where the loss or part loss was incurred by the loss company in any year following the 1981-1982 income year, the profit company must be in the same group of companies as the loss company in the preceding loss year of the loss company [s IZ 7]. Where the loss or part loss was incurred by the loss company in any year following the 1981-1982 income year, the profit company must be in the same group of companies as the loss company for all income years of the loss company (if any) falling between the loss year of the loss company and the year of offset of the loss company [s IZ 7];

(d) The loss company must at all times, from the year of loss to the year of offset be either incorporated in New Zealand or carrying on business in New Zealand through a fixed establishment in New Zealand. In addition, the loss company must not be either treated through a provision of a double tax agreement, as not being resident in New Zealand, or by the law of another tax jurisdiction, liable to income tax in that other tax jurisdiction by reason of domicile, residence, or place of incorporation...
Losses

The combined effect is that non-resident companies are able to offset their losses only to the extent of the losses of their New Zealand branches;

(e) Continuity of ownership must be maintained for the loss company for the year of offset. Where the year of offset of the profit company ends on a date later than the last day of the year of offset of the loss company, continuity of ownership must also be maintained through the year of offset of the profit company. Continuity of ownership is treated as being maintained for any company and any period where there is a group of persons:

(i) The aggregate of whose minimum voting interests in the company is equal to or greater than 49 per cent; and

(ii) The aggregate of whose minimum market value interests in the loss company is equal to or greater than 49 per cent in any case where at any time during the period a market value circumstance exists for the loss company.

The minimum voting interest or the minimum market value interest, as the case may be, of any person in the loss company in the continuity period is equal to the lowest voting interest or market value interest (as the case may be) in the loss company which that person has during the continuity period [ss IC 5, IC 2(1), IC 10(2)(a)];

(f) The amount to be offset against the profit company’s taxable income cannot exceed the net income of the profit company (after the offset of any losses carried forward), for that income year. It is not possible to transform a profit company into a loss company through these provisions [ss IC 5, IC 8]. For example, Profit Co has net income for the year of $10,000. It has losses carried forward from the previous income year of $2,000. The maximum loss offset is the lesser of $8,000 or the loss company’s net loss;

(g) Where the profit company makes a payment it must not exceed the amount of the loss. It is required to be made not later than the 31st day of March that, for the year of offset, is the latest date to which the time for the furnishing of the loss company’s return for that income year may be extended, or within such further time as the CIR may allow. It must not be otherwise taken into account in calculating the income of the loss company or the profit company. The loss company must give written notice to the CIR. It is not possible to transform a loss company into a profit company through these provisions [s IC 9]. For example, Loss Ltd, in the year of offset, has losses of $100,000, and Profit Ltd has profit of $150,000. The maximum loss offset in the year of offset is $100,000;

(h) The loss must not consist of any amounts as described in 940.15. The amount of the loss of the loss company is offset by the profit company against the net income for the year of offset. The offset reduces the available tax losses of the loss company in the same order in which those losses arose. Where any payment is made by the profit company to the loss company in consideration for the loss, the payment is not treated as a dividend paid by the profit company to the loss company.

Any election made is irrevocable. Notice may be given to the CIR by including it in return of income of the loss company. The notice must be filed no later than the 31st day of March that, for the loss company and the year of offset, is the latest date to which the time for the furnishing of the loss company’s return of income for the year of offset may be extended under s 37(5) of the TAA or within such further time as Inland Revenue may allow [s IC 9]. Where the provisions apply to non-standard balance date taxpayers, references to an income year includes a reference to a corresponding non-standard accounting year.

Standard practice statement SPS 05/12 sets out the CIR’s view of the circumstances under which group companies are able to offset losses [see TIB vol 18:1 (February 2006) at 5].

The 66 per cent threshold can be varied by Order in Council in respect of a company where either one or both of the following apply:

(a) The company is, or has been, carrying on a business wholly or mainly for the development of Niue;

(b) The company is, or has been, important to the development of Niue;

and, in both cases, the company has incurred expenditure in deriving income from that undertaking.
Any order will specify the name of the company or companies to which it applies [s IC 13].

**940.31 Part-year losses when 66 per cent commonality not maintained for full year** [ss IP 1, IP 2, IP 3, IP 4, IP 5, IP 6, IP 7]

A provision exists to offset a loss from a loss company against the profits of a profit company for periods comprising part of a year during which:

(a) The loss company maintains a continuity of shareholding; and

(b) A commonality of shareholding between loss and profit companies has been maintained.

The period during which the commonality of shareholding test is met is called the “group companies’ common span” [ss IP 1, IP 2].

Adequate accounts are required to have been prepared and furnished to Inland Revenue by both the profit and the loss companies. The accounts must detail sufficiently:

(a) In relation to the loss company, that part of the part-year loss of the loss company as is fairly attributable to the loss company commonality period; and

(b) In relation to the profit company, that part of the profit company’s part-year profit as is reasonably and fairly attributable to:

(i) The loss company commonality period where the year of offset of the profit company is co-extensive with the year of offset of the loss company; and

(ii) That part of the year of offset of the profit company which includes all or part of the loss company commonality period, in which the profit company and loss company are at all times members of the same group of companies and in which the continuity of ownership has been maintained for the loss company [s IP 6].

The loss company may, in a notice to Inland Revenue, elect to apply losses arising from the loss company to the profit company. Both the amount of the loss and the amount of the profit must be calculated for the “group companies’ common span”.

The rules effectively allow a loss (where a shareholder continuity of 49 per cent applies in the loss company) to be offset once only, and only against profits where there is a “group companies’ common span” with both the loss and offset companies in the same group.

**(1) Commonality lost part way through the income year** [ss IP 4, IP 5]

Where commonality is lost part way through the income year, the carried-forward and current-year losses may only be offset against the equivalent “group companies’ common span” pre-sale profit of companies in pre-sale group.

**Example 1:**

Loss Ltd and Vendor Profit Ltd have the same standard balance date. Loss Ltd satisfies the continuity of shareholding requirements (49 per cent threshold) from 1 April 20X1 until 31 March 20X3. Vendor Profit Ltd is formed on 1 April 20X2. For the period until 1 October 20X2 Loss Ltd and Vendor Profit Ltd have a group commonality, with shareholders having an aggregate of at least 66 per cent of common voting interests (and common market value interests where a market value circumstance exists). On 1 October 20X2, the two companies fail to satisfy the 66 per cent group commonality requirements.

Loss Ltd has net losses as follows:

<table>
<thead>
<tr>
<th>Period</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 April 20X1 to 31 March 20X2</td>
<td>$2 million</td>
</tr>
<tr>
<td>1 April 20X2 to 30 September 20X2</td>
<td>$500,000</td>
</tr>
<tr>
<td>1 October 20X2 to 31 March 20X3</td>
<td>$1 million</td>
</tr>
</tbody>
</table>

Vendor Profit Ltd determines its net income as follows:

<table>
<thead>
<tr>
<th>Period</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 April 20X2 to 30 September 20X2</td>

</tr>
</tbody>
</table>

In the “group companies’ common span” until 30 September 20X2, a loss offset from Loss Ltd is allowed against the net income of Vendor Profit Ltd. The offset is limited to $500,000, the amount of available tax loss arising in Loss Ltd during the “group span”.
companies’ common span”. The “group companies’ common span” is the period during which the companies are members of the same group for tax purposes.

Example 2:
Loss Ltd has a standard balance date and Maximum Profit Ltd has a late balance date of 30 June. Loss Ltd maintains its continuity of shareholding to at least 49 per cent from 1 April 20X1 all through the various periods. Maximum Profit Ltd is formed on 1 July 20X2 and for the period until 1 October 20X2 Loss Ltd and Maximum Profit Ltd have a group commonality, with shareholders having an aggregate of at least 66 per cent of common voting interests (and common market value interests where a market value circumstance exists). On 1 October 20X2, the two companies fail to satisfy the 66 per cent group commonality requirements.

Loss Ltd has net losses as follows:

<table>
<thead>
<tr>
<th>Period</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 April 20X2 to 30 June 20X2</td>
<td>$2 million</td>
</tr>
<tr>
<td>1 July 20X2 to 30 September 20X2</td>
<td>$800,000</td>
</tr>
<tr>
<td>1 October 20X2 to 31 March 20X3</td>
<td>$1 million</td>
</tr>
</tbody>
</table>

Maximum Profit Ltd determines its net income as follows:

<table>
<thead>
<tr>
<th>Period</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 July 20X2 to 30 September 20X2</td>
<td>$600,000</td>
</tr>
<tr>
<td>1 October 20X2 to 30 June 20X3</td>
<td>$3m</td>
</tr>
</tbody>
</table>

In the “group companies’ common span” until 30 September 20X2 a loss offset from Loss Ltd may be allowed against the net income of Maximum Profit Ltd. The loss offset is limited to $600,000, the amount of the net income of Maximum Profit Ltd during the “group companies’ common span”.

Example 3:
Big Loss Ltd has a standard balance date and Low Profit Ltd has an early balance date of 31 December. Big Loss Ltd maintains its continuity of shareholding at least 49 per cent from 1 April 20X1 all through the various periods. Low Profit Ltd is formed on 1 January 20X1 and for the period until 1 October 20X2 Big Loss Ltd and Low Profit Ltd have a group commonality, with shareholders having an aggregate of at least 66 per cent of common voting interests (and common market value interests where a market value circumstance exists). On 1 October 20X2, the two companies fail to satisfy the 66 per cent group commonality requirements.

Big Loss Ltd has net losses as follows:

<table>
<thead>
<tr>
<th>Period</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 April 20X1 to 31 December 20X1</td>
<td>$1.7m</td>
</tr>
<tr>
<td>1 January 20X2 to 31 March 20X2</td>
<td>$300,000</td>
</tr>
<tr>
<td>1 April 20X2 to 30 September 20X2</td>
<td>$500,000</td>
</tr>
<tr>
<td>1 October 20X2 to 31 March 20X3</td>
<td>$1 million</td>
</tr>
</tbody>
</table>

Low Profit Ltd determines its net income as follows:

<table>
<thead>
<tr>
<th>Period</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 January 20X2 to 30 September 20X2</td>
<td>$3m</td>
</tr>
<tr>
<td>1 October 20X2 to 31 December 20X3</td>
<td>$1 million</td>
</tr>
</tbody>
</table>

In the “group companies’ common span” until 30 September 20X2 a loss offset from Big Loss Ltd may be allowed against the net income of Low Profit Ltd. The loss offset is restricted to $800,000, the amount of available net loss that Big Loss Ltd has during the “group companies’ common span”.

(2) Commonality gained part way through the income year [ss IP 4, IP 5]

Subsequent to the loss of commonality (a post-sale situation) the qualifying carried forward losses and current part-year losses of a loss company may only be offset against the equivalent “group companies’ common span” post-sale profit of companies in a company group that exists after the sale of the shares.

Example 1:
Loss Ltd and Purchaser Profit Ltd have the same standard balance date. Loss Ltd maintains its continuity of shareholding to at least 49 per cent from 1 April 20X2 until 31 March 20X3. After 30 September 20X2 Loss Ltd and Purchaser Profit Ltd have a group commonality, with shareholders having an aggregate of at least 66 per cent of common voting interests (and common market value interests where a market value circumstance exists). Loss Ltd has made net losses as follows:

<table>
<thead>
<tr>
<th>Period</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 April 20X2 to 30 September 20X2</td>
<td>$400,000</td>
</tr>
</tbody>
</table>
Losses 1 October 20X2 to 31 March 20X3 $600,000

Purchaser Profit Ltd has made profits as follows:

1 April 20X2 to 30 September 20X2 $700,000
1 October 20X2 to 31 March 20X3 $500,000

In the “group companies’ common span” from 1 October 20X2 until 31 March 20X3 a loss offset from Loss Ltd may be allowed against the net income of Purchaser Profit Ltd. The offset is limited to $500,000, the amount of net income Purchaser Profit Ltd has during the “group companies’ common span”.

Example 2:

Loss Ltd has a standard balance date and High Profit Ltd has a later balance date of 30 June. Loss Ltd maintains its continuity of shareholding to at least 49 per cent from 1 April 20X2 all through the various periods. High Profit Ltd is incorporated on 1 July 20X2. After 30 September 20X2 Loss Ltd and High Profit Ltd have a group commonality, with shareholders having an aggregate of at least 66 per cent of common voting interests (and common market value interests where a market value circumstance exists). Loss Ltd has made net losses as follows:

1 April 20X2 to 30 September 20X2 $400,000
1 October 20X2 to 31 March 20X3 $600,000

High Profit Ltd has made profits as follows:

1 July 20X2 to 30 September 20X2 $200,000
1 October 20X2 to 30 June 20X3 $800,000

In the “group companies’ common span” from 1 October 20X2 a loss offset from Loss Ltd may be allowed against the net income of High Profit Ltd. The offset is limited to $600,000, the amount of net loss Loss Ltd has during the “group companies’ common span”.

Example 3:

Loss Ltd has a standard balance date and Mighty Profit Ltd has an earlier balance date of 31 December. Loss Ltd maintains its continuity of shareholding to at least 49 per cent from 1 April 20X2 all through the various periods. Loss Ltd and Mighty Profit Ltd have a group commonality, with shareholders having an aggregate of at least 66 per cent of common voting interests (and common market value interests where a market value circumstance exists). Loss Ltd has made net losses as follows:

1 April 20X2 to 30 September 20X2 $400,000
1 October 20X2 to 31 March 20X3 $600,000

Mighty Profit Ltd has made profits as follows:

1 January 20X2 to 30 September 20X2 $1.5 million
1 October 20X2 to 31 December 20X3 $200,000

In the “group companies’ common span” from 1 October 20X2 a loss offset from Loss Ltd may be allowed against the net income of Mighty Profit Ltd. The offset is limited to $200,000, the amount of net income Mighty Profit Ltd has during the “group companies’ common span”.

Standard practice statement SPS 05/12 sets out the CIR’s view of the circumstances under which group companies are able to offset part-year losses [see TIB vol 18:1 (February 2006) at 5].

940.32 Adequate accounts for losses grouping [s IP 6]

Where adequate accounts are required to substantiate a part-year result for the purposes of carry-forward of available net losses or offset within a group of companies, they must be prepared to the extent to which they are reasonable and fair, using the provisions of the ITA 2004 to that period as if it were an income year.

940.35 Loss carry-forward following a spin-out [s YC 13]

A spin-out occurs when shares in a subsidiary company are transferred to shareholders of the parent company. A spin-out may result in a change in shareholder continuity, preventing the carry forward of tax losses and tax credits in the subsidiary company. Special rules in s YC 13 apply to enable the carry forward of losses from spin-outs, which occur on or after 1 March 2002, subject to several conditions [see TIB vol 14:11 (November 2002) at 64-69].
Losses

Example:
ACo Ltd is held by shareholders none of which has a more than 10 per cent interest. ACo Ltd holds 100 per cent of the shares in BCo Ltd which, in turn, holds 100 per cent of the shares in CCo Ltd. CCo Ltd has losses available for carry-forward. ACo Ltd transfers the shares in BCo Ltd to ACo Ltd’s shareholders. Under the standard continuity rules, BCo Ltd’s shares (and therefore CCo Ltd’s shares) are deemed to be held by ACo Ltd on behalf of its small shareholders [s YC 11]. After the spin-out, the shares in CCo Ltd are deemed to be held by BCo Ltd which is no longer owned by ACo Ltd. There has been a 100 per cent change in the shareholding in CCo Ltd, resulting in the losses being forfeited, even though there has been no change in the economic ownership of the shares. Under s YC 13, BCo Ltd is deemed to have held before the spin-out a greater than 50 per cent voting interest (or market value interest if a market value circumstance exists) ignoring the look-through rules.

For the tax treatment of the Tower Ltd spin-out, see TIB vol 17:3 (April 2005) at 22.

940.40 Anti-avoidance and losses grouping [ss IC 11, GB 3, GB 4]
Anti-avoidance provisions exist for arrangements designed to defeat the legislation whereby Inland Revenue can treat the carry forward provisions as having not been met [s GB 3] or not allow a loss offset within a company group [s GB 4].

Example:
All the shares in a prospective loss company are transferred prior to the income year in which the company starts to make a loss, subject to an arrangement that the shares will be transferred back to the original owners after the end of the loss year. The anti-avoidance provision will also apply where it is the shares of the parent company of the prospective loss company that are acquired subject to a buy back arrangement.

Where a deduction has been claimed by more than one profit company for a qualifying loss from a loss company and the total amount of deduction claimed exceeds the actual loss, the deductions are reduced proportionately. However, the loss company may elect in writing within a period of six months (or such longer period as may be allowed) after Inland Revenue has given notice to the loss company of the excessive deductions by the profit companies to have a different reduction applying to the various profit companies. It cannot choose to have a greater reduction applying to a company which is no longer a member of the group of companies at the time of the election [s IC 11].

940.50 Special corporate entities and incorporated societies
A special corporate entity is deemed to have a paid-up capital and issued and allotted shares. The members or directors of such an entity, in their collective capacity as such, are deemed to hold all of the paid-up capital, issued and allotted shares, entitlement to profits, and voting power of the entity.

This means that special corporate entities are effectively exempt from the loss carry forward rules [s YC 5]. “Special corporate entity” means:
(a) Any public authority;
(b) Any local authority;
(c) Any State enterprise;
(d) Any Crown research institute;
(e) Any statutory producer board, other than a body that derives only exempt income;
(f) Any life insurance fund;
(g) An entity that has not issued shares and is engaged mainly in the business of providing life insurance or other insurance to the public;
(h) Any group investment fund (GIF);
(i) Any body incorporated under the Incorporated Societies Act 1908, for an income year in which the body on no day in the income year has shares on issue to the members of the body; or
(j) Any statutory body established by Act of Parliament (whether in New Zealand or elsewhere), where the CIR is satisfied to treat it as a special corporate entity.
Losses

While the provision extends to statutory bodies established by an Act of Parliament of a foreign jurisdiction, it should be noted that only New Zealand sourced losses are able to be offset against New Zealand sourced income. The main criteria the CIR would use in deciding whether it was appropriate to treat a statutory body as a special corporate entity, having regard to the terms of the statute by which a statutory body is established, is whether the body has any ultimate natural person shareholders with a beneficial interest. If it has, it is unlikely to be appropriate. A statutory body will need to submit a copy of its parent statute to Inland Revenue to allow a decision to be made as to whether it is appropriate to treat that body as a special corporate entity.

940.60 Losses sustained by foreign branch

A loss sustained by a foreign branch of a New Zealand enterprise, converted to the New Zealand currency equivalent, may be deducted from the other income derived by the New Zealand resident (whether from New Zealand or abroad), and if the loss exceeds the income the balance of the loss may be carried forward.

Example:

A New Zealand enterprise carries on business through a branch in Australia, where the annual total deductions exceed the annual gross income in the year ended 30 June 20X1 by A$10,000. The New Zealand currency equivalent of the annual total deductions and the annual gross income (adjusted for New Zealand tax law) is included in the calculation of net income of the enterprise for the year ended 31 March 20X1. If a net loss arises as a result, any balance of the net loss not offset against other companies in the same group may be carried forward. In Australia, the branch loss may be carried forward, and used against a subsequent year’s branch net income in Australia. In that subsequent year, New Zealand will include the branch’s annual gross income and annual total deductions in calculating the net income of the enterprise. The Act will also permit an available net loss to be utilised against that New Zealand net income. In addition, New Zealand will allow credit for the income tax paid in Australia (which will be arrived at on the basis of the net income of the branch after deducting the previous branch loss).

940.70 Use of losses to pay shortfall penalties [ss IA 3(1), IW 1]

A taxpayer can elect to use a net loss to pay a shortfall penalty. The taxpayer can do this if the net loss is available to be offset against the taxpayer’s net income in the tax year that the shortfall penalty is imposed — provided the taxpayer notifies the CIR of the election by the due date for payment of the penalty. The losses used may be either current year losses or losses carried forward from a previous year. A wholly-owned group of companies may elect to use a loss incurred by one company in the group to pay a shortfall penalty imposed on another company in the group.

The amount by which the penalty is reduced is the amount of the loss multiplied by the taxpayer’s lowest marginal tax rate [see 1110.195].
Chapter 950
Maori Authorities

950.10 Overview
The regime for the taxation of Maori authorities and their shareholders or beneficiaries is elective and is based on a company dividend imputation model.

Maori authorities that elect into the regime are taxed at the rate of 17.5 per cent. Tax paid by the Maori authority is credited to a “Maori authority credit account” and gives rise to “Maori authority credits”. These credits are able to be attached to “taxable distributions” paid to the members. Members are able to use these credits to offset their individual tax liabilities with unused credits being refunded if the member is resident in New Zealand for tax purposes. Resident withholding tax (RWT) is required to be deducted from taxable distributions to the extent that they are not fully credited.

There are also rules to govern the donations deduction available to Maori authorities [see 950.55].

950.15 Becoming a Maori authority [ss HF 2, HF 3]
Only the following persons are eligible to be a Maori authority:

(a) A company or trust that is established under the Te Ture Whenua Maori Act 1993 (Maori Land Act 1993);

(b) A company or trust that owns land that is subject to the Te Ture Whenua Maori Act 1993 (Maori Land Act 1993);

(c) A company that is established by a mandated iwi organisation to be an asset-holding company, as contemplated by s 12(1)(d) of the Maori Fisheries Act 2004;

(d) A company or trust that is recognised by Te Ohu Kai Moana Trustee Ltd as a mandated iwi organisation under s 13(1) of the Maori Fisheries Act 2004;

(e) The trustees of trusts that are established by Te Ohu Kai Moana Trustee Ltd as a mandated iwi organisation under ss 79 and 92 of the Maori Fisheries Act 2004;

(f) A company or trust that, under the deed of settlement and on behalf of Maori claimants, receives and manages assets that are transferred by the Crown as part of the settlement of a Treaty of Waitangi claim;

(g) The Maori trustee in the capacity as agent for an owner of land that is subject to the Te Ture Whenua Maori Act 1993 (Maori Land Act 1993);

(h) A Maori Trust Board as defined in s 2 of the Maori Trust Boards Act 1955;

(i) The Crown Forestry Rental Trust;
(j) Te Ohu Kai Moana Trustee Ltd, established under s 33 of the Maori Fisheries Act 2004; and
(k) Aotearoa Fisheries Ltd, established under s 60 of the Maori Fisheries Act 2004.

The eligibility to be a Maori authority does not include an individual or an unincorporated body other than a trust. Neither does it extend to entities owned by a Maori authority unless that entity is, itself, eligible to be a Maori authority.

A person who was a Maori authority (under the old rules), at the end of the 2004-2005 income year ceases to be a Maori authority unless the person was eligible at the beginning of the 2004-2005 income year to be a Maori authority (under the new rules), and before the end of the 2004-2005 income year, made an election to become a Maori authority.

A person who is eligible to become a Maori authority can elect to become one by filing an election. Under normal circumstances, the election will take effect from the first day of the income year in which the election is made. However, the person is able to nominate in the election that it take effect from the first day of the following income year.

Any election ceases to be effective if the Maori authority cancels the election or ceases to be eligible to be a Maori authority.

Eligible entities who choose not to file an election are taxed under the normal rules applying to entities of their type (eg the company or trust rules).

Entities that do not fall within the list of eligible entities, but who consider that they should be eligible, are able to request a legislative change to effect their inclusion in the regime.

950.20 Rules for entering, leaving and re-entering the regime [ss HF 9, HF 10]

The rules for entering the Maori authority regime are designed to ensure that no additional tax consequences arise.

Where a company or trust leaves and then re-enters the regime, it is treated as having realised and immediately reacquired its assets at market value. This ensures that any tax liability on such things as trading stock is accounted for at the company rate of tax. For depreciation purposes, assets are deemed to have been realised and reacquired at the lower of cost or market value, thus preventing an uplift in the depreciable value of the asset.

The tax treatment to be afforded on entry, leaving or re-entering the regime is set out below:

<table>

950.25 **Taxation of distributions from a Maori authority** [ss HF 4, HF 5, HF 6, HF 7, HF 8, CV 11, YA 1]

A “Maori authority distribution” occurs where there is a transfer of value from a Maori authority to a person and the cause of the transfer is the membership of the person in the Maori authority. It includes:

(a) Amounts advanced to a member to the extent to which the loan is not a genuine investment by the authority;
(b) A taxable bonus issue made by a Maori authority to a member;
(c) The disposal of property to a member to the extent to which the consideration is less than the market value of the property; and
(d) The acquisition of property from a member to the extent to which the consideration is more than the market value of the property.

Where a distribution has a Maori authority credit attached to it, the amount of the credit is included. A Maori authority distribution does not include the provision of services to a person by a Maori authority.

A “taxable Maori authority distribution” is a distribution from gross income of the Maori authority where that income was derived in the 2004-2005 or later income year and which was not exempt from tax in the hands of the Maori authority. The definition does not include such things as capital gains derived by the Maori authority or income earned by the authority prior to the 2004-2005 income year. The definition does include any taxable bonus issues made by the Maori authority to a member [s HF 7].

Where a Maori authority makes a “taxable Maori authority distribution”, the amount distributed is income of the member. Also included as gross income of the member are notional distributions made by a Maori authority that is a co-operative company. For Maori authorities which are co-operative companies, there is a specific exclusion from the definition of “taxable Maori authority distribution” for distributions made in respect of a notional distribution where the Maori authority has made a determination under s OB 82 that the distribution not be deductible.

Taxable Maori authority distributions are able to have Maori authority credits attached and, in most circumstances, are subject to deduction of resident withholding tax where they are not fully credited [see 950.60]. Members are able to use the attached credits to offset against their income tax liability. Excess credits are able to be refunded.

Non-taxable distributions are exempt from tax in the hands of the member.
950.30 Attaching Maori authority credits to distributions [ss HF 8, GB 42, OK 16, OK 17, OK 18, OK 19, OK 20, OK 21, OK 22, OK 23, OK 24]

A Maori authority is able to attach a Maori authority credit to a taxable Maori authority distribution. Where the Maori authority is a co-operative company, it may attach a Maori authority credit to a notional distribution in the same way that a non-Maori authority co-operative company can attach imputation credits to a notional distribution [see 670.90]. A Maori authority is also able to retrospectively attach Maori authority tax credits subject to the same criteria as the retrospective attachment of imputation credits [see 670.40].

Two allocation rules act to prevent Maori authority credits from being allocated on an inappropriate basis. They place restrictions on the base ratio of a distribution, i.e., the ratio of the amount of attached Maori authority credit to the amount of distribution paid (exclusive of credit).

The first allocation rule restricts the maximum amount of Maori authority credit that can be attached [s OK 19]. It requires that the base ratio of the distribution cannot exceed the following fraction:

\[
\frac{\text{tax rate}}{1 - \text{tax rate}}
\]

Where the “tax rate” is the basic rate of income tax for Maori authorities expressed as a percentage (currently 17.5 per cent).

This rule prevents credits from being attached to distributions in excess of the amount of tax that the Maori authority paid on the underlying income.

Example:

A Maori authority resolves to make a distribution of $805 and to attach a Maori authority tax credit. The maximum credit that can be attached is $175, calculated as 17.5/80.5 × $805, and doing so would result in a total distribution for tax purposes of $805 + $175 = $980 to the beneficiaries. However, the Maori authority could, instead, attach any amount of Maori authority tax credit less than $175.

Example:

A Maori authority resolves to make a distribution of $805 and to attach a Maori authority tax credit. The maximum credit that can be attached is $175, calculated as 17.5/80.5 × $805, and doing so would result in a total distribution for tax purposes of $805 + $175 = $980 to the beneficiaries. However, the Maori authority could, instead, attach any amount of Maori authority tax credit less than $175.

TaxNote: From the beginning of the 2011-12 income year to 31 March 2013, Maori Authorities have the option of attaching Maori Authority credits at the old rate of 19.5/80.5. This is the same transitional rule that applies to companies on the change in company tax rate. The transitional provision is designed to allow an opportunity for distributions of income which has been taxed at the higher rate. This will prevent credits being trapped in the Maori Authority.

The second allocation rule is aimed at preventing the “streaming” or unequal allocation of tax credits to different beneficiaries or different classes of beneficiary (not all of whom may be able to utilise the tax credits) during an imputation year. It establishes the first distribution for the imputation year as being the “benchmark distribution” and requires that the base ratio of every subsequent distribution made by the Maori authority during an imputation year must be the same as the ratio of the “benchmark distribution”, unless the Maori authority has supplied a ratio change declaration, in the prescribed form, to the CIR. In all cases, the imputation year runs from 1 April to 31 March [s OK 20].

The base ratio of a distribution paid subsequently to the benchmark distribution in an imputation year can differ from that of the benchmark dividend if:

1. The Maori authority declares in a ratio change declaration in the prescribed form, that the subsequent distribution is not being made as part of an arrangement to obtain a tax advantage, and provides such further information as the CIR may require; and
2. The ratio change declaration is delivered to the CIR before the date on which the subsequent distribution is made or such further time as the CIR may allow; and
3. The subsequent distribution is not paid as part of an arrangement to obtain a tax advantage [see 670.115 for a description of “tax advantage”].

Allocation debit [s OK 16]

If the second allocation rule is breached (ie where the required ratio change declaration is not filed, or the subsequent distribution paid is part of an arrangement to obtain a tax advantage) an allocation debit arises to the Maori authority credit account, calculated as follows:
Maori Authorities

(\text{net distributions} \times \text{Maori authority credit ratio}) - \text{credits attached}

Where:

“Net distributions” is the total of all Maori authority distributions made by the Maori authority during the tax year, excluding the amount of any Maori authority credits attached to the distributions;

“Maori authority credit ratio” is the lesser of the ratio of the distribution with the greatest ratio of all Maori authority distributions made by the Maori authority during the imputation year; or the maximum allowable ratio (17.5 / 80.5); and

“Credits attached” is the total of all Maori authority credits attached to distributions made by the Maori authority during the imputation year.

The allocation debit is effectively the difference between the total amount of Maori authority credits actually attached to distributions made during the income year, and the total amount of Maori authority credits that would have been attached if all such distributions had ratios equal to the highest ratio (not exceeding 17.5 / 80.5) that was actually adopted.

Example:

A Maori authority makes the following distributions:

<table>
<thead>
<tr>
<th>Date</th>
<th>Amount</th>
<th>Credits attached</th>
</tr>
</thead>
<tbody>
<tr>
<td>9 July</td>
<td>$10,000</td>
<td>$1,500</td>
</tr>
<tr>
<td>9 January</td>
<td>$10,000</td>
<td>$1,500</td>
</tr>
<tr>
<td>15 March</td>
<td>$20,000</td>
<td>$4,844</td>
</tr>
</tbody>
</table>

The ratio (4,844 / 20,000) of the subsequent 15 March distribution differs from that of the 9 July benchmark distribution. If no ratio change declaration was filed, the allocation debit arising would be: ($40,000 \times 0.2422) - $7,844 = $1,844.

The allocation debit to the Maori authority credit account arises at 31 March year end, so that it might cause a Maori authority credit account debit year-end balance to arise with consequential further income tax and penalties [see 1110.75].

Further tax payable [ss OK 21, OK 22, OK 23, OK 24]

A Maori authority is required to pay further income tax in the following circumstances:

(a) If there is a debit balance in the Maori authority credit account at the end of the imputation year. The amount of further tax payable is the amount needed to eliminate the debit balance. The amount is payable by 20 June following the end of the imputation year.

(b) If there is a debit balance in the Maori authority credit account immediately before the Maori authority ceases to be a Maori authority. The amount of further tax payable is the amount needed to eliminate the debit balance. The amount is payable no later than the last day on which the Maori authority is a Maori authority.

Any further income tax paid is able to be credited against any income tax liability or provisional tax liability for which the Maori authority becomes liable after the day on which the further income tax was paid.

A further anti-streaming rule, contained in s HF 8, provides that, where a distribution is made to members, all recipient members are treated as having received a proportionate share of taxable and non-taxable distributions.

Finally, s GB 42 contains further anti-streaming provisions where there has been an arrangement to obtain a tax advantage.

Maori authority credit accounts [ss OA 7, OB 1, OK 1, OK 2, OK 3, OK 4, OK 4B, OK 5, OK 6, OK 7, OK 8, OK 9, OK 10, OK 11, OK 12, OK 13, OK 14, OK 15, OK 16, OK 17, OK 18]

Every Maori authority is required to maintain a Maori authority credit account unless it either derives only exempt income (other than exempt dividends), or is prohibited by its constitution from making distributions...
Maori Authorities

to members. Where a Maori authority is a company, it is not required to maintain an imputation credit account (ICA).

The opening balance of the Maori authority credit account is nil for the first tax year and, for every subsequent income year, it is the closing balance from the previous income year [s OA 7].

Credits to the “Maori authority credit account” (MACA) for an imputation year arise for:

(a) New Zealand income tax paid during the tax year by the company by way of provisional tax or terminal tax. The credit arises on the date the tax is paid [s OK 2]. However, no credit to the ICA arises for income tax that is:
   (i) Income tax in respect of the 2003-2004 or earlier income year;
   (ii) Income tax paid in respect of income derived before the date on which the Maori authority became a Maori authority;
   (iii) Income tax paid by way of offsetting any imputation credit attached to a dividend received;
   or
   (iv) Tax paid to eliminate a debit balance that exists in the MACA immediately before the Maori authority ceases to be a Maori authority;

(b) Overpaid provisional tax by another Maori authority that the other Maori authority has elected, under s RC 32, to allocate to the Maori authority to cover its underpaid provisional tax. The credit arises on the date tax is paid [s OK 3];

(c) Further income tax paid by the Maori authority under ss OK 21 or OK 22 to clear a 31 March debit balance in the MACA. The credit arises on the date the tax is paid [s OK 4];

(d) The amount of any tax credit for research and development expenditure. The credit arises on the day on which the Maori authority’s return of income is filed [s OK 4B];

(e) Maori authority credits attached to distributions derived by the Maori authority. The credit arises on the date that the distribution is made [s OK 5];

(f) Imputation credits attached to dividends paid to the Maori authority. The credit arises on the date on which the dividend is paid or, in the case of a taxable bonus issue of shares with imputation credits attached, the date that such a dividend is treated as having been paid [s OK 6];

(g) An amount previously debited to the MACA under s OK 17 in respect of an arrangement to obtain a tax advantage where it is subsequently established (eg by the CIR or by a Court), that there was no such arrangement. The credit arises on the same date that the previous debit arose [s OK 9].

Debits will arise to the MACA for:

(a) The amount of Maori authority credit attached to a distribution made by the Maori authority during the imputation year. The debit arises on the date the distribution is made [s OK 10];

(b) Any provisional tax that the Maori authority overpaid and then elects, under s RC 32, to allocate to another Maori authority to cover the latter Maori authority’s underpaid provisional tax. The debit arises on the date that notice in writing of the allocation is supplied to the CIR [s OK 11];

(c) Income tax refunded to the Maori authority, except to the extent that:
   (i) The tax paid was in respect of the 2003-2004 or earlier income year; or
   (ii) The tax paid was applied in satisfaction of an income tax liability for an income year during which the Maori authority did not maintain a MACA, or during only part of which the Maori authority maintained a MACA (in the latter case, the refund is apportioned on a daily basis);

The debit arises on the date the refund is paid [s OK 12];

(d) Overpaid income tax that the CIR applies to satisfy a tax liability of the company other than provisional tax or income tax (eg a GST liability), except to the extent that the amount applied is:
   (i) In respect of income tax paid for the 2003-2004 income year;
(ii) In respect of tax paid before the date on which a debit arises under para (f) below (breach of continuity); and

(iii) Not more than the amount of the debit that arises on that date (thus preventing double debiting);

The debit arises on the date the CIR applies the overpaid tax in satisfaction of the other liability [s OK 13];

(e) Any refund of dividend withholding payment (DWP) paid to the Maori authority at a time when it does not maintain a dividend withholding payment account (DWPA). The debit arises on the date the refund is paid [s OK 14];

(f) Any amount of a tax credit transferred for the payment of other taxes to the extent to which it does not result in a refund of income tax;

(g) Where the Maori authority is a company, any credits existing in the MACA (and not cancelled by a prior or subsequent debit), at any time where there is a breach of the 66 per cent shareholder continuity requirement [see 670.75]. The debit occurs at the time the breach of shareholder continuity occurs [s OK 15];

(h) The allocation debit that arises when the base ratio of a subsequent distribution differs from that of the benchmark distribution. The debit arises at the end of the imputation year for which the allocation debit arises [s OK 16];

(i) A further debit which may be imposed under the anti-avoidance provision s GB 42, where the CIR determines that there is an arrangement to obtain a tax advantage. The debit arises at the end of the imputation year in which the tax advantage arrangement occurred or commenced [s OK 17]; and

(i) Any credit balance in the MACA if the Maori authority ceases to be a Maori authority. The debit arises immediately before the Maori authority ceases to be a Maori authority, so that any credit balance in the MACA is extinguished at that time [s OK 18].

If the CIR considers that a credit or debit in the Maori authority’s Maori authority credit account is incorrectly recorded or has failed to be recorded, the CIR is required to determine the correct debit or credit amount and the date on which it should be recorded. As soon as convenient following the making of the determination, the CIR must give notice of the determination that has been made. Unless the Maori authority establishes in proceedings that the CIR is wrong, the account must be corrected in accordance with the determination.

950.40 Maori authorities that are companies [s HF 3]

Where a Maori authority is a company, the general rules applying to loss grouping, shareholder continuity, amalgamations, consolidations and co-operative companies apply unless specifically over-ridden.

A Maori authority may only:

(a) Offset losses against the income of another Maori authority;

(b) Amalgamate with another Maori authority whose legal form is that of a company;

(c) Be part of a consolidated group comprised of Maori authorities only;

(d) Be a co-operative company if all of the shareholders are Maori authorities.

These rules are designed to ensure that companies not eligible to be Maori authorities are prevented from obtaining unintended tax advantages.

950.45 Limits on refunds of income tax [ss RM 22, RM 23]

The maximum amount of any tax that is able to be refunded to a Maori authority is the amount of the credit balance in its Maori authority credit account as at the previous 31 March. Any excess that is not refunded may be offset against a future income tax liability. Where a Maori authority ceases to be a Maori authority, the maximum amount of tax that can be refunded is the amount of the debit that arose at the time at which it ceased to be a Maori authority.
950.50  Donations deduction for Maori authorities [s DV 12]

A deduction is available to Maori authorities for donations to a Maori association and to “donee organisations”. The maximum level of donation is the total amount of the authority’s net income (before deduction of donations). Prior to the 2008-2009 year, the maximum level of donation was five per cent of the net income.

To be a “donee organisation”, an organisation must have been established for charitable, benevolent, philanthropic or cultural purposes within New Zealand or must specifically be listed in s LD 3(2) or sch 32.

950.55  Charitable purposes [s YA 1]

In order for the purpose of a trust, society or institution to be a charitable purpose, it is necessary that the “public benefit” requirement be met. However, the fact that the beneficiaries of the organisation are related by blood to a named person does not, of itself, preclude the public benefit test from being met [see 150.10].

In certain circumstances a marae can have a charitable purpose. Where this is the case, the entity that administers the marae may be exempt from tax under ss CW 41 and CW 42 [see 150.10] and also qualify for tax credits and deductions under ss LD 1 and DB 41 [see 1395.75 and 300.20].

A trust, society or institution that administers a marae that is situated on a Maori reservation qualifies for an exemption only if it uses its funds solely for:

(a) Charitable purposes;
(b) Administration and maintenance or improvements to the marae’s physical structure.

Maori reservation is defined to be an area of land that is set aside for specific purposes, such as a marae, in accordance with the process set out in s 338 of the Te Ture Whenua Maori 1993 (Maori Land Act 1993).

Where an entity administers a marae that is not situated on a Maori reservation, any exemption would be available only under the general charitable purposes exemption in the same way as entities administering churches and public halls.

Where a Maori Trust Board executes a declaration of trust whereby it stands possessed of property for charitable purposes under s 24B(1) of the Maori Trust Boards Act 1955, the income of that trust can be exempt from tax under ss CW 41 or CW 42 of the ITA 2007. In order for the exemption to apply, the following conditions must be satisfied:

(a) All of the purposes specified in the declaration of trust are purposes that are specified in ss 24 or 24A of the Maori Trust Boards Act 1955;
(b) The declaration of trust has been submitted to, and approved by, the CIR;
(c) The CIR is satisfied that all requirements of charitable trust status are met with the exception of the charitable purpose and the public benefit requirements;
(d) The trust is registered as a charitable entity under the Charities Act 2005, or has started the registration process before 1 July 2008 provided that the CIR has not notified the trust that it is not a tax charity as defined in the Act.

Neither s CW 41 nor s CW 43 provides an exemption where any person is able to influence the amount of any private pecuniary benefit from the trust. The exemption under s CW 42 applies only where and to the extent to which the charitable purposes are carried out in New Zealand. These conditions are confirmed in a public ruling BR Pub 08/02, which applies for an indefinite period commencing from the first day of the 2008-2009 income year [see TIB vol 20:8 (October 2008) at 26-34].

950.60  Resident withholding tax on distributions [ss RE 16, RE 20, RE 21]

Taxable Maori authority distributions are subject to resident withholding tax (RWT). No RWT is required to be deducted where the recipient holds a valid certificate of exemption that has been sighted by the authority.
Where a taxable Maori authority distribution is made in cash or by way of credit of an amount of money to the balance of any account with the Maori authority, the amount of RWT required to be deducted is calculated as follows:

\[(\text{tax rate} \times (\text{distribution amount} + \text{credit attached})) - \text{credit attached}\]

Where:
- “Tax rate” is 17.5 per cent or, if the distribution is more than $200 and the Maori authority does not have a record of the tax file number of the recipient, 33 per cent [sch 1];
- “Distribution amount” is the amount of the distribution before the deduction of RWT;
- “Credit attached” is the amount of the Maori authority credit attached to the distribution.

Where the taxable Maori authority distribution is not a payment in cash or a credit to the balance of an account with the Maori authority, the amount of RWT is calculated as follows:

\[\frac{((\text{tax rate} \times \text{distribution amount}) - \text{credit attached})}{1 - \text{tax rate}}\]

Where:
- “Tax rate” is 17.5 per cent or, if the distribution is more than $200 and the Maori authority does not have a record of the tax file number of the recipient, 33 per cent [sch 1];
- “Distribution amount” is the amount of the distribution, disregarding any RWT deduction;
- “Credit attached” is the amount of the Maori authority credit attached to the distribution.

In this latter case, the Maori authority does not deduct the RWT but, rather, is liable to pay the amount so calculated to the CIR. This means that the recipient of the distribution receives the gross amount as income. The Maori authority is required to pay all amounts of RWT to the CIR by the 20th of the month following the month of deduction.

Where a Maori authority, in error, deducts too much RWT from a distribution, the excess may be paid to the recipient at any time on or before 31 March in the income year in which the deduction was made provided that, at the time of payment, a notice of amounts distributed has not been given to the recipient under s 31 of the TAA or a notice including the excess deduction has been returned and cancelled.

This treatment of RWT on distributions from a Maori authority is the same as applies to RWT on interest income. Members are able to claim a refund of any excess RWT by filing a return of income or by requesting an income statement/personal tax summary [see 1270.75 Income Statement/Personal Tax Summary].

960.10  **Property (Relationships) Act 1976** [ss CS 4, YA 1; EGDA, s 75A]  

The application of the Property (Relationships) Act 1976 (PRA 1976) covers marriage, civil unions, and de facto relationships of both heterosexual and same-sex couples. Each of the partners to a relationship is entitled to an equal share in the family home, family chattels, and any other relationship property. If there are extraordinary circumstances that would make the equal division of property “repugnant to justice” or where a relationship is of short duration, each partner’s share is determined according to that person’s contribution to the relationship. Couples can enter into contracting-out agreements in order to preserve their autonomy in property.

The term “relationship property” is defined in s 8 of the PRA 1976. This definition also applies to the ITA 2007.

Section CS 4 provides an exemption from tax on withdrawals from superannuation funds where the withdrawal is necessary to settle the division of property following the end of a marriage or de facto relationship.

A division order made under the PRA 1976 has effect only from the time of the making of the order: *TRA Case J68* (1987) 9 NZTC 1,410.

The ITA 2007 contains provisions to eliminate any income tax liability arising where property is transferred from one person to another under a relationship agreement. A relationship breakdown need not have occurred before advantage can be taken of these provisions. The paragraphs which follow refer to the income tax circumstances applicable to various types of property.
(1) **Spouse**

The Income Tax Amendment Act 2005 updated the Revenue Acts to recognise civil unions as being equivalent to marriage and to also incorporate de facto relationships. The term “spouse” is replaced by “spouse or civil union partner”. De facto relationships are included from 1 April 2007.

For the purposes of *Staples Tax Guide* we have continued to use the word “spouse” to denote relationships by way of marriage and civil union (and from 1 April 2007, de facto relationships).

**960.15 Bloodstock** [s FB 18]

Section FB 18 applies where bloodstock, which has been used for breeding purposes, is transferred under a relationship agreement. For valuation purposes by the transferee, the bloodstock is deemed not to have been used for breeding purposes by the transferor.

**960.25 Company losses carry forward** [s FB 10]

In order for a company to carry forward a loss, it must maintain a 49 per cent continuity of minimum voting interests or market value interests where a market value circumstance exists. For the purposes of these rules, where any person has acquired shares or options in a company from a spouse [see 960.10] or former spouse under a relationship agreement, the transferee is deemed to have acquired these on the date the transferor acquired them.

**960.30 Depreciation** [s FB 21]

The transferee may claim the same depreciation allowance as would have been available to the transferor had the transferor retained the asset. The asset is transferred at its written down value for tax purposes. In the case of buildings, depreciation is allowed on the basis of the original cost price to the transferor. The transferee must use the asset in deriving gross income in order to obtain the depreciation allowance.

No depreciation is recovered where a transferor disposes of an asset under a relationship agreement. The disposal is at the lesser of the adjusted tax value at the beginning of the year of transfer and the cost price to the transferor. The transferee is deemed to have been allowed a deduction for depreciation of that asset of an amount equal to total depreciation allowed to the transferor. On subsequent disposal by the transferee, depreciation is recoverable by the transferee up to the combined total of that allowed to the transferor and transferee.

**960.35 Financial arrangements** [s FB 9]

The financial arrangement rules do not apply to various financial arrangements transferred under a relationship agreement in the circumstances mentioned in s EW 10(6).

**960.40 Herd scheme specified livestock** [s FB 15]

Any specified livestock transferred to a taxpayer under a relationship agreement is deemed to have been acquired by the transferee taxpayer during the income year in which the transfer occurred at a price equal to the national average market value of that livestock for that income year multiplied by the herd value ratio (if any), applying to the livestock in the hands of the transferor in the preceding income year. This applies when:

(a) That livestock was used by the transferor in any business carried on by the transferor, and was held by the transferor at the beginning of that income year;

(b) Its value at the end of the preceding income year was determined by the transferor under the herd scheme (or the former herd scheme); and

(c) Its value at the end of the income year in which the transfer occurred is determined by the transferee under the herd scheme.

**960.45 High-priced livestock** [s FB 17]

Where any high-priced livestock is transferred to any taxpayer under a relationship agreement:

(a) The taxpayer is deemed to have acquired the livestock:
(i) On the day on which it was acquired by the transferor; and
(ii) At a cost equal to the cost of the livestock to that transferor;

(b) The value of the high-priced livestock to be taken into account at the end of that income year is the amount of the value at which it is so transferred to the taxpayer, reduced by an amount equal to the assigned percentage of its cost price;

(c) Where the transferor had elected to adopt for the high-priced livestock a specified write down based on diminishing value, the taxpayer is deemed also to have made an election; and

(d) Where the transferor had not so elected to adopt a specified write-down based on diminishing value, the taxpayer is not entitled to make an election under these provisions unless the high-priced livestock was acquired by the transferor in the same income year as that in which it was transferred to the taxpayer.

960.50  Land transactions [ss FB 3, FB 4]
Where land to which ss CB 6, CB 7, CB 8, CB 9, CB 10, CB 11, CB 12, CB 14, CB 17, CB 20, or CB 23 would apply is transferred, the transfer is treated as a disposal and acquisition at the cost price of the land to the transferor. The transferor therefore is not liable for income tax on disposal of the land. The transferee is deemed to have acquired the land on the day on which it was acquired by the transferor.

For the purposes of s CB 13, the transferor is deemed to have disposed of the land for an amount equal to the market value of the land at the commencement of the scheme and scheme expenditure incurred prior to the transfer. The transferee is deemed to have incurred expenditure equal to the transferor’s disposal price providing the scheme was undertaken by the transferor. In the event that the transferor had not himself commenced a scheme, the transferee is deemed to have incurred expenditure equal to costs incurred by the transferor.

A transferee who acquires any land under a relationship agreement is deemed to have acquired that land on the day on which it was acquired by the transferor.

960.55  Leased assets sold [s FB 19]
Where a previously leased asset has been transferred under a relationship agreement, the transferor is not subject to the recovery provisions enabling Inland Revenue to recover lease payments previously allowed as a deduction. The asset is deemed to have been sold by the transferor at the lesser of the purchase cost to the transferor or the depreciated value for tax purposes in the transferor’s books. Where the transferee later sells the asset, the difference between the sale proceeds and the deemed transfer price is included in the transferee’s income to the extent of lease deductions previously allowed.

960.60  Non-specified livestock [s FB 16]
A transferee of relationship property who commences or recommences to derive income from non-specified livestock is deemed not to have so commenced or recommenced to derive income from non-specified livestock by virtue of that relationship property transfer. This does not exclude other circumstances from constituting the commencement or recommencement of deriving income from non-specified livestock.

If the transferee uses the livestock in deriving income from non-specified livestock, the transferee is required to continue any gradual write-down of value that the transferor was undertaking pursuant to s EC 31. This applies only where the transferee was not, in fact, deriving income from non-specified livestock before the year of transfer.

960.65  Patent rights [s FB 8]
The value of patent rights transferred is deemed to be the cost incurred by the transferor in acquiring the patents or the residue of the transferor’s costs where the transferor has already claimed a deduction on the basis of apportionment of costs over a period of years. The transferee is entitled to deduct the costs deemed to have been incurred in acquiring the rights over the remaining life of the patent.
960.70 Pensions to former employees or former partners [ss FB 11, FB 12]

An employer is allowed a deduction for pensions paid to spouses [see 960.10] of living former employees where the pension right has vested in the spouse under a relationship agreement.

Section DC 3 allows a deduction for pensions paid to former partners. The deduction is not affected by the fact that the payment may be made to some other person as a result of a relationship property agreement.

960.75 Personal property sales [s FB 2]

Property disposals within ss CB 4 and CB 5 are deemed to occur for a consideration equal to the cost to the transferor. Any excess over the transferee’s deemed purchase price, received by the transferee from a subsequent sale, is assessable to the transferee.

960.80 Resident mining operators [s FB 20]

Where a mining asset is transferred under a relationship agreement, the asset is deemed to be transferred at book value and the transferee is assessed on any profit made on a subsequent sale by the transferee in the same manner as if it had been sold by the transferor.

960.85 Share option or purchase schemes

The transferee spouse [see 960.10] is restricted from disposing of the shares until the restrictive period has terminated [see 340 EMPLOYEE SHARE PURCHASE SCHEMES].

960.90 Standing timber [ss FB 6, FB 7]

Where any timber or right to take timber or land with standing timber is transferred from any person to any other person under a relationship agreement:

(a) That transfer is deemed to be a sale or other disposition of timber, or of a right to take timber (whether or not the sale or other disposition includes other land or other assets or the land and timber are assets of a business), for a consideration equal to the cost to the transferor of the timber determined as at the date of the deemed sale or other disposition; and

(b) That amount is taken into account in calculating the income of the transferor and in calculating the cost of the timber to the transferee. This does not apply to any standing timber included with a sale or disposition consisting of ornamental or incidental trees.

960.95 Superannuation assignments

In TRA Case J96 (1987) 9 NZTC 1,541, an agreement between a husband and wife under s 21(1) of the PRA 1976 transferring a one-half share in a pension payable from a superannuation fund was held invalid for tax purposes where the rules of the fund did not provide for the assignment of pensions between husbands and wives other than pursuant to Court order under the Act.

An assignment of Government Superannuation rights made under s 21 PRA 1976 is recognised by the Government Superannuation Fund. A Court order is therefore not necessary. The Superintendent of the Government Superannuation Fund has the authority to approve assignments of Government Superannuation rights, upon application in writing.

If an assignment of pension rights satisfies the provisions of the Government Superannuation Fund Act 1956, it will also meet the requirements of the ITA 2007 [see PIB 164 (August 1987)].

960.100 Trading stock [s FB 13]

Where trading stock is transferred under a relationship agreement, the value at which it is transferred depends on whether or not the transferor was holding and using that stock in a business. Where the transferor was using the trading stock in a business:

(a) Trading stock held at the beginning of the year of transfer is treated as a sale and acquisition for the greater of its value under s EB 3 for the transferee at the end of the year of transfer or its value under s EB 3 for the transferor at the end of the preceding year; or
(b) Trading stock acquired by the transferor during the year of transfer is treated as a sale and acquisition at the transferor’s cost price.

For the purposes of this rule, trading stock does not include specified livestock unless it is used in a dealing operation and ss FB 14 and FB 17 apply. Where the transferor has not used trading stock in business, it is treated as a sale and acquisition at the transferor’s cost price. Where trading stock, used in the transferor’s business, is disposed of to the transferee under a relationship agreement, all sale proceeds received by the transferee must be taken into account in determining the transferee’s income regardless of whether the transferee uses that trading stock in a business.

**960.105 Tax awarded by the Court**

In *Von Ah v Von Ah* (1994) 16 NZTC 11,085 (HC) after the division of a farm and other relationship property in Family Court proceedings, the High Court ordered that a credit be given by the wife to reflect the fact that a tax contingency on livestock would apply to the husband at a future time.

980.100 Non-resident mining operators..............................................1135

980.05 Petroleum mining

The expenditure rules affecting the petroleum mining sector supplement the general permission and override the capital limitation. Thus, they are effectively a code. Much expenditure that would otherwise be of a capital nature is deductible, and capital assets treated as on revenue account.

The legislation dealing with petroleum mining expenditure splits the expenditure between exploration activities and development activities.

(1) Petroleum mining income [ss CT 1, CT 2, CT 3, CT 4, CT 5, CT 6, CT 6B, CT 7]

The provisions for income are contained principally in ss CT 1 to CT 7, which also contains a number of the definitions relating to petroleum mining. Sections CX 42 and CX 43 apply to the consideration received from the disposal of interests in controlled petroleum mining entities and the assessability of farm-in expenditure to the farm-out party. Section CZ 8 deals with excess expenditure under farm-out arrangements before 16 December 1991.

(2) Petroleum mining expenditure [ss DT 1 to DT 20]

The expenditure provisions are contained principally in ss DT 1 to DT 20. Sections DZ 3 to DZ 7 apply to petroleum mining development expenditure and farm-out arrangements before 16 December 1991. Sections EJ 12 to EJ 20 apply to deductions that are spread, s EZ 3 applies to petroleum mining expenditure incurred between 1 October 1990 and 15 December 1991. Section GB 20 applies to extend arrangements that have a tax avoidance effect to arrangements involving disposal of petroleum mining assets, petroleum mining expenditure arrangements involving farm-outs and arrangements between associated persons.
980.10 Definition of petroleum miner [ss CT 6, CT 6B]

A petroleum miner is a person who undertakes petroleum mining operations in a permit area for which the person has a petroleum permit. Petroleum mining operations are activities carried out in connection with the following:

(a) Prospecting or exploring for petroleum;
(b) Developing a permit area for producing petroleum;
(c) Producing petroleum;
(d) Processing, storing, or transmitting petroleum before its dispatch to a buyer, consumer, processor, refinery, or user; or
(e) Removal or restoration activities.

These activities do not include further treatment when:

(a) It occurs after the well stream has been separated and stabilised into crude oil, condensate, or natural gas; and
(b) It is done
   (i) By liquefaction or compression; or
   (ii) For the extraction of constituent products; or
   (iii) For the production of derivative products; and
(c) It is not treatment at the production facilities.

The consideration for the petroleum mining operations must be in the form or, or contingent on, the production or petroleum for the permit area, or profits from the production of petroleum from the permit area, or an interest or a right to an interest in the petroleum permit. A petroleum permit is any one or more of a prospecting permit, an exploration permit and a mining permit [s YA 1].

980.15 Petroleum mining income [ss CT 1, CT 2, CT 3, CT 4, CT 5, CT 6, CT 7, CX 42, CX 43]

As well as the assessable income derived from the petroleum mining operations, the following amounts are specifically taxable:

(a) The consideration derived from the disposal of exploratory material (anything acquired with exploratory well expenditure or prospecting expenditure [ss YA 1, CT 1(1)]);
(b) The consideration derived from the disposal of a petroleum mining asset (ie a petroleum permit or permit-specific asset) [ss CT 7, CT 1(2)]; and
(c) The consideration derived for damage to an petroleum mining asset, that is not a petroleum permit [s CT 2].

Income arising from exploratory well expenditure [s CT 3] is income of the petroleum miner. This income is essentially a clawback of exploratory well expenditure and arises when a petroleum miner commences using the well for the commercial production of petroleum. While the expenditure is added back as income, the expenditure is then able to be deducted under s DT 5 and the spreading rules in s EJ 12, as development expenditure.

With effect from 3 December 2002, the consideration a person derives from disposing of shares or trust interests in a controlled petroleum mining entity is excluded income under s CX 43, and the cost of those shares or trust interest is not deductible in terms of s DT 13. Essentially then the disposal is treated as being on capital account, as is the acquisition by the purchaser.

Prior to this date, such disposals and purchases were treated as being on revenue account. The change in tax treatment does not apply in respect of a contract entered into prior to 3 December 2001 when the sale was to a non-associated person and the shares or other interest are transferred to the purchaser within a year on the date on which the contract was entered into.
Mining Companies and Operators

**TaxNote:** Controlled petroleum mining entities are required to furnish under s 65 of the TAA, in their annual return, details of any disposal which ss CX 42 and DT 13 apply. Specifically, the date of disposal, the number of shares or proportion of the trust represented by the trust interest, and the name of the persons acquiring and disposing of the shares or trust interest. A controlled petroleum mining entity is defined in s YA 1. In general terms it is an entity when 90 per cent or more of the value of its shares are held by five or fewer people, and the market value of the petroleum permit represents 75 per cent or more of the entities net assets.

**980.20 Non-resident companies involved in exploration and development**

Income derived by a non-resident company from exploration and development activities is exempt from income tax where it is derived in the period that:

(a) Starts with the beginning of the 2005-2006 income year of the non-resident company; and

(b) Ends on 31 December 2009.

The Minister of Revenue has announced that this exemption is to be extended to 31 December 2014.

Exploration and development activities covered by the exemption are those undertaken for the purpose of identifying and developing exploitable petroleum deposits in an offshore permit area. The exemption is limited to activities in the nature of drilling a well or operating a ship to provide seismic survey readings. The exemption does not extend to the operation of support vessels.

Section CW 57 overcomes the problems caused by New Zealand’s tax system for non-residents engaged in these activities, that find themselves with a taxable presence in New Zealand when their activities give rise to a permanent establishment.

**980.25 Petroleum mining expenditure**

The approach taken under the rules for petroleum miners is to divide petroleum mining expenditure into two distinct categories: development expenditure and exploration expenditure.

Exploration expenditure is generally deductible in the income year incurred, whereas development expenditure is spread over seven income years.

1) Exploration expenditure

Petroleum exploration expenditure is defined in s YA 1 as:

(a) Exploratory well expenditure [defined in s YA 1]; and

(b) Prospecting expenditure [defined in s YA 1]; and

(c) Expenditure to acquire an existing privilege, a prospecting permit for petroleum, or an exploration permit for petroleum.

Exploration expenditure excludes “residual expenditure”, any expenditure that is deductible under subpart DT or DZ (both of which relate to petroleum mining expenditure), and expenditure that is treated under s DT 6 as development expenditure (ie expenditure on acquiring, constructing or planning petroleum mining assets and which is directly related to a permit area). Residual expenditure is defined in s YA 1 and means application fees payable for a petroleum permit, insurance premiums, royalties paid under the Petroleum Act 1937 or the Crown Minerals Act 1991, rates, land and building lease payments, interest and financial arrangements to which the old financial arrangement rules apply. It also includes expenditure deductible under s DB 33 (scientific research).

Exploration expenditure also includes consideration paid to another petroleum miner for a prospecting permit, prospecting permit for petroleum, or a petroleum exploration permit [s DT 8].

The deductibility of exploration expenditure is governed by ss DT 1 and DT 2.

Section DT 1 states that petroleum exploration expenditure is deductible. However, this is modified by s DT 2, that adjusts the deductible expenditure for any consideration received in respect of the property.
Section DT 2 applies when, under an arrangement, a person incurs expenditure that is deductible under s DT 1, and the person, or an associated person, disposes of any property under an arrangement, or disposes of any property under any rights given under the arrangement (put and call option for example). Section DT 2 does not include property that is exploratory material, a prospecting permit for petroleum, or an exploration permit for petroleum.

If the conditions in s DT 2 are satisfied, the deductible expenditure arising under the arrangement, that is expenditure deductible under s DT 1, is the greater of zero and the amount calculated under the formula:

\[
\text{expenditure} - (\text{consideration} - \text{lesser amount})
\]

Where:
- “Expenditure” is the amount of expenditure for which the person would (before s DT 2 applied) be allowed a deduction in the income year under s DT 1.
- “Consideration” is the total consideration for the property that is derived before or during the income year.
- “Lesser amount” is the lesser of:
  (a) The amount of the consideration; and
  (b) The amount of the expenditure that would (ie but for the rule in s DT 2) be allowed as a deduction in previous income years under s DT 1(1).

If the conditions in s DT 2 are satisfied, the deductible expenditure arising under the arrangement, that is expenditure deductible under s DT 1, is the greater of zero and the amount calculated under the formula:

\[
\text{previous expenditure} - \text{consideration}
\]

Where:
- “Previous expenditure” is defined as the amount of expenditure for which a person would (ie but for s DT 2) be allowed a deduction in previous years under s DT 1(1).

**Example:**

A petroleum miner incurs $100 of exploration expenditure in 20X1 and $120 in 20X2. In 20X2, the person derives $300 from a disposal of property under an arrangement to which s DT 2 applies. The deduction is calculated as follows:

\[
\text{expenditure} - (\text{consideration} - \text{lesser amount})
\]

20X1: 100 - (0 - 0) = 100
20X2: 120 - (300 - 100) = - 80

The deduction for 20X1 is (subject to the further adjustment in s DT 2(3) below) $100. Under s DT 2(2) the deduction for 20X2 is the greater of zero and the amount calculated under the above formula. Thus, the deductions for 20X2 are reduced to zero. The further calculation required in respect of the previous year is:

\[
\text{previous expenditure} - \text{consideration}
\]

20X1: 120 - 300 = - 180

Under s DT 2(3) the deduction is the greater of zero and the amount calculated under the above formula. Thus, the deductions for 20X1 are reduced to zero. When looked at as a whole, the petroleum miner has outlaid $220 exploration expenditure, but received $300 from the disposal of property. The miners deductions have been reduced to zero.

The CIR is given authority to amend any assessment despite the statutory time bar.

(2) **Development expenditure**

Petroleum development expenditure is defined in s YA 1 as:

(a) Directly concerns a permit area; and
(b) Is for acquiring, constructing, or planning petroleum mining assets.

Development expenditure excludes “residual expenditure,” petroleum exploration expenditure or any other expenditure that is deducted under the general permission rules (ie not deductible under subpart DT). Other expenditure could include depreciation on mining-specific assets and general administration overheads, for example. Residual expenditure means application fees payable for a petroleum permit, insurance premiums,

Consideration paid to acquire a petroleum mining asset (other than a prospecting licence, prospecting permit for petroleum, or a petroleum exploration permit) from another petroleum miner is development expenditure [s DT 8].

Development expenditure is allowed as a deduction under s DT 5, but is spread over the year of first commercial production and the six income years following under s EJ 12 in the case of on-shore development. For off-shore development, the seven-year period starts with the income year in which the expenditure incurred.

New rules in ss EJ 12 and EJ 12B apply to development expenditure incurred in a permit area where that expenditure is incurred on or after 1 April 2008. In addition to the seven-year spread, taxpayers have the option of electing to spread the expenditure under the reserve depletion method. The election is available only in the year in which the commercial quantities of petroleum are produced in that permit area. The election then applies to that particular permit area and is irrevocable.

Under the reserve depletion method, the allowable deduction for the permit area is calculated as follows:

\[(\text{reserve expenditure} - \text{previous expenditure}) \times (\text{reserve depletion for the year} / \text{probable reserves})\]

Where:

**Reserve expenditure** is the total petroleum development expenditure that relates to the petroleum mining development for the current income year or an earlier income year to which the reserve depletion method applied.

**Previous expenditure** is the total petroleum development expenditure that relates to the petroleum mining development and that has been allocated to an earlier income year to which the reserve depletion method applied.

**Reserve depletion** for the year is the amount, expressed in barrels of oil equivalent, of petroleum produced from the petroleum mining development for the income year.

**Probable reserves** is the amount, expressed in barrels of oil equivalent, of the reserves of petroleum for the petroleum mining development that are not yet proven but are estimated, at the beginning of the income year, to have a better than 50 per cent chance of being technically and commercially producible.

A “petroleum mining development” is defined as being a place where one or more of the following activities is carried out:

(a) Developing a permit area for producing petroleum;
(b) Producing petroleum;
(c) Processing, storing, or transmitting petroleum before its dispatch to a buyer, consumer, processor, refinery, or user; or
(d) Removal or restoration operations.

It does not include activities that include further treatment to which all of the following apply:

(a) It occurs after the well stream has been separated and stabilised into crude oil, condensate, or natural gas; and
(b) It is done:
   (i) By liquefaction or compression; or
   (ii) For the extraction of constituent products; or
   (iii) For the production of derivative products; and
(c) It is not treatment at the production facilities.

**Example:**
(taken from TIB vol 21:8 (October/November 2009, at 104)

The first $35 million of development expenditure (incurred in December 2007) is amortised over seven years on a straight-line basis. A deduction of $5 million is allocated to each year until the expenditure is completely amortised at the end of 2014. The remaining $70 million is allocated on a straight-line basis until commercial production begins in January 2009. Slick Oil then elects to allocate the remaining development expenditure under the reserve depletion method. As at January 2009, the balance of unamortised development expenditure incurred on or after 1 April 2008 is $67.5 million.

Applying s EJ 12B, the balance of reserve expenditure is $67.5 million. With probable reserves estimated at 100 million barrels and first-year production totalling 40 million barrels, a $27 million deduction for development expenditure is allocated to the 2009 income year.

At the end of 2009, the amount of probable reserves is revised down by 20 million barrels to 40 million barrels. The balance of reserve expenditure less previous expenditure is $40.5 million. Total production during 2010 is 20 million barrels. The deduction for development expenditure for 2010 is therefore $20.250 million.

Expenditure incurred on petroleum mining assets is treated as development expenditure when, at the time the asset is acquired, petroleum is produced in commercial quantities on a continuing basis under the permit or an application for a mining permit for the permit area has been made by a person entitled to a mining permit under s 32(3) of the Crown Minerals Act 1991.

However, on relinquishment of a petroleum permit all of the non-deducted expenditure balance applicable to that permit, or permit-specific assets may be deducted in the year of relinquishment [s EJ 13]. When a petroleum mining asset is disposed of, the remaining balance is allowed as a deduction in the income year that the income from the asset is assessable under s CT 1. Rules apply to limit the deductions available when petroleum mining assets are sold to associated persons.

Under s EJ 13B, a deduction is allowed for the cost of a dry production well. For the deduction to be available, the expenditure must be incurred on or after 1 April 2008, and the well must be one that will never produce commercial quantities of petroleum (as opposed to having ceased producing commercial quantities). The deduction for the balance of the cost of the well is available in the year in which drilling ceases and the well is abandoned.

Section EJ 13C provides a deduction for expenditure on or after 1 April 2008 on a well that has ceased producing commercial quantities of petroleum. For the deduction to be available, the well must be abandoned and the reserve depletion method must have been used for that permit area. The deduction is allowed in the year in which the well is abandoned.

If a petroleum miner has incurred exploratory well expenditure and then uses the well for the commercial production of petroleum, and the exploratory well expenditure in then treated under s CT 3 as income of the miner, the amount equal to the amount treated as income is treated as petroleum development expenditure in the income year in which commercial production starts, and is spread accordingly [s DT 7].

(3) Expenditure deductible in the year incurred

Expenditure on removal or restoration operations may be deducted from gross income in each year the expenditure is incurred [s DT 16], and if that income is insufficient may be carried back to previous years’ income, successively [s EJ 14].

Deductions are allowed for the cost of repairing damaged mining assets of the kind described in s CT 7(1)(b) and (c) (ie mining assets excluding a mining permit) [s DT 12]. See also the exclusions from the definitions of “petroleum development” and “exploration expenditure” as discussed above.

(4) Farm-out arrangements

A “farm-out arrangement” is defined is s YA 1, and is essentially an arrangement where a farming party (farm-in party) agrees with a petroleum miner (farm-out party) to incur expenditure for work in a permit area either by undertaking or paying for that work. In return for incurring this expenditure, the farm-in party acquires a right or option to any future revenue from petroleum that arises from that permit or subsequent permit.
The expenditure incurred as part of a farm-out is excluded income in the hands of the farm-out party [s CX 43]. Expenditure incurred on the part of the farm-in party is either exploration or development expenditure, depending on whether an exploration permit or a development permit is involved [s DT 14].

(5) Petroleum mining operations undertaken outside New Zealand

Expenditure incurred in undertaking petroleum mining operations outside New Zealand is ring-fenced under s DT 1A. The provision applies to expenditure incurred on or after 4 March 2008. The ring-fencing provision relates to exploration expenditure, development expenditure and residual expenditure. Under the provision, the amount of any deduction is limited to the amount of income derived from petroleum mining operations undertaken outside New Zealand. The provision is not jurisdiction-specific. Therefore, expenditure incurred in relation to operations carried on in one country can be offset against income derived from operations in another country. However, none is able to be offset against income derived from petroleum mining operations undertaken in New Zealand. Any expenditure for which there is insufficient income to enable a deduction is carried forward to the next income year. The carry-forward is subject to the same continuity of shareholding requirements as other tax losses [See 940 LOSSES].

980.30 Companies engaged in exploring or searching for minerals

The principal provisions for companies engaged in mineral mining are contained in ss CU 1 to CU 29, CX 45, CX 46, CZ 2, DU 1 to DU 12, in relation to income and ss DU 1 to DU 12 in relation to deductions.

(1) Companies to which the mining company rules apply [s CU 22]

The mining company rules apply to a New Zealand company if:

(a) Its only or main source of income is the business of mining any specified mineral in New Zealand; or

(b) It carries on, or proposes to carry on, in New Zealand as its only or main undertaking the activities of:

(i) Exploring, searching, or mining any specified mineral in New Zealand; or

(ii) Performing development work relating to exploring searching or mining any specified mineral.

An activity which is defined in (b) immediately above does not include an activity done or to be done as a service to another person for reward, unless the reward:

(a) Is wholly or mainly related to and dependent on the production of the specified mineral; or

(b) Arises wholly or mainly through participation in profits from the production of the specified mineral.

(2) Specific definitions [ss CU 21 to CU 29]

The meaning of a “specified mineral” is set out in s CU 28 and means any of the following minerals:

(a) Alumina minerals (such as bauxite, gibbsite, diasporic, and corundum), aluminium refractory clays and fireclays containing in either case over 30 per cent alumina in the fired state, andalusite, antimony, asbestos, barite, bentonite (other than bentonite mined in what was formerly the county of Malvern), bituminous shale, chromite, copper, diatomite, dolomite, feldspar, fluorite, gold, halloysite, kaolin, kyanite, lead, magnesite, manganese, mercury, mica, molybdenite, nickel, perlite, phosphate, platinum group, pyrite, silica in lump form used only in the production of silicon carbide, silicon metal, or ferro sillimanite, silver, sodium chloride, sulphur, talc, tin, titanium, titanomagnetite, tungsten, uranium, wollastonite, zircon; or

(b) Includes a mineral declared to be a specified mineral in a Gazette notice by the Minister.

Every mining company is assessable for income tax as if it were any other kind of company, with its income comprising income from mining and from non-mining. Any net loss incurred in either class of income is to be deducted from any income derived from the other source. An apportionment of the total income between processing operations and mining operations is made. Exploration and development expenditure are
deductible in calculating the net income derived from mining. Where exploration and development expenditure has been allowed to a mining company under these provisions a deduction cannot be allowed for the same expenditure under any other provision of the ITA 2007. Nor are any of the investment allowances available. The mining income includes the value of any assets previously taken into account in calculating exploration or development expenditure which are transferred for use in the non-mining activities of the company. The sale of any mining asset, right, or information is taken into account in determining the income of a mining company.

The definitions of income from mining, mining development expenditure and mining exploration expenditure are contained in ss CU 21, CU 23 and CU 24 respectively.

The definitions of mining operations, mining venture, resident mining operator are contained in ss CU 25, CU 26 and CU 27 respectively. The following definitions are contained in s CU 29:

(a) Associated mining operations;
(b) Holding company;
(c) Initial treatment;
(d) Loan;
(e) Mining holding company;
(f) Mining or prospecting right;
(g) Mining prospecting information;
(h) Mining purposes;
(i) Mining share;
(j) Non-resident mining operator;
(k) Prescribed period;
(l) Prescribed portion; and
(m) Reinvestment profit.

980.35 Income from mining [ss CU 1, DU 7]

The income derived by a mining company is divided into income from two sources, namely income from mining or income other than income from mining. This is because historically income from mining was taxed at 33 per cent, when the general company tax rate applicable to other income was 45 per cent.

Any net loss incurred in either class of income is able to be deducted from any income derived from the other source. However, there is a limit on the amount of the mining outgoing excess that can be deducted against the income other than income from mining. Essentially, the excess mining outgoings are required to be reduced by one-third when offset against non-mining income. Again because of the different tax rates that were applicable to mining and non-mining income.

This rule which continues to operate, is contained in s DU 7, and provides that the limit of the deduction in these circumstances is the lesser of:

(a) Two-thirds of the “mining outgoing excess;” and
(b) The greater of zero and the amount in the formula:

\[
\text{non-mining income} - \text{non-mining expenditure}
\]

The “mining outgoing excess” is defined in s DU 7(4) as the amount that is the greater of zero and the amount given by the formula

\[
\text{mining expenditure} - \text{income from mining}
\]

Where “mining expenditure” is all expenditure or loss of the mining company for that income year, including an amount of income appropriated to mining exploration or development under s CU 4.
If a mining company carries on processing operations (i.e., in addition to its activities as a miner it produces products by processing the specified minerals), and disposes of the products, the CIR must classify the mining company’s income from the disposal as income from mining or income other than from mining [s CU 2(2)]. Sections CU 2(3) and CU 2(4) provide matters that must be taken into account in making the apportionment.

980.40 Mining development and exploration expenditure [ss DU 1, DU 2]

In calculating the assessable income from mining, exploration and development expenditure are deductible under s DU 1. The amount of the deduction is determined under s DU 2, which section describes the consideration that the mining company is treated as giving for the asset and the consideration that the person who disposes of the asset to the mining company is treated as receiving for it. The exploration and development expenditure deductions are taken into account in determining the mining outgoing excess for the purpose of the limit on the offset against non-mining income [see 980.35].

980.45 Compensation and expenditure in respect of lost, destroyed, or damaged assets [ss CU 4, CU 5, CU 6, CU 7, CU 8, DU 3, DU 8(3)]

The mining rules contain comprehensive provisions dealing with the situation when an asset is lost, damaged or destroyed, and insurance or other indemnity receipt is received in respect of that event. The essence of the rules is to treat any expenditure in repairing or replacing the asset as deductible mining expenditure, and any amount of insurance or other indemnity as income.

The rules below apply when:

(a) A mining company has acquired an asset as part of the development or exploration expenditure;
(b) Has been allowed a deduction s DU 1 or s DZ 12(1)(a) (mineral mining: 1954 to 2005);
(c) The asset is lost, destroyed or damaged; and
(d) The company receives insurance or other indemnity or compensation in respect of for the loss, destruction or damage.

Section CU 5 treats the insurance, indemnity or compensation as income. Section CU 5 applies when the asset for which the insurance or other payment received in respect of the loss has not been used to replace or repair the asset. The proceeds of scrapping the asset are also income under s CU 5.

Section CU 6 provides that ss CU 7 and CU 8 apply if the miner gives notice to the CIR within the time for furnishing a return of income that the insurance or other indemnity or compensation received will be used to repair or replace the asset. The repair or replacement is must be started by the end of the second income year after the income year in which the loss, destruction or damage occurred.

Section CU 7 treats the amount of insurance, indemnity or compensation as not being income from mining. Neither are the proceeds received from scrap (if any). If the amount of expenditure incurred in repairing or replacing the asset exceeds the insurance or other indemnity receipts, the amount of the excess is allowed as a deduction under s DU 3(2), and taken into account in determining the mining outgoing excess for the purpose of the limit on the offset against non-mining income under s DU 7.

Section CU 8 provides that if the amount of expenditure incurred in repairing or replacing the asset does not exceed the insurance or other indemnity receipts, the amount of the excess is income from mining.

The following provisions are also relevant:

(a) Section DU 3(5) to (8) applies to allow a deduction for expenditure that the miner has incurred on repairing or replacing an asset after the time the CIR considered to be reasonable within which to replace or repair the asset; and
(b) Sections CU 10(3) and DU 8(3) provides that the asset repaired or replaced is the same asset as the one lost, damaged or destroyed.
980.50  **Mining assets used to derive income other than income from mining** [s CU 10]

Mining income is derived when mining assets previously taken into account in calculating exploration or development expenditure are transferred for use in the non-mining activities of the company.

The mining income is an amount equal to the market value of the asset on the first day of each period in which it is used, wholly or mainly, to derive income other than income from mining.

980.55  **Disposal of mining assets** [s CU 3]

The general rule for mining company assets (including mining prospecting information or prospecting rights) is that when the asset has been disposed of in circumstances when it was acquired as exploration or development expenditure, the income of the mining company includes the consideration received in respect of the asset’s disposal.

Sections CU 3(3)-(7) determine consideration that the mining company is treated as receiving for the asset when the consideration is other than cash, or the asset is disposed of to an associated person (when consideration is deemed to equal market value), or the parties give the CIR a notice of their agreement as to value.

An exclusion to the rule on disposal is made for assets forfeited [s CU 3(2)].

**TaxNote:** The CIR has issued a policy statement in TIB vol 7:7 (January 1996) at 25-26, about disposals when no deduction for acquisition was claimed. The CIR stated that some taxpayers consider that there is a discretion whether to follow the rule in s CU 3 on the basis that if a deduction is not claimed on the acquisition of a mining asset, any proceeds on its sale are not assessable. The CIR does not agree with this reasoning. In the CIR’s view s CU 3 applies whether or not the taxpayer has claimed a deduction.

980.60  **Income appropriated to expenditure** [ss CU 9, DU 4]

A mining company is allowed a deduction for an amount of income appropriated toward mining exploration or development expenditure. The deduction is allowed to the extent that all of the following apply:

(a) The appropriation is made within two months of balance date (or longer with the CIR’s agreement);
(b) The appropriation is not more than its net income;
(c) It is not actually spent in that income year; and
(d) It will be used as mining exploration expenditure or development expenditure before the end of the second income year following the income year to which the appropriation relates.

The deduction is taken into account as mining expenditure, and thus is included in any calculation of the mining outgoing excess in s DU 7(4).

The amount that is allowed as a deduction under s DU 4 is income of the mining company in the following income year under s CU 9.

980.65  **Losses of mining companies and petroleum miners** [ss IS 1, IS 2, IS 5]

Where the CIR is satisfied that a tax loss of a mining company, a resident mining operator, or a non-resident mining operator for any tax year arises as a result of exploration expenditure or development expenditure relating to a permit area, the following provisions apply:

(a) The tax loss which arises for each permit area must be determined; and
(b) In the case of a mining company, any loss from a permit area may be offset against the net income to the extent that it does not exceed the company’s net income if its sole source of income for the year of claim was from that permit area. It may be offset against the net income for following years to the extent that it does not exceed the net income of the company if its sole source of income for that year was from that permit area [s IS 2].

Special provisions exist for any net loss of a petroleum mining company carried forward from the 1990-1991 or any earlier income year [s IZ 3].
Mining Companies and Operators

980.70  Loss carry back by petroleum miners [s EJ 14]
If a petroleum miner would have a net loss in a year in which expenditure for removal or restoration operations is incurred, or a permit is relinquished, and deferred deductions are allowed under s EJ 14, the allowable deductions for that year are reduced by the amount that would otherwise be a loss. The amount is instead allowed as a deduction in the years preceding the loss year, beginning with the income year immediately preceding the loss year. The petroleum miner has the right to amend its returns for those income years in spite of the statutory time bar.

980.75  Losses carried forward [ss IS 2, IS 3, IS 6]
Mining company losses can be carried forward even where the 49 per cent continuity of ownership rule under s IA 5 has been breached. However, such losses can be offset only against assessable income from that mining permit area derived in later income years [s IS 2].

Where a mining company has a loss carried forward and it has ceased to be a mining company before the end of a year, it is treated as having continued to be a mining company for the whole of that tax year [s IS 6].

Generally, a mining company is not included in a group of companies for purposes of offsetting losses within the group. However, a mining company and a holding company (that is not a mining company), which would be included in a wholly-owned group in an income year may, in special circumstances, may offset net income of the mining company against a net loss of the holding company [s IS 3].

980.80  Profits on sale of mining shares [ss CU 14, CU 15, CU 16, CU 20, CU 29, CX 44, CX 45, CX 46, DU 11]
Special provisions apply to the taxation of a profit made by a company from the sale of shares in a mining company or a mining holding company, which would ordinarily be taxable because the business of the company is share dealing, or because the shares were acquired in an undertaking or scheme for resale. The provisions aim at deferring the taxation of the profit if the profit (described as reinvestment profit) is reinvested for mining purposes.

The cost figure for the purpose of calculating the profit on the sale of a mining share is an amount equal to the difference between “a” and “b” where:

a  is the sum of the purchase price of the share and any call paid on that share; and

b  is the sum of the reinvestment profit included in the purchase price and the amount of any reinvestment profit included in the call [s DU 11].

The circumstances under which a profit made by a company on the sale of a mining share is excluded income under subpart CX are:

(a)  Where the shares are sold to a mining company or a mining holding company and the consideration consists of shares in the mining company or the mining holding company issued to the vendor company; or

(b)  Where the consideration is used, or is to be used, for mining purposes within a period of six years following the year in which the sale took place.

“Mining purposes” means:

(a)  Subscribing for, or paying calls on, shares in any mining holding company or any mining company; or

(b)  Making loans to a mining company to finance its mining operations or associated mining operations, or to finance exploration or development expenditure of the mining company; or

(c)  Making loans to a mining holding company, where the loans made are to be used to finance mining operations or associated mining operations to be carried out by a mining company or finance exploration or development expenditure of a mining company.
If any part of that consideration is used for non-mining purposes in the period of six years referred to above, or remains unused for mining purposes at the end of that time, that part is income in the year it is used for non-mining purposes, or at the end of that period, as the case may be [s CU 15].

When the reinvestment profit which had been used for a loan to a mining company is repaid in whole or in part, the portion repaid is income unless the repayment is further invested for mining purposes within six income years following the year of repayment.

Where the CIR is satisfied that in calculating the profit a deduction was made for mining reinvestment purposes and/or reinvestment profit included in share purchase price, on sale the amount to be included as income is calculated as:

\[(\text{reinvestment profit amount} / \text{loan amount}) \times \text{repayment}\]

However, the resultant profit is not assessed to the extent that the shares are sold to a mining company in return for shares in that company, or that the proceeds of sale are to be used for mining purposes within a period of six years following the income year of sale.

On the liquidation of a mining holding company or of a mining company, any share held is deemed to be sold to the company and all distributions on the liquidation are deemed to be consideration for the sale, and any resultant profit is income unless the consideration received on distribution is in the form of shares allotted to the vendor in another mining holding company or mining company or is used for mining purposes within the prescribed period [ss CU 14, CX 45].

### 980.85 Assessment of companies holding shares in mining companies

[ss CU 17, CU 18, CU 19, CU 29, DU 12]

A New Zealand company which holds shares in a mining company and which has made loans to the mining company may deduct from its income any amounts written off the loans, but not interest. The deduction must not exceed the smaller of either one-half of the holding company’s taxable income for the year of the writing off, or the holding company’s proportionate share (with other holding companies’ shares) of the mining company’s total outgoings on exploration and development, reduced by any deductions claimed in any earlier years. In the event of the mining company being successful and repaying the holding company, the CIR has the power, at any time, to reopen the assessments on the holding company and disallow the deductions previously allowed. There are also safeguard provisions for the CIR to reassess the holding company if the income of the mining company should warrant this, or where the holding company which had received a deduction sells its shares at a price in excess of the amount paid on the shares.

### 980.90 Resident mining operators

[ss CU 12, CU 27, DU 9]

The term “resident mining operator” means a person (not being a mining company or a petroleum mining company) who is resident in New Zealand and who carries on, or proposes to carry on:

- Personally and actively in the field;
- As a business; and
- Under an exploration, prospecting or mining permit,

the activities of exploring or searching for or mining any specified mineral or performing development work relating to such exploring or searching or mining. Activities carried on as a service to any other person for reward do not qualify unless the reward is related to production of the specified mineral, etc or by way of participation in profits from the production of the specified mineral, etc. The activities must be carried on “as a business” and the person must be personally and actively engaged in the mining venture. These words are included to counter any claims for deduction under the section by a hobbyist or casual prospector.

The provisions follow the same general lines as those relating to mining companies but there are several points of difference:

- Exploration and development expenditure incurred is deductible on the same basis as for mining companies but no provision can be made for expected expenditure in advance;
(b) Losses from one type of income can be set-off against the other on a dollar for dollar basis but are subject to the proviso that the set-off of a mining loss against non-mining income cannot exceed one-half of the non-mining income; and

(c) Where a mining asset is transferred under a relationship property agreement, the asset is deemed to be transferred at book value and the transferee is assessed on any profit made on subsequent sale in the same manner as if it had been sold by the transferor.

980.100 Non-resident mining operators [ss CU 13, CU 29, DU 10]

“Non-resident mining operator” means a person who is not resident in New Zealand who carries on, personally and actively in the field, a mining venture.

“Mining venture” means a venture where all of the following apply:

(a) It is carried on, or is proposed to be carried on, in New Zealand, as a business;

(b) It is carried on, or proposed to be carried on, under an exploration, prospecting, or mining licence; and

(c) It consists, or is proposed to consist, of the activities of exploring or searching for or mining any specified mineral or performing development work for reward based on production or participation in profits.

The term “person” includes a company.

The provisions follow the same general lines as those relating to mining companies, but with these differences:

(a) The income is taxed at the company tax rate irrespective of whether the operator is an individual or a company or any other form of association.

(b) Any income derived by a non-resident mining operator from outside the mining venture is separately assessed. Unlike the provision regarding resident mining operators, a non-resident mining operator can deduct a provision for two years estimated exploration and development expenditure in advance.

A non-resident mining operator who derives any income otherwise than from a mining venture shall be separately assessed and liable for income tax for that income without regard to any income derived in that income year from any such mining venture or to any expenditure or loss incurred in such mining venture.
Chapter 990

Motor Vehicles

990.10 Tax issues

Tax issues relating to motor vehicles include:

(a) Deductibility of motor vehicle expenses [see 990.15, 990.25];
(b) Logbook and record-keeping requirements [see 990.30, 990.55];
(c) Depreciation [see 990.70, 990.75];
(d) Fringe benefit tax [see 990.90]; and
(e) Tax planning considerations [see 990.95].

The deductibility of motor vehicle expenses is given special treatment in the income tax legislation [subpart DE], recognising the widespread use of the motor vehicle as a business asset and the nature of the asset as one that is often used for both business and private purposes. Subpart DE sets out the rules for determining the proportion of the business use of a motor vehicle when it is used partly for business and partly for private purposes; it is essentially a code for the deductibility of motor vehicle expenditure and depreciation.

990.15 Deductibility of motor vehicle expenses [ss DA 1, DB 56, DE 1]

Under the general permission [s DA 1], a deduction for motor vehicle expenses and depreciation is allowed to the extent that the expenditure is incurred by the taxpayer in deriving the taxpayer’s assessable or excluded income or necessarily incurred by the taxpayer in the course of carrying on a business for the purpose of deriving assessable or excluded income [see 240.10].

If a motor vehicle is not used wholly for business purposes, a deduction is allowed only for expenditure and depreciation relating to the business use of the vehicle. The rules for determining the business use are set out in ss DE 2 to DE 12 [see 990.25 to 990.65]. The apportionment rules do not apply to:
Motor Vehicles

990.20

(a) Companies;
(b) Persons whose only income is from employment;
(c) A motor vehicle that is used only for deriving income or to provide a fringe benefit [s DE 1(2)].

Subpart DE is therefore targeted at self-employed persons (including partners) whose motor vehicles have some private or non-business use.

The types of expenses that are likely to be deductible include fuel, oil, repairs and maintenance (tyres, servicing, parts, panel beating, cleaning, and so on), insurance, warrant of fitness fees, registration fees, road user charges, and parking.

Inland Revenue has confirmed that the cost of leasing a parking space for a business vehicle is deductible [see TIB vol 5:2 (August 1993) at 9]. According to Inland Revenue, if a car is used extensively for business purposes a deduction will be allowed for the cost of using a parking space. However, where a taxpayer is merely using a car as a matter of convenience for travel between home and place of business, the expenditure is of a private nature and not deductible.

An employer or associated person who is treated under s CX 7 as having a right to use a motor vehicle during a period that the employee uses, or has a right to use, the vehicle privately [see 540.60] is allowed a deduction for the expenditure incurred in operating the motor vehicle during that period. The deduction is allowed because the vehicle is subject to FBT during the period of private use. This provision overrides the private limitation and the exempt income limitation, but the general permission must be satisfied and the other general limitations still apply [s DB 56].

990.20 Prohibition on deduction by employees [s DA 2(4)]

No deduction for motor vehicle expenses or depreciation is available to the extent that they are incurred in deriving income from employment. Thus, employees using their private cars to travel to and from work are unable to claim deductions for motor vehicle expenses or depreciation.

990.25 Apportionment [ss DE 2, DE 3]

If a motor vehicle is used by a taxpayer partly for business purposes and partly for other purposes, only the proportion of the total motor vehicle expenditure (including depreciation) that relates to the business use may be claimed as a deduction. Section DE 2 supplements the general permission, and overrides the private limitation.

The amount of the deduction allowed in an income year for motor vehicle expenditure for the business use of the vehicle is determined by the formula:

\[
\text{expenditure} \times \text{business proportion}
\]

Where “business proportion” is the business use proportion calculated under ss DE 3 to DE 12.

In relation to depreciation, ss DE 2(5) and (8) provide for the amount of depreciation loss and depreciation loss on disposal respectively. In relation to depreciation, the amount of depreciation loss that can be claimed is:

\[
\text{standard calculation} \times \text{business proportion}
\]

Where:

“Standard calculation” is the depreciation loss amount determined under the depreciation rules [s EE 16].
“Business proportion” is the business use proportion for the income year, which will be the same proportion as that used for motor vehicle expenses.

If on sale or disposal of a vehicle there is a depreciation loss, the amount of the disposal depreciation loss is determined in accordance with the following formula:

\[
\text{disposal depreciation loss} \times \text{all deductions} / (\text{base value} − \text{adjusted tax value})
\]

Where:

“Disposal depreciation loss” is the amount resulting from a calculation made under s EE 48(2), which is the standard rule for determining a depreciation loss on disposal.
“All deductions” is the amount of all deductions for depreciation loss for the vehicle that have been deducted in each of the income year in which the person has owned the vehicle.

“Base value” and “adjusted tax value” have their ordinary meanings [see 250.120].

If an amount of depreciation recovery income arises on sale, this is calculated under s EE 49 [see 250.500]. Depreciation is further discussed at 990.70 and 990.75.

The methods for determining the business proportion are set out in s DE 3, which are:

(a) Maintaining actual records of business use [s DE 5, see 990.30]; or
(b) Keeping a logbook of business use for a three-month test period every three years [ss DE 6 to DE 11, see 990.35].
(c) Using mileage rates [s DE 12, see 990.65].

If a motor vehicle is not used for any purpose other than deriving income (ie there is no private or other non-business use) or providing a fringe benefit, then no apportionment is required. Similarly, no apportionment is required if the taxpayer is a company or a person whose sole income is income from employment. Companies are not required to apportion motor vehicle expenditure because any non-business use of company motor vehicles will be subject to FBT or will give rise to a non-cash dividend. There is no need for employees to apportion motor vehicle expenditure because they are unable to claim any deductions for such expenditure incurred in gaining income from employment [s DA 2(4)]. This effectively means that only self-employed individuals (including partners in a partnership) are required to apportion their motor vehicle expenditure.

### 990.30 Default method for calculating business use [s DE 4]

If a person has not maintained adequate actual records to show the proportion of business use, the period is not a period covered by a logbook, or the person is not eligible to use the mileage rate method, the business use proportion for the purposes of the deductions under s DE 2 (for motor vehicles expenses and depreciation) is the lesser of:

(a) The proportion of actual business use of the vehicle; or
(b) Twenty-five per cent of the total use of the vehicle.

If there are no records that can be used to establish actual business use, no deduction will be allowed [see TIB vol 6:3 (September 1994) at 10].

### 990.35 Use of actual records to establish business use [s DE 5]

One option for determining the business use proportion of a motor vehicle is for the taxpayer to keep a record of all business trips made in the vehicle during the income year. The taxpayer must maintain a complete and accurate record of the reasons for and the distances of all business trips. The business use proportion for the income year is the total distance of all business trips during the year divided by the total distance travelled by the vehicle during the year.

This method of determining the business use proportion may not be used during a logbook application period, except with the agreement of the CIR.

### 990.40 Using logbook for test period [ss DE 6, DE 7 and DE 8]

Another option for determining the business use proportion of a motor vehicle is for the taxpayer to keep a logbook for a three-month test period. Once the business use proportion has been established, the business use proportion applies for a logbook term, which is a three-year period, as defined in s DE 8 and discussed below.

When a logbook is used to establish the proportion of business use of a motor vehicle, a person must select a start date, and keep the logbook for at least 90 consecutive days at a time that represents (or is likely to represent) the average proportion of business travel in the vehicle during the logbook term. A record of the total distance travelled during each income year that falls within a logbook term. Maintaining a logbook to establish the proportion of business use does not remove the requirement to keep records verifying the expenditure incurred by the taxpayer.
A logbook must record the:
(a) Start and end of the 90-day test period;
(b) Vehicle’s odometer readings at the start and end of the test period;
(c) Distance of each business journey;
(d) Date of each business journey;
(e) Reason for each business journey; and
(f) Any other detail that the CIR may require.

The “logbook term” is the period for which the business use proportion established by a logbook will be used for apportioning motor vehicle expenses. The logbook term cannot exceed three years.

The logbook term starts on the latest of the following days:
(a) First day of the income year in which the taxpayer starts to keep the logbook;
(b) Day on which the motor vehicle (not being a replacement motor vehicle) was acquired;
(c) Day immediately after the last day of the previous logbook term;
(d) A day specified by the taxpayer.

The logbook term ends on the earliest of the following days:
(a) Day that a person disposes of the motor vehicle without replacing it;
(b) Day that is three years after the first day of the income year in which the logbook term started; 
(c) A day specified by the CIR under s DE 9; or
(d) A day specified by the taxpayer.

With the approval of the CIR, a taxpayer may maintain full records [see 990.35], over any period during which business use is not representative of the average (ie a period of temporary and unforeseen increase in business activity) [see TIB vol 6:3 (September 1994) at 10].

**Example:**
John starts business as a sole trader on 1 April 20X1 and uses the secondhand car he acquired on 13 January 20X1. He starts keeping a logbook for a 90-day test period on 4 April 20X1. The test period establishes that the vehicle is used for business purposes for 60 per cent of the total distance travelled. The business does well and John upgrades his car on 25 November 20X1. The new car is to be used in exactly the same way as the old one. In early 20X2 John realises that he is using his car a lot more for work purposes, so he decides to end the current business use apportionment on 4 February 20X2 and start another logbook test period. This time the test period shows that the vehicle’s business use is 80 per cent.

The initial logbook term will start on 1 April 20X1, which is the beginning of the income year in which John started to keep a logbook for a test period after the vehicle had been purchased. Although John changed cars on 25 November 20X1, the new vehicle is used in a similar manner to the old one so the logbook term can continue [see 990.50]. The initial logbook term will end on 4 February 20X2 because John specified this date.

The second logbook term will start on 5 February 20X2, being a date specified by John, and (unless there is any other relevant change in circumstances) will end on 31 March 20X4, being a date not more than three years after the beginning of the income year in which the logbook term started under s DE 8(3)(b). To calculate the proportion of deductible motor vehicle expenses for the 20X1-2X2 tax year, a weighted average of the business use determined in both logbook terms must be calculated. The calculation should be based on the number of days each logbook term applied during the income year. The calculation is as follows:

\[
\text{20X1-X2 business use} = \frac{[307 \times 60\%]}{365} + \frac{[58 \times 80\%]}{365} = 63\%
\]

Example adapted from TIB vol 6:3 (September 1994) at 11.

**990.45 Variance during logbook term [s DE 10]**

A logbook term must end on the last day of any month during which the actual business use proportion of a motor vehicle is less than the business use proportion established by the logbook by 20 percentage points or more, and the business use proportion established by the logbook no longer fairly represents the average business use proportion for that vehicle.
Example:
If the business use of a motor vehicle drops from 50 per cent (as calculated from the logbook test period) to 30 per cent during July, the logbook term will end on 31 July. However, if the change in use is of short duration or the taxpayer elects to keep full records for the abnormal period, the enforced ending will not apply [see TIB vol 6:3 (September 1994) at 10].

990.50 Application of logbook to replacement vehicle [s DE 11]
For the purposes of establishing the proportion of business use of a motor vehicle, a logbook continues to apply to any replacement vehicle in the same manner as it applied to the vehicle that was replaced, provided it is likely to be representative of the average travel for business purposes for the remainder of the logbook term. A record must be kept of the total distance travelled by the replacement vehicle during each income year that falls within the remainder of the logbook term from the time it was replaced.

990.55 CIR’s powers of veto [s DE 9]
The CIR, if not satisfied that the logbook is representative of the average travel for business and non-business purposes, may either:
(a) Specify another 90-day period within the logbook term in which the person is to keep a further logbook; or
(b) Treat the person as not having kept a logbook that applies to the logbook term.
If the CIR directs that a further logbook be kept under (a) for the logbook term, and the proportion of business use calculated under that further logbook is less by at least 20 per cent than the proportion calculated under the first logbook, the CIR may find that the first logbook:
(a) Represented the average business use of the motor vehicle for business purposes for only part of the logbook term; or
(b) Did not represent that business use at all.
In the case of (a), the CIR may determine a date on which the application of the first logbook ended, and the further logbook applies to a new logbook term that starts on the day after that date.
In the case of (b), the CIR may direct that the further logbook applies for the logbook term to which the first logbook applied.

990.60 Vehicle logbooks — required content and quality
Taxpayers who use a vehicle for business and private purposes usually record details of vehicle use in a logbook. The logbook establishes the proportion of business to private use. This proportion may be used:
(a) To apportion vehicle running costs and depreciation for income tax;
(b) To determine whether a vehicle is used principally in the making of taxable supplies for GST;
(c) To calculate private use adjustments for GST; and
(d) In some cases, to determine the number of days each quarter the vehicle is available for private use and enjoyment for FBT purposes.
Inland Revenue notes that many taxpayers, although maintaining a logbook, do not record the required details and that many logbooks are illegible or incomplete. When reviewing a logbook the CIR must be satisfied that the business use proportion established by the logbook during the 90-day logbook test period is representative of the three-year logbook term. If the logbook is incomplete, illegible, or does not record the required details, the CIR cannot form such an opinion. In these circumstances the CIR has the discretion to either require another logbook to be maintained for another 90-day period or to deem the taxpayer not to have maintained a logbook for the three-year logbook application period.
The consequences of not maintaining an adequate logbook could include:
(a) Being required to maintain another logbook for 90 days;
(b) Having income tax deductions for running costs and depreciation limited to 25 per cent;
(c) Having GST input tax claims for the purchase of motor vehicles disallowed or delayed for three months; or
(d) Having FBT assessed as if the vehicle was available for private use and enjoyment on every day.

Inland Revenue requires the following information to be recorded in a logbook, in a legible and understandable format:
(a) The start date of the 90-day logbook test period;
(b) The odometer reading at the start of the 90-day logbook test period;
(c) The date of each business journey;
(d) The starting odometer reading for each business journey;
(e) The ending odometer reading for each business journey;
(f) The origin and destination of each business journey;
(g) The reason for each business journey;
(h) The time of each business journey when the use of the vehicle is subject to time constraints;
(i) The end date of the 90-day logbook test period; and
(j) The odometer reading at the end of the 90-day logbook test period.

Example 1 (below) illustrates a logbook containing this information.

Alternatively, logbooks can record all journeys (business and private), whether the journey was business or private, and just record the starting or ending odometer reading for each journey rather than both. Example 2 (below) illustrates a partial logbook containing this information.

Inland Revenue expects that most business journeys recorded in logbooks should be verifiable by reference to other records, such as diaries, appointment books, quotes, and invoices.

Inland Revenue does not require that logbooks be kept in any particular format. The examples below use a columnar format, but the required details could be recorded in a diary, in a daybook, or on quote or order forms. Whatever format is used, Inland Revenue must be satisfied that the records are complete and accurate and that the required details have been kept.

The ITA 2007 does not specify how the information required in the logbook is to be recorded. If a taxpayer finds it easier in the first instance to record on a dictaphone the business kilometres travelled, this will be acceptable to Inland Revenue provided the information in the logbook complies with s DE 7 and is transcribed into the logbook. A taxpayer electing to record information on a dictaphone will need to safeguard the tape against loss or damage until its contents are transcribed to the logbook, because without this information claims could be jeopardised [see TIB vol 6:13 (May 1995) at 17].

At the end of the 90-day logbook test period the following calculation should be performed to determine the business use percentage for the vehicle:

$$\text{business use percentage} = \frac{\text{total business distance travelled}}{\text{total distance travelled}}$$

Inland Revenue expects the totals used in this calculation to be easily reconciled with the entries in the logbook.

Example 1:

VEHICLE LOGBOOK

</tbody>
</table>

Business use percentage = Total business distance travelled / Total distance travelled

= 90.6% / (150393 – 150265) = 90.6%

**Note:** The logbook in Example 2 was maintained only for one day for illustrative purposes. Actual logbooks must be maintained for the 90-day logbook test period.

For Inland Revenue’s requirements as to the required content and quality of logbooks kept to establish the business use of a motor vehicle [see TIB vol 7:8 (February 1996) at 29-31].

### 990.65 Mileage rate method [s DE 12]

Mileage rates may be used to calculate the business-use expenditure on a motor vehicle if a person’s business travel is 5,000 kilometres or less in an income year. A person wanting to use the mileage rate method must keep details of the business use of the vehicle and calculate the total distance (in kilometres) travelled for business purposes during the income year. The amount of the deduction is calculated by multiplying the applicable mileage rate by the total number of kilometres travelled for business purposes for the income year. The CIR is required to set and publish a mileage rate from time to time.

**Income year Mileage rate**

<table>
<thead>
<tr>
<th>Year</th>
<th>Mileage rate</th>

</thead>
<tbody>
<tr>
<td>2010-2011</td>
<td>74 cents per kilometre</td>
</tr>
<tr>
<td>2009-2010</td>
<td>70 cents per kilometre</td>
</tr>
</tbody>
</table>
The mileage rate applies to self-employed persons for work-related travel not exceeding 5,000 km a year. The mileage rate applies to all motor vehicles (excluding motorcycles) irrespective of engine size, or whether they are powered by petrol or diesel.

The mileage rate may also be used as a reasonable estimate by employers reimbursing employees (including shareholder-employees) for business use of an employee’s private vehicle, from 1 April 2008. The 5,000 km a year limit does not apply when employers use the mileage rate to reimburse employees.

For distances of greater than 5,000 km a year, actual motor vehicle expenses must be used [see 990.35, 990.40].

Operational statement OS 09/01 [see TIB vol 21:3 (May 2009) at 26-27], which introduced the single mileage rate, replaced any previously published statement by the CIR on motor vehicle mileage rates. For the mileage rates that applied before the 2008-2009 income year, see Staples Tax Guide 2009 990.65

No mileage rate has been set for motorcycles as they are now rarely used for business purposes.

990.70 Depreciation [ss BD 2, DA 4, DE 1, DE 2, DE 3, DE 4, DE 5, DE 6, DE 7, DE 8, DE 9, DE 10, DE 11, DE 12, EE 1(5)]

A deduction for depreciation of a motor vehicle is allowed under s BD 2 if the taxpayer is entitled to such a deduction under s DA 1 or DE 2 and subpart EE, which sets out the detailed depreciation rules. The depreciation rules are explained in 250 DEPRECIATION. A depreciation deduction is only available in respect of a motor vehicle that is owned by the taxpayer and used, or available for use, by the taxpayer.

Under s DE 2, when a motor vehicle is used partly for business purposes and partly for non-business purposes, only the proportion of the total depreciation that relates to business use (as determined under ss DE 3 to DE 12), may be deducted [see 990.25, 990.55].

Motor vehicles (as with all depreciable property) may, at the option of the taxpayer, be depreciated either on a straight-line (SL) basis or a diminishing value (DV) basis [see 250.30]. The depreciation rates for motor vehicles are listed in 5000 DEPRECIATION RATES.

If a motor vehicle is acquired part-way through the taxpayer’s income year, one-twelfth of a full year’s depreciation may be claimed for each part or whole month that the vehicle is owned and used by the taxpayer.

Example:
Sandy is a self-employed engineering consultant. He is GST-registered. His business assets include a station wagon which he bought new at a cost of $35,000 (exclusive of GST) on 1 July 20X1. Sandy kept a vehicle logbook for 90 days ending 30 September 20X1. The logbook recorded that Sandy had driven the vehicle a total of 2,500 km during this 90-day period and that 2,000 km related to business use. The business use proportion is therefore 80 per cent (2,000/2,500). The applicable depreciation rate for a new station wagon is either 21 per cent SL or 30 per cent DV. Assuming Sandy has a 31 March balance date and elects to use the DV rate, his depreciation deductions for the 20X2 and 20X3 income years will be calculated as follows:

20X2
Total depreciation for nine-month period: $35,000 × 30% × 9/12 = $7,875
Allowable depreciation deduction: $7,875 × 80% = $6,300

20X3
Total depreciation for year: ($35,000 − $7,875) × 30% = $8,138
Allowable depreciation deduction: $8,138 × 80% = $6,510

If Sandy elected to calculate his depreciation on an SL basis, the calculations would be as follows:

20X2
Total depreciation for nine-month period: $35,000 × 21% × 9/12 = $5,513
Allowable depreciation deduction: $5,513 × 80% = $4,410

20X3
Total depreciation for year: $35,000 × 21% = $7,350

Staples Tax Guide 2012
**Allowable depreciation deduction:** $7,350 × 80%  
$5,880

**990.75 Gain or loss on disposal of vehicle [ss DE 2(7), (8)EE 11, EE 49]**

When a motor vehicle, in respect of which a depreciation deduction has been claimed, is sold or otherwise disposed of for more or less than its adjusted tax value, the difference will represent either depreciation recovery income or depreciation loss.

In the income year that a motor vehicle is sold or otherwise disposed of, no depreciation deduction is allowed in respect of that vehicle [s EE 11(1)]. However, if the vehicle is sold at less than adjusted tax value, a deduction will be available under s DE 2(8). When sold at an amount greater than adjusted tax value depreciation recovery income arises under s EE 49.

**Example:**

Continuing on from the example in 990.70, assume that Sandy sold his station wagon for $17,000 (exclusive of GST) on 30 April 20X3. Because the vehicle was sold on 30 April 20X3, no depreciation can be claimed in the 20X4 income year. However, Sandy will be able to claim a deduction under s DE 2(8) calculated as follows:

**DV method**

Adjusted tax value at 31 March 20X3 is ($35,000 − $7,875 − $8,138)  
$18,987

Loss on sale (allowable deduction) is ($18,987 − $17,000)  
$1,987

Under the formula in s DE 2(8):

Disposal depreciation loss is:  
$1,987

All deductions is ($6,300 + $6,510):  
$12,810

Base value is $35,000 and adjusted tax value is $18,987. The depreciation loss on disposal is: $1,987 × $12,810 / $16,013 = $1,590. Alternatively, as the business use percentage was 80 per cent the depreciation loss on disposal can be calculated as $1,987 × 0.80 = $1,590.

**SL method**

Adjusted tax value at 31 March 20X3: ($35,000 – $5,513 – $7,350)  
$22,137

Loss on sale is ($22,137 – $17,000)  
$5,137

Under the formula in s DE 2(8):

Disposal depreciation loss is:  
$5,137

All deductions ($4,410 + $5,880) is:  
$10,290

Base value is $35,000 and adjusted tax value is $22,137. The depreciation loss on disposal is: $5,137 × $10,290 / $12,863 = $4,109. Alternatively, as the business use percentage was 80 per cent the depreciation loss on disposal can be calculated as $5,137 × 0.80 = $4,109.

**Note:** Only the business use proportion of the loss (in this example, 80 per cent) may be claimed as a disposal depreciation loss.

If instead the station wagon had been sold for $23,000 (exclusive of GST), the excess of the sale price over the adjusted tax value would be depreciation recovery income for Sandy, calculated under s EE 49 as follows:

**DV method**

Depreciation recovery income: ($23,000 – $18,987).  
$4,013

All deductions is:  
$12,810

Base value is $35,000 and adjusted tax value is $18,987. Amount of depreciation recovery income is: $4,013 × $12,810 / $16,013 = $3,210. Alternatively, as the business use percentage was 80 per cent, the depreciation loss on disposal can be calculated as $4,013 × 0.80 = $3,210.

**SL method**

Depreciation recovery income is ($23,000 – $22,137):  
$863

All deductions is ($4,410 + $5,880):  
$10,290

Base value is $35,000 and adjusted tax value is $22,137. Amount of depreciation recovery income is: $863 × $10,290 / $12,863 = $690. Alternatively, as the business use percentage was 80 per cent, the depreciation recovery income is $863 × 0.80 = $690.

**Note:** Only the business use proportion of the gain is depreciation recovery income.
990.80 Registration plates bought as an investment

The income tax consequences of acquiring vehicle registration plates as an investment (not as a personalised number plate), are as follows:

(a) If the taxpayer buys and sells vehicle investment plates as part of a business of trading in those items, any gain on sale would be assessable income under s CB 1 or CB 5. If the taxpayer is in business, the plates will likely constitute trading stock. This means they must be brought in as stock on hand at the end of the year, and be valued according to the rules as set out in 1400 TRADING STOCK.

(b) If the taxpayer is not in business, but the plates were acquired for the purpose of eventually selling them at a profit, any amount received on sale would be assessable income under s CB 4. Inland Revenue’s view is that it would be difficult to see any other reason for acquiring an investment plate, other than for eventual sale at a profit. As there is no other income stream associated with the purchase, the onus would be on the taxpayer to demonstrate that the “investment” was not purchased with the intention of resale. If s CB 4 applies, the cost of the property will be allowed as a deduction under s DB 23, which, as it is subject to subject to s EA 2, will arise in the year of sale.

A deduction will be allowed under s DA 1 for any other expenses in the year incurred (eg insurance of the plates in the year the expense is incurred) [see TIB vol 10:5 (May 1998) at 24].

990.85 Motor vehicle dealers — deductions

Motor vehicle dealers must keep a logbook for any motor vehicle not used 100 per cent for business purposes so that the deductible proportion of expenses can be correctly identified.

The CIR has ruled that motor vehicle dealers can use the following approach to ascertain deductible vehicle expenses:

\[
\text{private vehicle expenses} = \frac{PR}{TR} \times N \times AE
\]

Where:

- \( PR \) is private running (in km);
- \( TR \) is total running (in km) in vehicles used privately;
- \( N \) is number of vehicles used privately; and
- \( AE \) is average expenses per vehicle (ie total vehicle expenses / total vehicles owned in the year).

Total vehicle expenses includes petrol and oil but not repairs, tyres and registration.

\[
\text{deductible vehicle expenses} = \text{total vehicle expenses} - \text{private vehicle expenses}
\]

Motor vehicle dealers may exclude repairs, tyres and registration expenses incurred when applying the formula because it cannot be argued that these types of expenses, carried out by a motor vehicle dealer to bring a secondhand vehicle to a suitable condition for sale, are incurred for the private running of the vehicle by the motor vehicle dealer. Only those expenses (if any), that can be directly attributed to private running (eg repairs following an accident that occurs while the vehicle is being used privately by the motor vehicle dealer) are included in the calculation.

Ideally, the motor vehicle dealer should identify a vehicle that is used privately and then keep a log of business running from the day the particular vehicle is purchased until it is sold.

Alternatively, the motor vehicle dealer could keep a log of business running once a vehicle is first used for private use. The following example illustrates how private and business running is ascertained by this method.

<table>
<thead>
<tr>
<th>Example:</th>
<th>Odometer running km</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vehicle purchased 1 April 20X1</td>
<td>20,000</td>
</tr>
<tr>
<td>Vehicle first used privately 1 June 20X1</td>
<td>20,500</td>
</tr>
<tr>
<td>Vehicle sold 1 September 20X1</td>
<td>26,000</td>
</tr>
</tbody>
</table>

(A logbook of business running is kept from 1 June 20X1 until the vehicle is sold.)
Private running calculation:
Odometer (26,000 − 20,500) 5,500
Less business running (as per logbook) 2,000
Private running 3,500

Business running calculation:
Odometer reading when vehicle purchased 20,000
Odometer reading as at 1 June 20X1 20,500
Difference 500
Plus business running (as per logbook) 2,000
Business running 2,500

[see PIB 159 (February 1987) at 3-4].

990.90 Fringe benefit tax

When an employer makes available a motor vehicle for the private use of an employee, the employer may be liable to pay fringe benefit tax (FBT). This applies only to motor vehicles with a gross laden weight of 3,500 kg or less. In addition, there are exemptions for work-related vehicles and for vehicles used for emergency callouts or for out-of-town business trips. The circumstances in which the use of a motor vehicle gives rise to an FBT liability and the method for calculating that liability are explained in 540.60 and 540.110.

If the supply of a motor vehicle constitutes a fringe benefit a record must also be kept of any days on which the vehicle is not available for private use or has been used for an emergency callout. This record is normally incorporated into the records explained in 990.30 and 990.35.

990.95 Tax planning considerations

Motor vehicles are frequently the focus of tax planning activity in businesses because:

(a) Motor vehicles are a common business asset and often constitute a significant proportion of the total value of the assets of a business.

(b) The cost of operating motor vehicles may be a significant business expense.

(c) Motor vehicles are an “attractive” item and as such are often made available to employees and shareholders.

(d) The private use of motor vehicles by employees (including shareholder-employees) gives rise to an FBT liability.

(e) It is very easy to switch between business and private use of motor vehicles.

Much of the tax planning effort in relation to motor vehicles involves attempts to minimise the exposure to FBT. In the past, motor vehicle lease arrangements were used to reduce exposure to FBT. However, recent tax law changes have largely removed this option [see 540.60 and 540.115].

Motor vehicles may be “acquired” as business assets in a number of different ways including outright purchase, hire purchase, operating lease, and finance lease. See 900 LEASED ASSETS for a general discussion of the tax implications of leasing. Another alternative is for employers to reimburse the running costs of vehicles owned by employees or shareholder employees. Each option has different tax consequences which can be quite complex, involving income tax, FBT and GST considerations.

Example:
A company has two shareholders and directors who are a married couple. The husband is employed by the company. For some years the company leased four motor vehicles for use in its business. The husband then decided to purchase four motor vehicles privately and lease them to the company at market rates. As a shareholder-employee, can he claim depreciation on the leased vehicles? Under s EE 1, a person is allowed a deduction for an amount of depreciation loss if the provisions of Part D are met. As the shareholder-employee incurred the depreciation expense as a result of leasing the motor vehicles to the company, the expense is deductible because the depreciable property owned is used in deriving assessable income [ss EE 6 and EE 7 define...
“depreciable property”). Although the shareholder is an employee of the company, he is also in the business of leasing motor vehicles [see TIB vol 6:3 (September 1994) at 16].
Chapter 1000
Non-residents and Absentees

1000.10 Definitions

An “absentee” is defined as “a person other than a person who is resident in New Zealand during any part of the tax year” [s YA 1]. A “non-resident” is defined as a person who is not a New Zealand resident [see 1250 RESIDENCE].

It follows that an absentee is always a non-resident, but a non-resident is not necessarily an absentee. A non-resident is only an absentee through being a non-resident for a full tax year. In the definition of resident a person may be a non-resident and still be in New Zealand for short periods during the tax year. The tax impositions for non-residents generally apply also to absentees except that absentees are generally not permitted to claim certain personal tax credits in calculating income tax [1000.35].
Non-residents and Absentees

1000.15 Income derived from New Zealand by non-residents

When income is derived from New Zealand and comprises dividends from New Zealand companies, or interest paid to a non-associated person or cultural royalties, the New Zealand tax liability on that income (referred to as non-resident passive income) is generally satisfied in full by the non-resident withholding tax (NRWT) deducted by the payer in New Zealand [see 1020 NON-RESIDENT WITHHOLDING TAX]. Income derived from New Zealand (other than non-resident passive income) is liable to New Zealand tax at normal resident rates and the non-resident is required to file an individual’s income tax return for income other than non-resident withholding income. Where a non-resident company derives income from New Zealand via a branch in New Zealand, then it is taxed at 30 per cent, the same as for resident companies.

1000.20 Personal services of non-resident visitor employed by a resident

Where a non-resident visits New Zealand for a short period of time that is not sufficient to become a resident and derives salary and wages, limitations may apply to the imposition of income tax on the income derived in the form of salary and wages. Income derived from personal services supplied in New Zealand to, or for, the benefit of a New Zealand employer is subject to ordinary income tax being imposed according to the PAYE system [ss BD 1(5), CE 1, RA 5, subpart RD]. The employer may need to obtain a clearance to employ the non-resident through the immigration authorities.

Non-resident seasonal workers are treated as residents for income tax purposes even if their stay in New Zealand exceeds 183 days in a 12-month period. The earnings of such workers are taxed at a flat rate of 15 per cent [see 1080.31].

1000.25 Personal services of non-residents visiting New Zealand and employed by a non-resident [s CW 19]

A non-resident who is employed by a non-resident for personal services performed in New Zealand is exempt from New Zealand income tax in the following circumstances:

(a) The duration of the visit does not exceed 92 days; and
(b) The total number of days that the person is present in New Zealand during the tax year does not exceed 92; and
(c) The income is chargeable with tax, which is substantially the same as income tax, in the country of residence of the visitor; and
(d) The services are performed for and on behalf of an employer who is not resident in New Zealand.

The exemption does not apply to public entertainers (ie theatre, motion picture, television, and radio artists, singers, musicians, dancers, lecturers, circus performers, athletes, boxers, wrestlers, and other professional sports people).

Example:

(a) Marie’s first visit to New Zealand from 24 March to 5 May 20X1 is 43 days (eight days in one income year and 35 in the next). No tax liability, as the visit is less than 92 days.
(b) Marie’s second visit to New Zealand from 1 June to 20 July 20X1 is 50 days. No tax liability, as the visit (plus 35 days of the first visit) is less than 92 days.
(c) Marie’s third visit to New Zealand from 21 March to 15 July 20X2 is 117 days (11 days in one income year and 106 in the next). She is liable for tax on the whole of the income from New Zealand during the year ended 31 March 20X2 as the number of days present during the year was 96 days, made up of 35 days in (a), 50 days in (b), and 11 days in (c).

Marie would also be liable for tax on income from New Zealand for the period from 1 April to 15 July 20X2 as the third visit in itself also exceeds 92 days, thus excluding the whole of the income of that visit from the exemption. In other words, if this had been the only visit in the year ended 31 March 20X3, the whole of the income earned on this trip would still have been subject to tax in New Zealand.

Inland Revenue policy is that tax deductions must be made in the usual way from salaries paid in New Zealand by a non-resident company to personnel normally resident abroad but working temporarily here for the company.

Staples Tax Guide 2012
It may not be possible to determine in advance whether the visiting non-resident will stay longer than the exemption period. Inland Revenue may accept a bond or other form of security from an employer to cover PAYE on non-resident employees in situations where their liability to tax in New Zealand is uncertain [s RD 23]. Where a bond or other security is provided, an employer must not:

(a) Make PAYE deductions for non-resident employees;
(b) Include information regarding non-resident employees in an employer monthly schedule; or
(c) Apply the non-declaration rate to a source deduction payment made to non-resident employees, until they become liable to tax in New Zealand or Inland Revenue specifies a date from which tax deductions are to be made. After that the employer is then liable for any PAYE incurred in the period covered by the bond.

Alternatively, Inland Revenue may require PAYE to be deducted as an interim measure. If, at the end of the visit, it is apparent that there is no New Zealand tax payable (because the employee stayed for a period within the exemption period) the tax deductions will be refunded.

The foregoing rules apply when no double tax agreement [see 1000.30] exists between New Zealand and the visiting non-resident’s country of residence.

**1000.30 Personal services of non-residents visitor employed by a resident from a double tax agreement country**

All of the double tax agreements to which New Zealand is a party provide for an exemption period of 183 days for non-resident visitors working in the other country. Generally, income derived in New Zealand from dependent personal and professional services by a non-resident individual is exempt under the relevant double tax agreement (DTA) where:

(a) The individual is present in New Zealand for less than 183 days in any 12-month period (earlier agreements refer to an income year or taxation year);
(b) The remuneration is paid by or on behalf of an employer who is resident in the other country; and
(c) The remuneration is not borne by a permanent establishment or fixed base that the person has in New Zealand.

However, the specific rules vary from agreement to agreement, and care should be taken to refer to the agreement itself before taking a tax position [see 310 DOUBLE TAX AGREEMENTS].

**1000.35 Absentees entitled to some tax credits** [s LC 9]

An absentee who has derived assessable income from their personal services while they are personally present in New Zealand, and who would be entitled to a tax credit under ss LC 3 to LC 6 if they were not an absentee, has a tax credit as calculated by the following formula:

\[
\text{Credit amount} \times \frac{\text{days}}{365}
\]

Where:

“Credit amount” is the tax credit the person would be entitled to if they were not an absentee;

“Days” is the total number of days in the tax year for which the person is paid for the personal services.

The tax credits to which this applies are the:

(a) Tax credit for school children [s LC 3];
(b) Transitional tax credit [ss LC 4, LC 5]; and
(c) Housekeeper tax credit [s LC 6].

When calculating the transitional tax credit for an absentee, their income is first grossed up to its full year equivalent (as required by s LC 11). The tax credit is calculated on this grossed up amount and then apportioned on the basis of the number of weeks (if the absentee was paid for regular pay periods) or days the absentee was present in New Zealand [see TIB vol 5:2 (August 1993) at 5, 6]. If income is derived from
a business carried on in New Zealand and the absentee derives no income from personal services here in the same income year, the income is assessable in full without tax credits [see 1395 TAX CREDITS].

1000.40 **Personal services of non-resident company director** [s YD 4(4)]
The liability of a non-resident on emoluments received from a New Zealand resident generally depends on whether the non-resident has been personally present in New Zealand while earning the income. Income treated as having a source in New Zealand includes an amount that is income under s CE 1 (amounts derived in connection with employment), if the amount is earned in New Zealand, even if the employer is not resident in New Zealand.

It follows that a non-resident director of a New Zealand company who does not visit New Zealand incurs no liability to New Zealand tax on director’s fees received. However, a director visiting New Zealand would be considered to earn in New Zealand the proportion of the annual director’s fee which the stay in New Zealand bears to the days in the income year for which the director’s fee is paid. Qualifying tax credits may also be proportioned on a daily basis.

1000.45 **Non-resident self-employed contractor**
Where the non-resident is an independent self-employed contractor (ie a consultant, artist, etc), it is appropriate to claim expenditure incurred in carrying on a business in the same way as other self-employed people [s DA 1]. Taxpayers who are employed by another are not able to claim expenses relating to employment [s DA 2(4)]. Payments made to non-resident contractors, which constitute schedular payments, are subject to tax deductions [see 1320.20].

1000.50 **Personal services of non-resident entertainers and professional sports persons** [ss CE 1, CW 19, CW 20, sch 4]
Visiting professional entertainers and sports people are liable to taxation on salary or wages derived from employment whether they are employed by a resident or a non-resident [ss CE 1, YD 4(4)]. The normal relief provisions for short visits by non-residents who are employed by non-residents do not apply as the exemption specifically excludes professional entertainers and sports people [s CW 19]. The special provisions of many double tax agreements (DTAs) for the right to tax artistes and athletes generally override the “183 day clause” for salaried employees so that such employees may be liable to New Zealand tax on all remuneration earned in New Zealand. A liability then exists for all salary or wages earned while in New Zealand and all profits from any business carried on in New Zealand [s YD 4].

Payments made to a non-resident entertainer (or to an agent or person acting on their behalf) are subject to a withholding tax at the rate of 20 cents in the dollar when the payment is for any of the following:

(a) A performance at a sporting event or competition;
(b) Making a speech or giving a lecture or talk for any purpose; or
(c) Acting, singing, playing music, dancing or entertaining generally, for any purpose and whether or not alone.

However, no tax deduction is required if the person:

(a) Is fully or partly sponsored under a cultural programme of an overseas government or the Government of New Zealand;
(b) Is an official representative of a body that administers a game or sport in an overseas country; or
(c) Is undertaking an activity or performance under an overseas programme for the promotion of a cultural activity and is not for an individual profit of a member or shareholder [see sch 4, Part F, cl 4].

The 20 per cent withholding tax is the final liability on incomes from activities described in these categories, and the non-resident is under no obligation to furnish a tax return unless the non-resident derives other income from New Zealand. An annual return may be submitted to claim allowable deductions.
When they elect to furnish a tax return the visiting entertainers or professional sports persons may claim against their New Zealand income travelling expenses to and from New Zealand on the following basis:

\[ \frac{\text{NZ Income}}{\text{Total Income}} \times \text{Travelling Expenses} \]

(1) **Exempt income of visiting entertainers** [s CW 20]

Income derived by a non-resident entertainer from an activity or performance in New Zealand during a visit is exempt income if the activity or performance occurs:

(a) Under a cultural programme of the New Zealand Government or an overseas government;
(b) Under a cultural programme wholly or partly sponsored by the New Zealand or an overseas government; or
(c) As part of a cultural programme of an overseas foundation, trust or other organisation that:
   (i) Exists wholly or partly to promote cultural activity; and
   (ii) Is not carried on for the private pecuniary profit of any member, proprietor or shareholder [s CW 20(1)].

Income derived by a non-resident entertainer from an activity that relates to a game or sport in New Zealand during a visit is exempt income if the participants are the official representatives of a body that administers the game or sport in an overseas country [s CW 20(2)]. Exempt income as outlined above is also exempt when provided by a person (eg a company) who:

(a) Provides the services of the non-resident entertainer during the visit to New Zealand; and
(b) Is the entertainer’s employer, a company of which the entertainer is an officer, or a firm of which the entertainer is a principal [s CW 20(3)].

A “non-resident entertainer” is a non-resident person who carries on an activity or performance in connection with:

(a) A solo or group performance by actors, comperes, dancers, entertainers, musicians, singers, or other artists for cultural, educational, entertainment, religious or other purposes;
(b) Lectures, speeches or talks for any purpose; or
(c) A sporting event or competition of any nature.

(2) **Effect of double tax agreement**

The liability of a non-resident entertainer can be affected by the double tax agreement (DTA) that may be in force between New Zealand and the country of the entertainer’s normal residence. The double tax agreements generally give New Zealand the right to tax income derived by public entertainers in New Zealand. Further, when the services of a non-resident artiste or sportsperson are provided by a service company, the agreements generally deem the service company to have a permanent establishment in New Zealand with a consequent liability to New Zealand tax on the profits derived by the non-resident company from the performances of the artiste or sportsperson in New Zealand. However, certain agreements exclude activities of entertainers or athletes where the visit is largely supported by public funds [see 310 DOUBLE TAX AGREEMENTS].

The general effect of a DTA is to set down rules whereby a resident of one state carrying on business in the other state is liable to tax in the other state only so far as industrial or commercial profits (which would include business profits of the professional entertainer) arise from a “permanent establishment”.

The agreements follow a pattern in that one article sets down the precise activities which constitute a “permanent establishment” and another article provides that only those “industrial or commercial profits” attributable to the “permanent establishment” are taxable in the country where the “permanent establishment” exists.
1000.55  Non-residents deriving superannuation or pensions

Income derived by either a resident or a non-resident from a superannuation fund [see 1390.15] or an annuity paid from a life insurance fund of a company is not assessable [s CW 4]. However, a non-resident who derives income from New Zealand from a pension, or a retiring allowance for past employment (or the past employment of a spouse [see 960.10], child, or dependant) is assessed on the income [s CF 1(1)(g)]. No exemptions or tax credits apply unless specifically provided for under a double tax agreement (DTA).

1000.60  Non-resident venture capital investors [ss CW 12, CW 13]

Non-resident investors who provide equity capital to unlisted New Zealand resident companies are exempt from income tax on profits arising from the sale of shares in those companies, provided the company’s main activity is not a prohibited activity. The objective of the exemptions is to encourage foreign equity investment in new business ventures in New Zealand. The exemption includes investments made alongside the New Zealand Venture Investment Fund Ltd [see 370.30].

1000.65  Non-resident traders [ss HD 18, HD 19, HD 20, HD 26, HD 29, YD 5]

Income tax is imposed on a non-resident trader when an agent is instrumental in obtaining business in New Zealand for that principal. It is immaterial whether the contract of purchase is made in New Zealand or elsewhere or whether the agent in New Zealand actually writes the order. The agent must file tax returns of the income derived from the business done in New Zealand and is held liable for the payment of the tax but has a right of recovery from the principal.

The method of assessment adopted is to take a determined percentage of the “gross proceeds” (or sales) of the business as being the net profit derived. The percentage varies with the class of goods dealt in, and is in the first instance an arbitrary method of assessment only. An alternative method to establish income is to submit a profit and loss account of the business done in New Zealand bearing a certificate of a chartered or certificated accountant stating that, in arriving at the net profit or loss disclosed, no charges, either actual or estimated, have been made for interest on capital, reserves, unusual depreciation, or other extraordinary charges. If this cannot be done, a further alternative is for a chartered accountant’s certificate on the same lines of the net profit to turnover on the whole world business and then applying this percentage to the gross proceeds of business done in New Zealand. No special exemption or tax credits are deducted from the net profit at this point. The tax is imposed at the same rates as those applying to residents of New Zealand.

Circumstances may exist when:

(a) The business of a person is carried on partly in New Zealand and partly outside New Zealand; or
(b) A contract is made in New Zealand and is wholly or partly performed by a person outside New Zealand; or
(c) A contract is made outside New Zealand and is wholly or partly performed by a person in New Zealand.

In such cases, the gross amount of income from the business or contract, and the expenditure incurred in deriving the income, is apportioned between New Zealand and sources outside New Zealand. This is done in such a way and to such an extent as is necessary to produce an amount of net income or net loss for the business or contract which the person might be expected to derive if such activities in New Zealand were carried out by a separate and wholly independent person undertaking only those activities and dealing at arm’s length. The person is assessable for income tax accordingly [s YD 5].

If a person in New Zealand (the agent) is instrumental in arranging the purchase of goods from the agent’s non-resident principal, and those goods are in New Zealand or are to be imported into New Zealand under the contract of purchase, then the following apply:

(a) The principal is treated as carrying on a business in New Zealand;
(b) The agent is treated as the principal’s agent in relation to the income derived from the business; and
(c) The income from the business is treated as having a source in New Zealand.
The agent is not liable as agent for the payment of income tax if the CIR is satisfied that in corresponding circumstances in a country outside New Zealand, the principal, if resident in New Zealand, would not be liable for income tax in that country [s. HD 29].

**1000.70 Transfer pricing arrangements** [ss. GB 2, GC 6, GC 7, GC 8, GC 9, GC 10, GC 11, GC 12, GC 13, GC 14]

A person entering into a cross-border arrangement with an associated person for the acquisition or supply of goods, services, or anything else at a consideration which reduces the person’s net income, must substitute an arm’s-length consideration when calculating their net income.

An arrangement is a “transfer pricing arrangement” if:

(a) The arrangement involves the supply and acquisition of goods, services, money, other intangible property, or anything else;

(b) The supplier and acquirer are associated persons; and

(c) The arrangement is a cross-border arrangement.

An arrangement is a cross-border arrangement if:

(a) The supplier and acquirer are a New Zealand resident and non-resident, unless:
   (i) The non-resident enters into the arrangement for the purposes of a business carried on by the person in New Zealand through a fixed establishment in New Zealand; and
   (ii) The New Zealand resident has not entered into the arrangement for the purposes of a business carried on by the person outside New Zealand;

(b) The supplier and acquirer are both New Zealand residents and either or both enter into the arrangement for the purposes of a business carried on by the person outside New Zealand; or

(c) The supplier and acquirer are both non-residents, unless each enters into the arrangement for the purposes of a business carried on by the person in New Zealand through a fixed establishment in New Zealand [s. GC 6].

An adjustment made under any of ss. GC 7 to GC 10 has no effect on an obligation of the taxpayer to withhold an amount under Part R, other than:

(a) An obligation under subpart RG (foreign dividend payments); or

(b) To the extent to which s. GC 11(2) (matching treatment) applies [s. GC 12].

1. **Excess amount payable**

If the amount of consideration payable by a taxpayer under a transfer pricing arrangement is more than an arm’s-length amount, an amount equal to the arm’s-length amount is treated as the amount payable by the taxpayer for the purposes of calculating their tax liability [s. GC 7].

2. **Insufficient amount receivable**

If the amount of consideration receivable by a taxpayer a transfer pricing under an arrangement is less than the arm’s-length amount, then the arm’s-length amount is treated as the amount receivable by the taxpayer for each of the following purposes:

(a) The calculation of their income tax liability for a tax year; or

(b) The determination of the obligation of another person to withhold tax under Part R.

This provision does not apply if the taxpayer was neither resident in New Zealand nor entering into the arrangement for the purposes of a business carried on in New Zealand through a fixed establishment in New Zealand, and:

(a) The amount receivable is a deduction of the other party or, in the case of an interest-free loan, would be a deduction but for the application of subpart FE (thin capitalisation) if an arm’s-length amount of interest were substituted; and
(b) The amount receivable is interest, royalties or an insurance premium to which s YD 8 applies. The provision also does not apply if the amount is a dividend receivable on a fixed-rate share, and the taxpayer is neither resident in New Zealand nor entering into the arrangement for the purposes of a business carried on in New Zealand through a fixed establishment in New Zealand [s GC 8].

(3) Calculation of arm’s-length amount
The arm’s-length amount of consideration must be determined by applying whichever one (or combination) of the methods listed below produces the most reliable measure of the amount completely independent parties would have agreed on after real and fully adequate bargaining. The arm’s-length amount of consideration must be calculated under any one (or combination) of:

(a) The comparable uncontrolled price method;
(b) The resale price method;
(c) The cost plus method;
(d) The profit split method;
(e) Comparable profits methods.

The choice of method or methods for calculation and the resultant application of the method (or methods) must be made having regard to:

(a) The degree of comparability between the uncontrolled transactions used for comparison and the controlled transactions of the taxpayer; and
(b) The completeness and accuracy of the data relied on; and
(c) The reliability of all assumptions; and
(d) The sensitivity of any results to possible deficiencies in the data and assumptions.

The arm’s-length amount of consideration is determined by the taxpayer and the amount so determined is the arm’s-length amount, unless:

(e) The CIR can demonstrate another amount to be a more reliable measure of the arm’s-length amount; or
(f) The taxpayer has not cooperated with the CIR in the CIR’s administration of this section in relation to that taxpayer and the non-cooperation has materially affected the CIR in that administration.

In either of these events the CIR determines the amount [s GC 13].

(4) Compensating arrangement: person paying less than arm’s-length amount
For the purposes of calculating a taxpayer’s income tax liability, the amount paid by them in a compensating acquisition arrangement is treated as an amount equal to the arm’s-length amount for the corresponding tax year when:

(a) The taxpayer is a party to a transfer pricing arrangement;
(b) An adjustment is made for an income year under s GC 7 or s GC 8;
(c) An amount of consideration payable by the taxpayer in the same income year, or in the previous or following income year, for an acquisition (the “compensating acquisition arrangement”) from the same person is less than an arm’s-length amount; and
(d) Either:
   (i) The transfer pricing arrangement involves goods, services, money, other intangible property, or anything else of the same type as that acquired in the compensating acquisition arrangement; or
   (ii) The amount of consideration actually payable or receivable in the transfer pricing arrangement is set having regard to the amount of consideration payable under the compensating acquisition arrangement [s GC 9].
Non-residents and Absentees

(5) **Compensating arrangement: person paying more than arm’s-length amount**
In the circumstances set out below, the amount received by a taxpayer in a compensating supply arrangement is treated as being an amount equal to the arm’s-length amount determined under s GC 13 for each of the following purposes:

(a) The calculation of their income tax liability for a tax year; and
(b) The determination of the obligation of another person to withhold tax from the amount under Part R.

The circumstances referred to above are when:

(a) The taxpayer is a party to a transfer pricing arrangement;
(b) An adjustment is made for a tax year under s GC 7 or s GC 8;
(c) An amount of consideration payable by the taxpayer in the same tax year, or in the previous or following tax year, for a supply (the “compensating supply arrangement”) to the same person is more than an arm’s-length amount; and
(d) Either:
   (i) The transfer pricing arrangement involves goods, services, money, other intangible property, or anything else of the same type as that acquired in the compensating supply arrangement; or
   (ii) The amount of consideration actually payable or receivable in the transfer pricing arrangement is set having regard to the amount of consideration receivable under the compensating supply arrangement [s GC 10].

(6) **Request for matching treatment**
When an arm’s-length amount is substituted under s GC 7 or s GC 8 for one party to a transfer pricing arrangement, the substitution applies also to the other party to the arrangement when:

(a) The other party to the arrangement (or, in the case of a CFC, a person with an income interest in the CFC) applies to the CIR within six months after an assessment is made for the first party reflecting the substitution;
(b) The CIR considers it is fair and reasonable to do so, having regard to an adjustment made under a double tax agreement or any other matter; and
(c) The CIR has notified the other party.

The substitution applies to the other party:

(a) Excluding the determination of the extent to which the other party has derived or been paid a dividend; and
(b) Including, when the other party is a CFC, the calculation of net attributable CFC income or net attributable CFC loss, and the resultant calculation of the attributed CFC income or an attributed CFC loss or attributed CFC net loss of a person [s GC 11].

**Transfer pricing guidelines**
Inland Revenue issued guidelines on the application of the transfer pricing rules in an appendix to TIB vol 12:10 (October 2000). The introduction to the guidelines notes that the guidelines are not issued as a binding public ruling — they are intended as a practical guide rather than as prescriptive rules. Further, Inland Revenue fully endorses the positions set out in the **OECD Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations**, ch 1-8, and proposes to follow those positions in administering New Zealand’s transfer pricing rules. The guidelines should be read as supplementing the OECD guidelines, not as superseding them.
The overall objective of the transfer pricing guidelines is to make taxpayers aware of the steps they need to take to demonstrate that they have complied with the arm’s-length principle in ss GC 6 to GC 14. A detailed commentary on the guidelines is beyond the scope of this publication.

The guidelines deal with the following aspects:

(a) The rationale behind New Zealand’s adoption of the arm’s-length principle;
(b) The conceptual framework on which application of the acceptable transfer pricing methods is based;
(c) The general principles of comparability which form the foundations of transfer pricing analysis;
(d) The factors taxpayers should consider in determining the extent to which documentation should be prepared and maintained in support of their determination of arm’s-length price;
(e) The treatment of intangible property;
(f) The treatment of intra-group services, such as management fees;
(g) Cost contribution arrangements.

The guidelines apply only to the application of ss GC 6 to GC 14 — they therefore apply only to transactions between separate entities. They do not apply to transactions within a single entity such as between a parent company and its branch. Such transactions are subject instead to the apportionment rules in s YD 5 [see 1000.65].

The guidelines emphasise the importance of proper documentation. One of the key messages is that if taxpayers make a conscientious effort to establish transfer prices that comply with the arm’s-length principle, and prepare documentation as evidence of that compliance, Inland Revenue is likely to determine prima facie that those taxpayers represent a low tax risk, whereas taxpayers who give inadequate consideration to their transfer pricing practices are likely to receive closer attention.

1000.80 Non-resident’s assessment

The following example illustrates the imposition of income tax on a non-resident.

Example:

A married man, a resident of Australia, derives income from New Zealand from rent ($3,000), interest on debentures ($240), and dividends from New Zealand companies ($210), and he spends 20 weeks in New Zealand working for a New Zealand employer at a salary of $700 a week. His tax liability, based on 2011-2012 tax rates, is as follows:

Salary $700 a week for 20 weeks (PAYE deductions $2,073) $14,000
Rent $3,000
Taxable income $17,000
Income tax on $17,000 $1,995
Credit for tax deductions $2,073
Tax refund due $78

The period of 20 weeks’ presence in New Zealand is insufficient to make him a resident. Non-resident withholding tax (NRWT) will have been deducted from the dividends at the rate of 15 per cent since there is a DTA with Australia [see 310.45]. This is the final tax liability on this income. Dividends are not included in a non-resident’s assessment. NRWT at the rate of 10 per cent is also the final liability on the interest, unless the taxpayer is associated with the New Zealand payer. Any imputation credits attached to the dividends are not refunded to the non-resident taxpayer. However, the benefit of them may be passed on by the company to the non-resident as supplementary dividends [see 1010.20].

As an absentee, the taxpayer is also entitled to claim a proportionate amount of certain tax credits for the period he was working in New Zealand [see 1000.35].

1000.85 Thin capitalisation rules [ss FE 1, FE 2, FE 38, FE 39, FE 40, FE 41]

Editorial Note

At the time of publication of the Staples Tax Guide 2012, 72nd edition, the Taxation (International Investment and Remedial Matters) Bill had not been passed into law. It is anticipated that the content of this paragraph will be changed following the
passing of the Bill. For an overview of the changes contained in the Bill, please refer to the “Future Developments” section of
this book.
When enacted, these changes will also be available in the Staples Tax Guide online at www.brookersonline.co.nz. The changes
will also be included in the Staples Tax Guide 2012 - Mid-Year Supplement.

The thin capitalisation rules apportion certain interest expenditure between income that has a source in New
Zealand and other income for a New Zealand taxpayer who:
(a) Is controlled by a single non-resident, or is a New Zealand resident (an outbound entity) with an
income interest in a CFC, or a New Zealand resident that controls an outbound entity; and
(b) Has a disproportionately high level of debt funding in relation to their worldwide interest expenditure.
These rules also prescribe an acceptable level of equity for a foreign-owned bank, for the purposes of the
interest apportionment rules [s FE 1].
This anti-avoidance measure ensures that income derived in New Zealand is not shifted offshore by the
charging of excessively high interest costs to New Zealand based operations of a multinational company.
The interest apportionment rules may apply to the following persons if, at a time in an income year, they are:
(a) A non-resident who is not a company;
(b) A non-resident company, unless
   (i) A New Zealand resident has a direct ownership interest of 50 per cent or more in the company;
   and
   (ii) No non-resident has a direct ownership interest (including those of all associated persons) of
        50 per cent or more in the company;
(c) A company that is resident in New Zealand, if a non-resident has an ownership interest in the company
    of 50 per cent or more or has control of the company by any other means;
(d) The trustee of a non-complying trust settled by a non-resident, if the value of the settlements made
    by them (including the value of all settlements made by associated persons) are 50 per cent or more
    of the value of the settlements made on the trust;
(e) A company that is resident in New Zealand and has an income interest in a CFC;
(f) A company that is resident in New Zealand and has:
   (i) An ownership interest in a company described in (e) of 50 per cent or more;
   (ii) Control of a company described in (e) by any other means; or
(g) A natural person, or a trustee of a trust settled by a New Zealand resident, if the natural person or
    trustee is resident in New Zealand and has:
   (i) An income interest in a CFC;
   (ii) An ownership interest in a company described in (e) or (f) of 50 per cent or more;
   (iii) Control of a company described in (e) or (f) by any other means.
For the above purposes, a company is treated as being non-resident if it is treated under a double tax agreement
as not being resident in New Zealand [s FE 2].

1 Ownership interests [ss FE 38, FE 39, FE 40, FE 41]
A person’s ownership interest in a company is the total of the following percentages:
(a) Any direct ownership interests they hold in the company;
(b) Any direct ownership interests held in the company by an associated person;
(c) Any indirect ownership interests they hold in the company; and
(d) Any indirect ownership interests held in the company by an associated person.
A person’s direct ownership interest in a company is equal to the highest percentage of shares or rights the
person holds in the categories listed in s EX 5(1) [see 850.25]. A person’s direct ownership interests include
the direct ownership interests of a person associated with them. However, the same percentage shares or rights in a company may not be counted more than once.

An indirect ownership interest arises when a person has a direct ownership interest in a company (company A), which has an ownership interest in another company (company B). If the person’s direct ownership interest in company A is less than 50 per cent, they are treated as holding an indirect ownership interest in company B equal to their direct ownership interest in company A multiplied by company A’s ownership interest in company B. If the person’s direct ownership interest in company A is equal to or more than 50 per cent, they are treated as holding an indirect ownership interest in company B equal to company A’s ownership interest in company B.

A non-resident who does not have a direct or indirect ownership interest in a company and a relative resident in New Zealand are not associated persons in relation to the company.

1000.90 Apportionment of interest expenditure [ss CH 9, CH 10, FE 5, FE 6, FE 7]

(1) Threshold for excess debt entity [s FE 5(1)]

An excess debt entity must apportion its interest expenditure for an income year if:

(a) The excess debt entity is not a trustee and not an excess debt outbound company, or is a trustee who is not described in s FE 2(1)(g) [see 1000.85], and:
   (i) The debt percentage of its New Zealand group for the income year is more than 60 per cent; and
   (ii) For a company or a trustee, the debt percentage of its New Zealand group for the income year is more than 110 per cent of the debt percentage of the worldwide group; or

(b) The excess debt entity is an excess debt outbound company, or is a trustee who is described in s FE 2(1)(g), and:
   (i) The debt percentage of its New Zealand group for the income year is more than 75 per cent; and
   (ii) For a company or a trustee, the debt percentage of its New Zealand group for the income year is more than 110 per cent of the debt percentage of the worldwide group.

An “excess debt entity” for an income year is a person who:

(a) Meets the requirements of s FE 2 in the income year [see 1000.85];
(b) Is not, at any time in the income year, a reporting bank for a New Zealand banking group, or a part of a New Zealand banking group; and
(c) Is not a natural person (unless acting as a trustee) [s FE 4].

(2) Exception for excess debt outbound companies [s FE 5(1B), (1C)]

An excess debt outbound company and a natural person or trustee who is described in s FE 2(1)(g) do not have to apportion interest expenditure for an income year if, for the income year:

(a) The ratio of the total group assets measured under s FE 16 for its New Zealand group to the total group assets measured under s FE 18 for its worldwide group is 90 per cent or greater; or

(b) Its New Zealand group:
   (i) Has a total amount of deductions for interest allowed under ss DB 6 to DB 8 to the group, less the total deductions allowed in relation to interest payable intra-group, that is not greater than $250,000; and
   (ii) Does not include an entity with an income interest in a CFC, and the CFC derives rent from land in the country or territory in which the CFC is resident.

For these purposes, the total group assets of a natural person’s worldwide group under s FE 18 are measured on the basis that the natural person is an excess debt entity that has a worldwide group made up of:
(a) The natural person;
(b) The natural person’s New Zealand group; and
(c) All CFCs in which the natural person or a member of the natural person’s New Zealand group has an income interest.

3 Threshold for reporting bank [s FE 5(2)]

A reporting bank must apportion its interest expenditure for an income year if:

(a) The New Zealand net equity of its New Zealand banking group for a tax year is less than its equity threshold; and
(b) Its group funding debt for the corresponding tax year is positive.

A “reporting bank” for an income year for a New Zealand banking group is a person who:

(a) Meets the requirements of s FE 2 in the income year; and
(b) Is the registered bank in the banking group — subject to s FE 36 [see 1000.135]

4 Threshold for natural person [s FE 5(3)]

A natural person must apportion their interest expenditure for an income year if:

(a) They are not described in s FE 2(1)(g) and the debt percentage of their New Zealand group for the income year is more than 60 per cent; or
(b) They are described in s FE 2(1)(g) and the debt percentage of their New Zealand group for the income year is more than 75 per cent.

5 Apportionment of interest by excess debt entity [s FE 6(1) to (3)]

A natural person or an excess debt entity required to apportion their interest under s FE 5 is treated as deriving, under s CH 9, an amount of income calculated for the income year as follows:

\[
\text{Total deduction} + \text{FRD} - \text{adjust} \times (\text{total debt} - \text{concession} / \text{total debt}) \times (\text{group debt percentage} - \text{threshold amount} / \text{group debt percentage})
\]

Where:

“Total deduction” is the whole amount of the excess debt entity’s deduction for interest allowed under ss DB 6 to DB 8, less:

(a) The total amount allowed in relation to interest payable to a company that is a member of the entity’s New Zealand group under ss FE 3 and FE 28 (not including an amount referred to in (b)); and
(b) The total amount allowed in relation to interest payable under a financial arrangement excluded from the total group debt of its New Zealand group under s FE 15.

“FRD” is the total amount of dividends paid by the excess debt entity in relation to fixed-rate foreign equity of fixed-rate shares issued by the entity and held by a person resident in New Zealand who is not a company that is a member of the entity’s New Zealand group.

“Adjust” is:

(a) Zero, if the excess debt entity is not an excess debt outbound company or a natural person or trustee described in s FE 2(1)(g);
(b) The amount (the group finance cost) that is the total amount for the New Zealand group found by calculating for each member of the New Zealand group the total amount (the member finance cost) of the items total deduction and FRD for the member, if the group finance cost is $1,000,000 or less and (a) does not apply;
(c) The amount found by multiplying the amount by which $2,000,000 exceeds the group finance cost by the ratio obtained by dividing the member finance cost for the excess debt entity by the group finance cost, if the group finance cost is more than $1,000,000 and less than $2,000,000 and (a) does not apply; or
(d) Zero, if the group finance cost is $2,000,000 or more and (a) does not apply.

“Total debt” is the total amount of debt of the excess debt entity’s New Zealand group for the income year calculated under s FE 15, before allowing for a reduction under s FE 13 [see 1000.110].

“Concession” is any reduction allowed under s FE 13 in the total group debt of the excess debt entity’s New Zealand group for the income year, averaged when s FE 8(1)(a) or (b) applies.

“Group debt percentage” is the debt percentage of the excess debt entity’s New Zealand group for the income year.

“Threshold amount” is:

(a) If the excess debt entity is not a trustee and not an excess debt outbound company, or is a trustee who is not described in s FE 2(1)(g), the greater of 60 per cent and 110 per cent of the debt percentage of their worldwide group;

(b) If the person is a natural person who is not described in s FE 2(1)(g), 60 per cent;

(c) If the excess debt entity is an excess debt outbound company, or is a trustee who is described in s FE 2(1)(g), the greater of 75 per cent and 110 per cent of the debt percentage of their worldwide group; or

(d) If the person is a natural person who is described in s FE 2(1)(g), 75 per cent.

(6) Alternative calculation [s FE 6(4), (5)]

If a company that is in the same wholly-owned group of companies as the excess debt entity has a deduction for interest under any of ss DB 6 to DB 8, the company may choose to be treated as deriving the income that the excess debt entity would otherwise be treated as deriving for the income year. The amount of income is not calculated using the formula set out above. The amount of income for which the company may make the above election must not be more than the total amount of deductions that the company has for interest for the income year, having taken into account any other income that the company chooses to treat itself as deriving under s FE 6(4).

(7) Apportionment of interest by reporting bank [s FE 7]

A reporting bank that is required to apportion its interest under s FE 5(2) is treated as deriving an amount of income under s CH 10 calculated using the formula:

\[\text{amount below threshold} \times \left( \frac{\text{interest expenditure}}{\text{group funding debt}} \right) \times \left( \frac{\text{days in period}}{\text{days in year}} \right)\]

Where:

“Amount below threshold” is the amount by which the New Zealand net equity for the New Zealand banking group is less than the equity threshold under s FE 19.

“Interest expenditure” is the financial value for the New Zealand banking group of interest expenditure measured under generally accepted accounting practice that is incurred:

(a) By a member of the New Zealand banking group in the income year; and

(b) Other than in relation to a share that contributes to the item “total interest” in the formula in s FE 23, or is a deduction referred to in the definition of the item “interest deductions” in that section.

“Days in period” is the number of days in the relevant measurement period.

“Group funding debt” is the group funding debt for the New Zealand banking group for the corresponding tax year.

“Days in year” is the number of days in the income year.

1000.95 Measurement period [s FE 8]

When measuring the amount of total group debt and total group assets of its New Zealand group for the income year, an excess debt entity must elect the basis on which it is to be measured:

(a) The average amount at the end of each day of the income year;
The average amount at the end of each three-month period in the income year; or
(c) The amount at the end of the income year.

For these purposes, the income year is determined by the balance date of the New Zealand parent.

A reporting bank [see 1000.135] must measure both the equity threshold and the net equity of its New Zealand banking group for an income year on one of the following dates:
(a) On each day of the income year;
(b) On the last day of each calendar month of the income year; or
(c) If the reporting bank does not choose (a) or (b), on the last day of each quarter of an income year.

If the identity of the reporting bank changes, the first measurement date for the new reporting bank is the day after the last measurement date of the former reporting bank.

**1000.100 Elections** [s FE 9]

For the purposes of the thin capitalisation rules, an election or choice is made by providing a return of income for the relevant income year. A choice of measurement date [see 1000.95] may be changed after a notice of assessment for an income year is received from the CIR. A choice of control threshold, or an election to include certain other companies in a New Zealand group [see 1000.115] by a person other than an excess debt entity is made by providing notice to the CIR with the return of income for the relevant income year.

**1000.105 Currency** [s FE 10]

The following values must be calculated in New Zealand currency for the thin capitalisation rules:
(a) Total group debt and total group assets of a New Zealand group or a worldwide group; and
(b) A financial arrangement or risk-weighted exposure.

An excess debt entity must convert foreign currency to New Zealand currency at:
(a) The close of trading spot exchange rate for the foreign currency on the relevant measurement date [see 1000.95]; or
(b) The forward exchange rate that applies on the first day of the income year for the relevant measurement date.

A reporting bank must convert foreign currency to New Zealand currency at the close of trading spot exchange rate for the foreign currency on the relevant measurement date.

**1000.110 Rules for calculating debt percentage of a group** [ss FE 12, FE 14, FE 15, FE 16.]

The debt percentage of a group is the percentage of total group debt to total group assets for the income year or accounting year [s FE 12].

**Example:**

If total group debt is $900,000 and total group assets equal $1,000,000, then the debt percentage of the group is 90 per cent.

The New Zealand group, for an excess debt entity is a company, is made up of all companies, traced tier by tier, that are identified as within the control threshold of the New Zealand parent [s FE 27].

The worldwide group, for an excess debt entity is a company, is made up of all companies, traced tier by tier, that are included in both the entity’s New Zealand group and the ultimate non-resident parent’s worldwide group [s FE 31].

If the excess group entity is a trustee, the memberships of the New Zealand group and the worldwide group are determined as follows:

(a) The trustee’s New Zealand group is made up of the trustee and all associated persons who are resident in New Zealand, or carrying on business in New Zealand through a fixed establishment in New Zealand; or
(b) The debt percentage is calculated by determining the total group debt and total group assets of the members of the New Zealand group on a consolidated basis equivalent to the generally accepted accounting practice for the consolidation of a group of companies for the purposes of eliminating intra-group balances [s FE 3(2)].

(1) **Consolidation of debts and assets [s FE 14]**

If the excess debt entity is a company, the debt percentage of a New Zealand group is calculated under generally accepted accounting practice for the consolidation of companies for the purposes of eliminating intra-group balances, by consolidating the debts and assets of the members of the entity’s New Zealand group.

For a natural person and an excess debt entity that is a trustee, the debt percentage of a New Zealand group is calculated under generally accepted accounting practice for the consolidation of companies for the purposes of eliminating intra-group balances by consolidating the debts and assets of the group.

If a member of a New Zealand group is not resident in New Zealand, the assets and debts of the member are included in a consolidation only to the extent to which the assets and debts are for the group member to:

(a) Carry on business in New Zealand through a fixed establishment in New Zealand;
(b) Derive income that has a source in New Zealand and for which relief from New Zealand tax under a double tax agreement is unavailable.

For the purposes of determining total group debt and total group assets, and for calculating an amount for which a deduction is denied:

(a) Specified leases are treated as financial arrangements that provide funds to the issuer;
(b) Expenditure incurred by the lessee under a specified lease for which a deduction is allowed under s BD 2 is treated as an amount of interest to which any of ss DB 6 to DB 8 applies; and
(c) Interest that is allowed as a deduction under s DP 1(1)(b) (expenditure of forestry business) or s DV 10(1)(a) or (b) (building societies) is treated as an amount of interest to which any of ss DB 6 to DB 8 applies, if not already allowed under these sections [s FE 14].

(2) **Total group debts and assets [ss FE 15, FE 16]**

“Total group debt” means the sum of the outstanding balances of:

(a) Financial arrangements entered into by a natural person, or an excess debt entity, or another member of the New Zealand group, if the financial arrangement:
   (i) Provides funds to the natural person, the entity or another member of the group; and
   (ii) Gives rise to an amount for which the natural person, the entity or another member of the group would have a deduction (not including an amount that arises only from movement in currency exchange rates);
(b) Fixed-rate foreign equity or fixed-rate shares that are issued by the entity or another member of the New Zealand group and held by a person resident in New Zealand;
(c) Staples debt securities that are issued by the entity or another member of the New Zealand group, held by a person resident in New Zealand and stapled to shares other than shares of a company that is a proportional-stapling company [s FE 15].

A “proportional-stapling company” means a company if:

(a) Each share in the company that is not a stapled debt security and not a fixed-rate share (a participating share) is stapled to a stapled debt security; and
(b) For each participating share in the company, the amount payable for the issue of its stapled debt security is the same proportion of the available subscribed capital calculated under the slice rule of the participating share as it is for each other participating share.
“Total group assets” for an income year means the total assets for a natural person, an excess debt entity or another member of the New Zealand group, measured under the applicable one or more of the following methods, as chosen by the person or entity:

(a) The value of the assets shown in the financial statements of the entity’s New Zealand group;
(b) The net current value of the assets;
(c) Market value, for trading stock that is valued at market value in calculating the person or entity’s income tax liability for the income year, or that of a member of the group;
(d) Adjusted tax value of a personal property lease asset at the start of the income year, in the case of a specified lease or a finance lease that is not recognised as an asset under generally accepted accounting practice; or
(e) If allowed under generally accepted accounting practice, a combination of the financial statement values and net current values.

If the excess debt entity or another member of the New Zealand group has an investment in a CFC in which the entity or member has an income interest, the value of the total group assets calculated and measured under s FE 16 does not include the value of the investment, except:

(a) To the extent to which–
   (i) The value of the investment represents the outstanding balances of financial arrangements to which s FE 13 applies:
   (ii) The CFC derives income with a source in New Zealand and for which relief from New Zealand tax under a double tax agreement is unavailable;
(b) That the value of the total group assets is treated as being $1 if the value would otherwise be zero as a result of this subsection.

If the excess debt entity or another member of a New Zealand group is not resident in New Zealand, the assets of the entity or member are included in the calculation and measurement of total group assets under this section only to the extent to which the assets are for the entity or member to:

(a) Carry on business in New Zealand through a fixed establishment in New Zealand;
(b) Derive income that has a source in New Zealand and for which relief from New Zealand tax under a double tax agreement is unavailable.

The amount of total group assets must be calculated under generally accepted accounting practice, except for the values referred to in (c), (d) and (e) [s FE 16].

1000.115 Determining membership of New Zealand group [ss FE 25, FE 26, FE 27, FE 28, FE 29, FE 30]

(1) Process [s FE 25]

The membership of the New Zealand group of an excess debt entity that is a company is determined by:

(a) Identifying the New Zealand parent;
(b) Establishing the companies under the parent’s control;
(c) Identifying the members of the New Zealand group; and
(d) If a non-resident has ownership interests in two or more New Zealand groups, establishing whether the groups may be combined into a single New Zealand group.

Section FE 30 (as explained below) does not apply to an excess debt outbound company.

(2) New Zealand parent [s FE 26]

The excess debt entity is treated as the New Zealand parent if it is not resident in New Zealand. An excess debt entity that is resident in New Zealand is treated as the New Zealand parent if:

(a) A non-resident has a direct ownership interest in the entity of 50 per cent or more; and
(b) No single non-resident carrying on a business in New Zealand through a fixed establishment in New Zealand, or who derives income that has a source in New Zealand and for which relief from New Zealand tax under a double tax agreement is unavailable, has an ownership interest in the entity of 50 per cent or more.

An excess debt entity is treated as the New Zealand parent if the entity is an excess debt outbound company and no single company resident in New Zealand has an ownership interest in the entity of 50 per cent or more.

If the excess debt entity is not the New Zealand parent, and the excess debt entity is not an excess debt outbound company, the entity’s New Zealand parent is the company (company A) that meets all the following requirements:

(a) Company A is either:
   (i) Resident in New Zealand;
   (ii) Not resident but carrying on business in New Zealand through a fixed establishment in New Zealand; or
   (iii) Not resident in New Zealand but deriving income that has a source in New Zealand and for which relief from New Zealand tax under a double tax agreement is unavailable;

(b) Company A has an ownership interest in the entity;

(c) A non-resident has a direct ownership interest in company A;

(d) If company A is resident in New Zealand, a non-resident who has an ownership interest in the entity of 50 per cent or more also has an ownership interest in the company of 50 per cent or more; and

(e) No other company that meets the requirements of (a) to (d) has a direct ownership interest in company A.

If the interest apportionment rule [see 1000.90] applies to the excess debt entity only because the entity is a resident company that a non-resident controls by “any other means” [s FE 2(1)(c)(ii)], the entity’s New Zealand parent is the company (company B) that meets all the following requirements:

(a) Company B is either:
   (i) Resident in New Zealand, or
   (ii) Not resident but carrying on business in New Zealand through a fixed establishment in New Zealand; or
   (iii) Not resident in New Zealand but deriving income that has a source in New Zealand and for which relief from New Zealand tax under a double tax agreement is unavailable;

(b) Company B has an ownership interest in the entity;

(c) If company B is resident in New Zealand, a non-resident who has control of the entity by any means has control of company B by any means; and

(d) No other company that meets the requirements of (a) to (c) has a direct ownership interest in company B.

Ownership interests are determined under ss FE 38 to FE 41 [see 1000.85], but for the purpose of identifying a New Zealand parent the ownership interests of an associated person are ignored.

If more than one company is identified as New Zealand parent, the New Zealand parent is the company that has the highest value in ownership interests calculated by multiplying:

(a) The total direct ownership interests in company A or company B of non-residents who also have ownership interests in the entity of 50 per cent or more; or

(b) The ownership interests of either company in the entity.

The excess debt entity is treated as the New Zealand parent if none of the above tests identifies a parent.
(3) **Companies under parent’s control [s FE 27]**

The New Zealand parent may choose, as the relevant control threshold, a percentage that is either:

(a) More than 50 per cent; or
(b) 66 per cent or more.

The chosen percentage must be applied consistently to all companies that are members of the group. If a control threshold is not chosen, the default control threshold is 66 per cent or more. The control threshold applying for an income year in relation to the entity and its New Zealand parent applies to any company of the New Zealand parent.

If the New Zealand parent elects a control threshold of more than 50 per cent, the company or companies treated as controlled by the New Zealand parent are those in which direct ownership interests of more than 50 per cent are held collectively by either or both:

(a) The New Zealand parent; and
(b) Any other company included in the New Zealand group.

If the New Zealand parent elects a control threshold of 66 per cent or more, the companies treated as controlled by the New Zealand parent are those in which direct ownership interests of 66 per cent or more are held collectively by any combination of:

(a) The New Zealand parent;
(b) A non-resident if:
   (i) They have ownership interests of 50 per cent or more in both the entity and the New Zealand parent; and
   (ii) A company included in the New Zealand group as a result of the control percentage would have been included in the group under s FE 28 through the application of the “over 50 per cent” control test had that control percentage been chosen; and
(c) Any other company or companies that are included in the New Zealand group under s FE 28.

(4) **Members of New Zealand group [ss FE 28, FE 29]**

A New Zealand group consists of:

(a) An excess debt entity;
(b) The entity’s New Zealand parent;
(c) A company that is:
   (i) Resident in New Zealand or carrying on a business in New Zealand through a fixed establishment in New Zealand;
   (ii) Under the control of the New Zealand parent;
   (iii) Not a member of the New Zealand banking group of a registered bank;
(d) A CTR holding company [defined in s YD 10].

If the excess debt entity is not a company under the control of a New Zealand parent (because the threshold is not met), the New Zealand group is made up of:

(a) The entity;
(b) Any company that is resident in New Zealand or carrying on a business in New Zealand through a fixed establishment in New Zealand, and that:
   (i) Would be under control of the entity if the entity was treated as the New Zealand parent;
   (ii) Would be under the control of another company (company A) if the entity is identified as under the control of company A, and company A is included in the New Zealand group and treated as the New Zealand parent;
Non-residents and Absentees

(iii) Would be under the control of company A if company A was treated as the New Zealand parent; or
(iv) Is not a member of the New Zealand banking group of a registered bank; and

(c) A CTR holding company [s FE 28].

A company is included in an excess debt entity’s New Zealand group if it is:

(a) On the measurement date [see 1000.95], a CTR holding company for a CTR company:
   (i) That is a member of the entity’s New Zealand group; and
   (ii) In which the holding company has direct ownership interests of more than 50 per cent; or

(b) A member of the New Zealand group of a company described in (a).

Two New Zealand groups (group 1 and group 2) are combined into a single New Zealand group when a natural person or trustee described in s FE 2(1)(g) has:

(a) A 50 per cent or more ownership interest in a member of a New Zealand group (group 1) having a member that is an excess debt outbound company; and

(b) A 50 per cent or more ownership interest in a member of a different New Zealand group (group 2) having a member that is an excess debt outbound company [s FE 29].

(5) Ownership interests in two or more New Zealand groups [s FE 30]

Special rules apply when:

(a) A New Zealand group is in existence;

(b) A particular excess debt entity (company A), that is not an excess debt outbound company, is outside the group;

(c) Company A is:
   (i) Resident in New Zealand, or
   (ii) Carrying on business in New Zealand through a fixed establishment in New Zealand; or
   (iii) Deriving income that has a source in New Zealand and for which relief from New Zealand tax under a double tax agreement is unavailable;

(d) A single non-resident has ownership interests of 50 per cent or more in both:
   (i) The New Zealand group; and
   (ii) Company A.

If the above conditions are met, the New Zealand parent of company A may choose to include the company in the New Zealand group if every company to be included in the enlarged group that is a New Zealand parent in the group makes the same election in relation to all other companies that are not in a New Zealand group with that parent.

However, company A cannot be part of the New Zealand group if:

(a) Another company (company B) that is outside the group has a direct ownership interest in company A;

(b) Company B is:
   (i) Resident in New Zealand, or
   (ii) Carrying on business in New Zealand through a fixed establishment in New Zealand; or
   (iii) Deriving income that has a source in New Zealand and for which relief from New Zealand tax under a double tax agreement is unavailable; and

(c) Either:
   (i) A New Zealand parent in the group, after the application of the previous rule, has control of company B under s FE 27(3) (relating to a control threshold of more than 50 per cent); or
   (ii) The single non-resident has ownership interest of 50 per cent or more in company B.
Non-residents and Absentees

1000.120 Rules for calculating debt percentage of worldwide group
[ss FE 12, FE 17, FE 18]

(1) Calculation of debt percentages [s FE 12]

If the debt percentage of a New Zealand group is more than the appropriate percentage specified in s FE 5(1) [see 1000.90], then the entity must calculate the debt percentage of their worldwide group. A debt percentage of a group is found by dividing the amount of the total group debt by the amount of total group assets for an income year or accounting year, as applicable.

If the excess debt entity is a company, the worldwide group is made up of all companies included as members of the worldwide group under:
(a) Sections FE 31 and FE 32, for an excess debt entity that is not an excess debt outbound company;
(b) Sections FE 31B to FE 32, for an excess debt outbound company.

(2) Consolidation of debts and assets [s FE 17]

For an excess debt entity that is a company, the debt percentage of a worldwide group is calculated under generally accepted accounting practice for the consolidation of companies for the purposes of eliminating intra-group balances by consolidating the debts and assets of the members of the entity’s worldwide group using:
(a) A financial standard used in the country in which the entity’s ultimate non-resident parent resides, if applicable; or
(b) Generally accepted accounting practice.

(3) Measurement of debts and assets of worldwide group [s FE 18]

The amount of total group debt and the amount of total group assets of the worldwide group of an excess debt entity must be calculated:
(a) Using a standard that is equivalent to generally accepted accounting practice for consistent and non-distorting financial reporting; and
(b) In accordance with the financial reporting standards of the country where the worldwide group’s consolidated financial accounts are prepared.

For this purpose, an excess debt entity must measure the amount of total group debt by applying s FE 15 [see 1000.110] as if it referred to a deduction that would be allowed if the entity, or another group member, were resident in New Zealand.

The amount of total group debt and the amount of total group assets of the worldwide group of an excess debt entity for an income year are measured using:
(a) The average amount at the end of each day of the income year;
(b) The average amount at the end of each three-month period in the income year; or
(c) The amount as at the worldwide group’s balance date that immediately precedes the income year.

If an excess debt entity is unable to calculate the debt percentage of their worldwide group for an income year, they may ask the CIR to estimate the percentage.

(4) Default percentages [s FE 18(5)]

A default percentage may be used as the debt percentage of the worldwide group of an excess debt entity if:
(a) The entity is unable to calculate the percentage, and does not ask the CIR to estimate the percentage;
(b) The CIR cannot reasonably estimate the debt percentage; or
(c) Every member of the entity’s worldwide group, except the entity, is resident in New Zealand.

The default percentages are as follows:
Non-residents and Absentees 1000.125

The excess debt entity is not a trustee and not an excess debt outbound company, or is a trustee who is not described in s FE 2(1)(g).
The excess debt entity is an excess debt outbound company, or is a trustee who is described in s FE 2(1)(g).

54.5454%

68.1818%

1000.125 Determining membership of worldwide group [ss FE 31, FE 32]

A worldwide group for an income year, for an excess debt entity that is a company but not an excess debt outbound company, is made up of:

(a) The entity;

(b) The entity’s New Zealand group for the income year;

(c) The entity’s worldwide GAAP group (see below);

(d) The entity’s ultimate non-resident parent (see below);

(e) The ultimate non-resident parent’s worldwide GAAP group (see below);

(f) Any non-resident that:

(i) Is not a company; and

(ii) Has ownership interests in the entity of 50 per cent or more; and

(g) Any person associated with the non-resident referred to in (f).

An excess debt entity’s worldwide GAAP group is made up of all non-residents who are required to be included with the entity in the consolidated financial statements under, as the entity chooses:

(a) Generally accepted accounting practice (GAAP); or

(b) An equivalent standard for consistent and non-distorting financial reporting that is:

(i) Set in the country where the ultimate non-resident parent of the parent resides; or

(ii) Applied when preparing the consolidated financial statements of the international group of which the entity is part.

An excess debt entity’s ultimate non-resident parent is the company that meets the following requirements:

(a) The company has ownership interests in the entity of 50 per cent or more;

(b) The company is not excluded from the entity’s worldwide group under s FE 32; and

(c) No other company has both:

(i) An ownership interest in the entity of 50 per cent or more; and

(ii) An ownership interest in the company referred to in (a) and (b).

For these purposes, ownership interests are determined under ss FE 38 to FE 41 [see 1000.60].

The ultimate non-resident parent’s worldwide GAAP group is made up of:

(a) The ultimate non-resident parent; and

(b) Any non-resident who is required to be included with the ultimate non-resident parent in consolidated group accounts under, as the non-resident parent chooses:

(i) The standard set in the country where the ultimate non-resident parent of the parent resides, if applicable; or

(ii) Generally accepted accounting practice (GAAP) [s FE 31].

A joint venture company may choose to exclude a joint venture (referred to as the “excluded joint venturer”) from its worldwide group for an income year if:
(a) A person (the excluded joint venturer) holds an ownership interest equal to 50 per cent in the joint venture company;
(b) One other person (the included joint venturer) in the worldwide group holds an ownership interest equal to 50 per cent in the joint venture company; and
(c) But for the application of s FE 32, the worldwide group includes every person who holds both an ownership interest equal to 50 per cent in the joint venture company and
   (i) Who has an ownership interest in the included joint venturer; or
   (ii) In whom the included joint venture company has an ownership interest.
Ownership interests are determined under ss FE 38 to FE 41 [s FE 32; see 1000.85].

1000.130 Adjustment when lending outside group [s FE 13]
The provisions set out below apply when a natural person, a member of a natural person’s New Zealand group, an excess debt entity, or a member of an entity’s New Zealand group or worldwide group, enters into a financial arrangement with another person (person A), and the financial arrangement:
(a) Provides funds to person A; and
(b) Would otherwise be included in the calculation of the debt percentage of the natural person, excess debt entity, New Zealand group or worldwide group.

In the calculation of the debt percentage of the New Zealand group and a worldwide group, the amount of total group debt and total group assets is reduced by the outstanding balance of the financial arrangement.

In the calculation of the debt percentage of a New Zealand group, the reduction applies if the consideration for the financial arrangement is at arm’s length, and person A is one of the following:
(a) A non-resident who is not carrying on a business through a fixed establishment in New Zealand and who:
   (i) Does not derive income that has a source in New Zealand;
   (ii) Derives income that has a source in New Zealand and, for all of that income, relief from New Zealand tax under a double tax agreement is available;
(b) A person who is not associated with the excess debt entity; or
(c) A person who is associated with the excess debt entity but is:
   (i) Not a member of the New Zealand group; and
   (ii) A person to whom subpart FE may apply under s FE 2 [see 1000.85].

In the calculation of the debt percentage of a worldwide group, the reduction applies if person A is not associated with the excess debt entity.

1000.135 New Zealand banking group [ss FE 33, FE 34, FE 35, FE 36, FE 37]
The membership of a New Zealand banking group is determined by:
(a) Identifying the ultimate parent of a registered bank;
(b) Determining whether a person may be excluded from a banking group; and
(c) Identifying a person and a fixed establishment as a member of a banking group [s FE 33].
The ultimate parent is the company identified as follows:
(a) An ultimate parent of a registered bank is a company that has an ownership interest in the registered bank of 50 per cent or more, and in which no other company that has an ownership interest in the registered bank of 50 per cent or more has an ownership interest; or
(b) The ultimate parent of a registered bank’s fixed establishment in New Zealand is the registered bank [s FE 34].

A reporting bank may determine the members of its New Zealand banking group by excluding from the group a person or fixed establishment as follows:
(a) A person or a fixed establishment whose main activity is providing life insurance;

(b) A person resident in New Zealand who has a voting interest of 100 per cent in a person excluded under (a), and whose main activity is not banking, financing, or leasing, or the ownership or control of an entity whose main activity is banking, financing, or leasing;

(c) A person resident in New Zealand who is required under generally accepted accounting practice to be included in consolidated group accounts with a person or fixed establishment excluded under subsection (a) or (b), and whose main activity is not banking, financing, or leasing, or the ownership or control of an entity whose main activity is banking, financing, or leasing;

(d) A fixed establishment of a non-resident if:
   (i) The non-resident has a voting interest of 100 per cent in a person excluded under (a);
   (ii) The fixed establishment has a main activity of financing the person excluded under (a); and
   (iii) The main activity of the fixed establishment is not banking, financing, or leasing, or the ownership or control of an entity whose main activity is banking, financing, or leasing.

The New Zealand banking group of a registered bank includes the following entities:

(a) The registered bank, if resident in New Zealand;

(b) The registered bank’s fixed establishment, if the registered bank is not resident in New Zealand;

(c) A resident person included in the banking group if:
   (i) The person is part of the same group of companies as the registered bank;
   (ii) The following conditions under generally accepted accounting practice (GAAP) are met:
      (A) For a resident registered bank with no non-resident ultimate parent, the consolidated group accounts include both the person and the registered bank, or would include both but for relevant materiality thresholds; or
      (B) For a non-resident registered bank with no non-resident ultimate parent, the consolidated group accounts would include the person and the registered bank if the registered bank were resident in New Zealand and the relevant materiality thresholds were met;

(d) A resident is included in the banking group if:
   (i) The person is part of the same group of companies as a non-resident ultimate parent; and
   (ii) Under generally accepted accounting practice (GAAP), the consolidated group accounts would include the person and the ultimate parent if the ultimate parent were resident in New Zealand and the relevant materiality thresholds were met;

(e) A fixed establishment in New Zealand of a non-resident is included in the banking group separately from the non-resident if:
   (i) The fixed establishment is part of the same group of companies as a non-resident registered bank with no non-resident ultimate parent; and
   (ii) Under generally accepted accounting practice, the consolidated group accounts would include the fixed establishment and the registered bank if the registered bank were resident in New Zealand and the relevant materiality thresholds were met;

(f) A fixed establishment in New Zealand of a non-resident is included in the banking group separately from the non-resident if:
   (i) The fixed establishment is part of the same group of companies as a non-resident ultimate parent; and
   (ii) Under generally accepted accounting practice, the consolidated group accounts would include the fixed establishment and the ultimate parent if the ultimate parent were resident in New Zealand and the relevant materiality thresholds were met.
The reporting bank for the day is the registered bank on a day when a New Zealand banking group has either:
(a) A single registered bank; or
(b) No registered bank but a fixed establishment of a single registered bank.
However, if a New Zealand banking group has either more than one registered bank or no registered bank but fixed establishments of more than one registered bank, the reporting bank is:
(a) The registered bank that first notifies the CIR of an election to be the reporting bank, if the CIR receives the notice within six months after the end of the income year in which the day occurs; or
(b) If no notice is received, the registered bank chosen by the CIR [s FE 37].

1000.140 Determinations [TAA, s 90A]
The CIR may determine the extent to which a financial arrangement provides funds to a party under the arrangement, for the purposes of the interest apportionment rules under subpart FE. Any determination made is binding for the purposes of subpart FE. Any taxpayer may apply to the CIR to exercise a discretion to make a determination. The CIR may at any time make a determination that varies, cancels, restricts or extends in scope an earlier determination, or issue a notice that cancels a determination.
A person who enters into a financial arrangement before the date of notification or publication of a determination or notice is not required to apply the determination to the financial arrangement, or treat the notice as affecting the financial arrangement, until the first tax year that commences after the date of notification or publication. All such determinations and notices issued by the CIR shall be published in the Gazette within 30 days of their making (ie when it is signed by the CIR).
If a person has applied a determination made under s 90A(1) of the TAA, an assessment made in respect of the person must be in accordance with the determination, except where:
(a) Since the date of the determination, the legislation on which the determination was based has been repealed or amended to the detriment of the person relying on the determination; or
(b) There was a material misrepresentation or omission in the application for the determination, whether intentional or not.
Chapter 1010

Non-resident Investors

1010.10 Non-resident investor regime [s LP 1]

The non-resident investor regime is also commonly referred to as the “foreign investor tax credit” (FITC) regime. When a company pays an imputed dividend to a non-resident shareholder, that company is allowed a credit against its own income tax liability if it also pays a supplementary dividend to the non-resident. The amount of the credit allowed is the amount of the supplementary dividend paid. The effect of paying a supplementary dividend is that the benefit of the imputation credits allocated to the dividend is passed on to the non-resident shareholder, and the company receives a credit against its own income tax liability to compensate it for paying the supplementary dividend. If the dividend is fully imputed and paid to a shareholder in a country with which New Zealand has a double tax agreement, the amount of the supplementary dividend is sufficient to cover the total NRWT liability on the dividend [see 1010.20 and 215 CONDUIT TAX RELIEF].

1010.20 Supplementary dividend [ss LP 2, OZ 12]

The supplementary dividend is an additional dividend paid to the same shareholder for an earlier dividend. It must be paid in the same income year as the first dividend. The FITC regime enables non-resident shareholders, who would otherwise not benefit from imputation credits attached to dividends, to receive the benefit of the tax paid by the company. In effect, the reduced company tax allows a supplementary dividend to be paid and the company pays that amount as NRWT for the benefit of the non-resident shareholder. This is shown as an extra (ie supplementary) dividend which follows the first dividend. Only non-resident shareholders get the supplementary dividend. Resident shareholders do not.

(1) FITC calculation for 2008-2009 and subsequent income years

The company income tax rate changes as from the 2008-2009 tax year which impacts the amount of the credit under the FITC regime. Consequently, the credit is calculated by multiplying the amount of the allocated credit by 7/10 instead of 67/187.

Note: In a transitional period from the start of the 2008-2009 income year until 31 March 2010 a company may choose to attach imputation credits to dividends up to the higher imputation ratio of 33/67 [see 670.45].

The new credit is $0.70 for every dollar of FITC-adjusted imputation credits that are attached to dividends paid to non-resident investors.

Prior to 2008-2009, the FITC was calculated by multiplying the imputation credit by 0.358275. This changes from 2008-2009, by multiplying the imputation credits the New Zealand company would usually distribute to its non-resident investors by 0.411806. The amounts given in the above example for a dividend paid in relation to 2008-2009 or subsequently would then read:
Example 1:
On 15 December, Company A Ltd pays a dividend of $700 to a shareholder resident in Australia. The dividend is fully imputed, so that an imputation credit of $300 is available. NRWT of $105 is deducted from this dividend so that the net dividend paid is $595. The NRWT is paid to Inland Revenue on or before the following 20 January. On the following 15 February, the company paid a supplementary dividend to the shareholder, calculated as follows:

$300 \times 0.411806 = $123.53

NRWT amounting to $18.53 is deducted from this supplementary dividend so that the net amount paid was $105. The NRWT is paid to Inland Revenue on or before the following 20 March. The total NRWT deducted from the two dividends is $123.53 which is the amount of the supplementary dividend, and is the same amount that the company can claim against its income tax liability in its income tax return.

In a transitional period from the start of the 2008-2009 income year until 31 March 2010 a company may choose to attach imputation credits to dividends up to the higher imputation ratio of 33/67 [see 670.45]. Generally, during the transitional period, the current formula (ie the pre 2008-2009 formula) should be used to the extent the higher ratio is legitimately applied [s OZ 12].

(2) FITC calculation for 2007-2008 and earlier income years
The supplementary dividend is calculated according to the following formula:

attached imputation credit × (67 / 187)

Where “attached imputation credit” is the amount (if any) attached to the dividend.

However, the combined total of the imputation credit attached to the dividend and the foreign investor tax credit together must not exceed the maximum imputation ratio (33/67) as specified in s OA 18. Therefore, the supplementary dividend can be more simply calculated by multiplying the actual amount of imputation credit allocated to the dividend by the figure of 0.358275 [see TIB vol 7:11 (March 1996) at 24-25].

Example 2:
On 15 December, Company A paid a dividend of $670 to a shareholder resident in Australia. The dividend is fully imputed, so that an imputation credit of $330 is available. NRWT of $100.50 was deducted from this dividend so that the net dividend paid was $569.50. The NRWT is paid to Inland Revenue on or before the following 20 January. On the following 15 February, the company paid a supplementary dividend to the shareholder, calculated as follows:

$330 \times 0.358275 = $118.23

NRWT amounting to $17.73 was deducted from this supplementary dividend so that the net amount paid was $100.50. The NRWT is paid to Inland Revenue on or before the following 20 March. The total NRWT deducted from the two dividends is $118.23 which is the amount of the supplementary dividend, and is the same amount that the company can claim against its income tax liability in its income tax return.

NRWT is deducted at the rate of 15 per cent because the dividend is fully imputed. Note that the supplementary dividend is equal to the NRWT liability. Company A will reduce its own income tax liability for the year by the amount of the supplementary dividend paid.

Example 2 illustrates the overall effect of the foreign investor tax credit on the tax paid by a company and the tax paid by a non-resident shareholder, for a fully imputed dividend.

### 1010.30 Tax credits to companies for dividends paid to non-resident investors [ss LP 2, LP 3]
If a company resident in New Zealand has paid a dividend and a single supplementary dividend to a non-resident in any income year, the company is entitled to a credit against its income tax liability equal to the amount of the supplementary dividend [see 1010.20]. This applies to dividends paid on or after 12 December 1995. The FITC is equal to and calculated in exactly the same way as the supplementary dividend. The tax credit is allowed in the income year in which the supplementary dividend is paid (which must be in the same year as the main dividend was paid).

A s LP 7 holding company [see 1010.50] may elect to reduce the amount of credit applied against its income tax liability to an amount not less than the amount of supplementary dividends derived in that income year. If a part of the tax credit cannot be credited against the income tax liability for the year in which the supplementary dividend was paid, or if the amount credited is reduced by a s LP 7 holding company as above,
the company can elect that the excess credit be set off against any other income tax liability of the company, or an income tax liability of another company [see 1010.31].

If there are still excess credits available, the company can carry forward the excess credit to a later income year [see 1010.32].

1010.31 Offset of excess credit between group companies [s LP 3]

If the whole of the FITC cannot be set off against the company’s income tax liability for the year in which the supplementary dividend was paid, the company can elect, by notice in writing to the CIR with the company’s income tax return for the year that the excess FITC be set off against:

(a) The income tax liability of another company in the same wholly-owned group for the income year in which the supplementary dividend is paid; or

(b) The company’s income tax liability for any of the four preceding income years (not being a year earlier than the 1993-1994 income year); or

(c) The income tax liability of another company in the same wholly-owned group for any of the four preceding income years (not being a year earlier than the 1993-1994 income year).

For items (b) and (c) above, if one of the group companies exists for only part of an income year, the FITC can still be offset provided both companies were in the same wholly-owned group at all times during the income year in which both companies exist.

1010.32 Carrying forward excess credits [ss LP 3, LP 4]

If an excess credit is unable to be utilised as set out in 1010.31, the company may carry the excess credit forward to the succeeding or a later income year. Excess credits can be carried forward only if there is a group of persons:

(a) Whose total minimum voting interests in the company from the beginning of the original income year to the end of the year of carry forward (the “continuity period”) is equal to or greater than 49 per cent; and

(b) Where at any time during the continuity period a market value circumstance exists, whose total minimum market value interests in the company in the continuity period is equal to or greater than 49 per cent.

The minimum voting interest or minimum market value interest of any person in the company in the continuity period is the lowest voting interest or market value interest in the company that that person has during the continuity period.

An excess credit carried forward in this way must first be offset against the income tax liability of the company for the year of carry forward, after allowing for any credit under subpart LJ for foreign taxes paid.

If there are still remaining credits at this stage, the company can elect that the excess credit be set off against the income tax liability for the year of carry forward of any other company that is in the same wholly-owned group of companies for both the year of carry forward and the original income year. The election is made by giving notice in writing to the CIR with the company’s income tax return for the year of carry forward.

Any credits offset in any of the ways explained in 1010.31 or 1010.32 cease to be available for carry forward or offset in any other way.

1010.40 Benchmark dividend [s LP 5]

The benchmark dividend provisions governing the attachment of imputation credits and FDP credits to dividends, and the anti-avoidance provisions of ss GB 35 and GB 36, apply as if the company had never paid a supplementary dividend.

In applying the maximum imputation credit ratio and benchmark dividend provisions governing the attachment of imputation credits to dividends, and the anti-avoidance provisions, the imputation credit attached to the dividend is increased by the amount of the FITC. The effect of these provisions is to allow...
the supplementary dividend to be paid with no imputation credits or with different levels of imputation credits attached without breaching the anti-streaming rules.

1010.45 Payment of supplementary dividend not to contravene company or trust law [s LP 6]

The payment of a supplementary dividend by a company to all its non-resident shareholders is not treated as contravening:

(a) Any provision of the Companies Act 1955, or s 53 of the Companies Act 1993;
(b) Any provision of the company’s articles of association or constitution (other than a provision which expressly refers to s LP 6); or
(c) Any rule of law,

that would otherwise prohibit the company from paying different amounts in relation to shares of that class. If a trustee derives a dividend and is required under the terms of the trust to distribute it as beneficiary income to a beneficiary, the distribution by the trustee of the supplementary dividend to the same beneficiary is not to be treated as contravening any term of the trust.

1010.50 Special rules for holding companies [ss LP 7, LP 8, LP 9, LP 10, DX 3, YA 1]

Special rules apply to holding companies where a New Zealand holding company has an insufficient tax liability to utilise the FITC credit arising from paying its own supplementary dividend to its own non-resident shareholders. This could occur when a foreign investor holds less than 100 per cent interest in a New Zealand subsidiary through a New Zealand holding company and the holding company derives income only in the form of fully imputed dividends. Therefore, without any remedy, the FITC cannot be applied by the holding company when it pays a dividend to the non-resident. As the subsidiary is not wholly owned by the holding company, the FITC cannot be allocated to the subsidiary.

The remedy is that the holding company which is not a member of a consolidated group can become classified as a supplementary dividend holding company. This enables the holding company to be treated for the purposes of dividends and supplementary dividends as if it were a non-resident. Therefore, the New Zealand resident subsidiary company of a New Zealand holding company can pay a dividend to the holding company and consequently obtain the benefit of the FITC. The supplementary dividend holding company, in turn, now has a tax liability against which it can claim a FITC when it pays a supplementary dividend to a non-resident. A “supplementary dividend holding company” is defined as a company resident in New Zealand which has given a notice (which it has not revoked) to the subsidiary company paying the dividend within the previous seven years, before the dividend is paid. The supplementary dividend holding company shall have a purpose in the notice of directly or indirectly enabling the payment of a supplementary dividend to its non-resident shareholder. At least one voting interest in the supplementary dividend holding company shall be held by non-residents, and the supplementary dividend holding company shall derive dividends that are not excluded or exempt income. Such dividends shall be taxable.

The consequences are that the dividend and the supplementary dividend derived by the supplementary dividend holding company from the subsidiary company will be treated in the manner as if the supplementary dividend holding company were not resident in New Zealand. The dividend exemption applicable to wholly owned group companies under s CW 10 that would otherwise apply to a holding company is limited, so that the supplementary dividend holding company will derive assessable income calculated using the formula:

\[
\text{Assessable income} = (\text{attached credit} + \text{dividend}) \times \left(\frac{1 - \text{tax rate}}{\text{tax rate}}\right) + \text{attached credit}
\]

Where:

“Attached credit” is the amount of imputation credit attached to the dividend;

“Dividend” is the amount of the supplementary dividend; and
“Tax rate” is the basic rate of income tax for companies, expressed as a percentage, for the income year (currently 30 per cent).

The maximum amount of net losses (if any) that the supplementary dividend holding company may offset against its net income for the year is the amount calculated under the formula:

\[
\text{company’s income} - \frac{(\text{company’s total credits} + \text{supplementary amount})}{\text{tax rate}}
\]

Where:
“Company’s income” is the income for the income year corresponding with the tax year;
“Company’s total credits” are the supplementary dividend holding company’s total amount of specified tax credits;
“Supplementary amount” is the supplementary dividends derived;
“Tax rate” is the basic rate of income tax for companies, expressed as a percentage, for the income year (currently 30 per cent).

Special timing issues for when the dividend is derived may be arranged if the supplementary dividend holding company and the company paying the dividend are associated persons (as defined in subpart YB but as if each reference to “50 per cent or more” instead reads “more than 50 per cent”) and if the supplementary dividend holding company has an earlier income tax balance date than the company paying the dividend. The tax credit will apply as if the income year in which the company pays the dividend were the later income year of the supplementary dividend holding company.
Chapter 1020
Non-resident Withholding Tax

1020.10  Imposition of non-resident withholding tax [s RF 1]

Any person who derives “non-resident passive income” (NRPI) is liable to pay non-resident withholding tax (NRWT) on that income at the rates set out in 1020.20. NRPI consists of dividends, interest and royalties derived from New Zealand by non-residents [see 1020.15 for definition]. It is the person who pays the NRPI that is liable to deduct NRWT from that income and pay it to Inland Revenue.

For most forms of NRPI, NRWT is the final tax on that income, and the recipient has no further income tax obligations in relation to that income [see 1020.70]. However, in the case of interest paid to associated persons, commercial and industrial royalties, and know-how payments, NRWT is only a minimum tax. In this case, the recipient may have further tax to pay [see 1020.75].

1020.15  Definitions [ss RF 2, CC 9]

“Non-resident passive income” (NRPI) means income derived from New Zealand by a non-resident that consists of:

(a) Dividends (excluding investment society dividends);

(b) Royalties; or
Non-resident Withholding Tax

(c) Investment society dividends or interest when the non-resident is not engaged in business in New Zealand through a fixed establishment in New Zealand.

“Dividend” is defined in ss CD 3 to CD 21 [see 270.20] and, for NRWT purposes, includes:

(a) A “foreign dividend payment” (FDP) credit (but not an imputation credit) attached to the dividend; or

(b) An amount paid to a company shareholder, where that company is related to the company paying the amount, if the amount is excluded from dividend treatment generally only as a result of ss CD 26 and CD 44.

“Royalty” is defined in s CC 9 [see 1290.10].

“Interest” means a payment made to a person by another person for money lent, whether or not the payment is periodical and however it is described or computed. Interest does not include a repayment of the money lent. Interest includes:

(a) A redemption payment for a commercial bill; or

(b) Interest paid by the CIR under Part 7 of the TAA. NRWT deductions made by the CIR from that interest are deemed to have been paid to the CIR on the date the deduction is made [s RF 2, see TES 21 (November 2004) 303].

NRWT is not required to be deducted from interest payable under the approved issuer levy scheme [see 1020.80]. The following are not NRPI:

(a) Exempt income;

(b) Income derived under s CV 17 by non-residents from renting films [see 460.60] or CX 56 in relation to portfolio investor allocated income and distributions of income by portfolio investor entities;

(c) Income calculated under the financial arrangements rules.

1020.20 Non-resident withholding tax rates [ss RF 7, RF 8, RE 11B, RF 12]

The rates of “non-resident withholding tax” (NRWT) applicable to various forms of “non-resident passive income” (NRPI) are as follows:

<table>
<thead>
<tr>
<th>Type of NRPI</th>
<th>Rate of NRWT</th>
</tr>
</thead>

</tbody>
</table>

Staples Tax Guide 2012 1179
Non-resident Withholding Tax

**Type of NRPI** | **Rate of NRWT**
--- | ---
(f) - the non-resident has a less than 10% voting interest in the company and, and a DTA would otherwise reduce the NRWT rate to less than 15% | 0%
(g) NRPI derived by a life insurer from a New Zealand resident company deemed to exist as a result of the life insurer making an election under EY 49 [see 800.20]. | 0%
(h) All other NRPI, including: | 15%
- Interest other than (b) and (c);
- Royalties;
- Investment society dividends;
- Conduit tax relief additional dividends;
- Dividends to the extent fully imputed;
- Dividends to the extent fully FDP credited;
- Dividends to the extent fully conduit tax relief credited.

The rate at which NRWT is deducted from a payment of NRPI is lower if the person deriving the income is a resident of a country with which New Zealand has a double tax agreement [see 1020.25].

**1020.25 Non-resident withholding tax rates for DTA countries**

The following table summarises the rates of NRWT applicable to residents of double tax agreement countries, for each type of non-resident passive income (NRPI). It is important that the relevant double tax agreement is consulted before applying any of these rates, because the conditions vary from agreement to agreement.

**Notes:**

1. The rates listed for Australia are the general rates. The latest DTA with Australia now provides the following rates if the conditions stipulated apply.
   - **Dividends**
     - Dividends shall not be taxed when the beneficial owner of the dividend is a company that has owned, directly or indirectly (through one or more residents of either Australia or New Zealand) shares representing 80 per cent or more of the voting power of the company paying the dividend for a 12 month period. The company that is the beneficial owner of the shares must be either a listed Australian or New Zealand resident company or a combination. There is also a facility in para 3 of art 10 for the CIR to issue a determination that the first sentence in para 9 of art 10 does not apply.
     - 5 per cent when the beneficial owner of the dividends is a company which holds at least 10 per cent of the voting power of the paying company.
   - **Interest**
     - Interest may not be taxed when paid to the central or local government or a political subdivision. This includes a government investment fund and the central bank.
     - The interest may not be taxed when derived by an unrelated financial institution dealing at arm’s length with the payer. A financial institution is defined as a bank or other enterprise substantially deriving profits by debt finance or by taking deposits at interest and using those funds in carrying on a business of providing finance. Note that, in this context, the interest will be subject to tax at 10 per cent if approved issuer levy is not paid or when the interest is paid as part of an arrangement of back-to-back loans.
     - Royalties are taxed at 5 per cent.
2. The rates listed for the United States are the general rates. The latest DTA with the United States now provides the following rates if the conditions stipulated apply.
Dividends

- 5 per cent when the beneficial owner of the dividends is a company which holds at least 10 per cent of the voting power of the paying company.
- Dividends shall not be taxed when the beneficial owner of the dividend is a company that has owned, directly or indirectly (through one or more residents of either the United States or New Zealand) shares representing 80 per cent or more of the voting power of the company paying the dividend for a 12 month period.
- The company that is the beneficial owner of the shares must be:
  - Either a listed Australian or New Zealand resident company or a combination. There is also a facility in para 3 of art 10 for the CIR to issue a determination that the first sentence in para 9 of art 10 does not apply.
  - At least 50 per cent of the aggregate voting and ownership of the shares is owned directly or indirectly by five or fewer companies resident in either country.
  - A non-individual if, on at least half of the days in the year, is entitled to the benefits of the United States DTA, owns at least 50 per cent of the aggregate voting power and value of the payer, provided that in the case of indirect ownership, each intermediate owner is a resident of the United States. Further, less than 50 per cent of the gross income of the paying company must not be paid to non-resident owners resident in a country other than the USA - excluding arm’s-length payments.

Interest

- Interest may not be taxed when paid to the central government or an instrumentality of that government which is not subject to tax and, interest may not be taxed if derived by a resident of the United States with respect to debt obligations guaranteed or secured by the government or an instrumentality, which is not subject to tax.
- The interest may not be taxed when derived by a bank or enterprise substantially deriving its income from lending or finance on transactions with unrelated parties.
- Note that, as with Australia, New Zealand may impose tax at 10 per cent if approved issuer levy is not paid or when the interest is paid as part of an arrangement of back-to-back loans.
- Royalties are taxed at 5 per cent.

(3) 15 per cent for companies; 25 per cent for other taxpayers.

(4) Excluding the Isle of Man and the Channel Islands.

Min  This means the rate shown is a minimum rate of tax. The net income (after deducting expenses) must be included in the non-resident’s tax return, along with all other income from New Zealand. Credit is allowed for the NRWT deducted.

Max  The tax on the income cannot exceed the rate shown.

1020.30  Who must deduct non-resident withholding tax  [ss RF 3, RF 4]

Persons making payments of non-resident passive income (NRPI) must deduct NRWT from the gross amount of income, before paying the balance to the recipient. To “pay” [s YA 1] includes:

(a) Distributing the amount to a person;
(b) Crediting it to a person; or
(c) Dealing with it in the person’s interest or on behalf of a person, or in some other way.

Where a New Zealand agent receives a payment of NRPI on behalf of a non-resident, and the required NRWT has not been deducted or only partly deducted, the New Zealand agent must deduct the shortfall. Where NRPI has had NRWT deducted before payment to the New Zealand agent, the payer must give notice to the agent of the amount deducted. This avoids the possibility of a double deduction. Notice must be given by one of the methods specified in s 14B of the TAA.
Non-resident Withholding Tax

Inland Revenue has the discretion to meet special circumstances by relieving any person from the obligation to deduct NRWT, or varying the amount of the NRWT to be deducted.

1020.35 Exemption from non-resident withholding tax

Some non-resident individuals or organisations are entitled to be paid non-resident passive income (NRPI) in full without having NRWT deducted. Unlike the exemption for resident withholding tax (RWT), certificates of exemption are not issued. Inland Revenue provide the payer with a letter granting the exemption.

The Non-resident Centre (based in Dunedin) processes requests from overseas organisations to exempt their NRPI income (derived from New Zealand sources) from tax. The main reason these organisations request an exemption is that, because they have tax-exempt status in their countries of residence, they believe it should extend to other countries from which they derive income.

New Zealand tax laws do not automatically exempt organisations or their income from New Zealand tax simply because an exemption exists in their own countries of residence. However, overseas organisations can be considered for exemption from NRWT if any of these conditions are met:

(a) Income is specifically exempted from income tax, including NRWT, under New Zealand tax law;
(b) Income is exempted from income tax by any other New Zealand legislation; or
(c) Double tax agreements expressly provide for an exemption from tax on certain types of income.

See Inland Revenue Booklet, Non-Resident Withholding Tax – Payer’s Guide (IR291)

1020.40 Calculation of NRWT on cash dividends

Non-resident withholding tax (NRWT) is deducted from cash dividends at the rate specified in 1020.20 and 1020.25.

If a dividend is not fully imputed, or not fully FDP credited, the extent to which it is fully imputed or credited must be determined.

(1) Extent to which dividend fully imputed

The extent to which a dividend is fully foreign dividend payment credited is calculated using the following formula:

\[
\text{Extent to fully imputed} = \left( \text{Imputation credit amount} + \text{Supplementary dividend amount} \right) \times \left( 1 - \frac{\text{tax rate}}{\text{tax rate}} \right)
\]

Where:

“Imputation credit” amount is the amount of imputation credits attached to the dividend;

“Supplementary dividend” amount is the amount of supplementary dividend payable as a result of subpart LP for the dividend; and

“Tax rate” is the basic rate of income tax for companies for the tax year that is concurrent with the tax year in which the dividends are paid.

Example:

A cash dividend of $100 is paid to a non-resident. Imputation credits of $20 are attached to the dividend. Assume that there is no applicable double tax agreement and no supplementary dividend has been paid. The extent to which the dividend is fully imputed is calculated as follows:

\[
\left( \frac{20 + 0}{0.72} \right) \times \frac{0.28}{0.28} = 51.43
\]

The dividend is not fully imputed to the extent of $48.57 ($100.00 – $51.43). The company paying this dividend must deduct NRWT of $22.28, calculated as follows:

\[
(51.43 \times 15\%) + (48.57 \times 30\%) = 22.28
\]

(2) Extent to which dividend fully FDP credited

The extent to which a dividend is fully FDP imputed is calculated using the following formula:
FDP credit amount / tax rate

Where:
“FDP credit” amount is the amount of FDP credits attached to the dividend; and
“Tax rate” is the basic rate of income tax for companies for the tax year that is concurrent with the tax year in which the dividend is paid.

Example:
A cash dividend of $100 is paid to a non-resident. Imputation credits of $20 and FDP credits of $10 are attached to the dividend. Assume that there is no applicable double tax agreement and no supplementary dividend has been paid. The extent to which the dividend is fully imputed is $51.43 as calculated in the previous example. The extent to which the dividend is fully FDP credited is calculated as follows:

\[
10 / 0.28 = $35.71
\]

The gross amount of the dividend is $110 (the cash amount of $100 plus the FDP credits of $10). The company paying this dividend must deduct NRWT of $ calculated as follows:

\[
[(51.43 + 35.71) \times 15\%] + [(110.00 − 51.43 − 35.71) \times 30\%]
\]

= 13.07 + 6.86 = $19.93

NRWT is imposed on the gross amount of a dividend. The “gross” amount means without any deduction whatsoever from the amount.

In Lambe v Commissioner of Inland Revenue (1980) 4 NZTC 61,599, (1980) 4 TRNZ 65 (HC), the taxpayer unsuccessfully claimed that legal expenses she had incurred to establish her right to receive the interest payments should be deducted in arriving at the amount on which the NRWT was payable. See also Fleming v Commissioner of Inland Revenue (1983) 6 NZTC 61,517, (1983) 6 TRNZ 6 (HC).

1020.42 Calculation of NRWT on non-cash dividends [s RF 10]

A non-cash dividend means a dividend to the extent that it does not consist of an unconditional payment in money or an unconditional credit in money to the balance of a shareholder’s current (or other form of) account with the company [see 270.50]. Examples of non-cash dividends provided to non-resident shareholders include:

(a) A taxable bonus issue;
(b) A dividend paid in kind (property distributed to a shareholder for nil consideration);
(c) Property sold or otherwise disposed of to the shareholders at less than market value; or
(d) Distributions or transactions by a close company to a shareholder or an associated person of a shareholder.

(1) Taxable bonus issues

The amount of NRWT to be deducted from a non-cash dividend (to the extent that it is not fully imputed) is calculated using one of the following formulae:

\[
(\text{rate } \text{A} \times \text{dividend payment}) + (\text{rate } \text{B} \times (\text{amount paid} + \text{credit amount})).
\]

Where
“Rate A” is 30 per cent, or the rate specified in any applicable double tax agreement;
“Dividend payment” is the amount of the dividends calculated under s CD 7(2) or CD 8(3) (which relate to bonus issues), either other than dividends referred to in the item “bonus issue” or to the extent to which it is neither fully imputed or fully credited for [see 1020.40] and before any deduction of NRWT;
“Rate B” is 15 per cent (ie the rate set out in s RF 7);
“Amount paid” is the amount of the dividends calculated under ss CD 7(2) or CD 8(3) together with the amount of any FDP credit attached to the dividends to the extent to which it is fully FDP credited and before any deduction of NRWT;
“Credit amount” is the amount of the dividends, to the extent to which it is fully credited for conduit tax relief plus the conduit tax relief additional dividends paid for the taxable bonus issue.
(2) **Non-cash dividends other than taxable bonus issues**

\[
\text{NRWT = \left( \frac{\text{rate } A}{1 - \text{rate } A} \right) \times \text{dividend payment} + (\text{rate } B \times \text{amount paid}).}
\]

Where:

“Rate A” is:

(a) for a CTR [see 215.10] 15 per cent, (ie the rate set out in s RF 7) additional dividends or dividends to the extent they are fully conduit tax relief credited; or

(b) in any other case, zero per cent, or the rate specified in any applicable double tax agreement;

“Dividend payment” is the amount of the dividend paid, to the extent to which the dividend is neither fully imputed or fully FDP credited, and disregarding any deduction of NRWT;

“Rate B” is 15 per cent, (ie the rate set out in s RF 7); and

“Amount paid” is the amount of the dividend paid, to the extent it is fully FDP credited, and disregarding any deduction of NRWT.

In determining the extent to which a dividend is fully conduit tax relief credited, an amount that must be deducted from a non-cash dividend to the extent fully conduit tax relief credited is treated as being part of the non-cash dividend.

Although there is a requirement under s RF 3 to deduct NRWT from non-cash dividends, in reality it cannot be deducted because there is no payment in money from which to deduct it. Instead, the company providing the dividend is liable to make a payment to the CIR of an amount equal to the NRWT that would otherwise have to be deducted.

1020.45 **Head office charges**

(1) **New Zealand business is branch of overseas firm**

When a New Zealand business is a branch of an overseas firm NRWT is not payable except on the proportion of any interest payable by the overseas company to non-resident lenders and included in the head office expenses charged to the New Zealand branch (see separate heading) because the loan is then being used for the business carried on by the New Zealand branch. Apart from any question of NRWT Inland Revenue must be satisfied that the claim against the New Zealand profits is reasonable. A claim for a percentage of sales at a fixed rate each year is generally unacceptable unless the firm can show that a factual result is produced. A more satisfactory way to work out head office expenses for New Zealand tax purposes is to:

(a) Adjust head office expenses of the firm’s world activities to include only those items deductible under New Zealand tax law; and

(b) Claim the adjusted expenses against the New Zealand income in the proportion that New Zealand sales bear to total world sales.

The claim for head office expenses should be supported if required at any time by a statement from the firm’s auditors showing:

(a) That the expenses are normal revenue expenditure;

(b) That items of a capital nature are excluded; and

(c) The proportion of New Zealand sales to world sales.

(2) **New Zealand business is a subsidiary of overseas company**

When the New Zealand business is a subsidiary of an overseas parent company NRWT could be payable because there is a payment between two separate firms. Questions to be considered are:

(a) Is the claim by the subsidiary in arriving at its own profits excessive? The rules set out previously should be followed; and

(b) Is there an income content in the payment to the parent company? If so the total payment could be liable to NRWT. Inland Revenue has stated this liability can be avoided by limiting the charges against New Zealand profits to a mere reimbursement of the New Zealand share of the head office
Non-resident Withholding Tax

revenue charges. The parent company can do this by basing its claim for head office expenses (adjusted to exclude items not deductible under New Zealand tax law) on the proportion of New Zealand sales to total world sales rather than on a flat percentage of New Zealand sales [see PIB 29 (February 1966)].

(3) Interest content in head office charges

Where the non-resident company charges its New Zealand branch with a proportion of the interest it pays for loan money to overseas lenders, Inland Revenue has ruled that the proportion of interest so charged to the New Zealand branch has a source in New Zealand (under s YD 4), and so the branch must deduct and account for NRWT based upon the proportion of interest so included in the head office charges. It is considered that the branch is part of the entity and therefore assumed to be using that part of the loan capital for which it is charged a proportion of the interest. If, in fact, the branch is not using a portion of the loan capital (and is thus wrongly charged by the head office), the interest will be disallowed in calculating the branch profit for New Zealand income tax purposes. In that case the interest will not be liable to the NRWT.

Interest included in the head office charges of a New Zealand subsidiary of a non-resident parent company is in a different category. The New Zealand subsidiary is a separate entity, and does not participate in the parent company’s loan capital, and is merely paying for a service it receives, and consequently the interest content is not liable to NRWT.

1020.47 Shares sold to associated company [s RF 11]

Where a non-resident, who controls (or is one of the persons deemed to control) a New Zealand company, sells his or her shares in the company to another New Zealand company which is also controlled by the non-resident, so long as any part of the purchase price is unpaid (whether or not secured by mortgage) any dividend paid by the former company in favour of the latter company is deemed to be derived by that non-resident shareholder to the extent that the price is unpaid, and is subject to the “non-resident withholding tax” (NRWT).

1020.50 Non-resident software suppliers

The income tax treatment of payments made to non-resident software suppliers is explained in an Inland Revenue interpretation guideline [see TIB vol 15:11 (November 2003) at 8-24]. Only the NRWT aspects of the guideline are summarised here.

NRWT applies only to payments that constitute royalties derived from New Zealand by non-residents [see 1290.10 for definition of “royalty”].

The Inland Revenue interpretation guideline addresses the following software transactions:

(a) Sale of a copyright right in a computer program: The sale of a copyright right in a computer program results in the alienation of the ownership of the rights. The consideration is not for “the use of the rights” and therefore not a royalty. No NRWT liability arises in this situation.

(b) Licence of a copyright right in a computer program: The granting of a licence to use software copyright results in only a partial transfer of rights. The consideration for the licence is for the use of, or the right to use, the copyright, and is therefore a royalty. If the payment is deemed (under s YD 4) to be derived from New Zealand, it will be subject to NRWT.

(c) Sale of a copy of a computer program: The sale of a copyrighted program (eg the sale of a prepackaged copy of a program) generally does not include a supply of copyright. The purchaser has no right to use the copyright, only the right to use the copy of the program purchased. The consideration provided is therefore not a royalty and NRWT does not apply.

(d) Lease of a copy of a computer program: The lease of a copy of a computer program is a chattel lease, and the payments made under the lease are rental payments. As with the sale of a copy of a computer program, there is no transfer of the right to use the copyright, only the right to use the copy for the term of the lease. The income tax treatment will depend on the terms of the agreement. For example, non-resident contractors withholding tax may apply if the payment is made to a non-resident contractor [see 1320.20]. If the lease agreement falls within the definition of a “finance lease” [see 900.15], the interest component of the lease payments will be subject to NRWT.
Non-resident Withholding Tax

1020.55 Failure to deduct non-resident withholding tax [ss RF 6, RA 8, RA 10]

If the person who pays “non-resident passive income” (NRPI) fails to deduct NRWT, or does not deduct enough NRWT, the CIR will normally require the payer to either deduct the shortfall from a subsequent payment to the same payee, or pay the shortfall and then recover it from the payee [see 1020.56]. If the shortfall is identified in the annual reconciliation, payment of the shortfall must be made by the due dates specified in 1020.64. However, the CIR is also able to recover the shortfall from the payee directly, if necessary.

(1) Recovery from person deriving NRPI

Where, for any reason, a person paying NRPI fails to deduct NRWT, or fails to deduct it in full, the recipient of the payment becomes liable to pay the deduction (or the shortfall in the deduction) that should have been made [s RA 8].

(2) Recovery from person paying NRPI

Where a person fails to make a deduction of NRWT from a payment of NRPI or a non-cash dividend, the amount in default constitutes a debt payable to the CIR, and is due and payable under s RA 10 as if the deduction had been made [see 1020.60]. The right of the CIR to recover the amount in default from the payer of the NRPI is in addition to the right to recover it from the payee. The CIR may recover the amount from both persons concurrently, from one of those persons alone, or partly from one and partly from the other. Any amount recovered by the CIR from the payer of NRPI may be recovered by the payer from the payee.

1020.56 Variation in NRWT deductions to correct errors [ss RA 11, RA 12]

A person who has failed to deduct “non-resident withholding tax” (NRWT) from a payment of non-resident passive income (NRPI), or deducts too little, may (unless the shortfall has already been deducted by another person) either:

(a) Deduct the deficiency from any subsequent payment of NRPI to the same person in the same year; or

(b) Recover the deficiency from the non-resident in some other way.

A person who deducts too much NRWT from a payment of NRPI may either reduce any subsequent payments of NRWT to the CIR by that excess or apply for a refund [see 1020.57], if:

(a) The excess has been paid to the CIR;

(b) The excess is due to an error on the part of the person making the deduction; and

(c) The person has subsequently refunded the excess to the non-resident.

However, if the payer deducts too much NRWT from a payment of NRPI as a result of an act or omission on the part of the recipient, the payer must pay the full amount to the CIR and is not liable to refund the excess to the recipient of the NRPI.

1020.57 NRWT over-deducted [s RA 19]

When a person has deducted too much NRWT and paid it to the CIR, the CIR must refund the excess. If the person who made the excess deduction has since paid back the excess to the non-resident (and not offset it
against subsequent payments of NRWT to the CIR), the excess will be refunded to that person. Otherwise the excess is refunded to the non-resident.

The CIR may apply the excess in payment of any outstanding tax due by the person entitled to the refund. If the CIR refunds NRWT in error, the CIR may recover the excess as if it were income tax payable. The excess refund must be repaid by the fifth of the month following the month in which the person is notified of the error. If the excess refund occurred because of wilful default or neglect by the taxpayer, penalties and interest will be charged from the day after the refund was originally paid by the CIR.

**1020.60 Payment of non-resident withholding tax** [ss RF 13, RA 15]

Deductions of NRWT must be paid to Inland Revenue on a monthly basis not later than the 20th day of the month following the month of deduction. However, a person who estimates that their aggregate NRWT deductions for a tax year will be less than $500 may pay the deductions on a six monthly basis as follows:

(a) On 20 October for all deductions made during the period 1 April to 30 September (both dates inclusive) in the tax year; and

(b) On 20 April for all deductions made during the period 1 October to 31 March (both dates inclusive) in the tax year.

Where the $500 aggregate is reached at any time during a tax year, all subsequent payments of NRWT to Inland Revenue must be made on a monthly basis.

Where a person ceases to carry on a taxable activity for which NRWT deductions have been required, or ceases to carry on any such taxable activity in New Zealand, all outstanding NRWT deductions must be paid to Inland Revenue by the 20th day of the month following the month in which such activity ceased. The CIR may extend the time for payment of NRWT.

**1020.62 Penalties**

Late payment penalty [TAA, s 139B] and interest [TAA, Part 7] apply to any failure to deduct or pay NRWT to the CIR [see 1110.40, 1110.290 and 1110.295]. Late payment penalties and interest are not charged on outstanding amounts of $100 or less. Shortfall penalties may also apply to any person required to deduct and account for NRWT [see 1110.85 to 1110.185].

**1020.64 Annual reconciliation** [s RA 6; TAA, s 49]

Every person who is required to deduct and pay NRWT must prepare and furnish to the CIR, not later than 31 May in the following year, a NRWT deduction certificate for all such deductions or payments made in relation to each recipient during the year. An annual reconciliation statement for all such deductions or payments made during the year is also required.

The NRWT deduction certificate must include the following information:

(a) The full name, address, and tax file number of the person making the deduction or payment;

(b) The full name, last known address, and tax file number of the recipient of the payment (except where, after making reasonable inquiries, the payer is unable to obtain such details);

(c) The country code of the recipient;

(d) The year to which the certificate relates;

(e) The type of non-resident passive income to which the deduction certificate relates;

(f) The amount of the NRWT deduction and the amount of the non-resident passive income to which the deduction relates;

(g) The amount of NRWT paid;

(h) The payer’s signature and date of signing; and

(i) Any other information required by the CIR.
The CIR may require further information to be provided in the annual reconciliation statement. Where the annual reconciliation statement identifies any unpaid deductions or payments, those unpaid amounts must be paid to the CIR no later than:

(a) 20 April following the end of the tax year; and

(b) The last day by which the information required in the deduction certificates is to be provided.

A person who ceases to carry on any taxable activity for which NRWT deductions have been required, or any such taxable activity in New Zealand, is required within 40 working days after the end of the month of cessation to prepare and furnish any NRWT deduction certificates and a final annual reconciliation statement.

Note: The CIR may vary any of the filing requirements set out above.

1020.66 Assessment of non-resident withholding tax

The assessment provisions in ss 109 to 111, 113 and 114 of the TAA [see 60 ASSESSMENTS] apply to assessments of NRWT, with appropriate changes in terminology.

The CIR may make an assessment of the amount of non-resident passive income (NRPI), and of the amount of NRWT payable on that income, for any person chargeable with NRWT. The person is liable to pay the tax so assessed, unless it can be established in challenge proceedings that the assessment is excessive or that the amount is not chargeable. The CIR also has a general power to make an assessment of the amount of NRWT that is payable.

An assessment of NRWT may be challenged under Part 8A in the same way as any tax imposed under s BB 1.

1020.70 Non-resident withholding tax — a final tax [s RF 2]

The amount of NRWT for which a person is liable is the final tax on the following types of non-resident passive income:

(a) Dividends, other than investment society dividends;

(b) Royalties for the use, production or reproduction of, or for the privilege of using, producing or reproducing, a literary, dramatic, musical or artistic work in which copyright subsists (commonly known as “cultural royalties”);

(c) Interest or royalties derived by a life insurer from a resident company deemed to exist as a result of the life insurer making an election under s EY 49;

(d) Interest or investment society dividends, where the person paying the income and the person deriving it are not associated persons [see 70.10 for definition of “associated person”).

This means that a non-resident deriving the above types of income does not need to include that income in a year-end tax return, and has no further income tax to pay on it over and above the NRWT already paid. If NRWT is the final tax for a dividend, the taxpayer is not entitled to a credit of tax for any imputation credit attached to the dividend.

Most double tax agreement’s state that NRWT on royalties is a final tax unless the non-resident recipient has a permanent establishment in New Zealand and those royalties are effectively connected to that permanent establishment.

1020.75 Non-resident withholding tax — a minimum tax [s RF 2]

Non-resident withholding tax (NRWT) is not the final tax for the following types of non-resident passive income:

(a) Interest and investment society dividends, where the person paying the income and the person deriving it are associated persons;

(b) Royalties other than cultural royalties (commonly referred to as “industrial royalties”) [see 1020.70].

In these circumstances, the person’s income tax liability for the tax year is the greater of:
(a) The sum of the NRWT payable on all non-resident passive income (NRPI) and the person’s income tax liability (as determined in an annual return) for other types of income; or
(b) The person’s income tax liability if the NRPI for which NRWT is not the final tax were included in the person’s annual return.

In calculating the person’s income tax liability under (b), a credit is allowed for the amount of NRWT deducted from the NRPI and paid to the CIR [s LA 8].

Example:
A company resident in Australia with a permanent establishment in New Zealand derives income from New Zealand during the year ended 31 March. In deriving net trading income the New Zealand operation was provided with technical know-how from the Australian resident, therefore establishing an effective connection between royalties paid and the New Zealand permanent establishment. The company is subject to art 12(4) of the Double Taxation Relief (Australia) Order 1995, which effectively says that NRWT will be a minimum tax if the contracting state (Australia) has a permanent establishment in the other contracting state (New Zealand), and the knowledge, information, assistance, right, or property giving rise to the royalties is effectively connected with that permanent establishment. Commercial royalties (trade marks) derived before expenses deducted amount to $2,560. NRWT deducted at 15 per cent amounts to $384. Other net income amounts to $3,440.

Annual return excludes NRPI
Net income $3,440
Income tax at company rates (30 per cent) $1,032
Add NRWT deducted at source $384
Total $1,416

Annual return includes NRPI
Commercial royalties, less 25 per cent expenses allowances $1,920
Net income $3,440
Income tax at company rates (30 per cent) $1,032
Less credit for NRWT deducted at source (as above) $384
Total $1,224

In the return including NRPI, the tax payable ($1,224) is less than the sum of the tax on the net trading income plus the NRWT on the royalties ($1,416). The amount of tax payable is therefore $1,224. Royalties would normally need to be effectively connected with the permanent establishment to give rise to assessment in New Zealand.

(1) Exception
NRWT on interest and investment society dividends paid to associated persons, and on industrial royalties, is the final tax on that income when derived by a non-resident company, and these forms of income (when combined with other assessable income) do not exceed $1,000.

1020.77 Industrial royalties
The 15 per cent NRWT on the gross payments of industrial royalties is, generally, a minimum tax. Unless limited by a double tax agreement, additional tax will be payable after the end of the financial year in which the royalties and payments were derived if tax assessed at annual rates on the net income after allowing deductible expenses exceeds the 15 per cent withholding tax.

Example:
(Income year ended 31 March)
Gross payment to non-resident company $8,000
Less expenses $2,000
Net income $6,000
Withholding tax on payments $1,200

### 1020.78 Allowable deductions against royalty income

Deductions are only allowed against royalties that are included in an annual tax return [see 1020.75]. It is recognised that non-residents may find it difficult to provide full details of the expenses applicable to royalties from New Zealand. To help these people Inland Revenue allows, as a minimum deduction in an annual assessment, the following percentages for expenses without supporting claims:

<table>
<thead>
<tr>
<th>Nature of payments</th>
<th>Percentage allowable</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Trade mark</td>
<td>25%</td>
</tr>
<tr>
<td>2. Patent</td>
<td>35%</td>
</tr>
<tr>
<td>3. “Know-how”</td>
<td>50%</td>
</tr>
<tr>
<td>4. Any combination of 1 or 2 above with 3</td>
<td>40%</td>
</tr>
</tbody>
</table>

The arbitrary expense allowance is made by Inland Revenue as a matter of administrative convenience only, and is not based on any specific statutory authority, although a deduction is generally allowable under s DA 1.

In *TRA Case B22 (1975)* 1 TRNZ 305, the objector, a non-resident company, in accordance with the above, claimed 50 per cent of the royalties as an expense allowance on the ground that the royalties were for “know-how” only, but Inland Revenue considered that they were for a combination of a payment for “know-how” and a payment for the use of trade marks, and reduced the claim to 40 per cent of the royalties. At the hearing, the objector pointed out that the only reference to trade marks in the agreement was in the schedule to the agreement and contended that the words were used there merely by way of description of the goods, and further contended that the Reserve Bank had approved of the quantum of the royalty on the basis that it was for “know-how”, not for trade marks. It was contended for Inland Revenue that the TRA had no jurisdiction to decide the matter since the allowance made was purely an arbitrary amount granted by Inland Revenue, and whether the deduction was 40 per cent or 50 per cent was non-judicable issue. However, the TRA decided that it had jurisdiction to consider the agreement to ascertain whether Inland Revenue had interpreted it correctly before arriving at its decision to allow 40 per cent as a deduction. The TRA decided as a fact that Inland Revenue had misconstrued the effect of the agreement, and that the royalty related solely to “know-how” and, accordingly, Inland Revenue had made the assessment in error.

If it is considered that actual expenses exceed the arbitrary allowance, a tax return, giving details to support the claim for the higher deduction, should be filed on behalf of the overseas recipient. In the first instance the claim should be supported by a certificate from an overseas auditor or chartered accountant setting out the amount and how it is arrived at.

The expenses of a non-resident in the production of industrial royalties and “know-how” from New Zealand may include, in addition to actual expenses in New Zealand, the proportion of:

(a) The expenses incurred in developing or acquiring the trade mark, patent, or “know-how”; and

(b) Administration and other overhead expenses.

The amount for development or acquisition will generally follow the treatment of this expenditure in the books of the non-resident recipient.

If expenditure on new or continuing research is charged direct to revenue accounts each year, the New Zealand proportion may be claimed even though the patent or knowledge used in New Zealand may have been developed some time in the past. On the other hand, if the original expenses were capitalised, the amount allowable would be the New Zealand proportion of the amount written off during the year.

Inland Revenue will consider requests that payments of NRPI be made without deduction of NRWT when:
(a) Tax has already been paid in annual assessments on the non-resident in past years; and
(b) The tax in an annual assessment exceeds the NRWT that would normally be deducted.
This variation will apply only to payments of industrial royalties and interest. Payments of dividends and cultural royalties are not included in an annual assessment and the deduction of NRWT is final.
Inland Revenue will also consider variations to provide for centralised accounting in one sum when numerous small payments of royalties, particularly cultural royalties, are made during the year.

**1020.80 Approved issuers [TAA, s 32M]**
Approved issuers may pay interest to non-residents without deducting NRWT. They are also eligible for certain exemptions under some double tax agreements. Under the NRWT rules, instead of deducting NRWT from a payment of interest, an approved issuer is required to pay a levy for the right to issue securities that are subject to a zero per cent rate of NRWT. The levy, known as the approved issuer levy, is calculated at the rate of two per cent of interest paid. The following conditions apply:
(a) The persons paying and receiving the interest cannot be associated persons;
(b) The interest must be paid by an approved issuer on a registered security; and
(c) The approved issuer levy must be paid by the due date.
The approved issuer levy regime cannot apply to:
(a) New Zealand residents and non-residents who have a fixed establishment in New Zealand deriving interest income, as they are not subject to the NRWT regime and are, instead, liable for income tax; and
(b) Interest payments to non-residents where the conditions for zero-rating are not satisfied.
Application for approved issuer status can be made using form IR396. One security can also be registered on form IR396 at the same time as applying for approved issuer status. Approval is granted and applies from the date the application was received unless the applicant has been in serious default or neglect with tax obligations during the period. Once a person has approved issuer status, the securities that will be subject to the approved issuer levy may be registered using form IR397 (the first security can be registered on form IR396).
A person’s approved issuer status may be revoked where there has been serious default or neglect with tax obligations. The revocation affects the person’s ability to issue new tax-free securities, not the status of existing securities. An approved issuer is also able to request that their status be revoked.
Borrowers (ie payers of interest) elect to pay the approved issuer levy in respect of a security by:
(a) Either being an approved issuer or becoming one; and
(b) Applying to register the security; and
(c) Paying the levy for the security.
The approved issuer levy is due for payment on the same date as NRWT [see 1020.60]. Payment is to be made using form IR67A. Failure to pay by that date will make the interest payment liable for NRWT to the extent that the approved issuer levy is deficient.

**Example:**
If the two per cent approved issuer levy on interest of $10,000, amounting to $200, is not paid by due date, the entire interest payment is due for NRWT, which is imposed on the payee and not on the issuer.

Inland Revenue has discretion to accept late payments of approved issuer levy where the delay was due to circumstances beyond the payer’s control. Penalties and interest will apply to any late payment of approved issuer levy.
Chapter 1030

Official Information and Secrecy

1030.10 Official Information Act 1982
The Official Information Act 1982 applies to information which is held by Inland Revenue. It does not overrule the secrecy provisions of the Tax Administration Act 1994. Any information relating to the personal affairs or identity of a particular taxpayer remains confidential to that taxpayer or the properly authorised agent. The Act does not substantially change the information that Inland Revenue already makes available, but it does enable taxpayers and other interested parties to obtain additional information in relation to technical rulings that had not previously been made available. The following information may be available on request.

1) Personal information
Information held relating to the affairs of an identifiable taxpayer (individual, company, etc) is available to that person. The types of information held that can be given include:
(a) Details from the tax return and assessments;
(b) Details of the correspondence held;
(c) Details of interview notes;
(d) Copies of the ledger record.

2) Official information
The types of information held that can be given include:
(a) Details of Inland Revenue rulings on technical matters;
(b) Details of Inland Revenue policy and practice.

These matters are included in Inland Revenue manuals available for perusal at the public counter in each Inland Revenue district office.

3) Protected information
The Official Information Act 1982 protects from disclosure certain kinds of information that have been obtained by or are in the possession of Inland Revenue in relation to the detection of offences that may have occurred against the Inland Revenue Acts. Inland Revenue does not propose to release such information. Examples of this type of information are:
(a) Reports on income tax inspections or investigations;
(b) Advice on transactions or activities given to Inland Revenue in confidence;
(c) Procedure sheets outlining methods to detect evasion;
(d) Procedures to check the authenticity of claims made in the annual returns.

Instances also arise where a particular question or issue is the subject of a legal opinion given by a legal officer of Inland Revenue. Any such opinion is privileged and disclosure will not be granted. Requests for information are required to be specific and to provide sufficient detail to enable the subject matter to be correctly identified. If needed by a taxpayer, assistance to meet this requirement will be provided by staff in the local district office. Written requests for information should be addressed to the CIR at the office where the taxpayer’s records are retained. However, verbal requests can be made.
In *TRA Case F118* (1984) 6 NZTC 60,130, a taxpayer company in business as tax advisers was issued with amended assessments to which it objected by way of case stated. The taxpayer sought information from Inland Revenue under the Official Information Act as to Inland Revenue’s basis for disallowing the objection. It was held that taxpayers are not entitled to know factual reasons for Inland Revenue’s assessments. However, evidence relied on, or paper or documents in the possession of Inland Revenue, may be subject to an order for discovery.

**1030.15 CIR’s policy on releasing information**

The CIR’s policy on the release of information under the Official Information Act 1982 and the Privacy Act 1993 is set out in standard practice statement IR-SPS GNL 170 [see TIB vol 13:9 (September 2001) at 90-94]. The statement applies from 11 September 2001. The statement also explains the relationship of those Acts with the TAA and how the secrecy provisions in the TAA and the Child Support Act 1991 will be applied. For further details of the policy, refer to the statement.

Requests for information can be made orally or in writing. However, Inland Revenue may ask the requester to submit a request in writing to reduce any opportunity for misunderstanding. Requests for official information are required to be “specified with due particularity”. This means that Inland Revenue must be able to identify the information being sought. If a request is so general in nature that it is impossible to identify the information sought, Inland Revenue will ask the requester to be more specific. The fact that a request is for a large amount of information does not in itself mean that the request lacks due particularity.

If a natural person requests all personal information held about them, Inland Revenue will seek clarification as to whether the requester wants copies of material that has already passed between the requester and Inland Revenue (filed returns, correspondence, etc).

Inland Revenue is required to provide reasonable assistance to persons requesting information. Where the requested information is not held by Inland Revenue, but Inland Revenue believes it to be held by another Government agency or Minister, Inland Revenue is required to transfer the request within 10 working days.

In all cases information will be released upon request unless there are good reasons to withhold that information under either the Official Information Act 1982 or the Privacy Act 1993.

Where the information requested is contained in a document and there is good reason for withholding some of the information in that document, a copy of the document will be provided with the withheld information deleted.

Requests by natural persons for information about themselves are governed by the Privacy Act 1993. Under that Act, individuals have a right of access to information about themselves, subject only to the reasons for refusing access stipulated in the Act. These reasons are specified in the standard practice statement.

All other requests for information are governed by the Official Information Act 1982. These include:

(a) Requests for information, including personal information by natural persons about natural persons other than themselves;

(b) Requests for Inland Revenue’s internal rules or reasons for decisions;

(c) Requests by bodies corporate for information about themselves.

Under the Official Information Act 1982, there are different reasons for refusing information requests depending on which part of the Act the request is made under. These reasons are specified in the standard practice statement [see 1030.10].

Inland Revenue is required by statute to make a decision on a request as soon as reasonably practicable and no later than 20 working days after the receipt of the request. Any request for the release of information will be dealt with as a matter of urgency.

When Inland Revenue is unable to respond within 20 working days, it will write to the requester advising the extended time-frame. Inland Revenue may be unable to action a request within 20 days if it involves a large quantity of information and meeting the original time limit would unreasonably interfere with the operations of Inland Revenue, or if consultation is necessary in order to make a decision on the request. If
the requester is dissatisfied with the extension of time, they can seek a review by the Ombudsman or the Privacy Commissioner.

A response by Inland Revenue to a request made under the Official Information Act 1982 or the Privacy Act 1993 will include:

(a) A repeat of the original request;
(b) A reference to the Act the request has been considered under;
(c) Inland Revenue’s decision on the request;
(d) The reason for refusal, if Inland Revenue has refused the request in whole or in part;
(e) The requester’s right to seek an investigation and review by the Ombudsmen or Privacy Commissioner of the decision, or have the decision reviewed by a review officer who reports directly to the CIR in case of a refusal.

Under the Official Information Act 1982, Inland Revenue may charge for the provision of information if considerable departmental resources are needed to satisfy the request. If Inland Revenue intends to charge for providing information, an interim letter will be issued detailing the proposed charge and whether whole or part payment is required before the information will be released. It is Inland Revenue policy not to impose charges on Members of Parliament and parliamentary research units. Inland Revenue will also not charge a natural person for the supply of personal information about that person.

Neither the Privacy Act nor the Official Information Act restricts the effect of the secrecy obligations imposed on Inland Revenue staff by the TAA [see 1030.20].

When a request is to be considered under the TAA, Inland Revenue will consider the intent of the Official Information Act 1982 and/or the Privacy Act 1993. For example, personal information about a requester may not be given to the requester:

(a) Once Inland Revenue has advised that a tax investigation is to commence and disclosure would prejudice the effective conduct of the investigation;
(b) When the information requested would disclose the identity of a person who has supplied information to Inland Revenue, thereby breaching an obligation of confidentiality;
(c) When the information requested would disclose particular targeting or investigation techniques and selection criteria which, if disclosed, would prejudice Inland Revenue’s ability to investigate in the future.

In these cases, a request may be refused as the release of this information would be likely to prejudice the maintenance of the law.

1030.20 Officers of Inland Revenue to maintain secrecy [TAA, s 81]

(1) Requirement to maintain secrecy [TAA, s 81(1), (1C)] [TAA, s 81]

Inland Revenue officers are required to maintain, and to assist in maintaining, the secrecy of all matters relating to the following legislation:

(a) The Inland Revenue Acts, or another Act that is or was administered by Inland Revenue;
(b) The Accident Compensation Act 2001, the Accident Insurance Act 1998, the Accident Rehabilitation and Compensation Insurance Act 1992, or the Accident Compensation Act 1982;
(c) The New Zealand Superannuation Act 1974;
(d) Any Act that imposes taxes or duties payable to the Crown.

Inland Revenue officers must not communicate any of these matters, except for the purpose of carrying into effect the legislation listed above.

Before an Inland Revenue officer performs their first official duty as an officer, they must make a declaration of secrecy and fidelity in the form prescribed by the CIR. The declaration must be made before the CIR, an
officer of Inland Revenue, or a person authorised by or under the Oaths and Declarations Act 1957 to take statutory declarations.

(2) When communication allowed [TAA, s 81(1B)]

An Inland Revenue officer may communicate a matter if:

(a) The communication is for the purpose of executing or performing a duty of the CIR, or for the purpose of supporting the execution or performance of such duty; and

(b) The CIR considers that such communication is reasonable with regard to the relevant purpose described in (a), and with regard to the following:

(i) The CIR’s obligation at all times to use best endeavours to protect the integrity of the tax system;

(ii) The importance of promoting compliance by taxpayers, especially voluntary compliance;

(iii) Any personal or commercial impact of the communication;

(iv) The resources available to the CIR; and

(v) The public availability of the information.

IRD has issued a standard practice statement on how it will apply its discretion to release secret information under the exception in TAA, s 81(1B). The statement outlines the factors that IRD must take into account and the process it will follow to ensure that the discretion is exercised correctly, and that there is a consistent approach taken by IRD staff when exercising the discretion. See SPS 11/07, TIB Vol 24:1 (February 2012) at 3 to 15.

(3) Divulging information to a Court [TAA, s 81(3)]

An Inland Revenue officer is not required to produce in a Court or tribunal any document, or to divulge or communicate to any Court or tribunal any matter or thing, coming under the officer’s notice in the performance of the officer’s duties as an officer of Inland Revenue, except when it is necessary to do so for the purpose of:

(a) Carrying into effect

(i) The Inland Revenue Acts, including all Acts, whether repealed or not, at any time administered by Inland Revenue;

(ii) The Accident Compensation Act 1982, the Accident Rehabilitation and Compensation Insurance Act 1992, the Accident Insurance Act 1998, or the Accident Compensation Act 2001; or

(iii) Any other enactment imposing taxes or duties payable to the Crown;

(b) Carrying into effect the powers, duties and functions of the CIR under the New Zealand Superannuation Act 1974.

The effect of s 81(3) was confirmed in Hester v Commissioner of Inland Revenue (2003) 21 NZTC 18,182 (HC), in which the High Court refused to order the CIR to answer questions which, if answered, could potentially have identified information on other taxpayers. In this case the plaintiffs, who were the trustees of a church superannuation scheme, were seeking information from the CIR on the tax treatment of superannuation schemes run by other religious organisations.

The meaning of “for the purpose of carrying into effect” the Inland Revenue Acts was clarified in Knight v Barnett (1991) 13 NZTC 8,014 (CA). The appellants brought a civil action against Inland Revenue for damages and sought an order requiring Inland Revenue to produce certain documents required as evidence. Inland Revenue refused on the grounds that s 13(3) of the Inland Revenue Department Act 1974 (the precursor to s 81(3) of the TAA), gave privilege against disclosure because the information was not necessary for the carrying into effect of the Inland Revenue Acts. The Court of Appeal held, in a majority decision, that the carrying into effect of the Inland Revenue Acts includes their proper implementation and administration. Where the CIR is a party to litigation, whether as claimant or defendant, such activity is the carrying into
effect or implementation or administration of the Inland Revenue Acts. As a result, Inland Revenue was required to produce the documents.

In *R v Morris* [2005] 2 NZLR 684, (2005) 22 NZTC 19,217 (CA), the Court of Appeal was required to determine whether the provisions of ss 81(1) and 81(3) of the TAA applied to a tax prosecution brought under the Crimes Act 1961. Mr Morris was charged under the Crimes Act with using IR3 income tax returns with intent to defraud. He objected to evidence being given by an Inland Revenue officer on the ground that it would contravene the secrecy provisions of s 81 of the TAA. The Court of Appeal held that, provided the Inland Revenue officer’s proposed evidence was admissible under the general law, the Inland Revenue officer was not prevented by s 81(1) from giving evidence, because the purpose in giving the evidence was to carry into effect an Inland Revenue Act (namely, the TAA 1994). The Court further ruled that s 81(3) of the TAA was not relevant in this case because that subsection only applies when the CIR or an Inland Revenue officer seeks to invoke privilege.

**4) Specific situations in which information may be divulged [TAA, s 81(4)]**

The CIR is authorised to communicate or divulge information in specific, defined circumstances, mainly to other Government agencies. There are too many to list them all in this publication, but some examples are set out below.

Under s 81(4)(d) of the TAA the CIR can provide information to an employee of the Department of Statistics if that officer is authorised to receive the information and the CIR considers that it is “reasonably necessary” and “not undesirable” to disclose such information.

The CIR is authorised under s 81(4)(fb) of the TAA to communicate information to the Charities Commission that the Commission is authorised to receive and which the CIR considers is not undesirable to disclose. The information must be reasonably necessary to enable the Commission to carry out its duties as lawfully conferred by the Charities Act 2005.

Under s 81(4)(q) of the TAA the CIR is authorised to communicate information for the purposes of administering s 85H of the TAA, which relates to paid parental leave.

Under s 81(4)(r) of the TAA the CIR may communicate information to the FMA, where that information is reasonably necessary to enable the FMA to perform its duties or functions in relation to the KiwiSaver scheme, and the CIR considers that it is not undesirable to disclose that information.

Staff of WINZ, ACC, and the Department for Courts, and any other persons who have access to restricted information, are bound by secrecy provisions similar to those imposed on Inland Revenue staff [TAA, ss 86, 87].

Breaches of the secrecy provisions may be punishable with imprisonment or fines [TAA, ss 143C to 143E].

**1030.25 Authorised disclosure [TAA, ss 82 to 85I]**

Inland Revenue is authorised to disclose taxpayer information to the following organisations and for the following purposes:

(a) ACC and WINZ, for matching purposes [TAA, s 82]:

(i) To verify the entitlement to, or amount of, a benefit or earnings-related compensation;

(ii) To verify whether any premium or levy is payable and the amount of the premium or levy.

(b) WINZ [TAA, ss 82A, 83, 84, 85]:

(i) To ensure the correct tax file numbers of beneficiaries are supplied, to prevent cessation of benefit payments;

(ii) To enable the issue of social welfare entitlement cards;

(iii) To verify entitlement to, or eligibility for, an entitlement card;

(iv) To identify qualifying persons and their spouses who are in receipt of WFF tax credits from both Inland Revenue and WINZ;

(v) To verify entitlement of a qualifying person to any benefit;
(vi) To assist WINZ to recover money owed by debtors.
Inland Revenue is allowed to supply the Ministry of Justice with information relating to persons who have defaulted in the payment of fines [TAA, s 85A]. The information which can be supplied includes:
(a) The last known address of the defaulter;
(b) The last known telephone number of the defaulter;
(c) The name of the last known employer of the defaulter;
(d) The address of the last known employer of the defaulter; and
(e) The telephone number of the last known employer of the defaulter.

The date when the information was most recently updated must also be supplied.
Inland Revenue and WINZ are allowed to exchange information in order to provide assistance to the government of a country with which New Zealand has a social security agreement [TAA, ss 85B, 85C]. WINZ is authorized to supply specified personal information supplied to it by Inland Revenue to the competent institution of a foreign government. Inland Revenue may supply information to ACC to enable ACC to assess levies for employers, self-employed persons, private domestic workers and shareholder-employees [TAA, s 85E].

Inland Revenue is permitted to provide certain information to the New Zealand Film Commission to enable the Commission to determine the entitlement of a company to a government screen production payment [see 460.15; TAA, s 85F].

Inland Revenue is authorized to receive information from the Ministry for Social Development to enable Inland Revenue to:
(a) Commence paying family tax credit payments to a qualifying person who has ceased to be entitled to a WFF tax credit;
(b) Contact a person to invite them to apply for WWF tax credits, or to request additional information so that Inland Revenue can calculate a credit; or
(c) Withdraw or replace a certificate of entitlement [TAA, s 85G].

The CIR is permitted to compare taxpayer information with information provided by an applicant for paid parental leave, in order to identify persons who may be ineligible for paid parental leave or who may have received an overpayment. When these checks reveal a possible discrepancy, the CIR can communicate taxpayer information to the Department of Labour [TAA, s 85H].

The CIR is permitted to compare taxpayer information with information provided by an applicant for paid parental leave, in order to identify persons who have applied for both paid parental leave and a parental tax credit [see 420.40] for the same child. When a person has applied for both payments, the CIR can decline one of the payments [TAA, s 85I].

Inland Revenue has the authority, which overrides all secrecy obligations in all enactments, to disclose information required to be disclosed under a double tax agreement or tax recovery agreement to an authorised person in another territory [TAA, s 88].
Partnerships

Chapter 1050

Partnerships

1050.05 What is a partnership? [s YA 1]

For tax purposes, “partnership” means a group of two or more persons who have, between them, the relationship described in s 4(1) of the Partnership Act 1908. It also means a joint venture, if the joint venturers all choose to be treated as a partnership for the purposes of the ITA 2007 and the TAA 1994. Co-owners of property (other than those who are merely co-shareholders or co-trustees) can also be treated as a partnership for tax purposes provided that all of the co-owners elect to be treated that way.

“Partnership” also includes a limited partnership. A limited partnership is a limited partnership registered under the Limited Partnerships Act 2008 and includes an overseas limited partnership. It does not include a listed limited partnership or a foreign corporate limited partnership. These two types of entity are treated as companies for tax purposes.

A “New Zealand partnership” is a:

(a) Limited partnership registered under the Limited Partnerships Act 2008;

(b) Partnership that has 50 per cent or more of its partners’ interests in capital, by value, held by New Zealand residents; or

(c) Partnership that has its centre of management in New Zealand.

A “small partnership” is a partnership that is not a limited partnership and which has five or fewer partners, none of whom are companies or other partnerships.

A “partner” in relation to a partnership means a person who is a member of the partnership. It includes both a limited partner of a limited partnership and a general partner of a limited partnership. It also includes a joint
venturer or co-owner where an election has been made for that entity to be treated as a partnership for tax purposes.

1050.10 Partnership evidence

A written partnership agreement is not essential and the existence of a partnership can be determined from a consideration of all of the surrounding circumstances: *Morden Rigg and Co v Monks* (1923) 8 TC 450. However, the matters concerning genuine partnership agreements which need to be in written form are highly important [see 1050.30]. The distinction between a joint venture agreement and a partnership is often difficult: *Harley v Commissioner of Inland Revenue* [1971] NZLR 482 (CA).

1050.15 Joint tax return required

When two or more people carry on business through a joint venture (as opposed to a partnership), each person is required to return their income and deductions separately and file a separate return of income. The one exclusion from this rule is an “airport operator” [s HG 1]. However, different rules apply to partnerships.

For tax purposes, under s HG 2, each partner in a partnership is treated as:

(a) Carrying on the activity carried on by the partnership;
(b) Holding the partnership’s property in proportion to the share in the partnership;
(c) Being party to every arrangement to which the partnership is a party, again in proportion to each partner’s share in the partnership; and
(d) Doing, and being entitled to do, everything that the partnership does or is entitled to do.

**TaxNote:** A joint venture can be treated as a partnership where all joint venturers choose this option [see definition of “partnership” in 1050.05].

Income, gains, expenditure, losses and tax credits are accumulated in the partnership. Each partner’s share of each of those things is then calculated by applying the particular partner’s “partnership share”. Each partner’s share of income from any particular source, whether it be assessable, exempt or excluded income, or deductions, losses, or tax credits, retains its nature and flows through to the partners’ individual returns on that basis. The partnership share of each partner will generally be set out in the partnership agreement.

This treatment does not apply to any of the following:

(a) Expenditure or loss that results from a new partner acquiring a share in the partnership from another partner;
(b) Supplementary dividends to the extent that subpart LP applies [see 1010 NON-RESIDENT INVESTORS];
(c) Imputation credits to the extent that s LE 6 applies [see 670 IMPUTATION].

It is not necessary that the partner be a partner at the time at which an amount of expenditure or loss was incurred [s HG 2(3), see 1050.27].

Partnerships are required to make a joint return setting out the total amount of income derived by the partners in the partnership, each partner’s share in the income and a summary of the deductions of each partner. There is no joint assessment. Each partner is separately assessed.

1050.20 Husband and wife partnerships

It is not necessary for a husband and wife to have a written deed of partnership in order to be held to be carrying on business as partners. The determination of whether a husband and wife are carrying on a business as partners is based on the facts of each case. Contributions by way of capital introduced and services performed may, therefore, be particularly relevant. However, the matters concerning genuine partnership agreements needing to be in written form must be taken into account.

The position of Dutch immigrants, who were married in the Netherlands and to whom the Dutch law of “community of property” applies, has been considered. It appears that only on the termination of the marriage,
Partnerships

or in the event of a dispute between the parties, are they deemed to own the marital assets on a 50/50 basis. The consequence is that the liability to New Zealand income tax of such people remains unaffected, namely:

(a) Income from the personal exertion of one spouse [see 960.10] is treated as being derived by that spouse alone;
(b) Income from assets owned in the name of one spouse is derived by that spouse alone; and
(c) Income from assets owned in the names of both spouses is derived in the same proportion as the ownership of the assets.

1050.25 Relatives in partnerships [ss GB 23, GB 24]

Family partnerships, eg between husband and wife or between parents and children, can be a convenient means of reducing tax liability. However, where the amount of remuneration paid to a relative or share of profit allocated to one of the partners is excessive having regard to the contributions by way of services, capital, or otherwise, the profits or losses of the partnership may be reallocated for taxation purposes between the partners. See 70 ASSOCIATED PERSONS AND RELATIVES for the definition of the term “relative”.

In *TRA Case S2 (1995)* 17 NZTC 7,012, a husband and wife contributed $8,000 and $2,000 respectively towards the purchase of a rental property. The property was sold and another rental property purchased with the sale proceeds. The husband and wife owned both properties as joint tenants and outgoings on the properties were met from matrimonial money. The husband was responsible for managing the properties. There was no written partnership agreement. The 1987 accounts were prepared for a partnership between the husband and wife, and losses were allocated on a 50/50 basis. However, from 1988 to 1992 the accounts allocated all rental losses to the husband. The CIR reassessed the losses and allocated them for the 1989-1992 years on a 50/50 basis under s GD 3 of the ITA 2004 [now s GB 23]. The TRA held that the husband and wife were partners carrying on a rental property business or income earning process. In the absence of a written agreement to the contrary, the losses must be shared equally. The TRA rejected the submission by the taxpayers that the rental losses should be allocated on the basis of the original contributions. This decision was based on:

(a) The further contributions from relationship property towards the mortgage and other outgoings.
(b) Joint liability of the parties under the mortgage.
(c) The fact that both were ratepayers and on the Valuation New Zealand roll.
(d) The muddlement in the presentation of their accounts.
(e) The fact that the 100 per cent allocation of losses to the husband could be viewed as self-serving from a taxation point of view.

Section GB 23 applies to partnerships when:

(a) A partnership carries on business, and two of the partners are relatives; or if a partner is a company, a director or shareholder of the company is a relative of any partner.
(b) A company carries on business in partnership with a relative of a director or shareholder of the company.

The CIR may reallocate the share of profits or other income payable to or for the benefit of, or reallocate the share of losses borne by, the relative or company if the CIR considers that the allocation is unreasonable. To determine whether an allocation is reasonable, the CIR must have regard to all of the following:

(a) The nature and extent of the services rendered;
(b) The value of the contributions made by the respective partners by way of services, capital, or otherwise; and
(c) Any other relevant matters.

If the CIR then forms the opinion that the amount of income or losses allocated to a relative is not reasonable, the CIR may reallocate the profits, income, or losses (before the deduction of any amount payable to the relative) between the partners in such shares as the CIR considers reasonable. The CIR cannot reallocate

Staples Tax Guide 2012 1201
income or losses if a genuine partnership contract exists [see 1050.30]. This is an anti-avoidance provision aimed at arrangements which allocate income or loss based on tax advantages, rather than on contributions to the partnership. The CIR considers the following information (when evaluating the allocation of partnership profit, income, or loss):
(a) *The services rendered by each partner*: Relevant factors include the duties and responsibilities of each partner, time spent on partnership business, and any special skills or expertise of the partners.
(b) *Capital contributions*: Usually capital contributions are shown in the partnership accounts and this information is relied on. The CIR may require more information if a partner has made assets available to the partnership and is not receiving rent or lease payments.
(c) *Other relevant matters*: These may include any special circumstances of the partnership business.

**1050.27 Partners entering and exiting a partnership** [ss HG 4, HG 5, HG 6, HG 7, HG 8, HG 9]

From 1 April 2008, subpart HG sets out the tax treatment that applies when:
(a) A partnership is dissolved;
(b) An existing partner leaves a partnership; or
(c) A new partner enters an existing partnership.

(1) *Partnership is dissolved* [s HG 4]

A partnership can be dissolved by agreement of the partners, by way of a Court order, or under a relevant provision of the partnership agreement. The tax effect of the dissolution of a partnership occurs immediately before the partnership is actually dissolved.

From 1 April 2008, new rules apply where a partnership (other than a limited partnership) is to be finally dissolved and the partnership business will not continue being carried on in partnership. For tax purposes, each partner is treated as having disposed of all of that partner’s interests in the partnership at market value and to a single third party immediately before the dissolution and reacquiring it for the same value immediately after the dissolution. The normal tax consequences flow from this deemed disposal. Any consideration actually received by the partner from any party in relation to the final dissolution of the partnership is ignored for tax purposes.

This treatment does not apply:

(a) To the extent to which a partner disposes of their partnership interests to a non-associated person. When determining whether or not two persons are associated for the purposes of this provision, the partner’s partnership capacity is ignored; or

(b) Where the following conditions are met:

(i) Immediately before the dissolution there are only two partners and they are each the spouse of the other;

(ii) The dissolution is caused by the death of one of the partners or the settlement of relationship property;

(iii) The interest on one of the partners is transferred to the other partner (ignoring any intermediate transfer to an executor or administrator); and

(iv) the transfer of those interests is subject to subparts FB or FC treat the transfers as disposals for other than market value. Subparts FB and FC relate to relationship property [see 960 MATRIMONIAL AND RELATIONSHIP PROPERTY] and gifts.

The exemption for partnerships consisting of two people each of whom is the spouse of the other ensures that neither the death of one spouse nor a relationship property split results in the crystallisation of the tax effect of a deemed disposal and reacquisition at market value. Where the deemed treatment outlined above does not apply, the normal rules apply to the disposal of each partner’s interest in the partnership assets.
Partners entering and exiting the partnership

From a legal perspective, when a partner leaves a partnership or a new partner joins, the old partnership is dissolved and a new partnership is formed. This has caused tax problems, particularly for larger professional partnerships where changes in partners is not uncommon event. The new rules set out below address these difficulties. The following rules do not apply where the partnership is totally dissolved as outlined above.

Partners entering and exiting the partnership — $50,000 rule [s HG 5]

When a partner disposes of some or all of their “partner’s interests” to a new or existing partner (called an “entering partner”), the following formula must be applied:

\[ \text{disposal payment} + \text{previous payments} - (\text{gross tax value} - \text{liabilities}) - 50,000 \]

Where:

- “Disposal payment” is the total amount of consideration paid or payable to the exiting partner for the current interests.
- “Previous payments” is the total amount of consideration paid or payable to the exiting partner for other disposals of some or all of their partner’s interests that have occurred in the year before the disposal of the “current interests”. In the definition of “gross tax value” (below) this is called the “other interests”.
- “Gross tax value” is the total of:
  (a) The value of the “current interests” and the “other interests” at the time at which the relevant interest is disposed of to the extent to which those interests consist of revenue account property, depreciable property or financial arrangements; and
  (b) The market value of the “current interests” and the “other interests” at the time at which the relevant interest is disposed of to the extent to which those interests consist of consist of anything else.
- “Liabilities” is the amount of liabilities under “generally accepted accounting practice” (GAAP) at the time at which the relevant interest is disposed of, calculated by reference to the exiting partner’s partnership share for the relevant interest.

If the amount calculated under the formula is less than zero:

(a) The “disposal payment” is excluded income of the exiting partner;
(b) The entering partner (or partners) to whom the partnership interest is sold is denied any deduction for the “disposal payment”; and
(c) For the purposes of calculating the income and deductions of an entering partner for the part of the income year after the disposal of the interests occurs and later income years, the entering partner steps into the shoes of the exiting partner. This means that, from that point onwards, the entering partner is treated as if they had acquired the current interests when the exiting partner acquired them and held them to that point in time; and
(d) The exiting partner is denied any deduction in relation to the current interests for the income year in which the disposal of the interests occurs and later income years to the extent to which the entering partner is allowed the deduction in item (c) above.

Partners entering and exiting the partnership — trading stock [s HG 6]

To the extent to which a disposal of a partner’s interest in a partnership include trading stock (but not livestock) the following treatment applies where, for the income year of disposal, the total turnover of the partnership is $3,000,000 or less:

(a) The amount of consideration paid or payable to the exiting partner for the trading stock is excluded income of the exiting partner;
(b) The entering partner is denied any deduction for the amount of consideration paid or payable to the exiting partner for the trading stock;
(c) For the purposes of calculating the income tax liability of an entering partner, the entering partner steps into the shoes of the exiting partner and is treated as if they had acquired and held the trading stock, not the exiting partner; and
(d) The exiting partner is denied any deduction in relation to the trading stock for the income year in which the disposal of the trading stock occurs and later income years, to the extent to which the entering partner is allowed a deduction under item (c) above.

(5) Partners entering and exiting the partnership — depreciable property [s HG 7]

To the extent to which a disposal of a partner’s interest in a partnership includes an item of depreciable property (but not depreciable intangible property), the following treatment applies if the total cost of the item when it was first acquired by the partnership is $200,000 or less:

(a) The amount of consideration paid or payable to the exiting partner for the depreciable property is excluded income of the exiting partner;

(b) The entering partner is denied any deduction for the amount of consideration paid or payable to the exiting partner for the depreciable property;

(c) For the purposes of calculating the income tax liability of an entering partner for the part of the income year after the disposal of the depreciable property occurs and later income years, the entering partner steps into the shoes of the exiting partner. The means that the entering partner is treated as if they had acquired the depreciable property when the exiting partner acquired it and held it to that point in time;

(d) The exiting partner is denied any deduction in relation to the depreciable property for the income year in which the disposal of the depreciable property occurs and later income years, to the extent to which the entering partner is allowed a deduction under item (c) above.

(6) Partners entering and exiting the partnership — financial arrangements and some excepted financial arrangements [s HG 8]

To the extent to which a disposal of a partner’s interest in a partnership include a financial arrangement or an excepted financial arrangement that is in New Zealand currency; interest-free, and repayable on demand, and where the following two conditions are met:

(a) the purpose for which the financial arrangement or excepted financial arrangement was entered into was necessary and incidental to the business of the partnership; and

(b) the partnership does not derive income from a business of holding financial arrangements, the following treatment applies:

(a) The amount of consideration paid or payable to the exiting partner for the financial arrangement or excepted financial arrangement is excluded income of the exiting partner;

(b) The exiting partner is not required to calculate a base price adjustment;

(c) The exiting partner is denied any deduction in relation to the financial arrangement or excepted financial arrangement for the income year in which the disposal of the financial arrangement or excepted financial arrangement occurs and later income years;

(d) The entering partner is denied any deduction for the amount of consideration paid or payable to the exiting partner for the financial arrangement or excepted financial arrangement;

(e) For the purposes of calculating the income tax liability of an entering partner for the part of the income year after the disposal of the financial arrangement or excepted financial arrangement occurs and later income years, the entering partner steps into the shoes of the exiting partner. This means that the entering partner is treated as if they had acquired the financial arrangement when the exiting partner acquired it and held it to that point of time.

(7) Partners entering and exiting the partnership — short term agreements for the sale and purchase [s HG 9]

To the extent to which a disposal of a partner’s interest in a partnership include a short-term agreement for the sale and purchase (eg trade receivables) the following treatment applies:
Partnerships

(a) The amount of consideration paid or payable to the exiting partner for the short-term agreement for the sale and purchase (the agreement) is excluded income of the exiting partner;

(b) The entering partner is denied any deduction for the amount of consideration paid or payable to the exiting partner for the agreement;

(c) For the purposes of calculating the income tax liability of the entering partner for the part of the income year after the disposal of the agreement occurs and later income years, the entering partner steps into the shoes of the exiting partner. This means that the entering partner is treated as if they had acquired the arrangement when the exiting partner acquired it and had held it to that point in time;

(d) The exiting partner is denied any deduction in relation to the agreement to the extent to which the entering partner is allowed a deduction under item (c) above.

(8) Small partnerships [s HG 3(2)]

A “small partnership” is defined as being a partnership that is not a limited partnership and has five or fewer partners, none of whom are companies or partnerships.

The partners in a small partnership can elect not to apply the above treatment. The election is made by the entering partner, the exiting partner and the partnership furnishing returns of income that ignore the treatment. These new criteria apply for income years commencing from 1 April 2008.

(9) Partners entering and exiting the partnership — livestock [ss HG 10, EC 26B]

Partners in a small partnership can elect that the general provisions do not apply to the transfer of partnership interests that consist of certain types of livestock where those interests are transferred to an entering partner. The election is made by way of the exiting partner, the entering partner and the partnership filing returns of income that reflect the election.

The election can be made only in respect of livestock that meets all of the following criteria:

(a) It is specified livestock;

(b) It is female breeding stock; and

(c) For that income year, the partners use national standard cost or the cost price method for valuing livestock.

For the purposes of calculating the income tax liability of an entering partner for the income year in which the disposal livestock occurs and later income years, the entering partner can elect to step into the shoes of the exiting partner. Where the election is made, the entering partner is treated as if they had acquired the livestock when the exiting partner acquired it and held it to that point in time. At the end of the income year, the entering partner is required to add to the existing cost base, the amount calculated under the following formula:

\[
\frac{\text{Livestock cost base difference} - \text{Current year count}}{\text{Allowed years}}
\]

Where:

“Livestock cost base difference” is the cost base that the entering partner would have for the specified livestock at the end of the income year in which they were acquired (under their normal livestock valuation methodology) reduced by the exiting partner’s existing cost base for the specified livestock at the end of that year. It must be a positive number.

“Current year count” is the “allowed years” less the number of years between the current year and the year in which the specified livestock was acquired. Any year in which the partners do not use either the national standard cost method or the cost price method is excluded from the count. The “current year count” may equal the “allowed years” but must not be a negative number. For example, if the “allowed years” is four (see below), the income year of acquisition was 20X0-20X1 and the current income year is 20X3-20X4, the “current year count” is one. This is because there are three income years between 20X0-20X1 and 20X3-20X4 (X4 minus X1 = 3) and (4 minus 3 = 1).
“Allowed years” can be either four or five. It is four if the partners acquire or dispose of any partnership interests that include any livestock between the date on which the entering partner’s acquisition of the specified livestock and the end of the income year in which that entering partner’s livestock acquisition occurred. Otherwise it is five.

This spreading provision applies for the 2009-2010 and subsequent income years.

**1050.30 Conditions for genuine partnership contract [s GB 24]**

Section GB 23 does not apply to genuine contracts of employment or partnership. A genuine contract complies with the following conditions:

(a) It is in writing signed by all of the parties;
(b) All of the parties are over 20 years of age when the contract is signed;
(c) It is binding on all parties for not less than three years and cannot be dissolved before then, except for the reasons specified in ss 36 and 38 of the Partnership Act 1908;
(d) Each party to the contract has:
   (i) Real and effective control over their entitlement to the remuneration, salary, wages, share of profits, or other income under the contract; and
   (ii) Real and effective liability for the share of losses to be borne under the contract; and
(e) The remuneration or share of profits of the relative is not an amount that constitutes in whole or in part a gift for the purposes of the Estate and Gift Duties Act 1968.

Where a gift is present the partnership is not invalidated but is subject to adjustment for the respective shares of its members for taxation purposes.

There is no hard and fast rule for determining when a contract is, or is not, a “genuine contract”, but *Case 18 5 NZTBR* gives some guidance as to the principles involved. The case concerned a husband and wife operating a plumbing business in partnership under an agreement which provided for the first $2,000 of the profits to be paid to the husband and for the balance to be divided equally between the partners. For the year ended 31 March 1969 the net profit was $10,929.30, and this amount was allocated between the partners as follows:

<table>
<thead>
<tr>
<th></th>
<th>Husband</th>
<th>Wife</th>
</tr>
</thead>
<tbody>
<tr>
<td>Value of services (per week for 52 weeks)</td>
<td>$3,939.00</td>
<td>$172.86</td>
</tr>
<tr>
<td>Interest on capital</td>
<td>$172.86</td>
<td>$6% on opening capital $2,382</td>
</tr>
<tr>
<td>Management</td>
<td>10% of net profit</td>
<td>$1,092.90</td>
</tr>
<tr>
<td></td>
<td>$5,204.76</td>
<td>$428.92</td>
</tr>
</tbody>
</table>

The CIR was not satisfied with this allocation, and reallocated the profits on the following basis:

<table>
<thead>
<tr>
<th></th>
<th>Husband</th>
<th>Wife</th>
</tr>
</thead>
<tbody>
<tr>
<td>Value of services (per week for 52 weeks)</td>
<td>$3,939.00</td>
<td>$286.00</td>
</tr>
<tr>
<td>Interest on capital</td>
<td>$172.86</td>
<td>$2,382</td>
</tr>
<tr>
<td>Management</td>
<td>10% of net profit</td>
<td>$1,092.90</td>
</tr>
<tr>
<td></td>
<td>$5,204.76</td>
<td>$428.92</td>
</tr>
</tbody>
</table>

The CIR reallocation was as follows:

\[
\frac{$5,204.76}{$5,633.68} \times $10,929.30 = $10,097.20
\]

\[
\frac{$428.92}{$5,633.68} \times $10,929.30 = $823.10
\]

The husband worked 54 hours per week in the business and the wife worked five hours per week. The wife’s share of profits was rounded up to $1,000. The taxpayers objected and the case was referred to the Taxation Board of Review. It was claimed that the partnership was genuine because the wife bore half the housekeeping expenses and because the agreement provided that the parties were to share losses equally, but the Board
found that the wife was favoured by the division of profits to such an extent as to make part of those profits a gift and consequently the agreement was not genuine, and the CIR was entitled to reallocate the profits. However, the Board also found that certain adjustments should be made to the CIR’s calculations by allowing the husband $1.65 per hour for seven hours per week (54 less 47) spent on clerical work, and that interest on capital should be allowed at seven per cent, and that an allowance of 20 per cent should be made on each partner’s opening capital in consideration of the acceptance of liability for a half share of losses. On the making of these adjustments the allocation was amended to the following:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Husband</td>
<td>$9,545.85</td>
</tr>
<tr>
<td>Wife</td>
<td>$1,383.45</td>
</tr>
</tbody>
</table>

**1050.35 Factors used in determining whether a gift exists**

In determining whether a gift exists, the nature of contributions by each partner is considered. These contributions would generally be by way of capital contributions although, in some cases, a value may be placed on such things as skill, services, or perhaps connections.

The ratio of contributions by each partner compared with the ratio of partnership profit allocated to those same partners is considered. A bounty or gift may exist in a partnership where expert knowledge is an important factor and the relative’s contributions, in the absence of any specialised knowledge, are unrelated to the division of partnership profits.

An arm’s length test is applied to determine whether the taxpayer would have entered into a partnership with a stranger on the same terms including the share of profits.

Having determined inequality in a partnership which is not genuine, the CIR will reallocate partnership profits by placing values on the various contributions by each partner.

A partnership agreement may validly determine for tax purposes a partner’s share of a partnership loss on a basis other than capital contribution: *Reed v Young* [1986] 1 WLR 649 (HL).

**1050.40 Partner’s misappropriation of property [ss DB 43, CG 4]**

In calculating the net income derived by any partner, a deduction is allowed for any amount paid by that partner in discharging a legal liability to make good any loss suffered by any person (other than a partner or the spouse [see 960.10] of a partner). For the deduction to apply, the loss must result from misappropriation of property received in the course of the partnership business. The misappropriation must not have been committed by the partner or that partner’s spouse. The amount paid is allowed as a deduction for the income year during which it is paid. Any amount recouped by the partner (whether by way of insurance, indemnity, reimbursement, recovery, or otherwise) is deemed to be income derived by the partner in the year of receipt.

**Example:**

Hugh, Lou, and Doug carry on a computer repair business in partnership. Minnie brings her computer in for repair. Hugh sells the computer (without the knowledge of Lou or Doug) and keeps the proceeds. Hugh, Lou, and Doug reimburse Minnie for the loss of property. All of the partners are liable to make good the loss. Lou and Doug can deduct their part of the amount paid, in the year in which they make the payment. Hugh is not entitled to any deduction. Any amount that Lou and Doug later recover from Hugh is assessable income in the year in which they receive it.

In *TRA Case N7* (1991) 13 NZTC 3,048, (1990) 15 TRNZ 519, a partner could claim a deduction for defalcations which occurred during the course of the partnership. A deduction could not be claimed for trading debts.

See TIB vol 6:2 (August 1993) at 4, which states the CIR’s policy in situations when there is a partnership liability to make good a loss resulting from the misappropriation of property by a partner.

A deduction is allowed only if the partner is under a legal liability to make good the loss. It is not sufficient that the payment be made under a moral rather than a legal obligation.

Section 13 of the Partnership Act 1908 sets out the general principle by which partners are liable for any wrong committed by one of their partners. All partners are liable if a wrongful act or omission by any partner causes loss or injury to any person (except a partner in the firm) or incurs any penalty. The partners are liable
only if the wrong is caused by a partner acting in the ordinary course of the business of the firm or with the
authority of their co-partners.
Section 14 of the Partnership Act 1908 also holds the partnership liable for a loss in these two specific
situations:
(a) If a partner who is acting within the scope of his or her apparent authority receives a third person’s
money or property and misapplies it.
(b) If the partnership receives a third person’s money or property in the course of its business, and the
money or property is misapplied by one or more of the partners while it is in the partnership’s custody.
The CIR’s policy is that a taxpayer can claim a deduction for any amount paid to make good a loss that
another person suffers because of the misappropriation of property, provided that all of the following five
conditions are met:
(a) The taxpayer carries on business in partnership;
(b) The partnership or any of the partners receive property in the course of the partnership business;
(c) The owner of the property is not a partner in the partnership, or the spouse of one of the partners;
(d) Any partner except the taxpayer or his or her spouse misappropriates the property, causing a loss to
the property owner; and
(e) The taxpayer is legally liable to make good the loss.
**TaxNote:** It is not necessary for the taxpayer to make the payment directly to the property owner. Any
reimbursing payment made to an insurance office or indemnity fund that had previously made good the loss
is deductible.

### 1050.45 Rent paid by or to a partner

Rent payable by a partnership to one of the partners for property leased to the firm is deductible in full by
the firm (subject to the normal deductibility criteria) and assessable in full to the recipient. Similarly, rent
payable by a partner to the firm is deductible by the partner (subject to the normal deductibility criteria) and
constitutes part of the firm’s income.

### 1050.50 Interest on partner’s capital

Section 27 of the Partnership Act 1908 provides that:

“The interests of partners in the partnership property, and their rights and duties for the
partnership, shall be determined, subject to any agreement (express or implied) between
the partners, by the following rules: …

“(c) A partner making, for the purpose of the partnership, any actual payment or advance
beyond the amount of capital which he or she has agreed to subscribe is entitled to interest
at the rate of 5 percent per annum from the date of the payment or advance.

“(d) A partner is not entitled, before the ascertainment of profits, to interest on the capital
subscribed by him.”

The following passages in *Lindley on Partnership* (12th ed, Sweet & Maxwell, London, 1962), are relevant.  
At 357 (on the meaning of the capital of a partnership):

“The aggregate of the sums contributed by its members for the purpose of commencing or
carrying on the partnership business, and intended to be risked by them in that business.”

At 419 (on advances by a partner to a partnership):

“An advance by a partner to a firm is not treated as an increase of his capital, but rather as a loan
on which interest ought to be paid; and subject to any agreement between the partners, interest
is payable on money paid or advanced by one partner for partnership purposes beyond the amount
of capital which he has agreed to subscribe. The rate of interest given in such cases is simple
interest at 5 per cent but an agreement to pay a different rate may be inferred if a different rate
Partnerships

1050.55

is payable by the custom or the particular trade or has been charged and allowed in the books of
the particular partnership.”

Accordingly, in addition to genuine loans or advances made by a partner to the firm (other than partnership
capital subscribed), the amounts left in the firm out of the profits of each partner constitute payments or
advances beyond the amount of capital to which each agrees to subscribe. Accordingly, even if no provision
by agreement is made for interest, s 27 of the Partnership Act 1908 would itself have provided an entitlement
in this respect.

The significance of this is that, because the partner is legally entitled to the interest, the partnership is allowed
da deduction for it and the partner receiving the interest is assessable thereon as interest, not as part of the
partnership profits.

1050.55 Book debts acquired by partner

Where a partnership changes the mix of its partners, the old partnership is dissolved and a new partnership
is formed. On such occasions, book debts of the old partnership may be acquired by one or more of the
remaining original partners or one or more of the new partners. Where this occurs and any portion of such
debts subsequently proves to be bad and is written off, a deduction may be claimed only to the extent that
the partners owning the debts were also partners in the earlier partnership.

TaxNote: From 1 April 2008, this applies only where the partners have chosen not to apply the new rules
for changes in the make-up of partnerships [see 1050.27].

1050.60 Work in progress

After withdrawing from a partnership, any amount the partner receives which represents the proceeds from
uncharged work at the time of withdrawing from the partnership is assessable income and not a capital receipt:
Jamieson v Commissioner of Inland Revenue (1974) 1 NZTC 61,126 (CA).

TaxNote: From 1 April 2008, this applies only where the partners have chosen not to apply the new rules
for changes in the make-up of partnerships [see 1050.27].

1050.65 Salaries paid to a partner [ss DC 4, GB 23]

A deduction is available for payments made by a partnership to any partner for services performed under a
contract of service, provided the payment does not exceed the amount payable to the partner as specified in
the contract.

Bonuses payable to partners under a contract of service qualify for the deduction whether or not the amount
of the bonuses is specified in the contract of service.

The deduction is available only for amounts paid for services performed during the period commencing not
earlier than the date on which the contract becomes binding and ending on the date on which it terminates.

The partner must personally and actively perform the duties required under the contract. Those duties must
relate to the carrying on of the partnership business. The contract of service entered into by the working
partner must be in writing, signed by all partners, and must specify the conditions of employment and the
amount payable for services rendered. The payments are subject to s GB 23 where the working partner is a
relative of one of the partners.

The deduction is not available to a partnership which is engaged principally in the investment of money or
the holding of or dealing in shares, securities, investments, or interests in land.

Payments made to the working partner under these provisions are included within the definition of “salary
or wages”. PAYE must be deducted at source from all such payments. Fringe benefit tax does not apply to
any fringe benefits provided to the working partner.

When a salary is paid to a partner outside of these provisions, the salary is not a business expense and the
partnership cannot take it into account in determining its business profit or loss. However, the payment is
relevant to the allocation of profit or loss between the partners. The following example is taken from TIB
Partnerships

Example 1:
Joyce and Mike are partners. The partnership agreement provides for Mike to receive a salary of $40,000 per annum (which does not meet the requirements of s DC 4). The residual profits and losses, after taking into account Mike’s salary, are to be shared equally between Joyce and Mike.

<table>
<thead>
<tr>
<th>Profit before salary</th>
<th>$70,000</th>
<th>To be allocated for individual assessment.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salary</td>
<td>$40,000</td>
<td>Not deductible from partnership income for tax purposes, but attributed to Mike</td>
</tr>
<tr>
<td>Profit after salary</td>
<td>$30,000</td>
<td></td>
</tr>
</tbody>
</table>

The partnership income is attributed $55,000 to Mike and $15,000 to Joyce. Mike’s share of the partnership income comprises the salary attribution of $40,000 and a half share of the balance — $15,000. Joyce’s share of the partnership income is $15,000, which is half of the balance after attributing Mike’s “salary”.

Example 2:
Joyce and Mike are partners. The partnership agreement provides for Mike to receive a salary of $40,000 pa (which does not meet the requirements of s DC 4). The residual profits and losses, after taking into account Mike’s salary, are to be shared equally between Joyce and Mike.

<table>
<thead>
<tr>
<th>Profit before salary</th>
<th>$20,000</th>
<th>To be allocated for individual assessment.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salary</td>
<td>$40,000</td>
<td>Not deductible from partnership income for tax purposes, but attributed to Mike</td>
</tr>
<tr>
<td>Loss after salary</td>
<td>$20,000</td>
<td></td>
</tr>
</tbody>
</table>

The partnership income is fully attributed to Mike. This is because in terms of the partnership agreement he is entitled to the first $40,000 of partnership income. Mike has income from the partnership of $20,000 and Joyce has nil income from the partnership.

In TRA Case L28 (1989) 11 NZTC 1,172, a provision of a partnership deed was held to not comply with the provisions. A clause provided first that each partner would be paid interest on capital. Secondly, after providing for that interest and all other business outgoings, a salary would be paid “to each of the partners respectively commensurate with the time which each of them shall devote to the partnership business”. Thereafter loss or profit sharing was to occur.

1050.70 Special partnerships [ss HC 1, IE 1]

Special partnerships are a particular type of partnership governed by Part 2 of the Partnership Act 1908. There are two categories of partner in a special partnership. The first is the general partners. General partners are actively involved in the business and are jointly and severally liable for the debts of the partnership. General partners are treated in exactly the same way as partners in a normal partnership. The second category of partner is the special partners. Special partners’ liability is limited to their capital contributions. They are treated more like shareholders in a company than like partners in a partnership.

The Limited Partnerships Act 2008 has replaced the special partnerships provisions with a new regime for limited partnerships. Existing special partnerships can be reformed into limited partnerships, subject to transitional rules [see 1050.85]. For information on the taxation of special partnerships, see Staples Tax Guide 2008.

1050.75 Limited partnerships — overview

The Limited Partnerships Act 2008 introduces a new form of partnership which replaces the old special partnership regime.

(1) Key features

A limited partnership is a legal entity separate from its partners. It has two types of partner, being general partners and limited partners.

General partners manage the partnership. They are liable for the partnership’s debts and liabilities if the partnership is unable to honour them.
Limited partners have limited liability. Their liability is limited to the amount of their investment in the partnership. This limited liability can be lost where a limited partner takes part in the management of the partnership. However, the schedule to the Limited Partnerships Act does contain a list of activities that are deemed not to constitute management. These activities can be undertaken by a limited partner without loss of limited liability.

Limited partnerships and overseas constituted limited partnerships are required to register with the Registrar of Companies. However, unlike companies, the confidentiality of investors is maintained.

(2) Tax treatment

For income tax purposes, the income and gains, expenditure and losses, rebates and tax credits are allocated to the partners in proportion to each partner’s income share under the limited partnership.

For resident withholding tax purposes, it is the limited partnership that holds an exemption certificate, not the individual partners.

For GST purposes, limited partnerships registered under the Limited Partnerships Act 2008 are treated as companies.

1050.80 Limited partnerships — limitation on deductions [ss HG 11, HG 12]

The treatment of losses incurred by partners in a limited partnership is governed by s HG 11. A limitation applies to the following partners in a limited partnership:

(a) A limited partner;
(b) A general partner who was a limited partner of the limited partnership within the last 60 days of the income year; and
(c) A general partner who is or will be a limited partner within 60 days after the end of the income year.

These partners are denied a deduction to the extent to which their share of the deductions of the limited partnership exceed the amount calculated under the following formula below. The amount so calculated is called “the partner’s basis”. The formula is:

investments - distributions + income - deductions - disallowed amount

Where:

“Investments” is the total of:

(a) The market value of “capital contributions” (below), made by the partner to the limited partnership at the time at which the relevant contribution is contributed (or agreed to be contributed) by them;
(b) The amount paid by the partner for the assignment of capital contributions to them; and
(c) The secured amounts.

“Distributions” is the total of:

(a) The market value of distributions to the partner from the limited partnership; and
(b) The amount paid to the partner for the assignment of capital contributions by them.

“Income” is the total of:

(a) The partner’s share of partnership assessable income in that income year and all previous income years. This amount excludes dividends paid by a FIF for which the partner has FIF income, but only up to the amount of the partner’s FIF income for that income year;
(b) The partner’s share of realised capital gains in that income year and all previous income years, unless the gain is accounted for under item (a) above; and
(c) Assessable income that the partner has in previous income years from goods and services that they contributed to the limited partnership, if the income is not accounted for in items (a) or (b) above, or as “Investments” (above).

“Deductions” is the total of:
(a) The partner’s share of the partnership expenditure or loss in all previous income years, excluding any deductions denied in those previous years under this formula;
(b) The partner’s share of capital loss amounts in that income year and all previous income years, unless the loss is accounted for under paragraph (a); and
(c) The partner’s share of deductions that the partner is allowed in previous income years in relation to the assessable income item (c) of “Income” (above).

“Disallowed amounts” is the amount of “Investments” (above), made by the partner within 60 days of the end of the income year, if those investments are, or will be, distributed or reduced within 60 days following the end of the income year.

There is an exclusion to the limitation of deductions under this formula. The exclusion applies to exiting partners. The limitation does not prevent an exiting partner from obtaining a deduction up to the amount of net income that the exiting partner has for the amount received or receivable for the disposal of their partner’s interests.

(1) Definitions

“Capital contribution” includes a capital contribution for the purposes of the Limited Partnerships Act 2008.

“Limited partnership deduction” means, for the partner and the income year, the amount of any deductions that the partner would be allowed if the partner is treated as having no income or deductions other than those that arise from the limited partnership.

“Secured amounts” means, for the partner, the least of:
(a) The amount of the limited partnership’s debt that the partner or the “partner’s associate” (below) secures by a guarantee or indemnity;
(b) The amount that results from dividing the amount in item (a) by the number of partners who are jointly and severally liable for the debt;
(c) The amount that is the market value of property against which the guarantee or indemnity may be enforced, treating the partner’s interests as having a market value of zero; and
(d) the proportion of the amount described in item (c) above, that is attributable to the partner in the case of the partners being jointly and severally liable for the debt.

“Partner’s associate” means a person who is not a partner of the relevant limited partnership, and who is:
(a) a relative of the partner; or
(b) a company in the same wholly-owned group as the partner.

Section HG 12 provides that deductions denied to a partner under s HG 11 are carried forward to the following income year. Section HG 11 is then applied again at the end of the second income year and amounts denied as deductions are then carried forward to the third income year, and so on. However, carry-forward is denied where the limited partnership ceases to be a limited partnership in a later year to which the deductions are carried forward. Carry-forward is also denied where the partner ceases to be a partner in a later income year to which the deductions are carried forward, but are revived and claimable in a future income year in which the person again becomes a partner in the limited partnership.

1050.85 Limited partnerships — transitional rules for special partnerships [s HZ 3]

Transitional rules apply where a special partnership that exists as at 1 April 2008 is terminated and a limited partnership registered under the Limited Partnerships Act 2008 succeeds to that special partnership. The rules provide that no partner’s interests in the special partnership are treated as being disposed of merely because of that termination and succession. Further, the partners of the special partnership are treated as the same partners of the new limited partnership.
For the first income year, when the partners calculate their “partner’s basis” [see 1050.80], all of the partners are required to choose one of the two following methods for the calculation under the formula:

(a) They may choose to use the market value or the accounting book value (as at the last day of the income year) of the items described in the formula; or

(b) They may choose to apply the formula as if the special partnership had always been a limited partnership and all relevant rules relating to limited partnerships had always existed.

If the application of the formula then results in a “partner’s basis” of less than zero, the partner’s basis for that year is deemed to be zero.

1050.90 Limited partnerships — transitional rules for overseas limited partnerships [s HZ 4]

The transitional rules for overseas limited partnerships moving into the limited partnership rules is the same as that applying to special partnerships.

For the first income year, when the partners calculate their “partner’s basis” [see 1050.80], all of the partners are required to choose one of the two following methods for the calculation under the formula:

(a) They may choose to use the market value or the accounting book value (as at the last day of the income year) of the items described in the formula; or

(b) They may choose to apply the formula as if the special partnership had always been a limited partnership and all relevant rules relating to limited partnerships had always existed.

1050.95 Limited partnerships — anti-avoidance

Section GB 49 allows the CIR to substitute market value for the consideration under an arrangement entered into by a partner. This applies where the consideration under the arrangement is not market value and the purpose or effect of the arrangement is to defeat the intent and application of subpart HG.
Chapter 1070

Patents and Patent Rights

1070.10 Patent rights
“Patent rights” means the right to do or authorise anything that would, but for the right, be an infringement of a patent.

1070.20 Fees paid for patents [ss DB 36, DB 37]
The deductibility of expenditure incurred for the grant, maintenance, or extension of a patent is governed by the general permission in s DA 1. This means that, in order for a deduction to be available, the patent must be used in earning assessable income and the expenditure must not be capital in nature [see 230.10]. However, where a person who applies for the grant of a patent and is refused the grant or withdraws the application, s DB 37 provides relief. The person is allowed a deduction for expenditure incurred in relation to the application where that expenditure would have been part of the cost of fixed life intangible property if the application had been granted provided that expenditure is not deductible under another provision. The deduction is able to be taken in the income year in which the grant is refused or the application is withdrawn.

Expenditure incurred for the grant, maintenance, or extension of a patent which was acquired before 23 September 1997 is deductible under s DB 36 in the income year in which the expenditure is incurred provided that the patent is used in deriving assessable income for that year.

1070.30 Cost of devising patents [s DB 38]
Patents created or acquired on or after 1 April 1993 are able to be depreciated as “depreciable intangible property” under subpart EE [see 250.105]. Expenditure incurred on or after 1 April 1993 on the development of an intangible asset may be deductible under the research and development provisions of ss DB 33 and DB 34 [see 1240 RESEARCH AND DEVELOPMENT].

Where a patent has been granted for any invention, a deduction is allowed for any expenditure incurred by the taxpayer before 1 April 1993 in connection with the devising of the invention. The provision applies whether the person devised the invention alone or with another person. This deduction is allowable only to the inventor and then only where the invention is used by the inventor in deriving gross income. The CIR treats the receipt of royalties as “using the patent in deriving income”.

The costs of opposing an application by a competitor for the registration of a trade mark for a brand or article substantially similar to that already being marketed by the taxpayer is deductible, the expenditure being necessarily incurred to enable the taxpayer to carry on the business without interference: Commissioner of Inland Revenue v Murray Equipment Ltd [1966] NZLR 360 (SC). Costs of litigation proceedings for an alleged infringement of a trade mark or patent are similarly deductible.

1070.40 Patent rights sold and purchased [ss CB 30, DB 38, DB 39, DB 40, EI 4]
Any amount received by or owing to a taxpayer for the sale of a patent application with a complete specification, or from the sale of patent rights, is income — even when it takes a form other than cash. The income is derived in the year in which the amount is received or becomes owing to the taxpayer [s CB 30].
From the 2007-2008 income year, vendors of patent rights can elect to spread income on sale of patent rights evenly over three years — being the income year that it was derived and the following two income years [s EI 4].

A taxpayer who sells patent rights may deduct the following expenditure in the year of sale:

(a) If the taxpayer devised the invention to which the patent relates, the taxpayer may deduct any expenditure incurred in devising the invention, provided a deduction for that expenditure has not already been allowed. If the sale does not include all of the patent rights, a proportion of the expenditure is deductible. That proportion is the proportion that the amount derived from the sale of the patent rights bears to the market value of the whole of the patent rights on the date of sale [s DB 38].

(b) If the taxpayer acquired the patent rights before 1 April 1993, the taxpayer may deduct a proportion of the cost of acquisition. The proportion is of the unexpired term of the patent rights at the date of sale to the unexpired term of the patent rights at the date of acquisition [s DB 39]. See example below.

(c) If the taxpayer acquired the patent application or the patent rights on or after 1 April 1993, the taxpayer may deduct the cost of acquisition less the total of the amounts already allowed as depreciation deductions [s DB 40].

Example:
A taxpayer acquired patent rights (before 1 April 1993) for six years for $1,000. The taxpayer sells the patent rights after three years. The taxpayer is allowed a deduction of: $1,000 × ½ = $500.

Subpart EE (which deals with the disposal of depreciable property) does not apply to any expenditure deductible under (a), (b), or (c) above.

The above rules apply also to any share or interest in any patent rights.

1070.50 CIR’s interpretation statement

The CIR has issued a revised interpretation statement that examines the income tax treatment of New Zealand patents, patent applications, and patent rights [see TIB vol 18:7 (August 2006) at 37-67].

The conclusions reached in the statement can be summarised as follows:

(a) References in the legislation to a “patent” refer to the legal rights that the owner of the patent obtains as a result of the grant of that patent. In the case of New Zealand patents, this will be the legal rights obtained as the result of a patent granted under the Patents Act 1953;

(b) Other intellectual property rights are not patent rights and the patent does not include the invention that the patent relates;

(c) Expenditure on research and development, including that on the construction of prototypes, is in accordance with s DB 33 for scientific research [see 1240.10] and ss DB 34 and DB 35 for other research and development [see 1240.20] provided that the taxpayer both complies with the relevant requirements of FRS-13: Accounting for Research and Development Activities, and chooses to apply these sections. In other cases the treatment is as per the general deductibility provisions of ss BD 2, DA 1, DA 2, DA 3 and DA 4;

(d) The current statutory provisions relating to “patents” only affect income and expenditure incurred in the patenting process (ie typically the administrative and legal costs incurred in the application for the patent) not income and expenditure incurred in devising the invention to which the patent relates;

(e) Legal expenses incurred in either defending or attacking a patent are generally revenue in nature;

(f) A person who devised an invention for which a patent has been granted and who uses the patent for deriving income, is allowed a deduction for expenditure incurred before 1 April 1993 under s DB 38 [see 1070.30];

(g) If the person who devised the invention sells the patent rights relating to the invention, a deduction is allowed for the expenditure incurred in deriving the invention to the extent to which a deduction has not already been allowed under s DB 38 [see 1070.40];
Patents and Patent Rights

(h) When patent rights acquired on or after 1 April 1993 are sold, a deduction is allowed under s DB 40 of the total cost to the person of those patent rights less total amounts of depreciation loss [see 1070.40];

(i) The disposal of patent rights is the disposal of a capital item unless it is the rare situation where the taxpayer is in the business of buying and selling patent rights, in which case, patent rights are trading stock and their disposal is a revenue item. Patent rights which are trading stock are not depreciable; and

(j) An amount that a person derives from the sale of patent rights is income of the person [s CB 30, see 1070.40].

1080.05 PAYE income payments [s BE 1(1)]

Any person who makes a PAYE income payment must withhold tax from the payment under the PAYE rules. The PAYE rules specify how much tax must be deducted and when it must be paid to Inland Revenue.

1080.10 Definitions [ss RD 3, RD 5, RD 6, RD 7, RD 8, YA 1]

The following defined terms, listed in alphabetical order, are commonly used in the PAYE rules.

An “employee” [s YA 1] is a person who receives or is entitled to receive a PAYE income payment.

An “employer” [s YA 1] is a person who pays or is liable to pay a PAYE income payment, and includes:

(a) The manager or other principal officer of an unincorporated body of persons other than a partnership;
(b) Each partner in a partnership;
(c) Each person in whom the property has become vested or to whom control of the property has passed,
   for the estate of a deceased person, a trust, a company in liquidation, an assigned estate, or for any
   other property vested or controlled in a fiduciary capacity; and
(d) The Crown.

An “extra pay” [s RD 7] is a payment (not including overtime pay and exempt income) that is made to a
   person in connection with their employment, but is not a payment regularly included in salary or wages. Extra
   pays are excluded from the definition of salary or wages because they are taxed at a special rate. The payment
   may be made in one lump sum, or in two or more instalments. An extra pay includes:

(a) A bonus, gratuity, share of profits, or redundancy payment (defined below);
(b) A payment made when a person retires from employment;
(c) A payment made for a retrospective increase in salary or wages (ie backpay); and
(d) Income derived under a restrictive covenant [s CE 9], or for loss of vocation, position or status, or
   for leaving a position [s CE 10], in connection with an employment relationship between the payer
   and the payee.

A “redundancy payment” is a PAYE income payment paid:

(a) To a person whose employment in a position is terminated because the position has become
    superfluous to the requirements of their employer; and
(b) In compensation for the loss of the person’s employment.

Regular bonuses (ie incentive or production bonuses paid out more frequently than once a year) are not extra
   pays. They are treated as normal salary or wages. Backpay (a payment for a backdated salary increase) is an
   extra pay, but holiday pay and overtime pay are not. A payment for a retrospective increase in salary or wages
   is included in extra pay only to the extent that:
(a) It accrues from the start of the increase until the start of the first pay period in which the increase is included in salary or wages; and
(b) When a week ends on a Saturday, the total of the backpay and the basic salary or wages for the week is more than $4.

A “pay period” [s YA 1] means the period for which regular payments of salary or wages are made to an employee. Typical pay periods are weekly, fortnightly, four-weekly and monthly.

A “PAYE income payment” [s RD 3] is:
(a) A payment of salary or wages;
(b) Extra pay; or
(c) A schedular payment.

The following are excluded from the definition of “PAYE income payment”:
(a) Amounts attributed under s GB 29. Section GB 29 attributes income from personal services to the person performing the services under certain conditions [see 740.30 to 740.50]. No tax deduction is required because the attributed income is not received in monetary form;
(b) An amount paid to a shareholder-employee of a close company in the circumstances set out in 1080.33; and
(c) An amount paid or benefit provided, by a person (the claimant) who receives a personal service rehabilitation payment from which tax has been withheld at the rate of 12.5 per cent under sch 4, Part I, or at the applicable rate under s RD 18, to another person for providing a key aspect of social rehabilitation [see 20.110].

The “PAYE rules” [s RD 2(1)] means:
(a) Section BC 1 (non-filing and filing taxpayers);
(b) Section LA 6 (remaining refundable credits: PAYE, RWT, and certain other items), s LB 1 (tax credits for PAYE income payments) and s LD 4 (tax credits for payroll donations);
(c) Sections RD 3 to RD 24 (PAYE deductions rules);
(d) Sections RP 2 to RP 16 (PAYE intermediaries); and
(e) Sections 15C to 15M, 24, 24B to 24P, 48, and 133, Part 9, and ss 167 to 169 of the TAA.

Salary or wages specifically includes the following items:
(a) Expenditure on account of an employee;
(b) Payments to working partners under s DC 4 and, for income year beginning on or after 1 April 2011, payments to working owners of look-through companies under s DC 3B;
(c) Periodic payments of pensions, allowances or annuities made to a person or their spouse [see 960.10], child, or dependent in connection with past employment;
(d) Payments of salary or allowances to members of Parliament;
(e) Payments of salary and principal allowances to judicial officers;
(f) A gratuitous payment made to a person in return for services provided to the payer by the person (or their parent, child, spouse, former spouse, or dependant) when the payment would not have been made if the services had not been provided;
(g) Payments of income-tested benefits;
(h) Payments of veterans’ pensions (excluding veterans’ pensions paid under s 74J(2)(b) of the War Pensions Act 1954);
(i) Payments of New Zealand superannuation (excluding New Zealand superannuation paid under s 26(2)(b) of the New Zealand Superannuation and Retirement Act 2001);
(j) Payments of living alone payments;
(k) Parental leave payments;
(l) Basic grants and independent circumstances grants provided to tertiary students;
(m) The market value of accommodation that a person receives in connection with their employment or service (not including a relocation payment under s CW 17B); and
(n) An employer’s superannuation cash contribution that the employee chooses to treat as salary or wages under s RD 68.

Salary or wages does not include:
(a) Exempt income, extra pays or schedular payments;
(b) Salary, wages or other income derived by a shareholder-employee that is, under s RD 3(3) and (4), not a PAYE income payment;
(c) Employers’ superannuation contributions (other than an employer’s superannuation cash contribution that the employee chooses to treat as salary or wages under s RD 68); or
(d) Payments excluded by regulation.

A “schedular payment” [s RD 8] is a payment of a type set out in sch 4 [see 1320 SCHEDULAR PAYMENTS]. If the payment relates to a sale, the schedular payment is the net amount paid after subtracting commission, insurance, freight, classing charges and other expenses incurred by the seller in connection with the sale. The definition of schedular payment specifically excludes:
(a) Salary or wages;
(b) An extra pay;
(c) A payment for services provided by a public authority, a local authority, a Maori authority, or a company (other than a non-resident contractor, a non-resident entertainer, or an agricultural, horticultural, or viticultural company);
(d) A payment covered by an exemption certificate provided under s 24M of the TAA;
(e) A payment for services provided by a non-resident contractor who has full relief from tax under a double tax agreement, and is present in New Zealand for 92 or fewer days in a 12-month period; or
(f) A contract payment for a contract activity or service of a non-resident contractor when the total amount paid for those activities to the contractor or another person on their behalf is $15,000 or less in a 12-month period.

1080.13 Requirement to make tax deductions [ss RA 1, RA 2, RA 5]

When an employer makes a PAYE income payment to an employee, the employer (or other person making the payment) must deduct tax from it and pay the tax to the CIR by the due date [s RA 5].

In TRA Case P44 (1992) 16 TRNZ 892, a New Zealand firm appointed a merchandise manager from overseas at a salary of $56,000 per annum and paid the employee a net monthly amount of $3,000 without accounting to Inland Revenue for the PAYE. The employee believed tax had already been paid on the amounts, but the CIR made amended assessments for the relevant income years on the basis that payments received by the employee were gross and therefore subject to tax in the hands of the employee. The employee objected and the objection was upheld. The responsibility of making PAYE deductions was on the employer. In this case, deductions were made by the employer, but were retained to assist the funding of its business. The employee’s wages were a PAYE income payment. It was not for the respondent to either tax the payments made to the employee as if they were gross, or to recover PAYE deductions from the employee.

1080.15 Payment in pay periods [s RD 15]

The following rules apply for the purpose of determining the amount of a tax deduction:
(a) If an employee in regular full-time employment is paid salary or wages for part of a pay period, the payment is treated as a payment for a full pay period.
(b) If an employee in regular full-time employment is paid salary or wages for part of a pay period, the payment is treated as a payment for a full pay period.

(c) If a PAYE income payment for a pay period is paid in two or more separate sums, those sums must be added together to determine the amount of tax for the payment.

(d) If it is impractical for an employer to pay an employee overtime pay and other salary or wages for a pay period at the same time, the employer may add the amount of the overtime pay of the employee to their salary or wages for a later pay period (but not to their overtime pay) if, for both pay periods:
   (i) The amounts of the employee’s salary or wages are more or less the same;
   (ii) The amounts of tax withheld from the employee’s salary or wages are the same; and
   (iii) The employee has the same tax code.

For this purpose, if overtime pay is paid for a period that is the same length as a pay period but does not coincide with a pay period, it may be treated as overtime pay for the pay period in which the period ends.

1080.16 CIR may determine if payment is subject to PAYE [s RD 3(5); TAA, 138M]

If a question arises whether the PAYE rules apply to all or part of a PAYE income payment, the CIR must determine the matter.

A person in respect of whom such a determination is issued cannot challenge or dispute the determination. Section 138E(1)(e)(i) prohibits a person from challenging a matter which, under the PAYE rules, is left to the determination of the CIR. An income tax dispute can be commenced only in respect of an assessment or a disputable decision. The definition of “disputable decision” in s 3(1) of the TAA [paragraph (b)(iii)] excludes a decision of the CIR which cannot be challenged and, as explained above, a s RD 3(5) determination cannot be challenged. However, a disputant may dispute a NOFA or challenge an assessment that is issued by the CIR in relation to an amount of tax withheld on the basis of a determination under section RD 3(5), on the ground that the determination is wrong, whether in fact or in law.

1080.17 Schedular payments [ss RD 8, RD 10(3), sch 4]

A person who makes a PAYE income payment (salary, wages, an extra pay or a schedular payment) is required to deduct tax from the payment. If the payment is made to an employee, PAYE (as set out in the PAYE tables) must be deducted. If the payment is a schedular payment and it is made to a non-employee, tax must be deducted at prescribed rates [see 1320 SCHEDULAR PAYMENTS].

1080.20 Amount of tax deduction from salary or wages [ss RD 9, RD 10, RD 11, LA 6, LB 1, sch 2]

The amount of tax to be deducted from PAYE income payments is the amount specified in sch 2. For normal payments of salary or wages, the amount of tax to deduct is determined using the PAYE tables published by Inland Revenue (IR340 Weekly and fortnightly PAYE deduction tables and IR341 Four weekly and monthly PAYE deduction tables). The amount of the deduction depends on the employee’s tax code [see 1080.25] and the amount of the payment. The rates of tax and earners’ levy shown below are those for the 2011-2012 income year.

If an employee has not provided their employer with a tax code declaration [see 1080.26], then tax must be deducted at the “no notification” rate of 45 cents in the dollar (47.04 cents including the earners’ levy).

The amount of tax deducted from an employee’s salary or wages during a tax year is credited against the employee’s income tax liability for the tax year. Any surplus credits are used to satisfy any income tax liability the employee may have for another tax year, and any remaining balance is refunded to the employee [see 1215.20].

Type of earnings (tax code) 1 April 2011 to 31 March 2012

Staples Tax Guide 2012
Secondary employment (SB) 10.5
Secondary employment (S) 17.5
Secondary employment (SH) 30.0
Secondary employment (ST) 33.0
Casual agricultural worker (CAE) 17.5
Election day worker (EDW) 17.5
Non-resident seasonal worker (NSW) 10.5

Note: The rates shown in the above table are cents per dollar of earnings, and do not include the earners’ levy. The earners’ levy is 2.04 cents in the dollar.

1080.22 Tax deduction exceeds PAYE income payment [ss RA 10, RD 21]
If the amount of a PAYE income payment available in money is less than the amount of the tax deduction (eg when a non-monetary PAYE income payment such as an accommodation benefit has been provided), the employee is required to pay the deficiency to the employer. The amount so paid is deemed to be a tax deduction made by the employer.

Example:
During a monthly pay period, a senior employee receives a salary payment of $4,000 and free accommodation with a value of $11,000. The total PAYE income payment is therefore $15,000. The tax that must be deducted by the employer from the PAYE income payment is $4,383 (at 2011-2012 rates, including the earners’ levy). However, the total cash from which to deduct the tax is only $4,000 (obviously tax cannot be deducted from the non-cash accommodation benefit), so the employee will be required to pay $383 to the employer. The employer will then pay the $4,383 tax deduction to Inland Revenue. If the employee fails to pay the required amount to the employer, Inland Revenue can recover the amount directly from the employee under s RD 4(2) [see 1080.85].

1080.24 PAYE deductions when new rates come into force [s RD 14]
The following procedures apply for the pay period in which a change occurs to the rates of tax for PAYE income payments set out in sch 2:
(a) Where the pay period does not exceed one month, deductions are to be made entirely at the new rate, whether it is higher or lower;
(b) Where the pay period is for more than one month, the pay is to be apportioned between the period before the date on which the change took place and the period after that date and tax is to be deducted from each portion at the respective rates in force during those periods; and
(c) Where, after the date on which a change comes into force, an employee receives a payment of salary or wages for a period ending before that date, tax is to be deducted at the old rate.

The following tax codes apply to PAYE income payments other than extra pays, schedular payments and income-tested benefits:

<table>
<thead>
<tr>
<th>Tax code</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>M</td>
<td>Primary employment earnings when the employee is not entitled to the transitional tax credit [s LC 4] or the independent earner tax credit [s LC 13].</td>
</tr>
<tr>
<td>ME</td>
<td>Primary employment earnings when the employee is entitled to the independent earner tax credit [s LC 13].</td>
</tr>
<tr>
<td>ML</td>
<td>Primary employment earnings when the employee is entitled to the transitional tax credit [s LC 4].</td>
</tr>
<tr>
<td>SB</td>
<td>Secondary employment earnings for an employee whose annual income is not more than $14,000.</td>
</tr>
</tbody>
</table>
PAYE 1080.25(1)

S Secondary employment earnings for an employee whose annual income is in the range $14,001 - $48,000.

SH Secondary employment earnings for an employee whose annual income is in the range $48,001 - $70,000.

ST Secondary employment earnings for an employee whose annual income exceeds $70,000.

CAE Salary or wages for employment as a casual agricultural employee.

EDW Salary or wages for employment as an election day worker.

NSW Salary or wages for employment as a non-resident seasonal worker.

No notification An employee who has not provided their employer with a tax code notification or tax code certificate.

When an employee receives an income-tested benefit and another PAYE income payment at the same time, the “S” tax code applies to the non-benefit income [TAA, s 24C].

The tax code applying to an employee’s parental leave payment is the same tax code that applied to the employee before the parental leave payments started, unless the employee provides another tax code notification [TAA, s 24D].

An employee with a student loan balance who expects their total income to exceed the annual repayment threshold must add “SL” to the end of their tax code. The employer is then required to deduct a student loan repayment as well as PAYE [see 1080.36].

(1) Employer using incorrect tax code

If an employer or a PAYE intermediary is using an incorrect tax code to calculate the tax deductions from PAYE income payments made to an employee, the CIR may notify the employer or the intermediary of the correct tax code and require the employer to apply this tax code to all future PAYE income payments to that employee. The tax code notified by the CIR may be superseded by a new tax code declaration supplied by the employee, if the employee’s circumstances change [TAA, s 24G].

(2) When entitlement to use tax code ends

When an employee is no longer entitled to use a particular tax code (eg because of a change in their circumstances), that tax code does not apply to future PAYE income payments unless the payment is salary or wages for a current pay period. The employee must notify their employer (or the CIR) that their entitlement has ended within four days after the date they became aware that they are no longer entitled to use the tax code. The employee must also give the reason why the tax code no longer applies and the date on which entitlement ended. If the employee provides their employer with a tax code notification or tax code certificate within seven days after the date on which they become aware that they are no longer entitled to use a tax code, the new tax code applies from the date on which the entitlement to use the earlier code ends. When an employee’s entitlement to use a particular tax code ends, their employer is not liable for withholding a reduced amount of tax for a payment if they have not received notice that the entitlement has ended.

An employee is not entitled to use the tax code “ML” in a tax year if the employee knows or expects, or should have known or expected, that they will not be entitled to a tax credit under s LC 4 [TAA, s 24H].

1080.26 Tax code declarations [TAA, ss 24B, 24I]

An employee is required to notify their employer that their tax code is one of the codes listed in 1080.25. If the employee fails to do this, tax is deducted from their salary or wages at the “no notification” rate (see 1080.20). An employee notifies their employer using a tax code declaration (IR330), which must be completed and delivered to the employer or payer of a schedular payment by:

(a) An employee on the commencement of employment;

(b) An employee who wishes to change their tax code; and
(c) A person to whom a schedular payment is to be made.

A separate declaration must be completed for each source of income (eg if a person has two employers, an IR330 must be completed for each employer). It is not necessary for an employee to complete a new tax code declaration at the start of each tax year.

The following information about the employee must be included in the tax code declaration:

(a) Name;
(b) IRD number;
(c) Correct tax code [see 1080.25];
(d) Type of schedular payment, if applicable;
(e) Whether the employee has a special tax code certificate;
(f) A statement that the employee is entitled to work in New Zealand; and
(g) The employee’s signature and date of signing.

The employer must ensure that a tax code declaration is fully completed for each employee. If an employee does not complete a tax code declaration, or omits their IRD number, tax code or any personal details, then the employer is legally obliged to deduct tax at the no notification rate. In the case of schedular payments, the no declaration rate is 15 cents in the dollar in addition to the appropriate tax rate.

1080.27 Special tax code certificates [TAA, s 24F]

The total amount of PAYE deducted from an employee’s earnings during a tax year will normally approximate the employee’s total income tax liability for that year (assuming this is their only income source). However, special circumstances may mean that tax deductions at the table rates will lead to a significant over or under-deduction of tax for the year. Such over or under-deduction may occur if:

(a) The employee has two or more jobs and the “S” tax rate is insufficient to meet the overall tax liability;
(b) The employee has an available net loss that can be offset against their employment income;
(c) The employee receives commissions or bonuses that vary erratically, so that normal tax deductions are excessive;
(d) The employee has a student loan and wants to make loan repayments over and above the statutory amounts;
(e) The person receives an overseas pension that is taxable in New Zealand; or
(f) The employee qualifies for hardship relief [see 480 FINANCIAL RELIEF].

In circumstances such as these, the employee can apply to Inland Revenue for a special tax code certificate. If Inland Revenue decides to issue a special tax code certificate, the certificate will specify that deductions be made from the employee’s earnings by:

(a) Deducting tax using a specified tax code;
(b) Making tax deductions at a certain rate (including a nil rate);
(c) Deducting the earner levy only; or
(d) Making student loan deductions at a specified rate.

A special tax code certificate does not take into account working for families tax credits. A person entitled to a WFF tax credit must apply for this in the normal way [see 420.05 to 420.15].

Non-resident seasonal workers cannot apply for a special tax code certificate [see 1080.31].

On receipt of a valid special tax code certificate issued by Inland Revenue and signed by the employee, the employer must deduct tax at the rate, or using the tax code, specified in the certificate. A special tax code certificate is valid only for the period stated on the certificate. At the end of that period, the employee must either obtain a new special tax code certificate or complete a tax code declaration (IR330). Further information about special tax code certificates can be found in TIB vol 6:9 (February 1995) at 1-2.
Inland Revenue may cancel a special tax code certificate at any time, and the employee must return the certificate to Inland Revenue within seven days of receiving notice of cancellation. In Commissioner of Inland Revenue v Lemmington Holdings Ltd [1982] 1 NZLR 517, (1982) 5 NZTC 61,268 (CA) the Court of Appeal granted no relief where the CIR sought to withdraw special tax codes certificates previously granted.

**1080.30 Extra pays [ss RD 10(2), RD 17, sch 2, Part B]**

Extra pays are excluded from the definition of “salary or wages”, and the tax deduction rates set out in the PAYE tables do not apply to them.

The rate at which tax is to be deducted from an extra pay [see 1080.10 for the definition] depends on the total of the extra pay and the annualised value of all other PAYE income payments paid to the employee by the employer in the four weeks preceding the day the extra pay is paid [s RD 17]. The following table (based on sch 2, Part B) summarises when the various rates apply.

<table>
<thead>
<tr>
<th>Annualised remuneration plus extra pay</th>
<th>Rate of deduction</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0 - $14,000</td>
<td>10.5%</td>
</tr>
<tr>
<td>$14,001 - $48,000</td>
<td>17.5%</td>
</tr>
<tr>
<td>$48,001 - $70,000</td>
<td>30%</td>
</tr>
<tr>
<td>$70,001 upwards</td>
<td>33%</td>
</tr>
</tbody>
</table>

**Note:** The earners’ levy [see 1080.20] is added to the deduction rates shown above.

An employee who has provided their employer with a tax code declaration may choose to have an extra pay taxed at a higher rate [s RD 10(2)].

**Example:**

Dion received wages of $1,380 for the two weeks ended 6 August and $1,470 for the two weeks ended 20 August. With his pay for the two weeks ended 20 August, he also received a payment of $5,000 for a backdated wage increase. The backpay is an “extra pay”. The annualised value of his PAYE income payments (other than the extra pay) for the four weeks preceding the payment of the extra pay is:

\[
\frac{(1,380 + 1,470)}{4} \times 52 = 37,050
\]

The total of this and his extra pay is $42,050 ($37,050 + $5,000). The applicable rate of tax to deduct from the extra pay is (as per the above table) therefore 17.5 per cent. The amount of tax (excluding the earners’ levy) to be deducted from the extra pay is $5,000 × 17.5% = $875. Dion could (if he had other sources of income that meant that his total income for the year would exceed $48,000) elect, by completing a tax code declaration, that tax be deducted from the extra pay at 30 per cent or 33 per cent, as applicable.

**1** Extra pays relating to secondary employment [s RD 17(3), (4)]

If an employer pays an amount of extra pay to an employee who has notified the employer that a secondary tax code applies, the tax rate applicable to the extra pay is based on the following amount:

\[
\text{extra pay + annualised amount + low threshold amount}
\]

Where:

“Extra pay” is the amount of the extra pay;

“Annualised amount” is as explained above;

“Low threshold amount” is as follows:

<table>
<thead>
<tr>
<th>Secondary code</th>
<th>Low threshold amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>SB</td>
<td>$0</td>
</tr>
<tr>
<td>S</td>
<td>$14,001</td>
</tr>
<tr>
<td>SH</td>
<td>$48,001</td>
</tr>
<tr>
<td>ST</td>
<td>$70,001</td>
</tr>
</tbody>
</table>

Staples Tax Guide 2012 1225
1080.31 Casual agricultural employees and non-resident seasonal workers [ss YA 1, YD 1(11), sch 2; TAA, ss 24B, 24F, 33A]

1. Casual agricultural employees

A “casual agricultural worker” is defined as a person engaged on a day-to-day basis for up to three months as a casual seasonal worker for the exclusive purpose of doing seasonal agricultural, horticultural, market gardening, nursery, orchard, or tobacco farming work, or other similar seasonal work [s YA 1, see 430.190].

A “shearer” is defined as a person who undertakes the shearing of sheep, but who is not carrying on a business and is not permanently employed on the premises where the shearing shed is situated [s YA 1].

A “shearing shed hand” is a person who is employed in or about the shearing shed but is not carrying on a business. Shearers, wool classers and persons permanently employed on the premises where the shearing shed is located are not shearing shed hands [s YA 1].

2. Non-resident seasonal workers [ss YA 1, YD 1(11), sch 2; TAA, ss 24B, 24F, 33A]

“Non-resident seasonal workers” (commonly referred to as migrant workers) are non-resident individuals who are employed to undertake work in New Zealand under the recognised seasonal employment scheme. The “recognised seasonal employment scheme” is the recognised seasonal employer policy published by the Department of Labour under s 13A of the Immigration Act 1987 [s YA 1].

Non-resident seasonal workers are treated as non-residents while they are employed under the recognised seasonal employment scheme, even if they are personally present in New Zealand for more than 183 days in total in a 12-month period.

The special tax code “NSW” applies to salary or wages earned by non-resident seasonal workers. These earnings are taxed at the flat rate of 10.5 cents in the dollar.

Non-resident seasonal workers cannot apply for a special tax code certificate. A non-resident seasonal worker is not required to file an income tax return if they have used the “NSW” tax code.

1080.32 Election day workers [s YA 1, sch 2, cl 7]

“Election day workers” are defined as people engaged to work for an election or poll held under the Electoral Act 1993, the Local Electoral Act 2001, or the Local Restoration Polls Act 1990. This applies only to work done or services rendered immediately before, on or immediately after the day on which the election is held or poll is taken, and where the worker is paid by the authority controlling the election or poll.

Payments to election day workers (tax code “EDW”) have tax deducted at the rate of 19.54 cents in the dollar (including the earners’ levy).

1080.33 Shareholder-employees of close companies [s RD 3(2)-(4)]

If the conditions set out below apply for an income year:

(a) The person may choose to treat all amounts paid to them in that income year, in their capacity as employee of the close company, as income that is not a PAYE income payment; and

(b) All amounts paid to the person in later income years, in their capacity as employee of the close company, are treated as income that is not a PAYE income payment.

The conditions that must be satisfied are:

(a) The person is a shareholder-employee of a close company; and

(b) The person does not derive, as an employee, salary or wages of a regular amount for regular pay periods:

(i) Of one month or less throughout the income year; or

(ii) That total 66 per cent or more of the annual gross income of the person in the corresponding tax year as an employee; or
(c) An amount is paid as income that may later be allocated to the person as an employee for the income year.

The effect of this treatment is that the company is not required to deduct PAYE from payments of employment income to the shareholder-employee, and the shareholder-employee will be responsible for paying the tax on that income (including provisional tax, if applicable).

A “close company” is defined as a company to which either of the following conditions applies:
(a) There are five or fewer natural persons the total of whose voting interests in the company is more than 50 per cent (treating all associated natural persons as one natural person); or
(b) A market value circumstance exists for the company and there are five or fewer natural persons the total of whose market value interests in the company is more than 50 per cent (treating all associated natural persons as one natural person).

For the purposes of s RD 3(2)-(4), a “close company” also means a company with 25 or fewer shareholders.

A special corporate entity cannot be a close company [s YA 1].

1080.34 Non-residents [ss BD 1, CW 19, HD 27, YD 1]

Generally, non-residents are liable for New Zealand income tax on all income derived from New Zealand. Thus if a non-resident works for a New Zealand employer, the employer will deduct PAYE from the non-resident’s salary or wages in the same way as for a resident [see 1000.25].

Foreign-sourced income of non-residents is not assessable income [s BD 1(5)(c)]. The residency rules are explained in 1250 RESIDENCE. A non-resident whose stay in New Zealand is no more than three months may be exempt from tax on employment income received from a foreign employer. Income derived by a non-resident from personal or professional services performed in New Zealand during a visit is exempt if:
(a) The visit is not for more than 92 days (including the days of arrival and departure);
(b) The total of that visit and all other visits to New Zealand in the same tax year is no more than 92 days;
(c) The services are performed for a non-resident employer; and
(d) The remuneration received is chargeable with a tax, in the person’s country of residence, that is substantially the same as New Zealand income tax [s CW 19].

The exemption does not apply to public entertainers (eg musicians, actors and professional sportspersons). “Public entertainer” is defined to include:
(a) Circus performers, dancers, lecturers, motion picture artists, musicians, radio artists, singers, television artists, and theatre artists; and
(b) Athletes, boxers, wrestlers, and other professional sports persons.

A non-resident may also be exempt from tax on income from personal services under a double tax agreement [see 310 DOUBLE TAX AGREEMENTS]. For example, under art 15 of the Australia-New Zealand double tax agreement, the remuneration of an Australian resident individual working in New Zealand is not taxable in New Zealand if:
(a) The individual is present in New Zealand for less than 183 days in total in any 12-month period;
(b) The remuneration is paid by an employer who is not resident in New Zealand;
(c) The remuneration is not deductible in determining the taxable profits of a permanent establishment or a fixed base that the employer has in New Zealand; and
(d) The remuneration is taxable in Australia.

The same would apply to a New Zealand resident working in Australia.

An employer who employs a non-resident person with an income tax liability is treated as an agent in relation to the employment income derived in New Zealand by the nonresident person. If the non-resident does not meet their income tax liability, the employer must withhold the amount of income tax payable from their employment income and pay it to the CIR on the person’s behalf. A non-resident trader who employs a person...
in New Zealand is treated as an agent in relation to the person’s employment income. If the trader has an 
agent in New Zealand, the agent must meet the trader’s obligations under s HD 3 [s HD 27].

1080.35 **ACC earner levy**
All employees must pay the ACC earner levy [see 20.20]. For employees, the earner levy is deducted by the 
employer from salary and wages along with PAYE tax deductions and paid to Inland Revenue on the same 
due dates as for PAYE. Inland Revenue collects these levies on behalf of the ACC [see 20 ACCIDENT 
COMPENSATION]. The earner levy is built into the PAYE tables. The earner levy is not deducted from any 
employee earnings which exceed the maximum earnings [see 20.35]. The earner levy does not apply to 
schedular payments [see 1320 SCHEDULAR PAYMENTS. People receiving schedular payments are 
responsible for paying their own ACC levies [see 20.25].

1080.36 **Student loan deductions**
A person with an outstanding student loan balance is required to make a student loan repayment at the rate 
of 10 cents in the dollar on every dollar earned in excess of the annual repayment threshold. The annual 
repayment thresholds are listed in 1380.10.

If an employee’s tax code includes “SL”, the employer is required to make student loan deductions in addition 
to PAYE [see 1080.40 Example 9].

1080.37 **Child support deductions**
An employer may be required to deduct child support from the earnings of employees who are liable parents 
[see 160 CHILD SUPPORT]. Child support has priority over all other deductions from an employee’s pay, 
except from PAYE. The employer responsibilities are outlined in 160.140.

1080.40 **Examples of PAYE deductions**
The following examples are based on the rates of tax applicable to the year ended 31 March 2012. PAYE in 
these examples has been calculated using the PAYE tables published by Inland Revenue (IR340 and IR341). 
These amounts will vary slightly if calculated using the Inland Revenue online PAYE calculator.

PAYE is paid on whole dollars of earnings only. If the exact amount of earnings is not shown in the “Earnings” 
column in the PAYE table, then the tax deduction for the next lowest amount is taken. PAYE deductions 
include the earners’ levy.

**Example 1 (weekly wage plus overtime):**
Rod receives weekly wages of $538.42 plus overtime pay of $165.83. His total pay for the week is $704.25. His tax code is “M”. 
The amount of PAYE to deduct from Rod’s earnings, as per the weekly PAYE table, is $118.71.

**Example 2 (fortnightly salary plus annual bonus):**
Kelly is paid her fortnightly salary payment of $2,307.69 and a yearly performance bonus of $6,000. Kelly’s pay for the previous 
fortnight was her normal salary of $2,307.69. Her tax code is “M”. The amount of PAYE to deduct from her salary, as per the 
fortnightly PAYE table, is $470.38. The bonus is an extra pay — the rate of tax to deduct from it depends on Kelly’s annualised 
PAYE income payments. Her annualised PAYE income payments for the previous four weeks, including the bonus, are 
($2,307.69 × 2 × 52/4) + $6,000, or $66,000. As this is between $48,001 and $70,000, tax must be deducted from the bonus at 
the rate of 32.04 per cent (including the earners’ levy). The amount of tax to deduct from the bonus is $1,922.40. The total tax 
deduction from Kelly’s fortnightly pay is therefore $2,392.78 ($470.38 + $1,922.40).

**Example 3 (monthly salary):**
Hemi receives a monthly salary payment of $7,000. His tax code is “M”. The amount of PAYE to deduct from Hemi’s salary, 
as per the monthly PAYE table, is $1,696.11.

**Example 4 (high monthly salary):**
Susan, the CEO of a major corporation, receives a monthly salary payment of $12,500. Her tax code is “M”. The maximum 
earnings figure listed in the monthly PAYE table is $10,000. To calculate the amount of tax deductible from earnings of $12,500, 
we take the tax on $10,000 ($2,733.16), as per the table, and add to it tax on the excess over $10,000 at the rate of 33 per cent
($825). The total tax deduction from Susan’s salary is therefore $3,558.16 ($2,733.16 + $825). Note that the earners’ premium is not deducted from any earnings in excess of $111,669 a year ($9,305 a month).

Example 5 (wages at no notification rate):
Alain has recently been employed as a labourer on a building site. He is paid gross wages of $876.32 for his first two weeks of employment. Alain has not provided his employer with a signed tax code declaration when his wages are paid. Tax must be deducted from his wages at the “no notification” rate of 47.04 cents in the dollar (including the earners’ levy). The tax to be deducted from Alain’s wages is $412.07 ($876 × 47.04%).

Example 6 (holiday pay):
Rhonda has just resigned from her job and is paid holiday pay (based on eight per cent of her gross earnings for the income year to date) of $2,443.27 on the day she leaves. Her normal fortnightly salary was $1,346.15. Her tax code is “M”. Her normal weekly salary was $673.07 ($1,346.15 / 2). Her holiday pay is equivalent to three normal weeks’ salary of $673.07 plus one partial week’s salary of $424.06. Tax on $673.07, per the weekly PAYE table, is $112.65. Tax on $424.06, per the weekly PAYE table, is $64.00. The total tax deduction from Rhonda’s holiday pay is therefore $401.95 ($112.65 × 3 + $64.00).

Example 7 (income under $9,880):
Peter works part-time for a supermarket. His wages for the week are $169.45. His tax code is “ML”. The tax to be deducted from Peter’s wages, as per the weekly PAYE table, is $17.66.

Example 8 (secondary employment):
Ngaio has two jobs. Her main full-time job is as a receptionist. She also has a part-time job sorting mail in the evenings. Her fortnightly wages for mail sorting are $576.92. Her tax code is “SH” (she estimates that her total annual earnings from all sources will be between $48,001 and $70,000). The tax to be deducted from Ngaio’s wages from mail sorting, as per the PAYE table for secondary earnings, is $184.55.

Example 9 (student loan repayment):
Steve graduated from university three years ago and is employed by a law firm. He took out a student loan to pay for his education. Steve’s fortnightly salary is $2,500. His tax code is “M SL”. The tax to be deducted from Steve’s salary is $532.52 and the student loan deduction to be made is $176.60, as per the fortnightly PAYE table. The total deduction is therefore $709.12.

Example 10 (casual agricultural employee):
The owner of a large commercial orchard employed Olga as a seasonal fruit picker. She is paid weekly on the basis of the quantity of fruit she picks. The fruit picking work will only last for about two or three weeks. For the first week, Olga earns $437. Her tax code is “CAE”. The tax rate applicable to casual agricultural employees is 19.54 cents in the dollar. The amount of tax to be deducted from Olga’s earnings is therefore $85.39 ($437 × 19.54%).

**Awards for lost wages [ss CE 1, CA 1, RA 5, RD 4(2)]**
The receipt by an employee of an award under the Employment Relations Act 2000 for lost wages or other remuneration is employment income under s CE 1. The payment is an extra pay and a PAYE income payment, and the employer is liable to make a tax deduction from it under s RA 5. If the employer fails to make a tax deduction, the employee is liable under s RD 4(2) to pay an amount equal to the tax deduction to Inland Revenue, and is also required to provide Inland Revenue with an employer monthly schedule. See public ruling BR Pub 06/06 [see TIB vol 18:7 (August 2006) at 17-26], which applies from 1 October 2005.

However, payments that are genuinely and entirely for compensation for humiliation, loss of dignity, or injury to feelings under s 123(1)c(i) Employment Relations Act 2000 are not income under ss CE 1 or CA 1(2), and there is no liability for employers to deduct PAYE from such payments. See public ruling BR Pub 06/05 [see TIB vol 18:7 (August 2006) at 9-16], which applies from 1 October 2005.

**Bonuses**
Bonuses such as annual or special one-off bonuses, that are not paid regularly, are taxed as extra pays [see 1080.30]. Regular bonuses, such as incentive or production bonuses paid out more often than once a year, are not extra pays. They are treated as normal salary or wages. If the bonus relates only to one pay period, then the bonus is added to the other salary or wages for that period and PAYE is deducted from the total. If the bonus relates to more than one pay period, then the method shown in the following example is used.
Example:
Bill is paid fortnightly, and receives a production bonus each month. His last two fortnightly gross wage payments were $1,028 and $1,076. He received his monthly bonus payment of $475 with his last fortnightly wages. His tax code is “M”. Tax on the two fortnightly wage payments is calculated as usual using the fortnightly PAYE tables. Tax on $1,028 is $163.16. Tax on $1,076 is $172.54. Tax on the bonus is calculated as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total wages for month ($1,028 + $1,076)</td>
<td>$2,104.00</td>
</tr>
<tr>
<td>Plus monthly bonus</td>
<td>$475.00</td>
</tr>
<tr>
<td>Total income</td>
<td>$2,579.00</td>
</tr>
<tr>
<td>Tax on total income (per monthly PAYE table)</td>
<td>$421.46</td>
</tr>
<tr>
<td>Less tax on normal wages ($163.16 + $172.54)</td>
<td>$335.70</td>
</tr>
<tr>
<td>Tax to deduct from bonus</td>
<td>$85.76</td>
</tr>
</tbody>
</table>

Tax of $163.16 will be deducted from Bill’s first fortnightly wage payment of $1,028; and tax of $258.30 ($172.54 + $85.76) will be deducted from his combined second fortnightly wage payment and bonus of $1,551 ($1,076 + $475).

1080.53 Commission agents
Commission agents (eg real estate or life insurance agents) are individuals who receive commissions on sales they make. If the agent is paid only on commission, the commissions are treated as schedular payments and taxed at the rate of 20 cents in the dollar [see 1320.30]. If the agent receives a salary or other fixed remuneration as well as a commission, the agent will be treated as an employee and PAYE will be deducted from both the fixed remuneration and the commission.

1080.54 Holiday pay
Employees have a statutory entitlement to be paid for annual leave and statutory holidays (Christmas day, Easter Monday, and so on) that fall during the period of their employment. Holiday pay does not include long service leave, retirement leave, sick leave, or any other accruing employee remuneration. Holiday pay and pay for statutory holidays are included as earnings in the pay period in which they are paid.

To calculate PAYE on annual leave, treat it as if it were received as normal salary or wages. For example, if an employee who is normally paid weekly receives three weeks’ annual leave pay before going on leave, that pay is divided by three and tax deducted from each third at the normal rate as per the weekly PAYE tables [see 1080.40 Example 6].

While an employer may have incurred expenditure on account of holiday pay, the allocation of the allowable deduction is delayed until such time as payments for the holiday leave are paid to the employee [see 230.175].

1080.55 Honoraria
If an honorarium is paid to a person who is also an employee of the payer, both the honorarium and the employment earnings will be subject to PAYE, including the earner levy. For example, if a person employed as a secretary of a golf club is paid an honorarium in addition to wages, both the wages and the honorarium will be liable for PAYE.

Honoraria paid to persons who are not employees (including mayors, chairperson and members of councils, boards, committees and other like bodies, and officials of societies, clubs and similar organisations) are subject to tax at the rate of 33 per cent. The earner levy does not have to be deducted from such honoraria. Honoraria paid to school trustees are schedular payments and also subject to tax at the rate of 33 per cent.

1080.56 IR56 taxpayers [s RD 16]
Certain categories of employee (IR56 taxpayers) are responsible for paying their own PAYE tax. IR56 taxpayers include:

(a) Private domestic workers who work part-time, such as homeelpers, caregivers, nannies, gardeners and domestic odd-jobbers;

(b) Embassy staff;
(c) New Zealand-based representatives of overseas companies; and
(d) United States Antarctic Program personnel.

A person employing an IR56 taxpayer is not required to deduct tax from salary or wages paid to them.

**Example:**

Polly works as a house cleaner for five different householders. She averages around eight hours per week per householder. Although she works a total of more than 30 hours a week, she is still an IR56 taxpayer as she fits the definition of a private domestic worker. This is because she is not working full time for any one employer, she works in the employers’ homes and is paid directly by each employer. Polly is responsible for paying the PAYE on her IR56 income.

IR56 taxpayers calculate the tax deduction from their total earnings each month in exactly the same way as an employer would do for an employee. They must complete and send an Employer deductions (IR345) form and an Employer monthly schedule (IR348) to Inland Revenue with their tax payment each month. In addition, they must keep a record on the IR56 summary forms of their monthly gross wages and PAYE tax deductions. The IR56 is kept by the IR56 taxpayer as a permanent record of their wages and tax deductions.

IR56 taxpayers who have a student loan and are embassy staff members, New Zealand-based representatives of overseas companies or Operation Deep Freeze workers, are also responsible for making monthly student loan repayment deductions from their earnings, if applicable.

1. **Payments to private domestic workers [s RD 16]**

No tax is required to be withheld for a PAYE income payment relating to a person’s employment as a private domestic worker. This applies to a person who is employed as a private domestic worker by another person and:

(a) The employer is the occupier, or one of the occupiers, of a house or premises used exclusively for residential purposes; and

(b) The employment:

   (i) Is for the performance of work in or about the house or premises, or a garden or grounds belonging to the house or premises;

   (ii) Is not for a business carried on by the employer, or an occupation or calling of the employer; and

   (iii) Is not regular full-time employment.

**1080.57 Income received fraudulently or in error**

Property received fraudulently is assessable income under s CB 32 [see 710.80], but because the recipient is not entitled to the income it is not a PAYE income payment. If PAYE is deducted from the payment, the CIR will repay the deduction to the payer on request in writing. The amount assessed to the recipient is the net amount of the fraudulent payment (ie the amount actually received by them). The recipient is then responsible for meeting their tax liability on that income. If the recipient repays any of the income, they can claim a deduction in the year of repayment under s DB 44.

**Example:**

An employee responsible for salary and wages at a small company makes fraudulent payments to himself on a fortnightly basis of $200. The employer discovers this theft as part of an audit after 24 weeks. In total, the employee received an additional $2,400. The employee received $2,099.04 net and $300.96 was paid as PAYE in the employee’s name. The employee will be assessed income of $2,099.04. The $300.96 paid as PAYE should be repaid to the employer.

Where an employer has, in error, paid an employee an amount to which the employee is not entitled, it is not income the employee is entitled to (unless s CB 32 applies). Therefore, it is not a payment subject to PAYE and Inland Revenue will return any tax deduction to the employer on request in writing. Income that is received in error and repaid will not be assessable to the employee, and the employee cannot claim a deduction in the year of repayment. If an overpayment of salary or wages occurs through simple oversight, and is immediately identified and corrected within the same period, Inland Revenue will permit the employer to correct the matter in the employer monthly schedule filed.
Where income is received in error by way of a benefit, the person is not entitled to the receipt of it (unless s CB 32 applies). The rules are the same as for salary and wages. The overpayment is not a PAYE income payment and PAYE does not apply. The recipient has an obligation to repay the amount received. If deducted, the PAYE would be returned by Inland Revenue to the payer, usually WINZ, on request in writing. If the recipient repays the benefit received in error they get no deduction for the repayments [see TIB vol 16:11 (December 2004) at 17-18].

1080.58 Musicians

Where musicians, bands or other entertainers are employees, PAYE should be deducted from payments made to them. Payments made to musicians hired on a casual basis are prepayment payments and subject to tax at the appropriate rate [see 1320.30]. If the leader of the band is in business, the business owner may apply for a certificate of exemption. Payments by the band leader to band members are subject to PAYE.

1080.59 Outworkers and pieceworkers [s RD 15(2)]

If an outworker is paid on a production basis (based on output), PAYE must be deducted from the payment. The payment is deemed to be for the period from the commencement of the work until the work is completed. Normally, pieceworkers employed in factories are paid on a weekly or other regular pay period basis and present no difficulty. Tax deductions are arrived at in the normal way.

Where payments for piecework or outwork are made for irregular periods, the procedure is as follows:

(a) The payments are treated as having been derived uniformly over the period in which the work was performed.

(b) The period must be split from commencement to completion into complete weeks, and the payment allocated in accordance with (a) above. Where the period does not divide equally into even weeks, the amount applicable to the odd days must be treated as being for an extra week, and should be added to any other amount allocated to be deducted.

(c) Tax must be calculated for each week separately. The aggregate of the deductions for each separate week is the total amount to be deducted.

Payments to labour-only contractors in the building industry are schedular payments liable for tax at the appropriate rate [see 1320 SCHEDULAR PAYMENTS].

1080.60 Prize money at sporting events

Prize money paid at sporting events or competitions is a schedular payment subject to tax at the rate of 20 per cent. This applies to both professional and amateur events. However, the first $500 per event or competition is effectively exempt [see 1320.30].

1080.61 Sales competition prizes

Where businesses conduct one-off selling competitions among their salespeople, the question arises as to the assessability of the prizes or trophies (other than cash) awarded in such competitions. Non-cash prizes or trophies are not assessable income to the salespeople (although they may be subject to FBT), but prizes awarded in cash are assessable. The cost of the prizes or trophies is deductible to the employer, as are cash prizes.

This was confirmed in Sixton v Commissioner of Inland Revenue (1982) 5 NZTC 61,285 (HC), where a taxpayer received a prize in the form of a points cheque that could be redeemed only for travel vouchers or goods (not cash). The High Court ruled that the benefit was not an allowance and therefore not assessable. However, prizes of this sort may be liable to FBT if they constitute a benefit that an employee derives “in connection with their employment” [s CX 2(1)].

1080.62 Shearers, drovers and musterers

Payments to shearers and shearing shed hands are subject to PAYE at flat rates, although some allowances are exempt. Payments to shearing contractors are schedular payments subject to tax at the specified rate [see 430.190 and 1320.40].
Payments to drovers and musterers for casual work are subject to PAYE. However, allowances paid for dogs, horses and saddlery are exempt [see 430.195].

**1080.63 Students and school children** [s LC 3]

School children earning income are liable to income tax in the same way as other taxpayers. However, they may qualify for the school child tax credit, which effectively exempts the first $2,340 of annual gross income (excluding interest and dividends) [see 1395.55].

School children whose total earnings from all employment do not exceed $45 per week ($2,340 a year) are not required to complete a tax code declaration (IR330), and no PAYE is required to be deducted from their earnings. This is because the school child tax credit would result in this tax being refunded to the child at the end of the year. School children who earn more than $45 per week are required to complete a tax code declaration, and tax must be deducted from the full PAYE income payment. When weekly earnings exceed $45 a week but the annual earnings are not expected to exceed $2,340 (eg when a child works full time during the holidays but will not earn more than $2,340 in total), the child is not required to fill in a tax code declaration and no tax should be deducted from their earnings.

With university, polytechnic and other tertiary students, tax should be deducted from employment earnings. If a student is only working for part of a year, the PAYE tables will result in tax being over-deducted. In this situation, the student may be best advised to apply for a special tax code certificate [see 1080.27] rather than wait for an annual assessment and a refund at the end of the year.

**1080.64 Voluntary labour projects**

Some organisations such as charities, which are exempt from tax, contract for their members to undertake work and apply the proceeds for the purposes of the organisation. The income is exempt from tax provided:

(a) The object is charitable [see 150 CHARITIES];
(b) The organisation itself arranges the contract with the principal and undertakes to carry out the work;
(c) The organisation arranges with its members to do the work. The members are then working for the organisation and not the principal;
(d) The members do the work, without remuneration, in their spare time and not as part of their ordinary occupation or employment; and
(e) The organisation receives payment direct from the principal.

Tax should not be deducted because the members do not receive remuneration for the work performed.

These arrangements for labour projects and working bees should not be confused with a person or persons undertaking work personally and directing the employer to pay the proceeds to a charitable or other organisation. In such instances, because the organisation does not make the contract with the employer and the employees are not working for the organisation, the income remains the income of those doing the work and is subject to tax. If the payment is to a charity it may qualify for a charitable donation rebate [see 1395.75].

**1080.75 CIR may reduce tax deductions** [s RD 11]

The CIR may, in special circumstances, reduce the amount of tax for a PAYE income payment to an employee or a class of employees. The PAYE rules then apply as if amended.

If the amount of tax for a PAYE income payment cannot be determined under sch 2 or under regulations because of the size of the PAYE income payment, or the number of the employee’s dependants, or for any other reason, the amount of tax for the payment must be determined by the CIR, taking into account the factors considered in fixing the amount of tax for other similar payments. The amount of tax for an income-tested benefit, or an allowance paid under regulations made under the Education Act 1989, must be determined by the CIR in consultation with the chief executive of the administering department or the Secretary of Education.
If the CIR makes a determination under s RD 8(3) of the amount or proportion of expenditure incurred in deriving a schedular payment [see 1320.40], tax is calculated on the net amount of the payment after the deduction of that expenditure. This overrides s RD 10(3) [see 1080.17].

1080.80 Payment of tax deductions to Inland Revenue [ss RA 5, RA 15, RD 4, RD 22; TAA, ss 24J, 24P]

Employers who make deductions of tax from PAYE income payments are required to pay those deductions to Inland Revenue on a regular basis, together with any:

(a) ESCT deductions [see 1080.105];
(b) KiwiSaver deductions [see 860.70];
(c) KiwiSaver employer contributions [see 860.85 and 860.87]; or
(d) Payroll donations [see 1395.77].

Each payment of tax deductions to Inland Revenue must be accompanied by a PAYE payment form (Employer deductions, form IR345), and each month an employer monthly schedule must be delivered to Inland Revenue summarising gross earnings and deductions for each employee [see 1080.95 and 1080.97]. The time for accounting to Inland Revenue for tax deductions depends on the total amount of tax deductions made each year.

1080.81 Large employers [ss RA 15, RD 4(1), RD 22]

Employers whose gross PAYE and ESCT deductions exceeded $500,000 in total for the preceding tax year are required to account for PAYE tax deductions in two instalments per month as follows:

<table>
<thead>
<tr>
<th>Date</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>On or before the 20th of the month</td>
<td>Pay to Inland Revenue tax deducted in the first 15 days of the month, and supply a PAYE payment form covering those deductions.</td>
</tr>
<tr>
<td>On or before the fifth of the month (the 15th in the case of January)</td>
<td>Pay to Inland Revenue tax deducted between the 16th and the end of the preceding month, and supply an employer monthly schedule and a PAYE payment form covering those deductions.</td>
</tr>
</tbody>
</table>

**Example:**

During the year ended 31 March, Jones Ltd deducted a total of $578,943 in gross PAYE tax deductions and ESCT from employees’ earnings. Jones Ltd is therefore a large employer. The company will be required to pay to Inland Revenue on or before 20 April, PAYE deducted from wages and salaries paid during the period 1 to 15 April. It will be required to pay to Inland Revenue on or before 5 May, PAYE deducted from wages and salaries paid during the period 16 to 30 April. A PAYE payment form must accompany each payment, and the payment on 5 May must also be accompanied by an employer monthly schedule.

1080.82 Small employers

Employers whose gross PAYE and ESCT deductions were less than $500,000 in total for the preceding tax year are required to account for PAYE tax deductions only once each month, on the 20th of the month. By this date, small employers must pay to Inland Revenue tax deducted during the preceding month, and supply an employer monthly schedule and a PAYE payment form.

1080.83 New employers [s RD 22]

If the employer was not an employer in the preceding tax year, the employer must account for PAYE tax deductions on the same monthly basis as for small employers until such time as the gross tax deductions and ESCT exceed, for the year to date, $500,000 in total. Once this total has been exceeded, the employer must account for tax deductions twice a month, as for large employers.

Inland Revenue may exempt an employer from providing a PAYE payment form if the information required in the form is provided in the employer monthly schedule. If the employer uses a PAYE intermediary [see 1090 PAYE INTERMEDIARIES], the PAYE obligations apply to the intermediary, not the employer.
1080.85  Payment of deductions by employee [s RD 4(2)]

If for any reason the employer does not deduct tax from a PAYE income payment, the employer must, on or before the 20th of the month following the month in which the PAYE income payment was made:

(a) Provide the CIR with an employee monthly schedule containing those particulars that apply to the employer; and

(b) Pay to the CIR an amount equal to the tax deduction that should have been made but was not.

1080.90  PAYE records [TAA, s 24]

Employers must keep a record of all PAYE income payments made to employees. The record must show, for each employee, the gross (pre-tax) amount of the PAYE income payment and the amount of tax (if any) deducted from it. The record must be created at the time each PAYE income payment is made.

If the employer uses a PAYE intermediary, the employer is only required to record the gross payment of salary or wages in respect of each employee [see 1090 PAYE INTERMEDIARIES].

The employer or PAYE intermediary must take all reasonable precautions for the safe custody of all PAYE records, including pay sheets, receipts for PAYE income payments, withholding certificates, tax code notifications, tax code certificates, and certificates of entitlement. These records must be kept for at least seven years after the payments, to which they relate, were made.

1080.95  Employer monthly schedules [TAA, ss 36A, 36B, 36C, 36D, 36E; s YA 1]

An “employer monthly schedule” is a form that an employer or a PAYE intermediary, who withholds tax from a PAYE income payment, must provide to Inland Revenue each month under s RD 22. The employer monthly schedule must be filed electronically, in the format prescribed by the CIR. However, the requirement to file electronically does not apply if the employer:

(a) Is not a new employer and has gross amounts of tax for PAYE income payments and employer’s superannuation contributions for the preceding tax year of less than $100,000;

(b) Is a new employer, but only in relation to the months in the income year for which the total amounts of tax for PAYE income payments and employer’s superannuation contributions remain under $100,000; or

(c) Is authorised under s 36B of the TAA to provide the schedule in a non-electronic format (see below).

An “employer monthly schedule” must contain the following information for the month to which the schedule relates:

(a) The employer’s name and tax file number;

(b) The name of every person who was an employee at any time during the period to which the schedule relates;

(c) The tax file number of each employee, if supplied;

(d) The tax code of each employee to whom a PAYE income payment (other than an extra pay) is made;

(e) The amount of gross earnings, the total amount of tax withheld, the total amount of tax credits for payroll donations, and the amount of earnings not liable to the earner levy, for each employee;

(f) Particulars of child support and student loan deductions made, if applicable;

(g) The amount of KiwiSaver contribution deductions made, if applicable, for each employee;

(h) The amount of employer’s superannuation cash contributions (net of ESCT), if applicable, for each employee;

(i) The date on which a new employee commenced employment;

(j) The date on which an employee who left ceased employment;

(k) The identity of each employee who received an extra pay at a rate less than 38 per cent (from 1 April 2009); and
(l) Other particulars required by the CIR for a class of employer [s YA 1].

Inland Revenue may authorise an employer, who would otherwise be required to file an employer monthly schedule electronically, to furnish it in a non-electronic format (ie on a printed form) if the cost likely to be incurred by the employer in furnishing it electronically is material [TAA, s 36B].

An employer who is not required to file the employer monthly schedule electronically may elect to do so [TAA, s 36E].

If an employer employs a school student whose total annual earnings from employment are not expected to exceed $2,340, the student does not have to be included on the employer monthly schedule since no tax is required to be deducted from their earnings [see 1080.63].

1080.97 PAYE payment form [TAA, ss 24J, 36A; s YA 1]

A PAYE payment form must accompany each payment of tax deductions to Inland Revenue. The PAYE payment form is referred to by Inland Revenue as the employer deductions form (IR345).

A “PAYE income payment form” must contain the following information for the PAYE period to which it relates:

(a) The period to which the form relates;
(b) The name of the employer;
(c) The tax file number of the employer;
(d) The total amount of tax withheld and paid;
(e) The total child support payments;
(f) The total student loan payments;
(g) The total KiwiSaver contribution payments;
(h) The amount of employer’s superannuation contributions paid under the KiwiSaver Act 2006 and the amount of ESCT withheld and paid;
(i) The amount of employer’s superannuation contributions paid and the amounts of tax withheld and paid [other than that shown in item (h)]; and
(j) Any similar information the CIR requires [s YA 1].

Employers can choose whether to furnish PAYE payment forms electronically or non-electronically. When information is furnished electronically, it must be furnished in a format prescribed by the CIR. The CIR must prescribe suitable electronic formats for furnishing PAYE payment forms electronically.

1080.99 Ceasing business or ceasing to employ

When an employer ceases, or is about to cease, to carry on business, Inland Revenue must be informed by phone or by way of a business cessation form (IR315). The employer must complete an employer monthly schedule (IR348), showing the date each employee stopped work, by the 20th of the month following the month in which business ceased. An employer deductions form (IR345) will also be required for the final month.

If the employer permanently stops employing staff permanently, but does not cease business, an employer monthly schedule must be completed for the month in which employment ceased.

1080.105 Employer’s superannuation contribution tax (ESCT) [ss RA 5, RD 64, RD 65]

An employer or a PAYE intermediary who makes an employer’s superannuation cash contribution must deduct employer’s superannuation contribution tax (ESCT) from it and pay the ESCT to the CIR by the due date [ss BE 1(5), RA 5]. An “employer’s superannuation cash contribution” is a contribution paid in money by an employer to either a superannuation fund or, under the KiwiSaver Act 2006, to the CIR for later payment to a superannuation fund, where the contribution is for the benefit of an employee [s RD 65(1)]. The rates of ESCT are set out in 1390.105.
Example:
An employer contributes an amount equal to 10 per cent of an employee’s salary to a superannuation fund (which is not a KiwiSaver scheme or a complying superannuation fund) on behalf of the employee each month. The employee’s monthly salary is $4,000. The employer makes a specified superannuation contribution of $400 each month. Assuming the applicable rate is 33 per cent, the employer is required to withhold 33 per cent of the contribution ($132) and pay it to Inland Revenue. The balance of $268 ($400 − $132) is paid to the superannuation fund.

Prior to 1 April 2012, compulsory employer contributions (ie not exceeding two per cent of the gross salary or wage payment) to KiwiSaver schemes and complying superannuation funds are not subject to ESCT [s RD 65(4)]. See 860.87.

Non-monetary contributions by employers to employee superannuation schemes are subject to FBT, not ESCT [see 540.175].

1080.106 Employer fails to deduct ESCT [s RD 70]
If an employer or a PAYE intermediary fails to withhold employer’s superannuation contribution tax (ESCT) from an employer’s superannuation cash contribution, the employer is liable to pay to the CIR an amount calculated using the following formula:

\[
\text{(tax rate / 1 – tax rate)} \times \text{contribution to fund} – \text{tax already paid}
\]

Where:
“Tax rate” is the applicable rate of ESCT;
“Contribution to fund” is the amount of the contribution (excluding tax) received by the superannuation fund;
“Tax already paid” is the amount (if any) of ESCT already paid for the contribution.

The effect of this calculation is that the amount of the employer contribution paid to the superannuation fund is treated as the net amount, and the ESCT is calculated on the grossed up amount of the contribution.

Example:
An employer makes an employer’s superannuation contribution of $1,000 to a superannuation fund (which is not a KiwiSaver scheme or a complying superannuation fund) on behalf of one of its employees. The employer does not deduct ESCT from this payment. The superannuation fund therefore actually receives $1,000. Assuming that the applicable ESCT rate is 33 per cent, the employer has an ESCT liability of $492.54, calculated as follows:

\[
0.33 \div (1 - 0.33) \times \$1,000 - 0 = \$492.54
\]

The gross amount of the contribution is thus deemed to have been $1,492.54 ($1,000 + $492.54), and ESCT on this at the rate of 33 per cent would be $492.54.

ESCT must be paid to Inland Revenue by the same due dates as apply for PAYE deductions [see 1080.80 to 1080.82].

1080.110 Recovery of unpaid tax deductions [TAA, ss 167, 168, 169]
Tax and earner-related payments withheld or deducted by employers and PAYE intermediaries under the PAYE rules (including earner levies) are deemed to be held by the employer in trust for the Crown. Legally, they are not the property of the employer. If an employer is made bankrupt or liquidated, or if an assignment is made for the benefit of the employer’s creditors, the amounts withheld or deducted do not form part of the estate available for distribution to creditors. If an employer fails to account for a tax deduction made under the PAYE rules, s 167(2) of the TAA sets the priority of the unpaid amounts if the employer is bankrupted, makes an assignment for the benefit of creditors, is liquidated, or placed in receivership. This applies notwithstanding anything in any other Act, including s 308 of the Companies Act 1993. For these purposes, “tax deduction” and “earner-related payment” do not include any late payment or shortfall penalties [TAA, s 167].

If an employer or a PAYE intermediary acting for an employer fails to withhold or deduct tax or earner-related payments as required under the PAYE rules or earner levies, the amount that should have been deducted is a debt payable to the CIR on the date the deduction should originally have been paid. The CIR may recover the outstanding amount from the employer or the employee, or partly from each [TAA, s 168].
If an employer or a PAYE intermediary acting for an employer fails, wholly or partly, to withhold or deduct tax or earner-related payment or to pay any amount to the CIR under the PAYE rules, the unpaid amount (including late payment penalties, shortfall penalties, and any costs, fees, expenses or other amount payable by the employer to the CIR in respect of any court judgment) is a charge on all the real and personal property of the employer. Special rules govern the registration, priority, operation and enforcement of the charge [TAA, s 169].

Failure to deduct tax when required to do so by a tax law may give rise to a penalty under s 143A or s 143B of the TAA, and UOMI will apply to any tax deductions paid after the due date.

In TRA Case G81 (1985) 7 NZTC 1,373, an employee who had management and control of a company in liquidation was held liable to account for the PAYE deducted by the company but not paid to Inland Revenue.

In TRA Case J12 (1987) 9 NZTC 1,071, it was held that the legislation clearly places the duty of payment of PAYE primarily on the employer, not the employee. Where the employer failed to make a tax deduction, the employee would become liable to pay the amount that should have been made by the employer. The TRA has no jurisdiction to interfere with Inland Revenue’s mode of collection.

In TRA Case K67 (1988) 10 NZTC 536, a PAYE deduction liability was imposed on a company which, to avoid “union problems”, had purportedly entered into a partnership with its workers. On the facts, it was held that the company controlled the nature of work carried out to such an extent that the agreements were a facade, and the true relationship with the company workers was employer/employee.

In TRA Case R23 (1994) 16 NZTC 6,108, a charitable trust which engaged the services of 12 previously unemployed workers under a special Employment Service work scheme to carry out restoration work on an old ship, was held to be their employer and liable to deduct PAYE and ACC levies from their wages even though the work was funded by a subsidy from the Employment Service.

Examples of situations in which shortfall penalties may, or may not, be imposed on employers that fail to deduct or account for PAYE are set out in TIB vol 12:5 (May 2000) at 51-53.

1080.115 Penalties

Employers who fail to fulfil their PAYE and related obligations may become liable to a range of penalties, some of them quite severe (eg a fine of up to $50,000 and/or prison for up to five years, for evasion). Use of money interest (UOMI) will also apply to any under or overpayment of tax deductions [see 1110 PENALTIES AND INTEREST].
An employer can transfer their PAYE and employer’s superannuation contribution tax (ESCT) obligations to a person approved as a PAYE intermediary or a listed PAYE intermediary. This PAYE intermediary or listed PAYE intermediary must:

(a) Withhold and pay to the CIR tax payable under the PAYE rules and ESCT rules; and
(b) File a return of income relating to the payment and the amount of tax.

When a person ceases to be a PAYE intermediary or a listed PAYE intermediary for an employer, the person retains the rights and obligations of a PAYE intermediary or listed PAYE intermediary, as applicable, in relation to funds that the employer has paid to the person as intermediary and that the person holds at the time they stop being an intermediary.

An employer who wishes to enter an arrangement with a PAYE intermediary must notify the CIR of the proposed arrangement, and provide the following information:

(a) The name of the PAYE intermediary;
(b) The period for which the PAYE intermediary is to act for the employer;
(c) The bank account number of the PAYE intermediary, into which the employer will deposit amounts; and
(d) Whether the proposed arrangement requires the PAYE intermediary to collect amounts under the ESCT rules.

On approval of the arrangement, the CIR must notify the employer. The approval applies to pay periods that begin on or after 14 days after the date the notice is given. An employer or a PAYE intermediary may end the arrangement by notifying the other party and the CIR. The notice must state the date that the arrangement ends, which must be after the date of notification.
An employer or a listed PAYE intermediary may end an arrangement by notifying the other party and the CIR. The notice must state the date on which the arrangement is to end, which must be on or after 14 days after the date on which the notice is given.

1090.25 **Responsibilities of employers** [ss RP 7, RP 8]

When an employer who meets the requirements of ss RP 8 to RP 11 arranges to transfer their PAYE obligations in relation to an employee and a pay period to a PAYE intermediary, the employer is not liable under the PAYE rules in relation to the employee and the pay period. However, the employer remains liable for the employee’s salary or wages for the pay period.

If the PAYE intermediary assumes the employer’s obligations under the ESCT rules, the employer is not liable under the ESCT rules in relation to the employee and the pay period. However, the employer remains liable for the payment to the employee of the employer’s superannuation cash contribution on the employee’s behalf. An employer must:

(a) Keep a record of the gross salary or wages of an employee for the pay period, the amounts of tax withheld by the employer for the pay period, the amount of any payroll donations for the pay period, and the amount of any tax credits for the payroll donations; and

(b) Provide information a PAYE intermediary requires in the time agreed by the employer and PAYE intermediary.

1090.30 **Transfers from accounts** [ss RP 9, RP 10, RP 11]

When an employer has authorised the PAYE intermediary to direct the transfer of an amount from the employer’s bank account to meet an obligation that the PAYE intermediary has on the employer’s behalf, the employer must ensure, at a time fixed by the PAYE intermediary, that the bank account has sufficient funds available for the transfer.

If an employer has not authorised a PAYE intermediary to direct the transfer of funds as described above, and the employer pays salary or wages directly to an employee for a pay period, the employer must pay the amount of tax for the payment required under the PAYE rules and ESCT rules into the PAYE intermediary’s trust account.

If the employer has not authorised the PAYE intermediary to direct the transfer of funds as described above, and the employer does not pay salary or wages directly to an employee as above, the employer must pay the amount of the employee’s gross salary or wages for the pay period into the PAYE intermediary’s trust account. However, the employer may retain an amount lawfully owed to them by the employee before making the payment.

If a PAYE intermediary has assumed the obligations of an employer under the ESCT rules in relation to an employee and a pay period, the employer must pay the amount of the employer’s superannuation cash contribution made in the pay period on behalf of the employee into the PAYE intermediary’s trust account.

1090.35 **Payments made directly by employer to employees** [s RP 12]

An employer may pay an employee’s salary or wages directly to the employee in the following circumstances:

(a) The payment is made on a day in a pay period that is not the usual day for a payment of salary or wages for the pay period;

(b) The payment is:

(i) An advance of the employee’s salary or wages;

(ii) Salary or wages owed to the employee for an earlier pay period;

(iii) A payment on the termination of the employee’s employment;

(c) The employer withholds the amount of tax that would be required under the PAYE rules and the ESCT rules if the employer did not have an arrangement with a PAYE intermediary; and

(d) The employer pays the amount referred to in item (c), in the way described in 1090.30.
1090.40 Fitness requirement [TAA, ss 15F, 15I]
A person who meets the “fitness” requirements set out below may apply to the CIR for approval to become a PAYE intermediary. A PAYE intermediary may apply to the CIR to become a listed PAYE intermediary. To make an application, the PAYE intermediary must meet, on a continuing basis, the requirements for a PAYE intermediary.

To be eligible to apply to become a PAYE intermediary, the following persons must meet a “fitness” requirement:

(a) An applicant who is a natural person or a corporation sole;
(b) Each member of an applicant that is an unincorporated body;
(c) An officer of an applicant that is a body corporate;
(d) A principal of an applicant.

Each person listed in (a) to (d) above must:

(a) Not be a discharged or undischarged bankrupt; or
(b) Not have been convicted of an offence involving fraud; or
(c) Be eligible to be a company director [TAA, s 15I].

1090.45 Application for approval as PAYE intermediary [TAA, s 15D]

To become a PAYE intermediary, a person must:

(a) Meet the above fitness requirement;
(b) Establish a trust account that meets the requirements of s RP 6 [see 1090.75]; and
(c) Operate systems to protect the personal information and payment details obtained in the course of running the account.

The CIR may approve an application if satisfied that the applicant will comply with the PAYE rules and ESCT rules, if the applicant assumes an employer’s obligations under those rules. The CIR must also be satisfied that the applicant has systems that allow them to make payments and provide information in the format required by the CIR. The CIR may approve a person as a PAYE intermediary for a set period.

1090.50 Revocation of approval as PAYE intermediary [TAA, s 15E]

The CIR may revoke an approval if the person:

(a) Does not comply with the PAYE rules;
(b) Does not comply with the ESCT rules, when they have assumed an employer’s obligations under those rules;
(c) Is no longer fit to be a PAYE intermediary because they do not meet the fitness requirements;
(d) When not a natural person, has been put into liquidation or receivership;
(e) When they are a company, is no longer registered in New Zealand.

If the CIR revokes an approval under (b) the CIR must notify the person, and any employer for whom the person remains a PAYE intermediary, of the revocation and its effective date. The effective date must be at least 14 days after the date of notification. A decision by the CIR to revoke an approval is not open to challenge.

1090.55 Listed PAYE intermediaries [s RP 3]

For a period in which a person remains a listed PAYE intermediary, they must:

(a) Continue to qualify under s 15D of the TAA as a PAYE intermediary;
(b) Meet all the obligations under Subpart RP of a PAYE intermediary;
(c) Continue to meet the fitness requirements; and
Operate technology systems that enable them to return electronically a subsidy claim form that contains a correct calculation of the amount of a subsidy under s RP 5 and s 15P of the TAA.

**1090.60 Application for approval as listed PAYE intermediary** [TAA, s 15G]

To become a listed PAYE intermediary, a PAYE intermediary must:

(a) Meet the requirements to become a PAYE intermediary [see 1090.40, 1090.45];
(b) Have completed and filed the returns of income required from them; and
(c) Have paid the required amounts of tax due from them.

A person can be a listed PAYE intermediary only if they are a PAYE intermediary. On approval of an application and before acting as a listed PAYE intermediary for an employer, the listed PAYE intermediary must inform an employer who contracts their services as a listed PAYE intermediary that the CIR does not guarantee payment by the intermediary to an employee of the employer, or the performance of a service provided by them. The CIR may approve a PAYE intermediary as a listed PAYE intermediary for a set period.

**1090.65 Revocation of approval as listed PAYE intermediary** [TAA, ss 15H, 15I]

The CIR may revoke the listing of a listed PAYE intermediary if:

(a) An approval of the person as PAYE intermediary is revoked;
(b) The person no longer meets the fitness requirements;
(c) The person does not provide a subsidy claim form by the date and in the format required by the CIR;
(d) The person does not comply with an obligation of a listed PAYE intermediary;
(e) The CIR considers revocation is necessary to protect the integrity of the tax system.

The CIR must notify a listed PAYE intermediary of an intended revocation and provide reasons for it. If the listed PAYE intermediary does not resolve the matters set out in the notice to the satisfaction of the CIR within 30 days, the CIR may give 14 days notice of revocation. At the end of the 14-day notice period the listing is revoked. A decision by the CIR to revoke an approval is not open to challenge under Part 8A of the TAA.

**1090.70 PAYE intermediaries’ responsibilities** [ss RP 13, RP 14, RP 15, RP 16; TAA, ss 15K, 15L]

A PAYE intermediary who assumes the PAYE and ESCT obligations in relation to an employee and a pay period does not become liable as an employer for the payment to the employee of the salary or wages for the pay period, or for the payment of an employer’s superannuation cash contribution made on behalf of the employee.

A PAYE intermediary must:

(a) Calculate and withhold the amount of tax for a payment of salary or wages, and pay the amount to the CIR by electronic means and in the format required;
(b) Transfer the amount of any payroll donation to the relevant recipient within the period described in s 24Q of the TAA [see 1395.77];
(c) Provide an employer monthly schedule to the CIR by electronic means and in the format required;
(d) Provide a PAYE income payment form to the CIR if required; and
(e) Keep the records referred to in s 24 of the TAA [see 1210.30].

The PAYE intermediary may make an amended monthly schedule relating to the employee and a pay period, but is responsible for the accuracy of the amendments.
PAYE Intermediaries

A PAYE intermediary who is authorised to act for an employer must direct that, at or before the time of the transfer of the payment of salary or wages, an amount equal to the amount of tax required under the PAYE and ESCT rules is transferred to:

(a) The CIR; or
(b) The PAYE intermediary’s trust account.

When a PAYE intermediary assumes the obligations of an employer under the ESCT rules, the intermediary assumes the obligations that the employer would have in the absence of s RP 2(1). The PAYE intermediary must operate and maintain systems to protect the personal information and payment details that they acquire in running the systems.

1090.75 Operation of PAYE intermediaries’ trust accounts [ss RM 7, RP 6]

A PAYE intermediary’s trust account must be named as a trust account and established at a registered bank. Deposits to the account consist of:

(a) A payment of gross salary or wages paid by an employer;
(b) An amount of employer’s superannuation cash contribution paid by an employer;
(c) An amount of tax for a payment of salary or wages required under the PAYE rules and ESCT rules, or made under s RP 12 [see 1090.35];
(d) An amount of a refund made by the CIR under s RM 7 (see below); and
(e) Interest on the amount of the funds in the trust account.

Withdrawals from the account consist of:

(a) A payment of net salary or wages to an employee;
(b) An amount of employer’s superannuation cash contribution paid by an employer;
(c) An amount of tax for a payment of salary or wages withheld under s RP 12;
(d) A payment that an employer would be required to make but for the arrangement with the PAYE intermediary, in relation to an amount of tax for a payment of salary or wages to an employee or an employer’s superannuation cash contribution made on behalf of an employee; and
(e) Interest on the amount of the funds in the trust account.

A payment relating to an employee that is credited to the trust account of a PAYE intermediary is held by the PAYE intermediary on trust for the benefit of the employee and the CIR according to their respective rights and obligations. Interest earned in the trust account of a PAYE intermediary by a payment that relates to an employee is held beneficially by the PAYE intermediary.

The CIR must refund an amount of tax for a PAYE income payment to a PAYE intermediary if the intermediary has paid the tax to the CIR for an employer:

(a) Relying on a payment made to the intermediary’s trust account:
   (i) By the employer and later dishonoured; or
   (ii) Mistakenly by a person and later recovered from the intermediary; or
(b) Mistakenly from funds not provided by the employer for a purpose related to the PAYE income payment [s RM 7].

1090.80 Payment of payroll subsidies to PAYE intermediaries [s RP 4]

The CIR may pay a subsidy to a listed PAYE intermediary for a payroll service they provide to an employer who qualifies for the subsidy if the listed PAYE intermediary:

(a) Has a contract with the employer to provide the services;
(b) Has met their obligations under ss RP 13 to RP 16; and
(c) Files a correct subsidy claim form under s 15M of the TAA.
If a subsidy is paid to a listed PAYE intermediary, the CIR must notify the intermediary of the following within 14 days of the date of payment:

(a) The amount of the subsidy paid for each employer;
(b) The period to which the subsidy relates; and
(c) Other information relevant to the payroll services provided.

The listed PAYE intermediary must calculate the amount of the subsidy in the manner provided by regulations made under this section.

The CIR must pay the amount of the subsidy within 30 days of receiving the last of:

(a) The employer monthly schedule to which the subsidy claim form relates;
(b) The payment of the tax for a PAYE income payment to which the subsidy claim form relates; and
(c) The subsidy claim form.

The CIR must pay the subsidy to a bank account nominated by the listed PAYE intermediary for the purpose or, if an overpayment has been made to the listed PAYE intermediary, to the listed PAYE intermediary’s bank account. The amount of the subsidy per employee is prescribed by the Governor-General, by Order in Council. The Governor-General may from time to time by Order in Council prescribe the amount of the subsidy.

1090.85 Subsidy claims [s RP 5; TAA, s 15M]

A listed PAYE intermediary must file a subsidy claim form within one month of the date of filing an employer monthly schedule to which the form relates. For the purposes of s 22 of the TAA [see 1210.10, 1210.30] a listed PAYE intermediary must keep the necessary records to verify the information in a subsidy claim form [TAA, s 15M].

A “subsidy claim form” means a form that a listed PAYE intermediary must provide to the CIR in an electronic format showing:

(a) The tax file number of the listed PAYE intermediary;
(b) The tax file number and name of each employer for which a subsidy is claimed;
(c) The tax file number and name of each employee of each employer in relation to whom a subsidy is claimed;
(d) The period to which the form relates;
(e) The number of PAYE income payments made by the listed PAYE intermediary to each employee in the period to which the form relates; and
(f) The amount of subsidy that the listed PAYE intermediary claims in respect of the period to which the form relates [s YA 1].
The CIR may amend the details in a subsidy claim form to correct an error. The amendment must be made within two years of receiving the form. The CIR must give the listed PAYE intermediary 14 days notice of a proposed amendment.

When a listed PAYE intermediary files a subsidy claim form and the CIR amends the details to correct an error:

(a) If an overpayment or underpayment results from the amendment, the intermediary or CIR, as applicable, must pay the amount overpaid or underpaid within 30 days of the date of notice; or

(b) The CIR may choose to use the amount of an overpayment resulting from an amendment to pay a subsidy claim made after the end of the 14-day period [s RP 5].
Chapter 1100
Payment and Collection of Tax

1100.10 Inland Revenue’s accounting system

Taxpayers who have correctly self-assessed their tax liability will receive a return acknowledgement notice from Inland Revenue within 10 weeks. This will confirm that the self-assessment was correct and will show the refund amount or the amount of tax to pay. If Inland Revenue has amended the details in the return, Inland Revenue will send the taxpayer a notice of assessment. This will show any refund or tax to pay.

Inland Revenue issues a statement of account:
(a) When tax is debited to a taxpayer’s account; and
(b) As a reminder if tax becomes overdue.

Separate accounts are kept for the various taxes imposed. These statements show:
(a) All ledger entries since the previous statement was issued, if the balance on that statement was not paid in one sum;
(b) All tax assessed as the case may be or payable at the date of issue; and
(c) An explanation of the more common entries by the use of codes or a narration typed on the statement.

Tax assessed is debited to the account and tax paid is credited. Each entry is identified by date and batch number. Payments of tax are credited to the earliest tax owing on the statement.

1100.13 Tax payment dates

[ss RA 3, RA 13, RB 1, RC 6, YA 1, sch 3; GSTA, s 23]

Tax payments must be made on or before the due date specified in the relevant legislation. If a due date falls on a weekend or public holiday, the payment will be accepted as being on time if it is posted, electronically paid, or handed in to Inland Revenue on the next business day (see details of Inland Revenue practice below).

GST payments are due on the 28th of the month following the end of the taxable period, except in the following cases:
(a) If the taxable period ends in March, payment is due by 7 May; or
(b) If the taxable period ends in November, payment is due by 15 January.

If the due date falls on a weekend or public holiday, the GST payment can be made on the next business day.

Example:
An income tax or GST payment which is due on a Saturday or Sunday will be accepted as paid on time if it is mailed and postmarked on the following Monday (assuming Monday is a business day).

Standard practice statement SPS 07/01 [see TIB vol 19:2 (March 2007)], which applies from 12 February 2007, sets out Inland Revenue’s practice for accepting tax payments as having been made on time.

1) Payments by post

Payments by post are accepted as received in time if mailed and postmarked on or before the due date. For rural delivery taxpayers, the date of payment is when it is received by New Zealand Post or a similar provider, not when the payment is placed in the taxpayer’s personal mailbox for collection.
(2) **Payments posted overseas**
Overseas postmarks cannot be used to determine the date a payment was received by Inland Revenue. Where payments are posted overseas, the date of payment is when Inland Revenue actually receives it.

(3) **Electronic payments**
Payments made electronically are accepted as received in time when actually paid or direct credited into an Inland Revenue bank account on or before the due date. Internet payments must be completed prior to the end of the bank’s online business hours to be recorded as received on a specific day. Internet payments made after those online business hours are processed on the next business day. If the payment is being made from overseas, it is made on time when electronically paid or direct credited into an Inland Revenue bank account on or before the New Zealand due date.

(4) **Physical delivery**
A payment is accepted as being received in time if deposited into an Inland Revenue drop box by the close of business on the due date.

(5) **Westpac payments**
Payments are also received in time if physically handed in to a Westpac bank branch (either over the counter or via a drop box), by the close of business on the due date.

(6) **Postdated cheques**
Inland Revenue does not bank postdated cheques until the date specified on the cheque. A cheque that is postdated after the due date, even though received on or before the due date, will thus be treated as late. This applies to cheques that are posted or physically delivered.

(7) **Weekends and public holidays**
If a due date falls on a weekend or public holiday (including a provincial anniversary day), Inland Revenue will accept a payment as in time if it is physically delivered or posted on the next working day. An electronic payment will be accepted as on time if it is credited to an Inland Revenue bank account on the next working day. This applies to all tax types, including GST and child support payments.

(8) **Tax pooling**
The date of payment is when the intermediary makes the tax payment to Inland Revenue [see 1150.77 and TIB vol 15:5 (May 2003) at 64-67].

(9) **Tax transfers**
The payment is treated as made on the effective date of the transfer [see 1215 REFUNDS AND TRANSFER OF EXCESS TAX, TIB vol 14:11 (November 2002) at 35-48, TIB vol 16:1 (February 2004) at 101-105].

1100.15 **Free postage for business tax payments**
Businesses can send their GST, PAYE and fringe benefit tax payments post free to Inland Revenue. Reply paid envelopes will be provided for this purpose. This concession is intended to simplify the tax system and reduce compliance costs [Ministerial Media Release Minister of Revenue, 2 December 2003].

1100.17 **Payment by credit card** [TAA, s 226C]
The CIR may offer to taxpayers the ability to pay their tax and other debts by credit or debit card, either by telephone or internet. The fee for making payments in this way is 1.42 per cent of the amount.

1100.20 **Tax recovery deduction notices for defaulting taxpayers** [TAA, ss 157, 157A]
Where a taxpayer has defaulted in the payment of income tax, interest under Part 7 of the TAA, or a civil penalty, the CIR may send written notice (commonly referred to as an “attachment notice”), requiring a person to deduct from any amount payable (or to become payable) to the defaulting taxpayer, an amount and
pay it to Inland Revenue within a specified time. The notice may specify the deductions be made in instalments. The notice may also specify a daily amount of interest which accumulates on the overdue tax and penalties between the date of issue of the notice and the date the amount specified in the notice is finally deducted. It applies to money on deposit, whether in ordinary savings accounts, term or fixed deposit accounts, or any other savings accounts in Postbank Ltd, trustee savings banks, private savings banks, building society savings banks, and to cheque accounts in trading and savings banks. It also applies to money paid to the CIR by a tax pooling intermediary.

Money held in joint bank accounts can (from 21 December 2010) be recovered by the CIR under s 157 if the taxpayer is able to withdraw money from the account without a signature or authorisation (such as pin number) from the other account holders. This does not apply to the joint bank accounts of partnerships that file annual returns of income under s 33(1) of the TAA.

The following types of accounts are specifically excluded from these attachment provisions:
(a) A Home Lay-by Account within the meaning of the Post Office Act 1959;
(b) A Home Ownership Account within the meaning of the Home Ownership Savings Act 1974;
(c) A Farm Ownership Account within the meaning of the Farm Ownership Savings Act 1974; and
(d) A Fishing Vessel Ownership Account within the meaning of the Fishing Vessel Ownership Savings Act 1977.

Any person required to make deductions does so as the agent of the taxpayer and is indemnified for the deductions. Tax deduction notices may also be issued against salary and wages. The maximum amount to be deducted is the greater of the amounts in (a) or (b) below:

(a) The lesser of:
   (i) 10 per cent per week of the income tax due and payable; or
   (ii) 20 per cent of the gross wages or salary payable; and
(b) Ten dollars per week.

The deduction notices may be attached for the recovery of income tax, PAYE deductions in their various forms, earner levies, amounts paid to a tax pooling intermediary, unpaid tax under a tax recovery agreement, employer’s superannuation contribution payments, and employer and employee KiwiSaver contributions. Where a notice is issued to a person or financial institution the CIR is required to issue a copy of the notice to the taxpayer. When a request is made to a bank all moneys deposited in the taxpayer’s accounts with the bank subsequent to the issue of the notice, as well as the balance of the accounts, must be paid to the CIR until the amount specified in the notice is satisfied or the notice revoked [see 1100.22].

Any notice given may at any time be revoked by the CIR by a subsequent notice. The notice must be revoked at the request of the taxpayer when the CIR is satisfied that:
(a) All income tax then due and payable by the taxpayer has been paid; and
(b) A sum is held to the credit of the taxpayer of not less than the income tax due for the then current tax year.

A person who has had any deduction on account of income tax payments made from any amounts is entitled to receive a written statement of the deduction and the purpose for which it was made from the person making the deduction.

The amounts deducted under these provisions are deemed to be held in trust for the Crown and, without prejudice to any other remedies available, are recoverable in the same manner as if they were income tax payable by the employer or other person required to make the deduction. Tax arrears deducted from wages must be accounted for to Inland Revenue separately from current PAYE deductions.

The section applies only to “any amount payable or to become payable” to the taxpayer. It cannot be applied where the taxpayer has lost the right to receive moneys, whether or not due to a voluntary act on the taxpayer’s part (eg an assignment under a deed of arrangement with creditors).
Payment and Collection of Tax

When a person (other than an employer) receives a notice from the CIR requiring them to deduct an amount from payments to a taxpayer and fails to comply with the notice, that person is liable to prosecution for an offence but is not liable to pay interest or civil penalties [TAA, s 157A]. This provision only applies to notices issued under:

(a) Section 157 of the TAA;
(b) Section 43 of the GSTA 1985;
(c) Section 154 of the Child Support Act 1991;
(d) Section 46 of the Student Loan Scheme Act 1992; or
(e) Another tax law specifying obligations in relation to withholdings or deductions of tax that operates by reference to s 157 of the TAA.

The validity of an attachment notice was challenged in *Anzamco Ltd (in liq) v Bank of New Zealand* (1982) 5 NZTC 61,249 (HC). Anzamco sought an application for review of one of the attachment notices. In that case the applicant acquired two large farming properties, which were sold in 1980. The CIR considered the sale gave rise to a taxable profit and reissued an assessment accordingly. The company went into liquidation in December 1981. In March 1982 the liquidator placed $935,000 of the company’s funds on term deposit. The manager of the bank was served with an attachment notice requiring a deduction of $629,333 from the money held on the applicants’ behalf. The application was allowed on the grounds that the form of the notice did not comply with the clear wording of the section. As a result, it was invalid. Since an attachment notice interferes with the rights of the subject the legislation authorising it must be followed exactly.

In *King v Leary* (1988) 10 NZTC 5,067 (HC), a notice was served on a solicitor for tax payable by his client. When instructions were received by the solicitor as trustee of a family trust to pay funds to his client as beneficiary, the solicitor was bound to comply with deduction requirements of the notice.

A notice issued by the CIR under s 157 of the TAA for the police to hand over cash seized from a suspected drug dealer was not invalidated by the fact that the police had obtained the cash during an unlawful search, provided the CIR fully complied with s 157 of the TAA in issuing the notice: *Wojcik v Police* (1996) 17 NZTC 12,646 (DC).

In *Singh v Commissioner of Inland Revenue* (1999) 19 NZTC 15,050 (HC), the CIR was entitled to postpone the repayment of funds seized under s 400 of the ITA 1976 (the predecessor to s 157 of the TAA) until such time as an investigation to quantify the actual amount of tax payable had been completed. The CIR could point to a set of circumstances that justified the proper retention of the funds. Laurenson J, citing *Commissioner of Inland Revenue v Wilson* (1996) 17 NZTC 12,512 (CA) and *Poananga v State Services Commission* [1985] 2 NZLR 385 (CA), observed that it would have been an abuse of the CIR’s powers if the substantial purpose of the decision to refuse repayment was to enable the Court to determine the ownership of the funds.

An attachment notice issued under s 157 of the TAA will be effective even if the income tax assessment to which the unpaid tax relates has been challenged and the challenge is not yet resolved, to the extent of any non-deferrable tax (arising under s 138I), that has not been paid by the taxpayer: *Hieber v Commissioner of Inland Revenue* [2000] 3 NZLR 718, (2000) 19 NZTC 15,716 (HC). Non-deferrable tax is the amount of tax in dispute [see 260.105].

In *Enterprises Lakeview Ltd v Commissioner of Inland Revenue* (2009) 24 NZTC 23,139 (HC) the CIR issued a deduction notice under s 157 of the TAA to Solid Energy, a debtor of the defaulting taxpayer, to recover unpaid taxes. The taxpayers referred to in the notice were a partnership (Mr and Mrs S) and a company (TFW Ltd) controlled by Mr S. The business, which involved the supply of kindling wood and trellis fencing, traded under the name of TFW Ltd. After the issue of the deduction notice, Mr S purported to transfer the business of TFW Ltd to Enterprises Lakeview Ltd (EL Ltd) and issued subsequent invoices to Solid Energy in the name of EL Ltd, in order to circumvent the deduction notice. However, Mr S retained effective control of the business. Following an investigation, Inland Revenue advised Solid Energy that in its view EL Ltd was merely an agent for the taxpayers named in the notice, and that moneys owing to EL Ltd should also be paid to Inland Revenue. EL Ltd claimed that the deduction notice could not be used against it because it was not...
the taxpayer named in the notice. The court held that the CIR acted reasonably and within his lawful powers in instructing Solid Energy to pay moneys owing to EL Ltd to the CIR. The creation of EL Ltd was a device or artifice by Mr S to avoid the implications of the deduction notice.

1100.22 Inland Revenue practice on deduction notices [TAA, s 157]

Inland Revenue will not issue a deduction notice for tax arrears that are subject to an instalment arrangement between the taxpayer and the CIR provided the arrangement is being adhered to by the taxpayer.

A deduction notice may require deductions to be made either in a lump sum (one-off notice) or by instalments (on-going notice). The bank is required to forward the deducted funds to Inland Revenue according to the date specified on the notice. If no funds are available the bank is required to advise Inland Revenue.

Inland Revenue will not require deductions from a bank account if this would put the taxpayer into, or further into, overdraft. However, if Inland Revenue issues a deduction notice for an account which is in credit and the taxpayer attempts to avoid complying with the notice by transferring funds from that account so that it will go into overdraft, then the deduction notice will take priority.

A deduction notice may require deduction from amounts held on the date of the notice, or from amounts deposited after the date of the notice. Inland Revenue is able to require daily monitoring of accounts where this is considered necessary. If daily monitoring is required, it will usually be for a maximum of 10 working days. However, Inland Revenue reserves the right to require an account to be monitored over a longer period of time.

A deduction notice may require deductions to be made to cover daily interest; in this case the rate of interest will be advised in the notice. Interest starts on the date of the deduction notice and ends on the day on which the amount required to be deducted has been deducted.

A deduction notice will continue to apply until the deduction is made by the bank (in the case of a one-off notice), until the total amount required pursuant to an on-going notice has been deducted, or until the notice is revoked or withdrawn by Inland Revenue.

With recovery of funds under the TAA, GDA, GSTA and SLSA, deductions made by the bank are held in trust for the Crown until they are forwarded to Inland Revenue. If the deduction is not made by the bank, the amount required to be deducted is recoverable by Inland Revenue from the bank as if it were tax payable by that bank.

A deduction notice issued under the TAA, GDA, GSTA and SLSA can be placed on joint bank accounts when the money is able to be withdrawn from that account by the defaulting person without the signature or other authorisation of the other joint bank account holder(s).

A deduction notice can only be placed on a partnership account in respect of the partnership’s liability as a taxpayer. A partnership account is defined in s 157(12) of the TAA as a joint account that files a return of income under s 33(1) of the TAA. A deduction notice cannot be placed on a partnership bank account to satisfy a partner’s personal tax liability.

The term “other authorisation” ensures that deduction notices can be applied to accounts which are accessed electronically.

Under s 154 of the CSA, the CIR is able to require banks to make deductions from money payable to a liable parent. Under s 155 of the CSA this deduction power extends to money held in joint bank accounts in the name of the liable parent and one or more other persons when the liable parent can draw from that account without the signature of the other person(s). Overpayments made to payees may also be recovered in the same manner as liable parent debt under s 151(2) of the CSA.
Both the primary caregiver and their partner or spouse, are jointly and severally liable for any overpayment of Working for Families tax credits. The CIR may place a deduction notice on the bank accounts of the primary caregiver and/or their spouse and any joint account held in the names of either the primary caregiver or the spouse.

A deduction notice will apply to money that is held in a term investment whether or not that investment is due to mature.

If a bank fails to make the deductions required by a deduction notice, and there was an amount payable, or an amount became payable, Inland Revenue has the power to prosecute the bank for not complying with the terms of the deduction notice under s 157A of the TAA. This does not apply to a deduction notice for child support.

### 1110.15 Purposes of penalties rules [TAA, s 139]

The stated purposes of the penalties regime are:

(a) Encourage taxpayers to comply voluntarily with their tax obligations and to cooperate with Inland Revenue;

(b) Ensure that penalties for breaches of tax obligations are imposed impartially and consistently; and

(c) Sanction non-compliance with tax obligations effectively and at a level that is proportionate to the seriousness of the breach.

### 1110.20 Non-application of penalties rules [TAA, s 141JA]

The penalties rules in Part 9 of the TAA do not apply to a non-filing taxpayer if the person:

(a) Is an employee who has been required, under s RD 4(2), to provide an employer monthly schedule and pay outstanding tax deductions in respect of a PAYE income payment; and

(b) Receives an income statement [see 1270.75] that the taxpayer considers incorrect and informs the CIR as required by s 80F of the TAA.
1110.25 Application of penalties to PAYE intermediaries [TAA, s 141JB]
The late filing penalty, late payment penalty and shortfall penalties apply to a PAYE intermediary [see 1090 PAYE INTERMEDIARIES] as if the intermediary were the employer, unless the employer has failed to:
(a) Pay the gross salary or wages to the intermediary; or
(b) Provide the information required by the intermediary within the agreed time.
If the employer has failed to do either of the above, the late filing penalty, late payment penalty and shortfall penalties apply to the employer and not to the intermediary.

1110.30 Civil penalties
A civil penalty means any of the following:
(a) A late filing penalty;
(b) A late payment penalty;
(c) A shortfall penalty;
(d) A promoter penalty;
(e) A non-electronic filing penalty; or
(f) A civil penalty under ss 215 (until 31 March 2009) or 216 of the KiwiSaver Act 2006 [TAA, s 3(1)].
Civil penalties are not deductible [s DB 1].

(1) Recovery of civil penalties by the CIR [TAA, s 156A]
For the purposes of recovering unpaid civil penalties, a civil penalty is treated as a tax of the same type as the tax:
(a) For which the penalty is imposed;
(b) For which the tax return is to be provided (if the penalty is a late filing penalty); or
(c) For which the return is provided (if the penalty is a non-electronic filing penalty).

A late filing penalty relating to an overdue ACC earners’ levy reconciliation statement is treated as a tax in the nature of income tax.

A civil penalty is recoverable from a taxpayer (or PAYE intermediary, if applicable) at any time after it has become payable, whether or not the taxpayer has been convicted of an offence in relation to the act, omission or matter that gave rise to the liability for the penalty.

1110.35 Late filing penalty [TAA, ss 139A, 142, 183AA]
The late filing penalty applies to the following types of tax returns:
(a) Annual tax returns;
(b) Annual ICA returns required to be furnished by Australian ICA companies that are not required to file income tax returns;
(c) Reconciliation statements;
(d) Returns required to be furnished by portfolio tax rate entities and portfolio investor proxies under s 57B of the TAA;
(e) Employer monthly schedules.

The late filing penalty does not apply to FBT returns or, prior to 1 April 2008, GST returns.

A taxpayer is liable to pay a late filing penalty if the taxpayer fails to provide a return, statement, or schedule listed above on time. The late filing penalties are as follows:

- Annual tax return with net income below $100,000: $50
- Annual tax return with net income between $100,000 and $1,000,000: $250
Penalties and Interest

Annual tax return with net income over $1,000,000 $500
Annual ICA returns, reconciliation statements and employer monthly schedules $250

Net income is annual gross income less annual total deduction [s BC 4(2)]. Deductions include net losses incurred in the current income year, but not losses brought forward from earlier years.

The CIR must, at least 30 days before imposing a late filing penalty for any late return other than an employer monthly schedule or a GST return, either:
(a) Notify the taxpayer in writing that a late filing penalty may be imposed if the return specified in the notice is not filed; or
(b) Publicly notify that a late filing penalty may be imposed on taxpayers who do not file the required return.

1. Employer monthly schedules

Where a taxpayer fails to file an employer monthly schedule on time, the CIR must send the taxpayer a warning notice. If the taxpayer has filed on time all employer monthly schedules due in the past 12 months, except for the most recent one, the taxpayer will be notified that a late filing penalty will be payable on any further failure to file on time. If the taxpayer has not filed on time all employer monthly schedules due in the past 12 months, the CIR must notify the taxpayer that the late filing penalty is payable on the current failure to file on time.

2. GST returns [TAA, s 139AAA]

A registered person is liable to pay a late filing penalty if:
(a) The registered person has not completed and filed a GST by the due date [see 580.110];
(b) The registered person has failed to file one or more GST returns on time in the past 12 months; and
(c) The CIR notifies the registered person that the penalty is payable.

The penalty is $250 if the invoice or hybrid basis is used or $50 if the payments basis is used, to calculate the GST liability.

If the registered person has filed on time all GST returns due in the past 12 months, the CIR must notify the registered person that the late filing penalty will be payable on any future failure to file a return on time. Otherwise, the CIR must notify the registered person that the penalty is payable on the current failure to file on time.

3. Due date for paying penalty [TAA, s 142]

Except in the case of employer monthly schedules or GST returns, the due date for payment of a late filing penalty is the later of a date specified by the CIR (not less than 30 days after the day the CIR notifies the taxpayer that the penalty is payable), and:

For
Annual tax returns
ACC earner premium reconciliation statements
ACC earner premium reconciliation statement following cessation of business
Annual ICA returns required to be furnished by Australian ICA companies that are not required to file income tax returns

Applicable date
The terminal tax date for the tax year to which the annual tax return relates
31 May following the tax year to which it relates
15th of the second month after the month in which the employer ceases business
The date by which the company is required to file the annual ICA return [TAA, s 69(1), (2)(a)]

The due date for payment of a late filing penalty for an employer monthly schedule is:
Penalties and Interest

For

Employer monthly schedules for large employers [see 1080.81]
Employer monthly schedules for small employers, and for new employers whose total tax deductions have not yet reached $100,000

Applicable date

The 5th of the month following the month in which the employer monthly schedule was due
The 20th of the month following the month in which the employer monthly schedule was due

For GST returns, the due date for payment of a late filing penalty is the 28th day of the second month following the end of the taxable period, with two exceptions:
(a) If the month following the end of the taxable period is December, the penalty is due on 15 February;
(b) If the month following the end of the taxable period is April, the penalty is due on 7 June.

For useful summaries of the factors that are taken into account by the Courts when determining the level of penalty to impose for failure to file tax returns: Commissioner of Inland Revenue v Wheeler (1999) 19 NZTC 15,183 (HC), R v Donaldson (1997) 14 CRNZ 537 (CA), Commissioner of Inland Revenue v Simpson HC Auckland AP291/97, 14 January 1998 and Denver Videotronics Ltd v Commissioner of Inland Revenue (1986) 8 NZTC 5,163 (HC).

(4) Inland Revenue practice

It is Inland Revenue’s practice that the late filing penalty will be imposed on:
(a) Income tax returns for individuals and companies;
(b) Employer monthly schedules; and
(c) Annual imputation returns required to be furnished by Australian imputation credit account companies that are not required to file income tax returns.

Inland Revenue will not impose late filing penalties on ACC reconciliation statements because Inland Revenue no longer collects these statements on behalf of ACC.

The late filing penalty will be imposed on outstanding income tax returns if:
(a) The return is not filed by the due date and is not subject to an extension of time (EOT) arrangement;
(b) The return is subject to an EOT arrangement but is not filed by the date agreed in the arrangement;
(c) An EOT arrangement is withdrawn from a client of a tax agent and the return is not filed by the date specified when the EOT was withdrawn; or
(d) The return is for a client of a tax agent with an EOT arrangement and is not filed by 31 March in the year following the income year to which the return applies.

The CIR will provide written notification of at least 30 days prior to the intention to impose the late filing penalty, either by public notification or directly to the taxpayer.

The amount of the penalty is based on the previous year’s tax return. If the previous year’s return has not been filed, or Inland Revenue has no information on which to base the penalty, the minimum penalty of $50 will be imposed. The penalty will be adjusted, if necessary, after the current year’s tax return has been filed. The minimum penalty is payable even if the taxpayer has no net income for the year.

Inland Revenue has no statutory obligation to give an employer warning that a late payment penalty is to be imposed for an unfiled employer monthly schedule. However, it is Inland Revenue practice to issue a warning notice the first time an employer fails to file a schedule by due date, and advise that the late filing penalty will not be imposed if the schedule is filed immediately (the practice statement does not specify what “immediately” means).

If, within 12 months of the warning notice being issued, a further default in filing a schedule occurs, a late filing penalty will be imposed in respect of the second default, and a notice will be issued advising that the
Penalties and Interest

penalty is payable (ie no warning is given). Any default more than 12 months after the warning notice was issued is treated as a “first offence” and a new warning notice is issued.

A late filing penalty will be imposed when an annual imputation return has not been filed by the due date, and at least 30 days written notification of the intention to impose the penalty has been given, either directly to the tax payer or by public notification.

A late filing penalty may be reversed if:

(a) The return was filed before the date the penalty was imposed, but had not been “lodged” by Inland Revenue; or

(b) The return or employer monthly schedule was not required to be filed; or

(c) In respect of an employer monthly schedule, the taxpayer did not pay any salary or wages even though it was a registered employer.

A late filing penalty may be remitted if the legislative criteria contained in ss 183A and 183D of the TAA are met [see 1110.335 to 1110.345].

The late filing penalty will not be remitted if:

(a) The taxpayer has an EOT arrangement as a client of a tax agent, but the agent had not notified the CIR that the taxpayer was their client before the late filing penalty was imposed.

(b) The taxpayer was granted an EOT (either as a client of a tax agent or individually) after the late filing penalty was imposed.

The CIR must automatically remit a taxpayer’s late filing penalty to the extent to which, objectively, the penalty is imposed because of errors in respect of the change in the GST rate on 1 October 2010 (for example, where the required systems changes to accommodate the new rate have not been able to be made in time) [TAA, s 183AA].

1110.40 Late payment penalty [TAA, ss 139B, 183F]

A taxpayer is liable to pay a late payment penalty if and to the extent that the taxpayer does not pay by the due date (the “default date”) an amount of tax (the “unpaid tax”), calculated by the taxpayer as payable, or for which the taxpayer is assessed, and any one or more of the following apply:

(a) The unpaid tax is provisional tax or a penalty relating to a failure to pay provisional tax;

(b) Ignoring any failure to pay for which a penalty or interest is remitted under s 183AA of the TAA, [see 1110.350], the taxpayer has failed to pay on time an amount of tax due for payment in the period:

(i) Beginning with the day that is two years before the default date (but no earlier than 1 April 2008); and

(ii) Ending before the default date;

(c) Ignoring any failure to pay for which a penalty or interest is remitted under s 183AA of the TAA [see 1110.350]. The taxpayer has paid on time all amounts of tax due for payment in the period referred to in paragraph (b) and:

(i) The CIR gives the taxpayer a notice setting a further date for payment of the unpaid tax; and

(ii) The taxpayer does not pay the unpaid tax before the date that is the earlier of the further date and the date that is one month after the date of the notice.

A taxpayer is liable to pay a late payment penalty in relation to a default date if:

(a) The CIR has given the taxpayer a notice of a further date for the payment of unpaid tax;

(b) After giving the notice, the CIR becomes aware of a default by the taxpayer that arose before the date of the notice; and

(c) The further date for payment falls outside the two-year period referred to above and should have been given in relation to the default referred to in (b).
If a taxpayer enters into an instalment arrangement under s 177B of the TAA [see 480.30] and a late payment penalty is imposed under s 139BA(1) [see 480.50], the taxpayer is treated for the purposes of s 139B of the TAA as paying the amount of tax due for payment on time, to the extent of the default.

The late payment penalty does not apply if the amount of income tax or ancillary tax outstanding after due date is $100 or less [TAA, s 183F].

The late payment penalty consists of an initial late payment penalty and an incremental late payment penalty. The initial penalty consists of two components:

(a) One per cent of the unpaid tax, which is added to the unpaid tax on the day after the default date for the unpaid tax.

(b) Four per cent of the tax to pay at the end of the sixth day after the day on which the penalty in item (a) is imposed. This is added to the tax to pay at the end of the sixth day after the penalty in item (a) is imposed. For this purpose, “tax to pay” means the sum of the unpaid tax and the one per cent penalty imposed under item (a).

The incremental late payment penalty is one per cent of the amount of tax to pay one month after the day on which the one per cent initial late payment penalty is imposed, or the day an incremental penalty was last imposed. This is added to the tax to pay on the day after the last day of successive monthly intervals during which the tax to pay remains unpaid (see example below). If this day falls on a day that does not exist (eg 31 April), the penalty is added on the last day of the month (eg 30 April).

The four per cent initial late payment penalty will not be added if the CIR has:

(a) Exercised powers available under s 157 of the TAA or s 43 of the GSTA 1985 (or a similar provision), to recover the overdue tax from the taxpayer by attachment notice [see 1100.20 and 580.153], before the end of the sixth day after the day the one per cent initial penalty was imposed; and

(b) Received the tax withheld or deducted in accordance with the requirements of the attachment notice.

The incremental late payment penalty will not be added if, for a month during which the tax to pay remains unpaid, the CIR has:

(a) Exercised powers available under s 157 of the TAA or s 43 of the GSTA 1985 (or a similar provision), to recover the overdue tax from the taxpayer by attachment notice; and

(b) Received the tax withheld or deducted in accordance with the requirements for the month of the attachment notice.

When a taxpayer has applied for financial relief under ss 177 to 177C of the TAA, the way in which the late payment penalty is imposed is modified [see 480.50].

“Tax to pay” means (at any time) the unpaid tax together with any unpaid late payment penalty. The unpaid tax is deemed to be the last part of any tax to pay that a taxpayer pays.

“Unpaid tax” includes an amount of tax that must be withheld or deducted and paid to the CIR under a tax law, but does not include a late payment penalty or a shortfall penalty imposed under s 141ED of the TAA.

### Example

Until 18 November, Henry forgot to file his GST return and pay the GST owing on the due date of 31 August. The amount of GST due on 31 August was $1,854.32. Henry will be liable for late payment penalty as follows:

<table>
<thead>
<tr>

\text{Tax to pay 18 November} & \$1,986.92 \\
\text{Total penalties payable (1,986.92 – 1,854.32)} & \$132.60 \\
\hline
\end{array}
\]

The CIR is able to remit a late payment penalty in limited circumstances [see TAA, s 183A and 1110.335].

1110.45 Penalty for not paying employer monthly schedule amount [TAA, s 141ED]

A penalty is payable when a taxpayer files an employer monthly schedule with the CIR showing an amount of tax payable (the “returned amount”) but fails to pay the total amount owing by the due date [see 1080.80 to 1080.82]. The CIR must, after the due date for paying the returned amount, give the taxpayer notice (the “CIR’s notice”) of the following:

(a) That the taxpayer is liable to pay a penalty for failing to pay the unpaid amount by the due date and how the penalty is calculated;
(b) The circumstances in which further penalties will be imposed and how they will be calculated; and
(c) What action the taxpayer can take to avoid further penalties being imposed.

Before sending this notice, the CIR must first notify the taxpayer that a penalty may be imposed under s 141ED of the TAA if the unpaid amount is not paid. The penalty does not apply if:

(a) The taxpayer is a receiver or liquidator appointed after the end of the return period to which the employer monthly schedule relates, and there are insufficient funds available to pay the unpaid amount;
(b) The taxpayer is, during the period, negotiating an instalment arrangement with the CIR to pay the unpaid amount; or
(c) The taxpayer enters into an instalment arrangement (of the same type as set out in s 177B of the TAA) [see 480.30] with the CIR before the penalty date and pays the unpaid amount under the arrangement.

The due date for paying the penalty (the “penalty date”) is:

(a) The date of the CIR’s notice, if the penalty is the first penalty in relation to the returned amount; or
(b) One month after the penalty date for the preceding penalty, if (a) does not apply. If a penalty date would fall on a date that does not exist, the penalty date is the last day of the month.

The amount of the penalty is as follows:

\begin{align*}
\text{Circumstance} & & \text{Penalty} \\
\text{The taxpayer fails to enter into an instalment arrangement and fails to pay the unpaid amount, within one month after the penalty date} & & \text{Ten per cent of the unpaid amount on the day before the penalty date} \\
\text{The taxpayer enters into an instalment arrangement before the penalty date but fails to comply with the arrangement within one month after the penalty date} & & \text{Ten per cent of the unpaid amount on the day before the penalty date} \\
\text{The taxpayer pays the unpaid amount or enters into an instalment arrangement within one month after the penalty date, and the previous circumstance does not apply} & & \text{Five per cent of the unpaid amount on the day before the penalty date}
\end{align*}
If the returned amount is varied or corrected by the taxpayer or the CIR in the period between the date the employer monthly schedule is filed and the day before the penalty date, the amount of the penalty is based on the varied or corrected amount.

An amount paid by the taxpayer or applied by the CIR on account of the taxpayer, in relation to unpaid tax and a penalty under s 141ED of the TAA, must first be applied towards payment of the penalty.

More than one penalty may be imposed on a taxpayer in relation to the same employer monthly schedule. However, the total penalties that may be imposed under s 141ED of the TAA may not exceed 150 per cent of the returned amount that is unpaid when the first penalty is imposed.

A taxpayer is not liable to pay a penalty for not paying an employer monthly schedule amount if the unpaid amount on the day before the CIR’s notice (under s 141ED(1)(b) of the TAA) is $100 or less [TAA, s 183F; see 1110.345].

1110.50 **New due date for payment of tax that is not a penalty** [TAA, s 142A]

If the CIR makes a new assessment of tax (ie an assessment of tax for which the taxpayer has not been assessed earlier), the CIR must fix a date for the payment of that tax that is at least 30 days after the date of the notice of assessment, and give notice of this date to the taxpayer in the notice of assessment.

If the CIR makes an amended assessment that increases the amount of tax assessed and the amended assessment is made less than 30 days before, or on or after the due date for the original tax assessed, the CIR must fix a date for the payment of the increase of tax that is at least 30 days after the date of the notice of assessment, and give notice of this date to the taxpayer in the notice of assessment.

The requirement to fix a due date as above does not apply:

(a) To any provisional tax that remains unpaid on an instalment date;
(b) If the new assessment referred to above is a default assessment;
(c) If the CIR has notified the taxpayer before the due date for the payment of the tax that the above provisions will not apply to the tax as calculated by the taxpayer, or to an amount of tax estimated by the taxpayer; or
(d) If the CIR considers that setting a new due date may prejudice the CIR’s ability to recover the tax.

For the above purposes, “tax” does not include a civil penalty.

1110.55 **Late payment penalty and provisional tax** [TAA, s 139C]

A late payment penalty will only arise on provisional tax that is unpaid at the expiry of an instalment date, or a CIR-set instalment date, to the extent that the provisional tax payable exceeds the provisional tax paid.

“CIR-set instalment date” means a date specified by the CIR under s 119(4)(a) of the TAA.

“Provisional tax paid” means the amount of provisional tax paid by the provisional taxpayer on or before the instalment date or CIR-set instalment date, and includes any amount of provisional tax:

(a) Paid in excess of the amount of provisional tax payable on any earlier instalment date for that tax year; and
(b) Not credited to the amount of provisional tax payable on any earlier instalment date for that tax year.

“Provisional tax payable” means:

(a) In respect of an instalment date and a taxpayer to whom s RC 10 applies [see 1150.30], the lesser of the amount calculated under s RC 10 and the amount calculated as payable under s RC 10 if the taxpayer’s RIT is substituted for the amount of provisional tax payable under s RC 5.
(b) In respect of an instalment date and a taxpayer to whom ss RC 10 and RC 21 applies [see 1150.80, 1150.82], the lesser of the amount calculated under ss RC 10 and RC 21 and the amount calculated as payable under ss RC 10 and RC 21 if the taxpayer’s RIT is substituted for item “residual income tax” in the formulae in s RC 10(2).
Penalties and Interest

(c) For an instalment date and a taxpayer to whom s RC 11 applies [see 1150.35], the lesser of the amount calculated under s RC 11 and the amount calculated as payable under s RC 11 if the GST ratio is substituted for a GST ratio which is calculated using the taxpayer’s RIT for the tax year and taxable supplies for the corresponding income year.

(d) In respect of a CIR-set instalment date, the provisional tax payable on that date in accordance with s 119(4)(a) of the TAA [see 1150.65].

1110.60 Where another person deducts and pays resident withholding tax [TAA, s 140]

For the purposes of determining a person’s liability to pay a late payment penalty, the person is treated as having withheld or accounted for an amount of tax if:

(a) They are liable to pay the late payment penalty for not withholding resident withholding tax (RWT) or not accounting for RWT; and

(b) They can satisfy the CIR that another person withheld the RWT or accounted for the RWT.

1110.65 Imputation penalty tax [TAA, s 140B]

A company that is liable to pay further income tax under ss OB 65 or OC 30 in respect of an end of year debit balance in its ICA or imputation additional tax under s OB 72, is also liable to pay imputation penalty tax. The penalty is 10 per cent of the amount of:

(a) Further income tax that gives rise to the liability for the imputation; or

(b) Imputation additional tax that gives rise to the liability for further imputation penalty tax.

1110.70 Foreign dividend payment penalty tax [TAA, s 140C]

A company that is liable to pay further foreign dividend payment (FDP) under s OC 30 in respect of an end of year debit balance in its foreign dividend payment account (FDPA) is also liable to pay FDP penalty tax. The amount of FDP penalty tax payable by a company is 10 per cent of the amount of further FDP that gives rise to the liability for the FDP penalty tax.

1110.75 Maori authority distribution penalty tax [TAA, ss 140CB, 181B]

A Maori authority that is liable to pay further income tax under ss OK 21 and OK 22 for an end of year debit balance in its Maori authority credit account (MACA) is also liable to pay a Maori authority distribution penalty tax. The amount of the penalty tax is 10 per cent of the amount of further income tax that gives rise to the penalty.

The CIR must remit a Maori authority distribution penalty tax to the extent that the CIR is satisfied that liability for the penalty arose because of:

(a) A debit arising to the MACA under s OK 17 in relation to an arrangement to obtain a tax advantage, and it is established subsequently that, in relation to the debit, a credit arises to the MACA under s OK 9;

(b) A refund of a Maori authority distribution having been sent to but not received by the Maori authority, or not having been known by the Maori authority to have been received, before the end of the tax year; or

(c) A debit arising to the MACA under s OK 13, and the Maori authority did not become aware of the debit in sufficient time to allow it to remove the debit balance before the end of the year.

The CIR must also remit any late payment penalty to the extent the CIR is satisfied that the penalty was imposed in respect of a Maori authority distribution penalty tax that has been remitted.

If the CIR remits a Maori authority distribution penalty tax because of (a) above, the CIR must also remit any late payment penalty to the extent the CIR is satisfied that the penalty was imposed in respect of the amount of further income tax that gave rise to the Maori authority distribution penalty tax so remitted.
1110.80 Non-electronic filing penalty [TAA, ss 139AA, 142G]

An employer, a portfolio investment entity, a portfolio investor proxy, or PAYE intermediary is liable to a non-electronic filing penalty if the person does not furnish an employer monthly schedule and a PAYE income payment form in the prescribed format. The penalty does not apply if the employer is authorised under s 36B(1) of the TAA to furnish the schedule in a format that is not prescribed.

The non-electronic filing penalty is the greater of $250 or $1 for each employee employed at any time during the month to which the employer monthly schedule relates. The penalty is due for payment on the fifth day of the month following the month in which the employer monthly schedule in electronic format was due.

1110.85 Tax shortfalls

The following table from TIB vol 8:7 (October 1996) at 10, summarises the breaches and shortfall penalty rates, including adjustments that may be made for disclosure and for obstruction.

<table>
<thead>
<tr>
<th>Action subject to penalty</th>
<th>Standard penalty rate</th>
<th>Reduced by 75% for disclosure before notification of audit</th>
<th>Reduced by 40% for disclosure after notification of audit</th>
<th>Reduced by 75% for disclosure when filing</th>

* This reduction is limited to the unacceptable tax position and abusive tax position penalties because it specifically relates to the disclosure of the taxpayer’s interpretation at time of filing.

The following flow chart, also from TIB vol 8:7 (October 1996), summarises how to determine whether an action is subject to a penalty, and the penalty rate that will apply.
**Penalties and Interest**

**1110.90** Not taking reasonable care [TAA, s 141A]

Inland Revenue acknowledges the contribution of the New Zealand Institute of Chartered Accountants in developing this diagram.

* The threshold referred to in the flowchart is the greater of:
  - $10,000; or
  - Lesser of one per cent of tax, or $200,000.

A taxpayer is liable to pay a shortfall penalty if the taxpayer does not take reasonable care in taking a tax position and the taking of that tax position results in a tax shortfall. The penalty payable for not taking reasonable care is 20 per cent of the resulting tax shortfall.

Inland Revenue acknowledges the contribution of the New Zealand Institute of Chartered Accountants in developing this diagram.

* The threshold referred to in the flowchart is the greater of:
  - $10,000; or
  - Lesser of one per cent of tax, or $200,000.

**1110.90** Not taking reasonable care [TAA, s 141A]

Inland Revenue acknowledges the contribution of the New Zealand Institute of Chartered Accountants in developing this diagram.

* The threshold referred to in the flowchart is the greater of:
  - $10,000; or
  - Lesser of one per cent of tax, or $200,000.

**1110.90** Not taking reasonable care [TAA, s 141A]

A taxpayer is liable to pay a shortfall penalty if the taxpayer does not take reasonable care in taking a tax position and the taking of that tax position results in a tax shortfall. The penalty payable for not taking reasonable care is 20 per cent of the resulting tax shortfall.
Penalties and Interest

1110.90

Note: A taxpayer who, in taking a tax position, relies on an action or the advice of a tax adviser engaged by the taxpayer, or by a company in the same group of companies as the taxpayer, takes reasonable care in relying on the action or advice. However, this does not apply if any one or more of the following apply:

(a) The taxpayer is the employer of the tax adviser;
(b) The taxpayer does not provide the tax adviser with adequate information relating to their tax position;
(c) The taxpayer does not provide the tax adviser with adequate instructions relating to the tax position;
(d) The taxpayer has reason to believe that the action or advice is incorrect;
(e) The taxpayer has previously (for a period ending less than four years before the beginning of the period to which the tax position relates) had a tax shortfall for the same type of tax arising from a corresponding tax position and does not take reasonable care to avoid the further tax shortfall.

A taxpayer who takes an acceptable tax position has also taken reasonable care in taking their tax position. However, this does not prevent a taxpayer who makes a mistake in the calculation or recording of numbers in a return from being liable for a penalty for not taking reasonable care. An acceptable tax position is an interpretation that is not an unacceptable tax position [see 1110.95].

If the CIR assesses a penalty for not taking reasonable care after cancelling (under s 141KB) a shortfall penalty assessed under s 141B (for taking an unacceptable tax position), the liability for the penalty for not taking reasonable care arises at the same time as the s 141B penalty is cancelled. (Note: s 141KB of the TAA was repealed for tax positions taken from 1 April 2008.)

“Tax position” means a position or approach with regard to tax under one or more tax laws, including without limitation a position or approach with regard to:

(a) A liability for an amount of tax, or the payment of an amount of tax;
(b) An obligation to deduct or withhold an amount of tax, or the deduction or withholding of an amount of tax;
(c) A right to a tax refund, or to claim or not to claim a tax refund;
(d) A right to a credit of tax, or to claim or not to claim a credit of tax;
(e) The provision of a tax return, or the non-provision of a tax return;
(f) The derivation of an amount of income or exempt income or a capital gain, or the inclusion or non-inclusion of an amount in income;
(g) The incurring of an amount of expenditure or loss, or the allowing or denying as a deduction of an amount of expenditure or loss;
(h) The availability of a tax loss component or loss balance, or the use of a tax loss component or loss balance;
(i) The attaching of a credit of tax, or the receipt of or lack of entitlement to receive a credit of tax;
(j) The balance of a tax account or memorandum account of any type or description, or a debit or credit to such an account;
(k) The estimation of provisional tax payable;
(l) Whether the taxpayer must request an income statement [see 1270.75] or respond to an income statement issued by Inland Revenue;
(m) The application of s 33A(1) of the TAA;
(n) A right to a tax credit; and
(o) The amount of a payroll subsidy, claimed under s RP 4, to a listed PAYE intermediary [TAA, s 3(1)].

“Taxpayer’s tax position” means a tax position taken by a taxpayer in, or in respect of, a tax return, a due date, or an income statement [TAA, s 3(1)].
If a taxpayer who has an obligation under the PAYE, FBT, employer’s superannuation contribution, RWT, NRWT or FDP rules furnishes a return under any of those rules, but pays (by the due date) less than the amount shown in the return, the taxpayer’s tax position becomes the tax paid and not the amount shown as payable in the return [TAA, s 4A(4)].

If a taxpayer does not provide a tax return for a return period, the taxpayer is deemed to take, for each type of tax and for each due date, a tax position based on the amount of tax actually paid [TAA, s 4A(5)].

The CIR’s policy on reasonable care is set out in TIB vol 8:7 (October 1996) at 11-14. The TIB contains useful examples.

In 2005 the CIR issued an interpretation statement in relation to the shortfall penalty for not taking reasonable care [see TIB vol 17:9 (November 2005) at 3-25]. The interpretation statement provides a detailed analysis of the shortfall penalty for not taking reasonable care, but the main features of the statement are:

(a) The standard of “reasonable care” in respect of s 141A of the TAA involves establishing what a reasonable person would do in the same circumstances, and takes into account such factors as the age, health, and background of the taxpayer in question.

(b) The statement provides guidance as to how the standard of reasonable care is applied to various types of taxpayers, (eg businesspersons, clients of agents, and tax specialists). It also examines how the reasonable care standard applies in certain situations such as receipt of Inland Revenue advice, complexity of the law, materiality, and arithmetical errors.

(c) The reasonable care standard does not mean perfection, but refers to the effort required commensurate with the reasonable person in the taxpayer’s circumstances.

(d) In determining whether the standard of reasonable care has been met, the CIR will consider the likelihood of a tax shortfall, the quantum of the shortfall and the difficulty of preventing a tax shortfall.

(e) Although a taxpayer is liable for the actions of their employees, the question of whether the taxpayer has taken reasonable care must still be considered [see Example 1 (below)].

(f) The shortfall penalty payable by the taxpayer for not taking reasonable care can be reduced for the taxpayer’s previous behaviour, voluntary disclosure or where the tax shortfall is temporary. The penalty can also be increased where the taxpayer obstructs the CIR.

(g) In the CIR’s view, s 141JAA of the TAA, which provides for the penalty payable to be capped in some situations, is only applicable after other reductions have been made.

**Example 1:**
A staff member of a large business makes an error of $10,000 in transferring figures from work papers to the GST return. The owner of the business is aware that the same staff member made a similar transposition error in the previous period’s GST return. In this case, it could be concluded that a reasonable owner would have foreseen a risk and put simple checks in place that would at least reduce the risk of obvious errors. Therefore, the taxpayer would be liable for a shortfall penalty for not taking reasonable care in respect of the second shortfall. Whether the first shortfall would give rise to a penalty would depend on the particular circumstances of the error in that instance.

**Example 2:**
A taxpayer returns $50,000 taxable income but omits a further $10,000 from his return. It can be accepted from the proportionally large amount of the omission that the taxpayer should have been aware that not all income had been returned. This is regardless of whether or not the taxpayer used an agent to complete his return. The tax shortfall is large relative to the taxpayer’s taxable income. In the absence of any special circumstances, the taxpayer breached the standard of reasonable care in this case.

**Example 3:**
A large company returns taxable income of $50,000,000, but omits an additional $10,000 of assessable income. Subject to consideration of the circumstances that led to the error, the amount of the omission when compared with the taxable income of the company does not support the view that there was a lack of reasonable care. The tax shortfall, in relation to the taxable income, may mean that the company, despite the error, still took reasonable care in the preparation of its income tax return.
The interpretation statement applies to the ITA 1994 (from the 1997-1998 to the 2004-2005 income years inclusive), the ITA 2004 (from the 2005-2006 income year), and the GSTA 1985 (from taxable periods commencing from 1 April 1997).

A solicitor who, during an Inland Revenue audit, was unable to provide source documents to support 112 deposits made into his bank accounts over two income years was found by the TRA to have demonstrated a lack of reasonable care, not gross carelessness. He had allowed his financial affairs to become muddled and had failed to maintain adequate records for income tax purposes. To some extent, his failure was caused by his health problems: TRA Case Y21 (2008) 23 NZTC 13,227.

1110.95 Unacceptable tax position [TAA, s 141B]

(1) Determining whether tax position is unacceptable

A taxpayer takes an “unacceptable tax position” if (viewed objectively), the tax position they take fails to meet the standard of being about as likely as not to be correct. A taxpayer does not take an unacceptable tax position merely by making a mistake in the calculation or recording of numbers used in, or for use in preparing, a return. Whether a tax position is acceptable or unacceptable is determined as at the time at which the taxpayer takes their tax position.

A taxpayer does not take an unacceptable tax position to the extent to which they have taken their position because they have relied on an official opinion of the CIR, where that opinion is given by the CIR on or after 7 September 2010.

The CIR’s official opinion means:

- An opinion of the CIR concerning the tax affairs of the taxpayer, given by the CIR, either orally or in writing, after all information relevant to forming the opinion has been provided to the CIR, if that information is correct;
- A finalised written official statement of the CIR, if it specifically applies to the taxpayer’s situation.

Private binding rulings are not official opinions.

The time at which a taxpayer takes a tax position for a return period is:

(a) The time at which the taxpayer provides the return containing the taxpayer’s tax position, if the taxpayer provides a tax return for the return period; or

(b) The due date for providing the tax return for the return period, if the taxpayer does not provide a tax return for the return period.

The matters that must be considered in determining whether a taxpayer has taken an unacceptable tax position include:

(a) The actual or potential application to the tax position of all the tax laws that are relevant, including specific or general anti-avoidance provisions; and

(b) Decisions of a Court or a TRA on the interpretation of tax laws that are relevant (unless the decision was issued up to one month before the taxpayer takes their tax position).

A partner in a New Zealand accountancy partnership (that was part of an international brand) resigned from the partnership and went to work for the brand in Indonesia. He ceased working for the New Zealand firm on 31 October 2000, and became a New Zealand non-resident in early November 2000. For the income year ended 30 June 2001, he received income of $286,074 from the New Zealand firm. This amount represented income for the period from 1 July to 31 October 2000. However, he included only $75,513 (one-third of the total after adjustments) in his 2001 income tax return on the grounds that the income was derived over the year as a whole and that he was only resident in New Zealand for four months of the 2001 income year. He argued that the rest of the income for that year was derived while he was a non-resident and was therefore excluded by the DTA with Indonesia or by s BD 1(2)(c) of the ITA 1994 [s BD 1(4) of the ITA 2007; non-residents’ foreign-sourced income]. The court rejected this argument and held that the whole amount of $286,074 had a New Zealand source (being derived from a New Zealand business), was derived while he was a New Zealand
resident (ie before 31 October 2000), and should have been included in his 2001 income tax return. As a consequence the taxpayer was liable to pay a tax shortfall under s 141B of the TAA for taking an unacceptable tax position. The taxpayer failed to meet the standard that his interpretation was about as likely as not to be correct. The law could not have been interpreted in favour of the taxpayer. The penalty was reduced to 10 per cent of the tax shortfall under s 141FB. See TRA Case Z1 (2009) 24 NZTC 14,001.

(2) Shortfall thresholds and penalty rates
A taxpayer is liable to pay a shortfall penalty of 20 per cent of the tax shortfall if the taxpayer takes an unacceptable tax position and the tax shortfall arising from the taxpayer’s tax position is more than both:
(a) $50,000; and
(b) One per cent of the taxpayer’s total tax figure for the relevant return period.

The Governor-General by Order in Council may vary these amounts from time to time.

The penalty was originally referred to as “unacceptable interpretation”. However, s 141B of the TAA was amended with effect from 1 April 2003 and the name of the penalty was changed to “unacceptable tax position”. A different approach is required in determining liability for the two penalties, as set out below.

(3) Interpretation and definitions
For the purpose of determining whether the resulting tax shortfall is in excess of the above amounts, a tax return provided by a partnership, a look-through company, or any other group of persons that derive or incur amounts jointly or are assessed together is to be treated as if it were a tax return of every taxpayer who is a partner in the partnership, effective look-through interest holder for the look-through company, or person in such group. The tax rate applying with respect to a partnership is deemed to be the same as the basic rate of income tax for companies for the relevant period.

A taxpayer’s “total tax figure” is:
(a) The amount of tax paid or payable by the taxpayer in respect of the return period for which the taxpayer takes a tax position before (in the case of income tax) any group offset election or subvention payment; or
(b) Where the taxpayer has no tax to pay in respect of the return period, an amount equal to the product of:
   (i) The net loss of the taxpayer for the return period, treated as having a positive value; and
   (ii) The basic rate of income tax for companies in the relevant return period, that is shown as tax paid or payable, or as a net loss of the taxpayer, or as a refund to which the taxpayer is entitled, in a tax return provided by the taxpayer for the return period [TAA, s 141B(3)].

(4) The CIR’s position — background
The CIR’s interpretation statement in relation to the shortfall penalty for an unacceptable tax position [see TIB vol 17:9 (November 2005) at 26-53], is summarised below.

The matters that must be considered in determining whether a taxpayer has taken an unacceptable tax position include:
(a) The making of an “interpretation or an interpretation of an application of a tax law” is no longer required for the application of s 141B.
(b) To take an unacceptable tax position, a taxpayer is required merely to take a tax position that, when viewed objectively, fails to meet the standard of being about as likely as not to be correct.
(c) An unacceptable interpretation of the law can give rise to an unacceptable tax position, but is no longer a requirement of s 141B.
(d) The threshold levels, which a tax shortfall must exceed to qualify as an unacceptable tax position, have increased.
Penalties and Interest

(e) Penalties of 20 per cent may be reduced to 10 per cent as a result of a taxpayer’s prior good compliance.

(f) In the CIR’s view, s 141JAA, which provides for the penalty payable to be capped in some situations, is only applicable after all other reductions have been made.

1110.100 Gross carelessness [TAA, s 141C]

A taxpayer is liable to pay a shortfall penalty if the taxpayer is grossly careless in taking a tax position. The penalty payable for gross carelessness is 40 per cent of the resulting tax shortfall. Gross carelessness means doing or not doing something in a way that, in all the circumstances, suggests or implies complete or a high level of disregard for the consequences. A taxpayer is not grossly careless if they take an acceptable tax position.

The CIR’s policy on gross carelessness is set out in TIB vol 8:7 (October 1996) at 18-19. The TIB contains useful examples.

The CIR’s interpretation of the shortfall penalty for gross carelessness is set out in TIB vol 16:8 (September 2004) at 10-17. The interpretation statement, which draws mainly on TRA Case W4 (2003) 21 NZTC 11,034, for its interpretive analysis, argues that gross carelessness is similar to recklessness but, unlike evasion which also involves recklessness, it does not require an intent to breach a tax obligation. The statement identifies the following characteristics as likely to indicate that a taxpayer has been grossly careless:

(a) A complete or high level of disregard for the consequences;
(b) A high risk of a tax shortfall occurring;
(c) Failing to give any thought to an obvious and serious risk;
(d) A reasonable person in the circumstances would have foreseen the risk involved in, and the consequences of, grossly careless conduct;
(e) Gross carelessness involves more than mere inadvertence or lack of reasonable care;
(f) Whether or not gross carelessness is present will depend upon the circumstances in each case; and
(g) The test for whether or not gross carelessness is present is objective, being similar to that for “recklessness”.

According to the statement, the following characteristics will distinguish gross carelessness from lack of reasonable care:

(a) A large tax shortfall is involved (resulting either from a single transaction or a number of similar transactions);
(b) The transaction (or transactions of a similar nature when viewed together) is significant when compared to the taxpayer’s business;
(c) Indifference by the taxpayer to an obvious risk of a possible tax shortfall occurring;
(d) A relatively short period of time between the purchase and sale of an item where the purchase triggered a tax effect that the taxpayer recognised;
(e) The taxpayer being experienced in the relevant tax laws; and
(f) A failure by the taxpayer to heed previous warnings or to take on board suggestions of tax advisers (either Inland Revenue or independent) aimed at reducing the likelihood of errors occurring.

Example:

Mr D runs a building recycling operation, buying and selling material and fittings from buildings that have been demolished or refurbished. His suppliers are both registered and unregistered persons for GST purposes. He claims input tax credits on the material purchased from the unregistered persons under the secondhand goods provisions of s 20(3)(a)(ia) of the GSTA, which allow an input tax deduction only to the extent that payment has been made. When his tax affairs are investigated, it is discovered that Mr D claimed a number of input tax credits on secondhand goods purchased from unregistered persons in the taxable period ended 31 March 2003 based on the full purchase prices totalling $36,000 when, during that period, he had only paid $5,000 of the total amount due. During past investigations, similar mistakes have been identified where the input tax credit claimed was based on the full purchase price rather than on the amount paid during the taxable period in question. The Inland Revenue investigator gave Mr D advice on how he could improve his bookkeeping system so that similar errors would not occur in the future.
Penalties and Interest

future. Despite 12 months having elapsed since this advice was given, the taxpayer had failed to implement the suggested improvements. In relation to the taxable period now being investigated, the taxpayer stated that the mistake was the result of mere inadvertence. The CIR proposes to impose a shortfall penalty for gross carelessness on the resulting tax shortfall.

In this instance, buying secondhand goods is a regular part of the taxpayer’s business. The fact that recording or calculation errors by the taxpayer have previously been identified on a number of occasions is an indication that a reasonable person, in the same circumstances, would have recognised the obvious and serious risk involved. As such, the errors are not the type of mistakes that occur because of mere inadvertence and which do not suggest or imply complete or a high level of disregard for all the consequences so as to constitute gross carelessness. Rather, in this case, once the nature of the errors had been identified, and it was recognised that such errors could potentially recur on a regular basis, a reasonable person would have ensured that such errors did not recur by following the advice previously given and putting in place an adequate record keeping system, including checks, to identify goods purchased from unregistered persons. Not to have done so indicates indifference to the serious risk of this type of error recurring and a high level of disregard for the consequences. Therefore, Inland Revenue considers that the taxpayer has been grossly careless and that a shortfall penalty under s 141C should be imposed.

See TIB vol 16:8 (September 2004) at 10-17 for further examples.

1110.105 Abusive tax position [TAA, s 141D]

A taxpayer is liable to pay a shortfall penalty if the taxpayer takes an abusive tax position. The intention is to penalise those taxpayers who, having taken an unacceptable tax position, have entered into or acted in respect of arrangements or interpreted or applied tax laws with a dominant purpose of taking, or of supporting the taking of, tax positions that reduce or remove tax liabilities or give tax benefits.

The penalty payable for taking an abusive tax position is 100 per cent of the resulting tax shortfall.

The penalty for taking an abusive tax position is reduced to 20 per cent of the resulting tax shortfall if:

(a) The taxpayer is a party to an arrangement to which s 141EB applies (ie an arrangement that is promoted by a promoter to 10 or more persons in an income year) and becomes liable to a shortfall penalty for an abusive tax position as a result of that arrangement, irrespective of whether a promoter penalty has been imposed for the arrangement;

(b) The sum of the tax shortfalls from the arrangement for the taxpayer and persons associated with the taxpayer is less than $50,000; and

(c) The taxpayer has independent advice stating that the taxpayer’s tax position is not an abusive tax position.

The time at which a taxpayer takes a tax position for a return period is:

(a) The time at which the taxpayer provides the return containing the taxpayer’s tax position, if the taxpayer provides a tax return for the return period; or

(b) The due date for providing the tax return for the return period, if the taxpayer does not provide a tax return for the return period.

A taxpayer’s tax position may be an abusive tax position if the tax position is an incorrect tax position under, or as a result of, either or both:

(a) A general tax law;

(b) A specific or general anti-avoidance tax law.

“Abusive tax position” means a tax position that:

(a) Is an unacceptable tax position at the time the tax position is taken; and

(b) Viewed objectively, the taxpayer takes:

(i) In respect of, or as a consequence of, an arrangement that is entered into with a dominant purpose of avoiding tax, whether directly or indirectly; or

(ii) Where the tax position does not relate to an arrangement described in point (i), with a dominant purpose of avoiding tax, whether directly or indirectly.

A husband and wife advanced $154,000 to a charitable trust of which they were the sole trustees. They then borrowed $154,000 from the trust under the terms of a “bond agreement”. The bond agreement provided for compound interest at 10 per cent per annum to be accrued.
Penalties and Interest

on the loan until repaid. Repayment was set for 40 years after the loan was advanced. The amount borrowed was to be used to buy shares in a vineyard company. The taxpayers claimed tax deductions calculated using the straight line method spread evenly over the 40 years [see 470.50] (ie calculated at 10 per cent compounding over 40 years). This resulted in full-year tax deductions of $198,117. The court held that the dominant purpose of the arrangement was tax avoidance, and that the taxpayers were liable for a penalty under s 141D of the TAA for taking an abusive tax position. See TRA Case Z1 (2009) 24 NZTC 14,001.

(1) CIR’s position

The CIR’s interpretation statement on the shortfall penalty for taking an abusive tax position is set out in TIB vol 18:1 (February 2006) at 24-35. The statement provides that before the penalty can potentially apply, the following requirements must be satisfied:

(a) The taxpayer must have taken a tax position;
(b) The tax position must be an incorrect tax position under or as a result of a general tax law or a specific or general anti-avoidance law;
(c) The time at which a taxpayer’s tax position has been taken has been determined in accordance with s 141B(6) of the TAA (see above);
(d) The taxpayer’s tax position leads to a tax shortfall, and that tax shortfall exceeds $20,000; and
(e) The taxpayer has taken an unacceptable tax position.

If the above requirements are met, a penalty can arise under s 141D of the TAA in one of two ways. The s 141D penalty can apply whether or not there is an arrangement.

Under s 141D(7)(b)(i) a penalty will apply if there is an arrangement and the dominant purpose of that arrangement is tax avoidance. It is the CIR’s view that, under subparagraph (i), it is the arrangement that must have the dominant purpose of tax avoidance, not the taxpayer. Thus the taxpayer does not have to have a dominant purpose of avoiding tax for this provision to apply. A penalty will arise under (i) if a taxpayer has taken their tax position (which is an unacceptable tax position) directly or indirectly in respect of or as a consequence of an arrangement that they have personally entered into, and the dominant purpose of the arrangement is tax avoidance.

Under s 141D(7)(b)(ii) a penalty will arise if there is no arrangement, or there is no arrangement of the kind described in s 141D(7)(b)(i), and the dominant purpose of the taxpayer in taking their tax position is tax avoidance. Subparagraph (ii) will apply where there is an unacceptable tax position and the taxpayer takes the tax position with the dominant purpose of avoiding tax. Subparagraph (ii) is therefore potentially applicable where there is no arrangement, or where there is an arrangement but it cannot be shown that the arrangement itself has a dominant purpose of avoiding tax.

“Dominant purpose of avoiding tax” means that the most influential and prevailing purpose of the arrangement or the taxpayer (as applicable) is to avoid tax.

The CIR’s approach to determining an abusive tax position before 1 April 2003 was set out in standard practice statement INV-215 [TIB vol 10:3 (March 1998) at 17-20]. The statement was withdrawn in TIB vol 15:6 (June 2003) at 19 following changes to the shortfall penalty provisions.

1110.110 Evasion or similar act [TAA, s 141E]

A taxpayer is liable to pay a shortfall penalty if, in taking a tax position, the taxpayer:

(a) Evades the assessment or payment of tax by the taxpayer or another person under a tax law;
(b) Knowingly applies or permits the application of the amount of a deduction or withholding of tax made or deemed to be made under a tax law for any purpose other than in payment to the CIR;
(c) Knowingly does not make a deduction, withholding of tax (or transfer of payroll donation from 6 January 2010), required to be made by a tax law;
Penalties and Interest

(d) Obtains a refund or payment of tax, knowing that the taxpayer is not lawfully entitled to the refund or payment under a tax law;

(e) Attempts to obtain a refund or payment of tax, knowing that they are not lawfully entitled to the refund or payment under a tax law;

(f) Enables another person to obtain a refund or payment of tax, knowing that the other person is not lawfully entitled to the refund or payment under a tax law; or

(g) Attempts to enable another person to obtain a refund or payment of tax, knowing that the other person is not lawfully entitled to the refund or payment under a tax law.

The penalty payable for evasion or a similar act is 150 per cent of the resulting tax shortfall.

A person will not be charged with a shortfall penalty under (b) above if that person satisfies the CIR that the amount of the deduction has been accounted for, and that the person’s failure to account for it within the prescribed time was due to illness, accident, or some other cause beyond the person’s control.

A person will not be charged with a shortfall penalty under (b) above if the person is chargeable with a shortfall penalty under s 141ED of the TAA for the same tax position.

If a taxpayer enables or attempts to enable another person to obtain a refund or payment of tax, knowing that the other person is not lawfully entitled to the refund or payment under a tax law, the taxpayer is liable to pay to the CIR an amount equal to the shortfall penalty that would have been imposed if the other person’s tax position had been the taxpayer’s tax position.

Evasion may also be treated as a crime under s 143B of the TAA [see 1110.235]. A taxpayer may be liable to a shortfall penalty for evasion, a criminal penalty for evasion (upon conviction), or both. The CIR can impose a shortfall penalty after a taxpayer has been prosecuted for evasion, even if the prosecution is not successful. However, the CIR may not prosecute a taxpayer for evasion in relation to a tax shortfall if a shortfall penalty has already been imposed [TAA, s 149].

The CIR’s policy on evasion or similar acts is set out in TIB vol 8:7 (October 1996) at 21, 22. The TIB contains useful examples.

(1) CIR’s interpretation statement

The CIR’s interpretation statement on the shortfall penalty for “evasion or a similar act” is set out in TIB vol 18:11 (December 2006) at 7-22. The statement includes a detailed analysis of relevant case law. The following is a summary only of the main points of the statement.

Evasion occurs when a taxpayer deliberately breaches a tax obligation. The required mental element (mens rea) for evasion will be present if a taxpayer knew or strongly suspected that their course of conduct would breach a tax obligation. In other words, evasion requires intentional behaviour or subjective recklessness; negligence and carelessness are insufficient. In determining whether to impose a shortfall penalty for evasion the CIR will consider a number of criteria including:

(a) Whether the taxpayer has been previously prosecuted and/or subject to shortfall penalties for evasion;

(b) The reason given by the taxpayer for their behaviour;

(c) The degree of culpability of the taxpayer;

(d) The likelihood of future compliance;

(e) The degree of cooperation received from the taxpayer;

(f) The effect on promoting voluntary compliance; and

(g) The duty to protect the integrity of the tax system.

Where the taxpayer has been prosecuted for evasion the following additional factors will be considered:

(a) Whether the taxpayer was successfully prosecuted under s 143B of the TAA; and

(b) Comments made by the judge in sentencing the offender (in the event of a successful prosecution).
A taxpayer’s intention is relevant in determining whether the person has evaded the assessment or payment of tax. Simply establishing that a person has failed to return or pay tax on an amount will not be sufficient to prove evasion. The intention or *mens rea* element of evasion will be satisfied if the taxpayer knew that their act or omission was in breach of a tax obligation.

The CIR contends that “subjective recklessness” is sufficient to satisfy the *mens rea* requirement of evasion. A taxpayer is subjectively reckless if the taxpayer avoids tax in circumstances where the taxpayer knew or strongly suspected that their conduct would breach a tax obligation. If the taxpayer strongly suspects an obligation may exist but does not investigate further before taking a tax position this could amount to recklessness and evasion if a tax shortfall results (see the example below). Recklessness is the conscious taking of a risk; knowing the facts and choosing to ignore them or the need to be on enquiry to which they give rise. By contrast, if a taxpayer is honestly unaware of (and has no reason to be on enquiry as to) an obligation so has no intention to try to avoid it (ie is “objectively reckless”), the penalty for evasion will not apply. However, a penalty for gross carelessness or lack of reasonable care may apply.

Unlike other shortfall penalties, where the onus lies with the taxpayer, the onus of proof in relation to a shortfall penalty for evasion is with the CIR, and the standard of proof is the balance of probabilities [TAA, s 149A]. The CIR must therefore prove that it is more likely than not that the taxpayer has the requisite *mens rea* for evasion. The test for evasion is subjective — the requisite knowledge or intention may be inferred through an objective analysis of the surrounding circumstances and conduct.

“Knowingly”, in relation to an act or failure to act, requires knowledge of the doing of the act (or omission) that amounts to a breach. It is a subjective test that can be satisfied by recklessness. Negligence or carelessness is insufficient to satisfy the test.

**Example:**
Mr B, who had been teaching overseas, returned to New Zealand leaving $300,000 invested in the country in which he had been living. He had been told by the investment company at the time of investing the money that the investment income was tax free within that country and New Zealand. For some time after his return to New Zealand he continued to hold that view. He did not mention the investment income when filing his New Zealand tax returns for the next 10 years. During these 10 years, he said he had gradually become unsure as to whether the income was taxable. The uncertainty, he said, had come from discussions with friends, where he had been given two differing viewpoints. He said he thought perhaps he was not liable for tax, but as time went on his doubts grew. He said that after making further enquiries in about year five he was almost certain that the investment income was taxable, but by that stage he was too afraid of the financial consequences of contacting Inland Revenue.

The intention or *mens rea* element of evasion relates to breaching a known tax obligation or a tax obligation which the taxpayer strongly suspects may exist. Initially there is no intent to evade a known or suspected obligation, so the behaviour does not amount to evasion, although the taxpayer may be liable to a gross carelessness penalty. However, the behaviour later crosses the borderline into evasion. Here, from at least year five, Mr B strongly suspected an obligation may exist but he chose not to investigate further (for example, by making enquiries of Inland Revenue or getting advice from an accountant or lawyer) as he did not want to have his suspicions confirmed. He chose to close his eyes to this issue by deliberately and intentionally refraining from taking any steps to discover the tax status of the income he received. This disregard of a suspected obligation from at least year five amounts to subjective recklessness, which is sufficient *mens rea* for evasion.

**1110.115 Promoter penalty [TAA, ss 141EB, 141EC]**

The promoter of an arrangement is liable to a promoter penalty if:

(a) A taxpayer becomes a party to the arrangement and a shortfall penalty for an abusive tax position is imposed on the taxpayer as a result of the arrangement; and

(b) The arrangement is offered, sold, issued or promoted to 10 or more persons in a tax year. An arrangement is treated as being offered, sold, issued or promoted to 10 or more persons if 10 or more persons claim tax-related benefits as a result of the arrangement.

A “promoter” of an arrangement means:

(a) A person who is a party to, or is significantly involved in formulating, a plan or programme from which an arrangement is offered; or

(b) A person who is aware of material and relevant aspects of the arrangement and who sells, issues or promotes the selling or issuing of, the arrangement, whether or not for remuneration.
The promoter penalty applies to arrangements entered into from 26 March 2003. A person whose involvement
with an arrangement is limited to providing legal, accounting, clerical or secretarial services to a promoter
is not a promoter.

If an arrangement is offered, sold, issued or promoted to a LAQC or a partnership, the arrangement is treated
as being offered, sold, issued or promoted to all the shareholders of the LAQC or all the partners in the
partnership.

The amount of the promoter penalty is the sum (not less than nil) of the tax shortfalls resulting from taking
an abusive tax position on the arrangement, for which the promoter would have been liable if the promoter had:

(a) Been a party to the arrangement in the place of each party to the arrangement to whom the arrangement
    was offered, sold, issued or promoted;
(b) Taken a tax position under which the arrangement is treated as producing for the promoter the tax-
    related benefits that were intended by the parties to the arrangement; and
(c) Had the taxation-related characteristics that would, under the tax position referred to in (b), produce
    for the promoter the maximum taxation-related benefits from the arrangement.

In plain language, the promoter penalty is the total of all the tax benefits (calculated at the highest marginal
tax rate) that all the parties who took advantage of the arrangement have received from the arrangement.

Each promoter’s liability for the promoter penalty depends on whether they fall within part (a) or part (b) of
the definition of promoter (see above). For ease of reference, promoters who fall within part (a) of the
definition are referred to here as “planners”, and those who fall within part (b) are referred to as “marketers”.

(a) Planners:
    (i) Jointly and severally liable with any other planners for the whole promoter penalty; and
    (ii) Jointly and severally liable with each marketer for the part of the penalty for which the
         marketer is liable.

(b) Marketers:
    (i) Jointly and severally liable, with all other promoters, for the portion of the penalty relating
        to taxpayers to whom the marketer has offered, sold, issued or promoted the arrangement.

**Example 1:**

An accountant in private practice works closely with an entrepreneur to design a scheme and prepare offer documents. The
entrepreneur offers an arrangement to at least 10 people who claim tax-related benefits. The knowledge and role of the accountant
would indicate that they were significantly involved in formulating a plan. Accordingly, they would be considered to be a
promoter for the purposes of the promoter penalty provisions. Other factors to consider may be whether the financial adviser is
paid for their services or receives a share of the proceeds.

**Example 2:**

Following on from the previous example, a financial adviser, who was not involved in formulating the plan, offers an arrangement
to their clients. The financial adviser, who is aware of material and relevant aspects of the arrangement, is considered to be a
promoter for the purposes of the promoter penalty provisions. Whether or not the financial adviser received remuneration is not
relevant.

**Example 3:**

An arrangement is offered to a LAQC with three shareholders, and another company with six shareholders. That will count as
an offer to four persons — three through the LAQC and one for the other company.

**Example 4:**

A promoter sells an arrangement to 11 investors, designed to give them a deduction of $30,000 each. Using the maximum income
tax rate of 33 per cent, the sum of these maximum taxation benefits is $11 × $30,000 × 33 per cent, or $108,900. Accordingly,
the amount of the promoter penalty is $108,900.
Penalties and Interest

1110.120 Officers liable to pay shortfall penalties [TAA, s 141F]

If a taxpayer is required to make or account for a deduction or withholding of tax under a tax law and an officer of the taxpayer fails to make the deduction or withholding of tax or applies or permits to be applied the amount of the deduction or withholding of tax other than in payment to the CIR, one shortfall penalty, calculated under Part 8, may be imposed for each tax position taken by the taxpayer. The CIR may apportion the shortfall penalty between the taxpayer and the officers on the basis of:

(a) The acts or omissions of the taxpayer and the officers; and

(b) Whether those acts or omissions were reasonable in the circumstances.

The CIR’s policy on the imposition of penalties on officers is set out in TIB vol 8:7 (October 1996) at 22.

1110.125 Liability of wholly-owned groups and partners to pay shortfall penalties [TAA, s 94B]

If the CIR treats the companies in a wholly-owned group as if they were a single taxpayer for the purpose of determining a tax shortfall, one company in the group will be assessed for the shortfall penalty but all the other companies remain liable to pay the shortfall penalty until it is fully paid.

All the partners in a partnership, and all the persons in any other group of persons that derive income jointly or are assessed together, are individually and collectively liable for any shortfall penalties imposed. Where a shortfall penalty is imposed on a partnership, the part of that penalty imposed on each partner is in proportion to the partner’s share or interest in the partnership. Where a shortfall penalty is imposed on a group of persons other than a partnership, that penalty is imposed in such proportions as the CIR determines on any one or more of the persons in that group.

1110.130 Shareholders of LAQCs [TAA, s 141FD]

A shortfall penalty arising because a LAQC attributes a tax loss to a shareholder and the tax loss is subsequently reduced (because deductions claimed by the LAQC are disallowed or the gross income of the LAQC is increased) is imposed on the shareholder and not on the LAQC.

The penalty is imposed on the amount of the deduction the shareholder claimed for the attributed tax loss. No other shortfall penalty may be imposed on the shareholder in relation to the reduction of the tax loss.

1110.135 Reduction of penalty for previous behaviour [TAA, s 141FB]

Shortfall penalties are reduced by 50 per cent for taxpayers who have a good history of compliance. The rules vary depending on the type of shortfall penalty imposed.

(1) Penalty for evasion

A shortfall penalty (the current penalty) for evasion [TAA, s 141E] is reduced to 50 per cent if the taxpayer is not:

(a) Convicted of a disqualifying offence (see definition below); or

(b) Liable for a disqualifying penalty.

A disqualifying penalty for this purpose is a shortfall penalty that:

(a) Relates to the same type of tax as the current penalty;

(b) Is for evasion or a similar act;

(c) Is not reduced for voluntary disclosure; and

(d) Relates to a tax position taken from 26 March 2003 and before the date the taxpayer takes the tax position to which the current penalty relates.
(2) **Penalty for not taking reasonable care, unacceptable tax position, gross carelessness or abusive tax position**

A shortfall penalty (the current penalty) imposed under ss 141A to 141D of the TAA is reduced to 50 per cent if the taxpayer is not:

(a) Convicted of a disqualifying offence (see definition below); or

(b) Liable for a disqualifying penalty.

A disqualifying penalty for this purpose is a shortfall penalty that:

(a) Relates to the same type of tax as the current penalty;

(b) Is a shortfall penalty for evasion or a similar act, or for gross carelessness or taking an abusive tax position (if the current penalty is for gross carelessness or taking an abusive tax position);

(c) Is a shortfall penalty of any sort (if the current penalty is for not taking reasonable care or taking an unacceptable tax position);

(d) Is not reduced for voluntary disclosure; and

(e) Relates to a tax position taken:
   
   (i) From 26 March 2003;
   
   (ii) Within the specified time period (see below); and
   
   (iii) Before the taxpayer takes the tax position to which the current penalty relates.

If the CIR becomes aware of two or more tax shortfalls as a result of a single investigation or voluntary disclosure, the penalties are treated as one shortfall penalty if the taxpayer:

(a) Takes both tax positions at the same time; and

(b) Is not liable for a shortfall penalty at any time in the specified time period (ending on the earliest date that the taxpayer takes a tax position resulting in a tax shortfall).

A “disqualifying offence” is:

(a) An offence under ss 143A, 143B, 143F, 143G, 143H or 145 of the TAA for which a conviction is entered from 26 March 2003 and before the taxpayer takes the tax position to which the current penalty relates;

(b) An offence under ss 143 or 144 of the TAA that relates to the same type of tax as the current penalty does, for a conviction entered:
   
   (i) From 26 March 2003;
   
   (ii) Within the specified time period (see below); and
   
   (iii) Before the taxpayer takes the tax position to which the current penalty relates.

The specified time periods are:

<table>
<thead>
<tr>
<th><strong>Tax type</strong></th>
<th><strong>Specified time period</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>PAYE, FBT, GST, RWT</td>
<td>Two years before the tax position was taken, to which the current penalty relates</td>
</tr>
<tr>
<td>Any other tax type</td>
<td>Four years before the tax position was taken, to which the current penalty relates</td>
</tr>
</tbody>
</table>

(3) **Standard practice statement**

Key points arising from the SPS are as follows:
Penalties and Interest

(a) All taxpayers start with a “clean slate”. Any shortfall penalties imposed or convictions entered before 26 March 2003 (the date s 141FB of the TAA came into effect) are not taken into account in determining whether a current penalty will be reduced for previous behaviour.

(b) Generally, a conviction is entered after the final determination of the case, when the defendant is sentenced. A guilty plea is not a conviction. A judge may permit a guilty plea to be withdrawn before sentencing. If a taxpayer enters a guilty plea that is later ratified by the judge, the conviction is entered at the date of ratification. However, ratification will often not occur until sentencing. If a taxpayer is convicted but discharged, the taxpayer will still be treated as convicted. However, if the taxpayer is discharged without conviction, then a conviction has not been entered and there is no “disqualifying offence” for the purpose of s 141FB.

(c) Generally, s 141FB applies separately to each tax type, such as PAYE, income tax and FBT. Therefore, a penalty imposed in relation to one tax type does not preclude a previous behaviour reduction for a later shortfall penalty relating to a different tax type. However, if the taxpayer is convicted of a “disqualifying offence” under paragraph (a) of that term’s definition in s 141FB(3), then a later shortfall penalty for any tax type cannot be reduced by 50 per cent.

(d) If a taxpayer has not been convicted of a “disqualifying offence” and is not liable for a “disqualifying penalty”, a current penalty for evasion under s 141E(1) will be reduced by 50 per cent. However, a current penalty for evasion will not be reduced by 50 per cent under s 141FB(1) if the taxpayer is liable to pay an earlier shortfall penalty for evasion that:

(i) Relates to the same tax type;
(ii) Is not reduced for voluntary disclosure; and
(iii) Relates to a tax position taken from 26 March 2003 and before the date of the tax position to which the current penalty relates.

(e) An earlier shortfall penalty for evasion that is reduced for voluntary disclosure is not a “disqualifying penalty”. Therefore, it will not affect the taxpayer’s eligibility to the 50 per cent reduction of the current penalty for evasion.

(f) The imposition of a shortfall penalty for evasion will affect the taxpayer’s eligibility for the 50 per cent reduction of later shortfall penalties in some cases. That is, if the shortfall penalty for evasion is not reduced for voluntary disclosure, any later shortfall penalty for evasion for the same tax type will not be reduced by 50 per cent under s 141FB(1). There is no specified time period in respect of a shortfall penalty for evasion in these cases. However, the specified time period will apply in cases where the later shortfall penalty is imposed under any of ss 141A to 141D. For example, a later penalty imposed for lack of reasonable care under s 141A for an income tax shortfall will be reduced by 50 per cent under s 141FB(2) if the previous shortfall penalty for evasion, that is not reduced for voluntary disclosure, relates to an income tax position taken outside the four-year specified time period.

(g) For the purpose of the SPS, an “investigation” means any examination of a taxpayer’s financial affairs verifying that the taxpayer has paid the correct amount of tax and is complying with the tax laws. Clear wording will be used in any communication to taxpayers when a decision to investigate has been made. Requests for information to enable the CIR to decide whether to investigate are not themselves part of an investigation. Examples of investigation activities include:

(i) Income tax, GST and payroll checks (eg capital/revenue discrepancies and GST on real property transactions);
(ii) Payroll, GST, and FBT registration checks; and
(iii) Any other types of review by Inland Revenue.

Example 1:
A taxpayer takes a tax position on 1 May 20X3. Following an Inland Revenue investigation, a current penalty for evasion is imposed on 1 August 20X3 for an income tax shortfall for the 20X2 tax year. The taxpayer has not been convicted of a...
“disqualifying offence”. However, the taxpayer was liable to pay a shortfall penalty for evasion for an income tax position taken on 1 June 20X1. The shortfall penalty for evasion for the tax position taken on 1 June 20X1 is a “disqualifying penalty” because:

(a) It is for the same tax type as the current penalty;
(b) It is not reduced for voluntary disclosure by the taxpayer; and
(c) It relates to a tax position taken after 26 March 20X1 and before the date on which the taxpayer takes the tax position to which the current penalty relates (ie 1 May 20X3).

The current penalty will not be reduced by 50 per cent under s 141FB(1) because the taxpayer is liable to pay a “disqualifying penalty”.

</tbody>
</table>

Example 2:
A taxpayer takes an income tax position on 31 July 20X5 and a current penalty for gross carelessness under s 141C is imposed on 31 August 20X5. Following a previous Inland Revenue investigation the taxpayer was liable to pay a shortfall penalty for taking an abusive tax position imposed under s 141D on 30 September 20X1 for an income tax position taken on 1 September 20X1. The shortfall penalty was not reduced for voluntary disclosure but was reduced for previous behaviour. The taxpayer is not convicted of a “disqualifying offence”. The shortfall penalty for taking an abusive tax position is a “disqualifying penalty” because:

(a) It is for the same tax type as the current penalty;
(b) It is not reduced for voluntary disclosure by the taxpayer; and
(c) It relates to a tax position taken after 26 March 20X1, within the four-year specified time period (1 August 20X1 to 31 July 20X5) and before the date of the taxpayer’s tax position to which the current penalty relates (ie 31 July 20X5).

Penalties and Interest

1110.140  Reduction in penalty for voluntary disclosure of tax shortfall

[TAA, s 141G]

A shortfall penalty under any of ss 141A to 141EB may be reduced if, in the CIR’s opinion, the taxpayer makes a full voluntary disclosure to the CIR of all the details of the tax shortfall, either:

(a) Before the taxpayer is first notified of a pending tax audit or investigation (referred to as “pre-notification disclosure”); or

(b) After the taxpayer is notified of a pending tax audit or investigation, but before the CIR starts the audit or investigation (referred to as “post-notification disclosure”).

The shortfall penalty is reduced as follows:

<table>
<thead>
<tr>
<th>Type of disclosure</th>
<th>Reduction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-notification disclosure, where the shortfall penalty is for not taking reasonable care, taking an unacceptable tax position, or unacceptable interpretation</td>
<td>100%</td>
</tr>
<tr>
<td>Pre-notification disclosure, for any other type of shortfall penalty</td>
<td>75%</td>
</tr>
<tr>
<td>Post-notification disclosure</td>
<td>40%</td>
</tr>
</tbody>
</table>

The CIR may specify the information required for a full voluntary disclosure and the form in which it must be provided.

Standard practice statement INV-260 defines Inland Revenue actions that constitute an audit or investigation and how a taxpayer will know that they have, in fact, been notified of a pending audit or investigation. According to the statement, any Inland Revenue examination of a taxpayer’s financial affairs to verify compliance with the tax laws is an audit. When Inland Revenue notifies a taxpayer that a tax audit or investigation is pending, this fact will, according to the statement, be brought clearly to the attention of the taxpayer. Such notification, which can only be given by the Inland Revenue, may be verbal or in writing. Inland Revenue considers that the actual words “audit” and “investigation” are not required to be used in the notification. Terms such as review, verify, check, or inspection could also be used. Thus, Inland Revenue believes that the statement “I am writing to inquire about a claim made in your … return” constitutes notification for the purposes of s 141G of the TAA [see TIB vol 12:2 (February 2000) at 58-60]. Taxpayers who are in any doubt as to whether an Inland Revenue communication constitutes notification should seek professional advice.

An audit or investigation starts at the earlier of:

(a) The end of the first interview an officer of Inland Revenue has with the taxpayer or the taxpayer’s representative after the taxpayer is notified as above; and

(b) The time when:

(i) An officer of Inland Revenue inspects information (including books or records) of the taxpayer after the taxpayer is notified as above; and

(ii) The taxpayer is notified of the inspection.

The CIR’s policy on voluntary disclosure is set out in TIB vol 8:7 (October 1996) at 23.

Inland Revenue’s guidelines for making voluntary disclosures are set out in standard practice statement INV-251, which replaced INV-250 from 1 May 2002 [see TIB vol 14:4 (April 2002) at 16-19]. The only significant difference between the two statements is in relation to prosecution following voluntary disclosure. Inland Revenue’s practice from 1 May 2002 is that taxpayers who have made a post-notification disclosure may be prosecuted in cases of evasion and fraud. Taxpayers making pre-notification disclosures will continue to be immune from prosecution in all cases. Inland Revenue’s practice prior to 1 May 2002 was not to prosecute any taxpayer who made a voluntary disclosure.

The following is an extract of relevant parts of INV-251.
1110.140(1)

(1) **Voluntary disclosure methods**

Taxpayers can make a voluntary disclosure in any one of the following ways:

(a) Visiting an Inland Revenue office;
(b) Telephoning an Inland Revenue office;
(c) Sending a letter, fax, or email to an Inland Revenue office; or
(d) During an interview with an Inland Revenue officer.

If a taxpayer makes a voluntary disclosure by visiting or telephoning Inland Revenue, as much information as possible will need to be provided by the taxpayer. Any officer is able to record a voluntary disclosure when a taxpayer visits or contacts Inland Revenue. Taxpayers making voluntary disclosures will be asked to sign a form setting out the disclosures.

If a voluntary disclosure is received in writing between the time of first notification of an audit and the first interview, it will be referred to the auditor who is conducting the audit or investigation. The auditor will incorporate this as correspondence relating to the audit or investigation. Acknowledgment will be made to the taxpayer that the disclosure has been received.

Where a disclosure is made during the first interview, the auditor will consider whether the disclosure is complete and reveals all the relevant information necessary to ascertain the correct tax position.

(2) **Notification of an audit**

A taxpayer is deemed to have been notified of a pending tax audit or investigation, or that the tax audit or investigation has started, if any one of the following is notified:

(a) The taxpayer;
(b) An officer of the taxpayer;
(c) A shareholder of the taxpayer, if the taxpayer is a close company;
(d) A tax adviser acting for the taxpayer;
(e) A partner in a partnership; or
(f) A person acting for, or on behalf of, or as a fiduciary of the taxpayer.

An officer of the taxpayer includes a director, secretary, receiver, or liquidator, but not an employee.

Time of notification is the earlier of the date of receipt by the taxpayer or agent of the written advice, or the time of a telephone call advising the commencement of the audit or investigation.

If the exact time of receipt of the written notice becomes crucial, it will be ascertained from the expected time for the mail to reach its destination as prescribed by s 14(2) of the TAA. Any telephone call advising of an audit or investigation will be followed up by written advice as soon as possible.

In the case of unannounced visits, the time of first contact with the taxpayer is the date of notification.

If the taxpayer does not attend the first interview, but instead sends a representative, the taxpayer cannot claim the benefit of a post-notification disclosure for any additional tax shortfall revealed after the interview. This is the case even if the agent was not given any information by the taxpayer with which to make a disclosure.

An audit of a parent company, or a subsidiary of that company, may necessitate the audit of other subsidiaries within the group. In such cases, disclosure would depend on which entity had been notified. If the parent company had received notification that the audit was restricted to that entity, then any disclosure made by the subsidiary is voluntary disclosure prior to notification of an audit. However, if another company in the group has been notified that the audit is being extended, any disclosure made by that other company would be considered a disclosure after notification of an audit.

When a company has a branch or branches, they are considered to have been notified at the same time as the company, as they are part of the company and not separate entities.
(3) **Full disclosure**

Any voluntary disclosure will initially be considered as a request for an amendment to an assessment, subject to the applicable time bar [see 60.70]. The disclosure must be full and complete. It is not up to Inland Revenue to elicit the required information from the taxpayer. This does not necessarily mean disclosing the discrepancies to the last dollar, but does require providing enough information to enable the Inland Revenue officer to make an assessment. Each case is considered on its own merits.

If a taxpayer is unable to provide full details at the first point of contact, Inland Revenue will allow the taxpayer reasonable time to obtain more information. The time period for obtaining this information is negotiable. Once this information is provided and the disclosure is considered full and complete, the date of the voluntary disclosure will be the date of the first point of contact.

To satisfy full and complete disclosure, the taxpayer must provide the following minimum details:

(a) Taxpayer’s name, trade name, IRD number, address, date of birth or incorporation, contact telephone number, and contact times;

(b) The nature of the errors or omissions;

(c) An explanation as to why the errors or omissions occurred;

(d) Adequate information to enable an assessment of the tax shortfall to be made;

(e) A declaration signed by the taxpayer, if possible; and

(f) Further information as is necessary to make an assessment.

If all this information is not provided, Inland Revenue will consider on a case-by-case basis whether the information provided is sufficient to satisfy the full and complete disclosure requirements. In doing so, Inland Revenue will have regard to the taxpayer’s reasons for not making the specified information available.

(4) **More than one tax shortfall**

Each tax shortfall is considered separately. If there is more than one tax shortfall, one being the subject of voluntary disclosure and the other being detected by an audit, the shortfall detected by the audit will not come within the voluntary disclosure regime.

If the items are identical or similar, they will be treated as one tax shortfall. Therefore, for a full and complete voluntary disclosure, all items will need to be disclosed prior to the end of the first interview. If one of the items is not disclosed until after the first interview, this will result in the taxpayer not satisfying the requirements of a full and complete disclosure.

(5) **Disclosure of another tax type**

If an audit is being carried out on one tax type and the taxpayer makes a voluntary disclosure regarding another tax type, and the taxpayer has not been notified that the other tax type is being audited, the taxpayer will qualify for voluntary disclosure prior to notification of an audit as long as the disclosure meets all other requirements.

(6) **Disclosure of another period**

It is common for a notice of intention to carry out an audit to state that a particular year or period is to be audited, but previous years or periods may be looked at if necessary. The year or period referred to only is examined in the first instance. If the taxpayer has not been advised that an earlier year or period is being examined, the taxpayer is able to make a pre-notification disclosure for that year or period.

(7) **Disclosure where Inland Revenue already knows of the shortfall**

Where the information provided is required by law or Inland Revenue knows there is a tax shortfall and has verification of that shortfall, the taxpayer cannot make a voluntary disclosure. An example of this is when an employer files their employer monthly schedule without an accompanying payment. The employer cannot voluntarily disclose the non-payment of the PAYE as Inland Revenue will know that payment has not been made.
(8) Disclosure forms
Where possible it is desirable for the protection of both the taxpayer and Inland Revenue that disclosures be in writing and signed by the taxpayer. A voluntary disclosure form (IR282A) is available for this purpose. However, Inland Revenue will accept other written and verbal disclosures without the need for the taxpayer to complete the form.

(9) Prosecution and publication of name
If a voluntary disclosure is full and complete:
(a) Inland Revenue will not consider prosecution action for pre-notification disclosures.
(b) In post-notification cases, prosecution may be considered in cases of evasion or similar offences.
(c) The taxpayer’s name will not be published in the New Zealand Gazette.

1110.145 Reduction in penalty for disclosure of unacceptable tax position [TAA, s 141H]
A shortfall penalty payable by a taxpayer for taking an unacceptable tax position or an abusive tax position may be reduced by 75 per cent if, in the CIR’s opinion, the taxpayer makes adequate disclosure of the tax position at the time the tax position is taken.
The CIR will specify the type of information required for adequate disclosure and the form in which the information must be provided. Disclosure must be made on a specified form. The following information is required in order to satisfy the requirement of adequate disclosure:
(a) Taxpayer’s details (name, trade name, IRD number, address, date of birth, contact telephone, and contact times);
(b) Overview of the position taken;
(c) Interpretation of case law on the subject, contents of any tax opinions, legal articles and related material;
(d) Any relevant Inland Revenue public ruling;
(e) A calculation, if necessary, to show the position and how it was arrived at; and
(f) A declaration and signature by taxpayer.
The disclosure form must be filed with the return in which the particular tax position has been taken.
If the tax return is filed electronically, the specified form will need to be sent to Inland Revenue separately.
The CIR’s policy on disclosure is set out in TIB vol 8:7 (October 1996) at 24.

1110.150 Reduction in penalty for temporary shortfall [TAA, s 141I]
A promoter penalty or a shortfall penalty payable by a taxpayer for lack of reasonable care, unacceptable interpretation, gross carelessness, or taking an abusive tax position must be reduced by 75 per cent if and to the extent that the tax shortfall is temporary.
A tax shortfall is a temporary tax shortfall for the return period if, when the CIR considers the assessment of a shortfall penalty, the CIR is satisfied that:
(a) The tax shortfall has been or will be, in an earlier or later return period, permanently reversed or corrected:
   (i) Before the end of the four-year period beginning after the day on which the taxpayer took the tax position;
   (ii) With the effect that the taxpayer pays or returns for the relevant return periods the correct total amount of tax (excluding penalties and interest) in respect of the tax position; and
   (iii) As a result of actions taken by the taxpayer or by the operation of law or circumstances;
(b) No tax shortfall will arise in a later return period in respect of a similar tax position; and
(c) No arrangement exists with the purpose or effect of creating a tax deferral or advantage related to the tax position for another return period.

The CIR’s policy on temporary shortfalls is set out in TIB vol 8:7 (October 1996) at 25. The CIR accepts that a shortfall has been permanently reversed if it appears from the taxpayer’s actions that steps taken will remedy the tax shortfall, or the matter will reverse itself through operation of law or circumstances. In order for the temporary shortfall reduction to apply, it is not always necessary for the return in which a shortfall is reversed to have been filed before an audit or investigation commences. Inland Revenue will accept that a reversal has occurred if satisfied that the reversal would have been made in the next return. This will apply mainly to GST returns [see TIB vol 11:8 (September 1999) at 22-24].

1110.155 Limit on reduction of shortfall penalty [TAA, s 141J]

A shortfall penalty cannot be reduced for both voluntary disclosure [TAA, ss 141G and 141H] and because of a temporary shortfall [TAA, s 141I]. A special penalty reduction rule applies to a shortfall penalty if:

(a) A taxpayer makes a voluntary disclosure (from 17 May 2007);
(b) The shortfall penalty is payable in respect of a temporary tax shortfall; and
(c) The shortfall would otherwise be reduced under s 141G or 141H of the TAA.

If the above conditions are met, the shortfall penalty is reduced by 100 per cent if:

(a) The shortfall penalty is for not taking reasonable care, for taking an unacceptable tax position, or for taking a tax position involving an unacceptable interpretation of a tax law; and
(b) The tax shortfall is voluntarily disclosed before notification of a pending audit or investigation by Inland Revenue.

In any other circumstances, the shortfall penalty is reduced by 75 per cent. For voluntary disclosures made before 17 May 2007, a shortfall penalty could be reduced only once, by 75 per cent in all cases.

1110.160 Shortfall penalty not to exceed $50,000 [TAA, s 141JAA]

A shortfall penalty for not taking reasonable care or for taking an unacceptable tax position may not exceed $50,000 if:

(a) The taxpayer voluntarily discloses the shortfall under s 141G of the TAA; or
(b) The CIR determines the shortfall no later than the later of:

(i) Three months after the due date for the return to which the shortfall relates; and
(ii) One return period (if no more than six months).

The $50,000 limit does not apply if the shortfall penalty has been increased for obstruction under s 141K of the TAA.

1110.165 Increased penalty for obstruction [TAA, s 141K]

The CIR may increase a shortfall penalty payable under any of ss 141AA to 141EB by 25 per cent if the taxpayer obstructs the CIR in determining the taxpayer’s correct tax position.

(1) Actions that are not obstruction

A taxpayer is entitled to:

(a) Exercise legal rights (accordingly, obstruction does not include asserting the right to legal privilege);
(b) Contest an assessment (the obstruction offences are not intended to discourage taxpayers from using legal processes in the course of any disagreement with Inland Revenue);
(c) Maintain an opinion contrary to that of Inland Revenue.

(2) Examples of obstruction

Examples include:

(a) Refusing reasonable access to business premises;
(b) Destroying relevant records;
(c) Successful prosecution of a taxpayer for a TAA, s 17 offence of failing to provide records or information requested;
(d) Lying at an interview;
(e) Falsifying details in a statement of assets and liabilities (IR110);
(f) Deliberate delay by the taxpayer to frustrate Inland Revenue’s inquiries.
The CIR’s policy on obstruction is set out in TIB vol 8:7 (October 1996) at 24, 25.

1110.170 **Shortfall penalties: disputes resolution**

A taxpayer has the right to disagree with the CIR’s decision to impose shortfall penalties.

The CIR will raise the issue of shortfall penalties as soon as practicable, which in most cases is at the time the substantive issues are being discussed. A notice of proposed adjustment (NOPA) will be issued before any assessment or adjustment of shortfall penalties unless there is full agreement with the taxpayer before the issue of the NOPA or a Court has directed the adjustment.

If the taxpayer cannot resolve the issues in the NOPA with the Inland Revenue officer who initially dealt with the case, the matter will be referred to Inland Revenue’s Adjudication Unit for further consideration before any assessments are issued [see 260.185].

A taxpayer who still disagrees with the assessment after adjudication has the normal rights of review through the Courts [see TIB vol 8:7 (October 1996) at 26].

When Inland Revenue and a taxpayer have agreed on the adjustments to be made to a return (eg following an Inland Revenue audit), it is Inland Revenue’s practice to reach agreement with the taxpayer on any shortfall penalties at the same time and to include these penalties on the agreed adjustment form. If the taxpayer disagrees with the shortfall penalties or it is otherwise inappropriate to include the penalties on the form (eg because Inland Revenue is prosecuting the taxpayer), Inland Revenue will inform the taxpayer that shortfall penalties may still apply. The taxpayer then knows what their potential total liability is likely to be at the time the agreement is reached [see TIB vol 13:9 (September 2001) at 89].

1110.175 **Shortfall penalties for failure to deduct or account for PAYE**

Employers who fail to deduct or account for PAYE are potentially liable for a shortfall penalty. In TIB vol 12:5 (May 2000) at 51-53, Inland Revenue outlined the factors it would consider when deciding whether to impose shortfall penalties and provided a number of examples of situations in which such penalties may and may not be imposed.

Where a PAYE shortfall occurs, a number of factors are considered by Inland Revenue to establish whether shortfall penalties should be imposed:

(a) The employer’s knowledge of the trust money status of PAYE;
(b) The processes in place to ensure that returns are correct, filed on time, and PAYE is accounted for on time;
(c) Who is responsible for drawing up deduction details and forwarding payment by the due date;
(d) The length of time the taxpayer has been employing staff, and their awareness of the obligation to deduct PAYE and make payments by the due date;
(e) Whether the taxpayer was aware that PAYE had not been accounted for by the due date and that an offence was being committed;
(f) Whether steps were taken to rectify the situation after the taxpayer became aware that payment had not been made;
(g) Reasons why the deductions were not paid by the due date and who is responsible to ensure payment is made; and
(h) How the unpaid deductions were applied by the taxpayer.
See TIB vol 12:5 (May 2000) at 51-53 for examples of how these factors would be applied in specific situations.

1110.180 Shortfall penalty if non-resident contractor has total tax relief

[TAA, s 141AA]

If a person fails to make a required tax deduction from a schedular payment made to a non-resident contractor (who does not hold a certificate of exemption), the payer is liable to pay a shortfall penalty of $250 per return period if the non-resident contractor is not liable to pay income tax on the contract payment (because of a DTA or otherwise). The maximum penalty is $1,000 per return period for which an employer monthly schedule is required.

Even though a non-resident contractor may qualify for total tax relief under a DTA, the New Zealand employer is still required to withhold tax from contract payments unless the non-resident contractor holds a certificate of exemption. The penalty aims to ensure that employers deduct tax from contract payments when the non-resident contractor has not obtained a certificate of exemption.

If a penalty is imposed under s 141AA, a shortfall penalty is not also payable under s 141 of the TAA on the same shortfall.

1110.185 Tax shortfalls — calculation

[TAA, s 141]

A tax shortfall calculation, to be made by the CIR, is required each time a taxpayer is liable to pay a shortfall penalty. This does not apply to a shortfall penalty imposed under s 141AA of the TAA.

A separate tax shortfall calculation is required for each return period, for each tax type, and for each tax position taken by a taxpayer.

“Return period” is defined as:

(a) The period covered by a tax return, or which would be covered by a tax return if one were provided;

(b) For a tax return that relates to a transaction, the time within which the transaction must be returned [TAA, s 3(1)].

Item (b) of the definition ensures that the shortfall penalties apply as intended to transaction-based taxes (eg cheque duty), which do not have an identifiable period in the same way as income tax and GST.

If a taxpayer is liable to pay one or more shortfall penalties for the same tax type in a return period, and the taxpayer’s liability to the tax is overstated in one or more respects, the tax shortfall is calculated by:

(a) In the case of one tax shortfall, setting off the tax effects of the overstatements against the understatement; and

(b) In the case of more than one tax shortfall, setting off the tax effects of the overstatements pro-rated against the understatements.

If:

(a) A taxpayer’s tax position in respect of a tax type (“tax one”) is adjusted by the CIR in a return period, and the tax effect of the adjustment is a tax shortfall; and

(b) As a result or consequence of the adjustment, the CIR also adjusts the taxpayer’s tax position in respect of another type of tax (“tax two”) in the same return period, and the tax effect of the further adjustment is an entitlement to a refund or to an increased refund of tax,

the CIR may, for the purpose of imposing a penalty, treat an amount up to the refund, or increased refund, of tax two as though it were tax one paid by the taxpayer in the return period, and in so doing reduce the tax shortfall for tax one. If two types of tax have different return periods, the CIR may, for the purpose of determining a tax shortfall, specify that part of one or more return periods for one of the tax types is to be treated as the same return period for the other tax type.

If:

(a) A taxpayer’s tax position in respect of a tax type in a return period is adjusted by the CIR, and the tax effect of the adjustment is a tax shortfall; and
(b) Linked to the adjustment, the CIR adjusts another taxpayer’s tax position in respect of the same tax type in the same return period, and the tax effect of the further adjustment is an entitlement to a refund or an increased refund of tax or a reduction in tax to pay; and

(c) The two taxpayers are “associated persons” [as defined in subpart YB],

the CIR may, for the purpose of imposing a penalty, treat an amount up to the refund, or increased refund, or reduction, of tax as though it were tax paid by the taxpayer referred to in paragraph (a) in the return period, and in so doing reduce that taxpayer’s tax shortfall.

The CIR may exercise this discretion if the associated person has a different return period from the taxpayer’s, provided the associated person’s return period overlaps the taxpayer’s, and the taxpayer’s tax position is not an abusive tax position and does not involve evasion or a similar act.

For the purposes of reducing taxpayer A’s tax shortfall (thus reducing the shortfall penalty), the CIR may treat an amount that is less than or equal to taxpayer B’s refund amount as an amount of tax paid by taxpayer A if all of the following conditions are met:

(a) The CIR makes an adjustment to a taxpayer’s tax position (taxpayer A) for a tax credit relating to internal software development under s LH 2;

(b) The adjustment in (a) results in a tax shortfall;

(c) The CIR makes an adjustment to another taxpayer’s tax position (taxpayer B) for a tax credit relating to internal software development under s LH 2;

(d) The adjustment in (c) is for the same tax year as the adjustment relating to taxpayer A;

(e) The adjustment in (c) results in an entitlement to an amount of refund or increased refund of tax (the refund amount) for taxpayer B;

(f) For the period to which the adjustments relate, taxpayer A and taxpayer B are members of the same internal software development group; and

(g) The tax credits described in item (a) and (c), relate to expenditure or depreciation loss under subpart LH incurred while taxpayer A and taxpayer B are members of the same internal software development group.

The CIR may treat the companies in a wholly-owned group as if they were a single taxpayer for the purposes of determining a tax shortfall.

If:

(a) In a return period, a taxpayer takes a tax position in respect of, or as a consequence of entering into, an arrangement; or in respect of an article, item, or matter; and

(b) In the same return period, the taxpayer takes a similar or identical tax position in respect of, or as a consequence of entering into, a similar or identical arrangement; or in respect of a similar or identical article, item, or matter,

the tax shortfalls arising from the taxpayer’s tax positions are to be aggregated and deemed to be one tax shortfall.

The tax effect of a tax position taken by a taxpayer in a return period is to be calculated having regard to the marginal rate or rates of tax applicable to the taxpayer during the return period and, where the taxpayer has no tax to pay in the return period, the rate of tax or lowest marginal rate of tax that would apply to the taxpayer during the return period, if the taxpayer had tax to pay.

The tax shortfall for a provisional taxpayer in respect of an instalment date is the difference between:

(a) The lesser of:

(i) The amount of provisional tax payable on the instalment date if an estimate had not applied at that instalment date; and
Penalties and Interest

(ii) The amount that would have been payable on that instalment date if the taxpayer’s provisional
tax payable for the tax year had been the taxpayer’s residual income tax liability for the tax
year; and

(b) The amount of provisional tax payable on that instalment date as determined by the estimate applying
as at that instalment date.

For the purposes of determining tax shortfalls, “tax” does not include a civil penalty.

The CIR’s approach to calculating shortfall penalties is set out in TIB vol 8:7 (October 1996) at 26, 27. The
TIB contains two detailed worked examples of the calculation of shortfall penalties, late payment penalties,
and interest on at 27-31.

1110.190 Duty of CIR to report on application of penalties [TAA, s 141L]

The CIR is required, as soon as practicable after the end of each financial year, to report in writing to the
Minister of Finance on the manner in which the shortfall penalties under ss 141A to 141EB of the TAA have
been applied in that financial year. The Minister must lay a copy of the report before the House of
Representatives.

The report for the year ended 30 June 2009 discloses that 5,152 tax shortfall cases were identified. Tax
shortfall penalties were imposed in 1,441 cases. The total number of shortfall penalties imposed in these
1,441 cases was 7,049. The monetary value of the shortfall penalties imposed and the number of impositions
were:

<table>
<thead>
<tr>
<th>Type of shortfall</th>
<th>Total amount</th>
<th>Number of impositions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not taking reasonable care</td>
<td>$1,644,984</td>

</tbody>
</table>

1110.195 Use of net losses to pay shortfall penalties [ss IA 3(1), IW 1]

A person who has a tax loss for a tax year can use the tax loss to pay a shortfall penalty for an income tax
liability for the tax year. The taxpayer must notify the CIR by the due date for payment of the penalty. The
election may be in either written or verbal form. The tax loss is used at the time of notification.

“Tax year” includes any part of a tax year taken into account for the purposes of carrying forward or grouping
company losses.

The losses used may be either current tax year losses or losses carried forward from a previous tax year.
There is no requirement that the losses must have been incurred since the introduction of the shortfall penalty
rules.

A wholly-owned group of companies may elect to use a tax loss incurred by one company in the group to
pay a shortfall penalty imposed on another company in the group.

Each dollar of net loss used to pay a shortfall penalty counts as an amount equal to:

\[ \$1 \times \text{tax rate} \]

“Tax rate” means the rate of tax, or the lowest marginal rate of tax, that would apply to the person during the
return period to which the tax shortfall relates. For companies, the tax rate is 30 per cent. For individuals,
the tax rate is the lowest marginal tax rate.

Example:

In the case of a company, a loss of $1,000 would be sufficient to pay a penalty of $300 ($1,000 \times 30\%).
Once a tax loss has been used to pay a shortfall penalty, that loss is no longer available for any other use and cannot be carried forward to a later tax year.

(1) CIR’s practice

The CIR’s approach to the use of tax losses to pay shortfall penalties is described in standard practice statement INV-245 [see TIB vol 10:3 (March 1998) at 24, 25]. The following information outlines relevant parts of the statement.

A taxpayer who has no losses carried forward from prior tax years, or has insufficient losses to eliminate both tax and penalty, but who expects to have losses in the current tax year, can elect to use those losses, even though the final loss for the current tax year has not been established.

Losses can only be used to offset against shortfall penalties on income tax shortfalls. They are not available to be offset, for example, against shortfall penalties on PAYE as this is not income tax to the employer.

Losses can only be used to offset income tax penalties as losses are, as defined in the ITA, “available to be offset against assessable income”. Therefore, as penalties which relate to anything other than income tax are not assessable income items, the losses cannot be offset against them.

Losses must be available in the year in which the shortfall penalty is imposed. For example, if adjustments are made to the 1999 return and penalties are imposed in the year 2001, losses must be available in the year 2001.

1110.200 Due date for payment of shortfall penalties [TAA, ss 142B, 142C]

A shortfall penalty is due and payable on the date the CIR notifies the taxpayer to be the due date, unless the tax shortfall is an amount of unpaid tax in which case the penalty is due and payable:

(a) Where no new due date is set, on the date the CIR notifies the taxpayer to be the due date for payment of the penalty (not less than 30 days after the date on which the CIR issues the taxpayer with a notice of assessment for the penalty); or

(b) Where a new due date has been set, on the due date for payment of the unpaid tax.

The due date for payment of a shortfall penalty by an officer of a company under s 141F of the TAA is the due date for payment of the shortfall penalty by the taxpayer.

If the CIR assesses a penalty for not taking reasonable care [s 141A] after cancelling (under s 141KB) a shortfall penalty for taking an unacceptable tax position [s 141B], the due date for payment for the s 141A penalty is the time the s 141B penalty was cancelled [see 1110.90]. Note: s 141KB was repealed for tax positions taken on or after 1 April 2008.

1110.205 Due date for repayment of excess refund or credit of tax [TAA, ss 142D]

Where a credit of tax has been allowed or credited under a tax law in excess of the correct amount, and the excess tax credit has been paid as a refund, the amount of the excess is repayable on the later of:

(a) The day specified by the CIR in the notice to the person requiring payment of the refund; and

(b) Thirty days after the date of that notice.

The tax is repayable on the date specified by the CIR in a notice to the taxpayer if:

(a) The CIR refunds too much tax to a taxpayer or credits a taxpayer with the payment of too much tax;

(b) A tax law provides for that tax to be repayable to the CIR on a set date or on a date to be specified by the CIR; and

(c) The CIR considers that applying that tax law may prejudice the CIR’s ability to recover that tax.
1110.210  **Due dates for payment of imputation penalty tax** [TAA, s 142E]

Imputation penalty tax is due and payable on 20 June following the end of the tax year in which the end of year debit balance (giving rise to the liability for the further income tax and the imputation penalty tax) occurred.

1110.215  **Due date for payment of deferrable tax** [TAA, s 142F]

Deferrable tax is due and payable on the 30th day after the last day of the period of deferral. Deferrable tax is tax (including GST) that has been assessed as payable, and which the taxpayer has challenged under Part 8A of the TAA [see 260.105].

1110.220  **Criminal penalties**

The following types of offences are criminal offences.

1110.225  **Absolute liability offences** [TAA, s 143]

The following offences are absolute liability offences under the TAA:

(a)  Failure to keep the documents required to be kept by a tax law;

(b)  Failure to provide information (including tax returns and tax forms) to the CIR or any other person when required to do so by a tax law;

(c)  Failure to provide a tax invoice when required to do so under the GSTA 1985; or

(d)  Failure to apply for registration for GST when required to do so under the GSTA 1985.

The term “tax return” includes income statements.

“Document” means:

(a)  A thing that is used to hold, in or on the thing and in any form, items of informations;

(b)  An item of information held in or on a thing referred to in (a);

(c)  A device associated with a thing referred to in (a) and required for the expression, in any form, of an item of information held in or on the thing.

A person cannot be convicted for failing to provide information (other than tax returns and tax forms) to the CIR if the person proves that, at the time they were required to provide the information:

(a)  They did not have that information in their knowledge, possession or control; and
(b) The information was not in the knowledge, possession or control of a non-resident who the person directly or indirectly controls.

The penalty for an absolute liability offence is:

(a) The first time the person is convicted in relation to a particular type of offence, a fine not exceeding $4,000;
(b) The second time the person is convicted of the same type of offence, a fine not exceeding $8,000; or
(c) On every other occasion the person is convicted of the same type of offence, a fine not exceeding $12,000.

In Beazley v Inland Revenue Department (2003) 21 NZTC 18,287 (HC), the High Court considered an appeal against penalties imposed on a taxpayer in the District Court for failure to file 17 income tax and GST returns. The taxpayer was fined a total of $3,700 by the District Court. The fines comprised: $150 for each GST return not filed; $250 for each income tax return not filed; and $650 court costs. The High Court quashed the fines and imposed a fine of $50 in respect of each of the 17 convictions, totalling $1,500 (including costs). Although $300 to $400 was a reasonable starting point for each offence, the totality principle had to be considered where there were multiple offences. Fisher J considered the taxpayer’s circumstances, which included: this was a first offence; business difficulties had affected the taxpayers personal life and health; the tax agent (who was also suffering personal difficulties and ill health) let the taxpayer down; and the taxpayer had liquidity problems.

In Smallridge v Department of Inland Revenue HC Auckland CRI-2004-404-342, 5 October 2004, the High Court also applied the totality principle and reduced total fines from $10,060 to $2,220 for failing to file three income tax returns and 46 GST returns.

1110.230 Knowledge offences [TAA, ss 143A, 147B]

The following offences are knowledge offences:

(a) Knowingly failing to keep the documents required to be kept by a tax law;
(b) Knowingly failing to provide information (including tax returns and tax forms) to the CIR or any other person when required to do so by a tax law;
(c) Knowingly providing altered, false, incomplete, or misleading information (including tax returns and tax forms) to the CIR or any other person in respect of a tax law or a matter or thing relating to a tax law;
(d) Knowingly applying or permitting the application of the amount of a deduction or withholding of tax, made or deemed made under a tax law, for any purpose other than in payment to the CIR;
(e) Knowingly failing to make a deduction or withholding of tax required to be made by a tax law; or
(f) Knowingly issuing two tax invoices in respect of the same taxable supply.

The term “tax return” includes income statements.

A person cannot be convicted for knowingly failing to provide information (other than tax returns and tax forms) to the CIR if the person proves that at the time the person was required by the CIR to provide the information:

(a) The person did not have the information in their knowledge, possession or control; and
(b) No non-resident, controlled directly or indirectly by the person [see 790.30], had the information in their knowledge, possession or control.

A person cannot be convicted for knowingly applying or permitting the application of an amount of withholding or deduction of tax for a purpose other than in payment to the CIR, if the person satisfies the Court that the amount of the deduction or withholding has been accounted for, and that the person’s failure to account for it within the prescribed time was due to illness, accident, or other cause beyond the person’s control. For these purposes, the term “withholding or deduction of tax” includes:

(a) A PAYE income payment;
(b) A combined tax and earner-related payment;
(c) An amount of tax withheld for resident passive income, non-resident passive income, or an employer’s superannuation contribution; and
(d) A deduction of KiwiSaver contribution.

The above defences against conviction are only available if the taxpayer has actually paid the outstanding tax deduction to Inland Revenue (ie after the due date). It is not sufficient to merely furnish the relevant return. The words “accounted for” implicitly require that the amount in question has been paid: *Flyger v Commissioner of Inland Revenue* (2004) 21 NZTC 18,431 (HC).

A person who is convicted for knowingly applying or permitting the application of a deduction or withholding of tax for any purpose other than in payment to the CIR, is liable for each conviction for that type of offence to imprisonment for a term not exceeding five years, a fine not exceeding $50,000, or both, unless the offence relates to:

(a) Section 157 of the TAA (which deals with the deduction of income tax from payments due to tax defaulters);
(b) Section 43 of the GSTA 1985 (which deals with the deduction of GST from payments due to tax defaulters); or
(c) Another tax law specifying obligations in relation to withholdings or deductions of tax that operates by reference to s 157 of the TAA.

A person who is convicted for knowingly failing to provide information to the CIR, or for knowingly providing altered, false, incomplete, or misleading information to the CIR, relating to information required to be provided under s 59 of the TAA (the disclosure of information about trusts with non-resident trustees) or s 61 of the TAA (the disclosure of an interest in a foreign investment fund) is liable to a fine not exceeding $50,000.

In all other cases, the penalty for a knowledge offence is:

(a) The first time the person is convicted for a particular type of offence, a fine not exceeding $25,000; and
(b) On every other occasion the person is convicted for the same type of offence, a fine not exceeding $50,000.

In *Brown v Inland Revenue Department* (2001) 20 NZTC 17,001 (HC), an appeal hearing confirmed the imposition, under s 143A(1)(b) of the TAA, of a fine of $5,000 on a taxpayer for knowingly failing to provide information to the CIR. The taxpayer had failed to respond to a request for information by the CIR.

(1) **Directors and officers of corporate resident foreign trustees [TAA, s 147B]**

If a company that is a resident foreign trustee [see 1210.20] commits a knowledge offence under s 143A of the TAA, a natural person who is a director or officer of that company also commits an offence if:

(a) The person, if not a director, is in a position in the company allowing significant influence over the management or administration of the company; and
(b) The offence was caused by:
   (i) An act done or carried out by the person;
(ii) An omission of the person; or
(iii) Knowledge attributable to the person.

1110.235  **Evasion or similar offences** [TAA, s 143B]

The following offences are evasion or similar offences if done so with the following aims:

(a) Knowingly failing to keep the documents required to be kept by a tax law; or

(b) Knowingly failing to provide information (including tax returns and tax forms) to the CIR or any other person when required to do so by a tax law; or

(c) Knowingly providing altered, false, incomplete, or misleading information (including tax returns and tax forms) to the CIR or any other person in respect of a tax law or a matter or thing relating to a tax law; or

(d) Knowingly failing to make a deduction or withholding of tax required to be made by a tax law; or

(e) Pretending to be another person for any purpose or reason relating to a tax law.

The above offences are considered to be evasion or similar offences only when done so:

(a) With the intention of evading the assessment or payment of tax by the person or any other person under a tax law;

(b) To obtain a refund or payment of tax in the knowledge that the person is not lawfully entitled to the refund or payment under a tax law; or

(c) To enable another person to obtain a refund or payment of tax in the knowledge that the other person is not lawfully entitled to the refund or payment under a tax law.

A person who evades or attempts to evade the assessment or payment of tax under a tax law commits an offence.

The term “tax return” includes income statements.

The penalty for evasion or a similar offence is imprisonment for a term not exceeding five years, a fine not exceeding $50,000, or both.

The seriousness with which the Courts regard the filing of false tax returns was illustrated in *R v Hunter* (2002) 20 NZTC 17,784 (CA), in which the Court of Appeal reduced from four years to three years six months the sentence of imprisonment imposed on a tax consultant for filing numerous false tax and GST returns over a six-year period. The volume of offending and the loss to Inland Revenue were important indicators of culpability in this case. The sentence was only reduced because of the consultant’s guilty plea and cooperation.

The CIR’s approach to determining the criminal offence of evasion is described in standard practice statement INV-225 [see TIB vol 10:3 (March 1998) at 22-24]. The following information outlines relevant parts of the statement.

(1)  **What is meant by “evasion or similar” offences?**

All offences in this category require the person to have both the knowledge and the necessary “intent” to commit the offence.

Intent is critical to the offence. There must be sufficient evidence to prove “beyond reasonable doubt” that the person not only committed the offence but committed it:

(a) Intending to evade the assessment or payment of the tax by the person or any other person; or

(b) To obtain a refund or payment of tax in the knowledge that the person was not lawfully entitled to the refund or payment; or

(c) To enable another person to obtain a refund or payment of tax in the knowledge that the other person was not lawfully entitled to the refund or payment.

Before a person can be prosecuted for an offence under s 143B(1) of the TAA they must meet two criteria. First, the person must have committed an act which comes within paras (a) to (e), and secondly the person must have committed the act with necessary intent, as required in paras (f) to (h).
(2) **Offence**

Section 143B(2) of the TAA provides that a person who evades or attempts to evade the assessment or payment of tax for themselves or another person under a tax law commits an offence against this Act.

Essentially, if a person evades or attempts to evade the assessment or payment of tax and the act or failure to act does not come within the offences listed in s 143B(1)(a) to (e) of the TAA then prosecution action can be taken under s 143B(2) of the TAA.

(3) **Prosecution**

Section 149(5) of the TAA states that if a shortfall penalty has been imposed on a taxpayer for taking an incorrect tax position, the CIR may not subsequently prosecute the taxpayer for taking the incorrect tax position.

Prosecution does not preclude the CIR from imposing the civil penalty for evasion. It is not necessary for a taxpayer to be prosecuted before a shortfall penalty is imposed, as the standards of proof are different.

(4) **Taxpayer to be advised of intention**

If a prosecution is to be considered, the taxpayer will be advised by letter that prosecution action is being recommended. This will occur at the time the Notice of Proposed Adjustment (NOPA) is issued for the tax shortfall.

If it is intended to prosecute and later impose a shortfall penalty, the taxpayer will be advised that after the prosecution, whether or not the prosecution is successful, the imposition of a shortfall penalty will be considered.

(5) **Consideration of shortfall penalty after unsuccessful prosecution**

Section 149(4) of the TAA states that a shortfall penalty may be imposed after a prosecution, whether or not the prosecution is successful.

If prosecution action for evasion is unsuccessful, a shortfall penalty can still be imposed for evasion or a similar act, because the standard of proof is the balance of probabilities, even though the onus of proof is still on the CIR.

However, the reason why the prosecution was not successful will be considered. If it was dismissed on technical grounds (eg some procedural matters in the prosecution were not complied with), clearly a shortfall penalty can be imposed. If the evidence available to the Court was clearly inadequate, then a shortfall penalty cannot be imposed.

1110.240 **Failure of Inland Revenue officers to maintain secrecy** [TAA, s 143C]

An Inland Revenue officer who fails to maintain secrecy as required by s 81 of the TAA commits an offence [see 1030.20]. The penalty for this offence is imprisonment for a term not exceeding six months, a fine not exceeding $15,000, or both.

1110.245 **Offence in relation to inquiries** [TAA, s 143F]

A person commits an offence if the person:

(a) is summoned under s 18 of the TAA and refuses or wilfully neglects to appear before the District Court Judge or to take oath as a witness before the District Court Judge;

(b) is sworn as a witness at an inquiry under s 18 of the TAA and refuses or wilfully neglects to answer any question put to the person touching upon the subject-matter of the inquiry;

(c) is required to give evidence under s 19 of the TAA and refuses or wilfully neglects to appear before the CIR or authorised officer or to take an oath as witness before the CIR or authorised officer; or

(d) is sworn as a witness at an inquiry under s 19 of the TAA and refuses or wilfully neglects:

(i) to answer any question put to the person touching upon the subject-matter of the inquiry; or
(ii) To produce to the CIR or authorised officer a document required to be produced under s 19(1) of the TAA.

The penalty for this type of offence is:

(a) For the first offence — a fine not exceeding $2,000, or a fine not exceeding $50 for each day of default, or both;

(b) For the second offence — a fine not exceeding $4,000, or a fine not exceeding $100 for each day of default, or both; and

(c) For each subsequent offence — a fine not exceeding $6,000, or a fine not exceeding $150 for each day of default, or both.

1110.250 Offence in relation to Court orders [TAA, s 143G]

It is an offence to fail to comply with a Court order made under s 17A of the TAA [see 790.35]. The penalty for this offence is the same as that which may be imposed under s 112 of the District Courts Act 1947 for offences to which that section applies.

1110.255 Obstruction [TAA, s 143H]

It is an offence to obstruct the CIR or an Inland Revenue officer acting in the lawful discharge of their duties or in the exercise of the CIR’s or officer’s powers under a tax law. The penalty for this offence is:

(a) For the first offence — a fine not exceeding $25,000; and

(b) For each subsequent offence — a fine not exceeding $50,000.

1110.260 Penalties for offences for which no specific penalty imposed [TAA, s 145]

The penalty for any offence for which no specific penalty is prescribed is:

(a) For the first offence of its type — a fine not exceeding $15,000; and

(b) For each subsequent offence of the same type — a fine not exceeding $25,000.

1110.265 Offences of employees and officers [TAA, s 147]

An employee, agent, or officer of a body corporate commits an offence if:

(a) The body corporate commits an offence (the “principal offence”); and

(b) The principal offence:

(i) Was caused by an act done or carried out by, or by an omission of, or through knowledge attributable to, the employee, agent, or officer; or

(ii) Is evasion committed by the employee, agent, or officer.

The employee, agent, or officer who does or carries out the act or omission, or has the knowledge or intent referred to above, is liable on conviction for up to the same maximum fine or term of imprisonment, or both, that could apply to an individual, if an individual had committed the principal offence.

A natural person (eg an employee of the corporate trustee) is not liable for an offence under s 147 of the TAA in relation to an offence for which a corporate resident foreign trustee is liable under s 147B of the TAA [see 1110.230].

An employee or officer of a body corporate includes a person who, by reason of the person’s employment with, or position in relation to, the body corporate, is responsible by law, contract, or otherwise for undertaking an action on behalf of the body corporate.

1110.270 Aiding or abetting [TAA, s 148]

A person who aids, abets, incites, or conspires with another person to commit an offence (the “principal offence”) also commits an offence. A person convicted of aiding, abetting, inciting, or conspiring is liable
Penalties and Interest

for up to the same maximum fine or term of imprisonment, or both, that could apply to a person who commits the principal offence.

1110.275 **Imposition of civil and criminal penalties** [TAA, s 149]

Each time a taxpayer breaches a tax obligation the taxpayer may be liable to a civil penalty or to a criminal penalty, or to both. Except in the case of a shortfall penalty under s 141ED of the TAA for filing an employer monthly schedule late, a taxpayer is liable to only one shortfall penalty for each tax shortfall. If a taxpayer could, apart from this restriction, be liable to more than one shortfall penalty for a tax shortfall, the highest shortfall penalty is to be imposed.

The CIR may assess and impose civil penalties after a taxpayer has been prosecuted for an offence under this Act, whether or not the prosecution is successful.

If a shortfall penalty, other than a shortfall penalty under s 141ED of the TAA for filing an employer monthly schedule late, has been imposed on a taxpayer for taking an incorrect tax position, the CIR may not subsequently prosecute the taxpayer for taking the incorrect tax position.

1110.280 **Standard of proof and onus of proof** [TAA, s 149A]

The standard of proof in civil proceedings relating to the imposition of penalties is *the balance of probabilities*.

The onus of proof in civil proceedings:

(a) Relating to evasion or a similar act to which s 141E of the TAA applies, or to obstruction, rests with the CIR; or

(b) Relating to any other matter or thing, rests with the taxpayer.

The standard of proof in criminal proceedings relating to the imposition of penalties is *beyond reasonable doubt*.

The onus of proof in criminal proceedings relating to any matter or thing rests with the CIR.

The standard of proof for the purposes of an application for a Court order under s 17A of the TAA is the *balance of probabilities*.

The onus of proof for the purposes of an application for a Court order under s 17A of the TAA rests with the CIR.

1110.285 **Proceedings for offences**

Procedural matters relating to proceedings, laying of information, and evidence are set out in ss 149B to 152 of the TAA.

An information for an offence must be laid within 10 years after the end of the year in which the offence was committed. This applies only where the offence relates to a tax law that is a provision of the ITA 2007 or the GSTA 1985, or to an obligation in relation to either of those Acts [TAA, s 150A].

In any proceedings against a person for refusing or failing to provide a tax return or written information or to produce for inspection any documents as and when required by any Act or by the CIR, a certificate signed by the CIR, that the tax return information or documents have not been received at the time required shall, in the absence of proof to the contrary, be sufficient evidence that the person has refused or failed to furnish the return information or documents, as the case may be [TAA, s 150D].

1110.290 **Use of money interest** [TAA, ss 120A-120U]

Use of money interest (UOMI) is not a penalty. The purpose of use of money interest is to:

(a) Compensate the CIR for the loss of use of money through taxpayers paying too little tax, and to compensate taxpayers for the loss of use of money through their paying too much tax; and

(b) To encourage taxpayers to pay the correct amount of tax on time.

If the CIR deducts RWT or NRWT from an interest payment, the interest paid to a taxpayer is the net amount for the purposes of the interest rules [TAA, s 120A].
Interest does not apply to:
(a) Third parties who are required, but fail, to make deductions from payments to taxpayers and forward them to Inland Revenue under s 157 of the TAA, s 43 of the GSTA 1985, s 154 of the Child Support Act 1991, and s 46 of the Student Loan Scheme Act 1992;
(b) A liable person in relation to child support;
(c) A student loan borrower with a repayment obligation; and
(d) An employer in relation to compulsory employer contributions required under the KiwiSaver scheme [TAA, s 120B].

A taxpayer may not object to or challenge the imposition of UOMI payable. However, this does not limit a taxpayer’s right to object to or challenge their liability to pay tax [TAA, s 120I]: see TRA Case U36 (2000) 19 NZTC 9,347.

“CIR’s paying rate” means the rate of interest established and notified as the CIR’s paying rate by an Order in Council [TAA, ss 120C, 120H]. The CIR’s paying rate is set at the Reserve Bank of New Zealand’s 90-day bank bill rate series less 100 basis points (one per cent). See 1110.295 for the rates.

“Date interest starts”:
(a) For unpaid tax means:
   (i) If a taxpayer pays too little tax by a due date:
       (A) The day after the due date for payment of the tax; or
       (B) Where the due date is a new due date or, in the case of GST, a later due date for payment of the tax, the day after the original due date for payment of the tax;
   (ii) If the CIR refunds or applies tax which should be kept and taken into account in respect of satisfying a taxpayer’s tax liability at a due date, the day after the day the CIR refunds or applies the tax; and
   (iii) For a provisional taxpayer to whom s 120KE(7) of the TAA applies, the day after whichever dates of instalments B, D, and F for their corresponding income year occur 30 days after their last ratio instalment date;
(b) For overpaid tax, other than GST or FBT for the final quarter of a tax year, means the later of the following days:
   (i) If a taxpayer pays too much tax by or after a due date and subparagraph (iv) does not apply:
       (A) The day after the later of the due date for payment of the tax and the date the payment is made; or
       (B) Where the due date is a new due date, the day after the later of the original due date for payment of the tax and the day on which the payment is made;
   (ii) If a tax return is also to be provided in respect of the tax, the day after the tax return is provided;
   (iii) For a taxpayer to whom s 80D of the TAA applies, the date on which the initial income statement [see 1270.75] is issued;
   (iv) For a provisional taxpayer other than one to whom s 120KE(1) or (3) of the TAA applies, the first day of the income year; and
   (v) For a provisional taxpayer to whom s 120KE(6) of the TAA applies, the later of:
       (A) The day after the date set out in s RC 18(3);
       (B) The day after their last ratio instalment date;
(c) For a GST refund, means the latest of the following days:
   (i) The day after the earlier of:
       (A) The 15th working day after the taxpayer provides a tax return for the return period to which the GST refund relates; and
(B) The original due date for payment of output GST in respect of that return period;

(ii) The day after the day on which the tax return is provided; and

(iii) The day after the date on which the payment is made;

(d) For overpaid tax, being FBT for the final quarter of a tax year, means the later of 31 May next following the end of the final quarter and the date on which the return for the final quarter is filed;

(e) For tax paid, being a deposit to a tax pooling account in accordance with ss RP 17 to RP 21, means the date on which the deposit is made, unless the CIR refunds the deposit as required by s RP 18(5), in which case there is not a date on which interest starts; and

(f) For unpaid tax, being terminal tax for the tax year in which a taxpayer dies, the due date for the deceased person’s terminal tax, if:

(i) Each instalment of provisional tax payable by the deceased person for that tax year is paid by the due date under s RC 6 for the instalment; and

(ii) The terminal tax payable by the deceased person for that tax year is paid by the due date under s RA 13 for the terminal tax.

“Interest paid to a taxpayer” means interest credited to, or dealt with in the interests of or on behalf of, the taxpayer; and “interest paid” and “paid” have corresponding meanings.

“Interest period” means:

(a) For unpaid tax, the period beginning on the date interest starts and ending on the date the tax is paid or credited as paid (both dates inclusive);

(b) For overpaid tax, the period (both dates inclusive) beginning on the date interest starts and ending on the earlier of:

(i) The date the tax is refunded by the CIR; and

(ii) The date the tax is applied by the CIR towards meeting another tax liability.

“Tax paid”, at a time, means:

(a) An amount of tax that -

(i) Is paid or credited by the time for a tax liability; and

(ii) Has not been refunded or applied by the CIR to satisfy another tax liability;

(b) An amount credited by the time to a tax pooling account;

(c) An amount credited or transferred by the time to a taxpayer’s account with the CIR from a tax pooling account.

“Tax payable”, at any time, means the amount of tax payable in respect of a tax liability by that time, determined in accordance with the tax laws, and includes an amount of tax that must be withheld or deducted under a tax law and paid to the CIR.

“Taxpayer’s paying rate” means the rate of interest established and notified as the taxpayer’s paying rate by an Order in Council. The taxpayer’s paying rate is set at the floating first mortgage new customer housing rate series, plus 250 basis points (2.5 per cent). See 1110.295 for the rates.

Where at any time:

(a) The tax paid by a taxpayer exceeds the tax payable, the excess is “overpaid tax”; and

(b) The tax payable by a taxpayer exceeds the tax paid, the excess is “unpaid tax” [TAA, s 120C].

The Governor-General may, from time to time, by Order in Council:

(a) Specify the criteria and other requirements by and against which interest rates will be set or reset and notified; and

(b) Set the CIR’s paying rate and taxpayer’s paying rate [TAA, s 120H].
Interest continues to accrue on deferrable tax even though a taxpayer has or may have no liability at the time to pay the deferrable tax. [TAA, s 120T].

If, under a tax law, a taxpayer provides the CIR with a bond or other security so that the taxpayer is not required to withhold or deduct tax from a payment and the CIR subsequently determines that the payment was liable to a have an amount of tax withheld or deducted, the due date for the purpose of the definition of “date interest starts” for withholding or deducting the amount of tax is the date on which the amount withheld or deducted would have been payable to the CIR if a bond or other security had not been provided [TAA, s 120U].

1110.295 Liability to pay interest [TAA, ss 120D, 120E, 120W, 183F]

Taxpayers are liable to pay interest on unpaid tax. The CIR can recover interest payable on unpaid tax as though it were tax (of the same type as the unpaid tax) payable by the taxpayer and the CIR must pay interest on overpaid tax to a taxpayer. If the CIR pays too much interest to a taxpayer, the CIR can recover the excess in the same manner as income tax that is payable [TAA, s 120D].

A taxpayer is not liable to pay interest if the amount of income tax or ancillary tax outstanding is $100 or less. Similarly, the CIR is not liable to pay interest to the taxpayer if the amount of overpaid tax is $100 or less [TAA, s 183F].

A taxpayer is not liable to pay interest on unpaid tax to the extent to which the interest arises because the taxpayer relied on a CIR’s official opinion (given on or after 7 September 2010). A “Commissioner’s official opinion” means:

(a) An opinion of the CIR concerning the tax affairs of the taxpayer given (either orally or in writing) after all relevant information has been provided to the CIR, if that information is correct;

(b) A finalised official statement of the CIR, in writing, if it specifically applies to the taxpayer’s situation. Private binding rulings are not official opinions [TAA, s 120W].

The amount of interest payable by a taxpayer on unpaid tax or by the CIR on overpaid tax is calculated for each day in the interest period in accordance with the following formula:

\[
\frac{(t \times r)}{365}
\]

Where:

\( t \) is the unpaid tax or overpaid tax on which the interest is payable; and

\( r \) is the CIR’s paying rate or the taxpayer’s paying rate applying on the day (see below).

The amount of interest payable in an interest period, is the sum of the amounts calculated using the formula for each day in the interest period.

The amount of interest outstanding at any time in an interest period is the sum of the amounts calculated using the formula for each day in the interest period that falls before that time less any interest that has been paid by that time [TAA, s 120E].

Except where a tax law provides otherwise, interest payable by a taxpayer to the CIR on unpaid tax is payable immediately and without the need for a demand [TAA, s 120G].

**1110.300 Interest priority [TAA, s 120F]**

If a taxpayer has unpaid tax to pay, and is liable to pay interest on the unpaid tax, any payment the CIR receives or applies on account of the taxpayer’s liability for the return period must first be applied towards payment of the interest. The CIR may apply interest payable to a taxpayer towards the taxpayer’s payment of unpaid tax after the date the taxpayer furnishes their return of income, provided that the CIR is not prevented from doing so by a tax law.

If, for a period, a taxpayer is liable to pay the CIR interest on unpaid tax, and the CIR is liable to pay the taxpayer interest on overpaid tax, the CIR may assess the taxpayer for the net amount or pay the taxpayer the net amount, as applicable, for the period.

The expressions “unpaid tax” and “overpaid tax” include:

(a) Any tax which has not been paid or which has been overpaid; and

(b) Any civil penalty imposed in respect of that tax which has not been paid or which has been overpaid, as if the tax and the civil penalty were a single tax type.

**1110.305 Interest on provisional tax [TAA, ss 120KB-120O]**

**(1) Instalments and due dates [s 120KB]**

For the purposes of the UOMI rules, a provisional taxpayer’s residual income tax (RIT) is due and payable under s RC 9. If a provisional taxpayer uses a GST ratio to determine the amount of provisional tax payable, and an adjustment to a base amount referred to in s RC 8 will, or is likely to, change the amount payable, the taxpayer may ask the CIR to make the adjustment and reassess their liability.

For the purposes of ss 120KB to 120KE of the TAA, RIT means a person’s RIT for a tax year as defined in s YA 1:

(a) As increased by an amount calculated in relation to the person and the income year under s MF 6(2); or

(b) As reduced by an amount calculated in relation to the person and the income year under s LA 4(1).

These rules do not apply to a transitional year or to a new provisional taxpayer.

**(2) RIT of new provisional taxpayers [TAA, s 120KC]**

In a tax year other than a transitional year, a new provisional taxpayer’s RIT is treated as due and payable:

(a) In three equal instalments on the interest instalment dates B, D, and F for the taxpayer’s corresponding income year, if s RC 9(9)(a) applies;

(b) In two equal instalments on the interest instalment dates, for the corresponding year:

(i) D and F, if provisional tax is payable in two instalments as per s RC 9(9)(b)(i); or

(ii) C and F, if provisional tax is payable in two instalments as per s RC 9(9)(b)(ii);
Penalties and Interest

(c) In one instalment on the interest instalment date F for the taxpayer’s corresponding income year, if provisional tax is payable in one instalment as per s RC 9(9)(c).

A reference to an instalment classified by the letters A to F is a reference to an instalment date in the table in sch 3, Part A on which an instalment of provisional tax is payable by a provisional taxpayer for an income year that corresponds to a tax year.

(3) Provisional tax instalments in transitional years [TAA, s 120KD]

For a transitional year to which sch 3, part B applies, the RIT of a provisional taxpayer, other than a person to whom s 120KE(1) or (3) of the TAA applies, is due and payable as determined under ss RC 21 to RC 24.

A provisional taxpayer in a transitional year is liable for UOMI for unpaid tax in relation to the instalments of provisional tax payable in the months set out in sch 3, Part B. The date interest starts is the day after the day on which payment of the instalment is due under s RC 21.

For the purposes of calculating the amount of interest due in relation to an instalment of provisional tax other than a final instalment, the amount of RIT payable on the instalment date is calculated using the formula:

\[
\text{Interest} = \frac{(\text{Residual Income Tax} \times \text{Instalment Period})}{\text{Months in Transitional Year}}
\]

Where:

“Instalment period” is either:

(a) Four, for provisional taxpayers who pay on the equivalent of instalment dates B, D, and F; or

(b) Six, for provisional taxpayers who pay on the equivalent of instalment dates C and F.

For the purposes of calculating the amount of interest due in relation to a final instalment of provisional tax, the amount of RIT payable is the RIT for the tax year minus any amount treated as due on an instalment date.

A provisional taxpayer includes a new provisional taxpayer.

(4) Provisional tax and rules on UOMI [TAA, s 120KE]

A provisional taxpayer’s RIT for a tax year is due and payable in one instalment on their terminal tax date if:

(a) They are a natural person, other than in their capacity as trustee;

(b) Their RIT is less than $50,000 for the tax year;

(c) They have not estimated their residual income tax for the tax year;

(d) They have not used a GST ratio in the tax year to determine the amount of provisional tax payable for the tax year; and

(e) They have not at any time in the tax year held an RWT exemption certificate.

When the above conditions are met, the provisional taxpayer:

(a) Is not liable for UOMI under s 120D of the TAA for unpaid tax until their terminal tax date; or

(b) Is not entitled to UOMI under s 120D of the TAA for overpaid tax until their terminal tax date.

A provisional taxpayer’s RIT for a tax year is due and payable in one instalment on their terminal tax date if:

(a) They use a GST ratio to determine the amount of provisional tax payable for the tax year; and

(b) They use the GST ratio as the determination method for the whole of the corresponding income year.

When these conditions are met, in relation to the amount of provisional tax paid or payable for the period in the corresponding income year in which the GST ratio is used, the provisional taxpayer:

(a) Is not liable for UOMI under s 120D of the TAA for unpaid tax until their terminal tax date; or

(b) Is not entitled to UOMI under s 120D of the TAA for overpaid tax until their terminal tax date.

If, under s RC 18, a provisional taxpayer changes the way they determine the amount of provisional tax, the taxpayer is not entitled to UOMI for overpaid tax under s 120D of the TAA until the later of:
Penalties and Interest

1110.305(5)

(a) The day after the date:
   (i) On which they notify the CIR under s RC 18(2); or
   (ii) Set out in s RC 18(3) (as the case may be);
(b) The day after their last ratio instalment date.

For debit interest, the taxpayer is liable for UOMI:

(a) For the period of the tax year in which they use the GST ratio, from the later of the dates set out above; or
(b) For the period of the tax year in which they estimate their provisional tax, from whichever dates of instalments B, D, and F for their corresponding income year occur 30 days after their last ratio instalment date.

A reference to an instalment classified by the letters A to F is a reference to a date in the table in sch 3, Part A, on which an instalment of provisional tax is payable by a provisional taxpayer for an income year that corresponds to a tax year.

(5) Meaning of unpaid tax and overpaid tax [TAA, s 120L]

For the purposes of determining amounts of unpaid tax and overpaid tax in respect of instalment dates for a tax year, a taxpayer’s RIT is calculated in accordance with the definition of that term in s 120KB(4) (see above). If a taxpayer makes a payment and does not specify how the payment is to be applied, the CIR must apply the payment towards the provisional tax that is due on an instalment date to which the CIR considers the payment relates. If the taxpayer makes a payment and specifies that it is made to meet their provisional tax due on an instalment date, the CIR must apply the payment towards the provisional tax specified by the taxpayer.

(6) Where provisional tax paid by a company does not count as overpaid tax [TAA, s 120M]

No amount of tax paid by a company is to be treated as overpaid tax to the extent that:

(a) The tax is provisional tax paid by the company for a tax year in excess of the company’s RIT for the tax year, and is retained by the CIR under ss RM 13 to RM 17, RM 32 and RZ 6 at any time after the company would, but for those sections, be entitled to a refund of the tax; or
(b) The tax would not be in excess of the company’s RIT for a tax year, but for the payment of an instalment of provisional tax being satisfied by an amount of further income tax in accordance with s RC 35.

(7) Variation to definition of date interest starts [TAA, ss 120N, 120O]

Where the due date for the payment of tax is an instalment date for provisional tax, the definition of “date interest starts” is to be construed as if the words “the later of the following days” and subparagraph (ii) were omitted from paragraph (b) of that definition.

The definition of “date interest starts” is to be construed as if the words “the later of the following days” and subparagraph (ii) were omitted from paragraph (b) of that definition when:

(a) A payment required by ss RA 5 and RD 4 is due to be paid to the CIR no later than 5 April in a year;
(b) A payment required by ss RA 5 and RD 23(3) is due to be paid to the CIR no later than 20 April in a year;
(c) A payment required by ss RA 6, RE 20 and RE 21 is due to be paid to the CIR no later than 20 April in a year;
(d) A payment required by ss RA 6 and RF 13 is due to be paid to the CIR no later than 20 April in a year.
1110.310  Spreading tax liability or apportioning income back over earlier tax years [TAA, s 120P]

If, under a tax law:

(a) A taxpayer elects to spread a tax liability over the tax year for which the election is made (election tax year) and one or more earlier tax years; or

(b) The CIR allocates income from a tax year (allocation tax year) to one or more earlier tax years, to the extent the election or allocation alters the taxpayer’s income tax liability for a tax year that precedes the election tax year or allocation tax year, as the case may be (the extent of that alteration being called “affected tax”), the taxpayer is not required to pay UOMI on the affected tax before the taxpayer’s terminal tax date for the election tax year or allocation tax year.

If income of a taxpayer is allocated to a tax year, the taxpayer shall allocate to the tax year that proportion of deductions allowed in the allocation tax year which the allocated income represents as a proportion of the income for the allocation tax year calculated without allocation.

1110.320  Interest and PAYE intermediaries [TAA, ss 120OB, 120OC]

The following definitions apply for the purpose of determining the interest chargeable or payable to a PAYE intermediary [see 1080.80], if the employer has:

(a) Paid to the intermediary the salary or wages as required by ss RP 9 to RP 11; and

(b) Provided to the intermediary the information requested by the intermediary as required by s RP 8(b).

“CIR’s paying rate” means the rate of interest established and notified as the CIR’s paying rate by an Order in Council made under s 120H of the TAA.

“Date interest starts”:

(a) For unpaid tax means:

(i) If a PAYE intermediary pays too little tax by due date:

(A) The day after the due date for payment of the tax; or

(B) Where the due date is a new due date, the day after the original due date for payment of the tax;

(ii) If the CIR refunds tax which should be kept and taken into account in satisfying tax payable by a PAYE intermediary on a due date, the day after the day the CIR refunds the tax; and

(b) For overpaid tax, if a PAYE intermediary pays too much tax by or after a due date, means:

(i) The day after the later of the due date for payment of the tax and the date the payment is made; or

(ii) Where the due date is a new due date, the day after the later of the original due date for payment of the tax and the date on which the payment is made.

“Interest paid to a taxpayer” means interest credited to the PAYE intermediary; and “interest paid” and “paid” have corresponding meanings.

“Interest period”:

(a) For unpaid tax, means the period beginning on the date interest starts and ending on the date the tax is paid or credited as paid (both dates inclusive);

(b) For overpaid tax, means the period beginning on the date interest starts and ending on the date the tax is refunded by the CIR (both dates inclusive).

“Tax paid”, at any time, means the amount of tax that at that time:

(a) Has been paid or credited as paid in respect of a deduction of tax that must be made under a tax law; and
Penalties and Interest

(b) Has not been refunded by the CIR.

“Tax payable”, at any time, means the amount of tax that at the time is due to be withheld or deducted under a tax law and paid to the CIR.

“Taxpayer’s paying rate” means the rate of interest established and notified as the taxpayer’s paying rate by an Order in Council made under s 120H of the TAA.

The use of money interest rules in ss 120A, 120AA and 120D to 120I of the TAA apply to a PAYE intermediary as if references to a “taxpayer” were read as references to a “PAYE intermediary”. Sections 120EA, 120F(2) and 120F(3) of the TAA do not apply to a PAYE intermediary.

1110.325 Interest and intermediaries who operate tax pooling accounts

[TAA, s 120OD]

The use of money interest rules in ss 120A, 120AA and 120C to 120I apply to an intermediary who operates a tax pooling account [see 1150.77] in their capacity as an intermediary as if references to a “taxpayer” were read as references to an “intermediary”. Sections 120EA, 120F(2) and 120F(3) of the TAA do not apply to an intermediary.

1110.330 Assessability and deductibility of UOMI [ss CC 8, DB 3BEF 4, EF 5]

(1) Interest paid by the CIR

Interest payable by the CIR under Part 7 of the TAA (UOMI) is income of the person receiving it. UOMI is not subject to the financial arrangements rules, but is allocated to income years under s EF 4 [s CC 8]. Income that is UOMI paid by the CIR is allocated to the income year in which it is paid [s EF 4].

Before the 2011-12 income year, UOMI was allocated to a different income year in the following situations:

(a) If the CIR paid the interest in the same tax year as that to which the original assessment relates, the interest is allocated to the following income year;

(b) If the CIR amended the person’s assessment, the interest payable by the CIR as a result of the amended assessment is allocated to the income year following the income year in which the notice of amended assessment was issued. For this purpose, if the CIR amended the person’s assessment more than once in a tax year, only the last amended assessment is taken into account.

(2) Interest paid to the CIR

UOMI is deductible [s DB 3B]. Section DB 3B supplements the general permission and overrides the capital, private and employment limitations, although the other general limitations still apply. This means that a person paying UOMI does not have to satisfy the general permission in order to claim a deduction. A deduction for UOMI paid to the CIR is allocated to the income year in which the interest is paid [s EF 5].

Amendments clarifying the deductibility of UOMI, enacted in 2011, apply retrospectively from the 1997-98 income year (the start of the UOMI rules) for taxpayers who have claimed deductions for UOMI in returns filed or NOPAs issued before 24 November 2010. The amendments also apply generally to the 2010-11 and later income years. See TIB vol 23:8 (October 2011), at 56.

Before the 2011-12 income year, a deduction for UOMI paid to the CIR was allocated to the income year in which the person’s original assessment was made, except in the following situations:

(a) If the original assessment was made in the same tax year as that to which the income tax liability relates, the deduction is allocated to the following income year;

(b) If the CIR amends the person’s assessment, a deduction for interest payable to the CIR as a result of the amended assessment is allocated to the income year following the income year in which the CIR issues the notice of amended assessment (except in those circumstances listed in item (c));

(c) If the CIR amended the person’s assessment, a deduction for interest payable to the CIR as a result of the amended assessment is allocated to the income year in which the CIR issued the notice of amended assessment, in the following circumstances:
(i) The person dies, goes into liquidation, or otherwise ceases to exist before the income year following that in which the CIR issues the notice of amended assessment; and
(ii) The person would have been allowed a deduction for the interest payable if it had been incurred in the income year in which the notice of amended assessment was issued; and
(iii) The person’s executor or other representative asks the CIR.

For the purpose of item (c), if the CIR amended the person’s assessment more than once in a tax year, only the last amended assessment is taken into account.

The pre-2011-12 allocation rules outlined above, apply even though the income tax liability giving rise to the obligation to pay interest, and the period for the interest payment, may have fallen wholly or partly in a different tax year from that in which the obligation to pay interest arose.

1110.335 Remission of penalties for reasonable cause [TAA, s 183A]

The CIR may remit the penalties listed below if the CIR is satisfied that:

(a) The penalty arose as a result of an event or circumstance beyond the control of the taxpayer (for example, an accident or disaster, illness, or emotional or mental distress); and
(b) As a consequence of the event or disaster the taxpayer has a reasonable justification or excuse for the failure to comply; and
(c) The taxpayer corrected the failure to comply as soon as practicable.

The penalties which may be remitted are:

(a) Late filing penalty;
(b) Non-electronic filing penalty;
(c) Late payment penalty;
(d) Imputation penalty tax imposed by s 140B of the TAA;
(e) Maori authority distribution penalty tax imposed by s 140CB of the TAA;
(f) Shortfall penalty imposed by s 141AA of the TAA for failing to deduct tax from a schedular payment to a non-resident contractor;
(g) A civil penalty imposed under ss 215 or 216 of the KiwiSaver Act 2006 for failing to provide information or make deductions;
(h) A penalty under s 141ED of the TAA for not paying employer monthly schedule amount (from 1 April 2008).

An event or circumstance does not include:

(a) An act or omission of an agent of a taxpayer, unless the CIR is satisfied that the act or omission was caused by an event or circumstance beyond the control of the agent:
   (i) That could not have been anticipated; and
   (ii) The effect of which could not have been avoided by compliance with accepted standards of business organisation and professional conduct; or
(b) A taxpayer’s financial position.

The CIR’s policy (standard practice statement) on the remission of penalties under s 183A of the TAA is set out in TIB vol 14:12 (December 2002) at 52-54.

The main points of the policy are as follows. The policy applies to remission requests received from 4 December 2002. The request for remission must be in writing and the taxpayer may be required to produce relevant information. There is no right to dispute the CIR’s decision. Remission will only occur if the taxpayer is able to provide reasonable justification for the late filing, non-electronic filing, or late payment. The term “reasonable” must be applied to the event or circumstance. It is an objective test which requires that it be reasonable for a person in the taxpayer’s position not to have complied. In deciding whether remission is appropriate the CIR will consider:
Penalties and Interest

(a) Has the penalty been correctly charged?
(b) Has the taxpayer paid the tax (or filed the return) in question?
(c) Why did the taxpayer pay (or file) late, or not file electronically?
(d) Was the non-compliance caused by an event or circumstance that was:
   (i) An accident or a disaster?
   (ii) Illness or emotional or mental distress?
(e) Has this reason been used before? Where appropriate, have measures been put in place by the taxpayer to ensure that this situation does not recur in the future?
(f) Was the tax paid or return filed as soon as “practicable” (as soon as it can be done, and as soon as is feasible and realistic)? This will depend on each case, specifically was the default corrected as soon as possible after the event or circumstance passed?
(g) Was the non-compliance an act or omission of the taxpayer’s agent? Did an event or circumstance beyond the control of the agent cause it? Could the default have been avoided by compliance with accepted standards of business organisation and professional conduct?
(h) Any other information that the CIR considers relevant in assessing the application.

For examples see TES 2 (March 2003) 28.

1110.340 Cancellation of interest [TAA, s 183C]

A taxpayer’s liability to pay interest under Part 7 of the TAA will be cancelled for the period from the date of the notice of assessment until the due date specified in the notice, if the tax assessed in the notice is paid to the CIR by the due date for payment specified in the notice.

Where the CIR issues a notice of assessment to a taxpayer before the original due date for payment of the tax to which the assessment relates and the tax assessed in the notice is paid to the CIR on or before the 30th day after the date on which the notice of assessment is issued, the CIR must cancel the taxpayer’s liability to pay interest for the period from the day after the date on which the notice of assessment is issued to the day on which payment is made.

Where the CIR issues a statement of account to a taxpayer after the original due date for payment of tax to which the statement relates, and the tax referred to in the statement together with any UOMI for the period before the date of the statement is paid on or before the 30th day after the statement date or the due date of the tax (whichever is earlier), the CIR will cancel the liability to interest for the period from the day after the statement was issued until the day the payment was made.

If the CIR issues both a notice of assessment and a statement of account to a taxpayer, and the 30th day referred to in the third paragraph occurs on or before the 15th day referred to in the fourth paragraph, the CIR must cancel the taxpayer’s liability to pay interest for the period from the day after the date on which the notice of assessment is issued to the date on which payment is made, if payment (the tax assessed in the notice of assessment plus any interest for the period before the date of the notice) is made on or before the 30th day referred to in the third paragraph.

The CIR may remit UOMI if the taxpayer is significantly affected by the February 2004 flooding, or a similar future event, and the CIR considers that it would be equitable to remit the interest. No time limit is set for the remission to apply, although the taxpayer must apply for the remission as soon as practicable [TAA, s 183ABA].

1110.342 Emergency event interest remission [TAA, s 183ABA]

A taxpayer may ask the CIR to remit UOMI if:
(a) An emergency event physically prevents the taxpayer from making a tax payment on or before the due date;
(b) The taxpayer is charged with UOMI for failing to make the payment by the due date; and
(c) The taxpayer is a member of a class of persons to whom remission is available.
Penalties and Interest

The CIR may remit the UOMI if satisfied that it is equitable to do so, and the taxpayer made the payment and sought relief as soon as practicable.

An event may be declared an emergency event by Order in Council if the event:

(a) Is the result of any happening, whether natural or otherwise, including, without limitation, any explosion, earthquake, eruption, tsunami, land movement, flood, storm, tornado, cyclone, serious fire, leakage or spillage of any dangerous gas or substance, technological failure, infestation, plague, epidemic, failure of or disruption to an emergency service or a lifeline utility, or actual or imminent attack or warlike act; and

(b) Causes or may cause loss of life or injury or illness or distress, or in any way endangers the safety of the public or property in New Zealand or any part of New Zealand [parts (a) and (b) of definition of “emergency” in s 4 of the Civil Defence Emergency Management Act 2002].

A class or classes of person to whom a remission is available in relation to an emergency event may be described by Order in Council.

(1) Canterbury earthquakes

The Tax Administration (Emergency Event–Canterbury Earthquake) Order 2010 declared the Canterbury earthquake that occurred on 4 September 2010, and all of its aftershocks, to be an emergency event for the purposes of s 183ABA of the TAA. Taxpayers that are physically prevented by the earthquake or any of its aftershocks from making a payment required by tax law may ask the CIR to remit interest charged under Part 7 of the TAA for failing to make payments on due date. This will apply, for example, to individuals and companies that are prevented from making PAYE payments to the CIR because staff or tax agents are unable to access a building where the records are kept, or because the records have been destroyed.

The CIR may remit interest if satisfied that:

• It is equitable that the interest be remitted;
• The taxpayer asked for the relief as soon as practicable; and
• The taxpayer made the payment as soon as practicable.

The order was originally due to expire on 31 March 2011, but has since been extended to 30 September 2012 by amendment orders.

1110.343 Cancellation of interest charged to non-residents working in Canterbury earthquake recovery programme [TAA, s 183CB]

When non-resident workers stay in New Zealand for more than a given period, PAYE withholding and provisional tax obligations are backdated to the first day of presence in New Zealand. The backdating often means that payments of tax are overdue, and interest is imposed on the overdue tax. This is inappropriate in the case of non-residents who are assisting in the Canterbury earthquake recovery programme. Accordingly, s 183CB requires the CIR to cancel the liability to pay the interest.

Cancellation of interest applies to a person (the earner) who derives income in the form of payment for work in the programme for the recovery of Canterbury from the Canterbury earthquakes (as defined in the Canterbury Earthquake Recovery Act 2011), when:

(a) The income relates to the period beginning after 4 September 2010 and ending before 4 September 2011; and

(b) The earner is a non-resident, or is treated as a non-resident under a relevant double tax agreement, on 4 September 2010 and:

(i) Is a natural person who arrives in New Zealand after that date; or

(ii) Is not a natural person and, under the double tax agreement, has no permanent establishment in New Zealand on 4 September 2010 but after that date has a permanent establishment in New Zealand or is a resident and not treated as a non-resident.

Cancellation applies to both:
Penalties and Interest

(a) Interest on overdue tax withheld from PAYE income payments; and
(b) Interest on overdue provisional tax instalments.

In both cases, the earner must apply for the interest to be cancelled.

1110.345 Other issues relating to remission and cancellation of tax [TAA, ss 183D, 183E, 183G, 183H, 183I]

The CIR may remit the penalties listed below if the CIR is satisfied that the remission is consistent with the CIR’s duty to collect over time the highest net revenue that is practicable within the law. The penalties that may be remitted are:

(a) Late filing penalty;
(b) Non-electronic filing penalty;
(c) Late payment penalty;
(d) Shortfall penalty under s 141AA of the TAA for failing to deduct tax from a withholding payment to a non-resident contractor;
(e) A civil penalty imposed under ss 215 or 216 of the KiwiSaver Act 2006 for failing to provide information or make deductions;
(f) A penalty under s 141ED of the TAA for not paying employer monthly schedule amount (from 1 April 2008); and
(g) UOMI.

The CIR must also have regard to the importance of the penalty and interest in promoting compliance, especially voluntary compliance, by all taxpayers and other persons with the Inland Revenue Acts. The CIR cannot consider a taxpayer’s financial position when considering whether to remit a penalty under s 183D of the TAA.

The CIR’s practice in respect to granting remission of penalties and interest under ss 183A, 183ABA and 183D of the TAA is set out in standard practice statement SPS 05/10 [see TIB vol 17:9 (November 2005) at 68-74]. SPS 05/10 applies to remission requests received by Inland Revenue from 17 October 2005. The standard does not apply to shortfall penalties, child support penalties and interest, or student loan repayments. The main points of the statement are as follows:

(a) Applications for remission under ss 183A and 183D of the TAA should be made in writing and should be accompanied by supporting information. The requirement to apply in writing contradicts s 183H(a) of the TAA, which was amended with effect from the 2005-2006 tax year to remove the requirement that notice must be in writing.

(b) The CIR will remit penalties under s 183A of the TAA where he is satisfied that the non-compliance has been caused by an event or circumstance that provides reasonable justification or excuse for the omission, and the omission was rectified as soon as practicable.

(c) The CIR will remit interest under s 183ABA of the TAA where:
   (i) A taxpayer is significantly affected by a “qualifying event”; and
   (ii) The taxpayer has applied for remission of interest as soon as practicable; and
   (iii) The CIR is satisfied that the effect on the taxpayer of the occurrence of the qualifying event makes the remission equitable.

(d) The CIR will remit penalties and/or interest under s 183D of the TAA if the CIR is satisfied that remission is consistent with the duty to collect over time the highest net revenue that is practicable within the law. Generally, the CIR will grant remission of penalties where there was a genuine oversight, a “one-off” situation, or incorrect advice was given by an Inland Revenue officer that led to the taxpayer not filing their return or paying the tax on time.

(e) The CIR will remit interest in limited circumstances such as where an Inland Revenue officer has given incorrect advice to the taxpayer, and that advice has directly resulted in the non-compliance.
However, this is not the only situation in which interest may be remitted. The CIR will consider each case on its own merits.

(f) Remission applications under ss 183A and 183D of the TAA will only be considered when the returns relevant to the remission requests have been filed and the tax has been paid.

(g) Sections 183A and 183D of the TAA do not permit remission to be granted for financial reasons. Requests for financial relief are dealt with under ss 176 and 177 of the TAA.

For examples see TES 2 (March 2003) 28.

The CIR has no discretion to remit shortfall penalties. Any interest payable in respect of tax that has been remitted by the CIR will also be remitted [s 183E of the TAA]. In TIB vol 11:8 (September 1999) at 29, the CIR indicated that he will also reverse interest when a retrospective change to legislation causes the position taken by a taxpayer to become incorrect after it was taken. In this situation, a new due date for payment would be made and the interest would be cancelled.

If interest or a civil penalty payable by a taxpayer is remitted by the CIR or a liability to pay the amount is cancelled, and the taxpayer has already paid the amount, the CIR will refund the amount to the taxpayer or apply the amount towards meeting another tax liability [TAA, s 183G].

To obtain the remission of interest or tax imposed under ss 183A or 183D, a taxpayer must apply to the CIR and produce such information as the CIR requires in relation to the request. The application for remission need not be in writing (eg the request could be made by phone, fax, or email) [TAA, s 183H]. However, a written application must be made for remission of the following:

(a) Imputation penalty tax;
(b) Maori authority distribution penalty tax;
(c) A shortfall penalty imposed on a non-resident contractor by s 141AA;
(d) UOMI.

Where a taxpayer’s tax liability or obligation is cancelled, the cancellation is deemed to take effect at the time the tax liability or obligation arose. A taxpayer is never liable to pay interest or a civil penalty in respect of a tax liability or obligation that is cancelled [TAA, s 183I].

**Compulsory remission of late payment penalties and interest**

[TAA, ss 181C, 181D, 183AA]

The CIR must remit UOMI and any late payment penalties, where a company is liable to pay further income tax under s OB 65 [see 670.95] and late payment penalties under s 139B of the TAA [see 1110.40], arising from unpaid income tax due in the same imputation year. The amount remitted must be equal to or less than the amount of unpaid income tax [s 181C of the TAA].

The CIR must remit UOMI and late payment penalties on the further income tax liabilities of Maori authorities when income tax liabilities are outstanding at the same time. The remission applies to the extent that the amount of the further income tax is equal to or less than the amount of unpaid income tax [TAA, s 181D].

The CIR must automatically remit a taxpayer’s late payment penalty and interest to the extent to which, objectively, the penalty is imposed because of errors in respect of the change in the GST rate on 1 October 2010 (for example, where the required systems changes to accommodate the new rate have not been able to be made in time) [TAA, s 183AA].

**Penalties and interest arising from unintended legislative changes**

Inland Revenue has issued two standard practice statements relating to the imposition of penalties and interest when a tax shortfall results from an unintended legislative change in the ITA 2004 or the ITA 2007. The standard practice statements are essentially identical.
Penalties and Interest

(1) **ITA 2004**

SPS 05/02 [see TIB vol 17:5 (June-July 2005) at 40-44] relates to the ITA 2004 and applies to the 2005-2006 to the 2007-2008 income years inclusive. The ITA 2004 rewrote Parts C to E of the ITA 1994, with no change in the law intended except as specifically identified in sch 22A of the ITA 2004. However, unintended legislative changes may arise as a result of the new wording used in the ITA 2004. Taxpayers who identify what they believe to be an unintended law change should notify the Rewrite Advisory Panel (Panel). The Panel may recommend that unintended law changes be corrected by amending legislation, and the Government may or may not pass such amending legislation.

The standard practice is that if a taxpayer incurs a tax shortfall as a result of an unintended legislative change in the ITA 2004, no shortfall penalty will be charged and the taxpayer will be entitled to apply in writing to the CIR for a remission of interest. The taxpayer will still need to have taken reasonable care and an acceptable tax position. To obtain a remission of the interest charged, a taxpayer will need to write to the CIR requesting remission, as this is a legislative requirement. The taxpayer will still be required to pay the shortfall of tax by the due date that is set for it.

(2) **ITA 2007**

SPS 08/03 [see TIB vol 20:10 (December 2008) at 35] relates to the ITA 2007 and applies from the 2008-2009 income year.

The ITA 2007 represents the final stage of a program to progressively rewrite the income tax legislation to make it clear and easy to understand. The ITA 2007 rewrites Parts F to Y of the ITA 2004 and makes consequential amendments to Parts A to E. The rewritten legislation is not intended to change the law except as specifically identified in sch 51 of the ITA 2007. However, unintended legislative changes may arise as a result of the new wording used in the ITA 2007. Taxpayers who identify what they believe to be an unintended law change can notify the Panel (as explained above).

If a taxpayer incurs a tax shortfall as a result of an unintended legislative change in the ITA 2007, no shortfall penalty will be charged and the taxpayer will be entitled to apply in writing to the CIR for a remission of interest. The taxpayer will still need to have taken reasonable care and an acceptable tax position. To obtain a remission of the interest charged, a taxpayer will need to write to the CIR requesting remission, as this is a legislative requirement. The taxpayer will still be required to pay the shortfall of tax by the due date that is set for it.

(3) **Examples**

The CIR identified two situations in which a shortfall incurred by a taxpayer is a result of an unintended legislative change. The two scenarios are set out below as they apply to the ITA 2007. However, they apply equally to the ITA 2004, simply by substituting “ITA 2004” for “ITA 2007”, “ITA 2004” for “ITA 1994” and “YA 3(4)” for “ZA 3(4)”.

**Scenario 1:**

In taking a tax position in their tax return, a taxpayer applies the ITA 2007, as the law is clear. An unintended legislative change from the ITA 2004 is later identified and confirmed by the Panel. On advice by the Panel, the Government amends the ITA 2007 retrospectively to be consistent with the ITA 2004. As a result of the amendment, a tax shortfall arises. It is established that the taxpayer has taken reasonable care and an acceptable tax position. In this situation, the taxpayer had taken an interpretation based on the words in the ITA 2007. The tax shortfall that subsequently arises is due solely to the unintended legislative change and the Government’s decision to amend the ITA 2007 retrospectively. In this instance no shortfall penalty will be imposed and the taxpayer will be entitled to a remission of interest upon written application to the CIR.

**Scenario 2:**

In taking a tax position in their tax return a taxpayer is required to have regard to the wording of the corresponding provisions of the ITA 2004, as the law in the ITA 2007 is unclear or leads to an absurd result. An unintended legislative change in the ITA 2007 is later identified and confirmed by the Panel. The Government decides not to amend the ITA 2007. As a result, a tax shortfall arises. It is established that the taxpayer has taken reasonable care and an acceptable tax position. In this situation the law in the ITA 2007 is not clear or leads to an absurdity. As required under s ZA 3(4) of the ITA 2007, the taxpayer has used the law in the ITA 2004 to interpret the meaning of the law in the ITA 2007. However, it is later established...
by the Panel that the meaning of the law in the ITA 2007 is different from that of the corresponding provision in the ITA 2004. The Government decides to retain the new meaning. Thus the tax shortfall that the taxpayer consequently incurs does not arise due to any fault of the taxpayer. No shortfall penalty will be imposed and the taxpayer will be entitled to a remission of interest upon written application to the CIR.

(4) Tax shortfall not due to an unintended legislative change

Outside the two scenarios above and the standard practice statements, a taxpayer’s liability to shortfall penalties and interest will be considered on a case by case basis according to normal principles. This will include the situations where an unintended legislative change is confirmed by the Panel but the tax shortfall incurred by the taxpayer did not arise due to the unintended legislative change. Rather, the tax shortfall arose as a result of an incorrect interpretation by the taxpayer.

There will also be instances where an unintended legislative change is not confirmed by the Panel. In this case, it will be clear that a tax shortfall incurred by the taxpayer did not arise due to an unintended legislative change but is the result of an incorrect interpretation by the taxpayer. These cases are no different to any other case when a tax shortfall arises. Whether a taxpayer incurs a shortfall penalty will be decided on the facts of each case, and whether the taxpayer took reasonable care and an acceptable tax position. Interest charged on the shortfall will be payable along with the outstanding tax. Generally, no remission of interest will be allowed. However, the taxpayer will still have the right to apply in writing to the CIR for a remission of interest and each case will be considered on its own merits in accordance with the relevant standard practice statement [see 1110.335 to 1110.345].

Scenarios 3 to 6 in the following table are outside the standard practice statement. Scenarios 3 and 4 are when there is a confirmed unintended legislative change but the tax shortfall that arises is not a result of the unintended legislative change. Scenarios 5 and 6 are when a potential unintended legislative change is not confirmed.

All six scenarios have been based on the assumption that the taxpayer has taken reasonable care and has an acceptable tax position when taking their tax position. In cases where a taxpayer has not taken reasonable care or has an unacceptable tax position, a shortfall penalty will be imposed.

If a taxpayer has an overpayment due to any of the scenarios outlined in the table above the normal rules, as they pertain to the CIR paying the taxpayer interest, will apply.
Chapter 1120
Pensions and Annuities

1120.10 Pensions for past employment liable for PAYE [s RD 5]
An annuity, pension, or retiring allowance paid for the past services of the recipient (or of a person on whom the annuitant was dependent) comes within the definition of “salary or wages” for PAYE purposes, and PAYE tax should be deducted. Any payment deemed to be a pension under s CF 1(2) is similarly subject to the PAYE rules.

Where a pension for past employment is received from an overseas source, and NZ PAYE tax has not been deducted at source, the recipient becomes liable to account for the tax deductions that should have been made. This normally involves the pensioner personally making the calculation of the tax deduction and accounting for it to Inland Revenue using form IR56. Where the taxpayer has other provisional income, it may be more convenient to show the pension in the return as income not taxed at the time of receipt and to pay provisional tax accordingly.

1120.20 Pensions paid to former partners [s DC 3]
Pensions paid to a former business partner are deductible under certain circumstances. Deductibility of the payment requires the following:
(a) The business of the taxpayer or partnership making the payment is the same business as that carried on by the former partnership;
(b) The former partner has retired from the former partnership;
(c) The pension is granted under a deed and the former partner or former partner’s spouse [see 960.10] has a right to receive the pension for a fixed period or for life;
(d) The pension is paid for the former partner’s past services in the partnership; and
(e) The business of the taxpayer or partnership paying the pension does not exclusively or principally consist of the investment of money, or the holding of, or dealing in, shares, securities, investments, or land.

1120.30 Exempt pensions and annuities [ss CW 28, CW 30, CW 33, CW 34]
The following pensions and annuities are exempt:
(a) Pensions (s CW 28)
   (i) Certain war pensions or war allowances. However, where the amount is payable irrespective of whether the death is attributable to service in one of the specified forces (including police), ie it is in the nature of a normal service pension, it is not exempt;
   (ii) Portable New Zealand superannuation. Portable New Zealand superannuation is New Zealand superannuation that is payable to a person who is outside New Zealand for not more than 26 weeks. The 26-week threshold can be extended in certain circumstances;
(iii) Portable veterans’ pension;
(iv) Overseas pension payments are exempt to the extent to which they are subject to an arrangement under s 70(3) of the Social Security Act 1964. This includes various income tested benefits. However, the equivalent amount of New Zealand superannuation or veterans’ pension paid under s 70(3)(b) of the Social Security Act 1964 is not exempt [ss CW 28(2)(b), (2)].

(b) Annuities paid from the Crown bank account (s CW 30)
Annuities which are granted by the Executive Council of New Zealand, paid from the Crown bank account, and not designated as assessable are exempt from tax.

(c) Allowances and benefits (s CW 33)
(i) Monetary benefits payable under the Social Security Act 1964 including participation allowances. Income-tested benefits are not exempt;
(ii) Payments under the Accident Compensation Act 2001 or Part 5 of the Accident Insurance Act 1998 that are for treatment or rehabilitation, or are an independence allowance, funeral grant, survivor’s grant or childcare payment;
(iii) Disabled workshop payments. These are payments made to a disabled person for undertaking work in a sheltered workshop where the average amount paid in a tax year does not exceed $50 per week;
(iv) Amounts derived by, or distributed by, a trust set up for the benefit of thalidomide victims;
(v) Amounts derived by, or distributed by, the New Zealand Agent Orange Trust.

(d) Compensation payments (s CW 34)
(i) Certain payments relating to incapacity to work paid by a friendly society or a sickness, accident or death benefit fund, or under a policy of insurance where the amount is not calculated by reference to income or profits;
(ii) Payments made under the Workers Compensation Act 1956 or the Criminal Injuries Compensation Act 1963;
(iii) Ministerially approved distributions to ex-prisoners of war held in German concentration camps during the Second World War, and payments made by the Federal Republic of Germany or Austria to victims of National Socialist persecution;
(iv) Payments under sch 1 of the Crown Forests Assets Act 1989 (other than cl 3(b));
(v) Certain payments under the Maori Reserved Land amendment Act relating to compensation, solatium payments or the purchase of leases, but excluding interest under s 23 of that Act.

1120.40 General features of the taxation of annuities [ss CC 5, CW 4]
An annuity contract providing a life income which ceases immediately on the death of the person upon whose life it is granted, is income.
An annuity contract giving a life income and a further provision to repay the purchase money after deducting any annuity payments already made is assessable, but the return of the purchase price is not assessable.
An annuity contract giving a life income and a further provision that the annuity continues until the amount paid out equals the purchase money notwithstanding the prior death of the annuitant, is income. Where the purchase money is repaid during the lifetime of the annuitant, further payments received during the remainder of the life are similarly income.
Any annuity paid under a life insurance policy is exempt where the policy was offered or entered into by a life insurer either:
(a) In New Zealand; or
(b) Outside New Zealand where the life insurer is resident in New Zealand.
Pensions and Annuities

1120.50

“Annuity certain” means an annuity payable under a contract providing for a fixed number of payments, irrespective of the death of the annuitant before the final payment is made, the payments being calculated so as to return to the annuitant the amounts paid as premiums plus compound interest. The basic distinction between an annuity certain and a life annuity is that, in the latter case, the sum of the payments which fall to be made may prove to be less or greater than the sum paid by the annuitant, while in the former case it is the same amount as the annuitant paid with the addition of interest. Where the annuity has been purchased by the taxpayer personally, only that portion of the instalment of an annuity certain which represents interest is assessable. Where the annuity has been purchased by some other person, eg an employer or a relative, the whole of each payment received is taxable.

“Deferred annuity” means an annuity purchased by instalments in advance, the payments for which are made in a manner similar to life insurance premiums. A deferred annuity is assessable.

Where an annuity is sold, any income due but unpaid as at the date of sale is apportioned between the purchaser and the vendor.

1120.50 Annuities arising from debt satisfaction or consideration for business purchase

Where a life annuity is arranged in satisfaction of a debt owing, no deduction is allowed to the debtor (payer) for payments made on the annuity. The amount received is assessable to the payee.

Where an annuity is arranged in consideration for the purchase of a business, no deduction is allowed to the purchaser. The annuitant is assessable on the annuity received: T v Commissioner of Taxes (1943) 3 MCD 101.

There is a distinction between an annuity and the payment of a capital debt by instalments. If there is a debt owing and it is agreed that it shall be payable by annual instalments, the instalments are not annuities but capital receipts. The financial arrangement provisions may then apply.

1120.60 Pensions and annuities from foreign countries [s LJ 2]

Pensions, other than war pensions derived from foreign government and private sources, are generally assessable when derived by New Zealand residents. An exemption may apply under either general tax law or a double tax agreement. Any foreign tax, which has been deducted from any foreign pension which is assessable in New Zealand, may be allowed as a credit against the tax payable in New Zealand [s LJ 2].

Where a double tax agreement exists between New Zealand and the country from which the pension is derived, it may provide that the pension is assessed only in New Zealand, only in the country of source or, in some cases, in both countries. The applicable agreement should be consulted in each case as the provisions differ from country to country.

WINZ has taken responsibility for paying the British pension, derived from the UK Department of Health and Social Security. The pensions are no longer paid direct from the UK but are included with New Zealand superannuation payments. The regular payments of New Zealand superannuation include the British pension payments. In effect, British pensions to persons living in New Zealand are increased by a partial New Zealand superannuation supplement, so that the person receives same gross amount as would be the case if he or she was entitled only to New Zealand superannuation.

In Public Ruling BR Pub 07/10, the CIR has advised that Netherlands social security pensions are taxable only in New Zealand when received by a New Zealand tax resident who is also a New Zealand citizen. Where the recipient is a New Zealand tax resident but not a New Zealand citizen, the pension may be taxable both in New Zealand and in the Netherlands. In this case, the pension should be included in the person’s New Zealand tax return. The tax payable in New Zealand will be reduced by way of a credit for Netherlands tax paid on the pension [see TIB vol 20:1 (February 2008) at 3].

A purchased annuity derived from overseas by a New Zealand resident is liable to New Zealand income tax. However, under some double tax agreements, it may be exempt from tax in the country of origin. The rules applicable to pensions derived from foreign countries generally apply also to purchased annuities. Any
foreign tax that has been deducted from any foreign pension which is assessable in New Zealand may be allowed as a credit against the tax payable in New Zealand [s LJ 2].

1120.70 Testamentary annuities charged on property [s DX 1]

Annuities paid by a taxpayer are not usually an allowable deduction. However, property devised or bequeathed under a will may be charged with an annuity. Alternatively, the beneficiaries in a deceased estate may have decided to rearrange the provisions for distribution set down in a will through a deed of family arrangement. The distribution provisions might also have been rearranged through an order of the Court under the Family Protection Act 1955. In any of these cases, where any beneficiary is charged with a requirement to pay an annuity, a deduction may be allowed for all or some of the amount paid to the annuitant.

A “beneficiary”, in this context, means:

(a) A person to whom that property has been devised or bequeathed by will; or
(b) A person who is entitled under a will to purchase a property from the estate, subject to payment of an annuity; or
(c) A person who is entitled to the property under an order of the Court under the Family Protection Act 1955 or under a deed of family arrangement.

There are cases where, acting under a power in the will or under a subsequent court order or deed of family arrangement, the trustees transfer the assets to the remaindermen before the death of the life tenant or annuitant. Where this is done, the remaindermen frequently assume the liability for the annuity. In some cases, the annuity is met from a fund created by holding back in the estate sufficient assets to ensure an income which is adequate to provide the annuity.

When the remaindermen in an estate assume the liability for an annuity, it is usual for it to be secured in two ways. First, a mortgage is given over the estate assets which have been or are transferred to the legal ownership of the remaindermen. Secondly, the remaindermen each gives a personal covenant which is usually joint and several. Where the assets of an estate have been transferred to remaindermen subject to a liability, whether secured or not, to pay a testamentary annuity, the remaindermen may deduct the annuity as an expense incurred in deriving income. The rules are strictly construed. The essential elements are:

(a) There must be property (or substituted property which has subsequently replaced the original property, or a property substituted by the beneficiary to replace the substituted property) which was devised or bequeathed by will; and
(b) The property must be charged with an annuity either under the will, by a court order under the Family Protection Act 1955, or by a deed of family arrangement; and
(c) The property so charged must have been transferred to the beneficiaries entitled to receive it under the will, order, or deed on the condition that they assume liability for the annuity.

Where these conditions are all met, the beneficiary by whom the annuity is payable is allowed a deduction for any amount paid during the income year to the annuitant.

Example 1:

Property in an estate comprises a farm property which is leased to the remainderman (the only son and child of the deceased farmer) who pays rent to the estate trustees. The farmer’s widow is the life tenant in the estate and receives beneficiary income from the estate trustees, which is effectively the rent collected by the trustees from the remainderman less the expenses of the trustees. The widow and the son decide to terminate the life tenancy and remainderman provisions in the will, and to distribute the estate assets to the son. They enter into a deed of family arrangement whereby the farm property is transferred to the son, and the widow is assured of an income through the son undertaking to pay her an annuity. A charge is entered on the title to the property requiring the son to pay an annuity for a determinable amount to the widow during her lifetime. On the widow’s death, there is no further requirement to pay an annuity. In these circumstances, providing the provisions are strictly adhered to, the son is allowed a deduction for the annuity.

The deduction is limited to the income derived during the year by that beneficiary from the property on which the annuity is charged.
Example 2:
A farming property is charged with an annuity of $20,000 per annum and produced a net income of only $14,000. The deduction for the income year would be limited to $14,000. The annuitant would, of course, still be assessable on the $20,000 received.
Chapter 1130
Portfolio Investment Entities (PIEs)

1130.10 Background
The tax rules for portfolio investment entities (PIEs) came into force on 1 October 2007. The aim of the rules is to allow investors in collective investment vehicles (eg managed funds) to be taxed on their investment earnings in a manner similar to those who invest directly. Any gains on the sale of shares in New Zealand resident companies and certain Australian resident companies are excluded income in the hands of a PIE and therefore not subject to tax. A PIE that is also a multi-rate PIE is taxed at the marginal rate of the investors capped at 28 per cent.

Collective investment vehicles which do not qualify under the PIE rules are taxed on all of their earnings at the company rate of tax. They are also generally taxed on capital gains on the sale of shares as they are in the business of dealing in such investments.

The PIE regime is also integral to the introduction of the Kiwisaver regime [see 860 KIWISAVER].

1130.15 Portfolio investment entity types [s HM 2]
Portfolio investment entity (PIE) is the generic term to cover the five different types of PIE.

The five types of PIE are:
(a) Multi-rate PIEs (MRP);
(b) Listed PIEs (LP) [see 1130.45];
(c) Benefit fund PIEs (BFP) [see 1130.50];
(d) Life fund PIEs (LFP) [800.22]; and
(e) Foreign investment PIEs (FIP).

(1) Multi-rate PIEs
A multi-rate PIE can be a company, a superannuation fund, or a group investment fund. It must have first become a PIE [see 1130.20] and have not ceased to be a PIE [see 1130.30]. It cannot be a benefit fund PIE.

(2) Listed PIEs
A listed PIE is a company that:
Portfolio Investment Entities (PIEs) 1130.15(3)

(a) Is listed on a recognised exchange in New Zealand; or
(b) Meets the requirements of s HM 18 whereby an unlisted company that meets certain criteria can choose to become a portfolio listed company [see 1130.20].

It must have first have become a PIE [see 1130.20] and have not ceased to be a PIE [see 1130.30], or ceased to be a listed PIE. It must not have chosen to be a multi-rate PIE. It cannot be a life fund PIE.

(3) Benefit fund PIE

A benefit fund PIE is any defined benefit fund that does not allocate income to investors provided that it has first become a PIE [see 1130.20] and has not ceased to be a PIE [see 1130.30].

(4) Life fund PIE

A life fund PIE is a separate identifiable fund forming part of a life insurer. It must have first have become a PIE [see 1130.20] and have not ceased to be a PIE [see 1130.30]. It must hold investments subject to life insurance policies under which benefits are directly linked to the value of the investments held in the fund.

(5) Foreign investment PIE

Foreign investment PIEs were introduced to ensure that non-residents who invest in New Zealand collective investment vehicles are taxed on the same basis as they would be if they earned the investment income directly. Direct investment would result in no New Zealand tax being payable on non-New Zealand sourced income, and non resident withholding tax being payable on New Zealand sourced passive income, such as interest and dividends. In the absence of these measures, foreign investors are taxed at 28 per cent on all of their PIE income.

There are two categories of foreign investment PIE. These are the foreign investment zero-rate PIE and the foreign investment variable rate PIE.

The foreign investment zero-rate PIE has only foreign-sourced income, subject to a de minimis of five per cent of New Zealand sourced interest income and one per cent for New Zealand equity income. The interest income threshold is to allow the PIE to hold sufficient cash reserves to meet applications, redemptions and normal expenses. The equity income threshold is to allow the fund to track a global index and hold some New Zealand shares as a part of that.

The foreign investment variable rate PIE has both New Zealand and foreign sourced income. Different tax rates apply to different types of income:

<table>
<thead>
<tr>
<th>Income type</th>
<th>Tax rate %</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foreign sourced income</td>
<td>0</td>
</tr>
<tr>
<td>Dividends from NZ equities to the extent imputed</td>
<td>0</td>
</tr>
<tr>
<td>Dividends from NZ equities to the extent un-imputed</td>
<td>15 (DTA)/30 (no DTA)</td>
</tr>
<tr>
<td>Gains on New Zealand equities</td>
<td>0</td>
</tr>
<tr>
<td>Interest income from NZ financial arrangements</td>
<td>1.44 (equivalent to net approved issuer levy rate)</td>
</tr>
<tr>
<td>Other NZ income</td>
<td>28</td>
</tr>
</tbody>
</table>

Income of a foreign investment PIE which is sourced from outside of New Zealand is not treated as having a source in New Zealand merely because the business of the PIE is carried on in New Zealand or the the contract in relation to the income (eg the purchase of the shares from which foreign dividends have been derived) was made or performed in New Zealand.

1130.20 Becoming a portfolio investment entity [ss HM 7, HM 8, HM 9, HM 10, HM 17, HM 18, HM 20, HM 71]

An entity can choose to become a portfolio investment entity (PIE) provided that it meets the eligibility requirements and files the appropriate election [s HM 7].

The eligibility criteria are as follows:
(a) The entity must choose to become a PIE and notify the CIR of the election under s HM 71;
(b) The entity must be a multi-rate PIE a listed PIE a benefit fund PIE or a life find PIE;
(c) The entity must maintain its eligibility to be a PIE in accordance with the rules in ss HM 8 to HM 20 and not lose its PIE status under the exit rules in ss HM 24 to HM 30;
(d) The entity must be resident in New Zealand and not be treated under a double tax agreement (DTA) as being a non-resident [s HM 8];
(e) The entity must be one (or more) of the following:
   (i) A company;
   (ii) Superannuation scheme;
   (iii) A group investment fund;
   (iv) A separate identifiable fund forming part of a life insurer; or
   (v) A trust that would be a unit trust if there was more than one subscriber, purchaser or contributor participating as beneficiaries [s HM 9]
(f) The entity must not be a life insurer unless it is a life fund PIE [s HM 10];
(g) Where the entity is not a life fund PIE all investor interests that give rights to proceeds must give the same rights in relation to all types of proceeds from the investment [s HM 17].

If the entity has ceased to be a PIE it cannot again become a PIE for a period of at least five years [s HM 20].

Note that a company that is not listed on a recognised exchange in New Zealand can become a listed PIE if it satisfies all of the following criteria:
(a) It has 100 shareholders or more;
(b) It has resolved to become a company listed on a recognised exchange in New Zealand if it were to obtain the required consents;
(c) It has applied to the Securities Commission for an exemption to disclose in a prospectus its intention to become a listed company; and
(d) It satisfies the CIR that the company would apply to become a listed company if it were to obtain the required consents.

If the company is not listed within two years of the election, it loses PIE status from the last day of that two-year period.

**1130.25 Election to become a portfolio investment entity** [ss, HM 71, HM 72, HM 75]

An entity can elect to become a PIE by giving notice to the CIR in accordance with s 31B of the Tax Administration Act. The election takes effect on the latest of the following dates:
(a) The date on which the entity is formed;
(b) The date nominated in the election notice; or
(c) Thirty days before the date on which the notice is received by the CIR.

Where an election to become a PIE has been made, the entity will become a PIE unless it cancels the election within 12 months or breaches any of the eligibility criteria [see 1130.30].

PIEs are generally required to have a standard balance date. Where an entity with a non-standard balance date becomes a PIE it has a transitional income year [see 770.70]. The transitional income year starts on the date on which the election to become a PIE takes effect and ends on the following 31 March.

On the day before an entity becomes a PIE it is deemed to have sold and reacquired, at market value, any shares that it holds (or for which it is a share lender) in New Zealand companies and certain Australian resident companies. This brings to account for tax purposes any notional gain or loss on the value of these investments.
The deemed disposal does not apply to shares in a company that is a PIE or becomes a PIE within the following six months.

Any tax liability that arises from:
(a) The requirement for a non-standard balance date entity to change to a 31 March balance date; or
(b) The deemed disposal and reacquisition of investment assets, is able to be spread evenly over the year in which the entity becomes a PIE and the following two income years. The provisional tax rules, use-of-money interest and the tax penalty rules do not apply to this income.

1130.30 Ceasing to be a portfolio investment entity [ss HM 25, HM 29, HM 72, HM 75; TAA, ss 2, 31B]

(1) Voluntary cessation
An entity can cease to be a PIE at any time by giving notice to the CIR in accordance with s 31B of the Tax Administration Act. The election takes effect on the latest of:
(a) The date on which the entity became a PIE;
(b) The date nominated in the notice; or
(c) The date on which the election is received by the CIR.

(2) Automatic cessation s HM 25
An entity ceases to be a PIE if it fails to meet eligibility criteria.
If, on the last day of a quarter, an entity, or one of its investor classes (as applicable) fails to meet any one or more of the requirements of:
(a) Section HM 11 (entity’s investment types);
(b) Section HM 12 (entity’s income sources);
(c) Section HM 13 (maximum shareholding in investments by entity or investor class);
(d) Section HM 14 (minimum number of investors in investor class); or
(e) Section HM 15 (maximum investor interest of an investor in an investor class)
and the breach is significant and within the control of the entity, and / or is not remedied by the last day of the next quarter, PIE status is lost from:
(a) For significant breaches within the control of the entity, the last day of that quarter;
(b) For other breaches that are not remedied by the last day of the following quarter, the last day of that second quarter.

There are two exceptions to the automatic loss of PIE status. They are:
(a) Where the start of the quarter in which the breach occurs is within six months plus one day of the date on which the entity becomes a PIE or the investor class is formed; or
(b) Where the quarter in which the breach occurs ends within three months prior to an announcement by the entity to its investors that the entity or the relevant investor class is to be wound up within the next twelve months.

Certain types of PIE can lose PIE status where a breach of criteria relating to the particular PIE type are breached. These are discussed under the paragraphs relating to those particular PIE types.

(3) Consequences of cessation
Cessation of PIE status results in a deemed sale and acquisition, at market value, of any shares held in New Zealand companies and Australian resident listed companies. These investments then lose their tax exempt status in respect of any future gain or loss on sale.
Multi-rate PIEs [ss HM 11, HM 12, HM 13, HM 14, HM 17, HM 21, HM 48]

An entity that has elected to be a portfolio investment entity (PIE), and which meets the criteria to be a multi-rate PIE will be a multi-rate PIE where the requirements below are met.

1. **Income interest requirement [s HM 17]**
   
The entity rules regarding investors’ interests must result in all investors having the same rights to all investment proceeds. This rule does not apply to category B income of a group investment fund.

2. **Investor membership requirements [ss HM 13, HM 14, HM 21]**
   
   Unless the entity is a listed company, every investor class within the entity must include one or more of the following:
   
   (a) Twenty persons (associated persons are treated as one person);
   
   (b) Another portfolio investment entity;
   
   (c) An entity that is eligible to be a PIE but has not elected to do so;
   
   (d) A foreign PIE equivalent;
   
   (e) A life insurer;
   
   (f) The New Zealand Superannuation Fund;
   
   (g) The Accident Compensation Corporation or Crown entity subsidiary of ACC;
   
   (h) The Earthquake Commission;
   
   (i) Auckland Council;
   
   (j) A boutique investor class which treats interests as being held by one person; or
   
   (k) A community trust. Where the entity is a listed on a recognised exchange in New Zealand, the above requirements do not apply. Instead the requirement is that the company is allowed only one investor class of which each investor is a member. This applies also to an unlisted PIE that meets the requirements of s HM 18 [see 1130.20].

   There are no investor membership requirements for:
   
   (a) Entities similar to unit trusts and certain superannuation funds; or
   
   (b) A portfolio investor class where any one or more of the following applies:
       
       (i) An investor in the class is a public unit trust;
       
       (ii) If it was a unit trust, it would meet the requirements of one or more of paragraphs (a) and (c) to (e) of the definition of public unit trust;
       
       (iii) It is a superannuation fund established under the restructuring proposal for the National Provident Fund;
       
       (iv) It is the fund established by the Government Superannuation Fund Act; or
       
       (v) It is a superannuation fund that existed before 17 May 2006 and, on or after 17 May 2006, meets the requirements of item (b)(i) above, and no investor in the class in question (other than the entity’s manager or trustee) can control the investment decisions relating to that class.

Section HM 25 provides some limited exceptions to these rules.

3. **Investor return adjustment requirement [s HM 48]**
   
The entity must make adjustments to each investor’s interests to reflect the effect of the investors’ tax rate on the total tax payable by the entity and the allocation of tax credits. The CIR has the power to extend the time limit for making the adjustment.
Portfolio Investment Entities (PIEs) 1130.35(4)

(4) Investment type criteria [s HM 11]
A multi-rate PIE must generally have at least 90 per cent (by value) of its investments in one or more of the following:
(a) Land;
(b) Financial arrangements;
(c) Excepted financial arrangements; or
(d) Rights or options concerning any of the above three categories of investment.
Neither the multi-rate PIE nor any investor class may hold a voting interest of 20 per cent or more in any underlying company into which it has invested. Section HM 25 provides some limited exceptions to these rules [see 1130.30].

(5) Income type requirement [s HM 12]
A multi-rate PIE must generally derive at least 90 per cent of its income from one or more of the following:
(a) Dividends;
(b) Financial arrangement income;
(c) Land rental from a non-associated person;
(d) Foreign investment fund income;
(e) The proceeds of property dispositions;
(f) Replacement payments under a returning share transfer;
(g) Income allocated to it by another PIE; or
(h) Distributions from superannuation funds.

Ceasing to meet the requirements results in the entity ceasing to be a PIE if the requirement is not again met within certain prescribed time-frames.

1130.40 Tax payable by multi-rate PIEs [ss CB 26, CW 9, CX 55, HM 42, HM 42B, HM 62, HM 63, HM 65, HM 75]
The normal rules of income and deductions apply to multi-rate PIEs. However, there are some differences in relation to the sale of shares and the receipt of dividends from foreign companies. These differences are explained below.

(1) Sale of shares [s CX 55]
Gains on the sale of shares other than non-participating redeemable shares, are excluded income, and therefore not subject to tax, provided that the shares are issued by a company which is either:
(a) Resident in New Zealand, and not treated by a double tax agreement (or equivalent) as being not resident in New Zealand, at all times during the income year; or
(b) Resident in Australia (and not treated under a double tax agreement as not being resident in Australia) at all times during the income year, included in an approved index under the ASX Market Rules either at the start of the income year or at the time at which the shares are first acquired, and required to maintain a franking account.

The concession does not apply where an arrangement has been entered into with another person whereby a gain on sale of the shares is assured. Neither does it apply to non-participating redeemable shares.
This treatment applies to all types of PIE, the New Zealand superannuation fund and to life insurers that elect to be a portfolio investment-linked life fund.

There are anti-avoidance rules which cover the disposal of shares “cum dividend”. Where this occurs, the entity is taxable on the amount of the dividend in respect of the shares that have been sold to the extent to which the dividend is not imputed [s CB 26]. The formula for calculating the taxable amount is:
(shares at declaration – shares on distribution) × dividend

Where:
“Declaration shares” is the number of shares held when the dividend is declared;
“Distribution shares” is the number of shares for which the entity derives a dividend; and
“Distribution” is the amount of the dividend per share or, for a share issued by an ICA company, the amount
of the dividend that is not fully imputed.

(2) Dividends derived from foreign companies [s CW 9]
The exemption from tax for dividends derived by a New Zealand resident company from a foreign company
does not apply to a dividend derived by a multi-rate PIE.

(3) Calculation of tax payable by a multi-rate PIE [ss HM 31, HM 34, HM 35, HM 35B, HM 36, HM 43, HM 47]
The income of the multi-rate PIE is allocated to the entity’s investors and the tax payable on that income is
calculated at the marginal tax rates of those investors. In order to achieve this, each multi-rate PIE must elect
a calculation period and an attribution period.
The attribution period is the period over which income, expenses, losses and tax credits are calculated and
allocated to investors. The entity can choose a period of a day, month, quarter or income year. The default
attribution period is a day.
The amount of the attributed PIE income or loss for each investor for each income year is the total of the
amounts calculated for:
a Each attribution period in the income year; and
b Each day in the attribution period; and
c Each investor class to which the investor belongs on the day.
These amounts are calculated using the formulae in ss HM 35 and HM 36:
Section HM 35 provides for the calculation of the net income or loss which is then attributed to the investors
who are part of that investor class. The formula is:
assessable income - deductions
Where:
“Assessable income” is the total amount of the PIE’s assessable income (including any tax credits received
for that income) attributed to the class for the attribution period; and
“Deductions” is the total amount of the PIE’s deductible expenditure or loss attributed to the investor class
for that attribution period.
When calculating “assessable income” and “expenditure”, the PIE is able to take into account certain future
income amounts which it is likely to have, and provisions that it has made for future expenditure or loss. Any
amount included must be either reflected in the PIE’s valuation of portfolio investments or be shown in its
financial statements. Any future income that is included must be income that would be assessable income
under the formula when it is derived. Any expenditure included must be an expense that is likely to be incurred
in the tax year in which the attribution period falls or within 893 days thereafter. Reasonable estimates of the
amount are permitted. A credit impairment provision is able to be included only where it is a credit impairment
provisions under NZIAS 39. [s HM 35B].
The net result is then allocated to each investor within the class using the formula contained in s HM 36:
(percentage x (income - loss)) / days in period - (expenses - credits for fees)
Where:
“Percentage” is the percentage of the investor’s entitlement to a distribution by the PIE to the investor class;
“Income” is the amount of taxable income determined under s HM 35(5) and (7) for the period (see above);
“Loss” is the amount of tax loss determined under s HM 35(5) and (7) for the period;
“Days in period” is the number of days in the period;
“Expenses” is the total amount for the day in the period of management and administration fees attributable to the investor as a member of the investor class plus expenditure transferred to the PIE under subpart DV and attributable to the investor (eg a transfer of expenditure to a master fund);
“Credits for fees” is the amount of any credit for the fee paid or credited by the PIE to the account of the investor as a member of the investor class on the day in the period. Note that, if the multi-rate PIE has income or property in which no investor has an interest or conditional entitlement, the PIE is treated as the sole investor in an investor class having an interest in that property or income.

The tax payable is then calculated for the calculation period. The calculation period can consist of one or more attribution periods. The entity can choose a period of a day, quarter or income year. The default calculation period is a quarter. The tax payable by the multi-rate PIE for the calculation period is the sum of the liabilities calculated for each investor for each attribution period. If the calculation period is a quarter, the tax is payable within one month of the end of the quarter and the provisional tax regime does not apply. If an investor exits, the multi-rate PIE is not required to pay tax in relation to that investor if that liability exceeds the value of any remaining interest of that investor. In these cases, the investor is required to return the income at the end of the year. If the calculation period is a year, the provisional tax regime applies in the normal way [see 1150 PROVISIONAL AND TERMINAL TAX].

If the calculation period is a day, tax is payable when an investor exits the entity. The tax is payable within one month of the end of the exit period. In respect of other investors, tax is payable within one month of the end of the tax year. If the multi-rate PIE incurs a loss that it allocates to its investors, the entity receives a rebate of tax. Exiting investors are, under certain circumstances, entitled to a deduction for their share of a loss incurred by a multi-rate PIE.

The amount of tax payable by the multi-rate PIE is calculated under s HM 47 and is the sum of the amounts for:

(a) Each investor class in which the investor has an interest;
(b) Each investor in an investor class;
(c) Each attribution period in the calculation period; and
(d) Each day in an attribution period.

The formula for the calculation is:

\[
\text{rate} \times \text{amount}
\]

Where:

“Amount” is the net income or loss (see above).
“Rate” is the investor’s tax rate or 28 per cent to the extent to which the PIE is the sole investor.

Example:

A multi-rate PIE has two investors, each having a 50 per cent interest in the fund. Investor A has a 10.5 per cent tax rate. Investor B has a 30 per cent tax rate. The income of the fund for the day is $20,000. Management fees for the day are $500. The entity has elected an allocation period of one day.

The income attributable to each investor is $(20,000 - $500) x 50\% = $9,750.

The tax payable is the sum of:
Investor A: $9,750 x 10.5\% = $1,023.75
Investor B: $9,750 x 28\% = $1,023.75 = $2,730.00

The total tax payable in respect of that day is $1023.75 + $2730.00 = $3,753.00.

These daily amounts are accumulated for the calculation period, which will generally be a quarter. Multi-rate PIEs are not able to form a group of companies. This means that they are ineligible for group loss offsets.
Exiting investors

An investor exits a PIE when the value of the investor’s interest reaches the exit level. This occurs when the PIE’s tax liability for the investor exceeds, or is equal to, the value of the investor’s interest [s HM 62].

Where an investor has reached the exit level during a tax year, the PIE must perform an exit calculation for the investor’s exit period. The exit period begins on the later of the first day of the tax year and the day on which the investor last became an investor. The period ends on the day on which the investor’s interest reaches the exit level. Where the PIE uses the quarterly calculation option, and does not voluntarily pay the tax, the exit period is the quarter in which the exit level is reached plus a five-working-day period of grace [s HM 63].

Land losses [s HM 65]

Where an investor class of a multi-rate PIE has a land loss for a calculation period, that loss can be carried forward provided that the PIE calculates and pays tax using the exit calculation option or the quarterly calculation option.

A “land loss” is a tax loss of an investor class for a calculation period where the following criteria are met:

(a) At the end of the calculation period, the class has an entitlement to the distribution of proceeds of the PIE’s investments; and
(b) Those investments have a value of more than 50 per cent of the market value of all of the PIE’s investments in which the class has the entitlement; and
(c) the investments fall into one or more of the following types:
   (i) An investment in land;
   (ii) An investment in a land investment company that is resident in New Zealand;
   (iii) An investment in a non-resident land investment company in which the investor class has a voting interest of more than 20 per cent.

Payment of tax [s HM 42]

PIEs are required to pay tax for each period in the income year and for each investor.

The tax attributable to exiting investors is required to be paid within one month after the end of the month of withdrawal. If the month of withdrawal is November, the tax must be paid by the following 15 November.

The tax attributable to investors other than exiting investors, is payable at the end of the tax year.

Tax treatment of investors in multi-rate PIEs [ss CX 56, CX 56B]

Investors in multi-rate PIEs elect a tax rate (called a “notified rate”) based on their “prescribed investor rate”. In simple terms, the prescribed investor rate is a little bit like a deemed marginal tax rate (but only for the purposes of the options for taxing income in a multi-rate PIE). The notified rate is the rate that the person advises to the multi-rate PIE.

The prescribed investor rates are set out in sch 6 of the Income Tax Act. Currently the rates are 28 per cent, 17.5 per cent and 10.5 per cent. For all investors who do not notify the multi-rate PIE of the tax rate that they have elected, the default rate applies, being 28 per cent.

Investigators in multi-rate PIEs have attributed PIE income or losses under subpart HM and s CP 1. Section CX 56 provides that the amount of any attributed PIE income is treated as excluded income to natural person investors who elect a rate that is no lower than their prescribed investor rate. This means that, provided investors have advised the correct rate to the multi-rate PIE they do not need to include the allocated PIE income in their tax return. If the incorrect rate is advised to the multi-rate PIE any allocated PIE income is not treated as excluded income and must be included in the person’s income tax return.

Income allocated by multi-rate PIEs does not affect entitlements to family assistance (under Working for Families). This is the case whether or not the correct tax rate has been notified to the multi-rate PIE.
Allocated PIE income is not excluded income for zero-rated investors (and certain exiting investors in entities paying tax under s HM 43). This income must be included in the investor’s tax return. Under s DB 53, these investors are allowed a deduction for the amount of any allocated PIE losses.

Allocated PIE losses relating to non-zero rated investors under ss HM 40 and HM 55 are available as a tax credit to the entity under s HM 55. Investors cannot claim these losses.

Any tax credits received by a multi-rate PIE must first be used against the tax liability of the entity. Any excess tax credits, other than foreign tax credits, are allowed as a rebate either to the entity or to the investor, in the case of zero-rated portfolio investors. Entities that receive a rebate must credit the rebate to investors’ accounts. Foreign tax credits are not rebated and must be used in the income year in which they are derived.

Trustees of trusts must choose between four options. They can:
(a) Elect the zero per cent prescribed investor rate and notify the multi-rate PIE of their election;
(b) Elect the 10.5 per cent rate;
(c) Elect the 28 per cent prescribed investor rate; or
(d) Choose to have the default rate of 28 per cent apply (by not electing a rate).

Making the correct choice is critical to the tax outcome for the trustees and beneficiaries of the trust.

If the zero per cent rate is elected, income distributed by the multi-rate PIE will not be excluded income. It can be either be returned as trustee income and taxed as such or can be distributed as beneficiary income and be returned in the beneficiaries’ tax returns. Any allocated tax credits retain their character.

If the intermediate rate is elected, income distributed by the multi-rate PIE will not be excluded income. It can be either returned as trustee income and taxed as such or can be distributed as beneficiary income and be returned in the beneficiaries’ tax returns. Any allocated tax credits retain their character. The trustees are allowed a credit for tax paid at the PIE level.

If the highest rate is elected, income distributed by the multi-rate PIE will be excluded income. It cannot be trustee income and cannot be taxed as beneficiary income. Therefore, the 28 per cent tax paid by the multi-rate PIE is a final tax.

If no election is made, the default rate applies. Income distributed by the multi-rate PIE will not be excluded income. It can be either be returned as trustee income and taxed as such or can be distributed as beneficiary income and be returned in the beneficiaries’ tax returns. Any allocated tax credits retain their character. However, they are non-refundable tax credits. Therefore, unless the trustees (if the distribution is retained as trustee income) or the beneficiaries (if the distribution is distributed to beneficiaries) have sufficient other refundable tax credits (ie PAYE or RWT) more tax than necessary may be paid on the income.

The CIR is able to notify a PIE that investor’s notified rate is to be ignored and prescribe a different rate that the PIE must apply to that investor [s HM 60].

1130.50 Tax treatment of investors in portfolio investments entities that are not also multi-rate PIES [s CX 56C]

Distributions and dividends from portfolio investment entities that are not also multi-rate PIEs are excluded income in the hands of the investor where all of the following conditions are met:
(a) The investor is a natural person or a trustee;
(b) The investor is a New Zealand resident for tax purposes; and
(c) The investor does not include the amount as income in a return of income for the income year.

In all other cases, the dividend or distribution is excluded income of the investor to the extent to which it is not fully covered by imputation credits.

1130.55 Listed PIES [s HM 2]

A listed PIE is a company that is listed on a recognised exchange in New Zealand and which is a portfolio investment entity. A listed PIE can elect to be a multi-rate PIE if it meets the relevant criteria [s HM 2]. Where
that election is not made, a listed PIE does not allocate income to investors. It pays tax at a flat rate of 30 per cent (28 per cent from the 2011-2012 income year).

A listed company is eligible to be a listed PIE where:

(a) It satisfies the requirements to be a portfolio investment entity [see 1130.20];
(b) It makes the appropriate election [see 1130.25]; and
(c) All of the requirements below are met:

(1) **Income interest requirement** [s HM 17]
The income interest requirement is the same as that applying to multi-rate PIEs [see 1130.35].

(2) **Membership requirement** [s HM 14]
The membership requirement is the same as that applying to multi-rate PIEs [see 1130.35]. However, the following requirements must also be met:

(a) The company must have only one investor class of investors;
(b) Each investor must be a member of the investor class; and
(c) Each investor interest must be a share traded on the recognised exchange.

(3) **Imputation credit distribution requirement** [s HM 19]
Where the listed PIE is an imputation credit account company and not a life fund PIE all distributions to members must be fully credited to the extent possible, limited only by the amount of ICA credits available.

(4) **Investor interest size requirement** [s HM 15]
The investor interest size requirement is the same as that applying to multi-rate PIEs [see 1130.35].

An investor who is not one of those listed in any of items (a) to (i) in 1130.35, can hold investor interests in the listed PIE that are more than 20 per cent. However, those interests must not exceed 40 per cent and must be between 20 per cent and 40 per cent on every day from 17 May 2006.

(5) **Investment type requirement** [s HM 11]
The investment type requirement is the same as that applying to multi-rate PIEs [see 1130.35].

### Distributions from listed PIEs [s CX 56C]
Distributions from a listed PIE are excluded income of the investor only where the investor:

(a) Is a resident;
(b) Is a natural person or a trustee; and
(c) Does not include the amount as income in their return for the year.

Where the above three conditions are met, the tax treatment of distributions from a listed PIE are similar to the treatment of distributions from a qualifying company. The income is assessable only to the extent to which it is fully imputed or fully dividend withholding payment credited.

### Benefit fund PIEs
A benefit fund PIE is a defined benefit fund that is a PIE that does not allocate income to investors. A defined benefit fund is a superannuation scheme that is registered under, and complies with, the Superannuation Schemes Act 1989 [SSA 1989, s 15(1)(a)].

Benefit fund PIEs pay tax at a flat rate of 30 per cent (28 per cent from the 2011-2012 income year). The investor membership requirement, the investor interest size requirement, the investment type requirement and the income type requirement are the same as those applying to multi-rate PIEs [see 1130.35].

### Life fund PIEs
A life fund PIE has the following characteristics:
(a) It is a separate identifiable fund which is part of a life insurer;
(b) The fund holds investments which are subject to life insurance policies under which benefits are
directly linked to the value of the investments in the fund;
(c) The entity must be resident in New Zealand and not treated under a double tax agreement (DTA) as
not being resident in New Zealand; and
(d) The entity must not have ceased to be a portfolio investment entity (PIE), five years or less prior to
the effective date of an election to become a PIE [see 1130.25].

The investor membership requirement, the investment type requirement and the income type requirement
are the same as those applying to multi-rate PIEs [see 1130.35].
Chapter 1140
Prepayments

1140.10 Deferral of deductions for prepaid expenditure [ss CH 2, DB 50, EA 3; TAA, s 91AA]
The role of the rules relating to prepaid expenditure is to ensure that the deduction for expenditure is matched as nearly as possible with the income that it generates. This is achieved by deferring the deduction to the extent to which the goods, services or rights to which it relates have not been consumed (the “unexpired portion”). The mechanism by which that result is achieved is to deem the prepaid amount to be income in the year of prepayment and an allowable deduction in the following year. That mechanism is applied for one or more years until such time as the goods, services or rights have been consumed.

These rules are not intended to override or alter existing specific deduction provisions, such as film expenditure or farm or forestry development expenditure.

The rules do not apply to expenditure incurred on:
(a) Purchase of trading stock;
(b) Purchase of revenue account property;
(c) Purchase of livestock;
(d) Any financial arrangement or excepted financial arrangement that is subject to its own valuation rules;
(e) Leases of personal property (whether or not a specified lease);
(f) Property resulting from petroleum exploration or development expenditure; or
(g) Any film or film right

The calculation of the amount that is required to be added back to income differs according to whether the amount relates to:
(a) Goods;
(b) Services;
(c) Choses in action; or
(d) Monetary remuneration.

1140.20 Goods — unexpired portion [s EA 3(4)]
The term “goods” includes all land and other real or personal property, but does not include choses in action or money. “Goods” also includes items which are consumable aids (being items which are consumed in the operating, manufacturing, or sales procedure, but which do not form part of the item received by the customer, eg sandpaper or solvents in a boat builder’s business, and fertiliser purchased by a farmer taxpayer but not applied).
PIB 167 (December 1987) endeavours to extend the phrase “expenditure which relates to the purchase of goods” to “the costs associated with the purchase, such as brokerage, Government imposts, solicitors’ and agents’ fees and delivery costs. It therefore includes the cost of certain services”. It appears that the ultimate purpose of the expenditure is to be considered.

Land is specifically excluded from the definition of “trading stock” for the purposes of the normal trading stock rules. However, it can be subject to the timing rules applicable to revenue account property under s EA 2 [see 880.90]. It is not subject to the rules in s EA 3.

Where the expenditure relates to the purchase of goods, the unexpired portion of the expenditure is the amount incurred on goods that have not been used in the derivation of income, or destroyed, or rendered useless. PIB 167 (December 1987) has described “used” for a good, as meaning applied, consumed, put into operation, or otherwise employed, in the process that produces gross income. It is not sufficient that it be available for use and, in particular, it is not sufficient that the goods be available for examination or sale.

### 1140.30 Services — unexpired portion [s EA 3(5)]

“Services” means anything which is not goods, money, or a chose in action.

Where the expenditure relates to payment for services, the unexpired expenditure is the amount incurred on services which have not yet been performed as at the end of the income year. PIB 167 (December 1987) advises that services are performed:

“where and to the extent that they are executed, carried out or otherwise rendered. Where they are to be performed over a period of time there must be an apportionment if the time period includes a balance date. The reference to ‘services not yet performed’ indicates clearly that the apportionment must be on the basis of the services yet to be performed compared with the total services to be performed in consideration for the expenditure, rather than on a simple time basis.”

PIB 167 (December 1987) provides that prepayment for services includes:

(a) The price paid for the services; and

(b) Costs related to the services, such as any solicitors’ fees or Government or local body levies.

### 1140.40 Choses in action — unexpired portion [s EA 3(6)]

A “chose in action” is not defined but is a legal term for something enforceable by legal action, and which is a contractual obligation (eg royalty rights).

PIB 167 (December 1987) describes a chose in action as:

“… literally a thing recoverable by legal action. Its modern use is to describe all personal rights of property that may be claimed or enforced by legal action including rights for real property.”

For example, it would include a three-year lease for a building.

Where the expenditure relates to a payment for, or in relation to, a chose in action, the unexpired expenditure is the amount that relates to the unexpired part of the period for which the chose is enforceable. PIB 167 (December 1987) interprets these words and places emphasis on more than a time expired basis:

“one must consider the rights that may be exercised for the part period. For example where an agreement provides for use of patent rights and it is expensed with reasonable certainty (or is provided in the agreement) that the use of the patent rights will be:

“(a) 15,000 units produced in the 6 months prior to balance date; and

“(b) 85,000 units produced in the 6 months after balance date.

“The apportionment to calculate the unexpired portion will be on an output basis (85% of the accrual expenditure) rather than a simple time basis.”
Prepayments

1140.50 Employment income and employee benefits [ss CH 3, DB 51, EA 3(7), EA 4]

While the rules relating to prepayments concentrate on payments made for goods not yet used, services not yet performed and choses in action not yet expired, the rules relating to expenditure on employment income work in reverse by concentrating on deferred payment.

Under the principles set out in King Country Electric Power Board v Commissioner of Inland Revenue (1995) 17 NZTC 12,122 (HC), employment income is “incurred”, and the deduction allowed, at the time at which the employee becomes unconditionally entitled to payment for the leave.

The amount that is a deferred payment and which is required to be added back to income is:

(a) In the case of an employee, the amount that has not been “paid” during the income year or within 63 days following the end of the income year; or
(b) In the case of a shareholder-employee, the amount that has not been “paid” by the employer company during the income year or by the following 31 March (being the last date for filing a return of income under the extension of time rules).

The term “paid” includes credited in account or dealt with in the interest or on behalf of the person.

Example:

Boss Co has one employee, Mary. Mary has been employed by Boss Co for 11 years. At the end of Boss Co’s financial year, Mary has the following holiday entitlements:

<table>
<thead>
<tr>
<th>Annual leave</th>
<th>15 days @ $200</th>
<th>$3,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>10-year long service leave</td>
<td>15 days @ $200</td>
<td>$3,000</td>
</tr>
</tbody>
</table>

When Mary completes fifteen year’s continuous service, she will be entitled to a further long service leave of 10 days, which Boss Co is accruing on an annual basis. The accrual to date is two days at $200 per day. Mary takes five days’ annual leave in the month following the end of Boss Co’s financial year but takes no more leave for a further six months.

Boss Co will not be entitled to a deduction for $400 accrual in respect of Mary’s 15-year long service leave as she is not yet definitively entitled to it and, therefore, the expenditure has not been incurred.

The expenditure in respect of Mary’s annual leave and 10-year, long service leave has been incurred and is deductible. However, all of the accrual other than five days of the annual leave entitlement constitutes a deferred payment. Therefore, Boss Co will have income of $5,000 ($3,000 for 10-year long service leave, plus $2,000 for annual leave) under the prepaid expenditure rules. The amount will be deductible in the following income year subject to any further requirement to defer the taking of the deduction.

Where expenditure relates to:

(a) Employee reimbursements or expenditure on account under s CW 17;
(b) Relocation allowances under s CW 17B;
(c) Overtime meal or sustenance allowances under s CW 17C; or
(d) Allowances for additional transport costs under s CW 18;

the prepayment rules apply on the basis that the relevant services were performed in the income year in which the employee’s expenditure is expected to occur. This means that, if the employee’s expenditure is expected to occur in prior to the employer’s balance date, no income arises for the employer under the prepayments provisions.

1140.60 Employee transfers [ss DC 10, DC 11, EA 4(4), (5), (6), (7)]

Where a business or part of a business has been sold, actual and contingent expenditure on employment income is treated as having been paid by the vendor at the time of sale and, therefore, is not required to be added back to income. The vendor does not obtain a deduction when the amount is eventually paid to the employee. For this treatment to apply, all of the following conditions must be satisfied:

(a) The buyer and seller are not associated persons at the time of sale;
(b) The obligation to pay the employment income has arisen in the course of the business;
(c) Under the sale arrangements, the employee becomes an employee of the purchaser of the business;
Prepayments

(d) The seller and the buyer agree in writing that the purchaser will assume the responsibility of paying the employee; and

(e) The seller and buyer have agreed in writing that the amount is reflected in the consideration paid by the buyer for the business.

If all of the conditions are met other than the requirement that the parties not be associated, the vendor is denied a deduction for amount but the purchaser will generally be entitled to a deduction at the time at which the employee is paid.

Where employees transfer other than on the sale of a business, the employer from which the employee is transferring is denied a deduction for any liability for employment income which is unpaid. The employer to which the employee transfers will generally be entitled to a deduction for the amount when it is eventually paid to the employee.

For the timing of deductibility of accident compensation premiums and interest payable under an instalment plan under the Accident Insurance Act 1998 [see 20 ACCIDENT COMPENSATION].

1140.70 Exemptions from accrual adjustments [ss EA 3; TAA, s 91AA]

The CIR has the discretion to excuse taxpayers from the requirements of the prepayments provisions. Determination E12 specifies the type of expenditure, amount, and the maximum period from balance date, for which adjustments are not required [see TIB vol 21:2 (April 2009) at 13]. Determination E12 provides that any expenditure taken into account in making a joint return of income of a partnership is treated as if the expenditure were incurred by the partnership and not by any other person.

Determination E12 provides that a person who incurs expenditure that is deductible in any income year ending on or after 1 April 2009, is not required to make accrual adjustments in respect of the expenditure and the income year, if:

(a) The expenditure is of a kind described in Column 1;

(b) The sum of all of the amounts of the unexpired portion of the kind of expenditure does not exceed the amount, if any, specified in relation to that expenditure in Column 2;

(c) The length of time between the balance date for the income year and the subsequent expiry date of the expenditure does not exceed the number of months (if any), specified in relation to the expenditure in Column 3; and

(d) The deduction of the expenditure has not been deferred to a subsequent income year for financial reporting purposes.

1140.80 Cost of revenue account property [s EA 2]

Section EA 2 deals with the timing of deductions for expenditure incurred on revenue account property and aims to match the timing of the deduction with the associated income. Revenue account property is defined to include property that, if it was disposed of for valuable consideration, would produce income for the person (other than by way of a depreciation recovery).

The deduction for the cost of revenue account property is allowed in the earlier of:

(a) The income year in which the taxpayer disposes of the property; and
(b) The income year in which the property ceases to exist.

These rules do not cover the timing of expenditure that is subject to timing rules elsewhere in the Act such as trading stock, livestock, financial arrangements, excepted financial arrangements, leases, petroleum exploration and development expenditure, and films and film rights.
Chapter 1150

Provisional and Terminal Tax

1150.05 Overview

Taxpayers who earn income that is not subject to deduction at source (ie business income), are required to meet their tax obligation for that income by paying provisional tax. Provisional tax is required to be paid when their residual income tax (RIT) for the previous tax year exceeds $2,500, although it can also be paid voluntarily. From the 2008-2009 tax year, provisional tax payments are aligned with GST payment dates. Prior to the 2008-2009 tax year, different payment dates applied [see 1150.40].

Provisional tax can be calculated using either the standard (uplift method) or the estimation method [see 1150.15 to 1150.20].
Certain taxpayers are required to pay provisional tax [s RC 3] and others may choose to pay [s RC 4]. The amount of provisional tax paid by a provisional taxpayer for a tax year is credited against the provisional taxpayers income tax liability for that year [s LB 2]. If the provisional tax is insufficient for any particular year, then the insufficient amount is called terminal tax. On the other hand, if the provisional tax was excessive in relation to the amount of tax that was required, then the excessive amount constitutes a refund.

See Inland Revenue’s Booklet Provisional Tax (IR289).

**1150.10 Definitions**

“Provisional taxpayer” means any taxpayer whose residual income tax (RIT) for the tax year is $2,500 or more, or who is entitled to make an election to be a provisional taxpayer under s RC 4 [see 1150.50], but does not include:

- A non-resident company that does not have a fixed establishment in New Zealand;
- A taxpayer not required to file a return of income by virtue of s 33A of the TAA [see 1270.70]; or
- A non-resident contractor;
- A portfolio tax rate entity that does not make an election under s HL 23 [s RC 3]

“Residual income tax” (RIT) means the positive amount (if any) that remains after subtracting from the person’s income tax liability for the income year (net of any refundable rebates):

- Any credit of tax allowable for tax paid by a trustee on behalf of a beneficiary or by an agent on behalf of a principal;
- Any credit allowed against the income tax liability for:
  - PAYE or withholding tax deductions;
  - RWT deductions;
  - NRWT;
  - Imputation credits or FDP credits;
  - Foreign taxes paid
  - Attributed foreign income tax credits allowed;
  - Tax Credits by group companies;
  - Maori Authority tax credits

When RIT is calculated no deduction is made for provisional tax paid during that year.

A provisional taxpayer with an “initial provisional tax liability” means any provisional taxpayer who:

- Is not a natural person or is a natural person trustee; and
  - First derived gross income from a taxable activity in that tax year; and
  - Has not in any of the four preceding tax years derived gross income from a taxable activity; or

- Is a natural person other than a trustee; and
  - Their RIT has not exceeded $2,500 in any of the four preceding years;
  - Their RIT exceeded $35,000 in the current tax year; and
  - During the current tax year, the taxpayer has ceased to derive employment income and subsequently commenced to derive gross income from a taxable activity.

“Taxable activity” has the meaning given to that term by s 6 of the GSTA 1985, except that s 6(3)(d) does not apply [see 580.95].
1150.12 Calculation of provisional tax [s RC 5]

There are three different methods that can be used to calculate the amount of provisional tax payable: the standard (uplift) method [see 1150.15], the estimation method [see 1150.20], and the GST ratio method [see 1150.21]. Also, in certain circumstances, the CIR may make a determination of the amount of provisional tax payable by a taxpayer [see 1150.65].

1150.15 Standard (uplift) method [ss RC 5, RC 6]

There are two methods with the standard method; the standard five per cent uplift and the standard 10 per cent uplift. Under either the five per cent or 10 per cent standard uplift method, the amount of provisional tax payable is calculated as at the date the instalment is due by multiplying the RIT for either the preceding tax year [see 1150.18] or for the year before the preceding tax year by either 105 per cent or 110 per cent respectively. In relation to RIT adjustments for current tax rate changes see 1150.18.

The particular uplift percentage for a particular instalment is determined as follows:

(a) If the income tax return for the preceding tax year has been filed by the date the instalment of provisional tax is due, then the provisional tax is based on 105 per cent of the RIT for the preceding tax year.

(b) If all of the following conditions are met, provisional tax for an instalment is based on 110 per cent of the RIT for the year before the preceding tax year:
   (i) A tax return was required for the preceding tax year;
   (ii) The return is not due on or before the date on which the first payment of provisional tax for the tax year is required or an extension granted under s 37 of the TAA [see 1270.61];
   (iii) The return is not provided on or before that date;
   (iv) The date is not the date of instalment F for the corresponding income year; and
   (v) The taxpayer has not chosen to furnish an estimate of provisional tax, and the CIR has not determined the amount of provisional tax.

If the CIR determines the provisional tax liability under s 119 of the TAA, the amount or liability is that last determined by the CIR and notified to the taxpayer at least 30 days before the instalment date. The 30-day requirement does not apply when, under s 119(1)(d) of the TAA, the estimate of residual income tax is not fair and reasonable [s RC 5]. If the tax return for the previous tax year has not been filed by the due date for the final instalment, that instalment must be based on an estimate. If no amount has been paid on an instalment date, penalties and use of money interest will apply to the short paid amount.

**Note:** To reduce penalty and use of money interest exposure it is prudent that an amount is paid on account of current tax on the instalment date. This need not be stated to be an estimate.

The following examples do not take account of current tax rate changes, referred to in 1150.18 and 1190 RATES OF TAX).

**Example 1:**
A company with a standard balance date filed its 20X1-X2 tax return on 18 May 20X2 (before the due date for instalment 1 for 20X2-X3). The company’s RIT for 20X1-X2 was $25,340. Assuming the company does not elect to use the estimation method, the company’s provisional tax for 20X2-X3 will be 105 per cent of its previous year’s RIT. Provisional tax for the 20X2-X3 tax year will thus be $25,340 \times 105\%$, or $26,607. Each instalment will be one-third of this amount, or $8,869.

**Example 2:**
Assume the same facts as in Example 1, except that the company’s 20X1-X2 tax return was filed on 13 September 20X2 (after the due date for instalment 1 but before the due date for instalment 2) under an extension of time arrangement, and that the company’s RIT for 20X0-X1 was $22,150. For instalment 1 of 20X2-X3 provisional tax, the company’s provisional tax will be one-third of 110 per cent of 20X0-X1 RIT, or $22,150 \times 110\% / 3 = $8,122. By the time instalment 2 is due, the tax return has been filed so instalment 2 will be based on 105 per cent of 20X1-X2 RIT ($25,340 \times 105\% = $26,607). Two-thirds of $26,607 ($17,738) should have been paid by instalment 2. Since $8,122 was paid at instalment 1, this leaves $9,616 ($17,738 – $8,122)
to be paid at instalment 2. For instalment 3, provisional tax will simply be one-third of 105 per cent of 20X1-X2 RIT ($25,340 \times 105\% / 3 = $8,869).

**Example 3:**
A self-employed individual with a 30 June balance date had their 20X1-X2 income tax return prepared and filed by a tax agent on 16 January 20X2 under an extension of time arrangement. The provisional taxpayer’s 20X0-X1 RIT was $29,425. RIT for 20X1-X2 was $25,873. As at the due date for instalment 1 of 20X2-X3 provisional tax (28 November 20X2), the provisional taxpayer has not filed their tax return. The first instalment is therefore based on 110 per cent of RIT for the 20X0-X1 tax year ($29,425 \times 110\% = $32,367). Instalment 1 will be one-third of $32,367, or $10,789. By the time instalment 2 is due (28 March 20X3), the provisional taxpayer has filed their 20X1-X2 tax return. Instalment 2 will therefore be based on 105 per cent of 20X1-X2 RIT ($25,873 \times 105\% = $27,167). Two-thirds of $27,167 ($18,111) should have been paid by instalment 2. Since $10,789 was paid at instalment 1, this leaves $7,322 ($18,111 – $10,789) to be paid at instalment 2. Provisional tax payable at instalment 3 will be one-third of 105 per cent of 20X1-X2 RIT ($25,873 \times 105\% / 3 = $9,056).

**Example 4:**
A self-employed individual with a standard balance date had their 20X1-X2 income tax return prepared and filed by a tax agent on 26 September 20X2 under an extension of time arrangement. The provisional taxpayer’s 20X0-X1 RIT was $1,049. RIT for 20X1-X2 was $4,387. Because the provisional taxpayer’s 20X1-X2 tax return was filed between the due dates for the first and second instalments of 20X2-X3 provisional tax and RIT was less than $2,500, the provisional taxpayer is entitled to pay their provisional tax in two instalments, on 15 January 20X4 and 7 May 20X4 [see 1150.25]. The amount due on each instalment will be one-half of 105 per cent of 20X1-X2 RIT ($4,387 \times 105\% / 2 = $2,303).

The advantage for individuals in using the standard method is that if their RIT is less than $35,000 they do not have to pay use of money interest if their provisional tax is less than their final tax liability [see 1110.305]. For this reason, it is also sometimes referred to as the “safe harbour” method. Individuals who estimate their provisional tax, and provisional taxpayers that are not individuals, are subject to use of money interest regardless of the level of their RIT.

**Note:** A provisional taxpayer can change from the standard method to the estimation method at any time up to the third instalment date [see 1150.20]. For example, a provisional taxpayer could use the standard method for the first and second instalments, and then change to the estimation method for the third instalment. However, once a provisional taxpayer has elected to use the estimation method the provisional taxpayer cannot then change back to the standard method later in that tax year. If a provisional taxpayer adopts the estimation method the estimate can be revised at any subsequent instalment date. Provisional taxpayers affected by a “qualifying event” may re-estimate their provisional tax liability after their third instalment date [see 1150.22].

**1) Transitional provisional tax uplift rates**

Sections RZ 3 to RZ 5 provides transitional provisions for calculating provisional tax for the 2009-2010 and 2010-2011 tax years to take into account the reduced tax rate.

**1150.18 Residual income tax for the immediately preceding tax year**

[s RC 6]

The residual income tax (RIT) for the immediately preceding tax year is the basis for the calculation of provisional tax in the current year. The amount is dependent upon whether or not any RIT was calculated.
and/or assessed for the immediately preceding year. Therefore, the RIT for the immediately preceding tax year is whichever one of the following that is relevant in the circumstances

(a) It may be based upon the provisional taxpayer’s assessment for the preceding tax year unless the CIR has issued an assessment at least 30 days before the relevant instalment date.

Example:
Rangi’s 20X1-X2 tax return was filed on 30 April 20X2 and his tax assessment was issued on 3 August 20X2. The tax assessment shows a higher RIT than that shown on Rangi’s tax return. Because the tax assessment was issued less than 30 days before 28 August, Rangi’s 28 August 20X2 provisional tax instalment is calculated on the basis of the RIT shown in his tax return. Assuming Rangi accepts the CIR’s tax assessment, his second provisional tax instalment, due on 15 January 20X3, should be calculated on the basis of the RIT shown in the assessment, because 15 January is more than 30 days after the assessment was issued.

(b) It may be based upon the CIR’s assessment for that preceding tax year when the CIR has issued a notice of assessment for that year at least 30 days before the relevant instalment date.

Example:
Harry’s 20X1-X2 tax return was filed on 30 April 20X2 and his tax assessment was issued on 31 May 20X2. As the tax assessment was issued at least 30 days before his first instalment date of 28 August 20X2, his RIT is calculated on the basis of the CIR’s assessment.

(c) It may be based upon the CIR’s assessment for that preceding tax year, whenever that assessment is made if the provisional taxpayer has failed to furnish the return on or before the due date. It is also calculated in this way if the provisional taxpayer is not required to furnish a return of income for that year by the date of instalment F for the corresponding income year, and none of the other provisions in (a) to (d) applies to the provisional taxpayer.

(d) It may be based upon the RIT (if any) for the immediately preceding tax year, where the provisional taxpayer is not required to furnish a return of income for that preceding year, or the provisional taxpayer had RIT for the year before the immediately preceding tax year of less than $2,500 and is not required to furnish, and has not furnished, a return for that preceding year by the third instalment.

(1) Tax assessments after due date for payment
If the CIR makes an assessment after the due date for payment of the tax, and the taxpayer’s RIT for that year is increased accordingly, then for the purposes of the provisional tax rules the taxpayer’s RIT is treated as if it had not been increased by the new assessment. This enables the taxpayer’s provisional tax position to remain unchanged if late assessments or reassessments arise.

Example 3:
The CIR reassessed a provisional taxpayer’s 20X1-X2 tax return on 27 May 20X3. The provisional taxpayer’s 20X2-X3 provisional tax will be based on the RIT calculated in the CIR’s original assessment, because the reassessment occurred after all the due dates for payment of 20X2-X3 provisional tax.

(2) Residual income tax of amalgamated company
When an amalgamating company ceases to exist on amalgamation, for the purposes of determining the RIT of the amalgamated company, the RIT of the amalgamated company for the tax year preceding the year of amalgamation is deemed to be increased by the RIT of the amalgamating company for the corresponding year, had the amalgamating and amalgamated company always been one company. This applies only for instalments of provisional tax due after amalgamation.

(3) Tax rate changes
There are two new definitions to classify provisional taxpayers so that the correct provisional tax is calculated as from the 2008-2009 and later tax years as a result of reduced income tax rates. Provisional taxpayers are classified as either a “new personal tax rate person” or a “new tax rate person”; the former being provisional taxpayers subject to the personal tax rates and the latter being provisional taxpayers generally subject to the flat 30 per cent rate (previously 33 per cent).
A “new personal tax rate person” means a person whose basic rate of income tax is calculated under sch 1, Part A, cl 1 for the 2008-2009 income year or a later income year” [s YA 1]. From the 2008-2009 and later tax years, for the purposes of the provisional tax liability and GST ratio calculation from 1 October 2008 to the end of the 2008-2009 income year, the following amounts are reduced by $730:

(a) The person’s residual income tax for the preceding tax year;
(b) The person’s income tax assessment or residual income tax for the tax year before the preceding tax year or the transitional year, as applicable; or
(c) The person’s income tax assessment for the year that is two years before the preceding tax year or the transitional year, as applicable.

In the 2009-2010 tax year the calculated amount is reduced by $1,460.

A “new tax rate person” means a person who uses a 30 per cent basic tax rate for the 2008-2009 and later income years. For those provisional taxpayers using the five per cent standard uplift, the 2008-2009 provisional tax is 95 per cent of the 2007-2008 income year residual income tax, instead of being 105 per cent. For the 2009-2010 income year the provisional tax is 105 per cent of the residual income tax for the 2008-2009 income year. For those provisional taxpayers using the 10 per cent standard uplift, the 2008-2009 income year is 100 per cent of the residual income tax for the 2007-2008 income year instead of being 110 per cent. If the residual income tax for the 2007-2008 income year has not been calculated at the time to pay the provisional tax, then it is 100 per cent of the residual income tax for the 2006-2007 income year. After that, for the 2010-2011 income year the provisional tax for that year reverts to being 105 per cent of the residual income tax for the 2009-2010 income year or if that residual income tax has not been calculated, then it is 110 per cent of the residual income tax for the 2008-2009 income year.

Similar adjustments are available if the company was to be paying its provisional tax instalments under the new GST ratio method.

1150.20 Estimation method [s RC 7]

If the provisional taxpayer furnishes an estimate of residual income tax (RIT), and the CIR has not determined the provisional tax payable under s 119 of the TAA [see 1150.65], the amount of provisional tax payable is simply the amount estimated on or most recently before the instalment date.

Example 1:
Henrietta, who has a standard balance date, estimates her provisional tax to be $8,400. On her first instalment date she will pay $2,800 provisional tax (⅓ of $8,400).

The advantage in estimating provisional tax is that taxpayers can avoid paying too much provisional tax, for example when their income is less than in the previous year. Provisional taxpayers who are not natural persons, or who are natural persons who have RIT over $35,000, can minimise their liability to use of money interest by accurately estimating, or alternatively overestimating, their provisional tax [see 1110.305].

However, natural person provisional taxpayers with RIT under $35,000 may prefer not to use the estimation method as they will be liable for use of money interest on any shortfall. Provisional taxpayers who estimate may also be liable for shortfall penalties if they do not take reasonable care in calculating their estimation [see 1110.90].

When provisional taxpayers estimate provisional tax, the following rules apply:

(a) Any provisional taxpayer may, on or before the day on which an instalment of provisional tax becomes due and payable, make a fair and reasonable estimate or revised estimate of RIT for the tax year and furnish to the CIR a statement showing the amount so estimated; and

(b) Provisional taxpayers who furnish an estimate or revised estimate must take reasonable care in making that estimate, and if an estimate ceases to be fair and reasonable they must make a revised estimate on or before the next instalment date.
Example 2:
Action Appliances Ltd made a “fair and reasonable” estimate of their provisional tax of $21,000, and paid $7,000 provisional tax on their first instalment date. Between the first and second instalment dates Action Appliances Ltd got a very large contract which meant that their $21,000 estimate of provisional tax was no longer reasonable. They are required to make a revised estimate of provisional tax on or before their second instalment date.

If a provisional taxpayer makes an estimate which exceeds the actual amount of provisional tax payable, the provisional taxpayer is deemed to have taken reasonable care.

Example 3:
Jake estimates his provisional tax to be $53,000. His RIT was actually $45,000. As Jake’s estimate exceeds his actual liability he is deemed to have taken reasonable care. However, if Jake had estimated his provisional tax to be $45,000, when his actual liability was $53,000 it would be open for the CIR to consider whether Jake had shown a lack of reasonable care in making his estimation, and he could be liable for a shortfall penalty [see 1110.90].

(1) Changing calculation method from GST ratio
If, under s RC 18(5), a person using the GST ratio method changes the way provisional tax is determined after the date of an instalment, the residual income tax must be estimated for the corresponding income year, and provisional tax shall be paid on whichever of the following instalment dates for the income year occur after 30 days from their last ratio instalment date:

(a) C and F for changes to a six-monthly GST taxable period;
(b) B, D, and F for other changes [see 1150.40].

1150.21 GST ratio method [ss RC 8, RC 15, RC 16, RC 17, RC 18, RC 19, RZ 4]
Provisional taxpayers who are liable to pay provisional tax and meet the requirements of s RC 16 and not excluded by s RC 17 may choose to use a GST ratio to determine the amount of provisional tax payable for a tax year [s RC 8].

They must inform the CIR of this before the start of the income year [s RC 15]. The election to use a GST ratio applies for the tax year for which the election is made and for later tax years, unless the calculation method is changed under s RC 18. They are eligible to use the GST ratio method only if they meet all the following requirements for the preceding year and the current year.

In the preceding tax year and the corresponding income year:

(a) Their residual income tax shall be more than $2,500 and not more than $150,000;
(b) They shall be GST-registered for the whole income year, and provided a GST return for a taxable activity that did not begin operations in that tax year; and
(c) The ratio of residual income tax to total taxable supplies expressed as a percentage, shall be between zero per cent and 100 per cent. A reference to a preceding tax year includes a reference to a tax year earlier than the preceding tax year if that earlier tax year is used for the purposes of calculating a GST ratio.

In the current year they must be liable to file a GST return for either a two-month or a one-month period [s RC 16].

The GST ratio is the percentage figure that is obtained by dividing the residual income tax for the preceding tax year by the total taxable supplies for the corresponding income year. The amount of residual income tax and the amount of total taxable supplies are called base amounts. If a base amount for the preceding tax year or corresponding income year is not known, the GST ratio is the percentage based on the assessment for the tax year and corresponding income year that are just before the preceding tax year and corresponding income year.

The CIR, and not the provisional taxpayer, calculates the GST ratio, and shows the amount on the provisional taxpayer’s preprinted GST return form. It can also be advised to the provisional taxpayer in writing, by telephone or some other means. The CIR shall adjust the GST ratio if a base amount is revised. Various reasons may require the GST ratio to be adjusted such as the issue of an assessment or an amended assessment.
for the preceding tax year, a change in the value of the total taxable supplies for the corresponding income year, or the disposal of an asset to which s RC 19 applies. When an adjustment is done to the GST ratio then the CIR must inform the provisional taxpayer. The new ratio applies to any relevant instalment dates that occur 30 days after the date on which the provisional taxpayer is informed.

If a provisional taxpayer has paid instalments of provisional tax in a transitional year [see 1150.80] for the tax year that follows the transitional year then the transitional year is ignored when determining the residual income tax or total taxable supplies. The residual income tax and total taxable supplies is then based on the tax year preceding the transitional year.

The total taxable supplies amount in the calculation is the GST inclusive amount of the total value for the period [s RC 8].

Provisional taxpayers must stop using a GST ratio for a tax year if:

(a) Their GST registration ends in the tax year; or
(b) They no longer qualify as a result of an amended assessment of their income tax liability or their GST liability for the preceding tax year; or
(c) They no longer qualify as a result of a change in their taxable period.

They must also not use, or must stop using, a GST ratio for a tax year if they are liable to provide a GST return for a period in their corresponding income year and do not file the return within 60 days after the due date for the return. They must then pay the provisional tax instalments required under the estimation method [s RC 18].

However, they may continue to use a GST ratio for an instalment period if they apply in writing or by telephone to the CIR who considers that the failure to file the return is caused by an event or circumstance beyond the person’s control; and it provides reasonable justification or excuse for the failure; and the provisional taxpayer has remedied the failure as soon as practicable. The CIR must notify this reinstatement to the provisional taxpayer. The CIR is required to use the same approach that would be used to justify the remission of a penalty under s 183A of the TAA [see 1110.90]. Such notice does not automatically refer to a later default unless the failure is anticipated and referred to in the notice and the instalment period begins on or after the due date of the return [s RC 17].

After having chosen to use a GST ratio for a tax year, a provisional taxpayer may either choose another way to calculate provisional tax or be required to stop using a GST ratio for the corresponding income year. A provisional taxpayer who chooses another method must inform the CIR of the decision either in writing or by telephone.

The date on which the person stops using a GST ratio is (as applicable) the:

(a) Date the GST registration ends;
(b) Date of the amended assessment of the income tax liability or GST liability for the preceding tax year;
(c) Effective date of a change in taxable period; or
(d) Last day of the period in which a GST return is liable to be provided.

The date on which the change applies may be a future date agreed between the person and the CIR.

If the GST ratio method changes before the date of instalment A, then the provisional tax payable is calculated under s RC 5(2), (3) or (5), and the provisional taxpayer is treated as never having chosen to use the GST ratio method. If the GST ratio method is changed after an instalment date, then the amount of provisional tax payable on instalments for the remainder of the income year is calculated under s RC 5(5) using the estimation method. The estimate may be advised to Inland Revenue in writing or by telephone.

When a provisional taxpayer using the GST ratio method disposes of an asset that is not revenue account property, and the value of the asset is not less than the greater of either $1,000 or five per cent of the total taxable supplies of the business for the previous 12 months then an adjustment to GST ratio for current and next income year is available.
The provisional taxpayer may choose to take the disposal of the asset into account in adjusting the taxable supplies for the relevant taxable period and income year, by subtracting the value, including GST, of the asset from:

(a) The total taxable supplies for a taxable period in proportion to the output tax which is attributed to that taxable period for the supply of the asset; or

(b) The base amount of total taxable supplies for the corresponding income year in proportion to the output tax which is attributed to a taxable period in that income year for the supply of the asset.

The provisional taxpayer must also inform the CIR of both the disposal of the asset and the value of its supply, and may do this either in writing or by telephone.

1150.22 **Provisional taxpayers affected by natural disasters** [s RC 36]

Provisional taxpayers who are liable to pay provisional tax and are significantly affected by a self-assessed adverse event or qualifying event (see below), may estimate or re-estimate their residual income tax (RIT) liability after the normal due date for making the estimate. This overrides s RC 7 [see 1150.20]. The CIR may accept the estimate or revised estimate if all the following requirements are met:

(a) The business is significantly affected by the self-assessed adverse event or qualifying event;

(b) It is not reasonable to require the person to provide under s RC 7 an estimate or revised estimate of residual income tax payable by them for the tax year;

(c) The basis on which the person has chosen to pay provisional tax is now inappropriate; and

(d) The person asks to revise their estimate as soon as practicable.

If the revised estimate is accepted it is treated as the estimate applying on the date of instalment F [see 1150.40].

A “self-assessed adverse event” materially affects a farming, agricultural or fishing business and is either a drought, fire, flood, or some other natural event, or disease or sickness of livestock. It shall be described to the CIR by the provisional taxpayer in a statutory declaration [s YA 1].

A “qualifying event” means:

(a) The extreme climatic conditions that occurred during February 2004 in New Zealand;

(b) The storm event that occurred during July 2004 in the Bay of Plenty area;

(c) Any naturally-occurring event that occurs after July 2004:

(i) For which a state of emergency is declared; and

(ii) That is declared by Order in Council to be a qualifying event [s YA 1].

1150.25 **Number of provisional tax instalments** [ss RA 4, RC 9, RC 13]

Generally, for a provisional taxpayer liable to pay provisional tax using the standard and estimation methods, the amount of the provisional tax liability is spread evenly over the applicable number of instalments, so that equal amounts are paid on each instalment date. If the full amount is not divisible into exactly equal instalments, the final instalment carries the difference.

A provisional taxpayer who is not GST-registered, as well as a provisional taxpayer who is GST registered (paying GST monthly or two-monthly) but who is not on the GST ratio method will pay provisional tax in three instalments. A provisional taxpayer who is GST-registered (paying GST six-monthly) will pay provisional tax in two instalments.

A provisional taxpayer who is GST registered and uses the GST ratio method will pay provisional tax in six instalments, whether or not GST is paid monthly or two-monthly [s RC 9]. The dates for payment of GST and provisional tax are the same [see 1150.40].

Table R1 gives a summary of instalment dates under the various calculation methods for provisional tax.

Example 1:
A provisional taxpayer who pays GST either monthly or two-monthly using either the standard uplift or the estimation method has three instalments of provisional tax and the instalment dates are given as codes in the form of B, D, F. The codes B, D, F refer to the columns shown in sch 3 [see 1150.40]. Therefore, under sch 3 this provisional taxpayer with a 31 March balance date will have provisional tax payable in three instalments on 28 August (first instalment), 15 January (second instalment) and 7 May (third instalment). If this provisional taxpayer had a 30 June balance date then provisional tax is payable in three instalments on 28 November (first instalment), 28 March (second instalment) and 28 July (third instalment).

Example 2:
A provisional taxpayer who pays GST six-monthly using either the standard uplift or the estimation method has two instalments of provisional tax and the instalment dates are given as codes C and F. The codes C and F refer to the columns shown in sch 3 [see 1150.40]. Therefore, under sch 3 this provisional taxpayer with a 31 March balance date will have provisional tax payable in two instalments on 28 October (first instalment) and 7 May (second instalment). If this provisional taxpayer had a 30 June balance date then provisional tax is payable in two instalments on 28 January (first instalment) and 28 July (second instalment).
Example 3:
A provisional taxpayer using the GST ration method and paying GST either monthly or two-monthly has six instalments of provisional tax and the instalment dates are given as codes A to F. The codes A to F refer to the columns shown in sch 3 [see 1150.40]. Therefore, under sch 3 this provisional taxpayer with a 31 March balance date will have provisional tax payable in six instalments on 28 June (first instalment), 28 August (second instalment), 28 October (third instalment), 15 January (fourth instalment) 28 February (fifth instalment) and 7 May (sixth instalment).

Note: The final instalment will often fall after 31 March which can create difficulties in the imputation system for provisional taxpayers which are companies, as the credits to the ICA only arise for tax payments on the date when the payment is made. This may result in the tax payable for a particular tax year not being sufficiently aligned with income. If foreseen in such cases, the matter can be rectified by paying the final instalment of provisional on or before 31 March for the corresponding tax year.

A transitional year refers to the situation when a provisional tax payer has a tax year that is not equal period of 12 months. In such cases refer to 1150.80 to 1150.83 for the dates, instalment amounts and relevance to subsequent years.

In the following examples, it is assumed that the provisional taxpayers have a 31 March balance date.

Provisional tax is payable in two instalments by:

(a) A person with an initial provisional tax liability (a new provisional taxpayer) [see 1150.10], whose first business day falls either after, or less than 30 days before, the first instalment date and more than 30 days before the second instalment date [s RC 13].

Example 1:
Innovation Ltd, a new provisional taxpayer, commences business on 1 August 20X1. The company will have to pay provisional tax in two instalments, because 1 August 20X1 is after the first instalment date (7 July 20X1) and more than 30 days before the second instalment date (7 November 20X1). If Innovation Ltd were to commence business on 1 July 20X1 it would still only have to pay provisional tax in two instalments because 1 July 20X1 is less than 30 days before the first instalment date (7 July 20X1).

Note: New business taxpayers [see 1150.10], are generally not required to pay provisional tax in their first year of business, as it is likely that their RIT for the previous year was less than $2,500 [see 1150.45]. However, they could still be liable for use of money interest back to the first provisional tax instalment date, if their RIT exceeds $35,000 and they have a provisional tax shortfall. The “new provisional taxpayer” rules may limit the exposure to use of money interest in this regard as they limit the number of provisional tax instalments.

(b) A provisional taxpayer whose tax return for the previous tax year was filed after the first instalment date and on or before the second instalment date, where the provisional taxpayer was granted an extension of time under s 37 of the TAA for filing the return, and the provisional taxpayer’s RIT for the year before the previous tax year was less than $2,500 [s RC 13].

Example 2:
Marie’s 20X1-X2 tax return is filed on 12 August 20X2 by her tax agent under an extension of time arrangement. Marie’s 20X1-X2 RIT is $5,000 and her 20X0-X1 RIT was $150. Marie can pay her 20X2-X3 provisional tax in two instalments because her tax return was filed after the first instalment date.

The foregoing provisions do not apply to a provisional taxpayer when GST is payable on a six-monthly basis, although they may qualify to pay provisional tax in one instalment (see below).

Provisional tax is payable in one instalment by:

(a) A new provisional taxpayer whose first business day falls either after, or less than 30 days before, the second instalment date [s RC 14].

Example 3:
Innovation Ltd, a new provisional taxpayer, commences business on 20 January 20X2. The company will have to pay one provisional tax instalment for the 20X1-X2 tax year, because 1 January 20X2 is after the second instalment date of 15 January 20X1. If Innovation Ltd were to commence business on 1 November 20X1 they would still only have to pay provisional tax in one instalment because 7 January 20X1 is less than 30 days before the second instalment date of 15 January 20X1.
(b) A provisional taxpayer whose tax return for the previous tax year was filed after the second instalment date, if the provisional taxpayer was granted an extension of time under s 37 of the TAA for filing the return and the taxpayer’s RIT for the year before the previous tax year was less than $2,500 [s RC 14].

**Example 4:**
Darryn’s 20X2-X3 tax return is filed on 23 February 20X4 by his tax agent under an extension of time arrangement. Darryn’s 20X2-X3 RIT is $5,000 and his 20X1-X2 RIT was $150. Darryn can pay his 20X3-X4 provisional tax in one instalment because his tax return was filed after the second instalment date.

(c) Provisional taxpayers who pay GST on a six-monthly basis may pay one instalment if their first business day occurs within 30 days before the first instalment (instalment C) and before the end of the corresponding income year. They also qualify to pay one instalment where they have been granted an extension of time under s 37 of the TAA for filing the return, and their RIT for the previous tax year was less than $2,500 [s RC 14].

If a natural person uses the standard (uplift) method of calculating provisional tax and their RIT is under $50,000 they are not subject to use of money interest [see 1110.305]. Tax agents may wish to delay filing tax returns for natural persons paying provisional tax for the first time until after the second instalment date, because then their provisional tax can all be paid on the third instalment date. Similarly, there are timing advantages in delaying the filing of returns for natural persons when RIT has increased considerably from the previous year, provided their RIT is under $50,000. The same advantages do not apply to non-natural provisional taxpayers, nor to natural provisional taxpayers who estimate their provisional tax or have RIT over $50,000, because these provisional taxpayers are subject to use of money interest from their first instalment date.

The “instalment date” is specified in sch 3 [see 1150.40], as a month in which payment of an instalment of provisional tax is payable.

“First business day”, for a non-individual, means the first day in a tax year on which gross income is derived or expenditure is incurred as a result of carrying on a taxable activity. “Taxable activity” has the same meaning as in the GSTA 1985.

“First business day”, for an individual, means the day following the last day in a tax year on which the taxpayer derives employment income.

If a provisional taxpayer has a change of balance date, provisional tax is payable in the number of instalments specified in the second column of Part B of sch 13 [see 1150.80].

**1150.30 Amount of provisional tax instalments** [ss RC 10, RC 11]

The amount of provisional tax payable on an instalment date is calculated using the total provisional tax payable [see 1150.12 to 1150.21], and the number of instalments determined [see 1150.25].

The amount of an instalment of provisional tax for a provisional taxpayer who uses either the stand uplift or estimation method (but not the GST ratio method) is calculated using the following formula:

\[
\text{residual income tax} \times \frac{\text{instalment number}}{\text{total instalments}} - \text{provisional tax}
\]

Where:

“Residual income tax” is the residual income tax (as applicable):

(a) For the preceding tax year, uplifted by five per cent (modified as applicable by s RZ 5 (Calculating amounts under standard method: 2008-2009 and 2009-2010 income years);

(a) For the tax year before the preceding tax year, uplifted by 10 per cent (modified as applicable by s RZ 5); or

(a) The amount estimated by them;

“Instalment number” is the number of the instalment for the tax year, whether first, second, or third;

“Total instalments” is the total number of instalments for the tax year;
“Provisional tax” is the amount provisional tax liabilities for the tax year to date [s RC 10].

When a provisional taxpayer is required to pay provisional tax for a tax year in three instalments, those instalments shall be due and payable on the first instalment date, second instalment date, and third instalment date respectively, and the amount of each instalment shall be calculated as follows:

(a) For the first instalment, one-third of the provisional tax payable for that tax year, as that provisional tax is determined at the time of the first instalment date;

(b) For the second instalment, the balance remaining after deducting from two-thirds of the provisional tax payable for that tax year (as that provisional tax is determined at the time of the second instalment date) the amount of provisional tax previously due and payable for that tax year; and

(c) For the third instalment, the balance remaining after deducting from the provisional tax payable for that tax year (as that provisional tax is determined at the time of the third instalment date) the amount of provisional tax previously due and payable for that tax year.

Example 1:
Wendy’s 20X1-X2 tax return is filed on 1 May 20X2. Wendy has a 31 March 20X2 balance date. Her 20X1-X2 RIT was $14,500. Wendy wants to calculate her 20X2-X3 provisional tax using the standard method. Her three instalments of provisional tax will each be $5,075 (1/3 of $14,500 × 105%).

Example 2:
Jason’s 20X1-X2 tax return is filed under an extension of time arrangement on 1 October 20X2. Jason has a 31 March 20X2 balance date, and his 20X1-X2 RIT was $14,500 and his 20X0-X1 RIT was $12,000. Jason wants to calculate his 20X2-X3 provisional tax using the standard method. On 7 July 20X2 he will need to pay $4,400 (1/3 of $12,000 × 110%). On 7 November 20X2 he will need to pay $5,750 (2/3 of $14,500 × 105% less the $4,400 already paid). On 7 March 20X3 he will need to pay $5,075 ($14,500 × 105% less the $4,400 and $5,750 already paid).

When a provisional taxpayer is entitled to pay provisional tax for an income year in two instalments, the two instalments are due and payable on the second instalment date and the third instalment date respectively, and the amount of each instalment is calculated as follows:

(a) For the first instalment, one half of the provisional tax payable for that income year, as calculated at the time of the second instalment date; and

(b) For the second instalment, the balance remaining after deducting from the provisional tax payable for that income year (as that provisional tax is determined at the time of the third instalment date) the amount of provisional tax previously due and payable for that tax year.

Example 3:
Sharon is entitled to pay her provisional tax in two instalments. Her provisional tax payable is $20,200. She will have to pay two equal instalments of $10,100.

When a provisional taxpayer is entitled to pay provisional tax in one instalment, that instalment is due and payable on the third instalment date, and the amount of that instalment is the provisional tax payable for that tax year, as calculated at the time of the third instalment date.

Example 4:
Tangesh is entitled to pay his provisional tax in one instalment. His provisional tax payable is $3,800. He will have to pay all of the $3,800 on his third instalment date.

The amount of an instalment of provisional tax for a provisional taxpayer who uses the GST ratio method is calculated using the following formula:

\[ \text{GST ratio for tax year} \times \text{total taxable supplies} \]

Where:

“GST ratio” is calculated by the CIR [see 1150.21];

“Total taxable supplies” is the amount total taxable supplies in the taxable period that matches the instalment period.
Where GST is paid on a one-month cycle then the GST ratio is applied to the sum of their taxable supplies in the current taxable period and the preceding taxable period, that is, the taxable supplies in the two-month period matching the instalment period [s RC 11]. The GST ratio method is modified for the 2008-2009 and 2009-2010 income years [s RZ 4].

1150.33 Provisional tax and the attribution rules [s RC 34]

If a provisional taxpayer (“B”) has had income from personal services attributed to them from an associated provisional taxpayer (“C”) [ss GB 27 to GB 29], any overpayment of provisional tax by either B or C may be allocated to the other person. See 740.30 to 740.40 for an explanation of the attribution rules.

The amount of overpaid provisional tax that may be allocated in this way is limited to the amount by which the recipient’s residual income tax (RIT) exceeds their provisional tax paid.

Example:
Jeremy, a personal services provider, has had $50,000 attributed to him from an associated company (Huggles Ltd). His total income for the year, including the amount attributed, is $80,000. Huggles Ltd has paid provisional tax of $33,000 for the year. Its RIT, following the allocation, is $15,000. Jeremy has paid provisional tax of $10,000 for the year. His RIT is $22,500. The overpayment of provisional tax by Huggles Ltd ($18,000) is available to be allocated to Jeremy but the amount that may be allocated is limited to Jeremy’s underpayment of provisional tax ($12,500).

An allocation cannot be made until the excess provisional tax is actually paid or the first instalment of provisional tax for the year (for the person making the allocation) is due, whichever is the later.

The allocation is made by giving written notice to the CIR. Notice must be given on or before the due date for the person receiving the allocation to file their tax return for the year [see 1270.60-61]. The notice must contain the following information:
(a) The name of the person to whom the excess provisional tax is being allocated and the amount allocated; and
(b) The date on which the allocation is made.

The provisional tax allocated is treated as provisional tax paid by the recipient and not by the donor [see TIB vol 12:12 (December 2000) at 54-57].

1150.35 Offset of further income tax [s RC 35]

Further income tax is an amount of tax that is imposed if the provisional taxpayer’s imputation credit account (ICA) has a debit balance at 31 March or when the company ceases for any reason to be an ICA company [see 670.95]. When a company has paid further income tax, the payment of any instalment of provisional tax for which the company becomes liable after the date of payment of the further income tax is satisfied by the amount of the further income tax, so far as that amount extends.

The CIR credits the amount of the further income tax in payment successively of:
(a) The instalment of provisional tax that first falls due and payable after the date of payment of the further income tax; and
(b) Instalments subsequent to that instalment, in the order in which they fall due and payable, so far as the amount of the further income tax extends.

The amount is deemed to have been paid on the date on which the instalment so credited was due and payable.

Any imputation penalty tax imposed on further income tax cannot be used to satisfy a company’s provisional tax liability.

Example:
Discovery Ltd had a $5,000 debit balance in their ICA at 31 March 20X1. They paid the $5,000 further income tax required, together with the $500 imputation penalty tax, on 20 June 20X1. Their first 20X1-X2 provisional tax instalment of $8,000 is due on 28 August 20X1. They can offset the $5,000 further income tax paid against the $8,000 first instalment and are, therefore, only required to pay $3,000 provisional tax on 28 August 20X2.

1150.40 Dates of payment [sch 3]

The number of instalments and the amount payable on each instalment is discussed in 1150.25 and 1150.30. Instalments of provisional and terminal tax are due in the months shown in the following table (from sch 3). Provisional tax is due on the 28th day of the month specified, except in January when payment is due.
on the 15th of the month and in May when the payment is due on the 7 May. The term “balance date” means
the annual balance date of a provisional taxpayer’s accounts for the period for which the provisional taxpayer
is required to file a tax return. The first and second provisional tax instalments are due in the months preceding
the month of balance date. The third provisional tax instalment is due in the same month as the month of
balance date. Terminal tax [see 1150.70] under Columns G and H is due in the month, shown in the table,
which follows the balance date.

1150.45 Taxpayers not required to pay provisional tax [s RC 3]

No taxpayer, including a taxpayer who comes within the definition of a provisional taxpayer, is obliged to
pay provisional tax for any tax year if their RIT for the preceding year did not exceed $2,500. However, a
provisional taxpayer (RIT in current year exceeds $2,500) who is not required to pay provisional tax because
their RIT for the previous year did not exceed $2,500, needs to be aware of the use of money interest provisions
[see 1110.305], in deciding whether to pay provisional tax.

Example 1:
Ronny Mac Ltd has 20X1-X2 RIT of $23,000, and 20X0-X1 RIT of $2,000. Ronny Mac Ltd is not required to pay 20X2-X3
provisional tax, because its 20X0-X1 RIT was less than $2,500. However, Ronny Mac Ltd will be subject to use of money interest
from the first 20X1-X2 provisional instalment date (7 July 20X2).

Example 2:
Ronny Mac, an individual, has 20X1-X2 RIT of $23,000, and 20X0-X1 RIT of $2,000. He is not required to pay 20X2-X3
provisional tax, because his 20X0-X1 RIT was less than $2,500. Provided he does not estimate his 20X1-X2 provisional tax he
will not be subject to use of money interest.

1150.50 Election to be a provisional taxpayer [s RC 4]

Normally a taxpayer is not a provisional taxpayer in an income year unless their RIT for the tax year is $2,500
or more. However, a taxpayer may elect to be a provisional taxpayer in a tax year if at least $2,500 has been
paid as provisional tax by the third instalment date (instalment F) by the final instalment date if the taxpayer
is in a transitional year. This applies if the taxpayer had, on the day the first payment of provisional tax was
made for that tax year, a reasonable expectation of being a provisional taxpayer. The election is made when
first furnishing a tax return for the tax year to which the election relates.

This provision enables taxpayers who have paid provisional tax and later find that this was not necessary to
receive use of money interest on the overpayment, which would run from the day after the payment. These
provisions apply to taxpayers who chooses to pay provisional tax [s RC 2], except for those who are not
required to pay provisional tax under s RC 3(2)(a) to (d) [see definition of “provisional taxpayer” in
1150.10. Taxpayers who meet the above criteria may elect to be provisional taxpayers whether they have standard or non-standard balance dates.

1150.55 **Voluntary payments of provisional tax** [s RC 12]

Taxpayers can make voluntary payments of provisional tax should they wish. A taxpayer may at any time make voluntary payments of provisional tax, being either:

(a) For the income tax liability in a tax year when the taxpayer does not have a provisional tax liability;
(b) For an amount which is more than the provisional tax liability for that tax year; or
(c) For an amount which is more than the income tax liability for that tax year.

One of the main reasons for making voluntary payments is to reduce exposure to use of money interest charges [see 1110.305] on any known tax shortfalls. Another reason, for individuals whose RIT is under $35,000, is to reduce the taxpayer’s terminal tax liability without making a formal estimation which would bring the taxpayer under the use of money provisions.

1150.57 **Early-payment discount for new small businesses** [ss RC 37, RC 38, RC 39, RC 40]

Self-employed individuals and partners in partnerships are entitled to a discount of 6.7 per cent of the amount of income tax they pay in any income before the income year they first pay provisional tax. The aim of the discount is to encourage individuals who begin receiving self-employed or partnership income to pay tax voluntarily before they are required to pay provisional tax. New business taxpayers are not required to pay provisional tax until the income year following the income year in which their residual income tax (RIT) first exceeds $2,500 [see 1150.05]. This means that they have two years tax to pay in the year in which they first pay provisional tax (the previous year’s terminal tax and second the current year’s provisional tax). By encouraging new business owners to pay income tax early, the discount helps relieve the financial strain in the in year in which provisional tax is first paid.

The early-payment discount applies to tax years commencing from 1 April 2005. The discount applies to taxpayers (referred to as a small-business person) who:

(a) Conducts a business on his or her own account, acting alone or as a partner in a partnership;
(b) Does not use a company or a trust in the conduct of the business; and
(c) Derives income that is mainly from the business, and does not consist of interest, dividends, royalties, rent, or beneficiary income [s RC 40].

A small-business taxpayer qualifies for the early-payment discount for a tax year if the small-business taxpayer:

(a) Is not required to pay provisional tax;
(b) Makes income tax payments on or before balance date;
(c) Throughout the period from balance date to the terminal tax date, has a credit balance with Inland Revenue at least equal to the lesser of the amount of tax paid on or before balance date and the amount of terminal tax payable (before deducting tax paid); and
(d) Has not previously been required to pay provisional tax and has not previously received an early-payment discount.

A small-business taxpayer can receive the early-payment discount more than once, but only if four tax years have elapsed since the last tax year for which the early-payment discount was received and during those four years the small-business taxpayer derived no income from a business.

Even if a small-business taxpayer has previously been required to pay provisional tax, the taxpayer will still qualify for the early-payment discount if they have not derived any business income during the four tax years since the last tax year for which the taxpayer was required to pay provisional tax. This enables individuals who have ceased to carry on a business to claim the discount when they set up a new business in the future, subject to the four-year restriction [s RC 37].
A small-business person who meets the criteria applies for the early-payment discount in their income tax return. The amount of the discount is 6.7 per cent of the lesser of the following amounts:

(a) The amount of income tax the small-business taxpayer has paid on or before balance date;
(b) 105 per cent of the small-business taxpayer’s residual income tax for the tax year.

The discount is credited to the small-business taxpayer’s income tax account and is treated as being a payment made by the small-business taxpayer on the day after the last day of the tax year [s RC 38].

The discount will be credited to the taxpayer’s income tax account only if the return in which the application is made is filed by the due date specified in s 37(5) of the TAA [see 1270.60]. For examples see TIB vol 17:1 (February 2005) at 50-53.

**1150.60 Refund of overpaid provisional tax** [TAA, s 173]

Where the amount of provisional tax payable by a provisional taxpayer for a tax year is reduced by the provisional taxpayer (eg, as a result of re-estimating RIT), or by the CIR under s 119(2) of the TAA, and as a result the provisional taxpayer has overpaid their provisional tax, the provisional taxpayer may make written application for a refund of the over-payment. In this situation, the CIR will first apply the excess against any unpaid income tax due by the provisional taxpayer for any earlier tax year, in accordance with the provisional taxpayer’s or their agent’s request under s 173T of the TAA [see 1215.48], and any of the excess remaining will be refunded to the provisional taxpayer.

Where a provisional taxpayer’s first or second instalments of provisional tax for a tax year are based on 110 per cent of the RIT for the year before the immediately preceding tax year [see 1150.15], but the provisional taxpayer’s RIT for the immediately preceding tax year is subsequently assessed as not exceeding $2,500, the taxpayer may make written application for a refund of the provisional tax paid on either or both of those two instalments. The CIR will first apply the tax paid against any unpaid income tax due by the provisional taxpayer for any earlier tax year, in accordance with the provisional taxpayer’s or their agent’s request under s 173T of the TAA, and any of the excess remaining will be refunded to the provisional taxpayer.

Where any excess provisional tax paid has been refunded or credited as per the above rules, any subsequent instalments of provisional tax payable are calculated as if the total of the instalments previously payable were reduced by the excess, and the amount of the excess refunded or credited is (as from the date of the refund or credit) deemed not to have been paid for that tax year.

**1150.62 Transfer of excess provisional tax** [TAA, Part 10B]

When a provisional taxpayer overpays their provisional tax for the year the excess, instead of being refunded, can be transferred to another tax period, tax type or provisional taxpayer. Within certain limits, the provisional taxpayer can elect the date of the transfer and so minimise exposure to UOMI. There are also restrictions on the amount of provisional tax that can be transferred as at a particular date [see 1215.30 and 1215.40 to 1215.44].

**1150.65 Determination of provisional tax by CIR** [TAA, s 119]

When the CIR makes a determination of the total provisional tax payable by a provisional taxpayer, the following rules apply. Any provisional tax determined by the CIR shall be open to objection or challenge. The CIR may, at any time, determine the amount that, in its opinion, ought to be the provisional tax payable by a person for a tax year (being an amount greater than what would otherwise be payable) where:

(a) The person defaults in furnishing the income tax return for the immediately preceding tax year;
(b) The CIR is not satisfied with a return made by the person for any of the two immediately preceding tax years;
(c) The CIR has reason to believe that the person is a provisional taxpayer, although the person has not furnished a return; or
(d) The CIR considers that an estimate of RIT furnished by the person was not fair and reasonable, either at the time the estimate was furnished or on any instalment date.
Provisional and Terminal Tax

The CIR may, at any time, determine the amount that, in its opinion, ought to be the provisional tax payable by a provisional taxpayer for a tax year (being an amount greater or lesser than what would otherwise be payable) where the CIR considers that the provisional tax that would be payable by the person is excessive. The amount of provisional tax determined by the CIR cannot exceed the amount of provisional tax that would be payable if the provisional taxpayer had not made an estimate, that is, it cannot exceed the amount calculated under the standard method.

Where the CIR determines an amount, the provisional taxpayer must be advised of the determination in writing and, where the provisional tax payable is increased:

(a) The consequent shortfall shall be due and payable on the day specified in the notice, being a day not less than 30 days after the issuing of the notice; or

(b) If the notice specifies that an estimate furnished by the provisional taxpayer was not fair and reasonable, the consequent shortfall for any instalment is generally due on that instalment date, even if that date has already passed.

1150.68 Allowance for provisional tax paid by agent [ss LA 6, LB 2]

Where an agent is liable to pay provisional tax on behalf of the agent’s principal, any amount paid by the agent is credited to the principal’s account on the date on which that payment is made.

1150.70 Terminal tax [ss BC 8, RA 3, RA 13, RB 1]

A taxpayer’s terminal tax is the balance of tax they have to pay for a tax year, after allowing for tax credits. That is, it is the amount by which their tax liability for the year exceeds their tax credits for the year, including any provisional tax payments [see 230.60].

Example 1:
Jane’s income tax liability is $15,000. Her tax credits, for rebates and PAYE totalled $14,700. Her terminal tax is $300 ($15,000 – $14,700).

Terminal tax, for both provisional taxpayers and non-provisional taxpayers, is due and payable on the seventh day of the month specified in sch 13 as being the month for payment of terminal tax [see 1150.40], unless the terminal tax is due in January, in which case it is due on 15 January.

Example 2:
Cool Water Ltd’s 20X1-X2 RIT was $17,000. They paid $16,000 provisional tax. Terminal tax of $1,000 is due by 7 February 20X3.

Non-resident companies with no fixed establishment in New Zealand must pay their terminal tax for a tax year by 7 February of the year following the tax year, unless the company’s return was linked to a tax agent, in which case terminal tax must be paid by 7 April.

(1) Returns prepared or filed by tax agents

Taxpayers whose income tax returns are linked to a tax agent [see 47.70] have an additional two months to pay their terminal tax. For example, taxpayers whose terminal tax would normally be due by 7 February have until 7 April to pay their terminal tax if they have a tax agent. This extension of time applies to all taxpayers who have a tax agent, not just to provisional taxpayers. The two-month extension applies only if the tax agent has an extension of time arrangement under s 37 of the TAA.

The extended terminal tax date also applies to ACC premiums paid by self-employed taxpayers [see 10.50].

1150.75 Penalties and interest

For commentary on the penalty and interest provisions applying to provisional tax see the following paragraphs:

(a) Late payment penalty [see 1110.55];

(b) Tax shortfalls [see 1110.85]; and
Provisional taxpayers are able to pool their provisional tax payments and thereby reduce their exposure to use of money interest (UOMI) [see 1110.290]. Provisional tax payments are pooled in an Inland Revenue tax pooling account, which is established and administered by an intermediary. Provisional taxpayers make payments to the intermediary. The intermediary then deposits these payments into the tax pooling account. The intermediary requests Inland Revenue to transfer amounts from the tax pooling account to the individual provisional taxpayer’s account with Inland Revenue once the taxpayer’s year-end tax liability has been determined. Rather than underpayments and overpayments of provisional tax being subject to UOMI, they are offset against those of other provisional taxpayers within the pool. Underpayments and overpayments are charged or credited with interest at market rates by the intermediary, rather than at the UOMI rates.

The following diagram shows how provisional tax pooling works.

A person or company wishing to be an intermediary must apply to Inland Revenue. An application to establish a tax pooling account must state the applicant’s full name, address and tax file number. The application must include statements that:

(a) The applicant has administration and information technology systems in place to protect the privacy of the personal information and payment details of its clients and to record the amount remaining at any time in the tax pooling account for each client taxpayer;

(b) The applicant has established a trust account into which amounts received as an intermediary will be paid;

(c) The applicant, each person acting as an officer of the applicant (if not a natural person), and any principal of the applicant is not a bankrupt, has not been convicted of a dishonesty offence, and is eligible to be a company director; and

(d) The applicant will, before acting as an intermediary for any taxpayer, inform the taxpayer that Inland Revenue is not required to oversee or audit the operation of the tax pooling account, that Inland Revenue is not liable for any loss the taxpayer suffers because of the way the intermediary operates the account, and of the requirements of (a), (b) and (c) above.

If Inland Revenue is satisfied that the applicant will operate the tax pooling account correctly, and the applicant’s information technology systems will allow the applicant to make payments and provide information in a prescribed format, Inland Revenue may give written approval for the applicant to establish a tax pooling account. The tax pooling account is established in the name of the intermediary and continues until wound up. The account does not relate to a particular tax year.

Any provisional taxpayer may contract with a person operating a tax pooling account for that person (ie the intermediary), to act as an intermediary between the provisional taxpayer and Inland Revenue in using the funds from the tax pooling account to meet the provisional taxpayer’s provisional tax obligations.
When an intermediary accepts a payment from a provisional taxpayer for deposit into a tax pooling account, the intermediary must (at or before the time of payment), advise the taxpayer that the payment does not satisfy the provisional taxpayer’s obligation to make a payment to Inland Revenue. It is only once the amount is transferred from the tax pooling account to the provisional taxpayer’s account with Inland Revenue that the obligation is actually satisfied.

An intermediary must maintain and operate administration and information technology systems that protect the privacy of the personal information and payment details of its clients and that record the amount remaining at any time in the tax pooling account for each client taxpayer.

Inland Revenue is not required to oversee or audit the operation of a tax pooling account. Furthermore, Inland Revenue is not liable for any loss suffered by a provisional taxpayer because the intermediary:

(a) Does not deposit a taxpayer’s payment into a tax pooling account;
(b) Makes an unauthorised withdrawal from a tax pooling account; or
(c) Fails to request a transfer of funds from a tax pooling account to a taxpayer’s account with Inland Revenue.

A provisional taxpayer intending to use the services of an intermediary thus needs to first satisfy themselves of the integrity and reliability of the intermediary.

When a deposit is made to a tax pooling account, the intermediary must notify Inland Revenue electronically of the name, tax file number and the amount of the deposit, for each provisional taxpayer. If these details are not provided within five working days, Inland Revenue must refund the deposit. On receipt of a deposit, Inland Revenue must notify the intermediary of the account to which the deposit has been paid, the provisional taxpayers who are recorded as being associated with the deposit and the amount of the deposit that is recorded as being associated with each provisional taxpayer.

The amount paid by a provisional taxpayer to an intermediary for deposit in a tax pooling account is held in trust by the intermediary for the provisional taxpayer until the amount is credited to the provisional taxpayer’s Inland Revenue account, credited to the Inland Revenue account of another provisional taxpayer who is a client of the intermediary, or refunded to the provisional taxpayer.

Use of money interest on an amount deposited in a tax pooling account accrues to the benefit of the intermediary from the date of deposit and is payable to the intermediary on the effective date of the credit of the amount to another Inland Revenue account, or the date the amount is refunded by Inland Revenue to the intermediary. For the purpose of calculating use of money interest, but for no other purpose, an amount deposited into a tax pooling account is treated as tax paid by the intermediary.

An intermediary may at any time request Inland Revenue to transfer an amount from the tax pooling account to a client’s Inland Revenue account. The intermediary can request that the amount be credited on any date on or after the date the amount was deposited into the tax pooling account. Inland Revenue will credit the amount to the provisional taxpayer’s account on the date requested by the intermediary, unless the requested date is in a tax year for which the terminal tax date is more than 60 days before the date on which Inland Revenue receives the transfer request and the provisional taxpayer is liable for a penalty that relates to the provisional taxpayer’s provisional tax obligations for the tax year. Otherwise, the amount will be credited on the date Inland Revenue receives the transfer request.

When requesting a transfer, the intermediary must provide Inland Revenue with the following details electronically:

(a) The date on which the amount is to be transferred and the effective date of the transfer, if different;
(b) The amount to be transferred; and
(c) The tax file number of the taxpayer.

Inland Revenue must not action a transfer if the amount was deposited into the tax pooling account within five days of the transfer request and the details required on deposit have not been provided, or if the information required under (a) to (c) above has not been provided. When an amount has been transferred, Inland Revenue must provide a statement showing the effect of the transfer on the intermediary and the
provisional taxpayer whose account has been credited. An amount transferred and credited to a provisional taxpayer’s account is treated as income tax paid to meet a provisional tax obligation.

Inland Revenue may refuse to accept a request for transfer, or may reverse a transfer, if Inland Revenue considers that the request is made for tax avoidance purposes. An intermediary may request Inland Revenue to refund all or part of the balance in the tax pooling account.

An intermediary may wind up their tax pooling account at any time. Inland Revenue may require an intermediary to wind up their tax pooling account if Inland Revenue considers that:

(a) The intermediary’s actions are preventing a provisional taxpayer from effectively managing their liabilities to pay provisional tax and use of money interest;
(b) The intermediary is, or has been, in breach of their obligations under ss RP 18 to RP 21;
(c) The tax pooling account has gone into deficit;
(d) There are, or are likely to be, consistently fewer than 100 taxpayers using the tax pooling account;
(e) The intermediary, any person acting as an officer of the intermediary (if not a natural person), and any principal of the applicant has been made bankrupt, has been convicted of a dishonesty offence, or is not eligible to be a company director; or
(f) The intermediary has been put into liquidation or receivership.

In the case of (d), Inland Revenue must give the intermediary 30 days notice of the intention to wind up the tax pooling account. When a tax pooling account is wound up, Inland Revenue may at its discretion either refund the funds in the tax pooling account to the intermediary or apply to a court for directions on how the funds should be disposed of.

When an intermediary makes a payment of interest to a client (or vice versa), arising from the operation of a tax pooling account, the payment is:

(a) Income (under s CC 4) to the person who derives the payment. The payment is subject to the RWT or the NRWT rules, as applicable.
(b) Expenditure incurred in deriving the gross income of the person who makes the payment.

Example:
Two provisional taxpayers, A and B, each have standard balance dates. A overpays its provisional tax by $5,000 at each of the instalment dates (28 August, 15 January, 7 May); B underpays its provisional tax by $5,000 at each instalment date. In the absence of an intermediary, A would receive UOMI calculated at the CIR’s lower paying rate whilst B would be charged UOMI calculated at the provisional taxpayer’s higher paying rate [see 1110.290]. If A and B employed the services of an intermediary, and assuming the intermediary it could be expected that the rate received by A would be higher and the rate paid by B would be lower.

1150.80 Dates of payment in a transitional year [s RC 21]
“Transitional year” means the period for which a taxpayer furnishes a return under s 39 of the TAA [s YA 1]. In other words, a transitional year is when the taxpayer’s tax year is not equal to 12 months because the taxpayer has had a change of balance date.

The total amount of provisional tax payable in a transitional year is the total of all provisional tax instalments due in the transitional year, as set out below and in 1150.82.

The interim instalments fall due on the 28th day of the months set out in sch 3, Part B except that 15 January is in place of 28 December (if applicable) and 7 May is in place of 28 April (if applicable). Provisional tax, in the case of interim instalments, is not payable on:

(a) The date of instalment B, if s RC 13 would have applied if the year were not a transitional year;
(b) The dates of instalments B and D, if s RC 14(1)(a) and (b) would have applied if the year were not a transitional year;
(c) The dates of instalments B, D, and F, if the person liable to pay provisional tax is a person with an initial provisional tax liability whose first business day occurs within 30 days of the date of instalment F;
(d) The date of instalment C, if s RC 14(1)(c) would have applied if the year were not a transitional year; or
(e) The dates of instalments C and F, if the person liable to pay provisional tax is a person with an initial provisional tax liability who pays GST on a six-monthly basis whose first business day occurs after the day that is 30 days before the date of instalment F.

The final instalment falls due on the 28th day of the month following the final month in the transitional year; except that this is the 15th day of January when November is the final month, or 7 May, when March is the final month. The calculation of the amounts payable on each instalment are explained in 1150.82.

The number of months in a transitional year is determined as follows. The first month in a taxpayer’s transitional year is the first whole month in that transitional year. For a new provisional taxpayer, the first month in a transitional year is the month following the first business day. The final month in a transitional year is the month in which a taxpayer’s new return date occurs [see 770.50]. Each month falling between the first and final months is counted to determine the length of the transitional year. The months for the payment of provisional tax instalments in a transitional year are outlined below [sch 3, Part B].

(1) Monthly and two-monthly non-ratio and non-GST provisional taxpayers

The months for the payment of provisional tax instalments in a transitional year are:

<table>
<thead>
<tr>
<th>Transitional year length</th>
<th>New instalment months</th>
</tr>
</thead>
<tbody>
<tr>
<td>0–4 months</td>
<td>1 month following final month</td>
</tr>
<tr>
<td>5–8 months</td>
<td>2 5th month, month following final month</td>
</tr>
<tr>
<td>9–12 months</td>
<td>3 5th, 9th months, month following final month</td>
</tr>
<tr>
<td>13–16 months</td>
<td>4 5th, 9th, 13th months, month following final month</td>
</tr>
<tr>
<td>17–20 months</td>
<td>5 5th, 9th, 13th, 17th months, month following final month</td>
</tr>
<tr>
<td>21–24 months</td>
<td>6 5th, 9th, 13th, 17th, 21st months, month following final month</td>
</tr>
</tbody>
</table>

(2) Six-monthly non-ratio provisional taxpayers

The months for the payment of provisional tax instalments in a transitional year are:

<table>
<thead>
<tr>
<th>Transitional year length</th>
<th>New instalment months</th>
</tr>
</thead>
<tbody>
<tr>
<td>0–6 months</td>
<td>1 month following final month</td>
</tr>
<tr>
<td>7–12 months</td>
<td>2 7th month, month following final month</td>
</tr>
<tr>
<td>13–18 months</td>
<td>3 7th, 13th months, month following final month</td>
</tr>
<tr>
<td>19–24 months</td>
<td>4 7th, 13th, 19th months, month following final month</td>
</tr>
</tbody>
</table>

(3) GST ratio provisional taxpayers

The months for the payment of provisional tax instalments in a transitional year are:

<table>
<thead>
<tr>
<th>Transitional year length</th>
<th>New instalment months</th>
</tr>
</thead>
<tbody>
<tr>
<td>0–2 months</td>
<td>1 month following final month</td>
</tr>
<tr>
<td>3–4 months</td>
<td>2 3rd month, month following final month</td>
</tr>
<tr>
<td>5–6 months</td>
<td>3 3rd, 5th months, month following final month</td>
</tr>
<tr>
<td>7–8 months</td>
<td>4 3rd, 5th, 7th months, month following final month</td>
</tr>
<tr>
<td>9–10 months</td>
<td>5 3rd, 5th, 7th, 9th months, month following final month</td>
</tr>
<tr>
<td>11–12 months</td>
<td>6 3rd, 5th, 7th, 9th, 11th months, month following final month</td>
</tr>
<tr>
<td>13–14 months</td>
<td>7 3rd, 5th, 7th, 9th, 11th, 13th months, month following final month</td>
</tr>
</tbody>
</table>

</tbody>
</table>

#### Amount of instalments in a transitional year

- If a taxpayer does not make an estimate of residual income tax (RIT) for a transitional year before an instalment date, and the instalment is not a final instalment, the amount payable on an instalment date is calculated using the following formula:

  \[
  \frac{\text{person's provisional tax} \times \text{instalments payable}}{\text{total instalments}} - \text{tax previously payable}
  \]

  Where:
  
  - "Person’s provisional tax" is the amount of provisional tax previously due and payable for that year;
  - "Instalments payable" is the aggregate number of instalments due in that year before the instalment date;
  - "Total instalments" is whichever of the following applies: Three for a person who pays on instalment dates B, D and F; Two for a person who pays on instalment dates C and F; and
  - "Tax previously payable" is the amount for the transitional year of the provisional tax payable before the instalment date [s RC 22].

- In a transitional year, provisional taxpayers who furnish estimates or revised estimates must:
  - (a) Before the CIR notifies a change of balance date, estimate RIT as if no change in balance date will be approved; and
  - (b) After the CIR notifies a change in balance date, re-estimate RIT.

Once a change of balance date has been approved, and the provisional taxpayer is making an estimate of RIT for the transitional year, the amount payable on an instalment date, other than a final instalment date, is calculated using the following formula:

\[
\frac{\text{tax estimate} \times \text{instalments payable}}{\text{transitional months}} - \text{tax previously payable}
\]

Where:

- "Tax estimate" is the amount of provisional tax last estimated under s RC 5(5);
- "Instalments payable" is either: four multiplied by the number of instalments in the transitional year payable on or before the instalment date if the person pays on the equivalent instalment dates B, D, and F; or six multiplied by the number of instalments in the transitional year payable on or before the instalment date if the person pays on the equivalent instalment dates C and F.
- "Transitional months" is the number of months in the transitional year [see 1150.80];
- "Tax previously payable" is the amount of provisional tax for a tax year calculated on the basis of the transitional year that is payable before the instalment date.

If a taxpayer has not made an estimate of the RIT for a transitional year, the amount payable on a final instalment date is calculated using the following formula:

\[
\frac{\text{person’s provisional tax} \times \text{transitional year days}}{\text{preceding year days}} - \text{tax previously payable}
\]

Where:
“Person’s provisional tax” is the provisional tax liability under s RC 5(2) or (3);
“Transitional year days” is the number of days in the transitional year;
“Preceding year days” is the number of days in the immediately preceding tax year;
“Tax previously payable” is the amount of provisional tax previously due and payable for that year and calculated on the basis of the person’s transitional year that is payable before the instalment [s RC 22].
If a provisional taxpayer makes an estimate of the income tax for a transitional year, the amount payable on a final instalment date is the amount of provisional tax payable less the amount of any instalments previously due and payable.

**1150.83 Provisional tax in years following a transitional year** [s RC 20]
When provisional tax is calculated on the basis of the previous year’s residual income tax (RIT), and the previous year was a transitional year, an adjustment is required to convert the RIT to a full year equivalent amount.
When provisional tax is calculated using:
(a) The 105 per cent method if the preceding tax year is a transitional year; or
(b) The 110 per cent method if the tax year before the preceding tax year is a transitional year,
the provisional taxpayer’s RIT must be calculated using the following formula:
\[(\text{residual income tax} \times \text{days in current tax year}) / \text{days in transitional year}\]
Where:
“Residual income tax” is the RIT for the transitional year;
“Days in current tax year” is the number of days in the current tax year; and
“Days in transitional year” is the number of days in the transitional year [s RC 20(4)].
Until the new balance date is approved, the provisional taxpayer shall use the existing instalment dates up until the time when the new balance date is reached [s RC 25].

**1150.85 Payments set off within wholly-owned group** [s RC 32]
Where a company, included in a wholly-owned group of companies, has paid provisional tax in excess of its RIT, the company may elect to allocate all, or any part of, the excess to any other company included in that tax year in the same wholly-owned group. The excess can be allocated to the extent that the provisional tax paid by the other company is less than its RIT for that year. The company who has overpaid its provisional tax is referred to as the “excess company” and the company that is allocated the excess tax is referred to as the “underpaid company”.
An excess company may make an allocation for a tax year only on, or after, the later of:
(a) The day on which the provisional tax in excess is paid by the excess company; or
(b) The day on which the first instalment of provisional tax payable for the tax year becomes payable by the underpaid company.
An allocation is deemed to be made on the day specified in the notice. Any provisional tax allocated by an excess company to an underpaid company is deemed to be provisional tax paid by the underpaid company and not by the excess company.
The notice of allocation must:
(a) Be in writing;
(b) Name the underpaid company or companies to which the excess is to be allocated, and the amount or amounts so allocated;
(c) Be furnished to the CIR within the time within which a return of income is required to be furnished by the underpaid company or companies, or within further time as the CIR may allow; and
(d) Specify the day on which the excess amount is deemed to be allocated to the underpaid company and the amount of the excess so allocated.

(1) Consolidated group provisional tax [s RC 8]

For commentary on the provisional tax rules for consolidated groups [see 190.65].

1150.90 Life insurer’s provisional tax [s RC 5(8)]

A life insurer must provide the CIR with details of how its provisional tax was calculated. These details must specify the extent to which the provisional tax relates to the policyholder base.
Chapter 1160
Qualifying Companies

1160.05 Purpose
The qualifying companies regime has applied since the 1993 income year. Under this regime closely held companies can be treated in a manner similar to partnerships for income tax purposes. Dividends paid by a qualifying company must be fully imputed to the extent that imputation credits or dividend withholding payment credits are available. To the extent that these credits are not available, the dividends will be exempt. This means that in effect dividends and capital gains can be distributed tax free to shareholders. If the qualifying company is also a loss attributing qualifying company any losses that it makes must be passed on to its shareholders, in proportion to their shareholding. The shareholder can then offset their share of the company’s tax loss against their other income.

A qualifying company retains its corporate status. It also retains its limited liability status, except in respect of the company’s income taxes, as the shareholders generally assume personal liability for their share of the company’s income tax. The definition of qualifying company is given in s HA 2, and the other qualifying companies legislation is found in Subpart HA. See also Inland Revenue’s Booklet Qualifying Companies (IR435).

1160.06 Phase-out of the regime
(1) Restrictions on entry into the regime [s HA 5]
The qualifying company regime is being phased out. Generally, only companies that were qualifying companies (QC) or loss attributing qualifying companies (LAQC) in the “grand-parenting income year” are eligible for inclusion in the regime. The one exception to this rule applies to new companies. These are companies that have not previously been required to file a return of income. These companies are able to
make an election on or before the date on which they are required to file their income tax return for the “grand-parenting income year”.

The “grand-parenting income year” is the year prior to the first income year that starts on or after 1 April 2011. For example, if a company’s balance date is 31 May, the “grand-parenting income year” is the year prior to the one that commences on 1 June 2011. That means that the “grand-parenting income year” is the year that runs from 1 June 2010 to 31 May 2011. For a new company, an election to enter the qualifying company regime would need to be made by the date on which the return for the year ended 31 May 2011 is required to be filed. The election would apply from the year ended 31 May 2011.

Existing QCs and LAQCs (including new companies that enter the regime under the conditions set out above) that do not wish to transition to an alternative business structure are able to continue to use the QC rules. However, continuing LAQCs are no longer able to attribute losses to shareholders.

**1160.07 Transition to other business structures** [ss HZ 4B, HZ 4C, HZ 4D]

(1) **Background**

QCs and LAQCs are able to transition to a new business structure. In order to take advantage of the transition provisions, the company must be QCs or LAQCs in the “grand-parenting income year” (see above).

The transition can occur in either of the two income years immediately following the “grand-parenting income year”. Where it occurs in the latter of these two years, the company must have also met the QC or LAQC criteria for the whole of the first of the two transition years.

The transition rules allow for a QC or LAQC to transition into any one of the following:

(a) A partnership;
(b) A limited partnership;
(c) A look-through company;
(d) A sole trader.

A transition to whichever structure is chosen must be completed by the end of the transition year. This includes the transfer of all assets and liabilities and the completion of all necessary legal documentation. Failure to complete the process in time will result in the corporate structure remaining in place but the QC status will have been lost.

(2) **Transition to partnership or limited partnership** [s HZ 4B]

A transition into a partnership, limited partnership or sole trader can be done at no tax cost.

During the first six months of the chosen transition year, the QC or LAQC must inform the CIR that it intends to transition into a partnership or limited partnership. The notice also serves as a revocation of QC or LAQC status with effect from the beginning of the transitional income year. The tax treatment for the new structure will apply from the beginning of the transitional income year.

The partners of the new partnership must be the same people as those who were shareholders in the QC or LAQC. The one exception to the “same people” rule is that a limited partnership may have a company as its general partner and the shareholders of what was the QC or LAQC as its limited partners.

The partners must also have the same relative interests in the partnership as they had in the QC or LAQC. This includes both assets and liabilities and the associated rights and obligations. If more than one QC or LAQC transition into the same partnership, it is necessary to ensure that their net relative positions in the total merged business remain the same.

Any person who dies during the transitional year is treated as still being a partner for the purposes of the “same people” and “same relative rights” requirements.

Any loss carried forward by the QC can be used by the partners of the new partnership against their share of the income of the new partnership. Where a QC or LAQC has CFC or FIF losses carried forward, the normal country ring-fencing applies.
The effect of the transition is that the partners effectively step into the shoes of the shareholders of the QC or LAQC and are treated as having, on the first day of the transitional income year, the QC’s or LAQC’s historical tax positions. Any balance in the QC’s or LAQC’s imputation accounts is ignored as is any available subscribed capital.

The limited partnership loss limitation rules [see 1050.80] do not affect these carried forward losses. For the purposes of the limited partnership loss limitation rules, the “partners’ basis” formula can be calculated using either:

(a) The market value or accounting book value as at the end of the income year prior to the transitional year of the various amounts in the formula; or
(b) The historic basis, as if the limited partnership rules had always applied.

If the formula results in a partner’s basis that is less than zero, it is deemed to be zero.

(3) Transition to look-through company [s HZ 4C]

Where a QC or LAQC becomes a look-through company, the original company remains in existence. It is only the tax treatment that changes.

All of the shareholders of the existing QC or LAQC must complete an election to become a look-through company [see 920]. The election must be made during the first six months of the chosen transitional year. The election also serves as a revocation of QC or LAQC status with effect from the beginning of the transitional income year. The look-through company then steps into the shoes of the qualifying company in respect of the various elections and methods relating to the qualifying company.

The tax treatment for the new structure will apply from the beginning of the transitional income year. No entry tax is payable on transition into the look-through company regime.

Any loss carried forward by the QC can be used by the owners of the look-through company against their share of the income from the look-through company. Where a QC or LAQC has CFC or FIF losses carried forward, the normal country ring-fencing applies.

For the purposes of applying the look-through company deduction rules [see 920.45], all of the persons who hold owner’s interests are required to choose one of the following two methods for calculating their basis:

(a) The market value or accounting book value as at the end of the income year prior to the transitional year; or
(b) The historic basis, as if the look-through company had always existed and all rules that apply to a look-through company had always applied.

If the calculation results in an owner’s basis that is less than zero, it is deemed to be zero.

(4) Transition to sole trader [s HZ 4D]

Transition to a sole trader can occur only where there is one single shareholder in the QC or LAQC. It cannot occur where there is more than one shareholder.

Any loss carried forward by the QC can be used by the sole trader in future income years. Where a QC or LAQC has CFC or FIF losses carried forward, the normal country ring-fencing applies.

(5) Other matters to be considered

Where a QC or LAQC transitions into a sole trader or partnership, then any income and expenses incurred during the transitional year will be treated as having been derived or incurred by the sole trader or partnership (as the case may be) notwithstanding that, in fact, they were derived or incurred by the QC or LAQC.

Matters such as working partner employment contracts will be deemed to be in place from the beginning of the transitional year. However, a new contract should be entered into once the transition actually occurs.

Partners and sole traders will be self-employed persons for the transitional year and so should ensure that matters such as personal provisional tax payments are made. It may be possible to transfer existing tax balances from the QC or LAQC to the sole trader or partners.
Qualifying companies definition [ss HA 2, HA 5, HA 6, HA 7, HA 8, HA 9, HA 11]

A company is a qualifying company where all of the following apply:

(a) It is not a unit trust [s HA 2];

(b) At all times in the income year, it is resident in New Zealand and not treated by a double tax agreement as not resident (however, it can have one or more non-resident shareholders) [s HA 6(2)];

(c) It has five or fewer shareholders [see 1160.12], or is a flat-owning company (one whose governing instrument provides that each registered shareholder is entitled to occupy or use residential property in New Zealand owned by the company, provided the residential properties are the only significant assets of the company) [s HA 6(1)];

(d) Each shareholder in the company is either:
   (i) A natural person (other than a trustee);
   (ii) A trustee of a trust provided:
       – All dividend income derived by the trustee from the qualifying company during the income year that can, under general trust law, be distributed is beneficiary income of a beneficiary other than:
           (A) A trustee beneficiary; or
           (B) A beneficiary that is a company other than a qualifying company; and
       – At least some of the dividends derived by the trustee from the qualifying company have either vested in, or been distributed to:
           (A) A beneficiary other than a trustee beneficiary; or
           (B) A beneficiary that is a company other than a qualifying company;
           and was beneficiary income of that person [s HA 11(5)].
   (iii) Another qualifying company [s HA 7(1), (2)];

(e) The company does not during the income year derive “foreign non-dividend income” (see below) exceeding $10,000 after deduction of the lesser of any:
   (i) Foreign non-dividend income derived under the accruals rules; or
   (ii) 10 per cent of gross income [s HA 9];

Foreign non-dividend income is income that:

(i) Does not have a source in New Zealand; and

(ii) Is not a dividend; and

(iii) Is not FIF income calculated under the fair dividend rate method.

For the purposes of the limit on foreign non-dividend income for qualifying companies, the definition of non-dividend income does not include foreign investment fund income calculated under the fair dividend rate (FDR) method. This change, backdated to 1 April 2008, has been made to accommodate the effect of the repeal of the grey-list of countries.

(f) The company must not have income interests in a CFC or attributing interests in a FIF that are a direct income interest of 10 per cent or more. If a qualifying company holds a CFC income interest or non-portfolio FIF interest in any income year beginning on or after 1 July 2009 it will immediately cease to be a qualifying company. This prevents qualifying companies from being used as intermediaries to distribute untaxed foreign income to New Zealand shareholders as dividends from qualifying companies are exempt under s CW 15 to the extent to which they are not fully-imputed [s HA 8B];

(g) All directors have made an election that is in effect at all times during the income year and which has not been revoked [s HA 5];
Qualifying Companies

(h) A shareholder election has been made in respect of shareholders who have full legal capacity and the election is in effect at all times during the income year and has not been revoked. Persons who can validly contract and bind themselves by legal obligation uncontrolled by any other person or persons have full legal capacity. Anyone under the age of 18 does not have full legal capacity.

(i) The company has not ceased to be a qualifying company by ceasing to be a loss attributing qualifying company.

In relation to item (d)(ii) above, if the trustee is a shareholder in several qualifying companies and does not distribute dividends from one company to beneficiaries, it is only that qualifying company which will lose its qualifying company status. The status of the other qualifying companies in which the trustee is a shareholder is not affected.

(1) Non-complying companies [ss HA 4, HA 11]

When a company ceases to meet any of the above requirements it ceases to be a qualifying company from the first day of the income year in which it failed to meet the requirement.

Example:
The number of shareholders in QC Ltd increased from five to six on 15 July 20X1. QC Ltd, which has a standard balance date, loses its qualifying company status from 1 April 20X1.

If a company did not know that it would cease to be a qualifying company, the CIR has the power to defer the date on which it ceases to be a qualifying company to the first day of a later income year. To exercise this power the CIR must be satisfied that the company did not know (and could not possibly have expected or ascertained) that it would cease to be a qualifying company whether:

(a) Through a reasonable expectation of a substitute election or other event occurring within any period of grace allowed for following a revocation of a shareholder election or a loss attribution election [see 1160.40];

(b) Through a reasonable expectation that it would not fail to comply with the requirement that during the income year it derives foreign non-dividend income not exceeding $10,000 after appropriate deductions; or

(c) Through a reasonable belief that qualifying company dividend income derived by a trustee would be distributed as beneficiary income.

In applying these provisions, the CIR must give consideration to all of the following matters:

(a) The period of time that has elapsed between the beginning of the income year and the date of failure to comply with any of the requirements of being a qualifying company;

(b) The period of time that has elapsed between the date of failure to comply and the date on which the failure became known, or could reasonably be expected to have become known;

(c) Any transactions of the company during any such period; and

(d) Any other relevant circumstances.

It is not intended that a company lose the benefits of being a qualifying company or a loss attributing qualifying company in any year solely because it liquidates or is formed in that year. The CIR will interpret the qualifying company legislation accordingly [see TIB vol 4:1 (August 1992) at 4].

1160.12 Five or fewer shareholders [ss HA 7(3), YB 21]

The following rules determine the application of the test of five or fewer shareholders:

(a) Shares held by a nominee of any person are regarded as being held by the person and not by the nominee [s YB 21];

(b) Shares in one company held by another company are regarded as being held by the shareholders of the latter company;
(c) A natural person who is a shareholder and all other shareholders related to that shareholder within the first degree by a blood relationship, marriage, civil union, de facto relationship or adoption, are regarded as a single shareholder (e.g., husband and wife, and parent and child are first degree relationships. A sister and brother are related in the second degree);

(d) Where a person becomes a shareholder in a qualifying company (whether through acquiring shares in the company or through the company becoming a qualifying company) and is treated with any other person as being a single shareholder, that person continues to be treated as a single shareholder, regardless of any subsequent death or marriage dissolution, for so long as he or she remains a shareholder in the qualifying company. This protects the situation where there is a break in the first degree of relationship because of a death or dissolution of marriage;

Example:
A father and his children all holding shares in the same company are treated as one person. If the father dies, the group continues to be treated as one person. However, if the father was not a shareholder, but all of his children were, the provision would not apply as each sibling would have been counted separately because they were not within the first degree of relationship with each other.

(e) Where a trustee is a shareholder the deemed number of shareholders in respect of that trust at any time is the greater of:

(i) The number of beneficiaries who, since the first day of the 1992 income year, have derived beneficiary income of dividends from any qualifying company; and

(ii) The number of persons (other than the trustee) who made a shareholder election on behalf of the trust that the company should become a qualifying company.

The trustee is not counted as a shareholder for the five or fewer test.

Example:
The following persons are shareholders in QC Ltd:
Jack Father
Jane Wife (second wife of Jack and stepmother of Paul)
Paul Son
Pauline Paul’s wife
A Ltd A qualifying company with shareholders being Jack, Jane, Paul, and Mary (Jack’s sister), and Joe (unrelated)
Family trust Beneficiaries are Sandra (Jack’s first wife and mother of Paul and Susan), Paul and Susan (aged 12 years)

For the test of five or fewer shareholders, QC Ltd has the following five shareholders:
• Jack, Jane, Paul and Susan, who are counted as one person, being one degree from Jack;
• Mary;
• Joe;
• Pauline;
• Sandra, who was divorced from Jack before the company became a qualifying company.

When applying the five or fewer shareholder test you can start with different shareholders to arrive at the fewest number of shareholders. In the above example, Paul and Susan could be grouped with Sandra instead of Jack. Alternatively, Paul and Pauline could be grouped together. In this particular case, whichever grouping was used, the number of shareholders would be five.

1160.15 Shareholder’s effective interest [s HA 44]
It is necessary to determine each individual shareholder’s effective interest in order to:

(a) Determine the appropriate proportion of a qualifying company’s tax liability that a shareholder assumes;
(b) Determine when certain shareholder elections can be made by majority shareholders [see 1160.30]; and
(c) Serve as a basis for attributing losses of loss attributing qualifying companies.

Example:
A shareholder has a voting interest of 60 per cent for five months and (through a reduction in shareholding) a voting interest of 20 per cent for the remaining seven months in an income year. The effective interest is:

\[
\frac{60}{100} \times \frac{5}{12} + \frac{20}{100} \times \frac{7}{12} = 36.7\%
\]

The shareholder would, therefore, be responsible for 36.7 per cent of the total tax assessed for that income year if the company defaults in payment of its tax; or be entitled to 36.7 per cent of losses if it is a loss attributing qualifying company.

### 1160.20 Director elections [ss HA 5, HA 30, HA 31]

A company is able to be a qualifying company only when, at the time of the notice of election, all directors have made elections in writing to the CIR that the company be a qualifying company. An election by the directors takes effect on the first day of the income year following the election unless a later income year is specified, and remains in force until it is revoked. Any election made by a company which has previously not been required to file an income tax return takes effect on the first day of the company’s income year if it is received by the CIR within the time allowed for the filing of a return for that first income year. The definition of “director” is very wide. It includes anyone occupying the position of director regardless of what the position is called, and includes any person whose instructions the directors are accustomed to following [s YA 1].

An election can be revoked only by a resolution of the board of directors that is notified to the CIR. The revocation is effective from the later of the beginning of the income year in which the CIR receives the revocation, or the beginning of the income year specified in the notice.

### 1160.30 Shareholder elections [ss HA 5, HA 8, HA 30]

A company may only be a qualifying company where every *sui juris* (of full legal capacity) shareholder has elected in writing that the company should become a qualifying company. The requirement to make a shareholder election extends to nominee shareholders. For example, if an accountant holds one share in a company, and the remaining 9,999 shares are owned by a client, the accountant must still make a shareholder election.

In addition, the shareholders must also have elected to be personally liable for their share (based on their effective interest), [see 1160.15] of any income tax not paid by the company and of any income tax not paid by another qualifying company in which the company is a shareholder. The shareholders’ personal liability covers only income tax incurred by the company in respect of the time it is a qualifying company, and does not apply to any other unpaid taxes.

An election remains effective until revoked, and takes effect:
(a) Where the company is not already a qualifying company, from the beginning of the income year following the year the election is made, unless a later year is specified; or
(b) Where the company is already a qualifying company, on the date the CIR receives written notice.

If a company has previously not been required to file an annual income tax return, any election made can take effect on the first day of the company’s first income year if it is received by the CIR within the time allowed for the filing of a return of income for that first income year [see 1160.35].

(1) **Shareholder trustees [s HA 8]**

Where a shareholder is a trustee, the trustee is treated as having made an election only where the trustee and one or more natural persons (who are *sui juris* beneficiaries) assume liability. Where there is no beneficiary who is *sui juris*, a natural person (who may also be the trustee) can assume liability on behalf of the beneficiaries. Written notice is given to the CIR electing that the company should become a qualifying company, and electing to be:
(a) Personally (in the case of a beneficiary or natural person); or
(b) To the extent of the trust’s net assets (in the case of a trustee), jointly and severally liable for the trustee shareholder’s share (based on the trustee’s effective interest [see 1160.15] of any income tax not paid by the company and of any income tax not paid by another qualifying company in which the company is a shareholder).

Whenever a trustee is a shareholder, extra care needs to be taken, especially after the qualifying company election is made, to ensure that the company retains its qualifying company status.

(2) Minority shareholders [s HA 8]

To prevent minority shareholders from preventing a company from becoming a qualifying company, majority shareholders may individually or jointly elect to assume responsibility in the place of minority shareholders. A minority shareholder (ie one with an effective interest of less than 50 per cent) is treated as having made an election where the majority shareholders (ie those with an aggregate effective interest of 50 per cent or more) have elected that the company become a qualifying company, and elected to be personally, jointly, and severally liable for the minority shareholder’s share (based on their effective interest), [see 1160.15] of income tax payable by the company and any tax the company may be liable for as a shareholder in another company.

1160.40 Revocation of shareholder elections [ss HA 32, HA 33, HA 34, HA 35, HA 36, HA 37]

Any shareholder election can be revoked by the person who made it by notice in writing given to both the company and the CIR. The company ceases to be a qualifying company from the first day of the income year in which the notice is received by the CIR, or on the first day of a later income year which may be specified in the notice. If it is necessary to determine the effective interest of the person making the revocation, it is determined on the date the CIR and the company received the notice of revocation or such later date as is specified in the notice [s HA 32].

A shareholder election is also deemed to be revoked in the following circumstances, from the first day of the income year in which the event that caused the revocation occurred:

(a) On the death of the person who made the shareholder’s election. The company will remain a qualifying company after the death of a shareholder, if within a 12-month period of grace following the death (or such extended period as allowed by the CIR upon application by the company, the personal representative of the deceased shareholder, or any other person who may make an election) all of the qualifying company requirements are met. For example, if a shareholder dies and leaves their shares to a person who was not previously a shareholder, the new shareholder (or majority shareholders on their behalf) has 12 months following the death to make a shareholder election [ss HA 33, HA 34];

(b) On sale or disposition of all the shares of a shareholder (who has made a shareholder election), unless the shares are sold or disposed of to an existing shareholder in the company for whose shareholding a valid shareholder election is already in effect [ss HA 33, HA 35];

Example:
Sharon, a shareholder in QC Ltd, sells all of her shares in the company to Peter, who was not previously a shareholder. Peter (or majority shareholders on his behalf) has a 63-day period of grace to make a shareholder election. However, if the sale of shares to Peter means that QC Ltd no longer has five or fewer shareholders [see 1160.12] the company ceases to be a qualifying company and there is nothing QC Ltd can do about it.

The CIR’s policy is that a transfer of shares held by a trustee to a new trustee constitutes a disposal of shares for the purposes of s HA 33 and a new election must be made [see TIB vol 6:5 (November 1994) at 6].
(c) Where an election has been made by both a trustee and a natural person to assume liability on behalf of beneficiaries (because there were no beneficiaries of full legal capacity) and a trust beneficiary attains full legal capacity [s HA 33];

**Example:**
The Jim Family Trust, a shareholder of QC Ltd, has three beneficiaries all of whom are aged under 20. When the first beneficiary, Sally, turns 20 the initial shareholder election in respect of the shares owned by the Jim Family Trust is deemed to be revoked. The trustee and Sally have 63 days to make a new shareholder election. If Sally refuses to make the election QC Ltd will lose its qualifying company status, unless a majority election can be made on behalf of the Jim Family Trust. It is not possible for someone to assume Sally’s responsibility.

(d) Where an election has been made by the majority shareholders who assume liability on behalf of the minority shareholders and the effective interest of a minority shareholder increases to 50 per cent or more [ss HA 33, HA 35];

**Example:**
Mr Smith, Mr Jones, and Ms Black are shareholders in a qualifying company. Their effective interests in the company are:
- Mr Smith, 20 per cent;
- Mr Jones, 40 per cent;
- Ms Black, 40 per cent.

Mr Jones and Ms Black have made a majority election on behalf of Mr Smith. Mr Smith then buys a further 30 per cent of the company’s shares from Mr Jones. Mr Smith’s effective interest in the company is now 50 per cent (an effective interest, if no market value circumstance exists, is the person’s voting interest in the company: see 1160.15). Their effective interests in the company after the sale are:
- Mr Smith, 50 per cent;
- Mr Jones, 10 per cent;
- Ms Black, 40 per cent.

Mr Jones and Ms Black now have a 50 per cent effective interest, which is still enough for a majority election, but Mr Smith has a 50 per cent effective interest which is no longer a minority interest. Therefore, the election on behalf of Mr Smith is deemed to be revoked. If the company is to remain a qualifying company, Mr Smith must make an election within 63 days (or such longer period as the CIR may grant), in which to make an election [see TIB vol 6:5 (November 1994) at 6].

(e) If an election has been made by the majority shareholders who assume liability on behalf of minority shareholders and the effective interest or aggregate effective interests of the majority shareholders then falls below 50 per cent. The company will cease to be a qualifying company unless a new election is made within 63 days [ss HA 33, HA 35];

(f) Where a joint election has been made and one of those persons revokes, or is deemed to have revoked, the election. If the person who made the election dies there is a 12-month period of grace for a new election to be made, otherwise there is a 63-day period of grace [s HA 36].

Sections HA 35 and HA 36 set out the periods of grace within which new elections must be made, or deemed to be made, when shareholder elections have been revoked or deemed to have been revoked. Generally, a substitute election must be made within 63 days of the date of receipt by the company of the notice of revocation. However, in the case of shareholder death, the period of grace is 12 months. If a substitute election is made within the period of grace, the company retains its qualifying company status. In all circumstances the CIR has the power to extend the period of grace on application from the company or any person who may make a shareholder election in respect of the shareholding. In order to exercise the discretion, the CIR must be satisfied that, under the circumstances, it would be unduly harsh or inappropriate to treat the company as having ceased to be a qualifying company.

Additionally, a company does not cease to be a qualifying company where it has issued or allotted any shares to a person other than an existing shareholder or when an existing shareholder attains full legal capacity if within 63 days or such extended period as is allowed by the CIR a valid shareholder election is made in respect of that shareholding.
1160.45 Liability of electing shareholders for company income tax [TAA, s 92AB]

Where a person makes a shareholder election to become liable for a percentage of the company’s income tax:

(a) That person becomes assessable, and liable as an agent for the company, for their share (based on their effective interest), [see 1160.15] of the company’s income tax and of any income tax payable by the company because it has made a shareholder election in respect of another qualifying company. If the shareholder has also made an election on behalf of a minority shareholder they are also liable for the effective interest of that minority shareholder. Shareholders who do not have full legal capacity have no liability because they have not made an election.

(b) No assessment for tax of an electing person and no assessment for tax of the company precludes an assessment being made of the other.

TaxNote: The shareholder liability arises only where the company fails to satisfy its tax liability.

Where a person who is liable for a percentage of the tax payable by a qualifying company first acquires shares in the company, or sells or disposes of his or her whole shareholding, the CIR can reduce the percentage of that person’s tax liability if the CIR is satisfied:

(a) With the support of adequate accounts and other relevant information, that the proportion of the tax liability attributable to the part of the income year, during which the person was a shareholder in the company, is smaller than the proportion that the part income year bears to the whole income year; and

(b) That in all circumstances it would be appropriate to reduce that person’s tax liability accordingly.

1160.50 Shareholder interest deductibility [s DB 9]

Non-cash dividends (other than taxable bonus issues) received by a shareholder from a qualifying company are exempt income. Section DB 9 restricts the amount of interest that a shareholder can claim as a deduction if they have borrowed money to acquire shares in the qualifying company and received non-cash dividends from the qualifying company during the income year. Specifically no deduction is allowed in calculating the net income of the shareholder for interest to the extent of the amount of any non-cash dividends (other than taxable bonus issues) which that shareholder, or any person associated with the shareholder, derives from the company in that income year.

Example:
During the 20X1 income year, Alex, a shareholder in QC Ltd paid $15,000 interest on money he borrowed to buy his shares in QC Ltd. He also received a $5,000 non-cash dividend from QC Ltd. His interest deduction for that income year is limited to $10,000 ($15,000 - 5,000).

The restriction on interest deductibility does not apply to the receipt of exempt cash dividends.

Where the associated person is associated with more than one shareholder in the qualifying company, the amount of any non-cash dividends (other than taxable bonus issues) derived by that person from that company in the income year is apportioned among the shareholders associated with the person in proportion to the effective interest in the company held by each of those shareholders in the relevant income year.

When the shareholder is also an employee, any non-cash benefits received will be subject to fringe benefit tax, and are not dividends. Accordingly, the restriction on interest deductibility will not apply.

1160.55 Taxation of qualifying companies [ss HA 17, CW 14, HA 22]

A qualifying company is taxed in the same way as any other company, but subject to the following rules:
(a) Dividends derived by qualifying companies are generally taxable. Sections CW 10 and CW 11 do not exempt from tax dividends received by a company which at any time before the date of deriving the dividend was a qualifying company [ss HA 17, CW 14]; and

(b) A qualifying company cannot utilise loss offsets from another company or make subvention payments to another company within a group unless the other company is also a qualifying company. However, qualifying company losses may be offset against the taxable income of a non-qualifying company [s HA 22].

1160.60  Qualifying company election tax [ss HA 40, HA 41, HA 42]

On becoming a qualifying company, the company is liable to pay qualifying company election tax (QCET). New companies have no QCET liability. Broadly stated, QCET is payable at 28 per cent on the amount of the company’s reserves that would be taxable if the company was liquidated and net assets distributed to shareholders. This excludes any amounts not ordinarily taxable to shareholders on liquidation, such as capital gains.

The amount of QCET payable, which cannot be less than nil, is calculated according to the formula:

$$\text{QCET} = (\text{dividends} + \text{balances} - \text{assessable income} - (\text{balances} / \text{tax rate}) \times \text{tax rate})$$

Where:

“Dividends” is the sum of the amounts that would be dividends if the company:

(a) Disposed of all its property, other than cash, to an unrelated person at market value for cash; and

(b) Met all its liabilities at market value (excluding income tax payable through disposing of the property or meeting the liabilities); and

(c) Was liquidated, with the amount of cash remaining being distributed to its shareholders without imputation credits or FDP credits attached.

“Balances” is the sum of the following amounts:

(a) The balance in the company’s imputation credit account;

(b) The balance in the company’s FDP account;

(c) Any unpaid income tax for an earlier income year less tax refunds due for the earlier income year; and

(d) Any unpaid FDP for a dividend received less refunds due for a dividend received, where the dividend was received before the date on which the company becomes a qualifying company.

“Assessable income” is the total assessable income that the company would derive by taking the actions described in the meaning “dividends” above less the amount of any deduction that the company would have for taking those actions.

“Tax rate” is the company tax rate for the relevant income year of the company.

If the company pays income tax with a purpose or intention of reducing the amount of QCET payable, the company’s ICA is reduced by the amount of the overpayment that is attributable to that action [s HA 41].

Inland Revenue does not require companies wishing to calculate their QCET liability to obtain formal valuations of assets and liabilities. Inland Revenue require a fair and reasonable valuation rather than a registered valuation. It would be acceptable, for example, for a real estate agent to provide a value for land owned by a company [see TIB vol 4:8 (April 1993) at 1].

Inland Revenue has developed a form that can be used to calculate QCET.

QCET is due on the company’s terminal tax date, for the year prior to the company becoming a qualifying company [s HA 42].

Example:

Small Ltd has a standard balance date. On 4 March 20X1 the shareholders and directors elect for it to become a qualifying company. This takes effect from 1 April 20X1 (the first day of Small Ltd’s 20X2 income year). Any QCET is due and payable on the 20X1 terminal tax date (ie 7 February 20X2, or 7 April 20X2 if Small Ltd has a tax agent).
A revocation made at any time before the end of the income year in which the QCET is payable normally removes the QCET liability. This is because the company becomes a non-qualifying company throughout the whole of the income year in which the revocation is made [see TIB vol 6:7 (December 1994) at 6].

QCET is not included in the term “income tax paid”. However, from 17 May 2007, QCET gives rise to a credit in the company’s imputation credit account (ICA) as a result of its payment. This is designed to stop companies contemplating winding up from electing to be a qualifying company and paying QCET on untaxed reserves at 30 per cent. A company that did that would then be able to distribute any untaxed reserves to the shareholders tax free, thus paying only 30 per cent tax instead of the shareholders rate, which could well be significantly higher. With QCET credited to the ICA, the reserves on which it was paid will be taxable when distributed to shareholders.

The CIR may make and issue assessments for QCET and late payment penalty, and taxpayers may follow the challenge process available [TAA, s 94].

QCET is also payable where a non-qualifying company amalgamates with a qualifying company. This applies where it is the qualifying company that continues in existence following the amalgamation. The amalgamated company is liable for the payment of any QCET arising on amalgamation. Any tax loss of the non-qualifying company is forfeited on amalgamation [s HA 40(2)].

### 1160.62 Forfeiture of losses [s HA 21]

In the income year in which a company becomes a qualifying company, any losses carried forward from previous years are forfeited and can no longer be carried forward. Losses incurred in the income year in which the company becomes a qualifying company and in any subsequent years can be carried forward.

**Example:**

Small Ltd had net losses of $12,500 carried forward from the 20X1 and 20X2 income years. Small Ltd became a qualifying company on 1 April 20X2 and the $12,500 net losses were forfeited. Small Ltd then makes a $5,000 net loss for the 20X3 income year. The $5,000 can be carried forward to subsequent income years.

### 1160.65 Qualifying company dividends [ss HA 14, HA 15, HA 16]

Broadly speaking, cash dividends paid by a qualifying company, including a loss attributing qualifying company, to a New Zealand resident shareholder must be fully imputed to the extent that imputation credits or dividend withholding payment credits are available. Credits are attached to dividends at the end of the income year in which the dividends have been paid. The amount of the fully-imputed distribution is calculated under the formula contained in s HA 15(2) (see below). To the extent to which the dividends exceed the fully imputed figure, they are exempt. Dividends paid to non-residents are subject to non-resident withholding tax, in the same manner as dividends paid by a non-qualifying company.

The formula is:

\[
\text{Full imputation credit} = \frac{\text{Attached imputation credit} + \text{Attached FDP credit}}{\text{Tax rate}}
\]

Where:

“Attached imputation credit” is the lesser of

(a) The maximum imputation credit that may be attached to the dividend by applying the maximum permitted ratio under s OA 18 (modified by changing the tax rate to an earlier company tax rate if s OZ 8 applies); and

(b) An amount calculated using the formula:

\[
\text{Attached credits} = \frac{\text{Attached credits} \times \text{amount of dividend}}{\text{amount paid before credits attached}}
\]

“Attached credits” is the balance in the company’s imputation credit account or FDP account, as applicable, on the last day of the tax year in which the dividend is paid (before a debit is made in respect of the dividend); “Amount of the dividend” is the amount before any imputation credits or FDP credits, as applicable, are attached;
“Amount paid before credits attached” is the total amount of dividends (excluding non-cash dividends other than taxable bonus issues) paid by the company during the tax year before any imputation credits or FDP credits, as applicable, are attached.

If the qualifying company is a FDPA company the company is treated as having attached a FDP credit to the dividend. The amount of the FDP credit is the lesser of:

(a) The maximum FDP credit that may be attached to the dividend under s OA 18, taking into account any imputation credit attached to the dividend as calculated above; and

(b) An amount calculated using the formula:

\[
\text{(attached credits} \times \text{amount of dividend)} / \text{amount paid before credits attached}
\]

The following rules apply to dividends paid by qualifying companies to New Zealand resident shareholders:

(a) Any unexpired 10-year bonus issue returned to shareholders before expiry of the 10-year period is income in the hands of the shareholder;

(b) Sections CW 9, CW 10, and CW 11 do not apply to treat a dividend paid to a corporate shareholder as exempt income;

(c) Any dividend (or part thereof) that is exempt income in the hands of trustee shareholder retains its exempt status upon distribution to New Zealand resident beneficiaries of the trust [s HA 16];

(d) Resident withholding tax (RWT) need not be deducted from qualifying company dividends, because they do not constitute resident passive income [s HA 14];

(e) Where the shareholder has a late balance date and the dividend is derived between 31 March and that balance date, the dividend is treated as if it was derived by the shareholder immediately following that balance date [s HA 14];

(f) An exempt dividend that is paid to trustees continues to be exempt when it is distributed to beneficiaries as beneficiary income [s HA 16];

(g) The amount of any imputation credit or dividend withholding payment attached to any dividend is debited to the company’s imputation account or dividend withholding payment account respectively on the date the company paid the dividend [s HA 19];

(h) A company dividend statement must be completed by the company showing all dividends paid, including taxable bonus issues (but not other non-cash dividends) whether or not any imputation credits or dividend withholding payment credits are attached. The statement must separately detail the gross and exempt dividends. It is required to be completed by 31 May following the end of the imputation year and filed with Inland Revenue;

(i) Likewise, a shareholder dividend statement containing similar details must be completed by the company in respect of all dividends paid and be given to each shareholder;

(j) In addition a company should, on request by a shareholder, include in the shareholder dividend statement details of the amount of non-cash dividends paid to the shareholder. Non-cash dividends paid to shareholders who are not employees are exempt, but the deduction that the shareholder can claim for interest is reduced by the amount of any non-cash dividends received [see 1160.50].

1160.68 **Imputation credit accounts** [ss OA 8(3B), RM 13, RM 32, OA 8(3B)]

There are some special rules that apply to qualifying companies’ imputation credit accounts (ICAs). Under s RM 13, the amount of an income tax refund paid to an ICA company is generally limited to an amount equal to the credit balance of the ICA at the end of the most recently ended imputation year (or later if certain rules apply) [see 670.65]. However, s RM 32 states that this limitation does not apply to qualifying companies, unless the tax was overpaid through an avoidance arrangement.
Example:
At 31 March 20X1, QC Ltd had a nil balance in its ICA. QC Ltd had overpaid its 20X1 provisional tax by $5,000. The $5,000 can be refunded to QC Ltd even though it will result in a debit balance in QC Ltd’s ICA. If QC Ltd was not a qualifying company the $5,000 could not be refunded.

Furthermore, under s OB 67, qualifying companies do not have to pay 10 per cent imputation penalty tax or further income tax if, at the end of an imputation year, there is an uncleared debit balance in their ICA that arises solely from the refund of income tax paid by the company [see 670.55 and 670.60].

Example:
Carrying on from the above example, if QC Ltd made no tax payments during the income tax year ended 31 March 20X2, it will have a $5,000 debit balance in its ICA at 31 March 20X2. Under the special rules that apply to qualifying companies, QC Ltd will not have to pay the further income tax or imputation penalty tax, which would have otherwise been due by 20 June 20X2. The deficit is instead carried forward to be offset against credits arising in the following income year.

The minimum shareholder continuity requirements for imputation credit accounts or dividend withholding payment accounts applying to non-qualifying companies do not apply to qualifying companies.

Upon ceasing to be a qualifying company:
(a) References relating to imputation credits and dividend withholding payment credits to the end of the year relate to the day immediately preceding the date when the company ceases to be a qualifying company;
(b) The imputation credit account is debited with the credit balance held in the account (before any credits attached);
(c) The dividend withholding payment account is debited with the credit balance held in the account (before any credits attached); and
(d) The shareholder continuity requirements apply from the day on which the company’s status as a qualifying company ends.

1160.70 Imputation credits and dividend withholding payment credits attached to dividends [s HA 15]

(1) Imputation credits
The imputation credits to be attached to dividends paid during the income year are calculated at the end of that income year.

When a qualifying company pays a dividend (other than non-cash dividends which are not taxable bonus issues) the imputation credits to be attached to that dividend are the lesser of:
(a) The credit available if the maximum imputation ratio was used; and
(b) An amount calculated according to the formula in s HA 15(2) [see 1160.65].

(2) Dividend withholding payment credits
When a qualifying company which keeps a separate dividend withholding payment account pays a dividend (other than non-cash dividends which are not taxable bonus issues), the dividend withholding payment credits to be attached to that dividend are the lesser of:
(a) The maximum permitted through the dividend withholding payment ratio calculation, after taking into account any imputation credit also attached (the combined imputation credits and dividend withholding payment credits can not exceed the maximum ratio of 30/70); or
(b) An amount calculated according to the same formula as is used for imputation credits but using the balance in the company’s FDP account instead of the balance in the ICA account.

These rules relate only to dividends paid to resident shareholders. Dividends paid to non-resident shareholders are subject to non-resident withholding tax and the rules relating to imputation credits and dividend withholding payment credits for non-qualifying companies.
**1160.75  Loss attributing qualifying companies [ss HA 1, HA 3, HA 4, HA 5, HA 10, HA 12, HA 38]**

For income years commencing on or after 1 April 2011, LAQCs are unable to attribute losses to shareholders. Instead, they are treated as being qualifying companies. For discussion of the loss attribution rules applying before that date, see *Staples Tax Guide 2011*.
Chapter 1180

Racing and Trotting

1180.10 Breeding or racing

The breeding and racing of bloodstock are closely related because a breeder’s objective is to breed a horse which will win races for the breeder or for some future owner, and/or be suitable for producing saleable progeny. However, for income tax purposes, there is a distinction between the two activities, and racing stakes won are exempt income.

It is sometimes difficult to distinguish between an activity which constitutes a business, the profits from which are taxable, and one which is a mere “hobby”, the profits from which are not taxable [see 130 BUSINESS]. The distinction between business and hobby is central to determining whether or not the proceeds of the sale of bloodstock are subject to tax.

1180.15 Exempt income [ss CW 47, CW 60]

Income derived by the following bodies is exempt income:

(a) The New Zealand Racing Board;
(b) The New Zealand Thoroughbred Racing;
(c) Harness Racing New Zealand;
(d) The New Zealand Greyhound Racing Association (Inc);
(e) Any “racing club” as defined in s 5 of the Racing Act 2003 if no amount income or club funds is used by or available to be used for the pecuniary profit of any member of the club or associate of a member.

Stake or prize money for any horse race, trotting race, or dog race is exempt income where it is paid by any club licensed to use the totalisator under the Racing Act 2003, or if the race is held outside New Zealand.

1180.20 Replacement breeding stock [s EC 48]

The CIR may allow the whole or part of the net gain from either:

(a) The sale of any breeding stock; or
(b) A payment received by way of insurance, indemnity, compensation or other damages for the loss or death of, or permanent injury to, any breeding stock,
to be offset against the cost of any bloodstock which has been acquired as replacement stock. “Net gain” means the amount by which the gross proceeds received exceeds the book value of the lost, dead, or injured stock. “Breeding stock” means bloodstock used in breeding operations or purchased for such use.

An application must be in writing not later than six months after year end, or within such further period as the CIR considers reasonable. The replacement bloodstock must be acquired before the application is made. Where there are valid commercial reasons for a delay in replacement, and replacement stock is acquired before the end of the second income year following the year in which the loss, death, or permanent injury of the animal occurred, a refund of the tax already paid on the assessable gain may be allowed. The application should be in writing and made before the end of the second income year following the year of loss, death, or permanent injury.

Example 1:
During the 20X1-X2 year a bloodstock breeder, Mr Stable, sold one of his broodmares for $100,000. Its book value at 31 March 20X1 was $50,000. His net gain was therefore $50,000. In April 20X2 he bought a replacement broodmare for $120,000, and then applied to the CIR to offset the net gain against the cost of the replacement. The CIR approved the application. The cost price of the replacement broodmare for tax purposes was therefore $70,000 (being $120,000 cost less $50,000 net gain offset).

Example 2:
A high-quality broodmare owned by Mr Bridle, a bloodstock breeder, died in January 20X1. As a suitable replacement could not be found in New Zealand, Mr Bridle visited stud farms in America. Finally, in April 20X2, he bought another mare. He received insurance proceeds of $350,000. The book value of the first mare at the time of its death was $200,000. The net gain was therefore $150,000. He included the gain in his 20X1-X2 income tax return. The cost of the new mare was $500,000. In June 20X2 he applied to the CIR for a refund of the tax paid on the assessable gain and for a reduction of the cost of the replacement mare. The application was received within two years of the end of the 20X0-X1 year, and the CIR was satisfied there were valid commercial reasons for the delay. The tax paid on the net gain was refunded and the cost of the replacement mare was reduced by $150,000.

1180.25 Cost of bloodstock

“Bloodstock” is defined in s YA 1 as any standard-bred or thoroughbred horse, including any interest or share in any such horse. All bloodstock is valued at cost subject to an annual write-down. The cost of a share in any breeding stock is able to be written down at the specified rate applying to full owners.

(1) Inland Revenue Policy

The following information regarding the CIR’s approach to determining the cost of bloodstock is taken from PIB 166 (November 1987).

The costs of purchasing or breeding are capitalised until the year in which the animal is first used for breeding purposes by that owner. Costs arising during or subsequent to that year are deductible in full.

The cost used for purchased bloodstock (other than in-foal mares — see below), is the cost price plus the costs of delivery. The cost used for home-bred bloodstock (including the progeny of a mare purchased in-foal) is:

(a) The service fee for the stallion used in the breeding; plus

(b) The depreciation allowed on the breeding mare in the year of servicing.

General farm costs are not significant in bloodstock breeding.

The cost of home-bred bloodstock progeny includes, inter alia, the specified writedown of the mare in the year of foaling, not in the year of servicing: TRA Case S12 (1995) 17 NZTC 7,102.

Where a taxpayer who breeds a foal also owns the stallion that provides the service, the service fee element of cost can be taken as:

(a) The market value of the stallion’s service; or

(b) Direct costs of the stallion divided by the number of mares serviced in the income year. The direct costs are depreciation on the stallion and insurance in the income year of servicing.
Where a mare is purchased in-foal, a portion of the price represents the service fee. The cost of the service fee needs to be subtracted from the cost of the mare and allocated to the cost of the foal. However, a mare may be purchased for less than the cost of the service fee plus the value of the mare before servicing. In other cases, the value of the service fee may not be known. In such situations, a cost allocation needs to be made.

(a) Where an in-foal mare is purchased for less than the value before servicing plus the service fee, the following calculation is used [see Example 1]:

\[
\text{cost allocated} = \frac{\text{value of service fee for mare}}{\text{value of mare plus service fee}} \times \text{price of mare}
\]

(b) Where an in-foal mare is purchased for more than its value before servicing but the cost of service is unknown [see Example 2]:

\[
\text{cost allocated to foal} = \text{price of mare} - \text{value of mare before servicing}
\]

(c) Where an in-foal mare is purchased but the value before servicing and the cost of service are unknown [see Example 3]:

\[
\text{cost of foal} = \text{value of foal}
\]

### Example 1:

<table>
<thead>
<tr>
<th>Description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>In-foal mare purchased for</td>
<td>$15,000</td>
</tr>
<tr>
<td>Mare’s value before servicing</td>
<td>$10,000</td>
</tr>
<tr>
<td>Service fee</td>
<td>$8,000</td>
</tr>
<tr>
<td>Cost allocated to foal ($8,000 + $18,000 × $15,000)</td>
<td>$6,667</td>

<td>$13,000</td>
</tr>
<tr>
<td>Cost of mare ($25,000 − $13,000)</td>
<td>$12,000</td>
</tr>
</tbody>
</table>

In some cases a mare may be leased by a stud. The lease charges can be treated in the same way as depreciation (ie deductible to the lessee and able to be allocated to the cost of a foal).

1180.30 Valuation of bloodstock [ss EC 39, EC 40, EC 41, EC 42, EC 43, EC 44, EC 45, EZ 5, EZ 6]

“Bloodstock ” is defined in s YA 1 as any standard-bred or thoroughbred horse, including any interest or share in any such horse.

Bloodstock is brought to account for income tax purposes at cost price less a write-down. In order to qualify for write-down, the mare or stallion must be two years of age or older. Subject to this age restriction, the write-down commences at the end of the year in which the bloodstock is:

(a) First used by a taxpayer for breeding purposes in the taxpayer’s bloodstock breeding business; or
(b) Purchased with the intention of being used for breeding purposes in the taxpayer’s bloodstock breeding business; or
(c) Owned by a taxpayer who is in the business of breeding bloodstock and who has formed the intention of using that bloodstock for breeding purposes.

(1) Stallions: Acquired or first used for breeding from 1 August 2006 [s EC 41]
The cost price of stallions acquired or first used for breeding on or after 1 August 2006 is written down to \$1 on a straight-line basis at the rate of 50 per cent of cost price per annum. Alternatively, the taxpayer may choose to use a write-down of 75 per cent of the diminishing value per annum.

In order to qualify for the 50 per cent and 75 per cent rates the stallion must not have been used for breeding in New Zealand prior to 16 December 1991, or used for breeding in New Zealand by any other person before its acquisition. However, there are three exceptions to the rule. The 50 per cent and 75 per cent rates may be used notwithstanding that the stallion has been used for breeding in NZ prior to 16 December 1991 where any one or more of the following apply:

(a) The other person transferred the stallion to the taxpayer by way of a relationship agreement under s FB 18 [see 960.15];
(b) The other person was a company in the same wholly-owned group of companies as the taxpayer; or
(c) For each year in which the stallion was used in New Zealand for breeding, it was owned by a non-resident, was removed from New Zealand after the breeding season, and was not subject to a write-down for New Zealand tax purposes (ie the stallion was a “shuttle stallion”).

TaxNote: The write-down for shuttle stallions is available only from 1 April 2008.

(2) Stallions: Acquired or first used for breeding before 1 August 2006 [s EZ 5]
The cost price of stallions acquired or first used for breeding before 1 August 2006 is written down to \$1 on a straight-line basis at the rate of 25 per cent of cost price per annum. Alternatively, the taxpayer may choose to use a write-down of 37.5 per cent of the diminishing value per annum.

In order to qualify for the 25 per cent and 37.5 per cent rates, the following two conditions must be met:

(a) The stallion must not have been used for breeding in New Zealand prior to 16 December 1991; and
(b) Before its acquisition by the taxpayer, the stallion must not have been used for breeding in New Zealand by any other person unless that other person transferred the stallion to the taxpayer by way of relationship agreement or the other person was a company in the same wholly-owned group of companies as the taxpayer.

Where the above conditions are not met, the rate of write-down is 20 per cent straight-line per annum based on cost price with no diminishing value equivalent [s EC 42].

(3) Broodmares: Acquired or first used for breeding from 1 August 2006 [ss EC 41, EC 42]
The write-down for broodmares acquired or first used for breeding on or after 1 August 2006 is dependent on two factors. These are:

(a) Whether or not the broodmare was first used for breeding prior to 1 April 2001; and
(b) Whether the broodmare has previously been used for breeding purposes by any other person, unless that other person transferred the broodmare to the taxpayer by way of relationship agreement or the other person was a company in the same wholly-owned group of companies as the taxpayer.

If the broodmare was not used for breeding in New Zealand before 1 April 2001, its cost is written down to \$1 on a straight-line basis over a maximum of six years (for broodmares that begin breeding at two years of age) with the cost of broodmares aged eight and older being written down in full in the year in which they are first used for breeding.

If the broodmare has previously been used for breeding in New Zealand, its cost is written down to \$1 on a straight-line basis over a maximum of seven years (for broodmares that begin breeding at two years of age)
with broodmares aged eight and older being written down in full in the year in which they are first used for breeding.

(4) **Broodmares: Acquired or first used for breeding before 1 August 2006 [ss EZ 5, EZ 6]**

The rate of write-down applying to broodmares is dependent on two factors. These are:

(a) Whether or not the broodmare was first used for breeding prior to 1 April 2001; and

(b) Whether the broodmare has previously been used for breeding purposes by any other person, unless that other person transferred the broodmare to the taxpayer by way of relationship agreement or the other person was a company in the same wholly-owned group of companies as the taxpayer.

If the broodmare was not used for breeding before 1 April 2001, its cost is written down on a straight-line basis to $1 by the age of 11 or over three years whichever is longer. If it was used for breeding before 1 April 2001, its cost is written down to $1 by the age of 14 or over three years whichever is longer.

In either case, the rate of write-down is increased by 25 per cent where the broodmare has not previously been used for breeding purposes by another person unless that other person transferred the broodmare to the taxpayer by way of relationship agreement or the other person was a company in the same wholly-owned group of companies as the taxpayer.

(5) **Infertility, birth deformity, or accident [s EC 43]**

If, by reason of infertility, birth deformity, or accident, the market value of any bloodstock on hand at the end of any income year is less than 50 per cent of the market value that would have applied had that incident not occurred, the taxpayer is entitled to value that bloodstock at the end of that income year at its market value. This commits the taxpayer to valuing that bloodstock at the market value at the end of each subsequent income year.

**1180.32 Leased bloodstock [ss CC 11, CC 12, CH 6, DZ 14, EJ 10, EZ 4, FA 6, FA 8, FA 9, FA 10, FA 11]**

The tax treatment of bloodstock leases is dependent on the terms of the particular lease in question. Factors that will impact on the treatment include the length of the lease, whether or not there is an option to purchase the bloodstock at the end of the lease term, and whether or not the lease is on arms-length terms. However, neither the personal property lease provisions of s EJ 10, nor the finance lease provisions in ss FA 6 to FA 1, CC 11, CC 12 and CH 6, apply to bloodstock.

**TaxNote:** A hire purchase agreement for bloodstock is an excepted financial arrangement under s EW 5.

Product ruling BR Prd 05/03 (5 December 2002 to 9 February 2005) and BR Prd 05/04 (10 February 2005 to 4 December 2007), give certainty to the tax treatment of bloodstock which is leased from New Zealand Bloodstock Leasing Ltd and which is used in breeding bloodstock progeny [see TIB vol 17:3 (April 2005) at 8-11].

In order for the rulings to apply, all of the following conditions must be met:

(a) The customer is in the business of breeding bloodstock;

(b) The customer has entered into the “Bloodstock Lease to Purchase Agreement” for the sole purpose of breeding from the leased bloodstock and intends to use that bloodstock in the production of assessable income;

(c) The lease payments are genuine, arms-length amounts;

(d) The leased bloodstock is mature and is capable of being used for breeding throughout the lease period;

(e) Any racing undertaken by the leased bloodstock is merely incidental;

(f) The lessee will have title to any progeny produced during the lease term;

(g) The bloodstock becomes the property of the customer only when the payment of the residual value is made after the lease termination date;
The residual value of the bloodstock is a reasonable estimate of the likely market value of the bloodstock at the lease termination date; and

The residual value amount when paid by the customer is not materially less than the open market value of the bloodstock at the lease termination date.

Where these conditions are satisfied, the following tax treatment results:

(a) The bloodstock lease payments are allowable deductions.

(b) At the end of an income year, the unexpired portion of any lease payments is subject to the prepaid expenditure rules [see 1140.10].

(c) The bloodstock valuation and specified write-down provisions apply when the bloodstock is purchased by payment of the Residual Value after the Lease Termination Date [see 1180.30].

(d) The cost price of the bloodstock is the Residual Value stated in the agreement.

(e) The general anti-avoidance rules do not apply.

(f) The financial arrangements rules do not apply.

(g) The operating lease provision, s EJ 10, does not apply.

(h) The finance lease provisions in ss FC 8A to FC 8I do not apply.

(i) The agreement is not treated as a hire purchase arrangement.

**TaxNote:** The ruling applies only to the agreement specified in it. However, similar arrangements may have similar tax outcomes.

**1180.35 Bloodstock used as a racehorse** [ss DW 2 EC 46, EC 47]

Where a taxpayer is in the business of breeding bloodstock, any bloodstock that the person uses for racing is treated as being so used as part of the bloodstock breeding business. If the bloodstock is being raced other than as part of the breeding business, the taxpayer is able to make application to the CIR that the bloodstock be treated as not being used in the breeding business.

Where the owner expects that the bloodstock will not be able to be used for breeding in the future, any use of the bloodstock for racing is not treated as being part of the breeding business. However, if the animal is being raced as part of the breeding business, application can be made to the CIR for it to be treated as such.

Any application must be made in writing with supporting documentation within one month after the day on which the bloodstock is first prepared for racing or is first raced, whichever is earlier.

Any change of use of bloodstock between being used in the breeding business and being used outside the breeding business is treated as occurring at market value.

Where the breeder races a horse as part of the breeding business to enhance the value of the horse or the stud, deductions are available for non-race related costs such as insurance, agistment, or veterinary costs. No deductions are available for the costs of racing the horse [s DW 2].

**1180.40 Deductibility of racing expenses** [s DW 2]

The following expenses are not deductible even where they are incurred by a breeder in carrying on the business of breeding bloodstock:

(a) The cost of preparing any bloodstock for racing. This does not include any expenditure or loss in preparing that bloodstock for sale where the person is in the business of breeding bloodstock and do not race the bloodstock on which the costs are incurred;

(b) The cost of racing bloodstock. Expenditure not directly related to racing is deductible to the stud owner in business.
Racing and Trotting

1180.45  Trainers
The limitations on the deductibility of expenses [see 1180.40] do not apply to trainers where the costs are incurred on bloodstock that the trainer is preparing for another person and the trainer receives assessable income for preparing that bloodstock for sale.

A taxpayer carrying on a business as a trainer of horses for racing is often able to acquire an interest in a horse. In TRA Case G53 (1985) 7 NZTC 1,229, the taxpayer’s method of apportionment of expenses was upheld. The taxpayer based the apportionment on the variable expenses of the training business and excluded from apportionment the fixed expenses on the grounds that these were incurred solely for business purposes and were not influenced by whether or not he had a racing interest in some of the horses that he trained. However, on appeal the High Court in Commissioner of Inland Revenue v Eales (1987) 9 NZTC 6,203 (HC) held, that once it was accepted that there was a private element in the expenditure for the variable costs, it was impossible not to extend that to apply equally to all other business costs. The distinction between fixed and variable costs was regarded as irrelevant.

Cases frequently arise where an owner and trainer enter into an arrangement (eg partnership or lease) entitling each to a percentage of the stakes won. Where the trainer’s interest is registered, any stake money paid to the trainer is exempt from tax and no deduction is allowable for expenses incurred in racing the particular horse.

A trainer’s interest must be registered where it is in excess of 10 per cent of the total interests. The amount received by the owner is treated as stake money and is accordingly exempt. This principle was confirmed in TRA Case Y22 (2008) 23 NZTC 13,238.

1180.50  Taxability of betting gains
Generally, money won from betting is not income and therefore not assessable. In Graham v Green (Inspector of Taxes) [1925] 2 KB 37, it was held that:

“A bet is merely an irrational agreement that one person should pay another person something on the happening of an event. A agrees to pay B something if C’s horse runs quicker than D’s, or if a coin comes one side up rather than the other side up. There is no relevance at all between the event and the acquisition of property. The event does not really produce it at all. It rests, as I say, on a mere irrational agreement.”

However, in several cases, winnings from betting have been held to be assessable. Almost without exception, these cases turn on special circumstances, and it is only rarely that betting transactions are so organised that they could be classed as a business carried on by a taxpayer. There appears to be no recorded case of a punter, whose life is otherwise dissociated from racing, being held liable for tax on betting gains, even where the transactions extend over a period of years.

In Duggan v Commissioner of Inland Revenue [1973] 1 NZLR 682 (SC), the taxpayer was a wool and skin buyer, but the results of the business over an eight-year period (according to the tax returns filed) were disappointing. Despite this, the taxpayer’s assets over the same period increased substantially. The CIR attributed the source of the increase to the business and, accordingly, considered the taxpayer’s returns to be fraudulent or wilfully misleading. The CIR argued in the alternative that, even if the increase came from race winnings, as the taxpayer alleged, such winnings were taxable income in the circumstances of the case. On appeal in the Supreme Court, Cooke J pointed out that the onus was on the taxpayer to show not only that the assessments were wrong but by how much they were wrong. His Honour was prepared to accept the taxpayer’s evidence that he had placed bets at race meetings regularly and systematically, and had had considerable success from time to time. However, his Honour considered that the taxpayer had failed to discharge the onus to show that he had won $27,000 in the eight-year period. Regarding the alternative submission, on which his Honour reserved his opinion, his Honour had regard to the regularity of the taxpayer’s betting, his frequent attendance at weekday as well as weekend meetings, his adoption of a “system”, and extent of his financial dependence on the winnings. He considered that this was a case where the winnings were taxable, notwithstanding the decision in Graham v Green (above). His Honour cited Commissioner of Taxes v McFarlane [1952] NZLR 349 (CA):
“Where income is in fact derived from betting activities which are engaged in, not with the motive of making casual gains or merely for sport or amusement, but with the motive of making an income, it is difficult to see on what principle such income can be differentiated from any other form of income.”

In an Australian case, *Case 7* (1978) 23 CTBR (NSW), two partners in a restaurant business were assessed on an asset betterment basis following an investigation of their affairs by tax inspectors. They claimed that the improvement in their asset position had been brought about by betting winnings. The three member Commonwealth Taxation Board of Review unanimously held that the taxpayers had made betting winnings and that, therefore, the assessments must be excessive. Two members considered that the taxpayers had thus discharged the burden of proof that the assessments were wrong; but the third member considered that the taxpayers should go further and demonstrate the quantity of the excess. The third member’s views were in line with those of the New Zealand Courts, which have held that it is necessary for a taxpayer, in displacing the onus of proof, to show not only that the assessments are excessive but by how much: *Lancaster v Commissioner of Inland Revenue* [1969] NZLR 589 (SC).

### 1180.55 Bookmakers

Bookmaking is a business, although illegal. Profits derived are assessable and losses incurred may be carried forward. Fines for breaches of the Gaming Act are not deductible. By reason of their occupation, bookmakers’ records are usually incomplete and it is, therefore, difficult for a bookmaker to arrive at a true income. If the CIR has reason to believe that the income returned does not closely approximate the true income, an arbitrary assessment may be issued, thus placing the onus on the bookmaker to establish that the assessment is excessive, and the extent of the excess.

A taxpayer with income from illegal sources has the same rights and obligations for tax purposes as any other taxpayer. Challenges to an assessment or to a ruling given by the CIR may be pursued and there is the legal right to secrecy.

A bookmaker who bets on their own account is assessable on winnings from this source. If there are losses on the betting transaction, these may be deducted from the bookmaking commissions: *Z v Commissioner of Taxes* (1948) 5 MCD 652.

In *Z v Commissioner of Taxes* (1948) 5 MCD 652 the taxpayer, who had himself owned and raced horses, acted as agent for a syndicate of owners and for individual owners in placing bets for them with bookmakers. Commissions earned on these bets were admitted as income. He also betted regularly and profitably on his own account. His success was explained as being due to his using the knowledge gained through his agency for owners who avoided the totalisator so that it would appear to the betting public that the horses were not well backed. In the case of doubles, he was in a position to know the opinion on each owner on his horse’s prospects, an advantage which neither owner might have. He did not attend race meetings but carried on his agency and his own betting activities by telephone from home. On appeal, the assessment was upheld on the facts.

### 1180.60 Jockeys and drivers

Jockeys and drivers in business are assessable on gross riding fees, less travelling and other expenses incurred in the production of their income. The gross fees are subject to withholding tax of 20 cents per dollar for jockeys and drivers and casuals and 15 cents per dollar for resident apprentice jockeys and drivers, whether the payments are fees, remuneration, prize money, appearance money, or otherwise. Non-resident jockeys and drivers have withholding tax deducted at 20 cents per dollar.

Some racehorse owners place bets for the benefit of their jockeys/drivers and trainers. Any proceeds paid to them are income and are in the same category as bonuses, etc, paid directly.

In *Commissioner of Taxes v McFarlane* [1952] NZLR 349 (SC), the taxpayer was a jockey, and the question at issue was whether the taxpayer’s betting gains were taxable. The Court of Appeal decided that the betting transactions were so organised with the taxpayer’s calling as to be part and parcel of it, or to amount to a business connected with it, and that, accordingly, the betting gains were assessable.
Chapter 1190

Rates of Tax

1190.10 Rates of tax [s BB 1; TAA, s 92A]
The rates of income tax may be fixed from time to time by an Act commonly referred to as an annual taxing Act. Schedule 1 of the ITA 2007 sets out the basic rates of income tax currently in force. The basic rates shown in sch 1 are amended from time to time by amendment Acts. The use of amendment Acts removes the necessity for Parliament to pass a separate Act each year to fix the income tax rates.

Even if the rates of tax for an income year have not been set by Parliament, the CIR can still proceed with the issue of assessments at the basic rates set out in sch 1 for the previous income year. If new annual rates of tax are subsequently fixed at a higher or lower level, any assessments already issued for the year may be increased or decreased accordingly.

1190.15 Individuals
The basic rates of income tax for individuals from 1 October 2010 are:

<table>
<thead>
<tr>
<th>Taxable Income Range</th>
<th>Tax Rate</th>
<th>Cumulative Tax</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0 – $14,000</td>
<td>10.5%</td>
<td>$1,400</td>
</tr>
<tr>
<td>$14,001 – $48,000</td>
<td>17.5%</td>
<td>$7,350</td>
</tr>
<tr>
<td>$48,001 – $70,000</td>
<td>30%</td>
<td>$13,950</td>
</tr>
<tr>
<td>Exceeds $70,000</td>
<td>33%</td>
<td></td>
</tr>
</tbody>
</table>

As the new rates apply from midway through the income year, the rates for full income year ended 31 March 2011 are a composite of the old and new rates. The composite rates are:

<table>
<thead>
<tr>
<th>Composite tax rates for 2010-2011 income year</th>
<th>Cumulative tax</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0 – $14,000</td>
<td>$1,610</td>
</tr>
<tr>
<td>$14,001 – $48,000</td>
<td>$8,155</td>
</tr>
<tr>
<td>$48,001 – $70,000</td>
<td>$15,085</td>
</tr>
<tr>
<td>$70,001 and over</td>
<td></td>
</tr>
</tbody>
</table>

1190.20 Resident companies
The basic rate for New Zealand resident companies and public authorities is 28 per cent of taxable income. From the 2008-09 to 2010-11 income years, the rate was 30 per cent.
**1190.25 Non-resident companies**
The basic rate of income tax for non-resident companies is 28 per cent, which is the same as the rate for resident companies. From the 2008-09 to 2010-11 income years, the rate was 30 per cent. From the 1996-1997 to 2007-2008 income years, the rate was 33 per cent. Before the 1996-1997 income year, the rate for non-resident companies was 38 per cent.

**1190.30 Trustee income**
On all taxable income of a trustee (whether or not the trustee is a company or a corporation) the basic rate of tax is 33 per cent. Taxable distributions from non-qualifying trusts are taxed at 45 per cent.

**1190.35 Maori Authorities**
The basic rate of income tax for the taxable income of a Maori authority is 19.5 per cent. Prior to the 2004-2005 income year, the rate was 25 per cent.

**1190.40 History of rates for individuals**
The table below shows the rates of tax applying on income derived during the income years specified.

<table>
<thead>
<tr>

Chapter 1210
Records of Taxpayers

1210.10 Statutory requirements

Appropriate records must be kept and retained by every person who:

(a) Carries on any business in New Zealand;

(b) Carries on any other activity (other than as an employee) in New Zealand for the purpose of deriving assessable income. This includes those taxpayers who receive schedular payments;

(c) Is a person to whom the ESCT rules apply and who makes an employer’s superannuation contribution to a superannuation fund;

(d) Is a person to whom the RSCT rules apply and who makes a retirement savings scheme contribution to a retirement savings scheme;

(e) Makes, holds or disposes of any investment for the purpose of deriving assessable income;

(f) Is an employer or person who provides fringe benefits to employees;

(g) Has a research and development tax credit under s LH 2 (applies for the 2008-2009 income year only);

(h) Is a listed research provider under s LH 15 (applies for the 2008-2009 income year only);

(i) Is an employer whose employees receive payroll donation tax credits [s RD 13B] (from 6 January 2010);

(j) Is an imputation credit account (ICA) company, a foreign dividend payment account (FDPA) company, a branch equivalent tax account (BETA) company, a BETA person, a policyholder credit account (PCA) company, or PCA person;

(k) Is a resident foreign trustee of a foreign trust.

Sufficient records must be kept in New Zealand and in the English language to enable Inland Revenue to readily ascertain:

(a) The assessable income derived by that person from the carrying on of that business, or the carrying on of that other activity, or the making or holding or disposing of that investment;

(b) The deductions of that person in the carrying on of that business, or the carrying on of that other activity, or the making or holding or disposing of that investment;

(c) Every fringe benefit, and the taxable value of every fringe benefit, provided by the person to any person in relation to whom the person is an employer, and every fringe benefit provided by the person to any person who in relation to another person is an employee, those records to include (without limiting the generality of the preceding provisions of this paragraph) details of the recipient of the fringe benefit, the occasion of the providing of it, and the amount (if any) paid or payable by the employee for the receipt or enjoyment of it;
Records of Taxpayers 1210.10

(d) Every foreign dividend received by that person;
(e) Every credit and debit to the person’s memorandum accounts (other than a CTR account and an ASC account), and the amount of a credit attached to a dividend or distribution paid by the person;
(f) The amount of the person’s research and development tax credit under s LH 2 (applies for the 2008-2009 income year only);
(g) The person’s compliance with s LH 15, if the person is a listed research provider, to show:
   (i) They meet the start-up requirements and other continuing requirements; and
   (ii) The amounts derived and incurred by them in performing the research and development activities on behalf of other persons (applies for the 2008-2009 income year only);
(h) The transfer of an amount of an employee’s payroll donation to the recipient of the donation under s 24Q of the TAA (from 6 January 2010);
(i) Every employer’s superannuation contribution, and the taxable value of that contribution, made by the person to any superannuation fund, those records to include (without limiting the generality of the preceding provisions of this paragraph) details of the recipient of the employer’s superannuation contribution, the occasion of making it, and any related tax credit under s MK 1(2);
(j) Every retirement scheme contribution, and the taxable value of that contribution, made by the person to any retirement savings scheme, those records to include (without limiting the generality of the preceding provisions of this paragraph) details of the recipient of the retirement scheme contribution and the occasion of making it; and
(k) The financial position of the foreign trust.

However, there is provision for the CIR to authorise that certain records may be kept outside New Zealand or in a language other than English. Written application, for such approval, should be made to the CIR. In standard practice statement INV-470: Applications to keep records in Maori, the CIR advised that from 1 May 1998 the CIR will generally approve applications to keep records in Maori provided the taxpayer complies with the requirements of ss 24 and 25 of the GSTA (relating to tax invoices, and credit and debit notes), and numbers are recorded using Arabic numerals (0, 1, 2, 3 etc) [see TIB vol 10:4 (April 1998) at 46-48].

The records are to be held for at least seven years after the end of the income year to which they relate, but no records need to be kept if:
(a) The CIR has advised the taxpayer, in writing, that retention of records is not required; or
(b) The taxpayer is a company which has been liquidated.

The seven-year retention period can be increased by up to three years by the CIR where the taxpayer is or has been under audit or investigation, or where such action is contemplated. The CIR must give notice of the intended extension before the expiry of the seven-year retention period. See 1210.20 for the definition of “records”.

If there is more than one resident foreign trustee of a foreign trust, the resident foreign trustees may appoint one of themselves as an agent for the purposes of keeping the required records of the foreign trust. Taxpayers who are not required to file a return [TAA, s 33A], and who are required to retain records of income that has been taxed at source, need retain those records only for 12 months after the end of the income year to which they relate.

The CIR is empowered to reduce the record retention period to 12 months following the end of the income or tax year for classes of taxpayers who are not provisional taxpayers, and records relating to payments from which tax has been deducted at source.

Similar retention periods exist where a return is transmitted to the CIR by electronic means and the return itself is retained by the taxpayer. A return need not be retained if the CIR has given written notice that retention is not required, or if the return relates to a liquidated company. Copies of employer monthly schedules also do not need to be retained [TAA, s 23].
In *TRA Case N21* (1991) 15 TRNZ 758, it was held that the fact that the objector failed to keep proper records of his business dealings does not mean that his explanations should not be accepted.

### 1210.20 Business records [TAA, s 22(1), (7)]

The term “records” includes:

(a) Books of account (in manual, mechanical or electronic format) recording receipts or payments or income or expenditure;

(b) Vouchers, bank statements, invoices, receipts, and such other documents as are necessary to verify entries in the books of account;

(c) Accounts (in manual, mechanical or electronic format) to be maintained under imputation rules, the FDP rules, or s OA 3 (for accounts under subparts OE and OJ, and ss OP 97 to OP 108), and any statement to be retained under ss 31 or 71 of the TAA;

(d) In the case of a foreign trust (other than for the period for which s 59B(3) of the TAA applies):
   
   (i) Documents that evidence the creation and constitution of the foreign trust;
   
   (ii) Particulars of settlements made on, and distributions made by, the foreign trust, including the date of the settlement or distribution, the name and address (if known) of the settlor of the settlement, the name and address (if known) of the recipient of the distribution; and
   
   (iii) A record of:
      
      (A) The assets and liabilities of the foreign trust;
      
      (B) All entries from day to day of all sums of money received and expended by the trustee in relation to the foreign trust and the matters in respect of which the receipt and expenditure takes place; and
      
      (C) If the trust carries on a business, the charts and codes of accounts, the accounting instruction manuals, and the system and programme documentation which describes the accounting system used in each income year in the administration of the trust;

(e) For the purposes of claiming research and development tax credits, other documents evidencing research and development activities.

The specific kinds of business records which are required to be kept include:

(a) A record of the assets and liabilities of the business;

(b) A record of receipts and payments, and the matters to which they relate;

(c) The charts and codes of accounts, the accounting instruction manuals, and the system and programme documentation which describes the accounting system used in each income year in the carrying on of the business; and

(d) Where the business involves the provision of services, a record of services provided and the associated invoices.

Where the business involves dealing in goods, the following additional records are required to be kept:

(a) A record of all goods purchased, and of all goods sold in the carrying on of that business (except those sold in the course of cash retail trading customarily conducted in a business of the kind of which that business is one) showing the goods, and the sellers and buyers or, as the case may be, the agents of the sellers and buyers in sufficient detail to enable the goods, and the sellers and buyers, and those agents, to be readily identified by the CIR; and all invoices relating to the goods;

(b) Statements (including quantities and values) of trading stock held by the person at the end of each tax year, and all records of stocktakings from which any such statement of trading stock has been, or is to be, prepared;

(c) A taxpayer, other than a low-turnover taxpayer, must retain all accounting records relating to the calculation of the value of closing stock;
(d) A low-turnover taxpayer must retain records of the valuation methods and their application in calculating the value of closing stock, except if the methods and their application are not materially different from the previous income year; and
(e) The low-turnover taxpayer must comply with s EB 22(4) [see 1400.35].

Where the business involves the provision of services, a record of services performed and the associated invoices must be kept.

1210.30 Wage records [TAA, s 24]

An employer who makes a PAYE income payment to an employee must keep a proper record relating to the employee, showing the amount of the PAYE income payment before tax and the amount of the tax withheld from it, and the amount of any payroll donation, and must enter those amounts in the record at the time of making the PAYE income payment.

For any pay period in which a person acts as a PAYE intermediary for an employer in relation to an employee:
(a) The intermediary must keep a proper record of their actions as a PAYE intermediary in respect of the employee; and
(b) The employer must keep a proper record of the employer’s payments to the intermediary of salary or wages in respect of the employee.

Every employer (or PAYE intermediary) must take all reasonable precautions for the safe custody of all records that the employer (or PAYE intermediary) is required to keep, and of all pay sheets, receipts for PAYE income payments, withholding certificates, tax code notifications, tax code declarations, tax code certificates, and certificates of entitlement. Such records, pay sheets, receipts, tax code declarations, tax code certificates, and certificates of entitlement must be retained for not less than seven years after the making of the payments to which they relate except and to the extent that the employer (or the PAYE intermediary) is required to deliver to the CIR or to any other person the signed withholding certificates, tax code notifications, tax code certificates, and any certificate of entitlement.

A person is not required to keep any records, pay sheets, receipts, tax code notifications, tax code certificates, or certificates of entitlement in respect of which the CIR has notified the employer or the PAYE intermediary that retention is not required.

1210.40 Retention of business records in electronic form

Standard practice statement IR-SPS GNL-430 sets out Inland Revenue guidelines on the retention of business records stored in electronic form, and on microfilm or microfiche [see TIB vol 15:12 (December 2003) at 57-61]. The statement also provides guidelines on the information and assistance required when Inland Revenue requests information and requires access to business records and supporting background materials. The statement applies from 21 November 2003, the date the Electronic Transactions Act 2002 (ETA) came into force.

Business records may be kept in either paper-based or electronic form. Where records are held in electronic form, they must be kept in a manner that allows Inland Revenue to readily ascertain the amount of tax payable. Persons who do business via the Internet are required to keep business records of all Internet transactions for tax purposes.

Some emails may be classified as business records required to be kept for tax purposes. Where emails are business records, s 27 of the ETA requires the origin, destination and time of electronic communications to be retained and accessible so as to be usable for subsequent references.

Regardless of how business records are retained there must be sufficient detail to ensure a complete audit trail that allows the retained records to be traced to and from accounting records and to tax returns. The ETA provides the option of using technology to store source paper documents by electronic means, and sets the standard for retaining information in electronic form. Inland Revenue considers that the information will be readily ascertainable and meet the requirements of the ETA if taxpayers follow the procedures set out in 1210.45 to 1210.60.
The electronic or microfilmed records must be retained for the full retention period required by the TAA and
the GSTA, currently seven years unless extended to 10 years by Inland Revenue for specific case situations.
Business records stored in electronic form must be stored in data centres physically located in New Zealand.
Back up business records stored offshore do not breach record keeping obligations provided the primary
business records are stored in New Zealand. See Inland Revenue Alert RA 10/02, 10 December 2010.

1210.45 Retention of records on microfilm or microfiche

Paper records that are microfilmed must be copied completely and accurately. The microfilmed records, when
reproduced in printed form, must be identical in format and in all other respects to the original records. The
addition of information such as indexing references is acceptable. The additional information must not
obscure the view of the original record information and must be distinguishable as additions to the original
record.

The quality of the microfilmed records must be sufficient to ensure they are readily accessible and capable
of being retrieved on legible hard copies if required. Paper records microfilmed in accordance with the
requirements detailed below may be destroyed after transfer to microfilm.

1210.50 Transfer of records to electronic form

Paper records transferred to electronic form must be copied completely and accurately. For example, the use
of imaging to provide information in a format identical in all respects to the source document. The addition
of information such as index referencing is acceptable. The additional information must not obscure the view
of the original record information and must be distinguishable as additions to the original record.

The electronic copy must be readily accessible and capable of being retrieved on legible hard copy or supplied
in electronic form (on electronic media and unencrypted in a form able to be read by Inland Revenue staff),
if required. Source-paper documents or other non-electronic records from which the complete information
is transferred and stored in electronic form, in accordance with the requirements of the ETA and the Electronic
Transactions Regulations 2003, may be destroyed after transfer to the electronic form.

1210.55 Electronic record system standards

Internal controls must be adequate to ensure that all business transactions executed electronically, including
those executed through the Internet, are completely and accurately captured. Taxpayers should be able to
demonstrate that their electronic records systems are secure from both unauthorised access and data
alterations. This usually involves developing and documenting a security programme that:

(a) Establishes controls to ensure that only authorized personnel have access to electronic records;
(b) Provides for backup and recovery of records;
(c) Ensures that personnel are trained to safeguard sensitive or classified electronic records; and
(d) Minimises the risk of unauthorised alteration, addition or erasure.

The charts and codes of accounts, the accounting instruction manuals, and the system and program
documentation that describes the accounting system used must be retained and produced, if required, to an
Inland Revenue officer.

The electronic copy must be readily accessible and capable of being retrieved and produced as legible hard
copy or supplied in electronic form (on electronic media and unencrypted in a form able to be read by Inland
Revenue officers) if required. The CIR may approve the use of symbols and abbreviations to facilitate the
electronic transfer of tax invoices, credit notes or debit notes. Requests for approval should be made in writing
to Inland Revenue.

Those who engage in the electronic transfer of tax invoices, credit notes or debit notes must retain electronic
records that in combination with any other records (eg the underlying contracts, price lists, price changes and
product code descriptions), have an adequate level of detail to meet the requirements of the GSTA. For
example, if a hard copy invoice is requested, the printout must contain all information as required under
s 24 of the GSTA.
Backup and recovery procedures must be sufficient to guarantee the availability of electronic records for the required record retention period.

Adequate viewing and printing facilities should be made available free of charge to Inland Revenue officers. If requested, persons must locate selected records that have been stored and print any items selected, free of charge, to Inland Revenue officers. Persons must be available to explain the operation of their computer system to Inland Revenue officers. This is the case whether the system is owned and operated by the person or outsourced to a third party. There must be sufficient detail to ensure a complete audit trail that allows the retained records to be traced to and from accounting records through to tax returns.

1210.60 Storage of electronic records

In the event of changes to hardware or software, facilities for retrieving electronic records that have been stored on the former system must be retained, or the electronic records must be converted to a compatible system and both sets of files retained complete with documentation showing the method of transfer and controls in place to ensure the transfer was complete and accurate.

The CIR may approve the storage of records offshore. Approval is subject to the records being readily available in New Zealand on request, in English, and at no cost to Inland Revenue in obtaining the information. Each case will be considered on individual merit, having regard to the person’s compliance history and whether storage overseas is likely to impede Inland Revenue compliance activities.

Inland Revenue’s Computer Tax Audit Unit and electronic data coordinators specialise in downloading electronically stored information. The preferred media for receiving electronic information is CD, DVD or floppy disk. However, other media may be accepted such as 8mm tape cartridge, Zip drives or 4mm DAT tapes. An alternative method is transfer of data between personal computers. Other mutually agreeable transfer methods may be negotiated as required.

When possible, electronic information supplied to Inland Revenue should be in a fixed record length format, in EBCDIC or ASCII or delimited. Tapes should be created without software compression. The electronic information should be copied to media, not to a proprietary back up. Documentation should be supplied with the media showing the record layout, record length (block size if supplied on tape), and number of records.
Chapter 1215

Refunds and Transfer of Excess Tax

1215.10  Refunds of income tax [ss RM 2, RM 4, RM 5, RM 6, RB 4, RM 10]

The CIR must refund an amount of tax paid by a taxpayer if the CIR is satisfied that the amount is in excess of the tax properly payable. The requirement to refund is contingent on the four-year period for amendment of assessments under s 108 of the TAA not having expired [s RM 2].

The CIR must refund an amount of tax paid by a taxpayer if the tax was paid as a result of an amendment to an assessment increasing the amount of tax payable, and the CIR is satisfied that the amount is in excess of the tax properly payable. The requirement to refund is contingent on the four-year period for amendment of assessments under s 108 of the TAA not having expired [s RM 4].

The CIR has discretion to offset a tax refund against a person’s tax liabilities that have not been paid and are due and payable. Whilst the CIR determines the offset in the first instance, taxpayers may request that a refund be used to offset an outstanding tax liability other than that determined by the CIR [ss RM 4, RM 10].

The CIR has no authority to offset a tax refund when the refund arises from:

(a) Tax credits for families;
(b) A refund of excess resident withholding tax; or
(c) A refund of excess non-resident withholding tax.
Refunds and Transfer of Excess Tax

The CIR may write-off tax, refrain from making an assessment, or refrain from recovering or refunding tax, if:

(a) The balance of tax payable is not more than $20; or
(b) The tax paid or deducted is $5 or less than the amount of tax for which the taxpayer is liable [TAA, s 174AA].

However, the taxpayer retains the right to request a refund in all cases. An overpayment of tax can arise in, for example, the following situations:

(a) The taxpayer has paid charitable donations;
(b) The taxpayer is entitled to a rebate which was not included in the PAYE tax code;
(c) The taxpayer has worked for only part of the year;
(d) Salary or wages was earned at fluctuating rates during the year; or
(e) Deductible expenses exceeded income from another source, and tax credits for PAYE were not claimed.

No special form of application for a refund is required, but it must be in writing signed by the taxpayer or an authorised agent. Formal wording is not essential. The application should request the overpayment be refunded or dealt with in some other manner. It should be made within the time limit specified above. If it is not made within that time, the right to a refund may be lost.

If a taxpayer makes a request within the statutory period to have an assessment reopened for the purpose of allowing an additional exemption or rebate and is informed by the CIR that the allowance does not apply, but later it is found that tax has been overpaid through an error in the computation of the tax and the taxpayer then requests a refund of the overpayment, it is the practice of the CIR to decline the application on the ground that specific objection was not made within the statutory period.

The Inland Revenue website contains an on-line personal tax summary calculator which enables taxpayers to calculate whether or not they are due for a refund [see www.ird.govt.nz/calculators/tool-name/tools-p/calculator-pts-calculator-2008.html]. Refunds can arise from having worked for less than the full year, having more than one job during the year, or by having allowable deductions. If a refund is due, the person can then request an summary income statement/personal tax summary for the year.

1215.15 Refunds to be by direct credit [TAA, s 184A]

All refunds made by Inland Revenue of tax paid in excess must be made by direct credit to a bank account nominated by the taxpayer. The taxpayer must provide the particulars of the bank account at the time the refund is claimed. The refund can be made to any registered bank, private savings bank, credit union, building society, or the Public Service Investment Society Ltd.

For these purposes, “tax” is defined as in s 3(1) of the TAA (broadly, any tax, levy, or duty imposed by any tax law), together with any tax credit under s 41A of the TAA, the approved issuer levy, cheque duty, financial support under the Child Support Act 1991, KiwiSaver deductions, and student loan repayment obligations.

Inland Revenue can pay a tax refund by other means if doing so by direct debit would result in undue hardship to a taxpayer, or is not practicable.

1215.20 PAYE to be credited against tax assessed [s LA 6]

PAYE tax deductions received by the CIR in relation to an employee for an income year must be credited successively against:

(a) Any income tax liability of the employee for the income year;
(b) Any income tax liability of the employee that has not been satisfied for any earlier income year;
(c) Any income tax liability of the employee that has not been satisfied for any subsequent income year, in the order of those years;
(d) Any provisional tax due by the employee that has not been paid for any subsequent income year, in the order of those years.
Refunds and Transfer of Excess Tax

Any tax deductions not so credited may be treated as transferable if requested by the taxpayer [see 1215.34]. Any remaining balance must be refunded to the employee by the CIR in accordance with s RM 2 [see 1215.10] and the TAA 1994. If the amount credited against an employee’s income tax liability for an earlier income year is less than the income tax liability for that year, the amount credited must be applied in satisfaction of the income tax liability, so far as it extends.

The amount credited or refunded may not exceed the sum of the tax deductions received by the CIR and any family tax credit paid to the employee if the amount of tax deductions shown in the employer monthly schedule was deducted from source deduction payments made to the employee by the employer.

If the CIR considers that any detail in the employer monthly schedule is incorrect, a tax deduction must not be credited against an income tax liability, nor must a tax deduction be refunded. A credit or refund can be processed once the CIR is satisfied that the particulars received are correct [s LB 1].

If a person has been allowed a credit of tax in excess of the amount properly allowable under a tax law, the CIR may recover the excess from the person in the same manner as if the excess were income tax payable [TAA, s 165A].

1215.30 Transfers of overpaid tax [TAA, ss 173K, 173U]

When a taxpayer overpays their tax (for example, when provisional tax paid exceeds residual income tax for a year), the excess can either be refunded or transferred to another tax period, tax type or taxpayer. The rules in Part 10B of the TAA clarify when and how excess tax may be transferred. Prior to these rules, transfers were governed by administrative policy.

Tax paid in excess by or on behalf of a taxpayer may be transferred only if the tax is refundable and has not already been used to satisfy a tax liability. This means that an offset is not available to the extent that excess tax has been retained by the CIR to meet an outstanding tax liability [s RB 4], or there are insufficient credits available in the company’s ICA [ss RM 13, RM 14].

For tax administration purposes, tax transferred by the transferor is treated as a refund to the transferor on the date of transfer; and tax transferred to the transferee is treated as tax paid by the transferee on the date of transfer (but not for the purpose of imposing shortfall penalties). The transferor and the transferee may be the same person if the transfer is to another tax period or tax type of that taxpayer.

“Tax” includes all taxes, levies and duties. The definition, for transfer purposes, specifically includes financial support, student loan repayment obligations and rebates for childcare and charitable donations [TAA, s 3(1)]. The transfer of excess child support payments is prohibited by s 173U of the TAA, but excess payments of other taxes may be transferred to meet child support obligations.

The rules in Part 10B apply to:

(a) Excess tax paid in the 2002-2003 and future income years;
(b) Excess tax paid in an earlier year if the excess arises between 1 April 2002 and 17 October 2002, if the taxpayer notifies Inland Revenue that Part 10B should apply;
(c) Excess tax paid in an earlier year if the excess arises on an assessment made after 17 October 2002;
(d) Refunds in relation to child care and charitable donations rebates claimed after 17 October 2002;
(e) GST supplies made on or after 1 April 2002;
(f) Tax deducted on behalf of another taxpayer that is paid on or after 1 April 2002; and
(g) Dividend withholding payments and duties paid on or after 1 April 2002.

See TIB vol 14:11 (November 2002) at 35-48, for a detailed explanation and examples of the transfer rules.

1215.32 Transfer of excess tax to another period or tax type [TAA, s 173L]

A taxpayer or their agent may request that the CIR transfer all or part of any excess tax paid to another tax period or to another tax type of the taxpayer. For example, excess provisional tax paid in 20X1 (year 1) may be transferred to pay provisional tax for 20X2 (year 2), or it may be used to meet a GST or FBT liability.
Refunds and Transfer of Excess Tax

The taxpayer may choose the date on which the excess is transferred. In the case of a GST refund, the date may be any day after the end of the GST return period in which the refund arose. In the case of tax deducted on the taxpayer’s behalf (eg PAYE, RWT), the date may be any day after the end of the accounting year in which the deduction occurred. In the case of a tax credit for research and development the date is any day after the end of the accounting year to which the credit relates. In all other cases (eg provisional tax), the date may be any day on or after the date the excess tax is paid.

In relation to excess tax deducted on the taxpayer’s behalf or a tax credit for expenditure on research and development, a taxpayer who has an early balance date may only choose a day after the end of the year in which the deduction occurred or the end of the tax year to which the credit relates.

The ability to elect the date of transfer enables taxpayers to choose a date that is most advantageous to them.

**Example:**
In September 20X2, Alex is assessed in relation to her 20X1-X2 income year and discovers that she has overpaid her tax. She has in the meantime paid her first provisional tax instalment for the 20X1-X2 year on 7 July 20X1, using the standard uplift method. However, she is now concerned that that amount will not be sufficient and a UOMI liability will arise. Alex asks Inland Revenue to transfer the excess as at 7 July 20X1, which it does. The transfer is made from tax overpaid as at the third instalment date. Accordingly, Alex has no UOMI liability on the 7 July 20X1 instalment date.

1215.34 Transfer of excess tax to another taxpayer [TAA, s 173M]

A taxpayer or their agent may request the CIR to transfer all or part of any excess tax paid to another taxpayer. The taxpayer may choose the date on which the excess is transferred as if the transfer were to another tax type or tax period of the taxpayer [see 1215.32], if the transfer is to:

(a) Another company in the same group of companies;
(b) A shareholder-employee of the taxpayer;
(c) A company in which the taxpayer is a shareholder-employee;
(d) A partner in the same partnership;
(e) A relative;
(f) A trustee of a family trust of which the taxpayer is a beneficiary (and vice versa); or
(g) A tax pooling intermediary’s tax pooling account.

If the transfer is to a tax pooling intermediary’s tax pooling account, the date of transfer must be a date that occurs on or after the date of the request.

If the transfer is to a person not listed above, the date of transfer chosen by the taxpayer must be no earlier than the later of:

(a) The date of the request; and
(b) The day after the date the relevant return is filed for the period in which the excess arose.

“Family trust” means a trust that is established primarily to benefit:

(a) A natural person for whom the settlor has natural love and affection;
(b) An organisation or a trust whose income is exempt under ss CW 34 or CW 35; or
(c) A combination of (a) and (b).

“Relative” means another person connected with the first person by blood relationship, marriage, civil union, de facto relationship or adoption. Persons are connected by blood relationship if one is the child of the other. Persons are connected by marriage, civil union or de facto relationship if one is in a marriage, civil union or de facto relationship with the other. Persons are connected by adoption if one has been adopted as the child of the other.

**Example:**
Company A, which has a standard balance date, estimates its provisional tax and pays $120,000 at each instalment date for the 20X1-X2 income year. In May 20X2 Company A files its return, which shows RIT is $300,000 for the year. It has therefore...
Refunds and Transfer of Excess Tax

overpaid tax of $20,000 at each instalment date. Company B is in the same group of companies as Company A. Company B underestimated its first provisional tax instalment on 7 July 20X1 by $20,000 and has incurred UOMI on the underpayment. Company A therefore requests Inland Revenue to transfer the $20,000 excess tax it paid on 7 July 20X1 to Company B as at that date. Company A has no outstanding tax liability, and its imputation credit account has sufficient credits, so Inland Revenue action the transfer at the date requested. The amount transferred is treated as a refund to Company A. It therefore records a debit of $20,000 in its imputation credit account as at 7 July 20X1. The amount transferred is tax paid by Company B, which records a credit in its imputation credit account as at 7 July 20X1. UOMI that has accrued in relation to Company B’s underpayment is cancelled.

1215.35 Limit on transfer by PAYE intermediary [TAA, s 173MB]
Interest paid by the CIR on a payment made by a PAYE intermediary, in their role as an intermediary, to the CIR may not be:
(a) Treated as tax overpaid by the intermediary other than as an intermediary for an employer; and
(b) Transferred to the intermediary in another capacity or to another taxpayer.

1215.36 Transfer of tax credits [TAA, s 173N]
If a taxpayer makes a request to transfer a housekeeping or charitable donations tax credit, the taxpayer may not choose a date earlier than the later of:
(a) The date of the request; and
(b) The day after the date the taxpayer applies for a tax credit.

Example:
Mrs B makes a charitable donation in the 20X1-20X2 year and claims a refund in December 20X2. Her husband underpaid his provisional tax on 7 July 20X2. Mrs B requests in a letter attached to the claim form that the refund be transferred to her husband as at 7 July 20X2, in order to minimize UOMI on the underpayment. Inland Revenue will transfer the excess only as at December 20X2, the date Mrs B claims the refund and makes the transfer request.

1215.38 Transfer of excess tax if no date specified by taxpayer [TAA, s 173O]
If a taxpayer requests a transfer of excess tax but does not specify a date, the CIR will transfer the tax on a date the CIR considers appropriate. The CIR will choose a date that minimises the UOMI impact on the taxpayer. Despite this, the taxpayer may subsequently choose an alternative date allowed under ss 173L and 173M [see 1215.32].

1215.40 Transfer of excess provisional tax before assessment [TAA, s 173P]
If a taxpayer requests a transfer of overpaid provisional tax for a tax year before an assessment has been made for that tax year, the amount of excess provisional tax that may be transferred on a particular date (date A) is calculated using the formula:

\[
\text{provisional tax paid} - \text{refunds} - \text{provisional tax liability}
\]

Where:
“Provisional tax paid” is the provisional tax paid for a tax year on or before date A, including voluntary payments under s RC 12 and tax transferred to the taxpayer;
“Refunds” are the refunds of the provisional tax that are paid to the taxpayer on or before date A, including transfers by the taxpayer or offsets by the CIR against unpaid tax;
“Provisional tax liability” is the provisional tax payable by date A.

The CIR must not transfer an amount on date A if, as a result of the transfer, the taxpayer would not satisfy their provisional tax liability on a subsequent date (date B) before the transfer is actioned. However, the CIR may make such a transfer if the taxpayer later requests a transfer back to satisfy their provisional tax liability on date B.
Refunds and Transfer of Excess Tax

Example:
H pays provisional tax on the uplift basis and is required to pay $50,000 at each instalment. She pays $150,000 at P1. After P2 and before P3, H calls Inland Revenue and requests a transfer of $100,000 at P1 to meet another tax obligation. As at P1, H has overpaid her provisional tax by $100,000 ($150,000 \(\text{−} 0 = $50,000\), as per the formula). However, the restriction applies to limit the amount that may be transferred at P1. If the CIR transfers $100,000 at P1, the provisional tax due at P2 will be underpaid. The maximum that could be transferred at this time is $50,000. The CIR could transfer the whole $100,000 only if $50,000 is transferred back in time to meet the P3 liability.

1215.42 Transfer of excess provisional tax before assessment where estimation method used [TAA, s 173Q]

If a taxpayer, who overpays their provisional tax for the year as a result of changing to the estimation method during the year or of revising their estimate of RIT during the year, requests a transfer of that overpaid provisional tax before an assessment has been made for that tax year, the amount of excess provisional tax that may be transferred on a particular date (date A) is calculated using the formula:

\[\text{provisional tax paid} - \text{refunds} - \text{estimated RIT}\]

Where:
“Provisional tax paid” is the provisional tax paid for a tax year on or before date A, including voluntary payments under s RC 12 and tax transferred to the taxpayer;
“Refunds” are the refunds of the provisional tax that are paid to the taxpayer on or before date A, including transfers by the taxpayer or offsets by the CIR against unpaid tax;
“Estimated RIT” is the taxpayer’s estimated RIT or revised estimated RIT that would be due by date A for the purposes of the interest rules [see 1110.305].

The CIR must not transfer an amount on date A if, as a result of the transfer:
(a) A taxpayer who has revised their estimate of RIT would not have paid the amount of their re-estimated RIT due on date B (a date falling after date A); or
(b) A taxpayer who has changed from the uplift method to the estimation method of calculating their provisional tax would not have paid the amount of their estimated RIT due on date B (a date falling after date A),

unless the taxpayer requests a transfer back to satisfy their provisional tax liability on date B.

The amount that may be transferred under s 173Q of the TAA is limited to the net provisional tax paid less the re-estimated RIT for the tax year (where the taxpayer has revised their estimated RIT), or the net provisional tax paid less the estimated RIT for the tax year (where the taxpayer has changed from the uplift method to the estimation method). Net provisional tax paid is provisional tax paid less any refunds of that tax.

Example:
Neil estimates RIT at $150,000 for the year and pays $50,000 at each of P1 and P2. At P3, Neil revises his estimate to $75,000 and pays no further provisional tax for the year. After P3, Neil applies to transfer the excess provisional tax at the earliest date available. Because the amount of provisional tax paid ($100,000) exceeds the re-estimated RIT ($75,000), the excess would be refundable under s RC 9. The amount of $25,000 can therefore be transferred under s 173Q of the TAA. The earliest date at which the $25,000 can be transferred is P1. The formula would calculate $50,000 as being available at P2, but the amount available to transfer is limited to the difference between net provisional tax paid and re-estimated RIT (ie $100,000 − $75,000 = $25,000).

1215.44 Transfer of excess provisional tax after assessment [TAA, s 173R]

If a taxpayer requests a transfer of excess provisional tax paid after an assessment has been made for that tax year, the amount of excess provisional tax that may be transferred on a particular date (date A) is calculated using the formula:

\[\text{provisional tax paid} - \text{refunds} - \text{residual income tax}\]

Where:
“Provisional tax paid” is the provisional tax paid for the tax year on or before date A, including voluntary payments under s RC 12 and tax transferred to the taxpayer;

“Refunds” are the refunds of the provisional tax that are paid to the taxpayer on or before date A, including transfers by the taxpayer or offsets by the CIR against unpaid tax;

“Residual income tax” is the taxpayer’s RIT that would be due by date A.

The CIR must not transfer an amount on date A if, as a result, the taxpayer would be liable for interest on unpaid tax or would have a late payment penalty imposed in respect of their provisional tax payments on a date (date B) that falls after date A. However, the CIR may make such a transfer if the taxpayer later requests a transfer back, so as to prevent interest or a late payment penalty being imposed on date B.

The amount that may be transferred may not be more than the net provisional tax paid for the tax year less the RIT for the year. Net provisional tax paid is provisional tax paid less refunds.

Example:
Harry pays provisional tax on the uplift basis, but he is subject to UOMI. He paid his provisional tax liability of $20,000 on P1, missed the payment due on P2, and paid $20,000 on P3. His RIT (as per the assessment) is $15,000. The total excess that may be transferred is $25,000 (tax paid of $40,000 less RIT of $15,000). Harry wants to transfer the excess at the earliest possible dates. At P1, the formula calculates an amount available of $15,000. However, if $15,000 were transferred the taxpayer would be liable for late payment penalties and interest at P2. Therefore only $10,000 is transferable at P1. (The additional $5,000 could be transferred provided it was transferred back by P2.) The balance of $15,000 of the excess can be transferred at P3.

1215.46 Transfer of interest on overpaid tax [TAA, s 173S]
If the CIR is liable to pay interest to a taxpayer for an overpayment of tax, the taxpayer or their agent can request the CIR to transfer all or part of that interest to another period, tax type or taxpayer.

The interest is transferred on the date it would have been payable to the taxpayer in the absence of a transfer request.

1215.48 Date of application of excess tax to unsatisfied tax liability [TAA, s 173T]
If the CIR applies excess tax in satisfaction of tax or another amount due by a taxpayer, the taxpayer or their agent may request the CIR to apply that excess on a date allowed by s 173L of the TAA [see 1215.32].
Chapter 1220
Rent

1220.10 Net rental income [s CC 1]
Rent received is income. It is provisional income. Improvements effected by a tenant are neither taxable to
the lessor as rent nor deductible by the tenant. Where a lessee who has agreed to pay the revenue outgoings
on the leased property makes default in the payment, any amounts paid by the lessor may be deducted to the
extent to which they are not recovered from the lessee.

TaxNote: Rental income derived offshore by a transitional resident is exempt from tax. No deductions are
able to be taken against this income [see 370.35].

Where a taxpayer occupies a rented private dwelling-house and a portion of that house is used for business
purposes, a proportionate part of the rent may be claimed as a business expense.

Where property has been purchased for the purpose of reselling, any profit from rental income is taxable.
Expenses such as rates, insurance, and repairs incurred pending sale are deductible from the gross rentals.
Expenses applicable to the property are deductible even though the property may be temporarily vacant.
Where property of an estate is held for letting at an adequate rental with a view to subsequent realisation, the
expenses are allowable to the extent to which they are incurred primarily for the purpose of earning rental
income during the period. Expenditure incurred primarily for the improvement of the property is not
deductible.

(PC) the Privy Council found that a lump sum inducement payment received by an accounting firm for moving
into new premises was not taxable.

(1) Lease for life

A common tax-planning arrangement involves a person granting a “lease for life” to themselves and then
transferring the balance of the property to another person or to a trust. There are various other permutations
that achieve largely the sale result. These transactions are generally undertaken for less than market value.
Whether or not an income tax liability arises depends on how the arrangement is structured. A number of
public binding rulings have been issued which set out the income tax and gift duty consequences of such
arrangements.

All of the following rulings apply from 1 April 2005 for an indefinite period and are set out in TIB vol 17:5
(June-July 2005) at 3-30:

(a) A transferor grants a life estate (including a lease for life) to themselves, and then subsequently
transfers the balance of the property to another person. The retention of the life estate (including a
lease for life) does not give rise to income to the transferor or the transferee under s CC 1(1). The
life estate (including a lease for life) granted by the transferor is a retention and not a reservation for
the purposes of s 70(2) of the EGDA 1968 [see BR Pub 05/02].

(b) A transferor grants a lease for a term to themselves, and then subsequently transfers the balance of
the property to another person. The retention of the lease does not give rise to income to the transferor
or the transferee under s CC 1(1). The lease granted by the transferor is a retention and not a reservation for the purposes of s 70(2) of the EGDA 1968 [see BR Pub 05/03].

(c) A transferor transfers property to another person and, under the arrangement, the other person subsequently grants a life estate (including a lease for life) back to the transferor out of the property transferred. The life estate (including a lease for life) granted back to the transferor is not a lease for the purposes of s CC 1(1)(a), and the grant back of the life estate (including a lease for life) does not give rise to income to the transferor or the transferee under s CC 1(1). The life estate (including a lease for life) granted back to the transferor is a reservation for the purposes of s 70(2) of the EGDA 1968 [see BR Pub 05/04].

(d) A transferor transfers property to another person and under the arrangement the other person subsequently grants a lease for a term back to the transferor out of the property transferred. The transferor either reduces the price of the property first transferred or reduces a debt owed by the transferee to the transferor; or the transferor otherwise pays the transferee. The amount of the reduction in price, reduction in the debt or the payment is attributable to the lease granted back to the transferor. The amount of the reduction in price, reduction in the debt or the payment is income to the transferee under s CC 1(1). The grant of the lease does not give rise to income to the transferor under s CC 1(1). The lease granted back to the transferor is a reservation for the purposes of s 70(2) of the EGDA 1968 [see BR Pub 05/05].

(e) A transferor transfers property to another person and, under the arrangement, the other person subsequently grants a licence back to the transferor out of the property transferred. The transferor either reduces the price of the property first transferred or reduces a debt owed by the transferee to the transferor; or the transferor otherwise pays the transferee. The amount of the reduction in price, reduction in the debt or the payment is attributable to the licence granted back to the transferor. The amount of the reduction in price, reduction in the debt or the payment is income to the transferee under s CC 1(1). The grant of the licence does not give rise to income to the transferor under s CC 1(1). The licence granted back to the transferor is a reservation for the purposes of s 70(2) of the EGDA 1968 [see BR Pub 05/06].

(f) The transferor purports to grant to themselves a licence to occupy; and then purports to transfer the balance of the property to another person; and the transferee then grants a licence back to the transferor. As a transferor cannot legally grant themselves a licence to occupy, the full property interest will be transferred to the transferee. The grant of the licence does not give rise to income to the transferor under s CC 1(1). The licence granted back to the transferor is not a reservation for the purposes of s 70(2) of the EGDA 1968 [see BR Pub 05/07].

(g) A transferor grants themselves a life estate (including a lease for life) and simultaneously transfers the balance of the property to another person. A simultaneous transfer includes the situation where it is the intention of the transferor that only the balance or interest in reversion in the property is transferred (even though, in conveyancing law terms, the whole property initially transfers) and there is an immediate equitable obligation on the transferee to grant back the life estate (including a lease for life). The transferor does not obtain any benefit out of the balance or interest in reversion that was transferred; and the transferor’s intention to retain the life estate (including a lease for life) is evidenced in the documents and in the surrounding circumstances. The retention of the life estate (including a lease for life) does not give rise to income to the transferor or the transferee under s CC 1(1). The life estate (including a lease for life) granted by the transferor is a retention and not a reservation for the purposes of s 70(2) of the EGDA 1968 [see BR Pub 05/08].

(h) A transferor grants themselves a lease for a term and simultaneously transfers the balance of the property to another person. A simultaneous transfer includes the situation where it is the intention of the transferor that only the balance or interest in reversion in the property is transferred (even though, in conveyancing law terms, the whole property initially transfers) and there is an immediate equitable obligation on the transferee to grant the lease back. The transferor does not obtain any benefit out of the balance or interest in reversion that was transferred; and the transferor’s intention to retain the
lease is evidenced in the documents and in the surrounding circumstances. The retention of the lease does not give rise to income to the transferor or the transferee under s CC 1(1). The lease granted by the transferor is a retention and not a reservation for the purposes of s 70(2) of the EGDA 1968 [see BR Pub 05/09].

(i) The transferor purports to grant to themselves a licence to occupy; and simultaneously purports to transfer the balance of the property to another person. The transferee grants a licence back to the transferor. A simultaneous transfer includes the situation where it is the intention of the transferor that only the balance or interest in reversion in the property is transferred even though, in conveyancing law terms, the whole property initially transfers; and there is an immediate equitable obligation on the transferee to grant the licence back. The transferor does not obtain any benefit out of the balance or interest in reversion that was transferred; and the transferor’s intention to retain the licence is evidenced in the documents and in the surrounding circumstances. As a transferor cannot legally grant themselves a licence to occupy, the full property interest will be transferred to the transferee. The grant of the licence does not give rise to income to the transferor or the transferee under s CC 1(1). The licence granted back to the transferor is not a reservation for the purposes of s 70(2) of the EGDA 1968 [see BR Pub 05/010].

1220.20 Rental expenses from own-your-own flat or office

Taxpayers can claim expenses if they occupy an “own-your-own” office or derive income from letting an “own-your-own” office or flat. Usually, the company which has been formed to own the building levies its shareholders for their share of the rates, insurance, maintenance, and other outgoings.

1220.30 Property leased for inadequate rent [s GC 5]

Where property is leased for an inadequate rent, or the lease makes no provision for payment of rent, the CIR may determine what is an adequate rent for that property and the amount is deemed to be income derived by the lessor. The term "property" includes both real and personal property. The provision applies where the property is leased by:

(a) A company to any person;
(b) A person to a relative of the person, or to a related company;
(c) Two or more persons to a relative of any of those persons or to a related company; or
(d) A partnership to a relative of a partner or to a related company.

The term “relative” has its normal meaning and includes a trustee for a relative [see 70 ASSOCIATED PERSONS AND RELATIVES].

The provisions apply only if, and to the extent to which, the property is used by the lessee in the production of income. It has no application to a property used by the lessee as a private dwelling unless the dwelling is used partly for business.

An amount of rent deemed by the CIR to be payable by a lessee to a lessor under s GC 5 is also deemed to be expenditure incurred by the lessee under s DA 1 [see Public ruling BR Pub 06/01 in TIB vol 18.5 (June 2006) at 30-34].

1220.40 Rental losses

Often a property is used for both private enjoyment and the derivation of rental income. The rental income is taxable. The amount of the expenditure applicable to deriving income is deductible. If an overall loss arises, it is deductible against other income. Any expenditure of a capital or private nature is not deductible.

Example:

Assume that a rental property is let for nine months and also used for the private enjoyment of the owner for three months of a year. In nine months there is rental income of $5,000 which is taxable. There was expenditure and depreciation related to the property of $20,000 for the full year. If an apportionment based upon income usage and private usage was appropriate in the circumstances, 9/12 would be deductible and 3/12 not deductible. The calculations would show:

(a) Income:

Example:

Assume that a rental property is let for nine months and also used for the private enjoyment of the owner for three months of a year. In nine months there is rental income of $5,000 which is taxable. There was expenditure and depreciation related to the property of $20,000 for the full year. If an apportionment based upon income usage and private usage was appropriate in the circumstances, 9/12 would be deductible and 3/12 not deductible. The calculations would show:

(a) Income:
Rents received | $5,000
---|---
Less deductible expenditure and depreciation | $15,000
\[ \frac{9}{12} \times 20,000 \]
Loss (either offset against other income or carried forward to a later year) | $10,000
\[ \frac{3}{12} \times 20,000 \]
(b) Private portion:
Expenditure and depreciation | $5,000
\[ \frac{3}{12} \times 20,000 \]

The $5,000 private portion cannot be offset against other income or carried forward.

In TIB vol 4:11 (June 1993) at 7, a question was asked about the availability of a rental loss for offset against other income. The CIR indicated that any rental losses that a taxpayer incurs while absent from New Zealand are available for offset against other income. This is a change from the CIR’s previous policy that saw the CIR unsuccessfully taking before the TRA a number of cases involving rental losses offset against other income.

1220.50 **Lease surrender payments received by a landlord** [ss CB 1, CC 1]

Receipt of a lease surrender payment by a landlord (who is in the business of leasing property) is assessable income under s CB 1. Where the landlord is not in the business of leasing property, but the lease agreement provides for a lease surrender payment, receipt of a lease surrender payment is lease income under s CC 1(1) or (2).

Public ruling BR Pub 09/06 provides that receipt of a lease surrender payment will be capital in nature and not income where the surrender of the lease is of such significance to the business that it constitutes a loss of a structural asset [see TIB vol 21:6 (August 2009) at 37-46]. Whether the lease is of “such significance” is a matter of fact and degree to be determined in the particular circumstances of each case.

Public ruling BR Pub 09/06 does not cover circumstances where the leasing activity carried on by the landlord is not sufficient to constitute a business. However, the commentary on the ruling states that a lease surrender payment in those circumstances may be income on some other basis (ie an amount that arose from an adventure in the nature of trade). Equally, the receipt could be a normal incident of some other business activity and thus a revenue receipt.

1220.55 **Deductibility of loan break fees paid by landlord**

The CIR has issued two public binding rulings covering the deductibility of break fees paid by a landlord. BR Pub 09/09 relates to break fees paid to exit early from a fixed interest rate loan. BR Pub 09/10 relates to break fees paid by a landlord to vary the interest rate of an existing fixed interest rate loan.

(1) **BR Pub 09/09 (early exit)**

Public binding ruling BR Pub 09/09 applies to a fixed interest rate loan used to acquire property to derive rental income. It also applies to a loan that is used to refinance another loan that was used for that purpose. In both cases, the ruling relates to the payment of a break fee paid by the taxpayer to the lender in order to repay and terminate the loan earlier than the agreed repayment date. It makes no difference whether or not the loan is replaced by a further loan from the same or a different lender. The ruling does not apply if the loan is not used solely for the derivation of rental income or if it is part of, or connected with, one or more other financial arrangements between the lender and the borrower. Nor does it apply where the taxpayer has adopted the IFRS financial reporting method [see 470.67].

Under the ruling, the tax treatment is as follows:

(a) A base price adjustment (BPA) must be performed on the termination of the loan;
(b) The amount of the break fee is included in “consideration” in the BPA formula [see 470.80];
(c) A negative result from the BPA formula will be expenditure incurred under the financial arrangement and will be interest;
(d) An automatic deduction for this interest is available to companies other than qualifying companies under s DB 7;
(e) A deduction is available to other taxpayers under s DB 6 provided that the general permission is satisfied; and
(f) If the money was borrowed to purchase a property from which rental income is derived, the general permission will be satisfied.

The ruling applies for the 2008-2009 income year to the 2011-2012 income year.

(2) BR Pub 09/10 (interest rate variation)
Public binding ruling BR Pub 09/10 applies to a fixed interest rate loan used to acquire property to derive rental income. It also applies to a loan that is used to refinance another loan that was used for that purpose. In both cases, the ruling relates to the payment of a break fee paid by the taxpayer to the lender in order to vary the interest rate payable under the loan. The ruling does not apply if the loan is not solely used for the derivation of rental income or if it is part of, or connected with, one or more other financial arrangements between the lender and the borrower. Nor does it apply where the taxpayer has adopted the IFRS financial reporting method [see 470.67].

Under the ruling, the tax treatment is as follows:
(a) No base price adjustment is required at the time at which the rate variation occurs;
(b) Taxpayers who are not cash basis persons, or who are cash basis persons but have chosen to apply a spreading method to the loan, will be required to apply Determination G25 in relation to the variation, which will result in the break fee being spread over the term of the loan;
(c) Cash basis persons will obtain a deduction for the break fee when it is incurred provided that the money was used to purchase a property from which rental income is derived.

The ruling applies for the 2008-2009 income year to the 2011-2012 income year.

(3) BR Pub 10/20 (break fee paid on sale of rental property)
Public binding ruling BR Pub 10/20 applies to the deductibility of a break fee paid by a landlord to exit early from a fixed interest loan on the sale of a rental property. The ruling applies where a person used a fixed interest rate loan to acquire a property from which rental income is derived and, subsequently, in order to sell the property, a break fee is paid to the lender to enable the loan to repaid in full and terminated earlier than its agreed repayment date. The ruling does not apply where:
• The loan is not used solely in the derivation of rental income;
• The loan is part of or connected with one or more other financial arrangements entered into with the same lender; or
• The taxpayer has adopted the IFRS financial reporting method in s EW 15D of the Act [see 470.67]

The ruling provides that a base price adjustment [see 470.80] is required in the income year in which the loan is repaid. The amount of the break fee included in “consideration” in the base price adjustment calculation and will, therefore, increase the size of the negative figure that results from the calculation. The amount of a negative result from a base price adjustment calculation is deemed to be interest under the financial arrangement rules. An automatic deduction is available for companies (other than qualifying companies) under s DB 7 of the Act. For other taxpayers, the amount will be deductible under ss DB 6 and DA 1 (the general permission). The ruling can be viewed in full on the Inland Revenue website www.ird.govt.nz.

1220.60 Cases
In *Eggers v Commissioner of Inland Revenue* [1988] 2 NZLR 365, (1988) 10 NZTC 5,153 (CA), the Court held the appellant was carrying on the business of farming, the development of the land and leasing all considered as part of a single income earning process to yield current income and future income. There being
no competing uses for any part of the assets, the losses were allowed from the farming activity in total without apportionment.

In *TRA Case L81* (1989) 11 NZTC 1,468, a homestead was used 80 per cent as a boarding house (from which rental was earned) and 20 per cent for private accommodation of the taxpayer during a period pending the use by the taxpayer of the whole residence as the family home. The TRA held that 80 per cent of the outgoings were deductible, whether or not those deductions exceeded rentals received.

In *TRA Case J66* (1987) 9 NZTC 1,393, the taxpayers let out a home acquired by them for investment purposes. The home was occupied by them for one-seventeenth of the year. Sixteen-seventeenths of expenses incurred, which exceeded rental income, were allowed as a deduction from other income.

In *TRA Case J97* (1987) 9 NZTC 1,552, repair costs were incurred in one income year to repair damage sustained to a rental property in earlier income years. As the rental activity had ceased at the time at which the expenditure was incurred, it was not deductible. The TRA found that, in order for expenditure to be deductible, it must have formed part of a continuous income-earning process, or one which had discontinued but was soon to be resumed. It must have been related to income earned at that time or shortly afterwards.
Chapter 1230

Repairs and Maintenance

1230.10 Repairs and maintenance — general rules

No deduction is allowed for the capital cost of plant, and all expenses incurred in placing plant in a revenue earning condition should be capitalised. The initial cost of installing plant and equipment is not allowable as a deduction, even where the expenditure consists mainly of wages paid to employees [see TES 9 (October 2003) 133]: Christchurch Press Co Ltd v Commissioner of Inland Revenue (1993) 15 NZTC 10,206 (HC).

In some circumstances, the cost of removing plant, equipment, and office furniture from one building to another may be allowed as a deduction (eg when a business moves from one location to another).

Section DA 1 (the general permission) allows a deduction for expenses incurred on repairs and maintenance. The amount is, of course, limited to expenditure on assets held for the purpose of deriving income or assets that are part of a business. Section DA 2 denies deductions for capital expenditure. Therefore, a distinction is drawn between capital expenditure (improvement or replacement) and revenue expenditure (repairs and maintenance). The timing of the allowable deduction can be affected by the provisions relating to the “unexpired portion” of expenditure [see 1140 PREPAYMENTS].

The additional cost of effecting improvements to a taxpayer’s business premises, by reason of a decision to keep the premises open whilst the alterations are being made, is capital expenditure, being of the same nature as expenditure on the alterations: Mann Crossman and Paulin Ltd v Inland Revenue Commissioners [1947] 1 All ER 742, (1947) 28 TC 410 (KB).

The CIR’s policy on repairs and maintenance is set out in TIB vol 5:9 (February 1994) at 1-5. The principal features of the policy are as follows:

(a) Expenditure on repairs, maintenance, and alterations must be on revenue account in order for it to be deductible. It must be deductible under the normal deductibility provisions of s DA 1 and avoid the prohibition of capital expenditure in s DA 2(1).

(b) Capital expenditure is not deductible, but it will be subject to the normal depreciation rules.

(c) Expenditure required to maintain an asset in the same condition as when the taxpayer acquired it is on revenue account, and therefore deductible.

(d) The replacement of a capital asset is capital expenditure.

(e) A distinct physical unit which can function on its own is a unit against which the extent of expenditure should be measured.

(f) Expenditure on an asset over and above making good wear and tear will be capital expenditure.

(g) No deduction is available for notional repairs.

1230.20 Repair and renewal

“Repair” is restoration by renewal or replacement of subsidiary parts of the whole. Expenditure of this nature is an allowable deduction if there is sufficient nexus with the derivation of income or the carrying on of a business [see 230.20]. “Renewal” is reconstruction of the entirety (not necessarily the whole, but of...
1230.30 Repairs and Maintenance

substantially the whole subject-matter). Only expenditures on repairs and maintenance are deductible as “repairs”: Auckland Trotting Club (Inc) v Commissioner of Inland Revenue [1968] NZLR 967 (CA).

No deduction is allowed for notional repairs and those costs should be capitalised. A notional repair is an amount arbitrarily assigned to repairs out of the total costs of restoring an asset to its original condition. For example, in TRA Case J92 (1987) 9 NZTC 1,518, a taxpayer chose not to repair and upgrade a farm employee’s dwelling, but instead redesigned and reconstructed the dwelling with the result that expenses incurred were held to be capital in nature and prohibited from deduction [see TES 9 (October 2003) 130].

In Sherlaw v Commissioner of Inland Revenue (1994) 16 NZTC 11,290 (HC), repairs were carried out on an old boat shed. This necessitated removing iron from the roof, drilling holes in the floor and, using a crane to place replacement piles. The work, which resulted in a new roof and a new raised-up floor to accommodate the piles, was held to be repairs: [see TIB vol 6:3 (September 1994) at 22].

Expenditure incurred by the lessee of a building to make the building useable for its commercial purposes by repairing defective parts of the building was held by the TRA to be repairs and not capital expenditure. The repairs involved replacing rotted flooring and covering it with particle board, re-routing defective stormwater drains, replacing rusted metal downpipe with PVC downpipe, and replacing the leaking fibrolite roofing with corrugated iron. There was no element of improvement involved in the work and the repairs did not increase the value of the building: TRA Case T43 (1998) 18 NZTC 8,287.

1230.30 Apportionment of repairs and maintenance on buildings

Architects and accountants may make an apportionment for tax purposes between revenue and capital expenditure on repairs, alterations, renovations, and additions to buildings. Apportionment is contemplated within the wording of ss DA 1 and DA 2 and a deduction is not allowed for an expenditure to the extent to which it is capital in nature: Buckley & Young Ltd v Commissioner of Inland Revenue (1975) 2 NZTC 61,036, (1975) 1 TRNZ 180 (SC); Commissioner of Inland Revenue v Banks [1978] 2 NZLR 472, (1978) 3 NZTC 61,236, (1978) 2 TRNZ 323 (CA).

A building comprises various assets and each category must be considered separately. The first step in any apportionment is to divide the total expenditure into its work category of either:

(a) Ancillary plant: lifts, heating and cooling systems, sprinkler systems.
(b) Internal fixtures: all partitions (except those constructed of brick and concrete) internal doors and internal windows, shelving, fixtures and fittings, lockers.
(c) Building proper: the structure of the building, namely, exterior walls including linings, exterior doors, shop fronts and windows, interior bearer walls, interior fixtures of brick or concrete, foundations, roof, ceilings, floors, ceiling, chimney, drainage, sewerage, stairways, plumbing, water and power supply.

After expenditure has been apportioned between the various assets, it should then be apportioned between revenue expenditure and capital expenditure, having regard to the principles applicable to items coming within that category.

1230.40 Repairs and maintenance to ancillary plant and building proper

Expenditure is of a revenue nature when it is:
(a) Repairs and maintenance of existing equipment; or
(b) Alterations not amounting to significant improvement.

Expenditure is of a capital nature when it is:
(a) Installation of new equipment;
(b) Replacement of a whole new asset; or
(c) Major alterations to the extent that they are an improvement.

For information concerning the depreciation rules applicable to buildings, structures, and building fit-outs [see 250 DEPRECIATION].
1230.50 Repairs and maintenance in specific instances

The following is a list of common types of repairs to buildings and fittings, along with comment on how the expenditures are likely to be treated for income tax purposes.

1. Architects' and consultants' fees
   Capitalise to buildings account and depreciate at building rates.

2. Braces to strengthen a building — structural alteration
   Capitalise to buildings account and depreciate.

3. Building alterations
   Cutting a new doorway is a structural alteration unless it is in the nature of an alteration to inner fixtures. The cost of replacing street and other doors is revenue unless an improved type of door has been fitted (e.g., an old wooden door replaced by steel roller door). The cost of the improvements should be capitalised to the building (e.g., installation of doors where no doors previously existed). Cost of structurally altering windows (e.g., setting windows back at an altered angle) should be included in “building proper”.

4. Building site expenses
   In *TRA Case J26* (1987) 9 NZTC 1,152, mortgage interest and rates expenses were disallowed as a deduction. The expenses were incurred on bare industrial-zoned land purchased for the purpose of erecting a purpose-built building for a future tenant. The expenditure was disallowed because it was incurred to retain a capital asset preliminary to commencing a rental business.

5. Cartage
   This cost follows the allocation of the material carried (e.g., cartage of bricks for structural alterations is capitalised to buildings).

6. Demolitions
   Costs of demolition and accompanying losses on buildings do not form part of the capital cost of new buildings for depreciation purposes. Such costs and losses are capital and should be taken to a non-depreciable account. The cost of clearing a site more properly relates to the cost of the site, and cannot be said to relate to the depreciable cost of the new building erected on that site.

7. Dilapidation and deferred repairs and maintenance
   Dilapidation relates to expenditure incurred on repairs to an asset which are undertaken immediately following, or shortly after, purchase. Work of a major nature to repair dilapidation which occurred during the previous ownership should be capitalised because the work is generally regarded as improving the value of the property for the new owner.

8. Drainage, sewerage
   Drainage and sewerage costs are normally part of the cost of building. New installations and extensions should be capitalised.
(9) **Electrical work**
Expenditures for the installation of heavier mains, switchboards, extensions to wiring, larger switchboards, etc, particularly on the installation of lifts and machinery, are likely to be capital in nature. Fluorescent lights, wiring, etc, are treated as additions to buildings.

(10) **Fire or earthquake precautions**
The cost of bringing a building up to the required fire or earthquake standards (eg by installing fire exits and fire escapes or by carrying out earthquake strengthening), should be capitalised to buildings: TRA Case X26 (2006) 22 NZTC 12,315.

(11) **Fire losses**
Expenditure incurred on fire losses, where the damage necessitates a full replacement of the asset, cannot be regarded as repairs or alterations and is not deductible. Where there is only partial damage to the asset, and repairs are undertaken, the deduction for those repairs should be considered on a case-by-case basis to ensure that no improvements are involved. Insurance proceeds, indemnity charges, or compensation payments received for assets lost, destroyed or damaged are taken into account as disposal proceeds for an asset sold under s EE 48 [see 250.165].

(12) **Foundations**
Except for normal repairs, all costs should be capitalised to buildings.

(13) **Hand basins and toilets**
Cost of installation (plumbing, basins, etc) should be capitalised to buildings.

(14) **Heating systems**
Cost of installation should be capitalised to plant. Where only repairs are carried out, the costs should be charged to revenue. If, when making repairs, the opportunity is taken to effect improvements such as increased capacity, more efficient materials or extension of the system, the expenditure should be capitalised.

(15) **Lawns and levelling**
Cost of laying lawns should be added to land account. No depreciation or loss on abandonment is available.

(16) **Lifts**
The cost of altering a lift to comply with fire precautions, enclosing sides etc, is capital expenditure. Alterations are treated as alterations to building. The cost of replacement of the lift by a ramp would be a structural alteration.

(17) **Murals**
In general, murals would fall within the definition of “inner partitions”. The cost should be capitalised and depreciation claimed.

(18) **Parapets**
The initial cost of coating with bitumen, etc to prevent leaks can be capitalised to building account. If water seeps through due to fair wear and tear, the cost of making good the damage is revenue although a full replacement is likely to be capital expenditure.

(19) **Paths and flagstones**
Capitalise to land account. Normal repairs are deductible.

(20) **Pillars**
Pillars that support the building, roof, ceilings, etc, are part of the main structure. The cost of the means of support substituted for a removed pillar should be capitalised to buildings account (this occurs for instance where a pillar is removed and replaced by a horizontal beam).
(21) **Ramps**
A ramp forms part of the main structure and should be capitalised to buildings account.

(22) **Removal expenses**
Costs of rearranging subdividing walls (not being bearer walls within a building) could be revenue expenditure, depending on the facts. Costs of altering main walls or bearer walls would be structural alterations and capitalised to buildings account.

(23) **Rental property repairs**
In *TRA Case J97* (1987) 9 NZTC 1,552, repair costs were incurred in one income year to repair damage sustained to a rental property in earlier income years. As the renting activity has ceased, the costs were not deductible. To be deductible, the expenditure must be incurred as part of a continuous income-earning process, or one which had discontinued but was soon to be resumed. It must have been related to income earned at that time or shortly afterwards.

(24) **Septic tanks**
Capitalise cost to buildings account.

(25) **Shelter trees (other than farmers)**
Capitalise cost to land account [see 430.125].

(26) **Shop fronts modernisation**
A shop front is generally regarded as being part of the “building proper”.

(27) **Skylights**
Cost should be capitalised to buildings account.

(28) **Strengthening building**
The cost of strengthening a building to carry machinery, including testing, consulting engineer’s fees, etc should be capitalised to building but, in some instances, where it can be shown that the long use of machinery has weakened the structure, the cost may arguably be allowed as a deduction.

(29) **Strongroom**
This is part of the building and the cost should be capitalised.

(30) **Windows**
The following policy is applied:
(a) Construction — capitalise to buildings;
(b) Replacement of damaged window with new window of same type — revenue;
(c) Replacement of wooden framed with metal — this expenditure should be capitalised as it is likely to improve the capital value of the asset, and provide an enduring benefit;
(d) Replacement of fixed types with louvres, etc as for (c) above; and
(e) Removal of windows and making good the walls — capitalise to buildings.

(31) **Windows tinting**
Outside windows are part of the building proper. The original cost of the tinting is capital expenditure. Any subsequent treatment of the same windows would be on revenue account and allowable as a deduction.

(32) **Yard**
Capitalise cost of levelling, sealing, etc, to land account and claim repairs only.
1230.60  **Amounts received for non-compliance with covenant to repair**  
[ss CC 2, DB 22, EI 5, EI 6, YA 1]

A payment received by a taxpayer as indemnity, compensation, or damages for the non-performance by a lessee of an obligation under a lease to maintain the leased land or to make repairs to any improvements on the land is income in the year of receipt. However, s EI 5 allows the taxpayer to elect to spread the income over the year of receipt and up to four years following the year of receipt. The election need not be made when the payment is received. It can be made in each of the years over which the income is spread. Any election must be in writing and must be made no later than the due date for filing the tax return for that income year. The CIR may allow an extension of time for the election.

The right to spread the payment is conditional on the taxpayer continuing to “own” the land in the year into which the income (or part of the income) has been spread. A taxpayer is deemed to “own” land in which that taxpayer has any estate or interest, whether legal or equitable, other than an interest by way of mortgagee. A lessee of land who has given a sub-lease is an “owner” for these purposes. Any balance of the payment which has not previously been allocated is automatically allocated to the fourth income year following the year of receipt.

Under s EI 6, where a taxpayer who has received a payment ceases to “own” the land before the end of the third year following the year of receipt, any balance of the payment which remains unallocated is automatically allocated to the year in which the taxpayer ceases to own the land.

Section DB 22 provides limited relief to the lessor where:

(a) The lessor continues to own the land but ceases to use it for the derivation of income;
(b) The lessor incurs expenditure such as maintenance of the land or repairs and maintenance of the improvements;
(c) The expenditure would have been deductible to the lessor if the land was being used in earning assessable income; and
(d) The expenditure is incurred because of the default of the lessee under a covenant to repair.

The amount of the expenditure incurred by the lessor is deductible up to the smaller of:

(a) The expenditure incurred in the income year; and
(b) The amount received from the defaulting lessee in that income year or spread to that income year under s EI 5 (see above).

This provision, contained in s DB 22, anticipates that the expenditure may be incurred in a later year than that in which the compensation is received, possibly in a year when the property, although still owned by the taxpayer, is not producing income.

1230.70  **Payments made for non-compliance with covenant to repair**  
[ss DB 21, EJ 11]

A lessee may have paid compensation to the landlord for neglecting to carry out repairs and maintenance which was a requirement under the lease. A deduction can be claimed where all of the following circumstances exist:

(a) The taxpayer was, or still is, the lessee of land used in deriving income;
(b) Under the lease the taxpayer is, or was, under an obligation to maintain that land or to make repairs to the improvements on the land;
(c) The taxpayer’s failure to perform that obligation led to the taxpayer becoming liable to pay the lessor a sum of money; and
(d) The sum or part thereof is paid to, or recovered by, the lessor from the taxpayer.

The taxpayer is given a right of election either to claim the whole of the expenditure in the year incurred or to spread back the whole or part of the deduction into one or more of the three years immediately preceding the year of payment provided these were years in which the land was used in the production of income. An
election to spread is irrevocable and must be in writing given to the CIR within the time allowed for furnishing the taxpayer’s return of income for the year in which the payment was made, or within such further time as the CIR in its discretion may allow.
Chapter 1240

Research and Development

1240.10 Scientific research expenditure [s DB 33]

A deduction is allowed for any expense incurred by the taxpayer during the income year for scientific research carried on by the taxpayer to derive assessable income. Expenditure which is capital in nature is not precluded from deduction under the provision unless it relates to an asset that is not created from the scientific research and for which depreciation is allowable, or would have been allowable had proper records been kept. For example, the costs of acquiring or building a laboratory or special plant used for scientific research purposes would not be deductible as they are depreciable. However, the cost of scientific research carried on in the process of inventing a new type of machinery may be deductible.

No deductions are allowed if the CIR considers that incomplete and unsatisfactory records have been kept. The CIR has power to set depreciation rates for any asset used in scientific research for the purpose of deriving income.

1240.20 Research and development [ss DB 34, DB 35]

There is a specific regime for the deductibility of expenditure on research and development. Use of the rules is optional. Taxpayers are able to use the general and specific deductibility rules such as s DA 1 (the general permission) or s DB 33 (scientific research) [see 1240.10] should they so choose.

Under the specific regime, taxpayers are permitted to follow their accounting treatment and claim an immediate deduction for research and development costs after applying the asset recognition criteria contained in Financial Reporting Standard NZ IAS-38: Intangible Assets, or under [5.1], [5.2] or [5.4] of the Financial Reporting Standard No 13 1995 (the old standard). Under NZ IAS-38, expenditure on “research” is always written-off, while expenditure on “development” is written-off until such time as the expenditure has resulted in a valuable asset with sufficiently certain economic benefits. This point is reached when the product or process being developed meets all of the following five asset recognition criteria:

(a) The product or process is clearly defined and the costs attributable to the product or process can be identified separately and measured reliably;

(b) The technical feasibility of the product or process can be demonstrated;

(c) The entity intends to produce and market, or use, the product or process;

(d) The existence of a market for the product or process or its usefulness to the entity, if it is to be used internally, can be demonstrated; and

(e) Adequate resources exist, or their availability can be demonstrated, to complete the project and market or use the product or process.

From the point at which these criteria are met, further development expenditure is capitalised and amortised. NZ IAS-38 defines “research” as:

“original and planned investigation undertaken with the prospect of gaining new scientific or technical knowledge or understanding.”

“Development” is defined as:
“the application of research findings or other knowledge to a plan or design for the production of new or substantially improved materials, devices, products, processes, systems or services before the start of commercial production or use.”

The rules do not allow the deduction of expenditure that has been expensed for accounting purposes on the basis that the amount is immaterial. It is necessary to first apply the criteria to determine whether the expenditure should be expensed or capitalised. However, taxpayers who have total annual research and development expenditure of $10,000 or less, and who write off the expenditure as immaterial for accounting purposes, can treat the expenditure as not being of a capital nature without applying the criteria contained in NZ IAS-38.

Expenditure incurred in devising a patent is deductible under the same criteria as other research and development expenditure.

Where an asset is used in the research and development project, its cost cannot be deducted if it is an asset to which the depreciation regime applies. However, assets which are created from the research and development expenditure, such as prototypes, are subject to the research and development regime for the expenditure incurred in creating them and are not required to be capitalised and depreciated merely because they may be able to be depreciated.

The immediate deduction for expenditure under the regime is achieved by the deeming of the expenditure to not be of a capital nature. However, in order to be deductible, the expenditure must meet the other normal tests of deductibility. This means that the expenditure must have been incurred and it must have the necessary nexus with the income earning process.

Expenditure which has been incurred will not be deductible if the accrual expenditure rules require that it be added back to assessable income [see 1140 PREPAYMENTS].

The normal prohibitions on expenditure of a private or domestic nature apply, as do the prohibitions on expenditure incurred in earning exempt income and income from employment, and expenditure which is otherwise specifically disallowed as a deduction under the ITA 2007. Some research and development expenditure will remain neither deductible nor depreciable (ie “black hole expenditure”) [see TIB vol 13:11 (November 2001) at 30-33].

1240.25 Research and development expenditure deferral regime

Historically, the tax benefit of expenditure incurred on research and development activities has not always been able to be utilised. This is due to the fact that it is often necessary to bring in additional investors when moving to the commercialisation phase. Where the taxpayer is a company, the introduction of new shareholders can result in the company’s losses, which have resulted from the research and development activities, being forfeited. Taxpayers have the option under ss EJ 22 and EJ 23 to either allocate their research and development expenditure to the income year in which it is incurred or to defer the deduction to a later income year.

In order for deferral to be available, the expenditure must be incurred prior to the start of commercial production or commercial use of the product. Expenditure which is able to be deferred is:

(a) Expenditure incurred on research and development;
(b) Depreciation of assets used for research and development; and
(c) Expenditure incurred on market development for a product that has resulted from research and development.

Deferrable expenditure includes a reasonable allocation of overhead expenses such as rent and utility costs. Expenditure on interest is not able to be deferred. To the extent to which the taxpayer decides not to defer the expenditure, it is offset against income in the normal way. Any resulting loss is subject to the normal loss carry-forward rules [see 940.15, 940.18, 940.20].

If the taxpayer decides to defer the deduction, the expenditure must then be offset to the extent possible against income that the person would not have derived but for the research and development having been undertaken or against depreciation recovered on the disposal of an asset used in the research and development.
Research and Development

activities. Deductions from unsuccessful research and development activities can be offset against income from successful projects. The minimum amount that is required to be taken as a deduction in any particular income year is the lesser of the amount of assessable income that would not have been derived but for research and development and the amount of qualifying deductions that have not been allocated to earlier income years. Amounts that have been deferred are also able to be offset against income from another source in any income year to which a loss would have been able to be carried forward from the income year in which the expenditure was incurred.

The maximum amount that is able to be taken as a deduction in any particular income year is the greater of:

(a) The amount of assessable income that would not have been derived in the current income year, but for research and development; and

(b) Deferred expenditure from any earlier income year that satisfies the loss carry-forward rules.

Example:

Innovative Co Ltd is in the process of developing a new product range. After allocating expenses between sales of existing products and sales of new products resulting from research and development activities and also separating out costs of new research and development, the results for the first two years are as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Net Profit Existing Products</th>
<th>Net Profit New Products</th>
<th>R&amp;D Expenses</th>
</tr>
</thead>
<tbody>
<tr>
<td>20X1</td>
<td>$700,000</td>
<td>$0</td>
<td>$4,000,000</td>
</tr>
<tr>
<td>20X2</td>
<td>$700,000</td>
<td>$50,000</td>
<td>$0</td>
</tr>
</tbody>
</table>

Year 1: The company decides to defer $3,300,000 of research and development expenditure leaving it in a nil profit situation.

Year 2: The minimum amount that the company must claim as a deduction is $50,000 (being the net profit from the new products). The maximum amount that it can claim is $3,300,000 being previously deferred expenditure. To the extent that the company decides to take a deduction over and above the amount of its profit for the year, the resulting loss will be subject to the loss carry-forward rules in the event of the change in shareholding. To the extent to which the company decides to continue to defer the expenditure, it will be protected from the loss carry-forward rules.

1240.30 Scientific research promoters [s CW 49]

Income derived by any society or association established primarily for the promotion of scientific or industrial research and approved by the Royal Society of New Zealand is exempt from income tax. The exemption applies only if no part of the organisation’s funds is available to be used for the private pecuniary profit of any proprietor, member, or shareholder, including an associate of any proprietor, member, or shareholder.

The exemption does not apply to Crown Research Institutes.

1240.35 Technology development grants and technology transfer vouchers [ss CX 47, DF 1]

(1) Technology development grants

Technology development grants can be made by the Crown to a business to assist with the costs of research and development (R&D). The amount is paid out over the course of the business’s R&D programme. Part of each grant instalment is withheld until the grant administrator is satisfied that the claims made fall within the eligible expenditure criteria under which the grant was approved. The grant administrator is the Ministry of Science and Innovation.

When a grant instalment payment is received (net of the withheld amount), it is treated as excluded income. To the extent to which the payment relates to deductible expenditure, the expenditure is not deductible. To the extent to which it relates to depreciable property, no depreciation is claimable.

Once the conditions of the grant have been satisfied, the retained amounts will be released. If this occurs in a later income year than the one in which the relevant expenditure occurs, the taxpayer has a choice of two ways in which to treat the amount. The first option is to apply the normal provision. If the person’s return of income for the income year in which the expenditure was incurred has already been filed, this would involve filing an amended return. The second option is to treat the amount as assessable income. Where the second option is chosen, no adjustment is required for the expenditure incurred in the prior income year.
Example:

Widget Co Ltd applies for a grant of $1,000,000 for the acquisition and modification of a new manufacturing plant and the cost of staff wages to test the plant and establish operational procedures for it. The grant is approved. In the first income year, Widget Co gradually completes the work and claims the full $1,000,000 in two instalments. Of the expenditure incurred, $800,000 relates to the physical machinery and $200,000 to wages. By the end of the income year, Widget Co has received both instalments of the grant net of a 10 per cent ($100,000) retention pending the provision of audited financial statements to the grant administrator.

The $900,000 grant receipts are excluded income to Widget Co.

Of the $800,000 spent on the plant, $720,000 has been covered by the grant monies actually received. The company can claim depreciation based on the net cost of $80,000.

Of the $200,000 spent on wages, $180,000 has been covered by the grant monies actually received. The company can claim a deduction of the net cost of $20,000.

In the following income year, the company receives the retained amount of $100,000. The company can either:

(a) Treat the amount as excluded income. If it takes this option, it will need to adjust its return of income for the previous income year to eliminate the depreciation claimed for the net cost of the plant and the deduction claimed for wages. If the return has already been filed, this will entail the re-opening of the return.

(b) Treat the amount as assessable income and leave the previous year’s return untouched.

(2) Technology transfer vouchers

Technology transfer vouchers provide for the payment of 50 per cent of the cost of R&D work which a business contracts out to a third party research provider. The grant payments are made direct from the Ministry of Science and Innovation to the research provider.

The taxpayer has two options regarding the tax treatment of these grants. The first option is to ignore the grant for tax purposes, merely claiming a deduction for the half of the expenditure that it incurs itself (assuming that it meets the deductibility criteria in s DB 34). The second option is to treat the grant amount as excluded income. This will still result in a deduction for only half of the expenditure that it incurs itself (assuming that it meets the deductibility criteria in s DB 34).
Chapter 1250
Residence

1250.10 Significance of residence in the imposition of income tax
[ss BD 1(4), (5)]

In the absence of a double tax agreement, the residence of a taxpayer and the country from which income is derived determines whether the income is taxable in New Zealand. The following points summarise the options:

(a) All income derived from New Zealand or foreign sources by any person who is New Zealand resident at the time of deriving the income (including attributed CFC income and foreign investment fund income) is taxable in New Zealand [see 760 INCOME FROM NEW ZEALAND AND FOREIGN SOURCES].

(b) All income which is New Zealand sourced and is derived by a non-resident is liable to New Zealand tax.

(c) Income which is neither New Zealand sourced, nor is derived by a person who is resident in New Zealand at the time the income is derived, is not subject to tax in New Zealand.

<table>
<thead>
<tr>
<th>New Zealand-sourced income</th>
<th>Foreign-sourced income</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Zealand resident</td>
<td>Taxable</td>
</tr>
<tr>
<td>Non-resident</td>
<td>Taxable</td>
</tr>
<tr>
<td></td>
<td>Not taxable</td>
</tr>
</tbody>
</table>

The above table illustrates that for New Zealand residents all income is taxable, whereas for non-residents only New Zealand sourced income is taxable. For an example see TES 19 (September 2004) 267. See Inland Revenue Booklet *New Zealand Tax Residence* (IR292) for further details.

1250.15 Residence

The legislation provides definitions for determining the residence of individuals, companies and trusts. There is no definition for the residence of a partnership.
1250.20  **Residence of individuals** [s YD 1]

The residence of individuals is determined by the length of time a non-resident is in New Zealand or the length of time a resident is out of New Zealand. However, if they have a permanent place of abode in New Zealand they are deemed to be a New Zealand resident irrespective of the number of days absent.

1250.25  **Definition of “New Zealand”**

The definition of “New Zealand” includes not only the continental shelf as defined in s 2 of the Continental Shelf Act 1964, but also the water and air space above any part of the continental shelf to the extent that there is exploration or exploitation of that part or any natural resource of that part, and the exploration or exploitation activities involve or relate to that water or air space [s YA 1, see 760.15].

1250.30  **Permanent place of abode** [s YD 1(2)]

Individuals are residents if they have a permanent place of abode in New Zealand even though they may also have a permanent place of abode outside New Zealand. This may give rise to taxation being assessed in two countries. The position may be clarified by a double tax agreement entered into between the two countries [see 310 DOUBLE TAX AGREEMENTS]. For New Zealand tax purposes there is also a credit given for foreign tax paid.

A permanent place of abode is not defined in the legislation. PIB 118 (November 1982) states that Inland Revenue will consider the following in determining the permanent place of abode:

(a) The length of time spent in New Zealand, and the time spent in other countries prior to, or subsequent to, the time spent in New Zealand;

(b) The domestic situation including the whereabouts of family;

(c) The memberships of professional or trade associations and sports clubs;

(d) Accommodation arrangements;

(e) Home, furniture, vehicles, and contents ownership;

(f) Financial connections, bank accounts, superannuation, insurance;

(g) Other connections associated with the claimed permanent place of abode.

Other factors that have been considered when determining an individual’s permanent place of abode have included:

(a) Employment history and transience of job;

(b) Length of residency in country claimed as permanent place of abode;

(c) Where any sporting, professional and trade ties are retained;

(d) Whether New Zealand or overseas welfare benefits are received;

(e) Whether annual leave is taken in New Zealand or overseas.

In Geothermal Energy New Zealand Ltd it was held irrelevant to the concept of residence that holidays or compassionate leave meant a transitory presence in New Zealand. In Applegate, the Federal Court of Australia had to decide whether a solicitor, who had been asked by the firm which employed him to proceed to Vila for one or two years to establish a branch office there, was “resident” in Australia during his absence. The Court considered s 6(1) of the Australian Income Tax Assessment Act 1936, which defines “resident of Australia” to mean, inter-alia:

“a person, other than a company, who resides in Australia and includes a person:

“(i) Whose domicile is in Australia, unless the Commissioner is satisfied that the permanent place of abode is outside Australia …”
The taxpayer resided in Vila for about 18 months from the end of 1971. It was held that the taxpayer’s only permanent place of abode during the relevant year was in Vila and, therefore, he was not a resident of Australia during that period. It appears from the case that a permanent place of abode does not mean permanent in the sense that the taxpayer intends to live there for the remainder of his life, since that would be equivalent to domicile; and the expression permanent place of abode is something less than domicile. It was also held that as the tax is imposed on an annual basis residency must also be determined on that basis, so that an expressed intention to return to a country at some time in the future is not in itself decisive of the question whether the taxpayer has a permanent place of abode in that country in the particular income year.

Similar sentiments were expressed in *W v Commissioner of Inland Revenue* (1961) 10 MCD 168:

“a home must be regarded as a place to which the characteristics of stability and permanence are attached. It is one’s fixed or settled abode and the place where one’s roots or permanent attachments are to be found … A man may have his home in a particular country although he is not for the time being physically present there.”

A taxpayer will not lose his or her permanent place of abode in a country simply because he or she has not formed an intention to remain indefinitely outside that country: *Federal Commissioner of Taxation v Jenkins* (1982) 12 ATR 745, 82 ATC 4,098 (QSC). In *TRA Case H97* (1986) 10 TRNZ 189, it was held that a permanent place of abode test should be an objective test decided on the relevant facts. See also *TRA Case J98* (1987) 9 NZTC 1,555. Where a taxpayer had requested the New Zealand CIR to assist in completion of a declaration of New Zealand residency for the purpose of obtaining a refund of UK tax on the basis of New Zealand residency, the CIR’s action amounted to a determination of New Zealand residence which bound the taxpayer: *TRA Case J41* (1987) 9 NZTC 1,240. In *TRA Case F138* (1984) 8 TRNZ 140, a university lecturer was overseas for just less than 12 months and always intended to return to New Zealand. It was held that he was a New Zealand resident as his permanent place of abode was New Zealand: *TRA Case F139* (1984) 6 NZTC 60,245 and *TRA Case F150* (1984) 6 NZTC 60,309.

A discussion of the various factors to take into account when determining whether a person has a permanent place of abode in New Zealand is covered in TIB vol 7:1 (July 1995) at 10-12. For examples see TIB vol 11:11 (December 1999) at 13-14 and TES 19 (September 2004) 262, 263.

### 1250.35 Persons coming to New Zealand

A person coming to New Zealand may be deemed to be a resident through being personally present in New Zealand for more than 183 days in the aggregate in any 12-month period. Once this qualifying period has been attained, the person is deemed to be resident from the first day of personal presence. The period of measurement is any 12-month period. It is not any income year or any calendar year.

Presence for part of a day in New Zealand gives rise to deemed personal presence for the whole of that day so that no part of the day is deemed personal absence. This rule applies to both persons coming to New Zealand and persons leaving New Zealand.

In the period from 1 April to the day before arrival, the person is a non-resident and assessed for New Zealand income tax on only New Zealand sourced income. New Zealand sourced non-resident passive income (interest, dividends, or cultural royalties) is assessed with non-resident withholding tax which is deducted at source and is the final tax liability. Other New Zealand sourced income (eg business profits and rents) is subject to tax through the normal assessment procedures.

In the period from the date of arrival to 31 March, the person is assessed with New Zealand income tax on all New Zealand income and overseas income.

#### Example:

Anton arrives in New Zealand on 15 May 20X1 and takes up employment with a New Zealand resident employer. Anton must then provide the employer with a tax code declaration (IR330). The employer makes PAYE tax deductions from Anton’s pay. If Anton is deriving provisional income, the instalments of provisional tax (if any) first fall due in the 20X2-2X3 income year. Terminal tax (if any) for the 20X1-X2 year is also due in the 20X2-X3 income year. If Anton derives income from overseas on or after 15 May 20X1, it is taxable in New Zealand once he has established residence in New Zealand.
For examples see TES 19 (September 2004) 265, 266.

Where non-residents come to New Zealand under the recognised seasonal employment scheme, the person is treated as a non-resident for the duration of their stay in New Zealand. This rule applies from the 2009-2010 income year [s YD 1(11) see 1080.31].

1250.40 Persons leaving New Zealand [s YD 1(5), (6)]

An individual with New Zealand resident status may become a non-resident by being absent from New Zealand for more than 325 days in any 12-month period. However, a resident who leaves New Zealand will not lose New Zealand resident status if a permanent place of abode in New Zealand is retained. If no permanent place of abode is retained in New Zealand, the absence from New Zealand is deemed to commence from the first day of personal absence in the 325-day period.

In the period from 1 April to the day of departure the person is a resident and is assessed with New Zealand income tax on all New Zealand income and overseas income. In the period from the day following departure to the following 31 March, the person is assessed with New Zealand income tax on New Zealand sourced income only. At that point, non-resident passive income from New Zealand (interest, dividends, or cultural royalties) is assessed with non-resident withholding tax which is deducted at source and is the final tax liability. Other New Zealand income (eg business profits and rents) is subject to tax through the normal assessment procedures.

A useful discussion of the factors that are relevant in determining whether a person on a two year overseas working holiday remains a New Zealand resident for tax purposes is covered in TIB vol 11:10 (November 1999) at 34-36. For examples see TES 19 (September 2004) 263, 266.

1250.45 Where overlap exists in the 183 day and 325 day rules

PIB 180 (June 1989) stated that where a person is travelling in and out of New Zealand an overlap between the 183 day and 325 day rules can occur. A person who is resident under the 183 day rule may have been temporarily absent from New Zealand at a time before the end of the counting of the days of presence for the purpose of the 183 day rule. If the person thereafter satisfies the 325 day rule by being absent from New Zealand for more than 325 days in any 12-month period, the person will cease to be resident in New Zealand from the first day of absence in that period (assuming no permanent place of abode) even though that day falls before the final day which is taken into account in determining that the person is resident in New Zealand by virtue of the 183 day rule. Consequently, in this situation the period of absence taken into account for the purpose of the 325 day rule effectively cuts into the period of presence taken into account for the purpose of the 183 day rule. This may result in the person being deemed to be resident for a period of less than 183 days even though he or she was present here for more than 183 days in a 12-month period.

The two rules may also overlap in the converse situation. Thus, a person who ceases to be resident under the 325 day rule may have been temporarily present in New Zealand at a time before the end of the counting of days of absence for the purpose of the 325 day rule. If the person then satisfies the 183 day rule by being present in New Zealand for more than 183 days in any 12-month period, he or she will become resident in New Zealand from the first day of presence in that period even though that day falls before the final day taken into account for the purpose of applying the 325 day rule. This may result in the person being deemed to be non-resident for a period of less than 325 days even though he or she was absent for more than 325 days in aggregate in a 12-month period.

In circumstances where there is an overlap between a period taken into account for the 183 day rule and a period taken into account for the 325 day rule, the later period chronologically operates to confer residence or non-residence respectively from the first day of that period.

Example 1:

Amy departs from New Zealand on 1 May 20X1, returning on 1 January 20X2 after 244 days of absence. She again departs from New Zealand on 1 February 20X2 after 32 days of presence. She returns on 28 April 20X2 after 85 days of absence and remains in New Zealand thereafter. It is assumed that she does not have a permanent place of abode in New Zealand until she returns on 28 April 20X2. It is also assumed that she was resident in New Zealand under the 183 day rule prior to departure on 1 May 20X1.
The result is that Amy ceases to be resident in New Zealand from 2 May 20X1 until 31 December 20X1. She becomes resident in New Zealand again on 1 January 20X2.

Explanation:
(a) Amy is personally absent from New Zealand for 329 days in aggregate in the 12-month period commencing on 2 May 20X1 (ie for 244 days from 2 May 20X1 to 31 December 20X1, and for 85 days from 2 February 20X2 to 27 April 20X2). Amy therefore ceases to be resident in New Zealand from the first day of absence (ie 2 May 20X1).
(b) Amy is personally present in New Zealand for 280 days (ie more than 183 days), in the 12-month period commencing on 1 January 20X2 (ie for 32 days from 1 January 20X2 to 1 February 20X2, and 248 days from 28 April 20X2 to 31 December 20X2). She is resident from the first day of presence in that 12-month period (ie 1 January 20X2).
(c) The period taken into account for the purpose of the 183 day rule cuts into the period taken into account for the purpose of the 325 day rule. Thus, Amy is only non-resident from the commencement of the period of absence (ie 2 May 20X2), until the day before the beginning of the period taken into account for the purpose of the 183 day rule (ie 31 December 20X2).

Example 2: Bill arrives in New Zealand on 1 November 20X1 and remains for 150 days until 30 March 20X2. Bill departs on 30 March 20X2, returning on 5 May 20X2, a period of absence of 35 days (ie from 31 March 20X2 to 4 May 20X2 inclusive). He is present in New Zealand from 5 May 20X2 to 13 June 20X2, a total of 40 days. Bill departs again on 13 June 20X2 and remains outside New Zealand indefinitely. It is assumed that he is resident outside New Zealand before he arrives on 1 November 20X1 and that he does not at any time have a permanent place of abode in New Zealand. The result is that Bill is resident in New Zealand from 1 November 20X1 to 30 March 20X2. He ceases to be resident in New Zealand on 31 March 20X2.

Explanation:
(a) Bill is present in New Zealand for 190 days in aggregate in the 12-month period commencing on 1 November 20X1 (ie for 150 days from 1 November 20X1 to 30 March 20X2, and for 40 days from 5 May 20X2 to 13 June 20X2). He is resident from the first day of presence (ie 1 November 20X1).
(b) Bill is absent from New Zealand for 327 days in aggregate in the 12-month period commencing on 31 March 20X2 (ie for 35 days from 31 March 20X2 until 4 May 20X2, and for 292 days from 12 June 20X2 to 30 March 20X3). He ceases to be resident in New Zealand from the first day of absence (ie 31 March 20X2).
(c) The period taken into account for the purpose of the 325 day rule cuts into the period taken into account for the purpose of the 183 day rule. Consequently, Bill is only resident from the commencement of the period of presence (ie 1 November 20X1), until the day before the beginning of the period taken into account for the purpose of the 325 day rule (ie 30 March 20X2).

1250.50 Government service [s YD 1(7)]

A person (other than a company) who is personally absent from New Zealand in the service in any capacity of the New Zealand Government is deemed to be resident in New Zealand during that absence. The remuneration is liable to New Zealand tax as well as overseas tax. New Zealand will give credit for the overseas tax against the New Zealand tax, but this does not apply if the relevant double tax agreement provides otherwise.

1250.55 University professors on sabbatical leave

When sabbatical leave is taken, study or research is usually undertaken at an overseas university or another approved institution. Salary, however, continues to be paid from New Zealand and the question which arises is whether the salary is liable to New Zealand tax if the period abroad exceeds 325 days under the residency rule. Furthermore, the salary paid is not in recognition of past services but for the continuing employment of the professor and is for work or services performed outside New Zealand.

The test is whether the person has a permanent place of abode in New Zealand, even though that person may also have a permanent place of abode outside New Zealand. Absence on sabbatical leave does not give rise to non-residence if a permanent place of abode is retained in New Zealand.

The home of a university professor whilst on sabbatical leave constituted a permanent place of abode: TRA Case Q55 (1993) 15 NZTC 5,313.

1250.60 Residence of company [ss YD 2, YD 3]

A company is deemed to be resident in New Zealand if:
(a) It is incorporated in New Zealand;
(b) It has its head office in New Zealand;
(c) It has its centre of management in New Zealand; or
(d) Control of the company by its directors, acting in their capacity as directors, is exercised in New Zealand, whether or not decision making by directors is confined to New Zealand.

If a company is not resident in New Zealand it is deemed to be a non-resident company. A foreign company is, for the purposes of the definition of “available subscribed capital” (ASC) and the international tax rules for any accounting period of the foreign company, deemed to be resident in a particular country or territory if at any time during that accounting period the company is liable to income tax in that country by reason of domicile, residence, or place of management in that country or territory, or any other similar criteria.

If there is the possibility of a company being deemed to be resident in more than one country, it is deemed to be resident in a country using the same rules (a) to (d) above as would apply if it were a New Zealand company. Failing that it is deemed to be resident where its centre of management is located. If difficulties still occur, the CIR has power to make a final decision.

Previously, a company’s residency was defined with reference to whether it was incorporated in New Zealand or had its head office in New Zealand. Its head office in New Zealand was taken as meaning the centre of its administrative management, and this could have meant day-to-day management or the highest level of administrative management. In TRA Case N28 (1991) 15 TRNZ 795, the objector was a duly incorporated private company in Papua New Guinea and was a wholly owned subsidiary of a New Zealand based company which was incorporated in New Zealand. However, the company’s physical activities and work were carried out mainly, if not wholly, in PNG as a forestry management operative. It was held that (with reference to the 1985, 1986, and 1987 income years):

(a) The legislation looked more to the centre of the day-to-day activities, the reality of carrying on business or the administrative function to see where the head office of the company was situated.
(b) The administrative management is not the same as management by itself. The focus on the actual place of management is important.
(c) The centre of the objector’s administrative management was at all times in PNG. The actual carrying out of decisions wherever made was executed in PNG. That is where they were administered from, so that was the centre of the objector’s administrative management.
(d) At all material times the objector was not a resident in New Zealand.

Whether the “centre of management” test now deems a particular company which is not registered in New Zealand and has no head office or directors acting in New Zealand as a resident company depends on all the facts in the particular circumstances. The tests are independent and companies incorporated outside New Zealand which were formerly not resident for New Zealand tax purposes may now in many situations be residents. Until case law evolves, many companies may need to take care that there is no centre of management in New Zealand and that all approvals or substantive decisions are made outside New Zealand. For examples see TES 19 (September 2004) 270, 271.

The position was clarified to some extent in New Zealand Forest Products Finance NV v Commissioner of Inland Revenue (1995) 17 NZTC 12,073 (HC). The company in question, a wholly-owned subsidiary of NZFP, was incorporated and registered in the Netherlands Antilles. The board, consisting of three directors, held all its meetings outside New Zealand. One of the directors was also a director of the parent company, NZFP. Although the company’s articles of association gave NZFP the power to remove directors, NZFP did not have the power to direct them how to vote. The company’s shareholder meetings took place in the Netherlands Antilles. The ongoing administration of the company was carried out by a trust company (unconnected with NZFP or its subsidiaries) resident in the Netherlands Antilles. The Court applied the test in De Beers Consolidated Mines Ltd v Howe (Surveyor of Taxes) [1906] AC 455, (1906) 5 TC 198 (HL) and the company was found to be not resident in New Zealand. The following reasons were given for the decision:

(a) All decisions by directors were taken outside New Zealand;
(b) The essential management functions of the company took place outside New Zealand; and
(c) All shareholder meetings took place outside New Zealand.

1250.65 Residence of trusts
The residence of a trust is determined by the residence of its settlor, in that a non-complying trust or a foreign trust is deemed to be a complying trust by virtue of having a New Zealand resident settlor [see 1420 TRUSTS AND ESTATES].

1250.70 Residence of partnerships
There are no tests for the residence of partnerships. As the income or loss of a partnership is transferred to each of the partners for assessment purposes, it follows that the residence of each individual partner determines how income is assessed to each partner.

1260.05  Overview

Resident withholding tax (RWT) is a tax deducted by the payer from interest, dividends, taxable Maori authority distributions (other than a retirement scheme contribution) and replacement payments under a share-lending arrangement [see 1340.90] paid to New Zealand residents. RWT also applies to interest paid in New Zealand to a fixed establishment of a non-resident. Other payments to non-residents are subject to “non-resident withholding tax” (NRWT) [see 1020 NON-RESIDENT WITHHOLDING TAX]. RWT is not a final tax. RWT deductions are credited against the taxpayer’s year-end tax liability and may be refunded if they exceed the income tax liability for the year.

TaxNote: A rewrite error resulted in interest paid in New Zealand to a fixed establishment of a non-resident not being subject to RWT. The correction applies with effect from the beginning of the 2008-2009 income year. However, where a person not deducted RWT as a result of relying on the legislative error, and that position was taken between 1 April 2008 and 3 December 2009, their position is protected.

RWT does not apply to certain types of interest and dividends [see 1260.30 and 1260.60]. Income that is subject to RWT is referred to collectively as “resident passive income”. The RWT rules do not apply to payments of use of money interest by the CIR. The rate at which RWT is deducted from interest depends on whether or not the recipient is a company, has supplied their tax file number to the payer, and has made an election to apply a particular rate [see 1260.25].

TaxNote: From 1 October 2010 the RWT rates applying to interest are reduced to reflect the new personal tax rates that apply from that date.

Payments of taxable Maori authority distributions are also subject to RWT [see 1260.70]. The normal rate of deduction is 19.5 per cent. However, if the distribution is more than $200 and the Maori authority does not have a record of the tax file number of the recipient, the rate of deduction is 33 per cent.

Also subject to RWT are replacement payments under a share-lending arrangement [see 1260.73]. The rate of deduction is 33 per cent.

RWT is deducted from dividends at the rate of 33 per cent in all cases. If the dividend is a non-cash dividend, the payer must pay to the CIR the amount of RWT that would have been deducted if the dividend had been a cash dividend [see 1260.45]. The amount of RWT payable on dividends is reduced by the amount of any imputation credits or FDP credits attached to the dividend, and by any foreign tax paid in respect of the dividend. If a dividend is fully imputed, no RWT will be payable [see 1260.65].

A person is only liable to deduct RWT from a payment of interest or dividends if:

(a) The person is resident in New Zealand or is carrying on a taxable activity in New Zealand through a fixed establishment; and

(b) One or more of the following applies:

(i) The person does not hold a certificate of exemption;

(ii) The payment is made in the course or furtherance of a taxable activity;

(iii) The payment is a payment of dividends;

(iv) The payment is a taxable Maori authority distribution; or

(v) The payment is a replacement payment under a share-lending arrangement.

Certain categories of taxpayer may apply for a certificate of exemption [see 1260.135]. Amounts paid to a taxpayer holding a certificate of exemption is not required to have RWT deducted from it. However, any resident taxpayer holding a certificate of exemption who makes a payment of resident passive income must deduct RWT from that payment (unless the recipient holds a certificate of exemption).

Deductions of RWT must be paid to Inland Revenue by the 20th of the month following the month of deduction. If RWT deductions from interest are less than $500 per month, those deductions are required to be made only twice a year, on 20 October and 20 April [see 1260.95].
1260.05(1)

\(1\)  \textit{Australian unit trust dividends}

New Zealand fund managers who elect at their option to be an RWT proxy, can withhold RWT from dividends received by New Zealand investors from Australian unit trusts. This saves many such investors from having to file income tax returns [see 1260.10].

\textbf{1260.10 Who deducts and pays RWT} \([\text{ss RE 3, RE 4, RE 5, RE 6}]\)

Section RE 3 requires a person who makes a payment of resident passive income to deduct an amount of RWT in terms of the formulae given in ss RE 12 (interest), RE 13 (dividends other than non-cash dividends), RE 14 (non-cash dividends other than bonus issues), RE 15 (bonus issues in lieu), RE 16 (taxable Maori authority distributions), RE 17 (replacement payments under a share-lending arrangement), and RE 18 (payments made by RWT proxies).

A person is liable to pay RWT to the CIR if the person makes a payment of resident passive income from which a deduction is required.

A person is required to deduct RWT, if at the time of payment of the resident withholding income, that person is either:

(a)  A New Zealand resident; or  

(b)  Not resident in New Zealand, but carrying on taxable activity in New Zealand through a fixed establishment \([\text{s RE 4(2)}]\).

“Taxable activity” has the same definition as in the Goods and Services Tax Act 1985, except that an activity that involves the supply of goods and services for a consideration does not apply \([\text{s YA 1}]\).

“Fixed establishment in New Zealand” is a fixed place of business in which the person carries on a substantial business \([\text{s YA 1}]\).

No person is treated as a resident or as carrying on a taxable activity in New Zealand through a fixed establishment if the payment of interest or dividends is attributable to, or effectively connected with, a fixed establishment of that person outside New Zealand or, in the case of the payment of dividends, the company is not a New Zealand resident; and in either case the payment is made in a currency other than New Zealand currency.

RWT must be deducted if the payer either:

(a)  Holds a certificate of exemption;  

(b)  Makes payments in the course of a taxable activity, including the acting as agent or trustee for any other person;  

(c)  Makes payment of dividends on shares issued by that company;  

(d)  The payment is a taxable Maori authority distribution; or  

(e)  The payment is a replacement payment under a share-lending arrangement.

\textbf{1260.15 RWT Proxy} \([\text{TAA, s 15N}]\)

If a person elects to be an RWT proxy for the payer, the person will also be liable to pay RWT to the CIR in respect of that resident passive income.

The RWT proxy rules were inserted following an amendment to treat certain non-taxable bonus issues of foreign unit trusts (principally targeted at Australian unit trusts) as dividends. The non-taxable bonus issues will be treated as a dividend when the bonus issue is made under an arrangement or decision that the unit trust will make the bonus issue instead of distributing the underlying income through to the unit holder \([\text{s CD 10}]\). Consequently, New Zealand residents in receipt of these dividends will have an income tax liability, with the antecedent obligation to file a return of income (if they are not already doing so) if the requirements of s 33A of the TAA are not met, or are no longer met.

The RWT proxy rules have been designed essentially to allow New Zealand fund managers to account for the RWT as a proxy for non-resident unit trust payers. The rules were designed to make it easier for the ultimate recipient of the non-taxable bonus issue (that is now treated as a dividend) to comply with their

Staples Tax Guide 2012 1425
income tax obligations. However, the rules are not limited to non-taxable bonus issues that are treated as dividends, but extend to all dividends. This is voluntary and done by an election under s 15W of the TAA.

A person (most likely a fund manager, but not necessarily so) can elect to be an RWT proxy for a payer of dividends that are resident passive income if:

(a) The payer of the dividend is a non-resident unit trust;
(b) The recipient of the dividend is a natural person or a trustee of a qualifying trust who has requested the person to act as a proxy in relation to the payment and the person has agreed to the request; and
(c) The payment is made while the election is effective.

The person notifies the CIR of their election to be an RWT proxy in respect of the dividends distributed by the payer (the non-resident unit trust). The notice must contain the election, the person’s name and postal address and the date on which the election takes effect.

The proxy is able to cancel the election at any time by notifying the CIR. The cancellation then takes effect from the later of the date set out in the notification of cancellation or the date on which the CIR receives the notification.

### 1260.20 Disclosure of tax file numbers [TAA, ss 27, 54]

A payer who is required to deduct RWT from a recipient must provide the CIR, for each recipient:

(a) The full name and last known address;
(b) Total resident passive income from which RWT deduction was required to be made by the payer;
(c) The tax file number, if any, of the recipient; and
(d) Any further information the CIR may require.

The CIR has a discretion to exempt persons from any or all of these requirements.

A recipient of resident passive income, from which RWT must be deducted by a payer, and who has a tax file number, must on written request provide the tax file number to the payer within 10 working days.

### 1260.25 Interest [ss RE 12, RE 19; TAA, s 25A]

The rate of RWT on interest is calculated using the following formula:

\[
\text{rate of RWT} = \left( \text{tax rate} \times \left( \text{interest paid} + \text{foreign withholding tax} \right) \right) - \text{foreign withholding tax}
\]

Where:

“Tax rate” is the basic rate in sch 1, Part D, cls 3 or 4 (see below);
“Interest paid” is the amount of interest paid, before deduction of RWT; and
“Foreign withholding tax” is foreign withholding tax (other than New Zealand tax) that is deducted from that interest and is substantially of the same nature as New Zealand NRWT.

The tax rate to be used in the above formula is as follows [see sch 1, Part D, cls 3 or 4]:

From 1 October 2010:

For trustees of a testamentary trust not subject to the minor beneficiary rule, payee’s tax file number 10.50% supplied, and payee elects to apply this rate or, before 1 October 2010, elected the 12.5% rate

For a payee other than a trustee, payee’s tax file number supplied, payee has reasonable expectation 10.50% at time of election that their income for the year will be $14,000 or less and payee elects this rate or, before 1 October 2010, elected the 12.5% rate

Payee’s tax file number supplied, and payee elects to apply this rate or, before 1 October 2010, the 17.50% payee had elected the 19.5% or 21% rate

Payee’s tax file number supplied, the account was opened on or before 31 March 2010, and the 17.50% payee has not elected a rate
Resident Withholding Tax

Payee’s tax file number supplied, and payee elects to apply this rate or, before 1 October 2010, the payee had elected the 33% rate

Payee’s tax file number supplied, and payee elects to apply this rate or, before 1 October 2010, the payee had elected the 38% or 39% rate

For new accounts opened after 31 March 2010, payee’s tax file number supplied but payee has not elected a rate (the “default rate”)

If the payee’s tax file number not supplied (the “no declaration rate”)

The income bands for which the above rates are appropriate are

<table>
<thead>
<tr>
<th>Income band</th>
<th>RWT rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>$1 - $16,800</td>
<td>10.50%</td>
</tr>
<tr>
<td>$16,801 - $57,600</td>
<td>21%</td>
</tr>
<tr>
<td>$57,601 - $84,000</td>
<td>30%</td>
</tr>
<tr>
<td>$84,001 upwards</td>
<td>33%</td>
</tr>
</tbody>
</table>

A person receiving an interest payment may elect to have RWT deducted at a rate that is higher than their marginal tax rate. By electing a higher optional rate, higher income earners can avoid a large terminal tax payment at the end of the year.

The no declaration rate applies where the payee fails to supply their tax file number to the payer. If the interest is being paid to more than one person, only one tax file number is required.

If the payee is a company (other than a trustee company or a Maori authority), the RWT rate is 28 per cent.

The CIR has the power to require a payer to change the rate applying to a payee where the rate applying by election or default is inconsistent with the person’s marginal rate. Where this occurs, the person remains able to elect a different rate [TAA, s 25A].

The term “interest” includes a redemption payment, which is the amount paid on the redemption of a commercial bill as far as it exceeds the money lent. RWT on interest is deductible from the difference between the original issue price and the redemption price of stock, including Government stock, and not on the difference between the acquisition price, even if bought on the open market, and the redemption value received.

Example:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Government stock issue price</td>
<td>$48,000</td>
</tr>
<tr>
<td>Taxpayer later purchases on market</td>
<td>$49,000</td>
</tr>
<tr>
<td>Maturity value paid to taxpayer</td>
<td>$50,000</td>
</tr>
</tbody>
</table>

The RWT for interest on the redemption payment is based on $2,000, although the taxpayer’s gain is only $1,000 on redemption.

For the purposes of the RWT rules, dividends paid by a building society in relation to withdrawable shares, and dividends paid by a friendly society in relation to shares, are deemed to be interest and not dividends.

1260.30 Interest that is not included [s RE 2]

The following interest is not subject to an RWT deduction:

(a) Exempt interest (see below);
(b) Interest derived by a person who holds a certificate of exemption;
(c) Interest that is non-resident passive income;
(d) Interest derived from outside New Zealand by a non-resident;
Resident Withholding Tax

(e) Interest that has a New Zealand source and which is derived by the Cook Islands National Superannuation Fund (as established under s 11(1)(a) of the Cook Islands National Superannuation Act 2000). The reason for this exclusion is that this entity is a non-resident under s YD 2(3);

(f) Interest payable between companies where both companies are, at the time of payment, members of the same group;

(g) Use of money interest payable by a taxpayer under Part 7 of the TAA;

(h) Interest paid to an intermediary by a client in the operation of a tax pooling account [see 1150.77];

(i) Interest paid by the CIR to an intermediary in relation to a tax pooling account [see 1150.77]; and

(j) Interest paid by the CIR under s 120D of the TAA on overpaid tax (applies to interest payments made from 1 April 2005).

Exempt interest includes:

(a) Interest payable on debts made for the purchase of goods or services in the ordinary course of the purchaser’s taxable activity, in accordance with generally accepted commercial practice (ie trade credits);

(b) Interest payable under a hire purchase agreement;

(c) Exempt interest payable out of New Zealand to a non-resident for money lent to the New Zealand Government or (with the approval of Government) where it is lent to a local or public authority for non-commercial activity, or expressly exempted from income tax by any other Act, to the extent of the exemption;

(d) Interest payable under a specified lease or finance lease;

(e) Interest payable on bonus bonds or Post Office bonus bonds;

(f) Interest payable on an overpaid estimated employers account levy; and

(g) Interest payable by the CIR under s 84 of the KiwiSaver Act 2006.

**1260.35 Interest threshold of $5,000** [s RE 10]

An interest threshold applies to a payer of interest without a valid certificate of exemption or who holds a certificate of exemption and has paid interest of less than $5,000 in the year preceding the year of payment. These persons are not required to deduct RWT from payments of resident passive income until such payments, in that year, exceed $5,000.

RWT does not need to be deducted when the payer does not have a presence in New Zealand. The liability to deduct RWT applies only when the payer is:

(a) A New Zealand resident; or

(b) A non-resident but carrying on a taxable activity in New Zealand through a fixed establishment in New Zealand.

The first test is not satisfied by a partnership because a partnership cannot be resident in New Zealand under the residence tests as it is not a separate taxpayer [see PIB 180 (June 1989)]. A partnership is required to deduct RWT if it is caught under the second test, that is, carrying on a taxable activity through a fixed establishment in New Zealand.

**Example:**

Mechanics Partnership carries on a car repair and servicing business. On 1 April 20X1 one of the partners lent the partnership $83,300 at six per cent to enable the partnership to purchase some machinery. He advanced the loan for a five-year term. No loans had been advanced to the partnership in the preceding year. On 31 March 20X2 the partnership paid the partner $5,000 in interest. This was the only interest paid by the partnership for the 20X1-2X2 income year.

On 1 April 20X2 the partner lent the partnership a further $45,000, and another partner also lent the partnership $45,000 at six per cent for five years. On 31 March 20X3 the partnership paid the first partner $7,700 and the second partner $2,700 in interest. The partnership does not have a certificate of exemption. The partners making the loans also do not have certificates of exemption. The partnership must deduct RWT from all the interest paid to the partners on 31 March 20X2 because it paid $5,000 interest in the preceding year (the 20X1-2X2 income year) and in the 20X2-3 income year paid more than $5,000 interest.
The partnership was not required to deduct RWT in the 20X1-X2 income year because it did not have a certificate of exemption, it did not make interest payments in the preceding year (the 20X0-X1 income year), and payments in the 20X1-X2 income year did not exceed $5,000 [see TIB vol 6:5 (November 1994)].

1260.40 **Cash dividends** [s RE 13]
The amount of RWT on dividend resident passive income, but excluding non-cash dividends, is:

\[
(\text{tax rate} \times (\text{dividend paid} + \text{tax paid or credit attached})) - \text{tax paid or credit attached}
\]

Where:

“Tax rate” is 33 per cent [see sch 1, Part D, cl 5];

“Dividend paid” is the amount of dividend paid, before deduction of RWT; and

“Tax paid or credit attached” is the total of the following amounts:

(a) If the dividend is paid in relation to shares issued by an imputation credit account company, the amount of any imputation credit attached to the divided (this includes any trans-Tasman imputation credits when the ICA company maintains an ICA under s OB 2);

(b) If the dividend is paid in relation to shares issued by a company not resident in New Zealand, the amount of foreign withholding tax paid or payable in respect of the amount of the dividend; or

(c) If the dividend is paid in relation to shares issued by a company resident in New Zealand, the amount of any FDP credit attached to the dividend.

1260.45 **Dividends comprising non-cash dividends (but not bonus issues in lieu)** [s RE 14]
The amount of RWT on dividend resident passive income that comprises non-cash dividends (but excluding bonus issue in lieu) is:

\[
\left(\frac{\text{tax rate} \times \text{dividend paid}}{1 - \text{tax rate}}\right) - \text{tax paid or credit attached}
\]

Where:

“Tax rate” is the basic rate set out in sch 1, Part D, cl 5;

“Dividend paid” is the amount of the dividend paid before the amount of tax is determined;

“Tax paid or credit attached” is the total of the following amounts:

(a) If the dividend is paid in relation to shares issued by an ICA company, the amount of an imputation credit attached to the dividend;

(b) If the dividend is paid in relation to shares issued by a company not resident in New Zealand, the amount of foreign withholding tax paid or payable on the amount of dividend;

(c) If the dividend is paid in relation to shares issued by a company resident in New Zealand, the amount of an FDP credit attached to the dividend.

1260.50 **Dividends that comprise bonus issues in lieu** [s RE 15]
The amount of RWT on bonus issues in lieu is:

\[
(\text{tax rate} \times (\text{alternative amount} + \text{tax paid or credit attached})) - \text{tax paid or credit attached.}
\]

Where:

“Tax rate” is the basic rate set out in sch 1, Part D, cl 5;

“Alternative amount” is the amount of money offered as an alternative to the bonus issue before the amount of tax is determined;

“Tax paid or credit attached” is the total of the following amounts:

(a) If the dividend is paid in relation to shares issued by an ICA company, the amount of an imputation credit attached to the dividend;

(b) If the dividend is paid in relation to shares issued by a company not resident in New Zealand, the amount of foreign withholding tax paid or payable on the amount of dividend;
(c) If the dividend is paid in relation to shares issued by a company resident in New Zealand, the amount of an FDP credit attached to the dividend.

1260.55 Dividends and RWT proxies [s RE 18]

A person who is an RWT proxy for a payer of RWT income and a payment of resident passive income in the form of a dividend must pay the amount of RWT given by the formula:

\[
\frac{\text{tax rate} \times \text{amount paid}}{1 - \text{rate}}.
\]

Where:

“Tax rate” is the basic rate set out in sch 1, Part D, cl 2; and

“Amount paid” is the amount of the dividend paid.

1260.60 Dividends which are not included [s RE 2]

The following dividends are excluded from having RWT deductions:

(a) Dividends derived by companies as exempt income;
(b) Deemed dividends where excessive salary or wages or remuneration is paid to shareholder, director or a relative, or a rebate from a mutual association;
(c) Attributed repatriations;
(d) Dividends derived when the recipient holds a certificate of exemption;
(e) Dividends constituting non-resident passive income;
(f) Dividends which are derived by a non-resident and do not have a New Zealand source;
(g) Dividends passing between companies which, at the time of payment, are members of the same group;
(h) Dividends which are expressly exempt income by any other Act, to the extent of the exemption;
(i) Dividends paid by qualifying companies [s HA 14(4)];
(j) Dividends paid and distributions of income by portfolio investment entities;
(k) Contributions to retirement savings schemes;
(l) Dividends (other than non-cash dividends) that have an imputation ratio or FDP ratio (or a combination of both) of 30/70 or greater paid by a unit trust or group investment fund where RWT has not been deducted from any previous dividend; and.
(m) A dividend which is deemed to arise under a dividend stripping arrangement [see 80.22].

TaxNote: When beneficiary income is also derived by a trustee who holds a certificate of exemption, that income is deemed not to be derived by the trustee, but by the beneficiary. This ensures that beneficiary income (ie resident passive income) derived through a trust retains its character. Therefore, if the beneficiary does not have a certificate of exemption, resident passive income derived by the beneficiary is subject to RWT — if the RWT is not deducted, the trustee may be liable to deduct [see 1260.80].

Where the criteria in s RE 4 are met, a company that is not resident in New Zealand is liable to make deductions of RWT if they carry on a taxable activity in New Zealand through a fixed establishment in New Zealand. However, in the case of dividends, a liability to deduct RWT does not apply if:

(a) The payment is attributable to or effectively connected with a fixed establishment of that person outside New Zealand, or the company is not resident in New Zealand; and
(b) All amounts payable are payable in a currency other then New Zealand currency.

A non-resident company with a branch (fixed establishment) in New Zealand is liable to deduct RWT from dividends paid unless the dividends were in a currency other than New Zealand dollars.

1260.65 The connection between RWT and imputation credits

The following table shows the relationship between RWT and imputation credits. RWT is imposed on all dividends paid by companies (except dividends paid by qualifying companies) but it should also take into account any imputation credits attached to the dividends.
### Resident Withholding Tax

<table>
<thead>
<tr>

</tbody>
</table>

The company tax rate was reduced from 33 per cent to 30 per cent from the 2008-2009 income year. There was no corresponding reduction in the RWT rate applicable to dividends. This has resulted in an obligation for companies to deduct RWT from fully-imputed dividends.

**TaxNote:** From the 2011-2012 income year, the company tax rate is 28 per cent. This means that dividends will, in most cases, be imputed at the rate of 28/72 rather than 30/70. As there has been no corresponding reduction in the RWT rate, RWT will still be required to be deducted from dividends even where they have been fully imputed at the new ratio. As was the case when the company tax rate was reduced from 33 per cent to 30 per cent a transitional measure will provide a short period during which the old ratio may continue to be used. Dividends paid by unit trusts and group investment funds are not subject to RWT [see 1260.60 (item “(l)” in the list)].

### 1260.70 Taxable Maori authority distributions [ss RE 16, RE 24]

Taxable Maori authority distributions are subject to resident withholding tax (RWT) [see 950 MAORI AUTHORITIES].

If a taxable Maori authority distribution is paid in the form of money or a credit of an amount of money to the balance of an account with the Maori authority, the amount of RWT is calculated as follows:

\[(a \times (b + c)) - c\]

Where:
- \(a\) is 19.5 per cent or (if the distribution is more than $200 and the Maori authority does not have a record of the tax file number of the recipient) 38 per cent [see sch 1, Part D, cl 6, Table 4];
- \(b\) is the amount of the distribution before the deduction of RWT;
- \(c\) is the amount of the Maori authority credit attached to the distribution.

If the taxable Maori authority distribution is not a payment in cash or a credit to the balance of an account with the Maori authority, the amount of RWT is calculated as follows:

\[((\text{tax rate} \times \text{distribution amount}) / (1 - \text{tax rate})) - \text{credit attached}\]

Where:
- “Tax rate” is the basic rate set out in sch 1, Part D, cl 6, Table 4;
- “Distribution amount” is the amount of the distribution before the amount of tax is determined;
- “Credit attached” is the amount of the Maori authority credit attached to the distribution.
Where the distribution is not a payment in cash or a credit to the balance of an account with the Maori authority, RWT is not actually deducted from the distribution. Instead, the Maori authority is liable to pay an amount that is equivalent to the amount calculated. This means that the recipient of the distribution receives the gross amount. The amount of RWT paid by the Maori authority is treated as a deduction of RWT. RWT deductions from taxable Maori authority distributions must be paid to Inland Revenue monthly by the 20th of the month following the month of deduction, as for dividends.

Where a Maori authority, in error, deducts too much RWT from a distribution, the excess may be paid to the recipient at any time on or before 31 March in the year the deduction was made, provided, at the time of payment, a notice of amounts distributed has not been given to the recipient under s 31 of the TAA or a notice including the excess deduction has been returned and cancelled.

1260.73 Replacement payments under a share-lending arrangement

Replacement payments under a share-lending arrangement are subject to deduction of RWT. The amount of RWT is calculated under the following formula:

\[
\text{((tax rate} \times \text{payment}) / 1 – \text{tax rate}) – \text{credit attached} – \text{credit transferred} – \text{FDP credit transferred}
\]

Where:
“Tax rate” is the basic rate set out in sch 1, Part D, cl 5;
“Payment” is the amount of the replacement payment excluding an imputation credit attached under section OB 64 (Replacement payments);
“Credit attached” is the amount of an imputation credit attached to the replacement payment under s OB 64;
“Credit transferred” is the amount of an imputation credit shown in a credit transfer notice relating to the replacement payment; and
“FDP credit transferred” is the amount of an FDP credit shown in a credit transfer notice relating to the replacement payment.

1260.75 RWT on foreign currency [s RE 17]

The payment of an RWT deduction, which is required on income in a currency other than New Zealand dollars, may be made in that foreign currency and if so:

(a) The person deriving the income has a credit for RWT against income tax assessed which may be converted into New Zealand dollars at either:
   (i) The close of trading spot exchange rate on the day of the deduction of RWT; or
   (ii) Such exchange rate specified for this purpose by the CIR for the month of the deduction of RWT; and

(b) The person making the deduction of RWT converts the deduction into New Zealand dollars at the close of trading spot exchange rate on the first working day of the month following the month of deduction.

If an Australian ICA company has deducted RWT from a dividend, the company can choose to convert the deduction at the rate specified in s OB 60(6). That rate is the close of trading spot exchange rate for the Australian dollar:

(a) For the date on which the dividend is declared (if less than three months before the dividend is paid); or

(b) For the date on which the dividend is paid (if more than three months before the dividend is paid).

1260.80 Resident passive income received by agents or trustees [s RE 7]

Where resident passive income is:

(a) Received by an agent or trustee for another person; and
(b) RWT in whole or part was not deducted; and
(c) The agent or trustee recipient either holds a valid certificate of exemption, or receives payment wholly or partly in the course of the agent or trustee’s taxable activity.

RWT is required to be deducted by the trustee or agent either in full or for the deficiency, as relevant. The RWT is required to be paid to Inland Revenue by the 20th of the month following the month payment is received. This does not apply where the agent or trustee has a valid certificate of exemption issued to that person and receives payment as a trustee of a trust (not being a bare trust).

Where a deduction is required of RWT from a dividend which is not “a dividend treated as interest” the RWT deduction is treated as if the dividend were a dividend treated as interest.

Where a deduction is required of RWT from non-cash dividends, the payer does not make a deduction of RWT but is liable to pay to the CIR an amount which is equal to the RWT that would have been required to be deducted. The amount is then treated as RWT.

These provisions do not restrict a deduction of RWT when making a payment, whether in the capacity of agent or trustee for another person.

1260.85 Dividends treated as interest [s YA 1]

“Dividends treated as interest” are dividends that are paid by a company which at that time is:
(a) Not resident in New Zealand; or
(b) Prohibited by its constitution from distributing income or property to any proprietor, member or shareholder; or
(c) A company which is exempt from income tax on its income (except for a company whose only income is foreign exempt dividends or dividends from companies in the same wholly-owned group as itself); or
(d) A company engaged in New Zealand solely in the business of life insurance or reinsurance which does not maintain a FDP account.

Generally, a dividend treated as interest is not subject to the imputation rules. Thus, these dividends are treated more akin to interest for RWT purposes, although the rates of RWT are those applicable to dividends. These dividends have no imputation credits to attach. Additional notification requirements apply to dividends treated as interest for RWT (much as for interest).

1260.90 Payment of RWT to Inland Revenue [ss RE 20, RE 21]

(1) Interest

Those persons required to deduct RWT on interest and who estimate for the relevant year that RWT will be $500 or more per month are required to make monthly remittances, no later than the 20th day of the following month. Others who deduct less than $500 pay by two instalments on:
(a) 20 October, for RWT deducted 1 April to 30 September; and
(b) 20 April, for RWT deducted 1 October to 31 March.

Where a payer who estimated RWT at less than $500 per month now pays $500 or more in aggregate since the last relevant payment month (either September or March) that person is required to pay all RWT on interest since the relevant month to Inland Revenue not later than the 20th day of the month in which aggregate deductions exceed $500.

(2) Dividends

All deductions are paid monthly by the 20th of the month following deduction. Payments to Inland Revenue are made on form IR15P. Where a person ceases to hold a valid certificate of exemption and ceases to carry on a taxable activity or ceases the taxable activity in New Zealand, all deductions of RWT are payable by the 20th day of the following month. A person may cease to have a valid certificate of exemption and is not
required to make deductions in a continuing activity. That person must pay all RWT not paid earlier no later than the 20th of the following month.

1260.100 RWT deductions varied to correct errors [ss RA 11, RA 12]
The failure to deduct RWT, or to deduct in full, from a recipient may be corrected by a further deduction from interest or dividends treated as interest in the same year or otherwise by recovery from the recipient.

If too much RWT has been deducted, the payer may pay the excess amount to the payee at any time before the end of the tax year in which the amount of tax is withheld. The following conditions apply:

(a) Where the payment was for interest or a dividend treated as interest, an RWT withholding certificate relating to that payment has either not been sent out or has been returned and cancelled;

(a) Where the payment was for a dividend other than a dividend treated as interest, a shareholder dividend statement relating to the amount has either not been sent out or has been returned and cancelled; and

(a) Where the payment was for a taxable Maori authority distribution, a notice relating to the amount has either not been given to a member of the Maori authority or has been returned and cancelled.

An act or omission on the part of a recipient which leads to over-deduction and payment to Inland Revenue does not lead to a refund of the excess to the recipient or any other person. Payers may make refunds at any time up to 31 March of the year in which the mistake was made provided that no RWT certificate or shareholder dividend statement is issued, or if it has been issued, that it has been returned and cancelled.

1260.105 Refunds of deductions [ss RA 12, RA 19, RE 10B, RM 8]
When the amount of RWT deducted and paid to Inland Revenue exceeds the amount required by the RWT rules, Inland Revenue will refund the excess. The refund is paid to the person deriving the income from which the deduction was made. If the person who made the excess deduction has already (under s RA 12), paid the excess to the person deriving the income, the refund is paid to the person who made the excess deduction.

If the person to whom a refund is payable has any amount owing to the CIR under the ITA or TAA, the CIR may offset the refund against the amount due. The date of the offset will be the date requested by the taxpayer under s 173T of the TAA or, if no such request is made, a date determined by the CIR.

Where a person:

(a) Receives a distribution in relation to an attributing interest in a foreign investment fund; and

(b) The comparative value method, deemed rate of return method, fair dividend rate method or cost method applies to the distribution [see 850 INTERNATIONAL TAX REGIME]; and

(c) RWT has been withheld from the distribution:

the distribution is treated as being resident passive income, and the amount withheld is treated as RWT and becomes a tax credit. This treatment does not apply where either the payer or the or the recipient has applied for a refund of the amount withheld prior to 31 March following the date of the distribution.

1260.110 RWT deduction certificates [TAA, s 25]
These apply to RWT on interest or dividends treated as interest. Certificates must be given by 20 May for the prior year ended 31 March. They may be given on annual figures, or each payment made of resident passive income.

A recipient may request at any time an RWT deduction certificate for a financial arrangement that has matured, been remitted or disposed of by the recipient. The payer must then prepare and provide the certificate to the recipient within 20 working days of the request.

A person who ceases to have a valid certificate of exemption and who ceases to carry on any taxable activity for which RWT deductions have been required or ceases to carry on such taxable activity in New Zealand, must prepare and provide RWT deduction certificates to recipients not later than 20th of the following month.

A person who ceases to have a valid certificate of exemption and is no longer required to make deductions due to not continuing in a taxable activity must follow the same procedure.
A RWT deduction certificate must include the following:

(a) A statement as to whether the resident passive income is interest or dividends treated as interest other than non-cash dividends;

(b) The date on which the deduction was made, or if there is more than one deduction, the year in which the deductions were made;

(c) The amounts of resident passive income and RWT deductions; and

(d) From the 2010-2011 income year, the rate for the resident passive income. That rate is:
   - Found by dividing the total amount of RWT withheld by the amount of resident passive income;
   - The rate at which RWT would have been withheld if the resident passive income had been paid or derived at the end of the relevant tax year;
   - The rate at which RWT was withheld during the relevant tax year, together with, if more than one RWT rate applied for the resident passive income, the amount to which each rate applied and the amount withheld at each rate.

The new requirement accommodates complications caused by a change in RWT withholding rate part way through a period.

“RWT rate” is the basic rate for RWT under sch 1, part D.

A certificate of RWT for an annual total not exceeding $50 is not required to be prepared unless written notice is given by the recipient and then the certificate must be prepared and provided within 20 working days. An RWT certificate must be retained for three years after the end of the relevant year, unless otherwise permitted by the CIR. Joint accounts may be treated as one certificate either in the name of one or more persons nominated by the persons or in the name of those persons jointly. A certificate given personally, posted to the last address, given to an authorised person or posted to their last address, or sent electronically to the person or a person authorised to act on their behalf, is deemed to have been provided to the recipient.

1260.115 RWT reconciliation statements [TAA, s 51]

Persons who deduct RWT from either interest, dividends treated as interest, or dividends must furnish a statement to the CIR by 31 May following the end of the year of deduction. The statement must be in the form prescribed, and contain the information specified, by the CIR.

The CIR may require the following information in relation to a deduction of RWT:

(a) The full name, address and tax file number of the payer;

(b) The full name and last known address of the recipient unless, after making reasonable inquiries, the payer is unable to obtain those details;

(c) The tax file number of the recipient, if known to the payer;

(d) Whether the resident passive income is interest or dividends treated as interest or dividends (other than non-cash dividends);

(e) The date on which the deduction was made or, if there is more than one deduction, the year in which the deductions were made;

(f) The amounts of resident passive income and RWT deductions; and

(g) Further information that the CIR considers relevant.

If a person has paid interest, dividends treated as interest, or dividends to another person without deducting RWT because the recipient holds a valid certificate of exemption, the CIR may require the following information:

(a) The full name and last known address of the recipient;

(b) The total interest or dividends treated as interest, or dividends paid to the recipient;

(c) The recipient’s tax file number, unless the recipient is, at the time of payment, a registered bank, a building society, a trustee bank, or the Public Trust (or a company that would be a member of the same wholly-owned group of companies as the Public Trust, if it were a company); and
(d) Further information that the CIR considers relevant.

Such information required by the CIR must be provided within 20 working days of the request. On the cessation of a taxable activity where a person ceases to hold a valid certificate of exemption, or ceases business in New Zealand, the information must be furnished within 40 working days after the end of the month in which taxable activity ceased. Similarly, if a valid certificate of exemption ceases and the payer is no longer required to make RWT deductions in carrying on a taxable activity, the information is required within 40 working days after the end of the month in which the certificate of exemption ceased. The CIR has power to vary these requirements.

1260.120 Disclosure of interest paid where no RWT deduction required

[TAA, s 52]

Details are required in a person’s annual tax return where a payment is made of interest which is resident passive income, but no RWT deduction is required because either:

(a) The payment was not made by the payer in the course of furtherance of a taxable activity; or
(b) No deduction is made because total resident passive income interest paid is less than $5,000; and
the payment is claimed as a deduction when calculating net income and payment is made to someone who has no valid certificate of exemption. The information required includes:

(a) Name and address and tax file number of the recipients; and
(b) Interest resident passive income total paid to each recipient.

A recipient who receives interest resident passive income from which no RWT is deducted because payment was not made in the course or furtherance of a taxable activity or because interest RWT is less than $5,000 is required to provide the payer with his or her tax file number within 10 working days of the request from the payer.

1260.125 RWT deductions credited against income tax assessed [ss LA 4, LA 6, LB 3]

Where a person derives resident passive income from which RWT deductions have been made, the amount of resident passive income is grossed up to include the RWT deductions. The RWT deductions (excluding any penalties) are credited successively against:

(a) Income tax payable for the current tax year;
(b) Income tax payable for previous tax years;
(c) Income tax payable for a subsequent tax year; and
(d) Provisional tax payable for a subsequent tax year (in the order of the years, if more than one).

A credit of tax is not allowed and a refund must not be paid unless the CIR has received an RWT deduction certificate or other satisfactory evidence in writing showing the deduction. The CIR may amend an assessment or determination at any time to give effect to s LA 6, notwithstanding the time bar.

1260.135 Certificates of exemption [s RE 27; TAA, ss 32E(2), 32F, 32G, 32H]

A person falling within any of the exempt categories listed below may apply to the CIR for a certificate of exemption. The application should be made on form IR451, and must state which category the person is applying under and contain a declaration that the applicant comes within that basis of exemption. The CIR may require the applicant to provide further information, including books of account, to support the application.

If the CIR is satisfied that an applicant meets the criteria for an exemption, the CIR will issue a certificate of exemption to the applicant. The certificate must:

(a) State the date of issue and the date of termination (if any) of the certificate; and
(b) Bear the applicant’s tax file number.
The certificate is valid from the date of issue. If it is lost or destroyed, the CIR may issue a replacement.

The categories of person that qualify for a certificate of exemption are as follows:

(a) Any registered bank defined in s 2 of the Reserve Bank of New Zealand Act 1989;
(b) Any building society;
(c) The Public Trust, or any company which would be a member of the same wholly owned group of companies as the Public Trust, if the Public Trust were a company, Maori Trustee, or a trustee company as defined in s 2 of the Trustee Companies Act 1967;
(d) A portfolio investment entity;
(e) Any person whose principal business is:
   (i) Borrowing money, accepting deposits, receiving credit, selling credit instruments; and
   (ii) Lending money, granting credit or buying or discounting credit instruments;
(f) A solicitor’s nominee company subject to the rules under s 96 of the Lawyers and Conveyancers Act 2006 and operated by a barrister and solicitor or an incorporated law firm; or
(g) A broker’s nominee company subject to the Securities Act (Contributory Mortgage) Regulations 1988;
(h) Any practitioner within the meaning of the Lawyers and Conveyancers Act 2006 for the operation of a trust account maintained in accordance with s 89 of the Law Practitioners Act 1982;
(i) A person who has filed all required returns of income in the time required and has in the most recent return over $2 million of annual gross income before allowable deductions. Companies which are members of a wholly owned group may combine their income for obtaining a certificate of exemption, provided the income from transactions or related or connected transactions with another member of the group are excluded. However, each company in a group must apply for a certificate of exemption separately. There is no provision for group registration;
(j) A person who has reasonable grounds for believing that total gross income before allowable deductions will exceed $2 million in the next accounting year. Companies with anticipated membership of a group may combine, but income from inter-group transactions must be excluded from the $2 million estimate. However, each company in a group must apply for a certificate of exemption separately. There is no provision for group registration;
(k) Any taxpayer with exempt income of the following kinds: public authorities generally, local authorities generally, local and regional promotional bodies, charities, charitable estates, friendly societies, funeral trusts (interest and dividend income), amateur sports promoters, the TAB and racing clubs, gaming machine operators, scientific or industrial research societies, veterinary service bodies, herd improvement bodies, Cornwall Park trustees, and community trusts. The exemption only applies to the exempt activities, not to any other activities;
(l) Any non-profit body within the meaning of s DV 8 [see 225.60], whose income for the most recently completed accounting year would, but for the deduction permitted by s DV 8, be $1,000 or less;
(m) A board of trustees that is constituted under Part 9 of the Education Act 1989 and that is not carried on for the private pecuniary profit of any individual;
(n) A tertiary education institute that is established under Part 14 of the Education Act 1989 and that is not carried on for the private pecuniary profit of any individual;
(o) The trustee of the Niue International Trust Fund or of the Tokelau International Trust Fund.

1260.140 Payer’s obligations under a certificate of exemption [s RE 29; TAA, ss 32G, 32H, 32I]

Where any person makes a payment to a second person or receives a payment as agent or bare trustee for that second person, then for the purposes of determining the first person’s liability to make a deduction of RWT that payment is deemed not to constitute resident passive income if:
(a) The payer has taken reasonable steps to confirm that the recipient is a bank, trustee bank, building society, trustee company, Maori Trustee, or Public Trustee. It is not necessary to sight the certificate of exemption as long as the identity of the payee is known; or

(b) The certificate of exemption is sighted and the exemption or tax file number obtained.

Otherwise, the first person should sight the certificate of exemption issued to the second person and take reasonable steps to see that the second person is the person named in the certificate. If not, there would be an obligation to deduct RWT.

Furthermore, the payer should be satisfied that no Gazette notice has cancelled a certificate of exemption:

(a) For interest more than five working days before the money was lent;

(b) For dividends or taxable Maori authority distributions more than five working days before payment is made.

If a notice is published the payer must sight a certificate of exemption issued to the recipient and dated after the Gazette’s issue date for the cancellation notice.

The payer also needs to be satisfied that no notice of cancellation of a certificate of exemption held by the recipient has been gazetted more than five working days before payment. If it has been gazetted, the payer needs to be satisfied that a certificate of exemption is sighted that is dated after the date of the Gazette notice of cancellation or the Gazette has published subsequently, and before more than five working days before payment is made, notice of reissue of the certificate of exemption.

The CIR, or the recipient, may also advise payers of the cancellation of the certificate of exemption more than five working days before the day on which payment is made. The notice is revoked by a Gazette notice, given subsequent the advice, of the issue of a further certificate of exemption to the recipient more than five working days before payment is made. Alternatively, a certificate of exemption is sighted with a date of issue subsequent to the advice being received. In addition, the payer must not have any grounds for believing the recipient is not eligible for a certificate of exemption and in the case of the recipient being a bank, building society, or trustee bank, the payer has no grounds for believing that interest or dividends are income derived by any person other than such organisations. The CIR may require an applicant for a certificate of exemption to provide information, including books of account, accounting information, or records relating to the applicant.

A person whose estimated income exceeds $2 million must provide to the CIR within three months of the end of the accounting year evidence of the actual gross income before allowable deductions. In the event that the total is less than $2 million, late payment penalties will be payable as if default had occurred on each day the recipient received or derived payment from which RWT would otherwise have been deducted [see 1110.40]. The CIR has a discretion to issue a certificate of exemption or permit its retention or remit any late payment penalty where the $2 million was not attained and failure is solely a consequence of extraordinary circumstances beyond the reasonable control of the applicant and not likely to be repeated. The CIR also has discretion to issue a certificate of exemption valid until date of termination specified (if any) where satisfied either that a person:

(a) Will or is likely to incur a loss, or aggregate entitlement to deductions are likely to be not less than aggregate income; or

(b) Would be likely to be entitled to claim aggregate RWT credits exceeding their income tax liability for an income year by $500 or more.

1260.145 **Unincorporated bodies** [s RE 30; TAA, s 32J]

If the body carries on a taxable activity, it may be issued with a certificate of exemption. The certificate of exemption must be in the name of the body. Where the body is a trustee of a trust, the certificate must be in the name of a trust. Members of the body are not, themselves, issued with a certificate of exemption for the taxable activity and payments made in the course of carrying on that taxable activity are deemed to be made by the body and not by the members. Similarly, payments to members acting as a member in the course of carrying on that taxable activity are deemed payments to the body and not to the member. Members become
Resident Withholding Tax

jointly and severally liable for RWT payable while members. Members of a partnership joint venture, or the
trustees of a trust do not cease to be members until written notice of the change is given to the CIR.
A notice addressed to the body in the name for the certificate of exemption is deemed to be served on all
members and makes all members jointly and severally liable for anything required to be done for RWT. For
a body which is not a partnership, joint venture, or trustees in a trust, where the affairs are managed by
members or a committee of members, anything required to be done for RWT becomes the joint and several
responsibility of:

(a) The president, chairperson, treasurer, secretary, or similar officeholder; or
(b) In default of any such member, then every member of a committee.

1260.150 Cancellation of certificates of exemption [s RE 27; TAA, ss 32K, 32L]

Where a certificate of exemption ceases to be valid on the basis of the exemption that was specified on the
application for the certificate of exemption, the person who holds the certificate of exemption must, within
five working days of becoming aware of that fact:

(a) Inform the CIR of the fact;
(b) Deliver the certificate of exemption to the CIR; and
(c) If requested, provide the CIR within five working days the full names and addresses of all persons
to whom the certificate of exemption has been shown for purposes of exemption from RWT.

The CIR may cancel a certificate of exemption at any time in the following circumstances:

(a) If the CIR believes the basis of exemption specified in the application no longer applies;
(b) If a person is not within the basis of exemption specified and obtained the certificate of exemption
through misleading information or otherwise should not have been issued with a certificate of
exemption;
(c) If the certificate of exemption basis was an estimate that income would exceed $2 million, if:
   (i) The evidence required within three months after the 12-month period shows that the target
   was not met; or
   (ii) Satisfactory evidence is not furnished as required; or
   (iii) The CIR has reason to believe the evidence provided is materially incorrect or is misleading;
   and
(d) If any income tax is not paid by due date.

The CIR must then notify the person of the certificate of exemption cancellation and the person must, within
five working days of notification return the certificate of exemption and if requested provide full names and
addresses of all persons to whom the certificate of exemption has been shown for purposes of exemption
from RWT.

Except when income tax is not paid by the due date, where the CIR is satisfied that a further basis of exemption
exists, the CIR must not cancel a certificate of exemption (unless issuing a substitute certificate with
immediate effect).

Any person notified that the certificate of exemption has been cancelled must within five working days inform
in writing all persons to whom the certificate of exemption was shown for exemption purposes and from
whom further payments of resident passive income are expected, of the certificate of exemption cancellation.
Cancellations are published in the Gazette:

(a) By 30 June each year giving:
   (i) A list of certificate of exemptions cancelled in the preceding year which were not
   subsequently reissued; and
Resident Withholding Tax

(ii) A list of certificate of exemptions issued in the preceding year to persons who in years prior to the preceding year previously held a certificate of exemption.

(b) In April, July, October, and January giving:
(i) A list of certificate of exemptions cancelled for the three months ending prior to the month of publication, where certificate of exemptions were not reissued in that three-month period; and
(ii) A list of certificate of exemptions reissued, from previous three-monthly periods, in the current three-month period.

Lists of cancelled certificates of exemption may also be published by electronic means.

A person required to deliver up to the CIR a certificate of exemption deliver up all original copies issued. A gazetted notice of a certificate of exemption cancellation causes the certificate of exemption to be invalid five working days after the date of publication, and where persons are informed by the CIR or the previous holder of a certificate of exemption that the certificate of exemption has been cancelled, the certificate becomes invalid five working days after the person has been informed.

1260.155 Records [TAA, s 26]

A person required to make RWT deductions must keep, in English, sufficient records to enable the following to be ascertained for each amount of resident passive income:

(a) The resident passive income before making the RWT deduction;
(b) The amount of RWT deduction;
(c) The date the RWT was required to be deducted;
(d) The full name and last address of the recipient or person deriving the resident passive income;
(e) For interest, any number used to identify the financial arrangement on which interest was paid (ie bank account number, etc); and
(f) Such other information as the CIR may require.

Where payments of interest and dividends are made to a person with a certificate of exemption, records in English must show for each amount:

(a) Amount and date RWT deduction would have been required;
(b) Full name and last address of the recipient; and
(c) The recipient’s tax file number.

A record at the end of each year is required, per recipient, for interest or specified dividends paid comprising:

(a) The total amount of interest and dividends treated as interest paid; and
(b) Details of all other financial arrangements under which interest was paid to that recipient at any time during that year.

Every person required to provide information to the CIR must keep the records in English to substantiate the details disclosed to the CIR. Reasonable precautions for the safe custody of all records must be maintained for seven years after the year end to which they relate. Provision is made for notice in writing by the CIR that retention is not required or the law requires delivery of records to another person or the person is a company which has been wound up and dissolved. Similar provisions to income tax records apply to extend the seven-year period to 10 years in certain cases. The CIR has a discretion, responding to a written application, to authorise by written notice records required in another language.

1260.160 Recovery of RWT deductions [TAA, s 170]

RWT is held in trust for the Crown and is not part of the property of any person liable to execution and forms no part of an estate in bankruptcy, liquidation, or assignment for creditors. In a company liquidation RWT deductions are payable after debts but in priority to holders of debentures under any floating charge.
1260.165 **Unpaid RWT deductions constitute a charge on payer’s property** [TAA, s 172]

Failure to deduct or pay the full RWT, together with late payment penalty or shortfall penalty, gives rise to a charge on all real and personal property for the amount unpaid plus any judgment fees, costs, or expenses.

1260.170 **Failure to make RWT deductions** [TAA, s 171]

Failure to make RWT deductions gives rise to a debt due to the CIR of the amount that should be deducted on the day it should be duly paid. The CIR may recover any RWT deduction from the payer in addition to the right to recover from the recipient and may recover from both concurrently, or wholly from one, or partly from one and partly from the other. However, where any liable person can satisfy the CIR that another person has made the deduction of RWT from the relevant resident passive income, that deduction is deemed to have been made.

1260.175 **Assessment of RWT deductions** [TAA, s 99]

Assessments for a failure to deduct, or a failure to pay deductions to the CIR by a payer, may be made. The same rights to challenge apply.

1260.180 **Disclosure of transactions in financial arrangements** [TAA, s 53]

A person who holds a certificate of exemption at any time during that year must disclose certain details in his or her return of income where a financial arrangement was acquired, disposed of, or redeemed and the other party to the transaction was not the issuer of the financial arrangement or at the time a holder of a valid certificate of exemption. The financial arrangement must be one for which interest is payable or where no RWT deduction in the case of a redemption payment has been made. The information to be disclosed includes:

(a) The full name and last address of the non-exempt person;
(b) The date of acquisition, disposition, or redemption;
(c) The consideration paid or received by the exempt person for acquisition, disposition, or redemption, exclusive of any fees;
(d) The tax file number (if any) of the non-exempt person;
(e) Further information that the CIR may prescribe.

Summary totals for all acquisitions, dispositions, and redemptions are separately required, except where the CIR otherwise requires, for items (b) to (e) for each non-exempt person in that year.

Every non-exempt person who enters into an acquisition, disposition, or redemption payment of a financial arrangement and who has a tax file number must, on request from the exempt person, provide it within 10 working days.
Chapter 1265

Restrictive Covenants and Exit Inducements

1265.10 Restrictive covenants
A restrictive covenant payment is the consideration given for a restriction on a person’s right to perform services. Under a restrictive covenant (also known as a restraint of trade agreement), an employee agrees not to compete with a former employer after leaving the employment. In return for that agreement, the employee is granted a payment. A restraint of trade agreement can take many forms, such as an agreement:

(a) Not to compete with a former employer within a certain time-frame;
(b) Not to compete with a former employer within a certain geographical area;
(c) Not to use secret knowledge concerning industrial or scientific processes obtained whilst working for the former employer; or
(d) Not to approach a former employer’s customers.

The Courts generally take the position that restraints of trade are contrary to public policy and therefore void. They are considered valid only where the restraint is justified by the special circumstances of the particular case, and the restraint is reasonable.

If a person gives an undertaking that restricts, or is intended to restrict, the person’s ability to perform services as an employee, office holder or independent contractor, any amount derived in respect of that undertaking is assessable income of that person. This applies whether or not the undertaking is legally enforceable and whether or not the payment is derived by the person giving the undertaking [see TIB vol 13:5 (May 2001) at 18-23, TES 9 (October 2003) 124].

The payment is not taxable if all of the following apply:

(a) It is derived by the person giving the undertaking (person A) as a result of person A (or an associate of person A) selling a business to another person (person B);
(b) The payment is consideration for an undertaking by person A not to provide goods or services in competition with the goods or services to be provided by person B;
(c) Person A does not provide services, other than temporary services incidental to the sale, to person B after the business is sold; and
(d) Persons A (or an associate of person A) agrees in writing with person B that the transaction is a sale of a business.

For the purposes of this exemption, the sale of a business includes:

(a) The sale of part of a business, if the part is capable of separate operation; or
(b) The sale of all of the shares in a company, if the company (or a wholly owned subsidiary of the company) is carrying on a business.

Restrictive covenant payments are taxable at source at the extra pay rate and also subject to ACC earner levies.
1265.20 Exit inducement payments [s CE 10]

An exit inducement payment is the consideration given by a prospective employer or contractor to a person to give up a particular status or position. The amount derived by a person for a loss of vocation or a position, for leaving a position, or for a loss of status is assessable income of the person [see TIB vol 13:5 (May 2001) at 18-23].

Exit inducement payments are taxable at source at the extra pay rate and are subject to ACC earner levies.

1265.30 Expenditure incurred on restrictive covenants and exit inducements [s DC 9]

Expenditure incurred by a taxpayer is deductible if the amount is assessable to another person as a restrictive covenants or exit inducement payment. The capital limitation contained in s DA 2(1) is specifically overridden.

If services are performed for the taxpayer by the employee, office holder or independent contractor who gave the undertaking under the restrictive covenant or who received the exit inducement, the expenditure is not deductible to the extent to which it would have been of a capital nature if the restrictive covenant payment or an exit inducement payment had not been made.

1265.40 Repayment of a restrictive covenant or exit inducement [s DB 48]

If a person who has received a taxable restrictive covenant payment is required to repay some or all of the payment because they have breached the covenant, the amount repaid is an allowable deduction. The deduction is allowed despite the s DA 2(4) employment limitation. The amount of the deduction is the lesser of the amount repaid and the amount of assessable income derived on receipt of the restrictive covenant payment.

No deduction is permitted for interest, punitive or exemplary damages, or the employer’s legal or other expenses. The deduction is allowed in the income year in which the amount is repaid [see TIB vol 13:5 (May 2001) at 18-23].

1265.50 Avoidance arrangements [s GB 30]

If a person enters into an arrangement that has the effect of avoiding the restrictive covenant provisions of s CE 9, the CIR may treat:

(a) The amount (or part of the amount) under the avoidance arrangement as assessable income of the recipient under s CE 9; and

(b) A person affected by the arrangement as the person who gave the undertaking.

A collateral arrangement to dispose of property may be part of an avoidance arrangement [see TIB vol 13:5 (May 2001) at 18-23].
Chapter 1270

Returns of Income

1270.05  Primary obligations of taxpayers [TAA, ss 15A, 15B]

The primary obligations of a taxpayer under the tax laws are to:

(a) Make an assessment if required to do so under a tax law;
(b) Correctly determine the amount of tax payable under the tax laws (unless the taxpayer is a non-filing taxpayer);
(c) Deduct or withhold the correct amounts of tax from payments or receipts when required to do so by the tax laws;
(d) Pay tax on time;
(e) Keep all necessary information (including books and records) and maintain all necessary accounts or balances required under the tax laws;
(f) Disclose to the CIR in a timely and useful way all information (including books and records) that the tax laws require the taxpayer to disclose;
(g) Co-operate with the CIR in a way that assists the exercise of the CIR’s powers under the tax laws, to the extent required by the Inland Revenue Acts;
(h) Comply with all the other obligations imposed on the taxpayer by the tax laws;
(i) Inform the CIR that an income statement/personal tax summary [see 1270.75 Income Statement/Personal Tax Summary] has not been received. This is required where the taxpayer is an individual who should have received an income statement but has not by the prescribed date; and
(j) Correctly respond to any income statement/personal tax summary issued to them, if the taxpayer is an individual.

Obligation (a) applies from the 2002-2003 income year. Obligations (b) to (h) apply from the 1997-1998 income year. Obligations (i) and (j) apply from 1 April 1999.

1270.10  Income tax returns required [TAA, ss 33, 34, 35]

A taxpayer is required under s 33 of the TAA to furnish to the CIR a return of income. The return for an income year must be furnished during the following income year [see 1270.60] and must:

(a) Be in the prescribed form;
(b) Contain any other particulars that may be prescribed;
(c) Contain a notice of the assessment required to be made under s 92 of the TAA [see 80.10].

A “taxpayer” is a person who is, or may be, liable to perform or comply with an obligation imposed under the ITA 2007 or TAA 1994 [s YA 1]. This includes an agent acting on behalf of another person.

A taxpayer to whom s 33A of the TAA applies [see 1270.70], is not required to furnish a return.

A return which purports to be made by a person or on the person’s behalf is, for all purposes, deemed to have been made by that person or by that person’s authority, unless it can be proven otherwise: [TAA, s 34]. It is therefore assumed that a return completed and furnished to Inland Revenue by an agent was done so with the taxpayer’s authority.

Under s 35 of the TAA, the CIR has the power to prescribe any forms or electronic formats, for the purposes of any of the Acts administered by Inland Revenue, if they are not specifically prescribed in legislation.

Taxpayers exempted from filing returns who wish to claim the donations or child care rebates do so by completing a rebate claim form [see 1395.95]. Overpayments of tax will be automatically refunded in most cases.

The return requirements extend to every person carrying on a business regardless of whether an overall loss was claimed. A return of all the income means a return which showed whether the business had income for the year and how that result was achieved: Commissioner of Inland Revenue v Grover (1988) 10 NZTC 5,012, (1987) 11 TRNZ 315 (CA).

Taxpayers have a personal liability to file returns. Fines totalling $4,600 were imposed on taxpayers who were husband and wife who had, through their professional adviser, failed to file income tax returns for five years, although the PAYE and GST returns had been completed: Terry v Commissioner of Inland Revenue (1993) 15 NZTC 10,309 (1993) 18 TRNZ 334 (HC). Where a return in required to be filed by a company, the obligation rests with the company and not with the directors: Commissioner of Inland Revenue v Cary DC Auckland CIV-2008-004-518, 26 August 2008.

1270.20 Classes of return

The following is a list of return forms and the classes of taxpayers who are required to use them:

Form IR3 Return for all individuals who are not exempted from filing a return under s 33A(1) of the TAA.

Form IR4 Company return to be completed by all companies and public authorities.

Form IR6 Estate or trust return [TAA, s 43].

Form IR7 Partnerships [TAA, s 42]. Look-through companies [TAA s 42B]

Form IR8 Maori authorities [TAA, s 57].

Form IR9 Clubs and societies.

Form IR44 Registered superannuation funds.

1270.21 Privately printed return forms

Inland Revenue accepts privately printed return forms provided that the reproductions:

(a) Do not show the firm’s name other than as an address for the service of notices;
(b) Are exact copies of the official forms for the particular income year;
(c) Closely match the official form in colour;
(d) Are on equal, or better quality paper than the official form;
(e) Bear the taxpayer’s original signature;
(f) Are folded in the same manner as the official forms.

Negotiations should be made with the local Inland Revenue office [see PIB 68 (July 1972)].
1270.25 General requirements for returns [TAA, s 40]

The following general requirements must be met in relation to all returns:

(a) Returns required to be furnished in writing must be signed, and must contain all the necessary information and be accompanied by all the documents required under any of the Inland Revenue Acts; and

(b) Returns furnished electronically must be transmitted in an electronic format prescribed by the Inland Revenue, and must contain all the necessary information and be accompanied by all the documents required under any of the Inland Revenue Acts.

A return is treated as being furnished on the date it is received at an Inland Revenue office.

1270.30 Electronic filing of returns [TAA, ss 36, 40]

The CIR may give approval for tax returns to be filed by electronic means which comply with specific conditions. The taxpayer or registered person shall retain a hard-copy transcript of the information transmitted which shall be deemed the return. It shall be signed by the taxpayer or registered person and held on behalf of the CIR.

1270.40 Signing of returns [TAA, s 40]

Tax returns should be signed by the taxpayer. Where the taxpayer is not able to sign the return, Inland Revenue has no objection to an agent signing the return on the taxpayer’s behalf, provided of course that the agent has the necessary authority. Inland Revenue will not accept returns signed by agents where a disclaimer has been added to the declaration on the return form. If the agent feels not able to sign the return form without a disclaimer being added, then the taxpayer should sign it.

Inland Revenue accepts a disclaimer to the balance sheet of unaudited accounts as evidence that the accounts have not been audited. However, the declaration on the income tax return form should not be altered, amended or added to in any way by agents when they sign the return on behalf of a taxpayer [see PIB 121 (August 1983)].

Persons who sign returns on behalf of taxpayers under the powers of attorney assume personal liability if the return is incorrect.

1270.50 Proper completion of returns

If attention is given to the undermentioned items when preparing business taxation returns, they provide the necessary information, and needless correspondence with Inland Revenue may be avoided [see PIB 51 (September 1969) and PIB 121 (August 1983)]:

(a) Assets taken over: On incorporation of an existing business the assets are to be brought in at the values adopted by the vendor, unless other arrangements have been made with Inland Revenue.

(b) Bad debts: Confirm that the amount has been actually written off in the debtors accounts as a provision for doubtful debts is not allowable as a deduction.

(c) Business and rental losses: Briefly note the reason for continued losses and comment on future viability.

(d) Capital accounts: Record the source of any increase in capital.

(e) Depreciation: If an asset is sold during the year supply the information requested.

(f) Depreciation schedules: To be included.

(g) Development expenditure: Show separately items of farm developmental expenditure.

(h) General expenses: If claim is significantly larger than that usually claimed, note details of each item.

(i) Goods taken privately: Note the amount of adjustment and the basis on which the adjustment is based.

(j) Group companies: Generate a list showing the names of other companies which come within the same “group”.

1446 Staples Tax Guide 2012
Husband and wife partnership: When the first partnership return is furnished Inland Revenue needs to know the source of opening capital, and duties in the business of both husband and wife.

Interest and rent paid: Complete the panel on the return form. The amount to be entered is that paid for the year ended 31 March and not to an otherwise non-standard balance date.

Land and buildings disposed of: Show the date of purchase, date of sale, purpose for which acquired and reason for sale.

Legal expenses: Record the nature of each item.

Livestock account: Reconcile any discrepancies in numbers.

Motor vehicle and plant lease: Supply copy of lease in first year in which these payments are claimed.

Private use of assets: Record what adjustments have been made for the private use of an asset.

Provisional income: If income is estimated for provisional tax show calculations clearly on the return form.

Repairs and maintenance: If claim is larger than usual brief details of the larger items will often avoid the need for further inquiry.

Stock: Note the basis of valuation of trading stock.

Travel expenses: Record separately internal and overseas travel expenditure. Give details of adjustments to be made for any private element, etc.

Unusual items: A brief explanation of any unusual or extraordinary items is helpful. Where financial statements are submitted, the items which are not deductible for tax purposes should be added back in the return form. Do not overlook:

- Payments to non-residents;
- Commissions, interest and royalties;
- Remuneration paid to shareholders and directors;
- Advances to shareholders and associated companies.

When to furnish returns [TAA, s 37]

The dates by which returns of income are to be furnished follow.

1. Taxpayers with an early or standard balance date

Taxpayers with an early [see 770.22], or a standard (31 March) balance date are required to furnish their returns by the following 7 July. For example, a taxpayer with a 31 December (early) balance date is required to file their return by the following 7 July.

2. Taxpayers with a late balance date

Taxpayers with a late balance date [see 770.23] are required to furnish their returns by the seventh day of the fourth month after balance date. For example, a taxpayer with a 30 June balance date is required to file their return by the following 7 October.

A return is deemed not to have been duly furnished until it has been received at any office of Inland Revenue. An electronic return is treated as having been duly furnished when the information contained in the return has been transmitted in the prescribed electronic format [TAA, ss 36, 40]

TRA Case T23 (1997) 18 NZTC 8,148 dealt with the issue of when a return is deemed to be furnished under s 40 of the TAA. The TRA held that a return sent by post was received by Inland Revenue when it was delivered into Inland Revenue’s private box or bag at a post office, not at the time it was subsequently delivered by NZ Post to an Inland Revenue processing centre or branch office.

Extension of time to furnish returns [TAA, s 37]

Any taxpayer may apply for an extension of time to file an income tax return. Before Inland Revenue will allow an extension of time it must be satisfied that the taxpayer is unable to file the return by the normal due
date. The application does not have to be in writing. Application should be made before the normal due date for the return, although Inland Revenue may extend the time for making application. Inland Revenue is unable to extend the time by which returns must be filed beyond the following dates:

<table>
<thead>
<tr>
<th>Taxpayer’s balance date</th>
<th>Final date by which returns must be filed</th>
</tr>
</thead>
<tbody>
<tr>
<td>31 March</td>
<td>The following 31 March</td>
</tr>
<tr>
<td>1 October to 30 March</td>
<td>31 March following the next succeeding 31 March</td>
</tr>
<tr>
<td>1 April to 30 September</td>
<td>Next succeeding 31 March</td>
</tr>
</tbody>
</table>

(1) **Tax agents**

A tax agent who prepares 10 or more income tax returns for clients may be permitted an extension of time for filing these returns if the agent is unable to file them by due date, or if it would be unreasonable in the circumstances to require the agent to file them by due date. This concession applies only to:

(a) Persons carrying on a professional public practice;
(b) Persons carrying on the business of filing income tax returns;
(c) The Maori Trustee.

The extension of time (EOT) arrangements for agents are made by Inland Revenue each year in consultation with the Institute of Chartered Accountants of New Zealand. The concession is not automatic and agents are required to meet certain targets for filing returns by certain dates in order to retain their extension of time concessions.

The E-file agents target dates apply only to tax agents who file 80 per cent or more of their clients’ returns electronically. The E-file agents target dates cease to apply if the agent has filed paper returns for more than 25 per cent of their clients as at any target date.

The late balance date returns target dates apply to tax agents only if more than 25 per cent of the agent’s clients, who are required to file returns, have late balance dates.

If a tax agent fails to meet the above return filing percentage targets, the CIR may:

(a) Refuse to grant any further extensions of time for returns linked to that tax agent; and
(b) Cancel any existing extension of time arrangement granted to that tax agent for the income years for which the agent has not met the percentage targets. A cancellation may relate to some or all of the returns linked to the tax agent.

Inland Revenue will not take any action against a tax agent who achieves a filing percentage within five per cent of the target at each target date other than 31 March. For example, an E-file tax agent who files 74 per cent of their returns by the third target date (target 78.5 per cent) will not lose their automatic extension of time provided that 100 per cent of returns are filed by 31 March. This arrangement gives some flexibility to allow for individual agents’ circumstances and reduces the need for tax agents to negotiate individual arrangements.

Full details of the tax agents’ extension of time arrangement (EOT), including the percentage requirements for the income year, may be found in Inland Revenue Booklet IR9XA Extension of time (EOT) arrangements, which is available on the Inland Revenue website.

(2) **Taxpayers without tax agents**

The CIR’s policy on how Inland Revenue will deal with extension of time applications from taxpayers without tax agents is set out in Standard Practice Statement SPS 09/03: Extension of time applications from taxpayers without tax agents TIB vol 21:9 (December 2009) at 27-31. The main points of the policy are:

(a) A request for an extension of time by a taxpayer who does not have a tax agent may be made by contacting Inland Revenue either in writing, by secure e-mail or by telephone.
(b) Any request should be made before the due date for filing the return or before the expiry of any existing extension of time arrangement. The late filing penalty may apply if this is not done.
Returns of Income

(c) When deciding whether or not to grant an extension of time, the CIR will take into account the reasons for the request, the taxpayer’s filing history and whether or not any previous extension of time arrangements have been adhered to.

(d) Any extension of time arrangement granted will be for a period that is appropriate under the particular circumstances.

(e) The CIR will notify the taxpayer in writing of the decision that has been made.

(f) A taxpayer whose tax agent no longer qualifies as a tax agent is entitled to the same extension of time that previously applied to their tax agent.

The following are examples of acceptable reasons for allowing an extension:

(a) The taxpayer is unable to obtain the necessary information to complete the return (for example, the taxpayer is waiting for a summary of earnings from Inland Revenue);

(b) The taxpayer has been overseas and needs time to prepare the return (this will depend on the actual dates involved);

(c) Ill health, hospitalisation, or injury of the taxpayer or a family member; and

(d) The taxpayer is awaiting the finalisation of accounts for a related taxpayer/entity with a different balance date.

1270.65 Non-active companies not required to furnish returns [TAA, s 43A]

Non-active companies are not required to file income tax returns or imputation returns, subject to the following conditions.

A company is not required to furnish a return of income for any income year if the company:

(a) Is a non-active company throughout that income year;

(b) Has furnished Inland Revenue with a declaration that it is non-active and that it will inform Inland Revenue if it ceases to be a non-active company; and

(c) Has not ceased to be a non-active company since making the declaration.

A company is a non-active company if, throughout the income year, the company:

(a) Has not derived, or been deemed to have derived, any gross income;

(b) Has no allowable deductions;

(c) Has not disposed of, or been deemed to have disposed of, any assets; and

(d) Has not been a party to or continued with any transactions which, during the income year, give rise to:

(i) Income in any person’s hands;

(ii) Fringe benefits to any employee or former employee; or

(iii) A debit in the company’s ICA account.

A company does not cease to be a non-active company if it:

(a) Incurs statutory company filing fees or associated accounting or other costs;

(b) Incurs bank charges or other minimal administration costs totalling no more than $50 in the income year; or

(c) Earns interest on a bank account, provided the total interest earned during the income year does not exceed the total of the expenses incurred under (b).

Non-active companies that are resident in New Zealand are not required to file imputation returns. If the non-active company has a non-standard balance date, it must be non-active for both income years in which the imputation year falls.
If a company that has made a declaration ceases to be a non-active company, the company must advise Inland Revenue. The company must also provide Inland Revenue with a statement as to:

(a) Whether or not it had any loss carried forward, or any credit balance in its ICA account, at the start of the income year that it became non-active;
(b) Whether or not there has been any change in the ownership (direct or indirect) of the company since that time; and
(c) Whether or not any of the continuity provisions would prevent any net loss or credit balance referred to in (a) from being carried forward, offset or otherwise utilised.

Despite the above provisions, the CIR can require a non-active company to file a return of income or an imputation return.

1270.70 Individuals not required to furnish returns [TAA, ss 33A, 33C]

Most individuals are not required to file an income tax return, and will not automatically receive an income statement/personal tax summary [see 1270.75 Income Statement/Personal Tax Summary], if their only sources of income were interest, dividends, or employment income, provided the income (other than overseas interest or dividends) has had the correct amount of tax deducted at source. If tax has not been deducted, or if it has been incorrectly deducted, from income at source, an individual is still exempted from filing a return if the amount of income incorrectly taxed is $200 or less. The purpose of this is to prevent unnecessary compliance and administrative costs.

An individual is not required to file a return of income provided that:

(a) The person’s income was only of a type listed under “Income types” below; and
(b) The person derived not more than $200 of income of type listed under “$200 limitation” below; and
(c) The individual does not receive employment income from which a tax deduction was made in accordance with a special tax code certificate [see 1080.17]; and
(d) The individual or their spouse [see 960.10] are not issued with a family certificate of entitlement (to interim instalments of family assistance) at any time during the year [see 420.70]; and
(e) The individual or their spouse are not paid a s MD 3 credit for which the family credit abatement [see 420.45], is greater than nil; and
(f) The individual is not issued with a family notice of entitlement for any part of the tax year; and
(g) The individual has a nil Inland Revenue student loan balance on the last day of the year; and
(h) The individual is not eligible to receive a full interest write off under s 38B of the Student Loan Scheme Act 1992; and
(i) The individual is not eligible to receive a base interest write off or reduction under s 39 of the Student Loan Scheme Act 1992; and
(j) The individual derives income from the provision of personal services to a person who is a claimant under the Accident Compensation Act 2001 provided that:
   (i) The person’s total taxable income for the year does not exceed $14,000;
   (ii) Tax has been withheld at the rate of 10.5 per cent from the income derived from the provision of personal services; and
   (iii) The person is not otherwise liable to file a return under s 33A of the TAA [TAA, s 33C].

1) Income types

(a) Income from employment that is subject to PAYE [see 1080.10];
(b) Interest of dividends that are subject to RWT [see 1260.05];
(c) Foreign sourced interest or dividends;
(d) A taxable Maori authority distribution;
(e) A personal service rehabilitation payment under the Accident Compensation Act 2001; or
(f) A source or sources other than those listed in (i) to (iv), if the total amount derived is $200 or less.

(2) $200 limitation
(a) Income in relation to which the individual’s PAYE obligations are not met;
(b) Income in relation to which the individual’s PAYE and student loan repayment obligations are not met;
(c) Income from employment from which the earner premium or earner levy [see 20.20], is not correctly deducted;
(d) Interest or dividends from which RWT is not correctly deducted [see 1260.25] at the rate of:
   (i) 17.5 per cent where the person’s annual gross income is more than $14,000 but not more than $48,000;
   (ii) 30 per cent where the person’s annual gross income is more than $48,000 but not more than $70,000;
   (iii) 33 per cent where the person’s annual gross income is more than $70,000.
(e) Extra pay from which tax is not correctly deducted [see 1080.10];
(f) Secondary employment earnings from which tax is not correctly deducted [see 1080.20];
(g) Dividends, if the individual’s annual gross income is more than $70,000;
(h) Taxable Maori authority distributions, if the individual’s annual gross income is more than $48,000;
(i) Interest, dividends or taxable Maori authority distributions, if the individual is required to pay child support;
(j) Interest, dividends or taxable Maori authority distributions, if the individual has a positive student loan balance and income is in excess of the student loan repayment threshold [see 1380.10];
(k) Salary or wages as an election day worker (if the employee has used the “EDW” tax code);
(l) Salary or wages as a casual agricultural employee (if the employee has used the “CAE” tax code);
(m) Foreign interest or dividends that were subject to a withholding tax at source; and
(n) Portfolio investment entity (PIE) income that is not excluded income [see 1130.40].

Even if the above conditions are met, an individual will be required to file a return (IR3) if the individual:
(a) Is a non-resident [see 1250 RESIDENCE];
(b) Is a provisional taxpayer [see 1140.10];
(c) Is not a cash-basis person [see 470.80];
(d) Received a total of more than $200 of gross income that included:
   (i) A schedular payment [see 1320.10], excluding the amount or proportion of a withholding payment for which the CIR has made a determination [under s RD 8(3)] regarding the expenditure deemed to be incurred in the production of the payment and excluding personal service rehabilitation payments under the Injury Prevention, Rehabilitation and Compensation Act 2001;
   (ii) Beneficiary income [see 1420.55];
(e) Has a research and development tax credit;
(f) Made a net loss; or
(g) Held a RWT certificate of exemption [see 1260.135], at any time in the income year;

There are some exceptions to the requirement for a non-resident to file a return of income. Non-residents who earn $200 or less of salary and wages as a non-resident seasonal worker and who use the “NSW” tax code are not required to file. Non-resident seasonal workers employed under the recognised seasonal
employment scheme are not required to file a return irrespective of the amount earned in that capacity [see 1080.31].

Inland Revenue will not issue an income statement/personal tax summary to an individual who is not required to file an income tax return [see 1270.75]. The effect of (d) above, is that school board trustees are not required to file tax returns if their only source of income is the honoraria paid to them for their services [see 1320.30].

1270.75 Income statement/personal tax summary [TAA, ss 33A, 80A, 80B, 80C, 80D, 80E, 80F, 80G, 80H, 80I, 106]

An income statement and a personal tax summary are the same thing. The ITA 2007 uses the term “income statement” whereas the CIR, in various publications, uses the term “personal tax summary”. This document should not be confused with a “summary of earnings” which is quite different. A summary of earnings merely sets out the information that the CIR holds regarding a taxpayer’s income for the year. This information is gathered from returns from entities such as employers, banks or companies which set out the amount of wages, interest and dividends paid to the taxpayer and any tax withheld at source such as PAYE or resident withholding tax. Requesting a summary of earnings from Inland Revenue does not trigger any tax liability. Requesting an income statement/personal tax summary crystallises the person’s tax position and can result in a refund of tax or a requirement to pay tax where the amounts deducted at source are insufficient to cover the total tax liability for the year.

In the remainder of this paragraph, we have used the term “income statement”. Inland Revenue has the discretion to issue an income statement to any person who derived no income other than interest, dividends and employment income, if the person is:

(a) Exempted from filing a return of income by s 33A(1), but requests Inland Revenue to provide an income statement; or
(b) Exempted from filing a return of income by s 33A(1), but is required by s RD 4(2) to file an employer monthly schedule because the person derived a source deduction payment from which the employer failed to deduct PAYE.

In addition, Inland Revenue may issue an income statement to any person, or require that person to apply for an income statement, where that person has received annual gross income. Inland Revenue may issue more than one income statement to the same individual for the same year.

An income statement must contain the following information:

(a) The amount of annual gross income derived from employment, interest, or dividends;
(b) The sources of the annual gross income;
(c) The amounts of PAYE or withholding deductions made;
(d) The amount of earner premium or earner levy deducted;
(e) A calculation of the income tax liability, including any tax payable or refund due;
(f) Particulars relating to Working for Families (WFF) tax credits (if applicable); and
(g) Any further particulars Inland Revenue consider necessary.

Any individual who receives an income statement when they should not have done so, or who has not received an income statement but should have done so, must inform Inland Revenue on or before the terminal tax date for the income year to which the income statement relates.

An individual to whom s 33A(5) of the TAA applies, and who has not received an income statement, must request an income statement from the CIR no later than the terminal tax date for the income year to which the income statement relates. The following taxpayers are subject to this requirement:

(a) Taxpayers who have received income that has had insufficient PAYE deducted and the “residual income tax” (RIT) is $500 debit or credit;
Returns of Income

(b) Taxpayers who have received income with PAYE deducted that has had insufficient student loan deductions made and the residual repayment obligation is more than $20;

(c) Taxpayers who received more than $200 of interest and/or dividends (excluding amounts that did not require an RWT certificate because the amount paid from the payer did not exceed $50 in the tax year) where Resident withholding tax was not deducted at the rate of:
- 33 per cent where the person’s income was between $48,001 and $70,000, or
- 38 per cent or 39 per cent where the person’s income was more than $70,000;

(d) Taxpayers who received more than $200 of extra emoluments that were not taxed at the rates set out in (c) above;

(e) Taxpayers who received more than $200 of dividends where the person’s income exceeded $70,000;

(f) Taxpayers who received more than $200 of Maori Authority distributions where the person’s income exceeded $48,000;

(g) Taxpayers who received more than $200 of interest, dividends or Maori Authority distributions where the person was required to pay financial support under the Child Support Act 1991;

(h) Taxpayers who received more than $200 of interest, dividends or Maori Authority distributions where the person had a student loan balance as at 31 October 2010 and whose income exceeded $19,084;

(i) Taxpayers who have received more than $200 of secondary employment earnings and these earnings were not taxed at:
- 17.5 per cent where their income was more than $14,000 but not more than $48,000 (21 per cent prior to 1 October 2010);
- 30 per cent where their income was more than $48,000 but not more than $70,000 (33 per cent prior to 1 October 2010);
- 33 per cent where their income was more than $70,000 (38 per cent prior to 1 October 2010);

(j) Taxpayers who received more than $200 as an election day worker and used the EDW tax code;

(k) Taxpayers who received more than $200 as a casual agricultural employee and used the CAE tax code;

(l) Taxpayers who received income that had tax deducted at a rate determined by a special tax code;

(m) Taxpayers who received “Working for Families Tax Credits” (WfFTC) from Inland Revenue during the tax year or are registered for WfFTC and entitled to receive a lump sum payment or who had a spouse with such an entitlement;

(n) Taxpayers who received WfFTC from Work and Income during the tax year and the amount of family credit abatement under s MD 13 of the Income Tax Act 2007 is greater than zero or who had a spouse in that position.

This does not apply to a person who has received interest or dividends with insufficient RWT deducted due to an error made by the payer.

An individual who does not automatically receive an income statement, may request one at any time after the end of the income year.

An individual to whom an income statement has been issued must inform Inland Revenue if the income statement is incorrect and provide the information necessary to correct it on or before the later of:

(a) The person’s terminal tax date for the income year to which the income statement relates; and

(b) Two months after the date the income statement is issued.

An individual does not have to inform Inland Revenue if the total amount of employment income, interest, or dividends omitted from the income statement is less than $200. If Inland Revenue accepts that the information provided by the taxpayer is correct, it will issue a new income statement incorporating the information provided. If Inland Revenue does not accept that all the information supplied is correct, it can either issue a new income statement or an assessment incorporating the information it considers is correct.
Despite the above procedures, if Inland Revenue considers that any of the particulars in an income statement are incorrect it can issue a default assessment. A default assessment will not be issued if the taxpayer informs Inland Revenue of an error in the income statement and provides the information necessary to correct it by the due dates set out above. The tax assessed under the default assessment is payable unless the taxpayer furnishes a return or amended income statement [TAA, s 106(1A)-(1C)].

An income statement issued to an individual is deemed to be a return of income furnished by the individual under s 33 of the TAA [see 1270.10], and to contain a notice of assessment signed by the individual, if the individual accepts it as correct or does not advise the CIR that it is incorrect. The tax position taken in the income statement is deemed to be the individual’s tax position [TAA, s 80G].

A person who is deemed to have made a return by virtue of having received an income statement is also treated as having made an assessment under s 92 of the TAA in respect of that income statement.

The assessment is deemed to have been made on the earliest of:

(a) The person’s terminal tax date for the income year to which the income statement relates; or
(b) The 30th day after the date the income statement is issued, if a refund of less than $200 is due; or
(c) The date on which the person requests a refund under s RM 5.

However, if the income statement is issued less than two months before the person’s terminal tax date, the assessment is treated as having been made two months after the date the income statement is issued. If a person is first issued with an income statement after their terminal tax date, the assessment is deemed to have been made two months after the date of issue of the first income statement, and treated as reflecting the tax position taken in the last income statement issued by the CIR in that two-month period.

In relation to the rules applying to income statements, a statement by the CIR that a return of income is deemed to be furnished, a return of income is deemed to have been signed by a taxpayer, or an assessment is deemed to have been made is conclusive of whether the event has occurred. Such a matter may not be called into question in any challenge or other proceedings on the basis that a return of income has not been furnished, a taxpayer has not furnished a return of income, a taxpayer has not signed a return of income, or the assessment is not final. A matter required to be done or provided within the time limit for furnishing a return of income is deemed to be required to be done or provided within the time limit for responding to an income statement.
Chapter 1290
Royalties

1290.10 Royalties

A royalty derived by a person is income of the person.

A royalty includes a payment of any kind derived as consideration for:

(a) The use of, or the right to use, any copyright, patent, plant variety rights, trademark, design or model, plan, secret formula or process, or other similar property or right;

(b) The use of, or the right to use, a mine or quarry;

(c) The extraction, removal, or other exploitation of standing timber or a natural resource;

(d) The right to extract, remove, or otherwise exploit standing timber or a natural resource;

(e) The use of, or the right to use, a film, a videotape, or a tape in connection with radio broadcasting;

(f) The supply of scientific, technical, industrial, or commercial knowledge or information;

(g) The total or partial forbearance of the use of, or the grant of a right to use, property or a right referred to in any of paragraphs (a) to (e);

(h) The supply of assistance that enables the application or use of anything in any of paragraphs (a) to (f); or

(i) The total or partial forbearance of the supply of knowledge or information or assistance referred to in paragraph (f) or (h).

For the purposes of the above definition, none of the following are relevant:

(a) How the payment is described or computed;

(b) Whether the payment is periodical or otherwise;

(c) Whether the payment is an instalment of the purchase price of real property; or

(d) Whether the payment is an instalment of the purchase price of personal property.

This definition corresponds with international practice, New Zealand’s double taxation treaties, and the policies of the OECD. However, the double tax agreements usually have their own specific definition of “royalty”.

Royalties are:

(a) Deemed to be income [s CC 9];

(b) Deemed to have a source in New Zealand if they are paid by a New Zealand resident and not made in connection with a business they carry on outside New Zealand through a fixed establishment outside New Zealand, or they are paid by a non-resident and for which the non-resident is allowed a deduction [s YD 4(9)]; and
(c) Defined as non-resident passive income and liable for NRWT if paid to a non-resident [subpart RF].

1290.15 **Know-how payments** [s CC 9(2)(f), (h), (i)]

A royalty includes “know-how” payments (ie the supply of scientific, technical, industrial, or commercial knowledge or information).

Payments which are essentially for services are not royalties, except to the extent that the services are connected with the application or enjoyment of “royalties” in the wider sense of the definition (ie the supply of any “assistance” which is furnished as a means of enabling the application or enjoyment of anything referred to in the earlier parts of the definition).

The payment for services may only be taxed in New Zealand to the extent that the services are performed in New Zealand. If the services are performed both in New Zealand and overseas an apportionment will be necessary. Generally, where a double tax agreement is in force a permanent establishment must exist in New Zealand for the services to be taxed here. Reference should be made to the particular agreement [see 310 DOUBLE TAX AGREEMENTS].

1290.20 **Distinction between know-how and services**

The distinction between a payment for “know-how” and a payment for “services” is not always an easy one and much will depend on the facts of a particular case, having regard to the contract or agreement entered into between the parties.

The main distinction between know-how and services is that the former is an asset and, as such, it is something which is already in existence and is not brought into being in pursuance of a particular contract. Thus, if a contract is one for the supply for the use of the “buyer”, of what might be broadly termed here a “product” which is already in existence, or substantially so, it is a contract for the supply of know-how and payments under the contract would be royalties.

On the other hand, if a contractor is required to supply special skills and knowledge in order to bring “the product” into existence for the buyer, payments under the contract would be considered to be for services and would not constitute a royalty.

Inland Revenue provides the following examples for payments made outside New Zealand:

**Example 1:**

A New Zealand resident company, NZ Ltd, manufactures engines under licence from a wholly owned non-resident company, O Ltd. The licensing agreement grants NZ Ltd the right to use patents, trademarks, and unpatented “know-how”. O Ltd agrees to keep NZ Ltd up to date by supplying details of improvements in the engine design etc, developed by O Ltd. In addition O Ltd agrees to give NZ Ltd any assistance necessary to enable NZ Ltd to manufacture the engines successfully. This assistance includes training NZ Ltd’s staff either in New Zealand or overseas, sending specialists to New Zealand to advise and finally receiving a faulty engine from NZ Ltd, diagnosing the fault and supplying NZ Ltd with detailed report. The only payment to be made under the agreement is one of $50 for each engine produced.

The payment falls within the definition of “royalty” and therefore is deemed to be income. Under s RF 2 the royalty will be taxed at the greater of NRWT or income tax on the net income. A 40 per cent arbitrary expense is allowed in the annual assessment. However, a double tax agreement may apply to limit the New Zealand tax. Most New Zealand treaties limit the tax on royalties to 10 per cent.

**Example 2:**

A New Zealand resident company, NZ Ltd, buys a large machine from OS Ltd, an unrelated non-resident company. The purchase price is $100,000. In addition, OS Ltd sends employees to New Zealand to assemble the machine, to ensure it is working properly and to train NZ Ltd’s employees in its use. OS Ltd charges $10,000 for these additional services.

The payment of $100,000 being the purchase price of the machine is exempt. It does not fall within the definition of “royalty”. It is income from business but has no source in New Zealand since it was manufactured overseas. The $10,000 charged for the additional services performed in New Zealand does not fall within the definition of “royalty” but is business income. OS Ltd is therefore assessable, on $10,000 less deductible expenses, at the annual rates applicable to a non-resident company [see PIB No 113 (July 1981)].
Royalties

1290.25 Payments for the supply of know-how and connected services

Typically payments for the supply of know-how and connected services are payments for the supply of technical data such as models, plans, designs, processes, formulas, publicity, instructional, and marketing material together with such services from time to time as are necessary to enable the New Zealand payer to use the know-how. These services can take various forms (e.g., the training either in New Zealand or overseas of the payer’s staff), the sending of specialised personnel to New Zealand to advise on the use of the technical data, the sending of written answers to questions on the technical data issued by the New Zealand payer, etc. The entire payment is treated as falling within the definition of royalty.

1290.30 Payments falling outside the definition of royalties

Payments for the supply of services unconnected with the supply of know-how or royalties and falling outside the definition of royalties, if made to a non-resident, will not be subject to non-resident withholding tax, but this does not mean that they are necessarily not taxable in New Zealand. They may be assessable under s CB 1, which deems all amounts derived from any business to be income. Income from any business wholly or partly carried on in New Zealand is deemed to have a source in New Zealand [s YD 4(2)]. Amounts paid to non-residents in these circumstances may need to be apportioned to exclude the value of any work done outside New Zealand and the balance will be assessed, after deducting allowable expenses, at basic income tax rates. If all the work is done outside New Zealand the income is likely to be non-resident’s foreign-sourced income and not assessable [s BD 1(4), (5)].

Note: Caution should be exercised where two or more agreements are in operation that purport to split the payments into “know-how” and “services unconnected with know-how”. It is likely that either all the services, or part thereof, in the latter agreement are in fact connected with the know-how and are therefore regarded as royalties.

1290.35 Composite payments

It may be claimed that a composite payment is made (either on a royalty basis or as a lump sum) for the use of patents, trademarks, know-how, services connected with know-how, and services unconnected with the transfer of know-how. As a general rule, unless the taxpayer can clearly demonstrate that a significant part of the payment relates to services unconnected with the patents, trademarks, or know-how supplied, the entire payment should be treated as relating to those items. The same applies to cases where the facts are the same except that no patents or trademarks are involved. This approach is supported by the OECD Model Tax Convention on Income and Capital (2008) at 187, in its commentary on royalties:

“In business practice, contracts are encountered which cover both know-how and the provision of technical assistance. One example, amongst others, of contracts of this kind is that of franchising, where the franchiser imparts knowledge and experience to the franchisee and, in addition, provides the franchisee with varied technical assistance, which, in certain cases, is backed up with financial assistance and the supply of goods. The appropriate course to take with a mixed contract is, in principle, to break down, on the basis of the information contained in the contract or by means of a reasonable apportionment, the whole amount of the stipulated consideration according to the various parts of what is being provided under the contract, and then to apply to each part of it so determined the taxation treatment proper thereto. If, however, one part of what is being provided constitutes by far the principal purpose of the contract and the other parts stipulated therein are only of an ancillary and largely unimportant character, then the treatment applicable to the principal part should generally be applied to the whole amount of the consideration.”
Paying royalties to an overseas parent company

1290.40 Payments by New Zealand subsidiary company to overseas parent company

A parent company may receive payments from its New Zealand subsidiary, described variously as technical service fees, administrative fees, administration charges, management charges, etc. The exact nature of the payments needs to be established by reference to any relevant contracts or agreements between the two companies and discussions with the companies and, likewise, the basis of computation of the charge. When this has been done the foregoing principles should be applied. The impact of the transfer pricing rules may also need to be considered [see 1000.75].

Payments made back to a parent company or head office may incur a GST charge as a result of the reverse charge rule, which imposes GST on the purchaser of imported services. The reverse charge mechanism applies to persons whose level of taxable supplies is or is expected to be less than 95 per cent of total supplies in a 12-month period. It also applies only to services that would be subject to GST if supplied in New Zealand. The zero-rating provisions [s 11A of the GSTA] do not apply unless the services are physically received at the time and place at which the services are physically performed [see 580.101].

1290.45 Payment for the use of computer software

It is common practice to license the use of computer software rather than sell it. Generally, the licence agreement stipulates that title to the software system stays with the supplier and the right to use cannot be transferred or assigned. The term of the agreement may be indefinite or for periods up to 99 years.

In a licencing situation each payment is likely to a royalty. When it is paid to a non-resident it is subject to non-resident withholding tax. However, the outright sale or assignment of intellectual property does not constitute a royalty.

Inland Revenue has issued an interpretation guideline to assist people in determining whether an amount paid for software is a royalty or a business profit [see TIB vol 15:11 (November 2003) at 8-24]. The interpretation guideline deals with the income tax treatment, under New Zealand domestic law and double tax agreements, of payments made to non-resident suppliers of computer software. It considers the tax implications, for non-resident suppliers, of the most common types of computer software transactions.

In particular, the following transactions are discussed:

(a) A sale of the copyright in a computer program;
(b) A licence of a copyright right in a computer program;
(c) A sale of a copy of a computer program subject to copyright;
(d) A lease of a copy of a computer program;
(e) A supply of services for the development or modification of a computer program; and
(f) The supply of know-how relating to a computer program.

A brief summary of the interpretation guidelines is set out below.

(1) Sale of copyright rights

A sale or assignment of copyright results in the ownership of the copyright rights being alienated either permanently or for a limited period. This alienation of the ownership of the rights means that the consideration derived is not for “the use of the rights” and therefore is not treated as a royalty. This view accords with that of the High Court in DB Group Ltd v Commissioner of Inland Revenue (1996) 17 NZTC 12,446 (HC), which confirmed that a payment for the outright sale of copyright rights does not fall within the definition of “royalty” in s YA 1.

In this situation the purchaser has bought the rights to the copyright as distinct from the “right to use” the copyright.
(2) **Licence of a copyright right**

If a computer software transaction involves the transfer of some but not all the substantial rights in the copyright (i.e., a transfer of partial rights) to a New Zealand recipient, it will generally be a licence. A licence “provides an excuse for an act which would otherwise be unlawful as (e.g. the infringement of a copyright). It is an authority to do something which would otherwise be wrongful, illegal, or inoperative”: per Latham CJ in *Federal Commissioner of Taxation v United Aircraft Corporation* [1943] 2 AITR 458 (HCA), at 464.

A licence to use software copyright generates royalty income under paragraph (a) of the royalty definition.

(3) **Sale of a copyrighted article**

A supply of a copyrighted program (i.e., a copy of a computer program subject to copyright) generally does not include a supply of copyright. The copyright remains with the owner of the original work. The supply of a copyrighted program essentially gives the recipient the right to use the program for personal or business use. This right is separate from a right to use the copyright for commercial exploitation. The sale of a copy of a computer program is analogous to the sale of other copyrighted works such as books and video tapes.

Many software transactions involve some form of end-user licence or user agreement. One common example of this is what is often referred to as a “shrink-wrap” licence. Shrink-wrap licences are generally issued for mass produced software, where the software is sold to an end-user via a distributor.

The licence in such situations generally provides that:

(a) The user acquires a perpetual, non-exclusive, non-transferable licence which authorises the licensee to use the software; and

(b) The licensee is permitted to make back-up copies of the software for operational and security purposes.

The purpose of the licence is to contractually restrict the purchaser from exploiting any of the rights protected by the copyright. The licence is not for the use of, or the right to use, any copyright (as in the case of a reproduction licence), but to prohibit use of the copyright.

From a practical and business perspective, the contract between the parties is for the provision of a copy of a copyrighted article and any transaction involving end-user licences of the nature described above, should be treated as a sale of a copyrighted article.

The purchaser is not paying for the right to use the copyright, and accordingly there is no royalty derived by the non-resident. This approach to prepackaged or shrink-wrap software is consistent with the 1992 OECD Report that considered that the “purchaser has done no more than purchase a product”.

(4) **Lease of a copyrighted article**

If a computer program copy has been supplied for a finite period without accompanying copyright rights in the program, the supply will generate rental income. While not technically a “lease”, as it does not relate to an interest in land, a chattel lease is a contract which, depending on its terms, does create an equitable right of some kind in the subject of the lease: *Bristol Airport plc v Powdrill* [1990] 2 All ER 493 (EWCA Civ), at 502. Payments made pursuant to a chattel lease are referred to in this Guideline as rental payments.

Where parties enter into a transaction for the right to use software for a finite period (as opposed to a right to commercially exploit the copyright rights) then the respective rights and obligations of such a transaction are equivalent to those in a lease. Accordingly, it is the CIR’s view that such transactions be treated equivalently for income tax purposes.

The tax implications of any particular transaction will depend upon the facts of that transaction. In the case of rental payments made in relation to a chattel lease there may be several possible tax implications.

Under sch 4, Part A, contract payments made to non-resident contractors are subject to tax at a rate of 15 per cent. A contract activity includes: “[t]he granting, providing, or supplying of the use, or the right to use, in New Zealand … any personal property …”. Such tax deductions are not a minimum or a final tax liability, but merely a payment on account of the contractor’s annual New Zealand income tax liability.
Payments made may constitute business income of the non-resident “lessor”. Where the non-resident is resident in a country with which New Zealand has a DTA, generally such business income will not be taxable in New Zealand under the business profits article of the applicable DTA, unless the non-resident has a permanent establishment in New Zealand.

Rental payments derived by non-resident “lessors” of computer programs may fall under the royalty articles of New Zealand’s DTAs. Most of New Zealand’s DTAs include, in the definition of the term royalties, payments made “as a consideration for the use of, or the right to use … industrial, commercial, or scientific equipment …”. The CIR accepts that leased computer software will not by itself constitute equipment, but considers that it can be part of equipment, within this royalty definition, where it is an integral part of an identifiable item of industrial, scientific or commercial equipment. The CIR considers that in order to determine whether software is an integral part of an identifiable item of industrial, scientific or commercial equipment, a functionality test should be applied. Where the software is critical or essential to the function of the equipment, ie the software is necessary to enable the equipment to perform its primary function, the software will be an integral part of the equipment.

A hire or lease of a copy of a computer program from a non-resident supplier may also come within the definition of a “finance lease” in s YA 1. Payments made under such leases are subject to the finance lease regime in ss FA 6 to FA 11. Under this regime the finance lease is effectively treated as a sale and loan back transaction, with each lease payment apportioned between a principal repayment and an interest component.

(5) Supply of services for the development or modification of computer programs

For many reasons computer programs may need to be modified, enhanced, or developed over their useful commercial life. Non-residents may be engaged to perform these tasks. Usually the non-resident is supplying a service to the owner or user of the program. However, in some situations the non-resident supplies know-how, and the correct nature of the supply in any situation depends on the facts and surrounding circumstances of the supply and the agreement made between the parties.

A service is generally considered to be some activity that helps or benefits, or conduct tending to the advantage of another, eg professional assistance. The underlying theme of a service is that the provider (supplier) is doing something for the recipient. This view accords with the concept of supplying a service for the purposes of the GSTA 1985: TRA Case S65 (1996) 17 NZTC 7,408.

It is not practical to list all the types of services that can be supplied by a non-resident, but certain indicators may exist that lend support to there being a supply of services. For example, a service is supplied when the benefit of the modification, enhancement, development etc, is for the recipient. Evidence showing that the ownership of the result or product of the service resides with the recipient supports the view that services have been provided. In a similar vein, if the supply involves an additional modification of the computer program and the copyright in the modification resides with the recipient, then this factor also supports a finding that a service has been provided.

In general, payments for the supply of services for the development or modification of computer programs (not connected with a licence of copyright rights or know-how) will be treated as business income of a non-resident supplier. This income will have a New Zealand source to the extent of the value of the services performed in New Zealand under s YD 4, and will therefore be liable to New Zealand income tax.

(6) Supply of know-how relating to computer programs

A payment derived as consideration for the supply of “scientific, technical, industrial, or commercial knowledge or information” (generally referred to as “know-how”) is a royalty under s CC 9(2)(f).

The term “know-how” is difficult to define with any precision. One leading description was given by Lord Radcliffe in Rolls-Royce v Jeffrey (Inspector of Taxes) [1962] 1 All ER 801 (HL). This description has been usefully summarised in Stroud’s Judicial Dictionary of Words and Phrases (5th ed, Sweet and Maxwell) at 1,395 as follows:

“‘Know-how’ is the fund of technical knowledge and experience acquired by a highly specialised production organisation; although it may be, and usually is, noted down in documents, drawings, etc, it is itself an intangible entity whose category may vary according to, and may even be

Staples Tax Guide 2012
determined by, its use. Like office or factory buildings, patents and trademarks, and goodwill, it may be described as a ‘capital asset’ while it is retained by a manufacturer for his own purposes, but, unlike these, its supply to another is not a transfer of a fixed capital asset because it is not lost to the supplying manufacturer (Rolls-Royce v Jeffrey (Inspector of Taxes) [1962] 1 All ER 801 (HL))."

Know-how is an intangible asset and, from a practical perspective, can be viewed as undivulged knowledge or information residing with the supplier that enables the product or process to be replicated. In the computer context know-how can perhaps best be described as information relating to computer programming techniques.

The supplier of know-how always remains entitled to use it: Moriarty (Inspector of Taxes) v Evans Medical Supplies Ltd [1957] 3 All ER 718 (HL), at 735. It is important to distinguish know-how from the physical (or electronic) means by which it is transferred. While know-how may subist in a computer program, that, of itself, does not constitute a supply. In a supply of know-how the seller is passing to the buyer the seller’s special knowledge or information that remains unknown to the public. Accordingly, if the contract between a non-resident supplier and a resident buyer does not purport to transfer the relevant know-how, however it is comprised, the transaction is not a supply of know-how simply because the software has been transferred. In addition, as the know-how is an intangible asset of the seller, who is receiving value from the buyer in exchange for its disclosure, generally know-how will be furnished under conditions which prevent unauthorised disclosure by the buyer.

Payments for know-how do not include payments for services. In practice, however, the distinction between know-how and services is not always easy, and much will depend on the facts of a particular case. As mentioned above, in a know-how transaction the supplier is passing on to the buyer special knowledge or information. In a provision of services, the supplier is not passing on special knowledge or information to the buyer, but is instead using knowledge or information in order to develop, enhance, or modify a computer program. In a sense, the difference between a supply of know-how and a supply of services is that know-how enables the buyer to use the know-how for his or her own benefit, whereas in a supply of services the supplier uses his or her know-how for the benefit of the buyer.

(7) **Summary**

The provision of information with respect to a computer program will be treated as the provision of know-how only if the information is:

(a) Information relating to computer programming techniques;

(b) Furnished under conditions preventing unauthorised disclosure;

(c) Specifically contracted for between the parties; and

(d) Considered property subject to trade secret protection (ie that unauthorised disclosure constitutes a breach of confidence).

The income tax treatment of royalties derived from New Zealand by non-resident suppliers of know-how is the same as that described above for the licensing of copyright rights, except that with a know-how royalty the NRWT of 15 per cent represents a minimum New Zealand income tax only.

1290.55 **Authors’ royalties** [ss CC 9, EI 3]

Royalties paid to authors for the publication of literary works are income [s CC 9]. Royalties do not have tax deducted at source unless paid to a non-resident. Thus the author receives the gross amount of the royalty. An author receiving royalties is not an employee of the publisher. The royalties do not constitute PAYE income payments and therefore PAYE does not apply. Royalties paid to authors are also not schedular payments. Consequently tax is not deducted from royalty payments if paid to New Zealand residents. However, if the author is a non-resident [see 1250 RESIDENCE] the payment would be subject to NRWT at the rate of 15 per cent (unless varied by a double tax agreement) [see TIB vol 6:4 (October 1994) at 3].

Authors receiving royalty payments are responsible for the payment of the tax on that income. Unless the amounts involved are small, authors will be required to pay provisional tax in respect of royalty income.
Royalties

[see 1140 PROVISIONAL AND TERMINAL TAX]. Any expenses incurred in deriving the royalty income will be deductible under the general permission [s DA 1].

When an author is engaged for more than 12 months on the making of a literary work, the income received by the author for the assignment of the copyright or the granting of any interest in the copyright may be spread over the income year in which it is received and the previous income year if the work was made over a period of two years or less; or the two income years before that income year if they made the work over a period of more than two years [see 710.90].

The above rules will apply similarly to royalties paid to authors of dramatic and musical works, and to creators of artistic works.

#### 1300.10  Employment income [ss CE 1, RD 5]

The following amounts derived by a person in connection with their employment or service are income of the person:

- (a) Salary or wages or an allowance, bonus, extra pay, or gratuity;
- (b) Expenditure on account of an employee that is expenditure on account of the person;
- (c) The market value of board that the person receives in connection with their employment or service;
- (d) A benefit received under a share purchase agreement;
- (e) Director’s fees;
- (f) Compensation for loss of employment or service; and
- (g) Any other benefit in money.

Section CE 1 is the primary charging provision for income from employment.

**TaxNote:** Not all income from employment is subject to the PAYE rules. To be subject to PAYE deductions, the income must be a PAYE income payment (i.e., salary and wages, an extra pay, or a schedular payment). While most items of income from employment as listed will be subject to PAYE, benefits from an employee share purchase scheme, for example, do not fall into any of these definitions.

#### (1) Salary and wages [s RD 5]

Salary and wages are included within the definition of a PAYE income payment in s RD 3. PAYE income payments are subject to PAYE deduction. Thus, if an item of income is included within the definition of salary and wages it will be subject to PAYE.

“Salary or wages” means a payment of salary, wages, or allowances made to a person in connection with their employment and includes:

- (a) A bonus, commission, gratuity, overtime pay, or other pay of any kind;
- (b) Expenditure on account of an employee;
- (c) A payment to a working partner under s DC 4 [see 1050.65];
- (d) A periodic payment of a pension, allowance, or annuity made to a person or their spouse, child, or dependant in connection with the person’s past employment;
(e) Salary and allowances of a member of Parliament and salary and principal allowances of a judicial officer made under a determination of the Remuneration Authority;

(f) A gratuitous payment made to a person in return for services of the person, or their parent, child, spouse, former spouse, or dependant, where the services were provided to the payer and the payment would not have been made if the services had not been provided;

(g) An income-tested benefit, veteran’s pension, New Zealand superannuation, living alone payment and a basic grant and independent circumstances grant made under regulations made under s 193 of the Education Act 1964 or s 303 of the Education Act 1989, or an enactment substituted for those sections;

(h) A parental leave payment made under Part 7A of the Parental Leave and Employment Protection Act 1987;

(i) The market value of accommodation that the person receives in connection with their employment or service other than a relocation payments;

(j) An amount of an employer’s superannuation cash contribution that an employee chooses to have treated as salary or wages under s RD 68;

(k) An accident compensation earnings-related payment.

“Salary or wages” does not include:

(a) Any amount that is exempt income;

(b) An extra pay;

(c) A schedular payment;

(d) Income which shareholder-employees of a close company choose to have taxed under the provisional tax rules;

(e) An employer’s superannuation contribution other than a contribution that the employee chooses to have taxed under the PAYE rules;

(f) Any payment that is excluded from PAYE under an income tax regulation.

While “extra pay” and “schedular payments” are not salary and wages, an extra pay is included as a PAYE income payment in s RD 3 and subject to PAYE, and schedular payments are subject to their own withholding rules under s RD 8 and sch 4.

(2) Case law

In TRA Case T46 (1998) 18 NZTC 8,311, the Authority ruled that an employee who was granted three years special leave on full pay by his employer to study for his PhD in the US continued to be an employee while overseas and was required to pay tax on his earnings. The payments received from the employer were monetary remuneration (ie employment income), because they were paid in respect of or in relation to the employee’s employment. The payments were not exempt under s CB 9(d) of the ITA 1994 [now s CW 36], because although they amounted to a maintenance or allowance, they were not made in terms of a scholarship or bursary.

In Sayer v Commissioner of Inland Revenue (1999) 19 NZTC 15,249 (HC) the High Court was asked to decide whether some or all of an amount of $100,000 (plus interest) paid to a taxpayer under a deed of settlement and assignment was monetary remuneration. The taxpayer’s former employer (a company in liquidation) owed the taxpayer $130,944 as a result of an Employment Court award of compensation for wrongful dismissal ($62,142), humiliation, loss of dignity and injury to feelings ($50,000), and costs. Under the deed, the taxpayer agreed to waive all future claims against the company and its directors and to assign all existing claims, in consideration of the payment by an undisclosed party of $100,000. Inland Revenue assessed the taxpayer for tax on $50,000, being the part of the payment that it regarded as relating to wrongful dismissal. The Court held that Inland Revenue was not wrong in principal to treat part of the $100,000 as monetary remuneration (ie employment income). The main reason for this decision was the fact that the deed itself provides that $99,999 of the settlement amount is consideration for the assignment by the taxpayer of
the claim for damages for unjustified dismissal. Furthermore, there was insufficient evidence to say that the CIR’s apportionment of the $100,000 between assessable and non-assessable income was wrong.

1300.15 **Expenditure on account of an employee** [s CE 5]

The notion of expenditure on account of an employee was introduced to bolster the FBT regime. Deciding when something is subject the expenditure on account rules or FBT is not always clear. As a rule of thumb, the difference between an amount subject to FBT or taxable as expenditure on account of an employee can be decided by considering where the liability for the expenditure giving rise to the benefit or expenditure resides. If it resides with the employer, then this is a good indication that the FBT rules are applicable, whereas if the expenditure is the employee’s liability, but is met by the employer, then the expenditure on account rules are likely to be applicable.

“Expenditure on account of an employee” means a payment made by an employer relating to expenditure incurred by an employee. Specifically, a premium that an employer pays on a life insurance policy taken out for the benefit of the employee (or their spouse [see 960.10] or their child), unless the policy is excluded under s CE 5(3)(f) to (j). Expenditure on account of an employee is otherwise defined in s CE 5(3) by what is not included.

“Expenditure on account of an employee” does not include:

(a) Expenditure for the benefit of an employee, or a payment made to reimburse an employee, under s CW 17 (Expenditure on account and reimbursement of employees);
(b) An allowance for additional transport costs under s CW 18 (allowance for additional transport costs);
(c) Expenses that an employee pays in connection with their employment or service to the extent to which the expenditure is their employer’s liability, if the employee undertakes to discharge the liability in consideration of the making of the payment by the employer;
(d) Expenditure on an employment-related loan to which the FBT rules apply;
(e) An employer’s superannuation contribution; or
(f) A premium that an employer pays on a life insurance policy taken out for the benefit of the employee (or their spouse or their child) if:
   (i) The premium cannot be refunded to, or converted to cash by, the employee or an associated person; and
   (ii) The only benefits that are payable under the policy are those payable on the death of the employee (or their spouse or their child) or those payable because of accident, disease or sickness of the employee (or their spouse or their child); or
(g) A premium that an employer that is a close company pays on a life insurance policy taken out for the benefit of the employee (or their spouse or their child), to the extent to which the expenditure is treated as dividend under subpart CD;
(h) A premium that an employer pays on a life insurance policy taken out for the benefit of the employee (or their spouse or their child) if the policy is, or is included in, a superannuation category 1 scheme, a superannuation category 2 scheme, or a superannuation category 3 scheme;
(i) A premium that an employer pays on a life insurance policy taken out for the benefit of the employee (or their spouse or their child) if the policy is held by or for the trustees of a superannuation category 3 scheme; or
(j) A premium for income protection insurance that an employer is liable to pay or make a contribution towards for the benefit of an employee.

Expenditure on account of an employee is included within the definition of salary and wages, and as such subject to PAYE deduction.
1300.20  **Accrued employment income** [ss CH 3, DB 51, EA 3(5), EA 4]

Expenditure accrued at the end of the income year for services that have been performed for employment income (eg accrued holiday pay, bonuses, or long service leave), is deductible in the income year that it is incurred, provided it is paid to the employee within 63 days after the end of the income year [see 240.175].

Example:

An employer’s balance date in year 1 is 31 March. At the end of year 1, annual leave worth $15,329 in wages and salaries, remains unused. In year 2 the employees use all their accrued year 1 annual leave. In the first 63 days of year 2 (ie up to 2 June), annual leave equivalent to $4,377 is taken. In year 1, the employer may claim a deduction for $15,329, but the unexpired expenditure of $10,952 ($15,329 – $4,377), must be added back to gross income in year 1 under s CH 3. The employer effectively has a deduction of $4,377 in year 1. The balance of $10,952 may be claimed as a deduction in year 2 under s DB 51 [see 1140.30].

If the employment expenditure is not paid at the end of the 63rd day after the end of the relevant income year, or in the case of shareholder employees, by the last day by which the person could file a return of income for the income year, the unpaid amount is income of the person in the income year under s CH 3.

If an amount is treated as income under s CH 3, the amount qualifies for a deduction in the following income year under s DB 51.

1300.25  **Transfer of provisions for employment income on sale of business** [ss CB 31, DC 10, DC 11, EA 4]

When a business, or part of a business, is sold in an arm’s-length transaction, the deductibility of the employment income provisions is permitted when:

(a) A person (seller) sells a business, or part of a business, to another person (buyer);

(b) An employee of the seller working in the business, or the part of the business, becomes an employee of the buyer under the sale arrangements; and

(c) The seller and the buyer agree in writing, under the sale arrangements, that the buyer assumes the obligation to pay an amount of employment income to the employee.

In these circumstances, provided the seller and buyer are not associated persons, the seller is allowed a deduction, in the income year of sale, for any part of the amount that remains contingent on the employee continuing in employment or any similar factor.

Such contingent income could be for holiday pay, long service leave, retiring allowances or redundancy payments. For example, long service leave is contingent on the employee completing a certain number of years of service. Any liability for such leave is not incurred until such time as the employee has completed that service, even though a provision may have been made for financial reporting purposes.

For the purposes of s EA 4, through s EA 4(4), the contingent remuneration is treated as having been paid, and thus no longer subject to the accrual expenditure rules.

Provisions for actual employment income transferred (such wages that have been earned but not yet paid) are deductible under normal rules because the amounts have been incurred.

Employment income provisions transferred to a buyer on the purchase of a business retain their capital character and are not deductible to the purchaser. For this reason the purchaser will need to account for payments made under those provisions separately from other payments of employment income. For this purpose, the purchaser of a business may account for actual and contingent employment income transferred on an employee by employee basis, or on a group of employees basis. The purchaser must account for the actual and contingent employment income transferred in the same way every year [s EA 4(7)].

If the reduction in consideration (for actual and contingent employment income transferred) paid on the purchase of a business is more than the amount that the buyer actually paid for the obligation transferred, the excess is income of the buyer at the time the provision is recognised as being reduced by generally accepted accounting practice (GAAP) [s CB 31].
If a business is sold to an associated person, the buyer is allowed a deduction for the amount of employment income that the seller would have been allowed as a deduction, had the business, or the part of the business, not been sold. The transferred amounts are not taken into account for the purposes of determining accrual expenditure of the vendor under s EA 4(5).

If employees are transferred to an associated person other than on sale of a business, the new employer may claim deductions for actual and contingent remuneration transferred if the amount would have been deductible to the original employer had the employees not been transferred. The transferred amounts are not taken into account for the purposes of determining accrual expenditure of the vendor under ss DC 10 and EA 4(5).

The term “associated person” is defined in subpart YB [see 70.20].

**1300.30 Restrictive covenants and exit inducement payments** [ss CE 9, CE 10]

Restrictive covenants (golden handcuffs) and exit inducement payments (golden hellos) are specifically dealt with in ss CE 9 and CE 10 and constitutes income.

1. **Restrictive covenants**

A restrictive covenant is income of a person (Person A) if Person A gives an undertaking that restricts, or is intended to restrict, their ability to perform services as an employee, office holder, or independent contractor, whether or not the undertaking is legally enforceable.

There is an exception for restrictive covenants given in the context of the sale of a business, or part of a business if that part can operate separately. The exception applies if:

(a) Person A derived the amount because Person A or an associated person sells a business to another person (Person B);

(b) Person A or the associated person and Person B agree in writing that the transaction is the sale of a business;

(c) Person A derives the amount as consideration for an undertaking by Person A not to provide goods or services in competition with the goods and services that Person B provides from the business; and

(d) Person A does not provide services to Person B after the sale of the business, other than temporarily providing services incidental to the sale.

For the purposes of this exception, the sale of a business includes part of a business.

If the business sold by Person A is incorporated, and instead, all of the shares in the company are sold by Person A to Person B, the exception will apply to the company as though the company were Person B [s CE 9(4)].

2. **Exit inducement payments**

An amount is income if it is derived for:

(a) Loss of vocation;

(b) Loss of a position;

(c) Leaving a position; or

(d) Loss of status.

Restrictive covenants and exit inducement payments are included within the definition of “extra pay” and subject to PAYE if the income was derived in connection with an employment relationship between the person and the person who paid the income.

**TaxNote:** The expression “in connection with” is a very broad term and would include an inducement payment made by an employer to induce and employee to work for that employer, even though there is no actual employment relationship in existence at the time the payment was made.
1300.35 Commutation of salary and pension

Where someone agrees to serve in consideration of a lump sum and no periodical salary, or a small periodical salary, that lump sum is just as much remuneration and taxable as a periodical salary, or as a larger periodical salary would have been: *Prendergast v Cameron* [1940] AC 549 (1940) 23 TC 122 (HL). This person is merely commuting the salary, and a sum so accepted in commutation of salary can in its nature be nothing but salary. The commutation merely substitutes one form of remuneration for another. It is, in effect, remuneration payable in advance and it is fallacious to speak of it as a capital payment. No sum paid as remuneration can ever be capital in the sense that it escapes taxation, since remuneration as such is liable to tax whatever form it takes.

The analogy of cases such as the sale by an annuitant of an annuity is a false one as, in that case, the quality of remuneration is absent from the payment. If a pension is surrendered in consideration of a present payment, with no reference to or connection with present or future services, the sum received is not taxable since it is not remuneration or salary for services. It would be nothing more or less than commutation of a pension, and a pension is in itself a distinct taxable subject matter. An amount received in commutation of a pension is not income, whether made after termination of the service or during the continuance of the service. It does not follow in the latter case that the payment must necessarily be regarded as remuneration for services rendered and to be rendered.

It is, of course, possible for an employee to agree to give up future pension rights in consideration of a present addition to his or her salary, and in that case the addition would be remuneration and taxable as such, notwithstanding that it originated in the surrender of pension rights. The question of whether a sum received in consideration of the surrender of future pension rights is or is not remuneration must depend on the true construction of the agreement by which the transaction is effected. If the sum received is by way of an addition to remuneration, in the form either of an increase in periodical salary or of a lump sum, it is taxable. If it is not so received but is merely paid by way of commutation of a future pension without reference to or connection with the service, it would not be taxable: *Wales (Inspector of Taxes) v Tilley* [1942] 2 All ER 22 (EWCA). Although this case went to the House of Lords and the decision varied slightly, the principles as stated above were not affected by *Tilley v Wales (Inspector of Taxes)* [1943] AC 386, [1943] 1 All ER 280 (HL).

1300.40 Losses from other sources

A salary earner may have other sources of income, such as rents, interest, or dividends. When the deductible expenses in deriving this other income exceeds the income so derived, the person may deduct the loss from the salary income.

1300.45 Sportsperson

A professional footballer receiving a “best and fairest” prize received income as an employee: *Kelly v Federal Commissioner of Taxation* (1985) 16 ATR 478, 85 ATC 4283 (WASC).

While not employment income, it is worth bearing in mind that fees, remuneration, prizes or appearance money received in connection with any activity or sport in connection with any sporting event or competition of any nature, including motor racing, motorcar rallies, motorcycle racing, motorboat racing, and horse racing and trotting, are schedular payments and are subject to a withholding tax of 20 per cent.

The taxation of income from sporting activities is explained in the Inland Revenue Booklet, *The Rule Book* (IR248).

1300.50 Students [s CW 36]

Any scholarship or bursary for attendance at an education institution is exempt income. This excludes a basic grant or an independent circumstances grant under regulations made under s 303 of the Education Act 1989, which are subject to PAYE.

A student allowance does not come within the definition of “salary and wages” and, therefore, does not allow the taxpayer to gain the transitional tax allowance: *TRA Case RI8* (1994) 16 NZTC 6,096.
1300.55 **Awards for lost wages** [s CE 1]

In public ruling BR Pub 06/06 [see TIB vol 18:7 (August 2006) at 17-26], the CIR ruled that the payment by an employer of an award for lost wages or other remuneration under the Employment Relations Act 2000 (ERA 2000) is “employment income” of the employee under s CE 1. Usually the payment is awarded under ss 123(1)(b) or 128 of the ERA 2000, but may be made under another provision. The ruling does not apply to an award of compensation for humiliation, loss of dignity, or injury to feelings made under s 123(1)(c)(i) ERA 2000 [see 1300.60]. The ruling applies for an indefinite period.

The payment is derived by the employee in the income year in which it is received, credited on behalf of the employee, or otherwise dealt with on the employee’s behalf. If the person receiving the payment is a shareholder-employee, the payment is derived in the income year in which the expenditure is deductible to the employer. If the expenditure is not deductible to the employer, the payment is derived in the income year in which it is received by the shareholder-employee.

1300.60 **Payments for humiliation, loss of dignity, and injury to feelings**

[ss CE 1, CA 1]

(1) **Under the Employment Relations Act 2000**

In public ruling BR Pub 06/05 [see TIB vol 18:7 (August 2006) at 9-16], the CIR ruled that payments to employees and former employees that are genuinely and entirely for compensation for humiliation, loss of dignity, or injury to feelings under s 123(1)(c)(i) of the Employment Relations Act 2000 (ERA 2000) are not the income of the employee under s CE 1. Such compensation payments are not gross income under ordinary concepts under s CA 1(2). There is consequently no liability under s RD 17 for employers or former employers to deduct PAYE from these payments. The ruling applies for an indefinite period.

(2) **Under the Human Rights Act 1993**

In public ruling BR Pub 05/12 [see TIB vol 17:6 (August 2005) at 4-11], the CIR ruled that payments for damages or out of court settlements that are genuinely and entirely awarded for humiliation, loss of dignity, and injury to feelings under s 92M(1)(c) of the Human Rights Act 1993 are not income under s CE 1 and are not income under ordinary concepts under s CA 1(2). The ruling applies for an indefinite period.
Chapter 1320

Schedular Payments

1320.10 Schedular payments — a broad definition

The term "schedular payments" was introduced by the PAYE legislation to refer to those classes of earned income where no true master and servant relationship exists. A schedular payment forms part of the recipient’s schedular income and is subject to a deduction of withholding tax. The relevant provisions are located in subpart RD and sch 4 [see 1320.40]. Examples of schedular payments include: commissions; honoraria; fees earned by entertainers, speakers, radio artists, freelance journalists; payments for agricultural work; payments for supply of labour in building and construction work; and payments to non-resident contractors, etc.

The expenditure incurred in deriving schedular income is deductible only where the recipient is not an employee. An “employee” is a person who receives salary or wages. Schedular payments are specifically excluded from the definition of salary and wages. However, where the recipient of schedular payments is an employee, income that may otherwise be classed as schedular payments is salary and wages [s RD 8(1)(b)].

1320.15 Tax code declaration

Any person receiving a schedular payment must complete a tax code declaration (IR330) and deliver it to the person making the payment before the payment is made. The appropriate tax code for a person receiving a schedular payment is “WT” [see 1080.17].

If the recipient of the schedular payment fails to provide the payer with a completed tax code declaration, the payer must deduct tax at one of the following penalty rates:

(a) If neither (b) nor (c) applies, the penalty rate is 15 per cent above the rate specified in sch 4 (eg if the schedular payment rate is 20 per cent the penalty rate will be 35 per cent of the amount of the payment);

(b) If the person receiving the schedular payment is a company that is a non-resident contractor [see 1320.20], the payment is not received directly or indirectly as a result of a choice made to avoid the 15 per cent penalty rate in (a), and the person is not a non-resident entertainer, the penalty rate is five per cent above the withholding tax rate; or
A nil penalty applies if the schedular payment is a payment to a non-resident entertainer. Non-resident entertainers are also able to elect to be a non-filing taxpayer. Where this election is made, the person’s tax liability is equal to the amount withheld.

An individual in business who receives schedular payments may apply for a certificate of exemption, which allows them to receive the payment without the deduction of tax [see 1320.40].

The tax deducted by a payer must be accounted for to Inland Revenue as part of the normal PAYE procedures [see 1080.60 and 1080.65].

**1320.20 Schedular payment — non-resident contractors [ss RD 8, RD 11, RD 19, RD 24, sch 4]**

Withholding tax is required to be deducted from payments to overseas contractors. The rate is 15 per cent of gross payments made to non-residents, whether they are companies or individuals (other than employees), for a contract activity or service. The 15 per cent rate does not apply where another part of sch 4 provides for a different rate for the particular type of income. An example is the 25 per cent rate that applies to payments for media contributions by a freelance contributor. The 25 per cent rate is provided for under sch 4, Part F, cl 1. Therefore, it is necessary to consider all of the categories listed in sch 4 before applying the non-resident contractor rate of 15 per cent. The following flowchart, taken from the Commissioner’s interpretation statement on non-resident contractor schedular payments, sets out the steps to be followed when determining whether a payment is a schedular payment and the applicable withholding rate (if any):
Schedular Payments

Is there a contract, agreement or an arrangement with a non-resident for which payment is made?

Under this contract, agreement or arrangement will the non-resident contractor perform any work in New Zealand?
Or Render a service of any kind in New Zealand?
Or Provide the use of, or right to use, in New Zealand, any personal property or services of a person other than the non-resident contractor?

Is the payment a royalty, under the ITA 2007, which is subject to non-resident withholding tax?

Is the payment a cost reimbursing payment made to a non-associated person?

Is the non-resident contractor eligible for relief under a double tax agreement?

Has the non-resident contractor been present in New Zealand for 92 days or less in any 12-month period?

Is the total amount paid to the non-resident contractor for any 12-month period less than $15,000?

Is the payment for salary, wages or extra pay?

Does the non-resident contractor have a valid Certificate of Exemption?

Does the non-resident contractor have a Special Rate Certificate?

Is an IR 330 held for the contractor with an IRD number?

Deduct non-resident contractor tax at the special rate.

If a company, deduct non-resident contractor tax at the rate provided for in schedule 4 of the ITA 2007 plus add five per cent to that rate; or
If not a company, deduct non-resident contractor tax at the rate provided for in schedule 4 of the ITA 2007 plus add 15 per cent non-resident contractor rate.

Deduct non-resident contractor tax at specific rate provided for in schedule 4 of the ITA 2007; or
If no specific rate then deduct non-resident contractor tax at the 15 per cent non-resident contractor rate.
Schedular Payments

(1) **Interim tax**
The withholding tax is not an additional tax but a payment on account of the non-resident’s annual income tax liability. The tax is neither a minimum nor a final liability. The non-resident’s final tax liability will be determined by annual assessment in the normal way. Any refund or further tax to pay will be determined when the tax return for the year is filed.

(2) **Liable payments**
The withholding tax is required to be deducted from payments to non-residents for any contract activity or service. “Contract activity or service” means:

(a) Performing any work or rendering any service in New Zealand;

(b) Providing the use of, or the right to use, in New Zealand any personal property or services of any person other than the non-resident contractor.

(3) **Exempt payments**
Tax is not required to be deducted from

(a) Direct reimbursement of the non-residents costs, except where the non-resident and the payer are associated persons; and

(b) Royalties within the meaning of the ITA 2007 (but these are subject to NRWT).

Non-resident contractors who are present in New Zealand for less than 92 days in a 12-month period, and are eligible for total New Zealand tax relief under a double tax agreement, are not required to seek a certificate of exemption and are automatically exempted from withholding tax [see TIB vol 15:11 (November 2003) at 25].

(4) **Exemption certificates**
Exemption certificates may be granted, on application from the non-resident contractor, where:

(a) Inland Revenue is satisfied that, by reason of a double tax agreement or for any other reason, the income is exempt from New Zealand tax;

(b) The non-resident contractor provides a bond or other form of security satisfactory to Inland Revenue, securing payment of any tax which is payable or may become payable for the contract activity; or

(c) Inland Revenue is satisfied that the non-resident contractor has complied with all tax obligations in the 24 months immediately preceding the application and will continue to comply in the future.

Payments to non-resident contractors are exempt from withholding tax if the total amount of contract payments made (by all New Zealand employers) to the non-resident contractor does not exceed $15,000 in any 12-month period. A New Zealand employer of a non-resident contractor must be sure, before treating a contract payment as exempt, that the non-resident contractor will not enter into any contracts with other New Zealand employers that might cause the contractor to exceed the $15,000 threshold [s RD 8(1)(b)(iv)].

Example:
If a non-resident contractor contracts with party A for $10,000 in a 12-month period, and in that same period contracts with party B for $20,000, the exemption will not apply. Both party A and party B will be required to deduct non-resident contractors’ withholding tax because the total amount of schedular payments derived by the non-resident contractor exceeds $15,000 in the relevant 12-month period [see TIB vol 15:11 (November 2003) at 25].

The 12-month period referred to is a period of 12 months starting on any date. The application of the exemption for non-resident contractors was clarified in TIB vol 14:5 (May 2002) at 26-27. In particular, the following points should be noted:

(a) The exemption will not apply if the non-resident contractor has a permanent establishment or other fixed base in New Zealand.

(b) Under most double tax agreements, the exemption will not apply if the non-resident contractor is supplying information or equipment the payment for which constitutes royalties.

Staples Tax Guide 2012 1473
(c) The onus is on the employer/payer to ensure that the under-92-day test is met and to determine whether the contract activity is exempt under a double tax agreement. If the employer fails to deduct withholding tax when it should have done, Inland Revenue can recover the tax from the employer. Failure to take reasonable care may also expose the employer to penalties and interest.

(5) **Special rate certificates [TAA, s 24N]**

Inland Revenue can issue, on application from a non-resident contractor special tax rate certificates which authorise a lower or higher rate of withholding tax to be deducted. These amended rates would normally be based on a certified budget of expected revenues and expenditure or on the basis of previous years’ tax returns. Any reduced rate would be for a limited period and would be reviewed in the light of actual results. The withholding tax liability may be affected where a double tax agreement is in force between New Zealand and the country of the contractor’s residence.

(6) **GST and schedular payments**

Where GST applies, the GST is not included when calculating the withholding tax deduction. The payer would hold a tax invoice issued by the supplier (payee) before the withholding tax is calculated on a GST excluded basis.

In *TRA Case U48* (2000) 19 NZTC 9,422, the Authority ruled that payments made by wire transfer to an overseas bank for the hire of shipping containers from a non-resident company, and payments made by telegraphic transfer to an overseas bank for the charter and hire of vessels from a non-resident company, were payments to non-resident contractors and subject to withholding tax under Part E of the Income Tax (Withholding Payments) Regulations 1979.

The Commissioner’s interpretation statement on non-resident contractor schedular payments can be found in TIB vol 22:7 (August 2010).

**1320.30 Schedular payments guide**

The following rules are a guide to some general payments.

(1) **Cleaning or maintenance contracts [sch 4, Part D]**

Payments made to contractors for cleaning or maintaining premises that are not used for farming or agricultural purposes, is not a residential dwelling and is not used exclusively for residential purposes, or for cleaning windows, or for cleaning or laundering plant, vehicles, furniture furnishings, fittings, or equipment are schedular payments and tax should be deducted at the rate of 20 per cent except:

(a) When the contractor is a limited company; or

(b) When the contractor produces a current certificate of exemption (IR118).

(2) **Commission agents other than insurance agents [sch 4, Part B]**

Commission paid to agents, salesmen, canvassers and others working as individuals and remunerated on a commission basis are subject to tax deductions at the time of payment. In order to ensure that the appropriate tax deduction is made, it is necessary to decide whether the commission being paid is essentially salary or wages (for which tax deductions would be calculated from the ordinary tax deduction tables) or a schedular payment (in which case a deduction must be made at the special flat rate of 20 cents per dollar from the gross commission in terms of sch 4).

Whether or not commission is salary and wages depends on the nature of the relationship between the agent and the principal. If the relationship amounts to a contract of service, an employment relationship exists. If the relationship amounts to a contract for services, the commission agent is an independent contractor and the commission will be treated as a schedular payment. The approach to be used when determining the nature of the relationship is set out in TIB vol 4:7 (March 1993) at 2-4 [see 335 EMPLOYMENT RELATIONSHIP].

Tax deductions are not to be made from commissions paid to a company, or to any person who produces a Certificate of Exemption (IR118).
(3) **Directors’ fees [sch 4, Part B]**

Directors’ fees are schedular payments and are liable to have tax deducted at the rate of 33 per cent, unless one of the following exemptions applies:

(a) The director is an employee and the directors’ fees are part of the director’s overall remuneration package. In this situation the directors’ fees would be subject to PAYE. If the director is employed and paid separately for services as a director, the exemption will not apply and the directors’ fees are schedular payments.

(b) The payment of directors’ fees is for services rendered by a public authority, local authority, Maori authority, or company.

(c) The directors’ fees are paid to a partnership for services performed by a partner and the fees are business income of the partnership.

(d) The director holds an exemption certificate issued by the CIR under s 24M of the TAA.

(e) The director is a shareholder employee in a close company and one of the following conditions is met [s RD 3(2)]:
   (i) The shareholder employee does not receive regular amounts of salary or wages for regular periods of one month or less throughout the year; or
   (ii) The total amount or regular payments received is not more that 66 per cent of total income from the company by way of directors’ fees and remuneration for services; or
   (iii) Any amount is paid or credited to or applied on account of the taxpayer by way of drawings against directors’ fees and remuneration for services.

(f) The director holds a special tax code certificate issued under s 24N of the TAA. This certificate will specify a deduction rate different from the standard 33 per cent rate for directors’ fees.

The fact that a director is registered for GST purposes does not release the company paying the directors’ fees from the responsibility of deducting tax. If the director is GST registered and provides the payer with a tax invoice, the payer must make tax deductions from the GST-exclusive amount of the directors’ fees. If the director does not provide the payer with a tax invoice, the payer must deduct tax from the gross amount of the directors’ fees, including any GST charged [see TIB vol 8:4 (September 1996) at 1-3].

(4) **Fees and honoraria [sch 4, Part B]**

These are schedular payments, even where paid exclusively for the personal services of the recipient, unless the payee is also in receipt of a fixed remuneration when these payments might be treated as salary.

Honoraria paid to school trustees are subject to withholding tax at the rate of 33 per cent. The CIR has issued a determination under reg 7 of the Income Tax (Withholding Payment) Regulations 1979 [now s 24P of the TAA], that when a school trustee receives honoraria for attendance at a board meeting, the sum of $55 per member, or $75 for the chair, shall be regarded as expenditure incurred in the production of the payment. The exemption applies to a maximum of 11 meetings per year. If a trustee receives any reimbursement (in addition to honoraria) for expenditure incurred to attend a meeting, the amount exempted under the determination is reduced by the amount of the reimbursement. The determination remains valid until revoked or varied by the CIR [see TIB vol 13:7 (July 2001) at 51-52].

**Example 1:**
The chair receives honoraria of $75 per meeting. No additional reimbursement is received. The school does not have to deduct tax because the payment does not exceed $75.

**Example 2:**
The chair receives a total payment of $95 made up of an honorarium of $70 and reimbursement of travel expenses of $25. The school must deduct tax from $20 ($95 − $75), (ie $20 × 33% = $6.60).

School trustees whose only income is the honorarium are not required to file a tax return. Although the honorarium is a schedular payment, the determination issued under reg 7 of the Income Tax (Withholding
Payment) Regulations 1979 (see above), means that school trustees are not required to file a return [TAA,
  s 33A(2)(d)].

The CIR has issued a determination under reg 7 of the Income Tax (Withholding Payment) Regulations 1979
  [now s 24P of the TAA], that when a member of the Royal New Zealand Plunket Society (Inc) receives
honoria, to reimburse expenditure that the member has incurred in carrying out Plunket-related activities,
up to $600 per annum shall be regarded as expenditure incurred in the production of the payment. If the
Plunket member receives any reimbursement in addition to honoraria for expenditure incurred, the amount
exempted ($600) is reduced by that additional reimbursement. The determination applied to honoraria paid
between 1 April 2002 and 31 March 2007 and has lapsed. It has not yet been reissued.

Example 1:
A Plunket member receives honoraria of $500 in respect of the Plunket-related activities carried out during the year. No other
reimbursement had been paid during the year. The payer does not have to deduct withholding tax because the total payment did
not exceed $600.

Example 2:
A Plunket member receives an honorarium payment of $525 at the end of February. During the year, in May and August, the
member had also received two smaller payments of $100 each as reimbursement of expenses incurred for Plunket-related
activities, making a total of $725 for the year. Because the Plunket member had received reimbursement payments of $200 earlier
in the year, only $400 of the honorarium received in February could be regarded as expenditure incurred under this determination.
Therefore, withholding tax of $41.25 should be deducted from the balance ($125) of the honorarium.

(5) Film industry workers
See 460.65 and 460.67, for tax treatment of payments made to film industry workers.

(6) Suppliers of game and other natural products [sch 4, Part H]
Withholding tax of 25 per cent is to be made from payments to suppliers of game, greenstone, eel, whitebait
and sphagnum moss. Game includes: deer, pigs, and goats which are killed, taken, or captured in a wild state,
and includes payments for meat, tails, sinews, and other parts of the animals.

(7) Insurance commission agents [sch 4, Part G]
The 20 per cent withholding tax is to be deducted on the gross payments whether they are by way of
commissions, retainer, or expense allowance. The agents may claim for actual expenses incurred or 20 per
cent of the gross payments (including any expense allowance which is not separately deductible) where
the agent is self-employed and gross commissions are $5,000 or less in the year.

(8) Insurance industrial agents
The 20 per cent withholding tax is to be deducted on any commissions and retainer paid but not on the expense
allowance granted in terms of the employment contract. The agents must return the gross payments. Where
the agent is self-employed the expense allowance must also be returned as income, but the agent may claim
actual expenses incurred.

(9) Commission on life policies
No tax is required to be withheld from commissions paid by an insurance company to an agent. It makes no
difference whether the insurance is effected on the lives of arms-length parties or on the life on the agent or
members of his or her immediate family [see Public ruling BR Pub 00/02, TIB vol 12:4 (April 2000) at
5-11]. The ruling applied from 1 January 2000 to 31 December 2004. While the ruling has now lapsed, there
is no reason to believe that conclusions do not remain correct. The income of the agent includes commissions
received by the agent on policies on the agent’s own life and on the lives of associated persons. Where the
commissions are offset against the premiums payable on the policies, the amount of the commission retains
its nature as income of the agent [see Public ruling BR Pub 10/07, TIB vol 22:5 (June 2010) at 8-17].
(10) Journalism and illustrations fees for publications [sch 4, Part F]
Fees paid for contributions (including photographs, illustrations and cartoons) by freelance journalists, writers, artists, or other regular or casual contributors to newspapers, magazines, journals, pamphlets, circulars, hand-bills, or similar publications are schedular payments and tax deductions must be made at the source from the gross fees paid at the rate of 25 per cent.

(11) Musicians — members of dance bands, orchestras [sch 4, Part F]
Deduction from payments to musicians will depend on the conditions of their engagement, whether individual or as members of a band or orchestra. There will be some instances of individual employment, eg the members of an established orchestra in which case PAYE applies. Payments in other cases where employment does not exist are schedular payments and the rate of deduction is 20 per cent.

In the cases of the larger bands where the leader is in business and furnishes income tax returns for that business, a certificate of exemption (IR118) may be used. The leader must, of course, make deductions of PAYE or withholding tax (as the case may be) from payments made to musicians involved in the band.

(12) Non-resident contractors [sch 4, Part A]
Payments to non-resident contractors are subject to withholding tax at the rate of 15 per cent.

(13) Non-resident entertainers and visiting sportspeople
See 1000 NON-RESIDENTS AND ABSENTEES.

(14) Piecework
Where the payment is for piecework, or otherwise for work based on production, but is paid solely for the personal services of the recipient (ie is not paid partly to cover the use of plant or equipment, and the recipient does not employ labour), Inland Revenue considers that the payment should be treated as salary or wages. Where the payment is for labour only contractors in the building or construction industry, sch 4 specifically includes such payment as a schedular payment.

(15) Prize money at sporting events [sch 4, Part F]
Prize money paid to participants at sporting events or competitions is liable for withholding tax at the rate of 20 per cent. “Sporting events and competitions” includes (but is not limited to) those involving motor racing, motorcar rallies, motorcycle racing, motorboat racing, and horse racing and trotting. The withholding tax applies to both resident and non-resident entertainers.

When a resident or non-resident entertainer receives prize money from a sporting event or competition, the amount of $500 is regarded as expenditure incurred in the production of the prize money. Thus, withholding tax is only deducted from the amount of the prize money which exceeds $500. If the prize money is equal to or less than $500, the whole of the prize money is regarded as expenditure incurred in the production of that prize money, and no withholding tax would be deducted. This rule applies to each prize paid to participants in an event. If a prize is shared (eg in a tennis pairs competition) the $500 deduction applies to each person’s share of the total prize money [see TIB vol 9:5 (May 1997) at 3].

(16) Salary or wages
Where a fixed remuneration is already payable, any additional payment, whatever its description, should be treated as salary or wages.

Example:
Employee received $500 regular salary and $200 commission in a pay period. The full $700 should be treated as salary. On the other hand, if commission only is receivable, it should be treated as a schedular payment.

(17) Theatrical artists — New Zealand residents [sch 4, Part F]
Where the artists are not employees, fees, remuneration, prize or appearance money, paid for theatrical, stage, concert, or radio performances are treated as schedular payments and tax deductions should be made at the...
Schedular Payments

flat rate of 20 per cent. Where the artistes receive their remuneration as salary or wages under a contract of service, PAYE tax deductions, according to the tax codes established, must be made.

Theatrical artists who are independent contractors and receive fees by way of schedular payments can claim actual expenses. If the artistes are on tour they are required to meet their own travelling expenses.

PIB 164 (August 1987) states:

“It is common in licensed premises for performers to be paid out of takings from cover charges collected at the door of the bar in which they are performing. Inland Revenue is satisfied that the licensee or manager of licensed premises is responsible for the deduction of withholding tax from charges made at the door and later handed to the entertainer or entertainers because in terms of the Sale of Liquor Act 1962 the management and control of the premises is vested in the licensee or manager. The licensee or manager is the only person who can restrict entry into any part of the licensed premises. That band members regularly act as doormen and admit or turn away a person, depending on whether that person accedes to paying an entrance fee, is an indication that the licensee or manager is exercising his or her powers under the Sale of Liquor Act. Those persons who collect the door charges or prevent entry by those who do not pay are acting as agents or delegates of the manager or licensees. These persons are therefore collecting the charges on behalf of the management and it is the licensee or manager who in effect, hands the charges to the entertainer. This is the case whether the person collecting the charges is a member of the hotel staff, member of the band, or any other person. The payments handed over to the entertainer or entertainers are specified payments as defined in the Withholding Payments Regulation[s] and the licensee or manager is required to deduct and account for the 20 per cent withholding tax.”

1320.40  Schedular payments [s RD 8, sch 4]

(1) Meaning of schedular payment [s RD 8]
The classes of payments that are schedular payments are those specified in s RD 8. However, the following payments are specifically excluded from the definition of schedular payments for the purposes of the rules:

(a) Payments of salary or wages, or an extra pay;

(b) Payments for work done or services rendered by a public authority, local authority, Maori authority, or company. This does not include a company which is a non-resident entertainer or a non-resident contractor or an agricultural, horticultural, or viticultural company;

(c) Payments covered by an exemption certificate;

(d) Payments made for work done or services rendered by a non-resident contractor, if the non-resident contractor is eligible for total relief from tax under a double tax agreement and is present in New Zealand for 92 days or less in any period of 12 months;

(e) Contract payments made for the contract activities or services of a non-resident contractor, if the total amount of contract payments made for the contract activities to the non-resident contractor, the non-resident contractor’s agent, and any other person acting on the non-resident contractor’s behalf is $15,000 or less in any period of 12 months [s YA 1 for the definitions of “contract payment” and “contract activity or service”].

(2) Exemption certificates [s RD 8(1)(b)(iv); TAA, s 24M]
The CIR may issue any person with an exemption certificate relating to a specific period (eg a tax year). The effect of the certificate is that it authorises the person making the payment (which would otherwise have been subject to a tax deduction) to do so without deducting any tax. An exemption certificate cannot be issued for payments to a non-resident entertainer.

The CIR may, on written application, issue an exemption certificate to a non-resident contractor in respect of a contract activity if:

(a) Any amount derived from the contract activity is not income, either because of a double tax agreement or for any other reason;
(b) The non-resident contractor provides the CIR with a bond or other form of security;
(c) The non-resident contractor has satisfied all their tax obligations in the past 24 months;
(d) The non-resident contractor will satisfy all their future tax obligations.

An exemption certificate may be cancelled at any time by the CIR. A cancelled certificate must be returned to Inland Revenue within seven days of notice of cancellation. An exemption certificate may not be altered or misused.

(3) Amount of tax deduction [sch 4]
The amount of tax to be deducted from a schedular payment is the amount of the payment multiplied by the appropriate rate specified in sch 4, or if applicable, the rate specified in the special tax rate certificate. The tax deduction must be calculated on the gross amount of the payment, even if the payment does not consist entirely of income, and even if the tax deduction relates partly to the income tax liability of an employee or subcontractor. If the payee has provided the payer with a tax invoice, tax is deducted from the gross amount excluding GST.

If the CIR has made a determination, that part of the schedular payment is to be regarded as expenditure incurred, tax is deducted from the net amount.

(4) Media, advertising, and entertainment [sch 4, Part F]
The appropriate rate of tax for payments for work done or services rendered within the class specified in Part F of the sch 4. However, this does not apply if a special tax rate certificate has been issued.

(5) Special tax rate certificates [TAA, s 24N]
The CIR may issue a special tax rate certificate to any person. The certificate may specify:
(a) That a specific amount of tax be deducted from each schedular payment;
(b) That tax be deducted from the schedular payment at a specified percentage; or
(c) That tax be deducted from a specified percentage of the total schedular payment.

The CIR may cancel a special tax rate certificate at any time. A cancelled certificate must be returned to Inland Revenue within seven days of notice of cancellation. A special tax rate certificate may not be altered or misused.

(6) Expenditure incurred in producing schedular payment [s RD 8(3)]
The CIR may determine the proportion of any schedular payment of any class that is to be regarded as expenditure incurred in the production of the payment or payments. This effectively allows the recipient of the payment to receive the benefit of a deduction for expenditure incurred in deriving the income, without necessarily having to file a tax return, and prevents the payment from being overtaxed at source.

(7) Tax to be deducted from protected payments [s RD 8(2)]
Tax must be deducted from a schedular payment even if the payment is protected against assignment or charge.

(8) Non-resident entertainers [s RD 19]
The income derived from New Zealand by a non-resident entertainer consists solely of schedular payments from which tax deductions have been correctly made, the income tax liability of the non-resident entertainer is the total amount of the tax deductions made.

If a non-resident entertainer receives a schedular payment from which no tax deduction was made, the non-resident entertainer must pay the amount of tax that should have been deducted to the CIR by the earlier of:
(a) The 20th of the month following the month in which the tax deduction should have been made; or
(b) The date the non-resident entertainer departs from New Zealand.

The types of activity that are included as schedular payments to a non-resident entertainer are “schedular entertainment activities”. There are activities which meet the requirements of paras (b) and (c) of the definition.
of “non-resident entertainer” in s YA 1. They are any activity or performance undertaken during a visit to New Zealand where that activity or performance is connected with:

(a) A sporting event or competition;
(b) Making speeches or giving lectures or talks for any purpose; or
(c) Acting, singing, playing music, dancing, or entertaining generally.

It includes such activities where they are a solo performance and where they are undertaken along with other people. It does not include an activity or performance relating to:

(a) A cultural programme sponsored by an overseas government or the New Zealand Government;
(b) A foreign foundation, trust or other organisation which exists to promote a cultural activity and is not carried on for the private pecuniary profit of any individual; or
(c) A game or sport where the participants are representing the body that administers the game or sport in an overseas country.

(9) Payments to employees or subcontractors [s RD 20]

If a contractor receives contract payments which are schedular payments, and the contractor is liable to make a payment to an employee or subcontractor, the contractor must deduct tax from the payment to the employee or subcontractor in accordance with the PAYE rules or schedular payment rules (as applicable).

(10) Primary sector employers to provide certain information [TAA, s 24O]

If an employer makes a payment in respect of which a tax deduction is not required to be made because of an exemption certificate [TAA, s 24M] or special tax rate certificate [TAA, s 24N], the employer must provide the CIR with the following information:

(a) The name and tax file number of the employer;
(b) The name of the person who received the payment;
(c) The tax file number of the person who received the payment (if supplied to the employer);
(d) The gross amount of the payment;
(e) The date of the payment; and
(f) The number of the exemption certificate or special tax rate certificate (where applicable).

The provisions apply only where the work performed is “horticultural contract work”. Horticultural contract work is certain types of work or services related to land that is used or intended to be used for agriculture, horticulture, or viticulture. The types of work specified in the definition are:

(a) Pruning or thinning fruit trees or vines; and
(b) Picking or packing fruit or grapes.

The information in item (a) to (f) above, must be provided to the CIR in the employer monthly schedule or, if an employer monthly schedule is not required, by the 20th of the month following the month in which the payment was made.

(11) Schedule 4

Schedule 4 provides the rate at which tax must be deducted from schedular payments. It is broken down into Parts A to I (below).

(12) Payments to non-resident contractors [sch 4, Part A]

A contract payment that relates to a non-resident contractor’s contract activity or service if the payment is to any one or more of the following:

(a) To the non-resident contractor;
(b) To an agent of the non-resident contractor; or
(c) To a person acting on behalf of the non-resident contractor.
Schedular Payments

The rate is 15 per cent.

(13) **Payments of company directors’ fees, examiners’ fees, or honoraria [sch 4, Part B]**

A payment of a company director’s fee, an examiner’s fee, or an honorarium. “Examiner’s fee” means fees or remuneration for work or services that relate to examining an examination candidate, if the work or services have the following nature:

(a) Setting an examination paper or question;
(b) Marking a candidate’s answer;
(c) Examining a candidate orally; or
(d) Examining a candidate’s practical work or performance.

The rate is 33 per cent.

(14) **Payments for work or services relating to primary production [sch 4, Part C]**

A payment for work or services of any one or more of the following types:

(a) Farming contract work;
(b) Cultivation contract work;
(c) Shearing;
(d) Droving;
(e) Forestry or bush work (including bush felling, road and tramway work, removal of timber, undergrowth cutting, burning, or clearing);
(f) Planting or cutting flax;
(g) Work described in ss DO 1 or DO 2 (enhancements to land (except trees), erosion and shelter plantings) that is related to land that is used or intended to be used for farming or agriculture.

“Farming contract work” means work that is related to land that is used or intended to be used for farming or agriculture, if the work is:

(a) Firewood cutting, or post or rail splitting;
(b) Cutting down trees incidental to work under item (a);
(c) Grass or grass seed cutting;
(d) Hedge cutting;
(e) Planting trees;
(f) Planting or cutting flax; or
(g) Threshing, chaff cutting, hay making, hay baling, or harvesting or gathering crops.

“Cultivation contract work” means work or services provided under a contract or arrangement on, or in connection with, land that is used for the cultivation of fruit crops, vegetables, orchards, or vineyards. It includes work or services provided under a contract or arrangement for the supply of labour, or substantially for the supply of labour, in relation to land that is intended to be used for the cultivation of fruit crops, vegetables, orchards, or vineyards.

The restriction to contracts for the supply of labour (or substantially for the supply of labour) takes out payments for services that involve a high capital element such as the provision of large machinery. It does not include work or services provided by a post-harvest facility or by a management entity under a formal management agreement under which the entity is responsible for payment for the work or services provided.

The rate is 15 per cent.

(15) **Payments for commercial cleaning and maintenance work, or for general contracting [sch 4, Part D]**

A payment for commercial cleaning or maintenance. The rate is 20 per cent.
A payment for the following types of work or services.

(a) Mail delivery or collection;
(b) Transporting school children;
(c) Milk delivery;
(d) Refuse removal;
(e) Caretaking or acting as a guard; or
(f) Street or road cleaning.

The rate is 15 per cent.

“Commercial cleaning or maintenance work” means work or services that are related to “schedular commercial land”, if the work or services are:

(a) Cleaning all or part of premises;
(b) Cleaning or laundering plant, vehicles, furniture, furnishings, fittings, or equipment;
(c) Gardening (including grass cutting and hedge cutting);
(d) Destroying vermin; or
(e) Destroying weeds.

“Schedular commercial land” means land that is not:

(a) Used for farming or agriculture purposes;
(b) A dwellinghouse; and
(c) Premises that are used exclusively for residential purposes.

(16) Payments for labour-only building work, or for labour-only fishing boat operating
[sch 4, Part E]

The rate is 20 per cent.

“Labour-only fishing boat work” means work or services under a contract, arrangement, or agreement for profit-sharing which is exclusively or substantially for the supply of labour in connection with operating or maintaining a fishing boat that is required to be registered under s 103 of the Fisheries Act 1996.

“Labour-only building work” means work or services under a contract or arrangement which is exclusively or substantially for the supply of labour in connection with a building or a construction (including pre-fabrication and pre-cutting for the relevant building or construction), if the work or services have the following nature:

(a) Work or services that, customarily, may form part of the work or services of a carpenter under a building contract;
(b) Work or services connected with roof-fixing, steel-fixing, erecting fences, or laying concrete, bricks, blocks, tiles, slabs, or stones, if the relevant building or construction is not land that is used or intended to be used for farming or agriculture;
(c) Work or services connected with hanging wallpaper, hanging decorative wall coverings or furnishings, or painting or decorating (including plastering); or
(d) Work or services connected with installing fibrous plaster, wallboard, insulating material, interior tiles, interior lining, floor tiles, carpet, linoleum, or floor coverings.

(17) Payments for activities related to sports, media, entertainment, and public speaking [sch 4, Part F]

- A payment of a media contribution fee, or of a promotional appearance fee. The rate is 25 per cent.
- A payment that relates to media production work. The rate is 20 per cent unless part A of sch 4 [payments to non-resident contractors] and the fourth and fifth dot points below do not apply to the payment.
Schedular Payments

- A payment of a modelling fee. The rate is 20 per cent.
- A payment for services connected with a non-resident entertainer providing or performing a “Part F activity” if the payment is:
  (a) To the non-resident entertainer;
  (b) To an agent of the non-resident entertainer; or
  (c) To a person acting on behalf of the non-resident entertainer.
The rate is 20 per cent.
- A payment for services connected with a New Zealand resident providing or performing a “Part F activity” if the sixth dot point below does not apply and the payment is to:
  (a) To the New Zealand resident;
  (b) To an agent of the resident; or
  (c) To a person acting on behalf of the resident.
The rate is 20 per cent.
- A payment for services connected with a New Zealand resident providing or performing a “Part F activity” if the payment relates to shares of riding or driving fees and it is:
  (a) To the New Zealand resident who is an apprentice jockey or an apprentice driver;
  (b) To an agent of the apprentice jockey or apprentice driver; or
  (c) To a person acting on behalf of the apprentice jockey or apprentice driver.
The rate is 15 per cent.

“Media contribution fee” means fees or remuneration, paid to a contributor, that relate to a contribution for television, radio, theatre, stage, or printed media.

“Media production work” means work or services that relate to television, videos, or films, if the work or services have the following nature:
  (a) On-set and off-set pre-production work or services;
  (b) On-set and off-set production work or services; or
  (c) On-set and off-set post-production work or services.

“Modelling fee” means fees or remuneration that relate to modelling, including a personal attendance for any promotional purpose, for photography, for supplying personal photographs, or for supplying personal endorsements or statements.

“Part F activity” means an activity or performance that is:
  (a) Connected with any one or more of the following:
      (i) A sporting event or competition;
      (ii) Making speeches or giving lectures or talks for any purpose;
      (iii) Acting, singing, playing music, dancing, or entertaining generally, for any purpose and whether alone or not; and
  (b) Undertaken by a person who meets the requirements of any of the following paragraphs:
      (i) They are not fully or partly sponsored under a cultural programme of an overseas government or the Government of New Zealand;
      (ii) They are not an official representative of a body that administers a game or sport in an overseas country;
      (iii) They are not undertaking an activity or performance under a programme of a foundation, trust, or organisation outside New Zealand which exists for the promotion of a cultural activity and is not carried on for individual profit of the member or shareholder;
(iv) If they are an employee, officer, or principal of a company, firm, or other person, includes the company, firm, or other person.

“Promotional appearance” fee means fees or remuneration that relate to a personal attendance for exhibiting or demonstrating goods.

(18) **Sales commission** [sch 4, Part G]

A payment of commission or remuneration to an insurance agent or sub-agent, or to a salesperson. The rate is 20 per cent.

(19) **Payments to purchase natural products** [sch 4, Part H]

A payment that relates to a purchase of “schedular natural products” if the payment is made to the seller and it is not an “exempt natural products payment”. The rate is 25 per cent.

A payment that relates to a purchase of game if the payment is made to the seller. The rate is 25 per cent.

“Exempt natural products payment” means a payment that relates to the purchase of “schedular natural products”, if the payment is made:

(a) To a natural products dealer;
(b) On a purchase that occurs after a disposal by a natural products dealer;
(c) To an auctioneer or a dealer acting as agent for the seller; or
(d) At retail, in a shop.

“Game” means all or part of a wild deer, wild pig, or wild goat, whether dead or alive.

“Natural products dealer” means a person who:

(a) Is registered under any Act or regulation as a broker, dealer, or trader in relation to schedular natural products;
(b) Holds a natural product dealer certificate, issued by the Commissioner under s 44D of the Tax Administration Act 1994; or
(c) Holds an unrevoked certificate from the Commissioner showing that the person would be a licensed dealer for purposes of the Income Tax (Withholding Payments) Regulations 1979 (prior to their repeal).

“Schedular natural products” means any one or more of the following:

(a) Greenstone (nephrite);
(b) Eel;
(c) Whitebait;
(d) Sphagnum moss.

(20) **Personal service rehabilitation payments** [sch 4, Part I]

A personal service rehabilitation payment for a person under the Accident Compensation Act 2001. The rate is 10.5 per cent.
Chapter 1340
Share Sales

1340.10 Holding shares
Shares are personal property. An ordinary investor buys shares for three basic reasons:
(a) To secure an income from the dividends;
(b) To hold as a hedge against inflation;
(c) To secure growth in capital invested.
These circumstances generally apply to all ordinary investors who may own several parcels of shares in different companies and, from time to time, sell them in line with changes in portfolio policy. However, such sales are not necessarily taxable. Profits or gains from the sale or other disposition of shares are assessable only if one or more of the following applies:
(a) The profits or gains are derived from the carrying on or carrying out of any undertaking or scheme entered into or devised for the purpose of making a profit [s CB 3];
(b) The shares that were sold were acquired for the purpose of selling or disposing of them [s CB 4]; or
(c) The business of the taxpayer comprises dealing in shares [s CB 5].
The Courts have stated that it is the dominant purpose at the time of buying the shares that is relevant. If a taxpayer has entered into any undertaking or scheme for the purpose of making a profit from shares, the profits will be taxable. Thus, profits which arise from motives of speculation or dealing are assessable.
Where the owner of an ordinary investment chooses to realise it, any gain is not normally a taxable profit. However, it is taxable when securities are realised in the course of carrying on a business: Californian Copper Syndicate v Harris (1904) 5 TC 159.
In Commissioner of Inland Revenue v Rangatira Ltd (1995) 17 NZTC 12,182 (CA) the Court of Appeal found that profits on the sale of the shares were business profits, but this was reversed by the Privy Council in Rangatira Ltd v Commissioner of Inland Revenue [1997] 1 NZLR 129, (1996) 17 NZTC 12,727 (PC).
In TRA Case S8 (1995) 17 NZTC 7,062, shares in a subsidiary company were sold to a company in another corporate group, at a price considerably in excess of their true value. The sale was part of a tax saving scheme. The profit resulting from the sale was held to be non-assessable because the transaction was not part of the normal business of the company.

1340.20 Purpose of disposal
A profit on an isolated speculation in shares is assessable. The law looks at each individual parcel of shares sold during the year and at the purpose for which those shares were acquired [see 710.70]. Conversely, any losses are deductible, but the onus is on the taxpayer to show clearly that the transaction was a speculation and not an investment. The ordinary investor in shares is not normally liable for tax on any profit made on
the sale of shares. The mere fact that the shares were acquired with a view to growth in their value would not in itself make any profits assessable.

No deduction is available for unrealised losses on shares acquired for the purpose of resale.

In *National Distributors Ltd v Commissioner of Inland Revenue* (1987) 9 NZTC 6,135 (HC), the High Court considered the applicability of the legislation to a private company where the prime activity was leasing. Purchases of shares were made for long term investment purposes and their haphazard sale, although involving intermittent monitoring of the market and achievement of favourable results, were a normal process of asset management. There was no carrying out of an “undertaking” or “scheme”, there being no evidence of design or planning with a definite end in contemplation. However, on appeal in *Commissioner of Inland Revenue v National Distributors Ltd* (1989) 11 NZTC 6,346 (CA), profits derived on share sales were held taxable on the basis that they had been acquired for the purpose of sale or disposal.

The taxpayer was assessable on profits from the sale of six groups of shares which had been held for an average period of 16 months. Shares acquired for resale but not sold at the end of the year are not taken into account, until actually sold in a later year: *TRA Case M115* (1990) 12 NZTC 2,737, (1990) 15 TRNZ 188.

In *TRA Case M115* (1990) 12 NZTC 2,737, (1990) 15 TRNZ 188, the taxpayer was assessable on profits from the sale of six groups of shares which had been held for an average period of 16 months. Any increase in the value of shares acquired for resale but not sold at the end of the year is not taken into account until the shares are actually sold.

In *Plimmer v Commissioner of Inland Revenue* [1958] NZLR 147 (SC), the taxpayer purchased a large parcel of both ordinary shares and preference shares. The reason for the acquisition was to secure for the taxpayer a controlling interest in the company. As the ordinary shares gave the taxpayer control of the company, he resold the preference shares which he had been forced to acquire as a condition of the purchase. The Court held that the profits were not assessable and that the taxpayer’s purpose was to obtain control of the company.

See also *Commissioner of Inland Revenue v Renouf Corporation Ltd* (1998) 18 NZTC 13,914 (CA), summarised in 875.30.

In *TRA Case B19* (1975) 2 NZTC 60,145, (1975) 1 TRNZ 269, the business of an investment company comprised lending money on first mortgage. Occasionally, small sums unsuitable for lending on mortgage were temporarily invested in shares until required for mortgage advances. The shares were selected for maximum yield rather than capital appreciation. Profits were made on the sale of the shares, and the court was asked to decide whether the company was a dealer in shares, and whether the shares were acquired for the purpose of sale. It was decided that, with one exception, the dominant purpose of the taxpayer at the time the shares were acquired was to resell them at such times as the funds were required for mortgage investment. Therefore, the profits were taxable in terms of the second limb of s 88(1)(c) of the Land and Income Tax Act 1954 [now s CB 4]. An exception applied to 200 bonus shares which were acquired when a merger was effected that was not anticipated when the shares were acquired. Whether a taxpayer is taxable on the sale of shares involves the making of a wide survey and an exact scrutiny of the taxpayer’s activities. The criteria to be taken into account include the nature of the asset, the circumstances of the purchase, the vocation of the taxpayer, the number of like transactions into which the taxpayer has entered in relation to the total invested capital, the length of time the property was held, and the circumstances of its sale.

### 1340.30 Dealing in shares

If a person is a dealer in shares, profits are assessable and losses are deductible against other income and able to be carried forward for set off against income of later income years.

It is a question of fact whether a taxpayer was carrying on a business of dealing in shares, and whether the items bought and sold were part of the business: *TRA Case N12* (1991) 13 NZTC 3,088, (1990) 15 TRNZ 557.

**1 Valuation at balance date**

A share dealer is required to value shares on hand at balance date according to the trading stock rules. These rules require shares to be valued at cost using either the FIFO or weighted average method. Shares may be
valued at nil where they have no current or likely future market value and have been written off as worthless by the taxpayer [see s ED 1 and 1400.60 EXCEPTED FINANCIAL ARRANGEMENTS].

(2) Fixed or circulating capital

In Commissioner of Inland Revenue v Inglis (1992) 14 NZTC 9,180 (CA) and Commissioner of Inland Revenue v Stockwell (1992) 14 NZTC 9,190 (CA), the Court referred to the distinction between fixed capital (which is capital invested in revenue producing assets) and circulating capital (which is capital invested in trading stock) and considered that a loss of capital is not prohibited from a deduction if it is circulating capital.

1340.40 Share losses [s DA 1]

Expenditure is deductible if it is incurred in deriving assessable or excluded income. Where the expenditure incurred in acquiring shares exceeds the proceeds for the sale of those shares, any resulting loss is available for offset against other income. Taxpayers claiming such losses must demonstrate that the sale of the shares is assessable. This basic principle arises whether the shares have been held for reasons of speculation, investment or dealing in a business.

Two cases, Inglis and Stockwell, have ruled in favour of taxpayers by finding that losses on the sale of shares can be deductible even where the taxpayer is not in the business of share trading. The taxpayers had purchased shares with the purpose of resale. The CIR did not dispute that if profits had arisen that they would have been taxable under s 65(2)(e) of the ITA 1976 [now s CB 5].

The following information for each share sale is expected when claiming losses on share transactions:

(a) Name of the company;
(b) Number of shares sold;
(c) Date of purchase;
(d) Date of sale;
(e) Cost of shares sold (including brokerage);
(f) Sale price of shares (net after brokerage);
(g) Other expenses (eg interest);
(h) Profit or loss (if claiming a loss state also the details of profits made from previous sales whether in this tax year or in earlier years); and
(i) Explain also the purpose for which the shares were purchased.

1340.50 Losses on disposal or non-disposal of shares by company [s DB 24]

Under certain circumstances, companies are prohibited from taking a deduction for losses arising from the sale or downward revaluation of shares. The prohibition applies where the amount subscribed for the share is used in such a way that a net loss results and that loss is able to be offset against the income of the shareholding company.

The share loss is not prohibited to the extent to which it exceeds the revenue loss accessed by way of loss offset.

Were it not for this provision, the investing company would be able to access a double deduction; one by way of the loss offset and the other by way of the resulting reduction in the value of the shares in the loss-making company.

1340.60 Sale of rights

Where a company confers upon its shareholders a right to purchase further shares at a price below market value, the sale of the rights by a shareholder, who is an ordinary investor and not a dealer in shares, does not represent income for tax purposes: Palmarc Investments Pty Ltd v Federal Commissioner of Taxation (1985) 16 ATR 671, 85 ATC 4410 (NSWSC).
1340.70 Shares sold cum div
Where shares are sold “cum div”, the purchaser is entitled to the imminent dividend. The dividend represents income to the purchaser, even where the sale takes place after the declaration of the dividend. The total sum is received by the vendor on capital account.

1340.80 Dividend stripping [ss CD 11, GB 1]
“Dividend stripping”, refers to an arrangement under which dividend income is diverted to a taxpayer who has a low tax rate, is tax exempt or has unutilised tax losses. This is achieved by selling shares in a company, which has substantial retained profits, at a price that includes its dividend potential.

In order for the provision to apply, the following three circumstances must exist:
(a) Shares are sold for a consideration under a tax avoidance arrangement;
(b) Tax avoidance is a purpose or effect of the arrangement; and
(c) The consideration includes amounts that would otherwise have constituted dividends in that or future income years.

Where these circumstances are found to exist, the amount received in substitution for the dividend is assessable.

In Federal Commissioner of Taxation v Gregghon Investments Pty Ltd (1987) 19 ATR 457, 87 ATC 4988 (FCA), a dividend strip was held to have occurred where a company’s shares were transferred at net asset value less a commission and the business assets of the company were by a series of transactions ultimately transferred to a company under the control of the shareholders of the vendor company. The purchaser company then operated the business in substantially the same manner as had the vendor. This situation was distinguished from that of Slutzkin v Federal Commissioner of Taxation (1977) 7 ATR 166 (HCA) in which no dividends strip was held to have occurred.

In Slutzkin, the vendor company had been dormant and there was no intention by the purchaser company to carry on the previous business. Thus, no artificiality was held to have occurred.

1340.90 Share-lending transactions [ss CD 17, CD 18, CD 54, CH 1, CX 54, DB 16, DB 17, DB 49, EA 1, ED 1, ED 2, EW 5, EW 52, GB 30, GB 49, GC 1, LB 3, LE 1(2), LF 1, LF 7, OB 22, OB 50, OB 64, OP 15, OP 39, OP 40, OC 11, OC 17, OP 60, OP 65, RE 2, RE 7, RE 11, RE 17, RE 19, RE 21, RE 25, sch 1; TAA, ss 30B, 30C]
Share-lending occurs when one party lends shares to another for a fee. The transaction may be entered into by brokers where they have a shortfall or by finance organisations to increase their overall portfolio returns. Legally, the transaction constitutes a sale and buy-back of the share with the normal tax consequences resulting. However, specific share-lending rules provide for the taxation of qualifying share-lending transactions on the basis of economic substance rather than legal form. Anti-avoidance rules apply to non-qualifying transactions.

A qualifying share-lending arrangement involves a “returning share transfer” which is an arrangement where all of the following apply:
(a) A share (the original share) which is listed on an official list of a recognised exchange is transferred from a share supplier to a share user;
(b) It is agreed that the share user or associate [s YB 2] will pay a replacement payment to the share supplier (or associate) in the event that a dividend is payable on the original share during the term of the arrangement;
(c) It is agreed that either the original share or an identical share may be transferred from the share user to the share supplier or associate [s YB 2; and
(d) The arrangement is not a warrant or instalment receipt.
Provided that certain criteria are met, a “returning share transfer” will fall within the definition of a “share-lending arrangement” and no taxable disposal will arise from the transaction. A “share-lending arrangement” is a returning share transfer:

(a) Entered into on or after 1 July 2006 for a term of one year or less;
(b) The arrangement is on ordinary commercial terms consistent with those that would apply between arms’ length parties;
(c) Any resident withholding tax payable under s RE 17 is paid;
(d) The share user disposes of either an original share or an identical share during the course of the arrangement (or within such further time as the CIR may allow); and
(e) If a dividend is payable on the original share, the share user either establishes and maintains an imputation credit account or issues a credit transfer notice in relation to the dividend.

The last of these criteria is designed to ensure that the benefit of any imputation credit attached to a dividend paid on the share during the course of the arrangement remains with the owner of the share.

Where a share user or associate receives an imputed dividend under a returning share transfer that does not meet the definition of “share-lending arrangement” the benefit of the imputation credit is cancelled out by way of a debit to the share user’s imputation credit account. In addition, the transfer of the share is treated as a disposal of the share for tax purposes.

Any share-lending collateral derived under a share-lending arrangement is excluded income. Share-lending collateral is a market-value related amount that is paid by a share user to secure the transfer of the original share [s CX 54].

A share-lending arrangement is an excepted financial arrangement [s EW 5(12)]. Neither the rules relating to disposition of trading stock for inadequate consideration [s GC 1] nor the rules relating transfers of financial arrangements between members of the same wholly-owned groups of companies [s ED 2] applies to share-lending arrangements.

Sections CH 1 and DB 49 provide for a share-lending right to be valued at the cost price of the original share for the purposes of accounting for the opening and closing values of excepted financial arrangements. This ensures that there is no change in the value of revenue account property. The share user is not allowed a deduction for the cost of acquiring the borrowed share and is not taxed when the share is returned [s DB 16].

If a distribution is paid on the original share during the term of the arrangement, the share user must make a replacement payment to the share supplier. This is an amount which is economically equivalent to the dividend paid on the share. The replacement payment is income of the recipient [s CD 54] and deductible to the to the payer [s DB 17]. The deduction includes the amount of any imputation credits attached to the replacement payment [ss OB 64, RE 25].

The share user may choose to pay the cash amount of the dividend along with any imputation credits attached, or may choose to pay a cash amount equal to the sum of the two amounts. If there are insufficient imputation credits, resident withholding tax must be paid [s RE 25]. Imputation credits can also be transferred to the share supplier by way of a credit transfer notice [TAA, s 30C]. The amount transferred is income of the share supplier and is not income of the share user [s CD 17].

A detailed analysis of the share-lending rules can be found in TIB vol 18:5 (June 2006) at 86-94.
Chapter 1350
Shipping and Seafaring

1350.10 Taxation of shipping profits [ss CV 16, YD 4, YD 6]
Income derived from the carriage by sea or air of merchandise, goods, livestock, mails or passengers shipped or embarked in New Zealand is deemed to have a New Zealand source [s YD 4].
The income of non-resident shipowners which is deemed to arise in New Zealand from shipping freights and passage money is five per cent of the gross outward freight and fares [s CV 16].
Any merchandise, goods, livestock, mails or passengers shipped or embarked on any ship at any port in New Zealand for carriage outside New Zealand are deemed to be carried outside New Zealand, even though the ship may call at one or more other ports in New Zealand before finally leaving on its voyage overseas.
The CIR may exercise a power to treat as excluded income (and therefore not subject to tax), the New Zealand sourced shipping profits derived by non-resident shipowners where a reciprocal exemption is provided in similar circumstances to resident shipowners from foreign jurisdictions [s YD 6].
The current jurisdictions where the exclusion applies are:
• Barbados;
• Bermuda;
• Brazil;
• Chile;
• Greece;
• Hong Kong;
• Israel;
• Liberia;
• Netherlands Antilles;
• New Caledonia;
• Panama;
• Papua New Guinea;
• Poland;
• Tonga;
• Vanuatu.
This exemption applies to shipping profits only and not to the New Zealand tax on income derived from other sources in New Zealand.
(1) Salvage proceeds
Salvage money is part of the reward of seafaring and is income. The cost of salvage is deductible, except where the salvage proceeds are derived by the crew who participated in the rescue operation for their employment or services. A payment made to a volunteer crew in addition to overtime rates was deemed to be income from employment rather than a gift: Naismith v Commissioner of Inland Revenue (1981) 5 NZTC 61,046, (1981) 4 TRNZ 300 (HC).
(2) Non-resident crew members
Amounts derived by a crew member of a pleasure craft are exempt under certain circumstances [see 370.15 (Exemptions under the ITA 2007)].
Chapter 1360

State Organisations and Local Authorities

1360.20 State organisations generally exempt [s CW 38]

In general, public authorities such as state departments and state corporations are not liable for taxation. However, there are important exceptions. These include:

(a) The Public Trustee;
(b) Any “State enterprise” specified in sch 36 [see 1360.40];
(c) Any Crown Research Institute [see 1360.60];
(d) Any authority to the extent to which it is a superannuation scheme;
(e) Any amount that a Public Authority derives as a trustee.

1360.30 Local authorities generally exempt [ss CW 10(3), CW 39, CW 40, CW 41, CW 42]

Local authorities are subject to tax on their commercial undertakings in the same manner as other commercial taxpayers.

For tax purposes, “local authority” is defined in s YA 1 to mean:

(a) A local authority within the meaning of the Local Government Act 2002; and
(b) Includes the:
   (i) Administering body within the meaning of the Reserves Act 1977 of any reserve classified under that act as a scenic reserve or recreation reserve;
   (ii) Airport authority (other than an airport company) within the meaning of the Airports Authorities Act 1966;
   (iii) Aotea Centre Board of Management;
   (iv) Canterbury Museum Trust Board;
   (v) Council of the Auckland Institute and Museum;
   (vi) Otago Museum Trust Board;
   (vii) Auckland Regional Transport Authority;
   (viii) Auckland Regional Holdings (other than for the purposes of the exclusions in item (a) and (b) below).

Any amount derived by a local authority is exempt from income tax (under s CW 39) other than income that is comprised of one or more of the following:

(a) An amount received in trust;
(b) An amount (other than rates) derived by a local authority from:
   (i) Any council-controlled organisation, unless it is operating a hospital as a charitable activity on behalf of the Local Authority;
(ii) Any energy company, port company or subsidiary of a port company, or energy company that would be a “council-controlled organisation” in the absence of s 6(4) of the Local Government Act 2002; or

(c) An amount derived by a port operator, to the extent to which it relates to a port-related commercial undertaking.

The exemptions under ss CW 40 (local and regional promotion bodies), CW 41 (charities: non business income), and CW 42 (charities: business income) do not apply to council-controlled organisations or to local authorities in respect of income derived from a council-controlled organisation other than a council-controlled organisation operating a hospital as a charitable activity on behalf of the Local Authority.

The dividend exemption for dividends derived by a company from another company within the same wholly-owned group does not apply where the dividend is derived by a local authority from any council-controlled organisation, energy company, port company or subsidiary of a port company [s CW 10(3)].

A “council-controlled organisation” is defined in s YA 1 to mean:

(a) Any company that is a council-controlled organisation under the definition contained in s 6(1) of the Local Government Act 2002;

(b) Any organisation, other than a company, that is a council-controlled organisation;

(c) Any council-controlled organisation which has, in relation to another council controlled organisation:

(i) Control of 50 per cent or more of the votes at any meeting of the members or controlling body of the organisation;

(ii) The right to appoint half or more of the trustees, directors or managers of the organisation;

(d) New Zealand Local Government Association Inc;

(e) A company or organisation controlled by the New Zealand Local Government Association Inc;

(f) New Zealand Local Government Insurance Corporation and its subsidiaries;

(g) Watercare Services Ltd and any of its subsidiaries;

(h) Any organisation that would be a council-controlled organisation under (a), (b) or (c) above were it not for an exemption granted under s 6(4)(i) of the Local Government Act 2002.

The definition specifically excludes the Auckland Regional Transport authority.

1360.40 State enterprises [s YC 5]

Schedule 36 lists the State enterprises for income tax purposes as follows:

- AgriQuality New Zealand Ltd;
- Airways Corporation of New Zealand Ltd;
- Asure New Zealand Ltd;
- Crown Forestry Management Ltd;
- Electricity Corporation of New Zealand Ltd;
- Genesis Power Ltd;
- Government Property Services Ltd;
- Housing New Zealand Corporation;
- Housing New Zealand Ltd;
- Landcorp Farming Ltd;
- Learning Media Ltd;
- Meridian Energy Ltd;
- Meteorological Service of New Zealand Ltd;
- Mighty River Power Ltd;
- New Zealand Post Ltd;
- Quotable Value Ltd;
- Radio New Zealand Ltd;
State Organisations and Local Authorities

- Solid Energy New Zealand Ltd;
- Television New Zealand Ltd;
- Terralink New Zealand Ltd;
- Timberlands West Coast Ltd;
- Transpower New Zealand Ltd;
- Works and Development Services Corporation (New Zealand) Ltd.

The offset of losses between State enterprises, or other transactions between related parties which have tax advantages, are unable to be used by State enterprises despite their having a common shareholding by the Crown. This is due to the fact that the holder of the shares is deemed under s YC 5 to hold nothing other than rights in respect of the particular State enterprise.

1360.50 Airport operators [ss DW 1, HR 1(4), HR 5, HR 6, HR 7; TAA s 42]

The general provisions of the tax legislation apply to airport operators except where they conflict with specific provisions.

An airport operator is deemed to be a company carrying on the business of operating an airport. The income of an airport operator is assessable. An airport operator means the Crown and an airport authority acting as parties to an airport joint venture agreement. Airport operators are deemed to be separate persons and not to be public or local authorities. This ensures that the income of airport operators is not presumed to be exempt income on the basis of it being a public authority. The activities of the airport operator include establishing, improving, maintaining, operating or managing an airport including the approaches, buildings, equipment for the airport. The airport operator is deemed to own all of the assets which are airport assets.

The parties to a joint venture agreement are deemed to hold shares in the airport operator in the same proportions as profits, after taking into account any adjustments for previous years, are to be shared between the parties.

For an airport operator, “airport asset” are those assets that any one or more of the following applies:

(a) An asset that, under the joint venture agreement, the airport authority acquires, agrees to use or is given the power to use for the purposes of the airport operator’s activities;
(b) An asset owned for the purposes of a depreciation sinking fund for an airport asset;
(c) An asset owned for the purposes of a loan redemption sinking fund for a loan on which the interest payments are a charge against the joint venture income of the airport operator; or
(d) An asset acquired by the airport operator using funds or property that acquired in carrying on the airport operator’s activities and not allocated or distributed to the joint venturers.

Funds are deemed to be borrowed as capital employed by the airport operator and a provision in the nature of interest on those funds is deemed to be deductible as expenditure or a loss in the nature of interest where all of the following apply:

(a) The airport operator has the use of funds provided by one of the parties to the joint venture agreement;
(b) It was expressly agreed, in writing, that those funds were advanced for the purpose of activities as an airport operator; and
(c) The funds were provided in consideration for some provision in the nature of interest.

No deduction is available to an airport operator for any expenditure or loss incurred, or deemed to have been incurred, by an airport authority and chargeable against profits that have been distributed to the joint venture parties. The intention is that no deduction be available for expenditure chargeable against the Airport Authority Appropriation Account or the Crown Appropriation Account.

There is no need for the Crown and the airport authority to file a joint or partnership income tax return. An airport operator, being deemed for income tax purposes to be a company and a separate person, is required to file a separate IR4 income tax return. Income tax files for airport operators are held at the Special Companies Section of Inland Revenue’s Wellington District Office.

Staples Tax Guide 2012
1360.60  **Crown Research Institutes** [ss CV 6, CW 49, OB 1]

The income of the Crown Research Institutes is assessable in the same way as State enterprises, statutory producer boards and other statutory bodies. The s CW 41 exemption for income derived by an organisation established to promote scientific or industrial research does not apply to Crown Research Institutes. A Crown Research Institute is a “special corporate entity” which means that its shares are deemed to be held by the same single person. This results in it being unable to group with any other entity. It also results in no breach of shareholder continuity being possible. Crown Research Institutes are prohibited from maintaining an imputation credit account.

1360.70  **Government Superannuation Fund Authority** [s HR 4]

The Government Superannuation Fund Authority is liable for tax as if the Fund were a superannuation scheme that is a trust, and the Authority were trustees.
Chapter 1380

Student Loans

1380.10 Student loan scheme overview

The Student Loan Scheme Act 2011 (SLSA 2011) replaced the Student Loan Scheme Act 1992 with effect, generally, from 1 April 2012. The purposes of the SLSA 2011, which is administered primarily by Inland Revenue, are: the effective administration of student loans; the collection of student loan repayments; transparency about student loans so that borrowers understand their obligations; and the encouragement of borrowers to repay their student loans as soon as possible.

Student loan borrowers can access information about and manage their student loans via the internet. Most communications between Inland Revenue and borrowers are electronic, although more formal matters (such as objections) must be communicated in writing.

Loan managers and Inland Revenue are able to exchange information about borrowers, to enable Inland Revenue to provide borrowers with up-to-date information about their loan balances and to prevent fraud.

The way in which loan repayment obligations are met depends on the type of income of the borrower. Different repayment methods are used for salary and wages, pre-taxed income (eg, interest and dividends), and other income (eg, business or rental income).

For salary and wage earners, loan repayments are made by deduction from their salary or wages. A deduction is required only if income exceeds the repayment threshold (currently $19,084 per annum). Provided there is no significant over- or under-deduction, this deduction is the borrower’s final repayment obligation for the pay period. This means that there is usually no need for an annual assessment or square-up.

Borrowers with a secondary job can apply to transfer any unused repayment threshold from their main job to their secondary job. This option is not available to borrowers who are required to file an income tax return.

Full-year, full-time students who expect to earn less than the annual repayment threshold and are not required to file a return can apply to be exempt from having repayments deducted from their salary or wages.

Inland Revenue is not required to take any corrective action on under- or over-deductions from salary or wages unless they are significant. Borrowers can request a refund of any significant over-deduction. The CIR can collect significant under-deductions by additional deductions from future salary and wages, or by issuing an assessment.

Borrowers can ask their employer to make extra deductions (in addition to standard deductions) from their salary or wages, in order to reduce their loan balance or to pay unpaid amounts. Inland Revenue can require an employer to make extra deductions if there has been a significant under-deduction or to collect unpaid amounts.

Borrowers who intend to be overseas-based can defer their overseas-based repayment obligations for up to a year by applying in advance for a repayment holiday. The borrower must nominate a contact person living in New Zealand who is able to provide Inland Revenue with details of the borrower’s current address.
Note: the requirement to provide a contact person, and the provision of the borrower’s current address by that contact person, are measures introduced by the Student Loan Scheme Amendment Bill, which is currently before Parliament.

The CIR can also make a special assessment of the amount that ought to have been deducted from salary and wages, and require the borrower to pay the amount within 30 days. Special assessments can be used, for example, when a borrower has neglected to advise their employer that they are a student loan borrower.

Borrowers who derive pre-taxed income (ie, income that is not required to have student loan deductions made from it, such as interest, dividends and Maori authority distributions), and who are not required to file tax returns, must make an online declaration of the amount of their pre-taxed income. Certain deductions are permitted against pre-taxed income. The CIR then makes an assessment of the borrower’s repayment obligation in respect of net pre-taxed income. A pre-taxed income repayment obligation only applies to borrowers who earn $1,500 or more of pre-taxed income and whose combined income from salary or wages and net pre-taxed income exceeds the repayment threshold by $1,500 or more. The dates on which a borrower’s repayment obligations for pre-taxed income are due to be paid depend on the amount payable and whether the borrower estimated their obligation for the year. Borrowers with a pre-taxed income repayment obligation of $1,000 or more are required to make interim payments (similar to provisional tax) for the following tax year. Interim payments may be calculated using either the standard method (previous year’s obligation increased by five per cent) or the estimation method.

Borrowers who derive income other than salary or wages and pre-taxed income (such as business or rental income), and are therefore required to file a tax return, must meet their student loan repayment obligations along with their provisional tax obligations. Normally this will mean paying loan repayments along with their provisional tax, with an annual square-up covering all their income. The dates on which a borrower’s repayment obligations in respect of other income are due to be paid depend on the amount payable and whether the borrower estimated their obligation for the year. If the other income repayment obligation is less than $1,000, the amount is paid in one sum on the next provisional tax due date. If the other income repayment obligation is $1,000 or more, the amount must be paid on the same dates as the borrower’s provisional tax is due. If the borrower has used the estimation method or has an “other income” repayment obligation of $16,000 or more, the amount must be paid on the provisional tax due dates for that tax year. Borrowers with an “other income” repayment obligation of $1,000 or more are required to make interim payments (similar to provisional tax) for the following tax year. Interim payments may be calculated using either the standard method (previous year’s obligation increased by five per cent) or the estimation method.

Interest is only charged on loans to borrowers while they are based overseas. However, all borrowers are charged late payment interest on overdue payments at the rate of four per cent above the base interest rate (currently 6.6 per cent). This can be reduced by two per cent if the borrower enters into an instalment arrangement. Interest is not charged on unpaid amounts of less than $500.

Late payment penalties are imposed on borrowers who fail to provide, or who provide incomplete, declarations or notifications. Shortfall penalties apply where an incorrect tax position has been taken and the borrower is liable for a shortfall penalty for income tax. Shortfall penalties are imposed at the same rate as for taking an incorrect tax position. Penalties for criminal offences may also be imposed for wilfully or negligently failing to provide information to Inland Revenue.

Inland Revenue and the New Zealand Customs Service (Customs) can exchange certain information about borrowers to enable Inland Revenue to verify whether borrowers are New Zealand-based or overseas-based, and whether they are New Zealand residents. For these purposes, the CIR can provide Customs with a borrower’s name (or any alias), date of birth and tax file number. The CIR may access arrival and departure information held by Customs.

1380.20 New Zealand-based and overseas-based borrowers [SLSA 2011, ss 21 - 29]

Whether a borrower is New Zealand-based or overseas-based determines the type of repayment obligations that apply to them. In addition, overseas-based borrowers are liable to pay loan interest.
(1) New Zealand-based borrower
A borrower is New Zealand-based if the borrower is physically in New Zealand (or is treated as being
physically in New Zealand) for a period of 183 consecutive days. If a borrower leaves New Zealand during
this 183-day period they remain New Zealand-based provided they are not absent for more than 31 days in
total. The period of 183 days can begin before the person becomes a borrower.
If a borrower is physically in New Zealand for part of a day, they are treated as being physically in New
Zealand for the whole of that day.
A borrower is treated as being New Zealand-based from the later of the day they became a borrower and the
first day of the 183-day period.

(2) Overseas-based borrower
A borrower is overseas-based if they are not treated as being New Zealand-based. Therefore a New Zealand-
based borrower who is physically absent from New Zealand for a period of 184 consecutive days is overseas-
based. If a borrower comes back to New Zealand during the 184-day period they remain overseas-based
provided they are not physically present in New Zealand for more than 31 days in total. The period of 184 days
can begin before the person becomes a borrower.
A borrower is treated as being overseas-based from the later of the day they became a borrower and the first
day of the 184-day period.

(3) Borrowers treated as being physically in New Zealand
The CIR may, if the CIR considers it fair and reasonable to do so, treat the borrower as being physically in
New Zealand if the principal reason the person is not physically in New Zealand is because:
(a) The borrower is in the service of the New Zealand Government;
(b) The borrower is working as a volunteer or for token payment for a charity (see 1380.25);
(c) Of an unexpected delay;
(d) Of an unplanned personal absence;
(e) The borrower is required to be overseas because of their employment or occupation;
(f) The borrower is accompanying their spouse, civil union partner, or de facto partner overseas;
(g) The borrower is undertaking overseas study that meets the requirements of SLSA 2011 clauses 7,
8 or 9 of Schedule 1; or
(h) The borrower is in Niue, the Cook Islands, Tokelau or the Ross Dependency.
The specific conditions that must be met in order for a borrower to be treated as physically present in New
Zealand under each of paragraphs (b) to (h) above are set out in SLSA 2011 Schedule 1.

(4) Borrowers must notify CIR of absences exceeding 183 days
A borrower who intends to be absent from New Zealand for a period of 184 or more consecutive days must,
before leaving New Zealand, notify the Commissioner of the following:
(a) One of the following ways in which the CIR can notify the borrower:
   (i) A permanent overseas postal address;
   (ii) A New Zealand postal address; or
   (iii) The name and New Zealand postal address of a person empowered to act for the borrower;
(b) An electronic means of communication prescribed by the CIR (presumably an email address); and
(c) Any information the CIR needs to determine the borrower’s repayment obligation and liability to
    pay loan interest.
A borrower who left New Zealand without notifying the CIR must provide the same information as above,
as well as the date the borrower left New Zealand, as soon as practicable.
An overseas-based borrower who returns to New Zealand must, as soon as practicable, notify the CIR of the date they returned to New Zealand and any other information the CIR requires in order to establish whether the borrower is New Zealand-based.

1380.25 Charities for purposes of student loan scheme

From 1 April 2012, a borrower who is not physically in New Zealand may be treated by the CIR as physically in New Zealand if the main reason the borrower is overseas is because they are working as a volunteer or for token payment for a charity [1380.20]. The following organisations are classified as charities for this purpose [Student Loan Scheme (Charitable Organisations) Regulations 2011]:

- Adventist Development and Relief Agency International
- Amnesty International
- ANCOP Foundation International Inc
- Anglican Social Services (Hutt Valley) Trust Board
- Australian Volunteers International
- Aziza’s Place
- Bright Hope International Trust
- Caritas Internationalis
- CBM International
- ChildFund International
- Christian World Service (CWS)
- CORSO Incorporated
- Doctors Without Borders/Médecins Sans Frontières
- ECPAT International
- Engineers Without Borders New Zealand Incorporated
- Habitat for Humanity International
- Hare Krishna Food for Life Trust
- Hibiscus Coast East Timor Appeal Trust (HETA Trust)
- IHC New Zealand Incorporated
- IN Network
- International Care Ministries Limited
- International Federation of Red Cross and Red Crescent Societies
- International Save the Children Alliance
- Interserve (NZ)
- Livelihood International Foundation Trust
- Mahitahi Catholic Overseas Volunteer Trust
- Marist Mission Ranong
- Mission Aviation Fellowship of New Zealand Incorporated
- Mobility Equipment for the Needs of Disabled Trust
- National Spiritual Assembly of the Baha’is of New Zealand
- NET Ministries (National Evangelization Teams)
- New Zealand Church Missionary Society Trust Board
- New Zealand Family Planning Association Incorporated
New Zealand Vietnam Health Trust
OMF New Zealand
Oxfam International
Partners Relief and Development NZ
Pax Christi International
Pioneers
Presbyterian Church of Aotearoa New Zealand
RedR International
Restless Development
Richmond Fellowship International (RFI)
Rotary International
Servants to Asia’s Urban Poor Incorporated
SIM New Zealand
Soroptimist International
SurfAid International
Tandem Ministries
Te Ora Hou Aotearoa Incorporated
Te Tuao Tawahi: Volunteer Service Abroad Incorporated
TEAR Fund
The Cambodia Trust
The Church of Jesus Christ of Latter-Day Saints Trust Board
The Foundation for Peace Studies Aotearoa/New Zealand Incorporated
The Fred Hollows Foundation
The Leprosy Mission International (TLM)
The Salvation Army International
The UMMA Trust
The Volunteer Ophthalmic Services Overseas Trust
Trade Aid NZ Inc
United Nations Children’s Fund (UNICEF)
United Nations Development Fund for Women (UNIFEM)
Vietnam Cambodia and Laos Support Network (VICALSN)
Vision Pacific Charitable Trust
WEC International
World Vision International
World Young Women’s Christian Association (World YWCA)
WWF

Loan deductions from salary or wages [SLSA 2011, ss 33 - 49]
New Zealand-based borrowers who derive salary or wages normally have an “SL” student loan repayment code. A borrower who qualifies to have deductions made at a non-standard rate is allocated an “STC”
Student Loans

repayment code. The repayment code is combined with the employee tax code [see 1080.25]. A borrower must notify their employer of their repayment code, or if their repayment code changes.

An employer (or PAYE intermediary) is required to deduct loan repayments from each payment of salary or wages to a borrower. The amount deducted depends on whether the borrower has an “SL” or an “STC” repayment code.

“SL” repayment code: Deductions are made at the rate of 10 per cent of each complete dollar of primary employment earnings in excess of the pay period repayment threshold. Deductions are made at the rate of 10 per cent from any secondary employment earnings paid to the borrower.

Example:
A borrower’s fortnightly gross salary is $1,154. The annual repayment threshold is currently $19,084. The pay period repayment threshold is $734 ($19,084 ÷ 26). The employer is therefore required to make a deduction of $42 [(($1,154 – $734) × 10%). In practice, the employer does not have to calculate the amount of the deduction because the amounts are built into the PAYE tables published by Inland Revenue.

Borrowers with secondary jobs can apply to transfer any unused repayment threshold from their main job to their secondary jobs.

“STC” repayment code: Deductions are made from all primary and secondary employment earnings at the rate specified in the special deduction rate certificate.

In addition to the standard deductions, employers must also make additional deductions if instructed to do so by Inland Revenue or requested to do so by the borrower. Inland Revenue can require an employer to make extra deductions, at a rate not exceeding 5 per cent, if there has been a significant under-deduction, or to collect unpaid amounts. Borrowers can ask their employer to make extra deductions (over and above the standard deductions) from their salary or wages in order to reduce their loan balance or to pay unpaid amounts.

1380.40 Over- and under-deductions [SLSA 2011, ss 63 - 68]

If deductions are not made from a borrower’s salary or wages, or if the incorrect amount is deducted, Inland Revenue is not required to take any corrective action unless the error is significant. Borrowers can request a refund of any significant over-deduction, and the CIR can collect significant under-deductions from future salary and wages (or issue an assessment if deduction is not possible).

The CIR is authorised to decide what the thresholds for significant under- and over-deductions are, taking into account the need to maintain the integrity of the student loan scheme and having regard to the resources available to the CIR.

A borrower who believes that a significant over-deduction has been made from their salary or wages can apply for a refund within 6 months after the date the deduction was made. Once the CIR confirms that a significant over-deduction has been made, the borrower then has 6 months from the date of the CIR’s confirmation to ask the CIR for a refund. The CIR can offset a significant over-deduction against any significant under-deduction identified in the same tax year, before any refund is made.

Note: the CIR’s ability to offset an over-deduction against any under-deduction, is an amendment introduced by the Student Loan Scheme Amendment Bill, which is currently before Parliament. This measure is expected to take effect from 1 April 2012.

If there has been a significant under-deduction, the CIR can recover the under-deduction by requiring that additional deductions be made from the borrower’s salary or wages, or by issuing a special assessment of the amount that ought to have been deducted. The amount due under a special assessment is payable within 30 days.

1380.50 Exemption for full-time students [SLSA 2011, ss 53 - 60]

Full-time students can apply to be exempted from standard deductions if they reasonably expect that the annual repayment threshold will not be exceeded by the total of their:

(a) Gross income from salary or wages;
(b) Net pre-taxed income (if any); and
To obtain the exemption, the student must make a declaration to the CIR specifying the applicable tax year, exemption period and any other prescribed information.

A “full-time student” is a borrower who is undertaking (or will undertake) a programme of study that:

(a) Is 32 weeks or longer in duration in any 52-week period and at least 0.8 of equivalent full-time student units [per Education Act 1989 s 159]; or
(b) Is 12 weeks or longer in duration in any 52-week period and at least 0.3 of equivalent full-time student units or the equivalent on a pro rata basis.

The exemption is likely to apply in the situation where a student has a part-time or holiday job and is earning more than the pay period repayment threshold for the periods they are working, but will earn less than the annual repayment threshold for the year as a whole.

1380.60 Loan interest [SLSA 2011, ss 133-143]

The default position is that interest is payable on the loan balances of all borrowers. However, no interest is payable on any day that a borrower is New Zealand-based.

Interest is calculated on a daily basis on the loan balance, and is charged and added to a borrower’s loan balance at the end of each year. After the interest has been added to the borrower’s loan balance, the CIR must notify the borrower in writing that interest has been added to the loan balance, of the new total of that balance, and that the new loan balance is subject to interest.

Interest is calculated at the base interest rate, which is currently 6.6 per cent.

An overseas-based borrower who returns to New Zealand, who would qualify as a New Zealand based-borrower, and who pays off their consolidated loan balance within 183 days of returning to New Zealand is not charged interest from the day they arrive back in New Zealand.

1) Late payment interest

Late payment interest is charged on any unpaid amount of $334 or more ($500 or more from 1 April 2013). An “unpaid amount” means any of the following, together with any late payment interest that has been added to it:

(a) A remaining repayment;
(b) An interim payment default;
(c) An overseas-based instalment default;
(d) A consolidated loan balance that is payable as a result of a demand made under a loan contract;
(e) Any part of a loan advance or a loan balance that the CIR has recalled or demanded payment of under SLSA 2011 s 204.

Late payment interest is calculated, charged and added to a borrower’s unpaid amount as follows:

(a) 0.843 per cent of the unpaid amount on the day after its due date; and
(b) 0.843 per cent of the unpaid amount as at each day that falls 1 month after the day on which late payment interest is imposed under paragraph (a).

From 1 April 2013, interest will be charged at the base interest rate plus 4 percent (ie, 10.6 per cent in total).

If a borrower enters into, and meets their obligations under, an instalment arrangement, monthly interest charged under (b) is written off during the period of the arrangement. From 1 April 2013, interest is not written off, but monthly interest is reduced to the base interest rate plus two per cent.

1380.70 Repayment holiday for overseas-based borrowers [SLSA 2011, ss 105-108A]

The effect of a repayment holiday is that the borrower has no overseas-based repayment obligation for the period of the holiday. A borrower who intends to be overseas-based can apply to the CIR for a repayment holiday.
holiday. The application can be made either from New Zealand or from overseas, but a person who is already an overseas-based borrower cannot apply for a repayment holiday. This means that a borrower who leaves New Zealand must apply for a repayment holiday within 183 days of the date of departure.

Note: the Student Loan Scheme Amendment Bill, which is currently before Parliament, contains an amendment requiring a borrower to apply to the CIR for a repayment holiday. This measure is expected to take effect from 1 April 2012. Currently, borrowers are automatically entitled to a repayment holiday.

The Student Loan Scheme Amendment Bill also contains a requirement for the borrower applying for a repayment holiday to provide a contact person. These measures are expected to take effect from 1 April 2012. The following commentary is based on the new provisions as contained in the Bill.

In applying for a repayment holiday the borrower must nominate an individual who resides in New Zealand as a contact person. The individual must be willing to act as the contact person, and the following information about the individual must be provided to the CIR:

(a) Name;
(b) A New Zealand postal address;
(c) An electronic address (if they have one); and
(d) A New Zealand telephone number (if they have one).

A borrower who is granted a repayment holiday becomes entitled to that holiday on the day the borrower becomes overseas-based.

The Student Loan Scheme Amendment Bill amends the repayment holiday provisions significantly. Currently, the maximum period for which a borrower can have a repayment holiday is three years. The following commentary is based on the new provisions as contained in the Bill, which are expected to take effect from 1 April 2012.

(1) Period of repayment holiday

Under the Student Loan Scheme Amendment Bill, the maximum period for which a borrower can have a repayment holiday is 365 days. This could be either one continuous period of 365 days or several periods which together total 365 days. A borrower who has had one or more repayment holidays under the Student Loan Scheme Act 1992 totalling three years is unable to have further repayment holidays.

If a borrower has taken repayment holidays totalling less than three years under the SLSA 1992, the borrower is able to take repayment holidays for a period or periods totalling the lesser of:

(a) 365 days; and
(b) The remainder of the days the borrower would have been entitled to under the Student Loan Scheme Act 1992.

Example:
Richard took a repayment holiday in 2009 and 2010 (under the SLSA 1992) for a total of 550 days. He plans to work in the USA for two years starting June 2012, and applies for a repayment holiday. The remainder of the days that would have been available under the SLSA 1992 is 545, calculated as $3 \times 365 - 550$. The maximum period the CIR can approve as a repayment holiday under the SLSA 2011 is 365 days, the lesser of 365 and 545.
Chapter 1390
Superannuation

1390.10 Superannuation funds and superannuation schemes

“Superannuation fund” means any superannuation scheme registered under the Superannuation Schemes Act 1989, or a KiwiSaver scheme that is registered under the KiwiSaver Act 2006. Where the fund is a trust, it means the trustees of the fund.

“Superannuation scheme” means:
(a) Any trust or unit trust established by its trust deed principally to provide retirement benefits to natural persons or paying benefits to superannuation funds;
(b) A non-resident company (other than a unit trust) established principally to provide retirement benefits to members or their relatives who are natural persons; or
(c) Statutory arrangements under an Act in New Zealand (other than the Social Security Act 1964) or similarly constituted under legislation outside New Zealand to provide retirement benefits to natural persons.

In item (c) above, a specific exclusion is provided for arrangements under the Social Security Act. Therefore, New Zealand Superannuation, to which every New Zealander gains entitlement by the age of 65, is neither a superannuation fund nor a superannuation scheme for the purposes of the discussion that follows.

“Superannuation contribution” means any disposition of property to or for the benefit of a superannuation scheme to the extent to which fully adequate consideration does not pass from the superannuation scheme to any person, other than as a benefit under the terms of the scheme.

1390.15 Taxation of superannuation funds

The following rules apply to the taxation of superannuation funds.

(1) Fund income

The income of the superannuation scheme includes profits and losses from the sale of investments. This principle has been established through a line of cases relating to banks and other financial institutions beginning with Californian Copper Syndicate v Harris (1904) 5 TC 159.

Personal contributions of members are not included in income and no deduction is allowable for any benefit paid out of the scheme, or any expenditure which is recoverable from a contributor.
Superannuation

Where a superannuation fund invests in a policy of life insurance offered or entered into in New Zealand, any amount that the fund derives from the policy is excluded income [s CX 40].

(2) Fund deductions

Under s DV 1, a superannuation fund is allowed a deduction for developing, marketing, selling, promoting, and advertising for members. This deduction does not apply to expenditure in respect of the following items:

(a) Expenditure incurred in acquiring plant, machinery, equipment, land, or buildings.
(b) Expenditure which is not income of the recipient.

The provision specifically supplements the general permission and over-rides both the capital limitation and the exempt income limitation.

While a superannuation fund (“member fund”) has funds invested in another superannuation fund (“master fund”) the member fund may incur expenditure in developing, marketing, selling, promoting, or advertising for members or in managing the fund. Where this occurs, the member fund is able to choose to treat some or all of the expenditure as being incurred by the master fund in deriving its assessable income. This treatment does not apply to expenditure in respect of the following items:

(a) Expenditure incurred in acquiring plant, machinery, equipment, land, or buildings;
(b) Expenditure which is not income of the recipient.

To avail itself of this concession, the member fund must make an election by giving notice to the CIR by the due date for filing its return of income or such further time as the CIR may allow [s DV 2].

The maximum amount that the member fund can elect be treated as expenditure incurred by the master fund is set down in s DV 3 as being:

\[
\text{taxable income} - \text{non-resident passive income}
\]

Where:

“Taxable income” is the taxable income of the master fund (before the impact of these provisions) for the tax year in which the expenditure is incurred.

“Non-resident passive income” is the total of non-resident passive income of the kinds to which s RF 2(5) applies (where the NRWT is a minimum tax), derived by the master fund for the tax year in which the expenditure was incurred.

The expenditure so allowed as a deduction to the master fund is then deemed not to be incurred by the member fund.

If the master fund has insufficient qualifying income with which to absorb the expenditure that the member fund wishes to transfer, the member fund has two options with regard to the excess. These are to:

(a) Deduct the excess expenditure against its own income; or
(b) Carry the excess expenditure forward to offset against master fund income in the following income year.

The second option is available only for so long as the member fund continues to have funds invested in the master fund.

Where the second option is chosen, the expenditure is deducted from the income of the master fund in the order in which the expenditure was incurred.

(3) Fund status

Resident settlers of a superannuation fund are not liable for income tax. It is the trustee who is liable [s HC 29(4)].

A superannuation fund is deemed to be a trust that can derive only trustee income and is taxed at the trustee income rates. The income derived by a trustee of a superannuation fund is not beneficiary income [s HC 6].
(4) **Distributions and benefits**

As a superannuation fund is a complying trust and cannot have distributions assessed as beneficiary income, it follows that all payments to beneficiaries from the superannuation fund must be either from trustee income or capital, and thus tax free to the payee.

If a superannuation fund provides a member with a loan that would be a fringe benefit if provided by an employer to an employee, the “value” of the loan is deemed to be income derived by the fund in that income year [s CS 18].

Superannuation funds that meet certain criteria are able to elect to become portfolio investment entities (PIEs) [see 1130 PORTFOLIO INVESTMENT ENTITIES].

### 1390.20 Foreign superannuation schemes

The taxation of foreign superannuation schemes may fall into the taxation of trusts regime or the taxation of foreign investment funds regime. Even though a foreign superannuation scheme is not a superannuation fund (and hence is not a qualifying trust), this does not exclude it from the trust regime. In the taxation treatment of interests in trusts, other than trusts which constitute superannuation funds, it is necessary to distinguish between trusts for which the beneficiary is a subscriber, purchaser, or contributor (contributory schemes) and other trusts (non-contributory).

The tax treatment of income derived by the trustees of trusts other than superannuation funds and of the distributions made may be summarised as follows:

(a) With non-contributory schemes, the income is taxed according to the trusts regime.

(b) With contributory schemes, the income is taxed, depending upon its inherent features, either:

   (i) As if the scheme is a foreign investment fund; or

   (ii) If it is resident, or if non-resident but not being a foreign investment fund, it is taxed as if it is a company, with the distributions being treated as dividends.

Under the Income Tax (Alternative Arrangement for Overseas Pensions) Commencement Order 1996 (SR 1996/346), as from 1 April 1997 New Zealand residents who receive a UK social security pension may have the pension paid to a special bank account drawn on by Work and Income New Zealand. The pensioner may then receive a full New Zealand superannuation or veteran’s pension.

### 1390.25 Costs of altering trust deed are deductible

The costs of creating or altering a superannuation scheme are deductible for tax purposes. This is because a superannuation fund is mainly for the benefit of employees and, as such, is part of the wage structure mechanism. Superannuation is a method of keeping good staff who assist in the production of the employer’s income. Therefore, the costs of establishing a superannuation fund are not of the same nature as the formation expenses of a company or business, and so a deduction is not denied by the capital prohibition.

### 1390.30 When employer contributions deductible [ss DC 7, EJ 21]

An employer is permitted a deduction for a superannuation contribution to an employee’s superannuation scheme.

The employer is able to choose to allocate the deduction to either:

(a) The income year for which the deduction was required by the superannuation scheme to be made; or

(b) The income year for which the amount of the contribution was calculated based on the earnings of the members of the scheme, provided that the payment is made within 63 days following the end of the income year.

### 1390.35 Taxation of contributions [ss BE 1, CX 49, CX 50B]

An employer’s superannuation cash contribution is excluded income of both the employee for whose benefit the contribution is made and the superannuation scheme to whom the contribution is made [s CX 49]. Contributions to a retirement savings scheme are excluded income of the scheme.
Contributions to a retirement savings scheme are also excluded income of the person for whose benefit the contribution is made. However, the following conditions apply:

(a) The excluded income treatment applies only to the extent to which the contribution is money or an amount of imputation credit or Maori authority credit that is used to meet the liability of the contributor for retirement scheme contribution withholding tax on the contribution;

(b) The excluded income treatment does not apply if:
   (i) The person for whose benefit the contribution is provided supplies a withholding rate that is lower than it should be;
   (ii) The person includes the contribution in a return of income for the income year in which the contribution is made; or
   (iii) The person is a non-resident and the contribution is non-resident withholding income.

**TaxNote:** Employer contributions to schemes can be subject to fringe benefit tax (FBT) or to employer’s superannuation contribution tax (ESCT) or to retirement scheme contribution tax (RSCT).

### 1390.40 When employer contributions subject to fringe benefit tax

Fringe benefit tax (FBT) applies to any contribution to a superannuation scheme which is not an “employer’s superannuation cash contribution”. An “employer’s superannuation cash contribution” [as defined in s YA 1] means an employer superannuation contribution made in money, to a superannuation fund, for the benefit of one or more employees This means that non-monetary contributions to a superannuation fund (such as vesting buildings, plant, or other assets) are subject to FBT.

As FBT applies to any superannuation contribution which is not a specified superannuation contribution, it also follows that it applies to monetary contributions to funds which are overseas constituted and classified by the Government Actuary under regs 29 and 30 of the Superannuation Schemes Regulations 1983, and to monetary contributions to other funds which are not in superannuation category 1 or 2 (ie superannuation category 3 funds and other funds).

For further details see 540 FRINGE BENEFIT TAX.

### 1390.45 Employer contributions and employer’s superannuation contribution tax [ss RD 67, RD 68, RD 69]

Superannuation contributions can be subject to:

(a) Fringe benefit tax (FBT);

(b) PAYE, where the employee has elected under s RD 68 that the contribution be treated as salary and wages and PAYE apply and that election has not been revoked in writing [see TES 7 (August 2003) 96]; or

(c) Employer’s superannuation contribution tax (ESCT).

ESCT (styled as withholding tax), applies to monetary contributions made by an employer as a superannuation contribution to a superannuation fund [ss RD 64 to RD 71].

The tax is a final tax and no employer’s superannuation cash contribution is included in income for the fund. The tax rate is dependent on the income level of the employee. The range of rates and the income thresholds to which they apply are set out in sch 1, Part D, Table 1. The threshold bands relate to the total salary and wages plus employer superannuation contributions paid to the employee in the previous year. From 1 October 2010, the rates are:

<table>
<thead>
<tr>
<th>Threshold Amount</th>
<th>Tax Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0 - $16,800</td>
<td>10.50%</td>
</tr>
<tr>
<td>$16,801 - $57,600</td>
<td>17.50%</td>
</tr>
<tr>
<td>$57,601 - $84,000</td>
<td>30%</td>
</tr>
</tbody>
</table>
Over $84,000 33%

**TaxNote:** Where the employee was employed for the whole of the immediately preceding income year, the rates are applied to the amount of salary or wages derived by the employee in that preceding income year. Where the employee was not employed for the whole of the immediately preceding income year, the rates are applied to an amount that the employer estimates the employee will derive in the current income year. Where the contribution is being made to a defined benefit fund, the employer also has the option of using a flat rate of 33 per cent.

The expenditure is deductible in the year that the specified superannuation contributions are made [s EF 2].

**1390.50 Retirement savings scheme contributions** [ss RH 3, RH 4, RH 5, RH 6, CX 50B; TAA, ss 28C, 47B, 48, 48B]

Superannuation contributions can be subject to:

(a) Fringe benefit tax (FBT);
(b) PAYE, where the employee has elected under s RD 68 that the contribution be treated as salary and wages and PAYE apply;
(c) Employer’s superannuation contribution tax (ESCT); or
(d) Retirement scheme contribution tax (RSCT).

(1) **Retirement savings schemes**

An entity is eligible to be a retirement savings scheme where the CIR has approved the distribution rules as being fair and following conditions are met:

(a) The entity is a portfolio investment entity;
(b) The entity holds funds from a retirement scheme contribution for the person;
(c) Distributions to members of the scheme cannot be made before the person reaches a retirement age which is stipulated in the scheme’s rules; and
(d) Distributions to members before the stipulated retirement age are limited to withdrawals for the following reasons:
   (i) Repayment of a student loan;
   (ii) Payment of fees and expenses relating to tertiary education;
   (iii) The purchase of a home (if the person does not already own a home);
   (iv) A reason allowed under the KiwiSaver Act 2006; or
   (v) Other reasons specified in the rules and approved by the CIR.

(2) **Retirement scheme contributors**

An entity is eligible to be a contributor for a person if:

(a) The entity is the trustee of a widely held unit trust, a company (other than a close company), or a Maori Authority; and
(b) The person is a unit holder, shareholder, or member, of the entity.

(3) **Retirement scheme contribution tax**

RSCT (styled as withholding tax) applies to monetary contributions made by contributor on behalf of a member of the scheme. RSCT is a final tax and no retirement scheme contribution is included in income for the fund. The tax is at the rate for the person on whose behalf the contribution is being made, depending on the person’s income in the previous two income years. The rates and the circumstances under which they apply are set out in sch 1, Part D, Table 5 of the ITA 2007.

For the 2010-2011 and later income years, up to and including 30 September 2010, the rates are:
Payee’s tax file number supplied, and payee elects to apply this rate 12.5%
Payee is a non-resident, contributor is a Maori authority and the distribution is $200 or less 12.5%
Payee’s tax file number supplied and notification given that 21 per cent is not less than the person’s retirement scheme prescribed rate 21%
Payee’s tax file number supplied, and notification has been given that 33 per cent is not less than the person’s retirement scheme prescribed rate 33%
In all other cases 38%

From 1 October 2010, the rates are
Payee’s tax file number supplied, and payee elects to apply this rate 10.5%
Payee is a non-resident, contributor is a Maori authority and the distribution is $200 or less 10.5%
Payee’s tax file number supplied and notification given that 21 per cent is not less than the person’s retirement scheme prescribed rate 17.5%
Payee’s tax file number supplied, and notification has been given that 33 per cent is not less than the person’s retirement scheme prescribed rate 30%
In all other cases 33%

The contributor is required to deduct the RSCT from the amount of the contribution. The amount of the contributions includes amounts in the form of money, imputation credits and Maori authority credits. The amount deducted is required to be paid to the CIR no later than the 20th of the month following the month in which the deduction was made. The contributor can appoint the retirement scheme as agent in respect of these obligations.

Failure to make and remit deductions of RSCT result in a debt to the CIR with the normal penalties and collection procedures applying.

The contributor is also required to file a reconciliation statement for the income year. The statement is required to be filed before the end of the second month following the end of the income year. In respect of each person for whom a retirement scheme contribution has been made, all of the following information is required to be included in the statement:

(a) The total amount of RSCT payable on retirement scheme contributions;
(b) The total amount of imputation credits and Maori authority credits used in meeting the liability for RSCWT;
(c) The total amount of RSCT paid or payable other than by using imputation credits and Maori authority credits;
(d) The amount of each retirement scheme contribution subject to RSCWT;
(e) The rate used to calculate the RSCT on the retirement scheme contribution;
(f) The RSCT for the retirement scheme contribution;
(g) The amount of imputation credits attached to the retirement scheme contribution;
(h) The amount of imputation credits used to meet the liability for RSCT on the retirement scheme contribution;
(i) The amount of Maori authority credits attached to the retirement scheme contribution;
(j) The amount of Maori authority credits used to meet the liability for RSCT on the retirement scheme contribution;
(k) The amount of RSCT remaining owing on the retirement scheme contribution after the use of imputation credits and Maori authority credits;
The amount of RSCT on the retirement scheme contribution paid other than by the use of imputation credits and Maori authority credits;

The tax file number, if a rate of less than is 38 per cent (33 per cent from 1 October 2010) is used to calculate the RSCT on a retirement scheme contribution;

The amount of the imputation credits or Maori authority credits attached to the retirement scheme contribution that are not used to meet the liability for RSCWT;

The total amount of non-resident withholding tax payable on retirement scheme contributions;

The amount of each retirement scheme contribution that is non-resident passive income; and

Any other particulars the CIR may require.

In addition, all of the following information must be supplied in the reconciliation statement in relation to the contributor:

The total amount of retirement scheme contributions for which RSCT is payable;

The total amount of RSCT payable on retirement scheme contributions;

The total amount of imputation credits used in meeting the liability for RSCWT;

The total amount of Maori authority credits used in meeting the liability for RSCWT; and

The total amount of RSCT paid or payable other than by using imputation credits and Maori authority credits.

Treatment in the hands of the scheme member

Contributions are excluded income of the retirement savings scheme. Contributions do not affect entitlements to social assistance. It is also excluded income of the person on whose behalf it is made. However, it is not excluded income where any of the following applies:

The person is a non-resident and the contribution is non-resident passive income

The person supplies to the contributor a tax rate that is lower than it should be; or

The person includes the amount in a return of income for the income year in which the contribution is made.

When employer receives a benefit from a superannuation scheme [s CG 5]

If the employer has received any benefit in money or money’s worth, including the recovery of contributions, from a superannuation scheme to which employer superannuation contributions have been made at any time, the amount recovered or received is treated as income of the employer.

The income is allocated to the income year in which the amount is recovered or received.

When pensions are deductible [s DC 2]

Instead of providing for an employee’s retirement through a superannuation fund, an employer may wish to keep the employee on the payroll. A deduction for pensions paid to former employees or their dependants is allowed in the following circumstances.

Not a close company

A deduction is allowed for a reasonable amount paid as a pension to the former employee where all of the following apply:

The person is not a close company;

The person carries on a business;

The employee’s employment has ended through retirement, redundancy or other similar circumstance;

The employer pays to the employee a pension in consideration of past services in the business; and
(e) The employee (or employee’s spouse [see 960.10]) has a right to receive the pension for a fixed period of time or for life or, in the case of the spouse, has entered a new marriage, civil union or de facto relationship.

The deduction is allocated to the income year in which the amount is paid.

(2) **Close company**

A deduction is allowed for the amount that the company would have paid as a pension had the former employee or relative not been a shareholder in the company where all of the following apply:

(a) The close company carries on a business;

(b) A former employee is a current or past shareholder of the company or is a relative of a current or past shareholder;

(c) The former employee’s employment was genuine;

(d) The employee’s employment has ended through retirement, redundancy or other similar circumstance;

(e) The employer pays to the employee a pension in consideration of past services in the business; and

(f) The employee (or employee’s spouse) has a right to receive the pension for a fixed period of time or for life or, in the case of the spouse, has entered a new marriage, civil union or de facto relationship.

The deduction is allocated to the income year in which the amount is paid.

See *Simpson v Commissioner of Inland Revenue* (1982) 5 NZTC 61,231 (HC) for a discussion on ceasing employment.

### 1395.10 Tax credits in general [ss BC 8, LA 1, LA 2, LA 3, LA 4, LA 5, LA 9]

A tax credit is an amount that:

(a) Reduces a taxpayer’s income tax liability (eg credits for PAYE, RWT or provisional tax);

(b) Is paid to a person in cash (eg housekeeper, charitable donations, WFF, or redundancy payment tax credits); or

(c) Is otherwise used or applied for the person’s benefit (eg KiwiSaver member tax credits).

The housekeeper [s LC 6] and charitable donations [s LD 1] tax credits are refunded to the taxpayer in full under s 41A of the TAA. The total of all other tax credits for a tax year under Part L are required to be used to satisfy the person’s income tax liability for that tax year [s LA 2]. An amount of tax credit may be used only once [s LA 9, see 1395.90].

1. **Income tax liability exceeds total tax credit [ss BC 8, LA 3]**

If the total tax credit is less than the income tax liability the difference, known as terminal tax [see 1150.70], must be paid to satisfy the person’s income tax liability for the tax year.

2. **Total tax credit exceeds income tax liability [ss BC 8, LA 4, LA 5]**

If the total tax credit is more than the income tax liability, the way in which the excess tax credits are used depends on the type of credit. Tax credits must be used to satisfy a person’s income tax liability in the following order:

(a) First, non-refundable tax credits [see 1395.20];

(b) Secondly, tax credits for supplementary dividends;

(c) Thirdly, tax credits for imputation credits; and

(d) Fourthly, refundable tax credits [see 1395.20].

Any remaining tax credits are dealt with as follows:

(a) Non-refundable credits are extinguished (lost);
(b) Credits for supplementary dividends may be used by applying s LP 3, which allows the credits to be transferred to another company in the same wholly-owned group or carried back to any one of the four preceding tax years. Any credits still remaining after this must be carried forward;

(c) Imputation credits are used by applying ss LE 2, LE 2B or LE 3. In the case of companies and trustees, remaining imputation credits are converted to a tax loss, which may then be carried forward. In the case of individuals, the remaining tax credit is carried forward; and

(d) Any remaining refundable tax credits are applied by the CIR [see 1395.15].

1395.15 Treatment of remaining refundable credits [ss LA 6, LA 7, LA 8]

If the remaining refundable credits for a tax year consist of tax credits for PAYE, provisional tax, RWT, RSCT, FDP, research and development expenditure, Maori authority credits, or tax credits for portfolio tax rate entities and investors (tax credits for multi-rate PIEs, from the 2010-2011 income year) the CIR must apply the credits in the following way (in this order):

(a) To satisfy the person’s income tax liability for an earlier tax year;

(b) To satisfy the person’s income tax liability for a later tax year, starting with the earliest year;

(c) To pay the person’s provisional tax for a later tax year, starting with the earliest year;

(d) If the credit is a research and development tax credit, to pay an amount that is payable by the person under an Inland Revenue Act [s LH 2(6)];

(e) To treat the tax credit as tax paid in excess and transferable under Part 10B of the TAA [see 1215.30 to 1215.48]; and

(f) Refund the tax credit as set out in ss RB 4, RM 2 to RM 8, and RM 10 and the TAA [see 1215.10].

If the remaining refundable credit for a tax year is:

(a) An abating WFF tax credit or a minimum family tax credit (under s LB 4), or

(b) A tax credit for charitable and other public benefit gifts (under s LD 1),

the CIR must treat the credit as transferable under Part 10B of the TAA, or refundable under ss RB 4, RM 2 to RM 8, and RM 10 (as applicable) [see 420.65].

If the remaining refundable credit for a tax year is a tax credit for NRWT, the CIR must:

(a) First, treat the tax credit as tax paid in excess and transferable under Part 10B of the TAA; and

(b) Secondly, refund the tax credit as set out in ss RB 4, RM 2 to RM 8, and RM 10 (as applicable) [see 1020.75].

1395.20 Refundable and non-refundable tax credits — definition [s YA 1]

“Non-refundable tax credits” are defined as:

(a) Tax credits for natural persons) [subpart LC], excluding the housekeeping tax credit [s LC 6];

(b) Tax credits for payroll donations [s LD 4];

(c) Tax credits for foreign income tax [subpart LJ];

(d) Tax credits relating to attributed CFC income [subpart LK];

(e) Tax credits of CTR companies [subpart LQ];

(f) Tax credits for policyholder income [subpart LR];

(g) An amount in a person’s BETA or PCA that the person chooses under Part O to credit in payment of tax; or

(h) Tax credits to investors who are allocated credits under subpart LJ, received by a portfolio tax rate entity or a portfolio investor proxy [s HL 29(7)(a)].

“Refundable tax credits” are defined as:

(a) Tax credits for payments, deductions and families [subpart LB];
(b) Tax credits for FDP credits [subpart LF], excluding credits for persons who are non-resident or who receive exempt income [s LF 8];
(c) Tax credits for research and development expenditure [subpart LH];
(d) Tax credits for Maori authorities [subpart LO];
(e) Tax credits relating to multi-rate PIEs and their investors [ss LS 2, LS 3(2) and LS 4(2)];
(f) Tax credits for multi-rate PIEs to the extent to which they arise under ss HM 53 or HM 55 (which relate to the use of tax credits other than foreign tax credits) [s LS 1].

A tax credit that a person has under Part M is excluded income of the person [s MA 3].

(1) **Terminating provisions**

Subpart LZ sets out terminating provisions relating to various tax credits including the UFTC and credits for certain non-resident investment companies, home vendor mortgages, and special home ownership accounts. Subpart MZ sets out terminating provisions relating to the child tax credit.

**1395.40 Credits for tax paid or deducted** [ss LB 1, LB 2, LB 3, LB 4, LB 5, LB 6, LB 7, LB 8]

Tax that a person has paid and tax deducted from income paid to a person, during the tax year are tax credits that may be used to satisfy the person’s income tax liability for that tax year. The following payments or deductions give rise to tax credits.

(1) **Tax credits for PAYE income payments** [s LB 1]

A person has a tax credit for a tax year equal to the total amount of tax shown as withheld from PAYE income payments paid to the person in the employer monthly schedules provided by the person’s employer to the CIR.

If the employer is a close company, the amount of the tax credit must not exceed the amount of tax paid to the CIR if:

(a) The employer and the employee are associated persons, or the employer and the spouse of the employee are associated persons; and

(b) The employer withheld the amount of tax for the PAYE income payment shown in the employer monthly schedule.
The person’s credit is extinguished if the CIR does not receive an employer monthly schedule for the relevant amount of tax, or if the relevant particulars of the schedule are incorrect. The credit is restored if the error is corrected.

(2) **Tax credits for provisional tax payments [s LB 2]**

A person has a tax credit for a tax year equal to the amount of provisional tax for the tax year paid by the person or their agent (if the agent is liable to pay provisional tax on the person’s behalf).

(3) **Tax credits for resident withholding tax [s LB 3]**

A person has a tax credit for a tax year equal to the amount of tax withheld and paid in relation to their resident passive income for the tax year. The evidential requirements of s 78D of the TAA must be met (including a RWT withholding certificate).

The amount of tax credit for a multi-rate PIE and an investor in a multi-rate PIE is limited to the extent allowed under subpart HM) [see 1130 PORTFOLIO INVESTMENT ENTITIES].

(4) **Tax credits for families [s LB 4]**

A person has a tax credit for a tax year equal to the total amount of their abating WFF tax credit (subpart MD) and minimum family tax credit (subpart ME) for the tax year. [See 420.20 and 420.50.]

A person’s tax credit is adjusted if an instalment of the credit (under subpart MF) is used to satisfy an amount of tax for an earlier income year. The adjustment is equal to the total amount of instalments payable under s MF 1 that are recovered by the CIR under s MF 6 as tax payable by the person [see 420.70].

(5) **Tax credits for non-resident withholding tax [s LB 5]**

A person has a tax credit for a tax year equal to the amount of tax withheld and paid in relation to their non-resident passive income [see 1020.75].

(6) **Tax credits for RSCT [s LB 6]**

If the person is resident in New Zealand, they have a tax credit for a tax year equal to the RSCT withheld if:

(a) The person derives income as a retirement scheme contribution;
(b) The retirement scheme contributor pays RSCT for the contribution; and
(c) The income is not excluded income under s CX 50B [see 1390.98, 1390.107].

If the person is not resident in New Zealand, they have a tax credit for the tax year of an amount equal to the excess of RSCT withheld over NRWT paid in relation to the contribution.

If the person is not resident in New Zealand and the retirement scheme contribution is a taxable Maori authority distribution, they have a tax credit for the tax year of an amount equal to the RSCT withheld.

(7) **Tax credits related to personal service rehabilitation payments — providers [s LB 7]**

The provider has a tax credit for a tax year if:

(a) A person, who receives a personal service rehabilitation payment, pays another person (a provider) for providing a key aspect of social rehabilitation to them; or

(b) The ACC pays a provider a personal service rehabilitation payment for providing a key aspect of social rehabilitation to the person.

The amount of the credit is calculated using the formula:

\[(\text{Amount paid} \times \text{tax rate}) / (1 – \text{tax rate})\]

Where:

“Amount paid” is the amount paid to the provider (net of any tax withheld);

“Tax rate” is the rate of tax applying to the personal service rehabilitation payment under sch 4, Part I, cl 1, with the following exceptions:
(a) For a payment to which s RD 18 (schedular payment without notification) applies, the rate of tax is the rate under sch 4, Part I, cl 1 plus any additional amount required to be withheld under s RD 18;
(b) For a payment to which a special tax rate certificate applies, the rate of tax is the rate applying to the payment as determined by the CIR under s 24N of the TAA.

(8) Tax credits related to personal service rehabilitation payments — payers [s LB 8]
A person has a tax credit if the following conditions apply:
(a) The person is paid a personal service rehabilitation payment for a key aspect of social rehabilitation;
(b) The person pays another person (the provider) for providing the key aspect to them; and
(c) The amount paid to the provider is less than the amount of the personal service rehabilitation payment to the person after taking into account any amount of tax withheld.
The amount of the tax credit for a tax year is calculated using the formula:
\[
\text{total tax withheld} - \left(\frac{\text{amount paid} \times \text{tax rate}}{1 - \text{tax rate}}\right)
\]
Where:
“Total tax withheld” is the total amount of tax withheld from the personal service rehabilitation payment paid to the person;
“Amount paid” is the amount paid to the provider;
“Tax rate” is the rate of tax applying to the personal service rehabilitation payment under sch 4, Part I, cl 1, with the following exceptions:
(a) For a payment to which s RD 18 (schedular payment without notification) applies, the rate of tax is the rate under sch 4, Part I, cl 1 plus any additional amount required to be withheld under s RD 18;
(b) For a payment to which a special code applies, the rate of tax is the rate applying to the payment as determined by the CIR under s 24N of the TAA.

1395.45 Personal tax credits

Most tax credits are deducted from a person’s income tax liability for a tax year [ss BC 8(2), LA 2] in the order set out in s LA 4. The housekeeper and charitable donations tax credits are not deducted from the income tax liability because they are claimed under a separate process [see 1395.95]. The redundancy payment tax credit is also claimed separately [see 1395.90]. The payroll donations tax credit is refunded to the employee in the pay period in which the donation is deducted from their salary or wages [see 1395.77].
The deduction of personal tax credits from the income tax liability gives an equal benefit to all taxpayers, irrespective of the amount of their income. The tax credits are proportionally limited when allowed to an absentee [see 1000.35].

1395.55 School child tax credit [s LC 3]
A personal tax credit of up to $245.70 is deductible from the tax payable by a school child other than an absentee. “Absentee” is defined in 1000.10. To qualify for this tax credit, the person must, at any time in the tax year be younger than:
(a) 15 years; or
(b) 18 years and attending:
   (i) A private or state primary school, or a private or state secondary school, or department (as defined in the Education Act 1964); or
   (ii) An integrated school (as defined in the Private Schools Conditional Integration Act 1975); or
   (iii) A school providing special education (as defined in the Education Act 1964 and the Education Act 1989); or
(c) 19 years and:
   (i) During the previous tax year was a person to whom (b) applied;
   (ii) Turned 18 on or after 1 January in that previous tax year; and
   (iii) Continues to attend a school of any of the kinds referred to in (b).

The tax credit is the lesser of: $245.70 and an amount calculated by the formula:
\[
\text{Net income} - \text{Resident passive income} \times 10.5\%
\]

Where:
“Net income” is the person’s net income for the tax year;
“Resident passive income” is the resident passive income (ie New Zealand-sourced interest and dividends) derived by the person in the tax year.

A person cannot claim both the child tax credit and the transitional tax credit [s LC 4]. Without this tax credit the earnings of school children (eg from gardening, babysitting, or newspaper deliveries), would be taxed at the rate of 10.5 per cent (the lowest marginal rate of tax). The tax credit of $245.70 allows a child to earn $2,340 (not including interest and dividends) a year tax-free. The tax is claimed in the annual tax return, and like other non-refundable credits, cannot exceed the tax payable.

Example:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Annual gross income (including $200 interest)</td>
<td>$2,627.00</td>
</tr>
<tr>

<td>$275.84</td>
</tr>
<tr>
<td>Less school child tax credit:</td>
<td></td>
</tr>
<tr>
<td>($2,627 – $200) × 10.5% = $254.84</td>
<td></td>
</tr>
<tr>
<td>As $254.84 exceeds maximum tax credit, the maximum tax credit is claimed:</td>
<td>$245.70</td>
</tr>
<tr>
<td>Tax to pay</td>
<td>$30.14</td>
</tr>
</tbody>
</table>

In the year a child leaves school there is the choice of claiming either the child tax credit or the transitional tax allowance.

(1) Minor beneficiaries
If a child claiming a tax credit is a minor beneficiary of a trust (ie under 16 years of age at the trust balance date), the income received from the trust will not be included in the child’s net income for the purposes of calculating the tax credit. This is because any beneficiary income distributed to a minor is not included in
the assessable income of the minor, but is subject to tax in the hands of the trustees of the trust [s HC 17, see 1420.60].

1395.60 Transitional tax credit [ss LC 4, LC 5, LC 11, LC 12]

The transitional tax credit provides relief to those low income persons who would not otherwise qualify for tax credit relief under the family support legislation.

The tax credit is allowed to any person who in a tax year is engaged in full-time work, but not a person who:

(a) Is a child younger than 18 years, other than a child older than 15 who has stopped going to a school of any of the following kinds:
   (i) A private or state primary school, or a private or state secondary school, or department (as defined in the Education Act 1964);
   (ii) An integrated school (as defined in the Private Schools Conditional Integration Act 1975); or
   (iii) A school providing special education (as defined in the Education Act 1964 and the Education Act 1989);

(b) Is not resident in New Zealand throughout the tax year;

(c) Has a tax credit for the tax year under subparts MD, ME or MZ (which relate to tax credits under the family scheme); or

(d) Is throughout the tax year the spouse, civil union partner or de facto partner of a person [see 960.10] who has a tax credit for the tax year under subparts MD, ME or MZ .

A person who is engaged in full-time work for a week means a person who, in the week, is engaged in paid work for at least 20 hours. A person engaged in full-time work includes a person who is not engaged in paid work if they:

(a) Suffer incapacity due to personal injury by accident for which compensation is or will be paid, when otherwise they would have been engaged in paid work;

(b) Are on parental leave during a week for which a parental leave payment is payable under Part 7A of the Parental Leave and Employment Protection Act 1987; or

(c) Are temporarily, or for an indefinite period, incapacitated for work through sickness or accident in relation to which a sickness benefit is or will be paid under the Social Security Act 1964, when otherwise they would have been engaged in paid work.

If a person performs paid work in a pay period that consists of a period longer than one week, the person is treated as having been engaged in paid work at a uniform daily rate throughout that pay period.

“Paid work” means work from, by, or through the performance of which a person derives assessable income.

A taxpayer who was remunerated for only 10 hours work per week but who in fact worked more than 20 hours per week was a full-time earner and entitled to claim the transitional tax allowance: *TRA Case S52* (1996) 17 NZTC 7,343.

The tax credit is calculated in accordance with the following formula:

\[ \text{person’s net income} \times \frac{\text{weekly periods}}{52} \]

Where:

“Person’s net income” is

(a) $611.52, if the net income of the person for the tax year is less than $6,241; or

(b) If the net income of the person for the tax year is $6,241 or more, an amount calculated using the following formula:

\[ \$611.52 - \left( \text{person’s net income} - \$6,240 \right) \times 0.168 \]

Where:

“Person’s net income” is the person’s net income for the tax year in complete dollars.
“Weekly periods” is the number of periods of one week for which the person is engaged in full-time work. When a full-time earner is a non-resident for part of a tax year, the net income earned while that person is personally present in New Zealand is grossed up in the proportion that the number of days in the income year bears to the number of days in the period of personal residence. The credit is then apportioned on the basis of the number of days the person is resident in New Zealand [s LC 11].

Example:
Person A, a full-time worker, is personally present in New Zealand for 100 days during the tax year and derives net income of $2,000 during that period. The “grossed up” net income is calculated as follows:

\[
\begin{align*}
\text{Number of days in the income year} & = 365 \\
\text{Divided by number of days A is personally present in New Zealand} & = 100 \\
\text{Gross up factor} & = 3.65 \\
\text{Multiplied by net income earned while A is personally present in New Zealand} & = 2,000 \\
\text{Grossed up net income} & = 7,300 \\
\end{align*}
\]

\[
\text{Tax credit on grossed up net income: } \frac{611.52 - (7,300 - 6,240) \times 0.168}{7,300} = 433.44
\]

\[
\text{Allowable tax credit: } \frac{433.44 \times 100}{365} = 118.75
\]

The CIR is granted discretion under s LC 12 to determine the net income of a person who is not a New Zealand resident throughout the whole of the tax year.

1395.65 Housekeeper or childcare [ss LC 6, LC 7, LC 8]
The housekeeper tax credit provides a partial subsidy for the cost of a housekeeper or childcare in certain circumstances. It is not affected by household income. The tax credit is claimed by completing a credit claim form [see 1395.90]. The housekeeper tax credit is a refundable tax credit under s LA 7. Refunds of the tax credit are paid by direct credit to the taxpayer’s bank account.

The tax credit for a tax year is 33 per cent of every complete dollar of housekeeping payments made during the tax year by a person other than an absentee. The maximum tax credit allowed is $310, which is reached when total housekeeping payments equal or exceed $940.

“Housekeeping payments” are payments that are made by the person during the tax year for the services of a housekeeper, and for which no credit under any other provision of ITA 2007 is allowed to the person or to any other person.

“Housekeeper” means for a person (person A) and a tax year:

(a) If person A is a widow, a widower, a surviving civil union partner, a surviving de facto partner, a divorced person, a person whose civil union has been dissolved, a person who is not in a marriage, civil union, or de facto relationship, or a separated person:

(i) A person or an institution that has the care and control of a household member, either in person A’s home or elsewhere; or

(ii) A person who tends person A’s home if the person’s services are necessary because of a mental or physical infirmity or disability of person A; or

(b) If person A is living with their spouse, civil union partner, or de facto partner:

(i) A person or an institution that has the care and control of a household member, either in person A’s home or elsewhere, if the services of the person or the institution are necessary because of a mental or physical infirmity or disability of person A or their spouse, civil union partner, or de facto partner; or

(ii) A person who tends person A’s home, if the services of the person or the institution are necessary because of a mental or physical infirmity or disability of person A or their spouse, civil union partner, or de facto partner; or
(c) If person A is living with their spouse, civil union partner, or de facto partner, a person or an institution that has the care and control of a household member, either in person A’s home or elsewhere, if the services of the person or the institution are necessary because of the employment or business activities of both person A and their spouse, civil union partner, or de facto partner [s LC 7].

“Household member” means a person who is younger than 18 or is suffering from a mental or physical infirmity or disability affecting their ability to earn a living.

“Institution” means a creche, day nursery, play centre, kindergarten, or similar body. It does not, in relation to the care and control of a household member who is five or older, include an institution that is, in any way, concerned with the education of the household member.

“Home”, for a person and a tax year, means the dwelling in which the person resides during the tax year. It does not include a motel, hotel, boardinghouse, guest house, convalescent home, nursing home, rest home, hospital, hospice, or other similar establishment, other than a part of an establishment that is occupied by any person regularly engaged in carrying on the activity of operating the establishment or by the person’s spouse, civil union partner, or de facto partner [s LC 8].

Example 1:
Rita, a solo mother, works part-time while her daughter is at a creche. During the income year, Rita paid creche fees of $1,000.47. The tax credit is calculated as 33 per cent of $1,000, or $330. As this exceeds the $310 maximum, her credit is limited to $310. Note that Rita would qualify for the credit even if she did not work.

If a person and their spouse both qualify for the tax credit, the CIR may apportion the amount of the credit as is fair and equitable, up to the $310 overall maximum [s LC 7].

Example 2:
Ron and Nancy, a married couple who both work, have a physically disabled child who requires constant care. During the income year they each paid $3,000 for a person to look after their child at home. Ron and Nancy both qualify for the housekeeper tax credit, but because the amount they have paid far exceeds the maximum, they will each be entitled to claim $155 (50 per cent of $310).

The tax credit is allowed against income from personal services on a proportionate basis for absentees [see 1000.35].

1395.70 Independent earner tax credit [s LC 13]
The independent earner tax credit (IETC) is available from 1 April 2009 to New Zealand resident individuals who do not receive an income-tested benefit, a veteran’s pension or New Zealand superannuation, and who are not (either directly, or through their spouse or partner) entitled to a WFF tax credit. In addition, the person (or their spouse or partner) must not be in receipt of any similar benefit granted outside New Zealand.

The amount of the credit is calculated using the formula:

\[
(person’s credit – full year abatement) \times \text{credit period month/12}
\]

Where:

“Person’s credit” is $520 if the person’s net income for the tax year is $24,000 or more. If net income is less than $24,000, the credit is zero.

“Full year abatement” is 13 cents for each complete dollar of net income in excess of $44,000.

“Credit period months” is the number of whole months in the tax year that the person meets the qualifying criteria set out above.

The effect of the abatement is that the credit is not available to person’s whose net income equals or exceeds $48,000. The full year entitlement can be summarised as follows:

<table>
<thead>
<tr>
<th>Net income</th>
<th>Amount of IETC</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0 - $24,000</td>
<td>Nil</td>
</tr>
<tr>
<td>$24,000 - $44,000</td>
<td>$520</td>
</tr>
</tbody>
</table>
**Tax Credits**

### Net income  
**Amount of IETC**

- $44,001 - $48,000: $520 – ((net income – $44,000) × 0.13)
- Over $48,000: Nil

Employees receive the benefit of the IETC by way of reduced PAYE deductions. Non-employees claim the credit by filing a tax return or requesting a personal tax summary.

### 1395.75 Charitable donations [subpart LD]

#### (1) Calculating and claiming the tax credit

A person who makes a charitable or other public benefit gift in a tax year, and who applies for the credit as required by s 41A of the TAA, has a tax credit for the tax year equal to the amount calculated under the formula:

\[
\text{total gifts} \times 33\frac{1}{3}\%.
\]

Where:

“Total gifts” means the total amount of all charitable or other public benefit gifts made by the person in the tax year.

A credit under s LD 1 is a refundable tax credit under s LA 7. The credit is not used under ss LA 2 to LA 6 to reduce the person’s income tax liability.

#### (2) Exclusions [s LD 2]

The following persons cannot claim a charitable donations tax credit:

- An absentee;
- A company;
- A public authority;
- A Maori authority;
- An unincorporated body;
- A trustee liable for income tax under subpart HC, and s HZ 2 (which relate to trusts and distributions from trusts);
- In relation to the credit, a person who has a tax credit for a payroll donation.

#### (3) Meaning of charitable or other public benefit gift [s LD 3]

A “charitable or other public benefit gift”:

- Means a gift of $5 or more that is paid to a society, institution, association, organisation, trust, or fund, described below or listed in sch 32 (see list below);
- Includes a subscription paid to a society, institution, association, organisation, trust, or fund, only if the subscription does not confer any rights arising from membership in that or any other society, institution, association, organisation, trust, or fund; and
- Does not include a testamentary gift.

The following are the entities referred to in (a) above:

- A society, institution, association, organisation, or trust that is not carried on for the private pecuniary profit of an individual, and whose funds are applied wholly or mainly to charitable, benevolent, philanthropic, or cultural purposes within New Zealand;
- A public institution maintained exclusively for any one or more of the purposes within New Zealand set out in (a);
- A fund established and maintained exclusively for the purpose of providing money for any one or more of the purposes within New Zealand set out in (a), by a society, institution, association, organisation, or trust that is not carried on for the private pecuniary profit of an individual;
(d) A public fund established and maintained exclusively for the purpose of providing money for any one or more of the purposes within New Zealand set out in (a).

The fact that an organisation is not registered with the Charities Commission [see 150 CHARITIES] does not necessarily mean that a person making a charitable donation to that organisation is prevented from claiming a tax credit. A tax credit will be available provided the organisation has Inland Revenue-approved donee status, which depends on the organisation meeting the requirements of s LD 3(2). An organisation can have Inland revenue-approved donee status without being registered with the Charities Commission.

The payment of a tertiary student association fee is not a gift for the purposes of s LD 3 where any rights arising from membership are conferred by the payment and/or where the payment is compulsory. Accordingly, a tax credit is not available under s LD 1. However, if a person who is not a student makes a donation to a student association and no rights are conferred because of the payment, a gift is made and a tax credit is allowed. If the payment of a student association fee is voluntary and does not confer any rights upon the student, a tax credit will be available [see Public ruling BR Pub 05/11, TIB vol 17:5 (June-July 2005) at 31].

Receipts for gifts must be furnished with the tax credit claim form [see 1395.95]. The payments must be made in the tax year, that is, from 1 April to 31 March. The receipts need only be for the total amount donated during the income year. A formal receipt, although desirable, is not essential. An acknowledgement is acceptable provided it shows the name of the organisation receiving the payment, the name of the payer, the amount and date of the payment or other data signifying the amounts paid within the income year. Certificates given by members of the New Zealand Institute of Chartered Accountants may be accepted in place of receipts.

If a tax agent completes a taxpayer’s tax credit claim, receipts do not have to be supplied with the claim form if the tax agent has sighted the receipts and the taxpayer retains them for four income years after the year of claim.

Receipts are often issued made out to “Mr and Mrs”, which the CIR will accept without further inquiry. If both husband and wife are deriving income they may each claim up to the maximum tax credit and seek to split the donation between them, which is permissible. Where the receipt is attached to the return of one spouse [see 960.10] and the receipt is in the name of the other spouse, the claim will also be admitted.

The CIR has indicated that church offerings come within the spirit of definition of “charitable purpose”.

It is understood that some members of Jewish congregations pay an annual subscription which entitles them to a particular seat. In addition, they may pay further amounts by way of envelope collections. The subscription paid under the first arrangement is normally applied for general church purposes and will qualify for the donations tax credit in the same way as the envelope contributions.

“Charitable purpose” includes every charitable purpose, whether it relates to the relief of poverty, the advancement of education or religion, or any other matter beneficial to the community. The purpose of a trust, society, or institution is charitable under the ITA 2007 if the purpose would meet the public benefit requirement apart from the fact that the beneficiaries of the trust, or the members of the society or institution, are related by blood. A marae has a charitable purpose if the physical structure of the marae is situated on land that is a Maori reservation referred to in the Te Ture Whenua Maori Act 1993 (Maori Land Act 1993); and the funds of the marae are not used for a purpose other than the administration and maintenance of the land and of the physical structure of the marae, or not used for a purpose that is a charitable purpose other than under this paragraph [s YA 1].

In Molloy v Commissioner of Inland Revenue (1981) 5 NZTC 61,070, (1981) 5 TRNZ 1 (CA), the taxpayer claimed a special exemption for a donation to the New Zealand Society for the Protection of the Unborn Child (SPUC) which the CIR disallowed on the ground that the funds of the Society were not “applied wholly or principally to any charitable, benevolent, philanthropic or cultural purpose within New Zealand”.

It was held that funds are not disbursed for charitable purposes if the dominant purpose or one of the dominant purposes of a society is political. If an object of a society was to change law or to oppose a change in the law,
it was a political object and it could not be said that the application of its funds were principally for charitable or cultural purposes.

According to Inland Revenue’s information sheet (IR525), donations to the following organisations will qualify for the tax credit:

(a) Approved charitable organisations;
(b) Approved New Zealand religious organisations;
(c) Medical research schools and universities;
(d) Approved overseas aid funds;
(e) Free Kindergarten Associations;
(f) State schools, school boards of trustees or parent–teacher associations (To qualify, the school must be a state school (this includes integrated schools) or be approved as a charity for tax purposes. Payments must be donations, not payment of school fees);
(g) State-funded schools for payment of fees, as long as these go to the school’s general fund.

Tuition or tertiary fees do not qualify for the credit. Some school activities are deductible. However, you cannot claim for:

(a) Payments for classes where there is a take-home component (eg woodwork);
(b) Where attendance at (or participation in), an activity is voluntary;
(c) Transport to or from a school activity (eg a camp), or food at the camp.

Gifts made by partnerships to approved organisations are allowed to the individual partners in proportion to their respective shares in the partnership. Where one of the partners is a company, this partner’s share of the amount contributed is non-deductible expenditure of the partnership (as is the whole donation for that matter) and may not be spread among the other members of the partnership for the purposes of their claim for a tax credit.

Example:
A, B, C, and X Co Ltd are partners in a business. The partnership makes a gift of $200 to an approved organisation. Each partner has contributed $50 each. This $200 is non-deductible to the partnership. The three individual partners may each claim 33 per cent of their $50 as a tax credit. However, the fourth partner (X Co Ltd), cannot claim for its $50 share since the tax credit is not available to companies.

Donations to the following specific organisations (listed in sch 32) qualify for the tax credit:

- Adventist Development and Relief Agency
- African Enterprise (New Zealand) Aid and Development Fund
- Akha Rescue Ministry Charitable Trust
- Alhay Buhay Foundation Trust
- Amnesty International
- Bangladesh Flood Appeal Trust
- Books for Africa
- Caritas Aotearoa-New Zealand
- Channel 2 Cyclone Aid for Samoa
- Cheboche Area Trust Incorporated
- Children on the Edge (New Zealand) Trust
- Christian Blind Mission International (New Zealand)
- Childfund New Zealand Limited
- Christian World Service
- Community Action Overseas (Oxfam New Zealand)
- CORSO (Incorporated)
- Cry for the World Foundation New Zealand Humanitarian Aid Fund
- Cure Kids
• Cyclone Of a Relief Fund
• Cyclone Val Relief Fund
• DIPS’N Charitable Trust (International)
• Educational Aid for International Development Trust Board
• Four Sherpa Trust
• Global Hope
• Greater Mekong Subregion Tertiary Education Consortium Trust
• Habitat for Humanity New Zealand Limited
• Hamlin Charitable Fistula Hospitals Trust
• Help a Child Foundation New Zealand
• Hope Foundation Development Trust
• Hope International Charitable Trust
• Ingwavuma Orphan Trust Fund of New Zealand
• International Christian Aid (ICA)
• Jasmine Charitable Trust No 2 (from 2013 tax year)
• Karunai Illam Trust
• Kyrgyzstan New Zealand Rural Trust
• Limbs 4 All Charitable Trust
• L Women of Africa Fund
• Medicine Mondiale
• Mission Without Borders (New Zealand), Humanitarian Aid Account
• Mobility Equipment for the Needs of Disabled Trust
• Nelson Mandela Trust (New Zealand)
• New Zealand Disaster Assistance Response Team Trust
• New Zealand Good Samaritan Heart Mission to Samoa Trust (from 2013 tax year)
• New Zealand Jesuits in India Trust
• New Zealand Sports Foundation (Incorporated)
• New Zealand Viet Nam Health Trust
• NZ-Iraqi Relief Charitable Trust (from 2013 tax year)
• Open Home Foundation International Trust
• Operation Hope (Aid Ship to Africa)
• Operation Restore Hope Charitable Trust
• Operation Vanuatu Charitable Trust
• Partners Relief and Development New Zealand
• Plan New Zealand
• “Raphael” (The Ryder-Cheshire Foundations of New Zealand)
• Register of Engineers for Disaster Relief New Zealand
• RNZWCS Limited (from 2013 tax year)
• Ruel Foundation (from 2013 tax year)
• Sampoerna Foundation Limited
• Save the Children New Zealand (and its branches)
• Sport and Recreation New Zealand
• St Stanislas Charitable Trust of New Zealand
• Surf Aid International Incorporated
• Te Tuao Tawahi: Volunteer Service Abroad Incorporated
• Tender Trust
• The Band Aid Box
• The Cambodia Charitable Trust (from 2013 tax year)
• The Bougainville Library Trust [from the 2011-2012 to 2018-2019 tax years]
• The Branch Foundation
Tax Credits

- Waterharvest Trust
- World Vision of New Zealand (Incorporated)
- Zonta International District 16 (New Zealand) Charitable Trust

See 150.70 for the criteria and procedure to apply for listing in sch 32.

(4) Approval for charities and donee organisations

Organisations seeking confirmation of donee status or charitable exemption should write to Inland Revenue stating the types of exemption sought and providing the following details:

(a) An up-to-date, signed copy of the organisation’s rules, constitution, trust deed or other founding document;
(b) A copy of the organisation’s certificate of incorporation (if applicable); and
(c) Details of how the organisation has been (or will be) operating.

Overseas organisations should write to Inland Revenue’s Non-resident Centre, Private Bag 1932, Dunedin. Refer to the Inland Revenue Booklet Charitable organisations (IR255), for details of the criteria that must be met by organisations seeking charitable donee status and charitable exemptions.
1395.77  Payroll donations [ss LD 4, LD 5, LD 6, LD 7, LD 8, RD 13B; TAA, s 24Q]

(1) Payroll donation tax credit

The voluntary payroll giving scheme enables employees to make regular donations to charitable organisations of their choice by way of deduction from their salary or wages, and to receive the immediate benefit of the charitable donations tax credit without the need to obtain and keep receipts. The donations are passed on to the charities by the employer or PAYE intermediary.

The scheme is voluntary. Employers have the option of whether or not to offer this service to their employees; and employees have the choice of whether to participate in the scheme. Only employers who file their employer monthly schedules and PAYE income payment forms electronically can participate in the payroll giving scheme. The scheme takes effect from 7 January 2010.

(2) Amount of credit [ss LD 4, LD 8]

An employee is entitled to a tax credit for a pay period equal to:

\[
\text{total donations} / 3
\]

Where:

“Total donations” is the total amount of all payroll donations made by the person in the pay period.

A “payroll donation” is an amount that an employee asks their employer to transfer from their pay to a donee organisation. A “donee organisation” is any entity described in s LD 3(2) or listed in sch 32 [see 1395.75].

The employee who is making the donation is responsible for:

(a) Checking that the recipient of the donation is a donee organisation; and

(b) Providing the employer with sufficient details of the recipient to enable the transfer to be made [s 24Q of the TAA].

The amount of the tax credit must not exceed the amount of tax for the employee’s pay for the period. The credit is a non-refundable tax credit [see 1395.10]. A person who has received a tax credit for a payroll donation cannot apply for a refund in relation to the same donation under ss LD 1 and 41A of the TAA [see 1395.75, 1395.95]. A person may make a payroll donation for a pay period only after satisfying any tax obligation they may have, or any statutory or legal requirement they may be obliged to meet from their PAYE income payment (eg student loans or child support).

Example 1:

Ann makes regular weekly donations of $20 to her church. She has asked her employer, who offers a payroll donation facility, to deduct the donations from her salary and forward them on to the church so that she can receive the benefit of the tax credit in her weekly pay. Ann’s gross weekly salary is $960 and the tax on this amount is $173.35. The tax credit is one-third of the amount of the donation, or $6.67. The employer will pay $166.68 ($173.35 less $6.67) to Inland Revenue. Ann’s net salary is:

| Gross salary | $960.00 |
| Less tax     | $173.35 |
| Less donation| $20.00  |
|              | $766.65 |
| Plus tax credit for donation | $6.67 |
| Net salary   | $773.32 |

Example 2:

Kevin is a fanatical animal rights activist. Every week, he donates $235 to the SPCA and other approved charities that benefit animals. He lives with his mother and so is able to survive on very little income. Kevin has arranged for his employer, who offers the payroll donation facility to staff, to deduct the donations from his wages and forward them on to the various charities. Kevin’s weekly wage is $425. Tax on this amount is $64.19. The tax credit is calculated as one-third of the total donations, or $78.33. However, since this figure exceeds the amount of tax, the tax credit is limited by s LD 4(4) to $64.19. Kevin’s employer will not have to pay any tax to Inland Revenue for Kevin’s wages because the tax credit equals the amount of tax. Kevin’s net wages are:
Tax Credits

Gross salary $425.00
Less tax $64.19
Less donation $235.00
Plus tax credit for donation $64.19
Net salary $190.00

(3) Meaning of “pay” [s LD 4(7)]
For payroll donation purposes, “pay” means a payment of salary, wages, or allowances made to a person in connection with their employment, and includes:
(a) A bonus, commission, gratuity, overtime pay, or other pay of any kind; and
(b) Any similar amount earned by an employee in the normal course of their employment.

(4) Employer’s responsibilities [ss LD 5, RD 13B; TAA, s 24Q]
The employer is responsible for calculating the amount of the credit. The employer or PAYE intermediary must subtract the amount of the tax credit from the PAYE for the pay period and record the information in the employer monthly schedule.

The employer must transfer the amount of the donation to the donee organisation by the PAYE due date (as specified in ss RA 15 and RD 4) that falls nearest to two months after the end of the pay period [see 1080.80 to 1080.83]. The employer holds the amount on trust for the employee until it is transferred to the donee organisation.

(5) Credit may be extinguished [ss LD 6, LD 7]
A tax credit for a payroll donation is extinguished when:
(a) The employer or a PAYE intermediary transfers the donation to an entity that is not a donee organisation; or
(b) The payroll donation is, for whatever reason, returned to the employee.

The extinguished credit is removed from the employee’s tax credits for PAYE income payments, and if the extinguishing of the credit results in a tax shortfall the employee is liable to pay the shortfall to the CIR under s RD 4 [see 1080.85].

1395.90 Redundancy payments [subpart ML; TAA, s 41B]
A person who derives a redundancy payment before 1 October 2011 has a tax credit equal to six cents for each complete dollar of total redundancy payments derived by them before 1 October 2011. It does not matter whether a redundancy payment is paid in a lump sum or by instalment, or whether the total redundancy payments relate to one or more occasions of redundancy. However, the maximum credit that a person has for each occasion of redundancy is $3,600.

A “redundancy payment” is a PAYE income payment [see 1080.10] paid to a person whose employment in a position is terminated because the position has become superfluous to the requirements of the employer, and the payment is in compensation for the loss of the person’s employment [s YA 1].

A tax credit is not allowed for a redundancy payment:
(a) Related to:
(i) Retirement from employment;
(ii) Loss of seasonal employment arising from the normal seasonal work cycle;
(iii) A contract of employment for a fixed term or for the duration of a project;
(iv) Employment for a period following notice of termination of employment; or

(b) Paid:

(i) To a director of a company by the company or a person associated with the company;
(ii) To a person by a person associated with them; or
(iii) By a person to an employee who has been paid a redundancy payment by a person associated with the person.

A person who is entitled to a redundancy payment tax credit must apply to the CIR for a refund. The CIR cannot pay the credit until the person applies for it as required under s 41B of the TAA. An application for a refund must be made within four years of the date of the redundancy payment.

The tax credit applies to redundancy payments paid on or after 1 December 2006 and before 1 October 2011.

1395.95 Application for refund of housekeeper and charitable donations tax credits [TAA, s 41A]

The housekeeper and charitable donations tax credits [ss LC 6, LD 1] are claimed by completing a tax credit claim form (IR526). A taxpayer can submit more than one claim form, but the total amount refunded by Inland Revenue cannot exceed the annual amount of the tax credits [see 1395.65 and 1395.70].

If the sum of the payments which qualify for the tax credits exceeds the taxpayer’s taxable income for the preceding tax year, Inland Revenue must reduce, in equal portions, the total amount of qualifying payments to the amount of the taxpayer’s taxable income for the tax year in which the payments were made.

Example:
Chris’s taxable income for the previous tax year was $2,000. During the current tax year, Chris made total qualifying payments under s LC 6 of $900 and total qualifying donations under s LD 1 of $1,500. Because the total of the qualifying payments under both tax credits ($2,400) cannot exceed the previous year’s taxable income, Inland Revenue will limit the total of both to $2,000. As this must be done on a pro rata basis, the qualifying payments under s LC 6 will be reduced to $750 ($900 × 2,000 / 2,400) and the qualifying donations under s LD 1 will be reduced to $1,250 ($1,500 × 2,000 / 2,400). Chris will therefore be entitled to a tax credit under s LC 6 of $247.50 ($750 × 0.33) and a tax credit under s LD 1 of $416.67 ($1,250 / 3). His total refund will be $664.17 ($247.50 + $416.67).

In completing a claim form, a taxpayer must provide details of qualifying payments for each tax credit.

Standard and early balance date taxpayers can apply for a refund for a tax year from 1 April following the end of the taxpayer’s income year. Late balance date taxpayers can apply for a refund for a tax year from the first day of the taxpayer’s next accounting year. In special circumstances, the CIR may accept an application for a refund before the end of the tax year. Special circumstances include a taxpayer leaving New Zealand permanently or for a significant length of time, and a trustee of a deceased person’s estate who wishes to wind up the estate.

Inland Revenue has stated that it will process early tax credit claims in circumstances where having to make a claim during the claim period would significantly disadvantage or inconvenience the taxpayer (eg when the taxpayer has been incapacitated or out of the country during most of the tax credit claim period) [see TIB vol 12:12 (December 2000) at 60].

Following receipt of a claim form, Inland Revenue must notify the taxpayer of the amount of tax credits allowed and the amount of refund allowed. An allowable refund must be paid as if it were tax paid in excess [see 1215.10]. Refunds must be made by direct credit to a bank account nominated by the taxpayer, unless this would cause undue hardship [TAA, s 184A]. The claim form will therefore require the taxpayer to provide bank account details.

If overpaid, a refund is recoverable by Inland Revenue as an excess credit of tax under s 142D of the TAA [see 1110.205].

Use of money interest (UOMI) does not apply to refunds or excess refunds made under s 41A of the TAA. However, applications made under this section are subject to the penalties rules.

1400.05 General rules

The trading stock rules are applicable to all business trading stock. The key features of the rules are:

(a) Trading stock is valued under subpart EB.
(b) The closing value of trading stock is income.
(c) The opening value of trading stock is an allowable deduction.
(d) Closing stock can be valued at cost or market selling value, but market selling value can only be used if it is less than cost.
(e) Low-turnover traders (those with an annual turnover of less than $3 million), can use market selling value even if it exceeds cost.
(f) Excepted financial arrangements (eg shares and options), held as trading stock must be valued at cost.
(g) Taxpayers, other than low-turnover traders, who value trading stock at cost must follow generally accepted accounting practice and, in particular, must comply with NZ IAS-2 Inventories and the consistency and disclosure requirements of NZ IAS-8: Accounting Policies, Changes in Accounting Estimates and Errors. Separate rules for valuing stock at cost apply to low-turnover traders.
(h) Only the first-in first-out (“FIFO”) or weighted average methods of assigning costs may be used, and the method chosen must be the same as that used by the taxpayer to prepare financial statements. Low-turnover traders must use the same cost-flow method consistently from year to year.
(i) Discounted selling price and replacement price may be used to determine cost by taxpayers who use the same method in their financial statements or by low-turnover traders who do not prepare financial statements.

Staples Tax Guide 2012 1529
(j) Taxpayers whose turnover for the income year does not exceed $1.3 million are permitted to use the value of opening stock as being the value of closing stock, provided that the taxpayer reasonably estimates that the true value of closing stock is less than $10,000.

(k) Livestock, unless held as trading stock, is valued under subpart EC.

**1400.10 Effect of trading stock on net income** [ss CH 1, DB 49, EB 1, EA 1(1), EB 3]

Taxpayers that own or carry on a business must take the value of trading stock into account in calculating their net income or loss for the year. This includes excepted financial arrangements such as shares and a share supplier’s share-lending right under a share-lending arrangement. A share-lending right is valued at the cost of the original share.

The value of closing stock is added to income for the year, and the value of opening stock is deducted from income for the year. The value of opening stock for an income year is the value of closing stock at the end of the previous income year. This reflects the cost of goods sold calculation typically used in calculating gross profit for an entity.

**Example:**

<table>

</tr>
<tr>
<td></td>
<td>$32,000</td>
</tr>
</tbody>
</table>

Because closing stock increases net income, taxpayers will (given the opportunity) tend to value closing stock at the lowest possible value. The trading stock rules provide only limited opportunities for tax planning.

The value of closing stock is calculated using one or more of the methods explained below [see 1400.20].

**1400.15 Definitions** [ss EB 2, EB 13(2)]

“Trading stock” is property that a person who owns or carries on a business has for the purpose of selling or exchanging in the ordinary course of business. It includes:

(a) Work in progress or partially completed work which, if completed, would be trading stock;

(b) Materials held by a taxpayer for use in the manufacture or production of trading stock;

(c) Anything for which expenditure has been incurred that, if possession of it were taken, would be trading stock (eg stock in transit);

(d) Livestock; and

(e) An asset subject to hire purchase that is deemed to have been acquired by the lessor under s FA 15, if the asset is a business asset of the lessor (eg repossessions) [see 640.10].

The following are not trading stock:

(a) Land;

(b) Depreciable property [see 250.18];

(c) Financial arrangements subject to the financial arrangement rules or the old financial arrangement rules;

(d) An excepted financial arrangement of a life insurer;

(e) Livestock not used in a dealing business;
(f) Consumable aids which are to be used in the production of trading stock;
(g) Spare parts, unless held for sale or exchange;
(h) Excepted financial arrangements in the form of investment shares held by a portfolio investment entity (PIE), the New Zealand Superannuation Fund, or a life insurer in its capacity as a life fund PIE if the proceeds from the sale of the share would be excluded income under s CX 55;
(i) An emissions unit; and
(j) A non-Kyoto greenhouse unit.

Services generally are not included in trading stock. However, some services, such as inward freight, are included in the cost of trading stock.

The above definition does not apply for all aspects of the trading stock rules. Some provisions have modified definitions of trading stock. Where appropriate, these modified definitions are explained.

A “low-turnover trader” is one whose turnover in an income year does not exceed $3 million. In determining whether turnover has exceeded $3 million, the turnover of persons associated with the taxpayer is also included. “Associated person” is limited to relationships referred to in ss YB 2 and YB 3 [see 70.20 to 70.35]. Under this rule, taxpayers will be associated only if they are two companies that have at least 50 per cent common ownership, or one of them is a company and the other is a person (other than a company) who has at least 50 per cent ownership of that company.

TaxNote: Taxpayers other than “low-turnover traders” are referred to in the following commentary as “high-turnover traders”. This is not a statutory term but is used here to refer to a taxpayer whose turnover (including that of any associated person) in an income year exceeds $3 million.

1400.20 Valuation methods [ss EB 3, EB 4, EB 13, EB 14, ED 1(1)]

The options available to a taxpayer for valuing closing stock depend on two main factors:
(a) Whether the taxpayer is a low-turnover trader or a high-turnover trader; and
(b) Which method of valuing trading stock the taxpayer uses in its financial statements (if financial statements are prepared).

(1) High-turnover traders [ss EB 3, EB 4]

High-turnover traders may value closing stock (other than excepted financial arrangements), at:
(a) Cost [see 1400.30];
(b) Replacement price (if used in the taxpayer’s financial statements) [see 1400.45];
(c) Discounted selling price (if used in the taxpayer’s financial statements) [see 1400.40]; or
(d) Market selling value (if lower than cost) [see 1400.50].

These four methods are known as the “standard valuation methods” for trading stock. High-turnover traders are not compelled to use market selling value if it is lower than cost (as would be the case under NZ IAS-2).

(2) Low-turnover traders [ss EB 13, EB 14]

Low-turnover traders may value closing stock (other than excepted financial arrangements), at:
(a) Any of the “standard valuation methods” available to high-turnover traders (see above); or
(b) Any of the “low turnover valuation methods” being:
   (i) Cost for low-turnover traders [see 1400.35];
   (ii) Replacement price for low-turnover traders [see 1400.45];
   (iii) Discounted selling price for low-turnover traders [see 1400.40]; or
   (iv) Market selling value for low-turnover traders [see 1400.55]; or
(c) As “low value trading stock” [see 1400.35].

These methods are explained below.
The same valuation method does not have to be used for all trading stock held by a taxpayer. According to the CIR, taxpayers may use one or more valuation methods to value their closing stock. They may use a cost valuation method for some stock and market selling value for other stock that has a value less than cost. Taxpayers may also use more than one cost valuation method to value closing stock. However, it is generally expected that taxpayers will apply the same cost valuation method to groups of similar or related items of trading stock. For example, a manufacturer might use cost to value most stock and discounted selling price for stock sold in a factory shop [see TIB vol 10:12 (December 1998) at 22].

Trading stock which consists of excepted financial arrangements, such as shares, must be valued at cost [s ED 1(1), see 1400.60].

Livestock which is held as trading stock (ie for dealing operations) is valued using the same rules as for other trading stock. However, all other livestock must be valued under subpart EC [see 430.60].

1400.30 Cost — high-turnover traders [ss EB 6, EB 7, EB 8, EB 12]

Cost may be used for valuing any trading stock. However, for the treatment of excepted financial arrangements [see 1400.60]. Cost must be determined according to NZ IAS-2: Inventories. This is intended to reduce compliance costs by enabling taxpayers to adopt for tax purposes stock valuations used in their financial statements. Taxpayers valuing closing stock using a cost valuation method must also comply with the consistency and disclosure requirements of NZ IAS-8: Accounting Policies, Changes in Accounting Estimates and Errors [s EB 12]. The New Zealand International Accounting Standards (NZ IAS) should be read in conjunction with the New Zealand Preface and the New Zealand Equivalent to the IASB Framework for the preparation and Presentation of Financial Statements (NZ Framework). These documents are available from the New Zealand Institute of Chartered Accountants (NZICA). NZ IAS-2 does not apply to work in progress under a construction project or financial instruments, or inventories held by producers of minerals or mineral products. Neither does it apply to biological assets and agricultural produce (see below).

NZ IAS-2 states that the cost of inventories is the total of the cost of purchase, cost of conversion and other costs incurred in bringing the inventories to their present location and condition. Cost of purchase includes (in addition to the actual cost of the goods themselves):

(a) Import duties and other purchase taxes (other than those which are subsequently recoverable);

(b) Transport and handling costs;

(c) Any other directly attributable costs of acquisition; and

(d) Deductions for immediate or deferred discounts (other than settlement discounts), rebates, and subsidies received.

Cost of conversion includes:

(a) The cost of labour (including any charges directly incurred in connection with such labour) and of subcontract work; and

(b) Other production costs.

Costs of conversion include a systematic allocation of those production overheads that relate to putting the inventories in their present location and condition. The systematic allocation of those production overheads must be based on the capacity of the production facilities. Overheads other than production overheads must be included as part of cost of inventory only to the extent to which they relate clearly to putting the inventories in their present location and condition. The cost of items of inventory segregated for specific projects and the cost of items of inventory that are not ordinarily interchangeable must be ascertained by using specific identification of their individual costs. The cost of all other items of inventory must be ascertained by using the first-in, first-out (FIFO) cost formula or the weighted average cost formula.

According to Inland Revenue, some of the costs to be included in trading stock under NZ IAS-2 (eg depreciation or repairs and maintenance), may be different from the amounts allowed for tax purposes. The
accounting values of costs such as depreciation are only relevant for tax purposes for calculating the value of closing stock. For all other purposes, the specific provisions in the ITA governing deductions will apply. NZ IAS-2 states that the cost of inventories includes the costs of purchase and other production costs. Costs that are directly and indirectly related to production must be included in cost. An example given in NZ IAS-2 of a directly related cost is labour. Indirectly related costs include fixed and variable production overheads. Examples given of fixed production overheads include depreciation and maintenance of factory buildings and equipment, and the cost of factory management and administration. Examples of variable production overheads include indirect materials and indirect labour. Consumables used in the manufacture of trading stock must be included in the cost, although consumables on hand do not fall within the definition of trading stock.

NZ IAS-2 is not explicit in addressing the dividing line between costs to be included that relate to bringing inventories to their present location and condition and selling expenses. At paragraph 16, it states that selling expenses are to be excluded from the cost of inventories, as are storage costs, unless those costs are necessary in the production process prior to a further production stage. This may cause an interpretation issue for transport costs incurred once the trading stock is within the control of the taxpayer. However, in practical terms, this aspect of NZ IAS-2 is being interpreted and applied currently. The costs included for financial reporting purposes will be acceptable for tax purposes, provided the financial reports apply NZ IAS-2. Practice may vary slightly between taxpayers and may change over time as accounting systems improve.

**Example 1 (Transport costs not included for financial reporting purposes):**
Company K is a furniture retailer. It has a nationwide chain of stores and a central warehouse. For any particular product, about 50 per cent of the stock will be delivered direct to the stores, with the balance dispatched to the central warehouse. The product from the warehouse is distributed around the country on a replenishment basis to replace stock in the stores as it is sold. Depending on customer requirements, stock may be moved from one store to another, from the store back to the warehouse for supply to another store, or from the warehouse to a store to fill a particular order. Company K has a fleet of its own delivery trucks and employs drivers. For financial reporting purposes, Company K does not include the cost of transport to and from the warehouse and stores in the cost of its inventory. It has never included these costs, and Company K’s auditors regard this as compliance with NZ IAS-2. As a practical matter, it would have great difficulty in identifying the costs which related to delivery of the stock, as the trucks are also used for delivery to customers once a sale has been made. For tax purposes, it is acceptable for Company K not to include the transport costs in the cost of its trading stock.

**Example 2 (Transport costs included for financial reporting purposes):**
Company U is a retailer with many retail outlets nationwide. It has a distribution centre from which all stock orders are coordinated. The deliveries are made from the distribution centre to the outlets for sale to the public. The distribution of stock from the distribution centre to the retail outlets is carried out by a firm which is contracted to Company U for this purpose. For financial reporting purposes, Company U includes the costs paid to the independent contractor for delivery of stock to the retail outlets in its cost of inventory. For tax purposes, Company U would also be required to include these transport costs in the cost of trading stock [see TIB vol 10:12 (December 1998) at 24-25].

Manufacturers or producers using a budgeted or standard cost method of cost allocation must allocate any variances (between the budgeted or standard costs and actual costs of production) between trading stock sold during the year and closing stock. This must be done on a pro rata basis. It is Inland Revenue policy that the apportionment may be made on a global basis and does not need to be further apportioned to raw materials, work in progress and finished goods, or other sub-classifications of trading stock. For operations with multiple activities or products, variances may be allocated according to a fair and reasonable method of apportionment (eg apportioning based on the cost of the stock on hand compared with the cost of goods sold). Other methods of apportionment that are reasonable and appropriate will also be accepted by Inland Revenue for tax purposes.

**Example 3:**
Company B manufactures children’s toys. During the year, Company B made three types of toys: X, Y, and Z. Budgeted production costs were $2,000,000, actual costs incurred were $2,400,000. In other words, Company B had an unfavourable budget variance of $400,000. Company B must pro-rate the budget variance between the cost of sales and the goods on hand at balance date. Company B has decided to pro-rate the variance based on the cost of goods sold compared with the cost of the stock on hand.
### Trading Stock

<table>
<thead>
<tr>
<th>Product</th>
<th>Cost per unit</th>
<th>Units sold</th>
<th>Units on hand</th>
<th>Cost of goods sold</th>
<th>Cost of goods on hand</th>
</tr>
</thead>
<tbody>

<tr>
<td><strong>Total</strong></td>
<td><strong>$2,500,000</strong></td>
<td><strong>635,000</strong></td>
<td><strong>635,000</strong></td>
<td><strong>$635,000</strong></td>
<td><strong>$635,000</strong></td>
</tr>
</tbody>
</table>

Allocation proportion = 635,000 ÷ (635,000 + 2,500,000) = 0.2025. Thus 20.25 per cent of the total variance is to be allocated to closing stock. Company B will absorb $81,000 (20.25% × $400,000) of the budget variance into the value of closing stock. The balance of the variance, $319,000, is attributable to goods sold [see TIB vol 10:12 (December 1998) at 26].

FIFO or weighted average cost must be used to assign costs to items of trading stock which are not separately identifiable (eg tubes of toothpaste). Where items of trading stock are separately identifiable (eg works of art) the use of FIFO or weighted average is optional. Other cost flow methods, such as last-in first-out (LIFO), cannot be used under any circumstances. The method of assigning costs when valuing closing stock for tax purposes must be the same as that used in the taxpayer’s financial statements.

High-turnover traders are required to have a valuation of trading stock which is not materially different from that prepared under NZ IAS-2 [s EB 6]. According to Inland Revenue, this means that taxpayers must consider materiality in the context of trading stock alone, instead of in the context of the financial statements as a whole. If materiality was considered in the context of the financial statements, material errors in the valuation of trading stock could be offset by other errors in the financial statements [see TIB vol 10:12 (December 1998) at 24]. The basic principle of materiality, under paragraph 11 of NZ IAS-1: Presentation of Financial Statements, states “omissions or misstatements of items are material if they could, individually or collectively, influence the economic decisions of users taken on the basis of the financial statements. Materiality depends on the size and nature of the omission or misstatement judged in the surrounding circumstances. The size or nature of the item, or a combination of both, could be the determining factor.”

1. **Valuation of biological assets and agricultural produce [s EB 6(1B)]**

Taxpayers who value their trading stock in accordance with NZ IAS-41 for financial reporting purposes must value their closing stock at cost and include allocated costs so that the value is not materially different from the value obtained by applying NZ IAS-2 (other than paragraph 20).

NZ IAS-41: *Agriculture* is the New Zealand equivalent to International Accounting Standard IAS-41: *Agriculture* and covers the valuation of both biological assets and agricultural produce at the point of harvest. Biological assets include animals, trees and plants. Agricultural produce includes such things as wool, logs, milk, carcasses and fruit. It does not include products that have been processed following harvest such as wine, cheese or processed fruit.

Biological assets are required to be valued at fair value as at each reporting date. However, entities which qualify for differential reporting concessions are permitted to use national average market values or national standard cost [see 430.40 and 430.45] as a proxy for fair value.

Agricultural produce is required to be valued at fair value less estimated point-of-sale costs at the point of harvest. Entities which qualify for differential reporting concessions are permitted to use either fair value or cost. Point-of-sale costs include commissions payable to brokers and dealers, levies payable to regulators and commodity exchanges, transfer taxes and duties. They do not include transport and other costs to get the assets to market.

The requirements for the valuation of biological assets and agricultural produce apply from the earlier of the 2007-2008 income year or the first income year for which the taxpayer adopts IFRS for financial reporting purposes.
Trading Stock

1400.35  **Cost — low-turnover traders** [ss EB 15, EB 16, EB 17, EB 18, EB 22, EB 23]

Low-turnover traders valuing trading stock at cost may either follow NZ IAS-2: Inventories [see 1400.30 for high-turnover traders], or they may use the following simplified method.

Low-turnover traders that manufacture or produce trading stock must include the following costs of production when determining cost:

(a) Direct and indirect materials;
(b) Direct and indirect labour;
(c) Utilities;
(d) Repairs and maintenance to factory plant;
(e) Rent of factory plant.
(f) Depreciation of factory plant.

If a low-turnover trader prepares financial statements that include costs additional to those listed above, the taxpayer must also include those costs in the value of closing stock for tax purposes. This must be done consistently from year to year. Low-turnover traders are not required to allocate any variances between budgeted and actual costs of manufacture to closing stock.

A low-turnover trader that complies with NZ IAS-2 when valuing closing stock at cost must also comply with the consistency and disclosure requirements of NZ IAS-8: Accounting Policies, Changes in Accounting Estimates and Errors. Low-turnover traders that do not comply with GAAP must be consistent from year to year in:

(a) The cost valuation method chosen;
(b) The use of market selling value, if it is greater than cost;
(c) The use of a cost-flow method (FIFO or weighted average);
(d) The extent to which indirect costs are included in the cost of manufacture or production; and
(e) The method of calculating a discounted selling price.

Changes in relation to the above are allowed if it is justified by sound commercial reasons (the advancement, deferral, or reduction of an income tax liability is not a sound commercial reason) or the change is required by another provision of the trading stock regime. A low-turnover trader who makes a change must keep details of the change, and the reasons for it.

Trading stock other than that manufactured or produced by the taxpayer must include the following costs in the value of closing stock:

(a) The purchase price;
(b) Direct transport and insurance costs incurred to bring the trading stock to its present location and condition.

Low-turnover traders must use either FIFO or weighted average cost to assign costs to items of trading stock which are not separately identifiable. They must use the chosen method consistently from year to year.

Taxpayers whose turnover for the income year does not exceed $1,300,000 are permitted to use the value of opening stock as being the value of closing stock, provided that the taxpayer reasonably estimates that the true value of closing stock is less than $10,000.

1400.40  **Discounted selling price** [ss EB 9, EB 19]

(1)  **Retailers — high-turnover traders**

Retailers may value closing stock at discounted selling price (DSP) if they use this method in their financial statements. DSP for each department or category of goods is the total of the retail selling prices of the goods less the normal gross profit margin for the department or category of goods.
“Normal gross profit margin” must be calculated in accordance with NZ IAS-2: Inventories. For example, if stock has been reduced from normal retail price, a corresponding adjustment in the normal gross profit margin will be required. In calculating the normal gross profit margin, taxpayers must include all costs required to be included under ss EB 6 to EB 8 [see 1400.30 and 1400.35]. The normal gross profit margin for each department or category of goods must be recalculated for each income year.

(2) Retailers — low-turnover traders

Low-turnover traders that are retailers may value closing stock at DSP if:
(a) They do not prepare financial statements; or
(b) They prepare financial statements and value that stock using DSP.

The same requirements as for high-turnover traders apply unless annual turnover is $1 million or less (see below).

(3) Retailers — turnover of $1 million or less

Retailers with an annual turnover of $1 million or less may calculate DSP by discounting the total of the retail selling prices of all closing stock by the average gross profit margin for all trading stock that is valued at DSP. This concession means that the overall gross profit margin for the business can be used rather than individual margins for each department or category of goods.

(4) Non-retailers — high-turnover traders

High-turnover traders other than retailers may also use DSP if they use this method in their financial statements. The DSP for each category of goods is the total of the market selling values of the goods in each category less the normal gross profit margin for that category. “Market selling value” is explained in 1400.50. The normal gross profit margin for each category of goods must be recalculated for each income year. In calculating the normal gross profit margin, taxpayers must include all costs required to be included under ss EB 6 to EB 8 [see 1400.30 and 1400.35].

(5) Non-retailers — low-turnover traders

Low-turnover traders that are not retailers may value closing stock at DSP if:
(a) They do not prepare financial statements; or
(b) They prepare financial statements and value that stock using DSP.

The same requirements as for high-turnover traders apply.

(6) Nursery stock

The CIR has issued guidelines for the use of DSP for the valuation of nursery stock [see TIB vol 13:11 (November 2001) at 68], as follows:
(a) Mature plants: The DSP for each category is calculated by multiplying the selling price of the plant by the DSP value. The five categories which fall under this head and the percentage by which the selling price is multiplied are as follows:

<table>
<thead>
<tr>
<th>Category</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bedding plants</td>
<td>58%</td>
</tr>
<tr>
<td>House plants and roses</td>
<td>55%</td>
</tr>
<tr>
<td>Liners/plugs</td>
<td>52%</td>
</tr>
<tr>
<td>Shrubs and perennials</td>
<td>48%</td>
</tr>
<tr>
<td>Trees</td>
<td>42%</td>
</tr>
</tbody>
</table>

Example:
A nursery has 100 mature shrubs on hand at balance date. The shrubs retail at $10 each. The value of the stock for trading stock purposes is $480 (100 plants × $10 × 48%).
(b) **Immature plants**: The DSP of immature plants is calculated by multiplying the DSP of a mature plant by the ratio of the whole years of completed growth to the number of whole years that the plant takes to reach maturity.

**Example:**
A nursery has 100 three-year-old trees and 200 five-year-old trees of a particular variety. The variety of tree takes 10 years to reach maturity at which point they retail for $25. The value of the three-year-old trees for trading-stock purposes is $315 (100 × $25 × 42% × 3/10). The value of the five-year-old trees is $1,050 (200 × $25 × 42% × 5/10).

(c) **Over-mature plants**: The value of plants past their prime or whose value drops is calculated by multiplying their revised market value by the DSP percentage. Where plants are scrapped, their value for trading stock purposes is nil.

Growers are at liberty to calculate their own DSPs but will need to keep records to justify their calculations. Taxpayers not eligible to use the DSP method are required to value their trading stock at cost.

**1400.45 Replacement price** [ss EB 10, EB 20]

(1) **High-turnover traders**
Taxpayers may use replacement price to value closing stock if they use this method in their financial statements. The replacement price of an item of trading stock is the market value (exclusive of GST), for the acquisition of that item on the last day of the income year. If there is no such replacement price (eg seasonal goods), the last price paid for the item by the taxpayer during the income year is taken as the replacement price.

(2) **Low-turnover traders**
Low-turnover traders may value closing stock at replacement price if:
(a) They do not prepare financial statements; or
(b) They prepare financial statements and value that stock using replacement price.

The replacement price of an item, for low-turnover traders, is either the market value of the trading stock on the last day of the income year, or the last price paid by the taxpayer for that item during the income year.

**1400.50 Market selling value — high-turnover traders** [s EB 11]
High-turnover traders may use market selling value to value closing stock only if market selling value is less than cost. In addition, market selling value may only be used if the taxpayer has reasonable evidence to substantiate that value.

Market selling value is the gross amount (exclusive of GST), that the taxpayer normally expects to receive from the sale of an item of trading stock in the ordinary course of business, less the following amounts:
(a) Estimated costs of completion;
(b) Expected selling costs (transport, insurance, sales commissions and sales discounts), if those costs are typically incurred by the taxpayer.

Selling costs can only be deducted by taxpayers that prepare financial statements if those costs have been taken into account in calculating net realisable value in the taxpayer’s financial statements.

Market selling price is the price received in the ordinary course of business. Inland Revenue considers that the meaning of “ordinary course of business” takes into account taxpayers’ business decisions to clear or exit stock lines for a variety of reasons, including seasonal factors and fashion and technology changes. The act of quitting or intending to quit a particular stock line arises as part of the taxpayer’s ordinary course of business. The relevant price at which a taxpayer can clear or exit stock is the market selling value. Sales in the ordinary course of business will also include sales in secondary markets, such as sales of goods that have been traded-in. Therefore sales in the ordinary course of business will include clearance sales when, for example, stock is sold at discount rates. However, the ordinary course of business will not include sales that are not at arm’s length or that are not on an open market (eg as sales made to employees at cheap rates). Market selling value must be calculated on an item-by-item basis. If there are multiple items of stock on hand...
to be valued, the market selling value will be the sum total of the individual items [see TIB vol 10:12 (December 1998) at 28].

There are no special provisions for trading stock which is slow moving or affected by obsolescence. Such stock may be valued at market selling value only if the offering price is less than cost. Taxpayers will not be able to realise (for tax purposes) any loss from holding excess stocks until either the stock has an objective market selling value, or it is sold.

Raw materials and work in progress may be valued at market selling value only if they are to be sold in their unprocessed or unfinished form.

(1) Goods sold into different markets

When the same goods are sold in different markets at different prices, the relevant market selling value will depend on the circumstances. If trading stock for sale into a particular market can be identified or is committed, it should be valued at the relevant value for that market. If the trading stock for sale into a particular market cannot be separately identified, taxpayers should use the following guidelines to make a reasonable estimate of the market selling values for their markets:

(a) Goods available for sale in any one of several markets should be valued at a weighted average price. The weighting should be based on the most appropriate of either the percentage of actual sales or the anticipated sales volume (not taking into account abnormal fluctuations) into each market. The market selling value is the selling price at balance date.

(b) If stock is predominantly available in one market, taxpayers may value all of the stock using the relevant market selling value in that market.

(c) For actual or prospective contracts in foreign currency, taxpayers should use the amount committed, or if it is not yet committed, use the spot rate on balance date [see TIB vol 10:12 (December 1998) at 29-30].

(2) Evidence to support market selling value

A taxpayer must have reasonable evidence to substantiate the market selling value of an item of trading stock. If such evidence is not available, the taxpayer must use a cost valuation method.

According to Inland Revenue, reasonable evidence includes offering prices of goods and actual sales for a reasonable period before and/or after balance date, but before the tax return is prepared. If stock is seasonal and no sales are expected around balance date, the last offering prices for a reasonable period during the year would be acceptable. If either price fluctuations when the market is volatile or exchange rate variations have led to goods being sold for a range of values, the evidence should be the best estimate of market selling value. Taxpayers may have difficulty determining and substantiating market selling value in some circumstances. This may arise when there is no open or active market in the good, or when the stock has not sold for some time, and the taxpayer has reason to believe the goods will not sell at their current offering prices. If this information is not available, and the taxpayer wants to use market selling value, the taxpayer may substantiate the market selling value by a valuation which meets all of the following criteria:

(a) It is carried out by a qualified person (in some circumstances, this person may be employed by the taxpayer);

(b) It is for tax purposes;

(c) It uses the definition of market selling value (and not a net realisable value concept set out in NZ IAS-2); and

(d) It is exclusive of GST.

A proposed sale of large amounts of stock to be held by tender will not substantiate a market selling value if the selling price is not known. The market selling value must have an objective basis [see TIB vol 10:12 (December 1998) at 29].
1400.55 Market selling value — low-turnover traders [s EB 21]

Low-turnover traders may use market selling value whether it results in a value higher than or lower than cost. If market selling value is lower than cost, the valuation must be supported by reasonable evidence. If reasonable evidence is not available, cost must be used. According to the CIR, reasonable evidence for low-turnover traders would be a documented best assessment of market selling value. In this assessment, the taxpayer would be required to document the valuation and state the factors considered in arriving at market selling value, including any recent sales and current offering prices [see TIB vol 10:12 (December 1998) at 32].

If market selling value is higher than cost, the only restriction is that the low-turnover trader must use this method consistently from year to year. Since closing stock is added to gross income, it is unlikely that taxpayers would choose to use a value higher than cost unless there is no practicable alternative.

1400.57 Consumable aids and spare parts [s EA 3]

Consumable aids are excluded from the definition of trading stock for tax purposes and are therefore not covered by the trading stock rules in subpart EB. The term “consumable aids” is not defined for tax purposes, although the comparable term “consumable stores and supplies” is defined in paragraph 4.5 of FRS-4: Accounting for Inventories as aids to manufacture or service, such as fuels and oil, which are absorbed in the production of goods and services for realisation and which do not become part of the finished product or service. Consumable aids are not trading stock because they are consumed or rendered worthless in the manufacturing or production process and do not become an identifiable part of the finished product.

For financial reporting purposes, consumable stores and supplies are included in the cost of inventories [see FRS-4, paragraph 4.1]. If the trading stock valuation figure in the financial statements is to be used for income tax purposes, an adjustment to remove the value of consumable aids is needed.

Although the value of consumable aids on hand at year end is not required to be taken into account under the trading stock rules, if the cost of consumable aids on hand at the end of the taxpayer’s income year exceeds $58,000, it must be added back to income as prepaid expenditure [see 1140 PREPAYMENTS].

Spare parts are also excluded from the definition of trading stock for tax purposes unless they are held for sale or exchange in the ordinary course of business. Spare parts held for meeting warranty requirements will be trading stock because they are held for exchange. Spare parts held for maintaining plant where those spare parts are treated as inventory under FRS-4 should either be depreciated (when appropriate) or be dealt with under the prepaid expenditure rules [see 1140 PREPAYMENTS]. If the trading stock valuation figure from the financial statements (prepared under FRS-4), is to be used for income tax purposes, an adjustment will be required to remove the value of spare parts.

1400.60 Excepted financial arrangements [s ED 1]

An “excepted financial arrangement” is a financial arrangement which is excluded from the application of the financial arrangement rules. It includes shares, options, leases and short term trade credits [see 470.25].

“Revenue account property” is property that falls within any one or more of the following categories:

(a) Property that is trading stock of the person; or

(b) Property that, if disposed of for valuable consideration, would produce income for the person other than income under ss EE 48 (depreciation recoveries), FA 5 (Assets acquired or disposed of after deductions of payments under lease), or FA 9 (Lessee acquiring asset when lease ends); or

(c) Property that is an emissions unit of the person.

It does not include depreciable property.

Excepted financial arrangements which are held as trading stock or are revenue account property must be valued at cost. When more than one of the same type of excepted financial arrangement is held (eg more than one parcel of the same type of shares), the FIFO or weighted average cost methods of assigning costs must be used. Low-turnover traders who do not comply with generally accepted accounting practice must apply the chosen method of assigning costs consistently from year to year and may change between FIFO and
weighted average only if the change is justified by sound commercial reasons. The advancement, deferral or reduction of an income tax liability is not a sound commercial reason. High-turnover traders who do comply with generally accepted accounting practice must comply with the consistency and disclosure requirements of NZ IAS-8: Accounting Policies, Changes in Accounting Estimates and Errors.

Excepted financial arrangements held as trading stock may be valued at nil for tax purposes if they:
(a) Have no current or likely future market value; and
(b) Have been written off by the taxpayer as worthless (eg the shares of companies placed in liquidation, under statutory management, or de-listed from the stock exchange).

1400.65 Insurance receipts [s CG 6]

Insurance, indemnity, compensation, or damages received by a taxpayer for the loss or destruction of, or damage to, any trading stock must be included in the taxpayer’s income if the cost of the trading stock has, in any income year, been allowed as a deduction (other than a depreciation deduction). For these purposes, “trading stock” [see 1400.15] also includes anything produced, manufactured, acquired, or purchased for any purpose ancillary to the business of manufacture or production of goods for sale or exchange.

1400.70 Disposal of trading stock [ss CB 2, EB 24]

Derivation of the income from the sale of trading stock occurs when a legally enforceable debt arises, or the right to be paid otherwise crystallises [see Public ruling BR Pub 04/06 (expired 31 March 2008), TIB vol 16:5 (July 2004) at 17-18].

When trading stock is sold or otherwise disposed of along with other assets of a business (eg on the sale of the whole or a part of a business), the consideration received or receivable by the vendor for the trading stock must be taken into account in determining the vendor’s income for the year. The purchaser is deemed to have acquired the trading stock for the same consideration. This also applies when a share or interest in trading stock is sold or otherwise disposed of [s CB 2] Special rules apply to trading stock transferred to an administrator or executor on the death of a taxpayer and to any subsequent transfer to a beneficiary of the estate [see 1420.197].

The date of sale or disposition differs, depending on whether a clearly expressed intention of the parties exists as to when property in the goods is to pass:
(a) If such an intention is evident from the terms of the contract, the conduct of the parties, and the circumstances of the case, the date of sale or disposition is the date on which the parties intended property in the goods to pass.
(b) If no such intention can be determined, the date of sale or disposition is determined according to the appropriate statutory presumption contained in s 20 of the Sale of Goods Act 1908. In short:
(i) If there is an unconditional contract for goods that are specific and in a deliverable state, it is the date on which the contract becomes unconditional;
(ii) If the vendor must do something to make such goods deliverable, it is the date on which such action is completed, and the buyer is notified;
(iii) If the vendor must weigh, measure, or test such goods in order to ascertain the selling price, it is the date on which such action is completed and the buyer is notified;
(iv) If goods are delivered to a buyer on “sale or return” or similar terms, it is the time at which the buyer signifies approval or retains the goods without notifying rejection within an agreed or reasonable time-frame;
(v) If unascertained or future goods are sold by description, it is when the goods are in a deliverable state and unconditionally appropriated to the contract by either party with the assent of the other.

When trading stock is sold together with other assets of a business, the total consideration must be apportioned on the basis of the assets’ relative values. This consideration apportioned to the trading stock is also deemed to be the price paid for the trading stock by the purchaser. Any trading stock disposed of other than by sale...
or by transfer under a relationship agreement is deemed to have been sold for a consideration equal to its market value at the date of disposal. Similarly, any trading stock sold for a non-cash consideration is deemed to have been sold for a consideration equal to its market value at the date of disposal. These provisions also apply to the sale or other disposition of a share or interest in trading stock sold together with other assets of a business. The section applies whether or not the entire interest in the asset or assets is disposed of or whether the disposal is of a partial interest. It also applies whether or not the disposal is to another person, such as where trading stock is taken by a sole trader for personal consumption.

For the purposes of s FB 4, “trading stock” is defined as:

(a) Anything manufactured or produced;
(b) Anything acquired or purchased for purposes of manufacture, sale, or exchange;
(c) Livestock;
(d) Timber;
(e) Any right to take timber;
(f) Any other real or personal property sold or disposed of where the business of the taxpayer comprises dealing in such property or the property was acquired for the purpose of resale;
(g) Anything for which expenditure is incurred after 31 July 1986 and which, if possession of it were taken, would be trading stock.

Financial arrangements to which the financial arrangement rules apply are excluded from the definition of trading stock for these purposes.

The creation or grant of any right to take timber is treated as a sale or other disposition of trading stock [see item (d) in the above definition].

Where land with standing timber is sold or otherwise disposed of, the sale or other disposition is deemed to include timber as trading stock, except to the extent to which the timber is:

(a) Ornamental or incidental trees;
(b) Subject to a forestry right registered under the Land Transfer Act 1952; or
(c) Subject to a profit à prendre granted before 1 January 1984 [s EB 24].

1400.75 Sale of trading stock for inadequate consideration [ss GC 1, GZ 3]

When trading stock is sold or otherwise disposed of for no consideration, or for a consideration that is less than the market price, the following provisions apply:

(a) The trading stock is deemed to have been sold at market price at the date of sale or disposition.
(b) The price the trading stock is deemed to have realised under (a) is treated as income of the vendor.
(c) The purchaser is deemed to have purchased the trading stock at the price it is deemed to have realised under (a).

“Trading stock” means, for the purposes of s GC 1:

(a) Anything produced or manufactured;
(b) Anything acquired or purchased for the purposes of manufacture or disposal;
(c) Livestock;
(d) Timber;
(e) Any right to take timber;
(f) Any land, if its disposal would produce income under any of ss CB 6 to CB 15 [see 880 LAND SALES]; and
(g) Anything which would be trading stock if possession of it were taken.
Trading stock does not include any financial arrangement to which the financial arrangement rules apply. Neither does it include a share disposed of by a share user to a share supplier, or vice versa, under a share-lending arrangement.

The creation or grant (other than in favour of a proprietor or grantor) of a right to take timber is treated as a sale or other disposition of trading stock.

Where land with standing timber is sold or otherwise disposed of, the sale or other disposition is deemed to include timber as trading stock, except to the extent to which the timber is:

(a) Ornamental or incidental trees;
(b) Subject to a forestry right registered under the Land Transfer Act 1952; or
(c) Subject to a profit a prendre granted before 1 January 1984.

The above provisions also apply to any share or interest in any trading stock (other than land with standing timber that is subject to a timber right) sold or otherwise disposed of for inadequate consideration. They do not apply to:

(a) Trading stock transferred under a relationship agreement;
(b) Trading stock that is donated or supplied to a person for less than market value for use in a farming, agricultural or fishing business that is affected by a self-assessed adverse event, provided that the donor or supplier is not an associated person of the recipient; or
(c) Trading stock that is disposed of in the disposal of an emissions unit under any of the following circumstances:
   (i) Surrender of a unit under the Climate Change Response Act 2002;
   (ii) Transfer of a unit to the Crown under a forest sink covenant; or
   (iii) Transfer of a forest land emissions unit from the person who receives it from the Crown to another person as a party to a forestry rights agreement and as required under the agreement in relation to the allocation of income or emissions units between the two parties.

Section GZ 3 provides an exemption from the operation of s GC 1 where trading stock is donated or sold for below market value in response to the Canterbury earthquakes. For the exemption to apply, the disposal of the trading stock must be to a non-associated person, be for the purpose of relief from the adverse effects of the Canterbury earthquake, and be made in the period 4 September 2010 to 31 March 2012. A provision has also been inserted in the Estate and Gift Duties Act 1968 (s 73B) to ensure that these disposals of trading stock do not constitute a gift.

**1400.80 Transfer of trading stock within wholly-owned group** [ss EB 5, ED 2, CD 28]

(1) **Trading stock [s EB 5]**

Special rules apply where trading stock (other than an excepted financial arrangement) is transferred between companies in a wholly-owned group. Section EB 5 allows the company holding the stock at balance date (“Company B”) to value it at the cost to the group company which originally acquired it (“Company A”). The following conditions must be met:

(a) At all times since the trading stock was originally acquired, it has been held by a company which is a member of the same wholly-owned group and which is resident in New Zealand;
(b) At the end of the income year, both Company A and Company B remain members of the same wholly-owned group; and
(c) Company A and Company B have the same balance date, or have the CIR’s approval to use different balance dates on the basis that this is necessary to prevent the material distortion of net income that would result from gross income and allowable deductions for a single business cycle being reported in different income years.
If Company A and Company B cease to be members of the same wholly-owned group, Company B is deemed to have sold the trading stock for its market value and to have immediately reacquired it at the same price. Any profit or loss arising on the sale of the trading stock is thus realised for tax purposes when the trading stock is transferred out of the wholly-owned group of companies.

If the trading stock has become part of, or has been absorbed into, some other property, and its market value cannot be separately determined, the consideration for the sale is deemed to be the market value of the trading stock when it was acquired by Company B.

(2) **Excepted financial arrangements** [ss ED 2, CD 28]

When an excepted financial arrangement (eg shares) held as trading stock or revenue account property, with a market value of less than cost, is sold or otherwise transferred from one company to another in a wholly-owned group, the transfer is deemed to occur at cost. If the company holding this excepted financial arrangement ceases to be a member of the group, the company is deemed (on the date it leaves the group), to have sold the excepted financial arrangement at market value and then to have immediately reacquired it at the same price. The recognition of any profit or loss on the sale of the excepted financial arrangement is thus deferred until it exits the group of companies. The transfer of the excepted financial arrangement does not trigger the dividend rules. However, this rule applies only to sales, disposals, or distributions of excepted financial arrangements made between New Zealand resident companies. Where excepted financial arrangements enter or leave the New Zealand tax base, the transaction is treated as taking place at market value.

**TaxNote:** These rules do not apply to the transfer of an excepted financial arrangement under a share-lending arrangement.

**1400.85 Trading stock distributed to shareholders** [s FC 1]

When a company distributes trading stock to a shareholder or an associated person of a shareholder, the transfer occurs at market value for both the company and the shareholder.
Chapter 1410
Travelling Expenses

1410.10 Travelling expenses
To be deductible, travelling expenses must be necessarily incurred in carrying on a business for the purpose of deriving gross income for any year.

1410.11 Employee’s travel between home and place of work
A cash allowance paid by an employer to an employee for this purpose is taxable in the employee’s hands as a benefitting allowance. For PAYE purposes the allowance should be added to the employee’s wage or salary and the appropriate tax deduction made from the total. Inland Revenue has power to exempt cash travelling allowances paid to employees to the extent that the allowances reimburse the employees for additional transport costs incurred in travelling between home and work for the benefit or convenience of the employer [see 330.21].

1410.12 Dual purpose journeys
Generally, the cost of travel between the taxpayer’s home and place of work is of a private nature, and not deductible for tax purposes. The present practice for travelling from home to work is as follows:
(a) If a vehicle is used merely to take the taxpayer from home to place of work the expenses are non-deductible;
(b) If, in the course of travel between home and work, the taxpayer engages in an activity which makes a substantial contribution to the business carried on at home, as in the case of a farmer delivering livestock on the journey to work, the vehicle serves a dual purpose, and the tax position would be:
   (i) The cost of getting the taxpayer from home to place of employment is not deductible as being of a private nature; and
   (ii) The cost incurred in gaining the income from the business carried on at the place of residence is deductible.

An apportionment of the expenses should be made in the case of dual purpose expenditure of this kind.

In Case 57 (1977) 21 CTBR (NSW) 639 the taxpayer was a livestock farmer and had a salaried employment away from the farm. He claimed deductions for travelling costs on the grounds that:
(a) He travelled between two places of income derivation;
(b) He frequently carried, in going to and from work, large items such as stock, bales of wool, etc; and
(c) On some occasions he purchased small items for the farm, e.g. nails, on his way home.
The expenses in categories (a) and (c) were disallowed, but category (b) was allowed in full because the business character of the journeys was considerable and the private character incidental. The expenses were claimed against the farming operations, not against the salary.

In TRA Case H50 (1986) 8 NZTC 391 an independent contractor rafting guide paid only for work done on the river could not validly claim deductions for expenses of travelling from his home to the river.

In TRA Case E84 (1985) 5 NZTC 59,645 a taxpayer on two occasions travelled some 200 miles to discuss with his taxation consultant matters relating to provisional tax, penal tax, and overseas tax credits. The TRA disallowed the deduction for expenses on the basis that they were only remotely connected with the calculation of the taxpayer’s income. To be deductible under s DB 3 the expenses would have been principally, if not exclusively, incurred in connection with the calculation of income. In this case it was at best a secondary and remote purpose and then only related to preparatory matters for the calculation.

In TRA Case E87 (1985) 7 NZTC 1,353 a freelance actor was allowed to deduct the cost of travelling from her home in the city to other centres to attend auditions and perform, as the expense of travel to further her employment opportunities was necessarily incurred in carrying on her business for the purpose of gaining income.

In TRA Case H27 (1986) 8 NZTC 264 a retired couple with $130,000 lent on mortgage with loans continually renewed and re-advanced over a lengthy period. They were held to be carrying on a business enabling the deduction of vehicle expenses incurred in meeting prospective borrowers and inspecting properties over which securities were held.

In TRA Case H42 (1986) 8 NZTC 353 a private company was allowed deduction of 50 per cent of running costs for a vehicle but a deduction claim for 50 per cent of repair costs arising from an accident where the principal shareholder was using it for private purposes was disallowed.

In TRA Case L57 (1989) 11 NZTC 1,326 overseas travel and accommodation costs were deductible to a professional artist.

1410.20 Travelling expenses can be capital expenditure in certain cases

Travelling expenses may be of a capital nature, eg when incurred with a view to purchase plant and other fixed capital. Similarly, an overseas trip undertaken to establish new agencies would generally be not deductible. However, where the trip is undertaken by a taxpayer who already has a number of established agencies, mainly to contact existing principals, the claim would be allowed, even if, during the trip, the taxpayer secures further agencies, provided only a moderate extension of the established structure of the business is involved. Where an established business sends its works manager or engineer overseas to make a general survey of new machines, new processes, factory layout etc, the claim is allowed if the trip is not made to buy a specific machine. If it is, the cost of the trip should be capitalised as part of the cost of the machine and depreciation claimed at the appropriate rate.

1410.30 Overseas travel

Trips undertaken to establish new markets or selling agencies, or to grant licences to manufacture overseas, generally qualify as a deduction. Where a company’s business necessitates regular overseas trips, the representatives of the company should contact Inland Revenue and discuss the details, which should be supplied. Generally, where there is an established pattern of travel Inland Revenue is satisfied with the following:

(a) Name(s) of those travelling;
(b) Reason for trip;
(c) Total cost of trip; and
(d) Estimated amount (if any) applicable to holiday and other private purposes.

If the object of the travelling is to acquire stock-in-trade, or to enter into contracts in the ordinary course of business the expenditure incurred is deductible. The cost of bringing employees to New Zealand to establish...
a new business is not deductible but if the employees are brought here to engage in an established business the expenses incurred would, in general be allowed.

The CIR’s policy on the deductibility of foreign travel expenses is set out in TIB vol 7:2 (August 1995) at 13-15.

1410.31 Isolating the private component of travelling expenses

Some entertainment or pleasure may be taken during what is predominantly a business trip, as for instance, when a business trip to Australia coincides with the running of the Melbourne Cup. In these cases, the dominant purpose of the trip determines the deductibility of the expenditure, and where it is clear that the cost of the entertainment was not substantial and does not result in an extension of the time taken for the trip, no adjustment is sought by Inland Revenue. However, where the cost of the entertainment is substantial or the trip has been extended because of personal or entertainment considerations, some adjustment is normally applied.

Conducted tours are sometimes organised by business organisations, wholesalers, retailers, etc to study overseas methods of design, production, selling, and administration. Taxpayers travelling with these organised tour parties may be allowed a proportion of the expenses which Inland Revenue considers relate to the business aspects of the tour. Both local and national groups seeking prior approval of tour and conference deductions should apply to Inland Revenue in the district where the principal organiser of the tour is based.

Inland Revenue considers individual claims when participants furnish their annual returns of income. Each claim is treated on its merits. Only those expenses that are necessarily incurred in deriving gross income are allowable as a deduction. Irrespective of any prior generally approved portion of expenses set as a deduction, any taxpayer may be entitled to more or less than that portion, depending on the circumstances. Participants need to keep receipts and full details of expenditure. On returning to New Zealand, they should maintain the following details:

(a) Name of organisation which arranged the tour;
(b) Itinerary;
(c) Cost of fares, accommodation, and other expenses;
(d) Extent of the holiday or pleasure aspect of the trip; and
(e) Whether the taxpayer was accompanied by spouse [see 960.10] and/or relatives and if so, the total costs relating to the spouse and/or relatives.

1410.32 Accompanying spouse

Generally, the expenses of an accompanying spouse [see 960.10] going overseas are allowed only if one or more of the following factors is present:

(a) The accompanying spouse is employed for a time in the business, is engaged full-time in business activities while overseas, and Inland Revenue is satisfied this person is qualified and competent to carry out the activities allotted to him or her. Consideration would be given to a claim where the accompanying spouse is not a full-time employee of the firm, but the goods handled by the firm are those where the spouse has influence, eg an accompanying wife could provide invaluable judgment for a business dealing in women’s fashions, millinery, jewellery, etc.

(b) Because of the taxpayer’s state of health, it is essential that the spouse is also travelling. A medical certificate is required to substantiate such claims.

(c) Where the travel is connected with an overseas association that expects a spouse to accompany the taxpayer. For example, the husband is employed by a New Zealand concern which is part of, or has direct associations with, an overseas organisation, and it is shown that there is a past pattern that the presence of spouses is expected at overseas conferences etc.

In TRA Case K75 (1988) 10 NZTC 602, travelling expenses incurred for wives accompanying publishing company executives to international and local conferences and seminars were held to be
Travelling Expenses

1410.32(1)

deductible. The objectives of the wives’ travel were dominantly business and were part of or incidental to the company’s business. Wife support enabled the husbands to carry out their employer’s business. Sufficient nexus existed between the expenditure and the business of the husbands’ employer.

(d) The accompanying person is the spouse of a professional taxpayer (ie medical practitioner, lawyer, engineer etc) and attends an overseas conference with a taxpayer’s spouse who:

(i) Is the leader of the New Zealand delegation to the conference;
(ii) Is required to present a paper at the conference; or
(iii) Is a member who is the only accredited delegate at the conference.

(1) Details required

Where the accompanying spouse’s expenses are claimed, the following details need to be maintained:

(a) The spouse’s qualifications for the work undertaken.
(b) Copies of any correspondence with overseas firms regarding the proposed visit of husband and wife prior to departure.
(c) Copies of resolutions (if any), appointing the accompanying spouse as an official adviser, or to a similar position, for the duration of the trip.
(d) A full itinerary. Details of appointments in each place are required. It is not sufficient to simply state the name of the overseas country or town visited, and the duration of the visit.
(e) Costs of fares, accommodation, and other expenses.

1410.33 Barristers’ and solicitors’ triennial conferences

Actual and reasonable expenses incurred by members of the legal profession in attending the barristers and solicitors triennial conferences are allowed. No deduction for expenses incurred for accompanying spouses [see 960.10] is allowed, except for the spouse of the president of the New Zealand Law Society, and the spouses of those members who present papers. When the president of the society does not attend as the New Zealand leader at an approved overseas conference the expenses of the spouse of the practitioner appointed to deputise for the leader is allowed. Any private or holiday element in the trip is not deductible.

1410.34 Barristers’ and solicitors’ legal conferences overseas

Reasonable travel, accommodation and incidental expenses incurred in attending overseas conferences are deductible only if the member attending is an accredited representative of the New Zealand Law Society. Any deduction should be adjusted for any holiday or private element. Where the dominant purpose of the overseas trip is the attendance at a conference, a greater proportion of the expenses is allowed than if the purpose of the trip is predominantly holiday.

A more liberal attitude is adopted for members attending conferences in Australia. In addition to the accredited representatives of the New Zealand Law Society, it is expected that other members would attend, in which case expenses may be claimed, although the extent to which some adjustment may be necessary for holiday or private expenditure is decided on the same basis as conferences beyond Australia. Those expenses of accompanying spouses [see 960.10] to overseas conferences are not allowed whether to Australia or elsewhere, except in the circumstances outlined above.

1410.40 Establishment of business

Travelling expenses in the nature of establishment expenses are not allowable as a deduction. In B v Commissioner of Taxes (1940) MCD 426 a company commencing business in New Zealand incurred considerable expenses in bringing trained employees from England to form a nucleus staff in New Zealand and claimed to deduct the expenses in the year incurred. It also claimed a deduction for expenses incurred in sending New Zealand employees to England for specialised training. The expenses were disallowed on the grounds that the expenditure was incurred to secure an advantage beyond the year in which the expenditure took place and was therefore expressly precluded as a deduction by the then s 112 [now s DA 2]. The Court
upheld the assessment. However, in the case of an established business, where a taxpayer makes a regular practice of sending employees abroad for training, such expenses are deductible.

**1410.41 Shareholder travelling to annual meeting of company**

In *TRA Case B41* (1976) 2 NZTC 60,341, (1976) 1 TRNZ 642 a shareholder with a substantial holding in an Australian company claimed travelling expenses for trips to Australia to examine the company’s operations and to attend the annual general meeting in an endeavour to persuade the directors to adopt a more generous dividend policy. He claimed to have been instrumental in causing the directors to make a bonus issue but there was no other evidence of a change in the dividend policy of the directors. The objection was disallowed as the taxpayer had failed to show the necessary degree of connection between the expenditure outlaid and the dividend income derived.

In *TRA Case D55* (1980) 4 NZTC 60,830, (1980) 4 TRNZ 148 a director and shareholder in two substantial companies and an investor in other companies in South Africa, the laws of which prohibit the export of capital but not of income. The taxpayer emigrated with his family from South Africa to New Zealand, leaving the management of his investments in South Africa to his accountant there. Becoming disenchanted with the management of his affairs in South Africa, he made several trips back. This resulted in reduced costs and increased income within the company, as the efforts were directed at maximising income at the expense of the capital. The TRA was satisfied that although there was some restructuring of capital assets, the objector’s main purpose in making the first trip was to increase the income which could be sent out to him in New Zealand, and the other trips undertaken were in furtherance of that objective. The expenditure on travel in the relevant years was in the particular circumstances incurred in the course of gaining or producing the objector’s income.

1420.10  Trusts and trustees

A trust is a legal relationship between two persons, whereby one of them, the trustee, holds property for the benefit of the other, the beneficiary, while as regards the rest of the world the trustee is, for most purposes, the absolute owner of the property. When beneficiaries get a vested title (as distinct from a contingent title) to the property, they also get a right which is enforceable as a personal right against the trustee.

It is not necessary for a trust to be evidenced in writing. A trust can be made orally or by conduct, and it is a matter of evidence as to when the trust was created. However, most trusts are evidenced by a deed of trust, a will, or other formal instrument. A trust may be *inter vivos* (ie set up by a living person), or it may be testamentary (ie set up through the death of an individual by a will, codicil, Court order, or an intestacy). The date of the creation of an *inter vivos* trust is generally the date of the trust instrument and the date on which a testamentary trust commences is the date of death of the deceased person.

Generally, a trust can only exist when there is a genuine intention upon the part of a person, the settlor [see 1420.65], to put property into a trust for the benefit of definite beneficiaries. Property held by the trustee can generate income, and this imposes an obligation upon the trustee to file income tax returns. For income tax purposes, a “trustee” is defined to also include an executor, an administrator, the Public Trustee, and the Maori Trustee.

Trusts are classified into four categories:

(a) Complying trusts;
(b) Foreign trusts;
(c) Non-complying trusts; or
(d) Charitable trusts.

The income from property held in trust is taxed as either beneficiary income or trustee income. Deductions allowable against the income of a trust are claimable by the trustee, not by the beneficiaries [s DV 9].

1420.15  Complying trusts [s YA 1]

1. Purpose and definition

The purpose of the complying trust definition is to allow both capital gains and income on which the trustees have previously paid tax to be distributed to beneficiaries without further income tax consequences for the beneficiary. The focus of the definition of “complying trust” is on whether income derived by the trustee of a trust has been liable to New Zealand income tax and whether that tax liability has been paid. Accordingly, a complying trust is a trust where all trustee income has been liable to tax in New Zealand for the life of the trust up to the time of distribution. Trustee income must not include an amount that is taxed only as non-resident passive income (ie non-resident withholding tax is a final tax on the income). This applies only to
trusts that have non-resident trustees. In trusts that have non-resident trustees, non-resident passive income should be distributed to beneficiaries in the income year in which it is derived.

The test of whether a trust is a complying trust is applied in any income year in which a distribution is made from the trust. The test is applied to the period starting with the tax year in which a settlement was first made and ending with the tax year in which the distribution is made.

A superannuation fund is automatically a complying trust. Most domestic trusts are complying trusts.

(2) Consequences

If the trust is a complying trust, only beneficiary income is subject to tax in the hands of the beneficiary. Any other distribution from a complying trust is tax-free in the hands of a beneficiary of a complying trust. Beneficiary income includes only revenue amounts that have been received by the trustee and which have not already been taxed in the trustee’s hands at the trustee rate of 33 per cent.

If the trust is not a complying trust it will be a non-complying trust or foreign trust [see 1420.20, 1420.25].

(3) Election by foreign trust

A foreign trust may elect to become a complying trust. The election must be made within 12 months of the day on which the settlor becomes a resident [see 1420.75].

1420.20 Foreign trusts [s YA 1]

A foreign trust is any trust (other than a unit trust) where, at all times from the later of 17 December 1987 or the date the trust was first settled, to the date of distribution in question, no settlor has been resident in New Zealand.

Example:
Jim, a New Zealand resident, is a beneficiary in a trust settled 40 years ago by his Scottish grandmother who never came to New Zealand and who has since died. The trust is a foreign trust for New Zealand tax purposes.

1420.25 Non-complying trusts [s YA 1]

A non-complying trust is any trust other than a complying trust, foreign trust, or a unit trust. Non-complying trusts are those trusts where:

(a) Not all trustees’ obligations for the trustees’ liability to New Zealand income tax have been satisfied;
or

(b) A settlor has been resident in New Zealand after the later of 17 December 1987 and the date the trust was first settled, and no settlor, trustee, or beneficiary has elected to pay tax in New Zealand on trustee income.

It generally has a resident settlor, has been established in a foreign country with non-resident trustees, and has not been liable for New Zealand income tax on trustee income since it was first settled.

1420.30 Charitable trusts [s HC 13]

A charitable trust is any trust in which the trustee income is held in trust solely for charitable purposes, and all income derived by the trustees in the income year is exempt under s CW 41(1) (non-business income of charities) or s CW 42(1) (business income of charities).

In Commissioner of Inland Revenue v Dick (2001) 20 NZTC 17,396 (HC), a trust was found not to be charitable because the trustees were able to (and did) receive benefits from the trust’s business income and to influence the nature and circumstances of the benefits received by virtue of their capacity as settlor and trustee. The decision of the High Court was confirmed by the Court of Appeal in Dick v Commissioner of Inland Revenue (2002) 20 NZTC 17,961 (CA) [see 150.10].

The taxation provisions applying to charitable trusts are as follows:

(a) The settlor has no tax liability [s HC 29];

(b) Trustee income is exempt [ss CW 41, CW 42, see 150.10];
Beneficiary distributions or grants received by a person under the terms of a charitable trust are not liable to income tax.

1420.35 Meaning of distribution [s HC 14]
For the purposes of the trust rules, the term “distribution” has a very wide meaning and occurs whenever the trustees transfer value to a person and the transfer is made because the person is a beneficiary. Such transfers of value could include:
(a) Where any property of the trust has been disposed of or made available to the beneficiary for less than market value. The distribution is the amount by which the value of the property exceeds the consideration paid by the beneficiary;
(b) Where the trustee has provided any services to the beneficiary for less than market value. The distribution is the amount by which the value of the property exceeds the consideration paid by the beneficiary; and
(c) Where the beneficiary has disposed of or made available any property, or provided any service, to the trustee for greater than market value. The distribution is the amount by which the consideration paid by the trustee exceeds the value of the property or services.

The term also includes transfers to other trusts the extent to which it would have constituted beneficiary income if it had been distributed at that time to a New Zealand resident beneficiary. A distribution is made when what is transferred vests absolutely in interest in the person or is paid to the person. A distribution may be made directly or indirectly, or by one or more transactions whether or not those transactions are related or connected. The fact that a person is, or will become, a beneficiary of a trust does not constitute the giving or receiving of value.

1420.40 Trustee income [ss HC 7, HC 24]
The definition of “trustee income” applies to complying trusts but not to a unit trust. It means income which:
(a) Is derived by the trustee in the income year; and
(b) Is not beneficiary income [see 1420.110].
As a consequence of this wide definition, trustee income may include the following amounts, but only to the extent to which they are not beneficiary income.
Income which is:
(a) Accrued to date of death, but received subsequently;
(b) Derived from a financial arrangement under the accrual rules;
(c) Derived pending determination of the distribution of the residue;
(d) Used to pay expenses that are not deductible for taxation purposes (eg rates paid on land not producing income);
(e) Accumulated in terms of the trust;
(f) Used or accumulated to pay debts and legacies (these are required by trust law to be charged to capital);
(g) Held on behalf of un-ascertained beneficiaries;
(h) Of estates assigned for the benefit of creditors.
Also treated as trustee income is the market value property which is settled on the trust and which falls outside of the definition of corpus [see 1420.115].
The provisions for the taxation of beneficiary income and trustee income are mutually exclusive. Therefore, where income is taxed as trustee income, it cannot be assessed as beneficiary income when it is later distributed to the beneficiaries. Similarly, if the trustee withholds income from the beneficiaries pending the settlement of a Court action and it is taxed as trustee income for the year in which it is derived, it cannot be reassessed later as beneficiary income when the Court action is completed.
A trustee is assessable and liable for income tax on trustee income as if the trustee were an individual beneficially entitled to the income except that:

(a) Tax is calculated by reference to the trustee income alone;
(b) There are no entitlements to any tax credits under subparts LC and LD (which relate to tax credits for natural persons and certain gifts). Tax credits such as imputation credits or credits for foreign tax paid are able to be used to satisfy the trustee’s tax liability; and
(c) The trustee may not be a cash basis person under the financial arrangements rules. The one exception to this is the trustee of a deceased estate under certain circumstances [see 470.75].

Trustee income is subject to tax at a flat rate of 33 per cent.

**1420.45 New Zealand-sourced income of trustees**

Income tax is imposed on all New Zealand sourced trustee income.

**1420.50 Foreign-sourced income of resident trustees**  [s HC 26; TAA, ss 22, 59, 59B, 143A]

Trustee income derived from outside New Zealand is exempt from tax in any income year during which no trust settlor is (at any time), a resident in New Zealand. The exemption does not apply where:

(a) The trust is a superannuation fund; or
(b) The trust is a testamentary trust or an inter vivos trust where any settlor of the trust died resident in New Zealand in any income year.

Any income which is beneficiary income is not taxed as trustee income. The exemption is restricted to ensure that sufficient information is supplied to the CIR to enable New Zealand to comply with its DTA obligations regarding the exchange of information. The disclosure rules apply to resident foreign trustees only.

1. **What information is required to be disclosed?**  [TAA, s 59B]

   “Resident foreign trustees” are required to disclose to the CIR the following information:

   (a) The name of the trust or other identifying particulars (eg settlement date);
   (b) The name and contact details of the resident foreign trustees; and
   (c) Whether or not a settlor is resident in the Commonwealth of Australia.

   If the resident trustee claims to be a “qualifying resident trustee”, the name of the “approved organisation” and the name and contact details of the natural person, who is a member of that organisation, must also be disclosed. Where there is more than one resident foreign trustee, one of them may be appointed as agent for the purposes of disclosure. Where this occurs, the names of both the appointing trustee and the appointed trustee must be disclosed.

2. **What do the terms mean?**

   A “resident foreign trustee” is a New Zealand resident trustee of a foreign trust that is not registered as a charitable entity under the Charities Act 2005.

   A “qualifying resident trustee” is a resident foreign trustee who, if an individual, is a member of an “approved organisation” and, if not an individual, has a director or person in a management position who is resident in New Zealand and is a member of an “approved organisation”.

   An “approved organisation” is an organisation approved by the CIR. Criteria for approval includes the existence of a professional code of conduct and a disciplinary process to enforce compliance with the code. Members of the organisation will typically provide trustee services in the course of business. Other criteria include whether members are required to have certain qualifications and the size of the organisation’s membership. Names of approved organisations are published on Inland Revenue’s website.
(3) **What records need to be kept?**
Resident foreign trustees are required to maintain certain financial and other records for a period of seven years [see 1210.10, 1210.20].

(4) **What are the penalties for non-disclosure or failing to maintain records?**
Failing to comply with the rules when the resident trustee knew or should have known what was required is a knowledge offence under s 143A punishable by a monetary fine and/or imprisonment. If the trustee is a corporate entity, directors and managerial staff whose actions or failure to act gave rise to the offence are also subject to penalties [see 1110.230, 1110.265].

If a trustee who is not a “qualifying resident foreign trustee”, has been requested to provide information, and has failed to supply that information, the s HC 26 exemption does not apply and the trust is subject to New Zealand tax on its world-wide income.

(5) **Newly-resident trustees**
Section 59B(3) of the TAA provides a period of grace for newly-resident trustees of foreign trusts. In order for the concession to apply, the person must:

(a) Have been appointed trustee prior to becoming a New Zealand resident;
(b) Have become New Zealand resident on or after 1 October 2006;
(c) Not be in the business of providing trustee services; and
(d) Have been not resident in New Zealand on any day in the five-year period prior to becoming New Zealand resident.

Following the expiry of the two-year period of grace, the trustee must commence complying with record-keeping and information disclosure requirements.

**1420.55 Foreign-sourced income of non-resident trustees** [s HC 25]
A non-resident trustee is subject to tax on any foreign-sourced income that would be taxable to a New Zealand resident where:

(a) Any settlor of the trust is resident in New Zealand, but not a transitional resident, at any time during the income year;
(b) The trust is a superannuation fund; or
(c) Any trustee is resident in New Zealand during the income year and the trust is a testamentary trust or an inter vivos trust where any settlor died resident in New Zealand in any income year.

However, s HC 25(3) provides that a trustee who is non-resident for the whole of the income year will not be subject to New Zealand tax on foreign-sourced income where:

(a) No settlement has been made on the trust after 17 December 1987; or
(b) The only settlements made on the trust were made by settlors who were not at the time of making the settlement, and had not at any time after 17 December 1987 been, resident in New Zealand; and, in both instances, where no election has been made by the trustee to pay income tax on trustee income.

Even though an exclusion might apply to income tax on trustee income, it does not affect the liability for income tax of any settlor personally. A settlor who is resident in New Zealand can (in certain circumstances), be made liable as agent for income tax on trustee income. A trustee is both assessable and liable for income tax on the distribution of beneficiary income and taxable distributions.

Non-resident trustees are treated as being resident in New Zealand for the purposes of:

(a) The application of the financial arrangement rules in ss EW 9 and EW 11 [see 470 FINANCIAL ARRANGEMENTS];
(b) The availability of tax credits for foreign tax paid [s LJ 2, see 760 INCOME FROM NEW ZEALAND AND FOREIGN SOURCES];
Rules for the operation of BETA accounts [see 670 IMPUTATION]; and
The international tax rules [see 850 INTERNATIONAL TAX REGIME].

**TaxNote:** Section HC 25 does not apply for the purpose of determining whether or not the trust is a complying trust.

### 1420.60 Liability of trustees for tax on distributions to minors

**[ss HC 3, HC 7, HC 17, HC 35, HC 36, HC 37, HD 12(1)]**

Trusts have always been a useful tool where a taxpayer wishes to divert income to family members whose marginal tax rates are lower than the taxpayer’s. However, provisions aimed at limiting this practice apply to the beneficiary income of minors.

Where more than one settlement is made on a trust, the general legal position is that each settlement constitutes a separate trust. However, s HC 3 provides that, for the purposes of subpart HC, all of the settlements may be treated as being one trust.

Subject to the exemptions (explained below), any beneficiary income distributed to a minor is subject to tax in the hands of the trustees of the trust and is not included in the income of the beneficiary [s HC 35]. Any tax paid by the trustee on this income is deemed to be paid on behalf of the beneficiary for the purposes of debiting and crediting the beneficiary’s account in the books of the trust [see TES 20 (October 2004) 275, 276].

1. **Exemptions — small distributions [HC 35(4)]**

   This provides that the rules do not apply if the amount of beneficiary income derived by a minor in relation to an income year is $1,000 or less. The $1,000 limit applies on a “per beneficiary, per trust” basis. Therefore, if a beneficiary receives $1,000 or less from each of a number of trusts, none of the distributions will be subject to the rules [see TIB vol 19:4 (May 2007) at 10].

2. **Exemptions — type of trust [HC 35(4)]**

   The rules do not apply to beneficiary income derived:

   (a) From a trust where:

      (i) The settlor is acting as agent of the minor and has received the property from a person other than a relative, guardian, or their associate;

      (ii) The settlor is required by a court order to pay damages or compensation to the minor; or

      (iii) the minor is a protected person, as defined in s 2 of the Domestic Violence Act 1995, in relation to a protection order, and the settlement is made before the protection order is made or during the time the order is in force;

   (b) From a testamentary trust where all of the settlements were made under a will, codicil, intestacy, or court variation and either:

      (i) The minor is alive within 12 months of the date of the settlor’s death; or

      (ii) The minor has a brother, sister, half-brother, or half-sister alive within 12 months of the date of the settlor’s death;

   (c) From a Maori authority;

   (d) Directly from a group investment fund; or

   (e) By a person for whom a child disability allowance is paid under the Social Security Act 1964.

3. **Exemptions — Source of settlements [ss HC 36(1), HC 37]**

   The rules do not apply where all settlements on the trust are made:

   (a) By a person who is neither a relative or legal guardian of the minor nor a person associated with the relative or legal guardian;
Trusts and Estates

(b) By a relative, legal guardian, or associated person as an agent of the minor if the settlor has received the property from someone other than a relative, guardian or associated person;

(c) By a relative, legal guardian or associated person if the settlor is required by a Court order to pay damages or compensation to the minor;

(d) By a relative, legal guardian or associated person against whom a protection order has been made under s 14 of the Domestic Violence Act 1995. This provision applies only where the minor is a protected person in relation to the protection order and the settlement is made either before or during the time that the protection order is in force; or

(e) According to a will, codicil, intestacy or a Court variation of a will, codicil or intestacy, if the minor, or a brother, sister, half-brother or half-sister of the minor, is alive within 12 months following the date of the settlor’s death.

Where there is more than one settlement on a trust and one or more of those settlements is not exempt under items (a) to (e) above, this exemption continues to apply where all of the settlements that would not be exempt are either:

(a) Dispositions of property to the trust at less than market value, where those settlements have a total value of not more than $5,000 at the end of the trust’s income year, with valuation being as at the date of settlement; or

(b) The making of loans to the trust for less than the market interest rate where those loans have a total value of not more than $1,000 on any day in the trust’s income year.

However, there is a requirement that at least one of the settlements is of a kind referred to in items (a) to (e) above.

This exemption does not apply where services (other than those that are incidental to the operation of the trust such as bookkeeping or the duties of a trustee), are provided to the trust by a relative or legal guardian of a minor beneficiary (or associated person of a relative or legal guardian of a minor beneficiary). Therefore, the exemption will not apply to trading trusts carrying on business in a service industry (such as a medical practice) where a person (such as a relative of the minor beneficiary) has sold the assets of the business to the trust and continues to operate the business in return for a salary, with the trust deriving the profits.

(4) Exemption — disabled children [s HC 35(4)(b)(v)]

An exemption is provided in respect of beneficiary income derived by a minor for whom a child disability allowance is paid under the Social Security Act 1964.

(5) Definitions [ss HC 36, HC 35(3)]

The definitions of “minor”, “guardian”, and “relative” are crucial to the scope and application of these rules.

“Minor” means a natural person who is New Zealand resident and who is under 16 years of age at the trust balance date for the income year in which the distributed income was derived.

“Guardian” is defined under s 15 of the Care of Children Act 2004, but does not include a guardian appointed under certain sections of the Children, Young Persons and Their Families Act 1989, s 31 of the Care of Children Act 2004, s 53 of the Public Trust Office Act 1957 (by way of Court order), or s 7(4) of the Adoption Act 1955.

“Relative”, in relation to a person (“Person A”), means a person (“Person B”) connected with Person A by blood relationship within the fourth degree, marriage, adoption, or guardianship, and includes a trustee of a trust under which Person B has benefited or is eligible to benefit.

Blood relationship applies if it is within the fourth degree of relationship.

Marriage applies if one person is in a marriage, civil union or de facto relationship with the other or with a person who is connected by blood relationship, adoption or guardianship to the other.

Adoption applies if one has been adopted as a child of the other or as a child of a person who is within the third degree of relationship to the other.
Guardianship applies if one is the guardian of the other.

**1420.65 Meaning of settlor** [s HC 27]

“Settlor” has a wide definition. It means a person who, at any time, transfers value to, or for the benefit of, the trust, or on terms of the trust. This includes the provision of financial assistance where there is an obligation to pay on demand but the right to demand is not exercised or is deferred. The same meaning is assigned to the term “settlement”. It makes no difference whether the transfer of value is made directly or indirectly or whether it is made in one or more than one transaction.

The fact that a person is, or will become, a beneficiary of a trust does not constitute the giving or receiving of value.

The definition is expanded in s HC 28 for the purposes of the trust rules. If a person undertakes any of the following activities, the person will be a settlor in relation to a trust:

(a) The person acts or refrains from acting, or enters into one or more transactions, and this results in defeating the intent and application of the trust rules;
(b) The person has a control interest of 10 per cent or more in a controlled foreign company (CFC) [see 850.10] and the CFC settles an amount on a trust;
(c) A company settles an amount on a trust and, had the company been a foreign company, it would have been a CFC on the date of settlement and the person would have been treated as having a control interest of 10 percent or more;
(d) A trustee of a head trust settles an amount on a sub-trust, or makes a distribution to, or on terms of, the sub-trust and the person is a settlor of the head trust;
(e) The person directly or indirectly acquires rights or powers in relation to a trustee or settlor of the trust with the purpose or effect of being able to require the trustee to treat the person (or a nominee of the person) as a beneficiary of the trust.

(1) **Exclusions from the definition of “settlor”**

There are a number of exclusions from the definition of “settlor”. These are:

(a) **Trusts for retirement benefits for employees**

The term “settlor” does not include a person who is resident in New Zealand and who makes a settlement on a trust for the benefit of one or more of the person’s employees, provided that the following conditions are met:

(a) The trust is established or created mainly to provide retirement benefits to natural persons; and
(b) The trust is neither a foreign superannuation scheme nor a superannuation fund.

(b) **Employee share purchase agreements**

The term “settlor” does not include an employer in relation to a payment made by that person to the trustee of an employee share purchase agreement, where the following conditions are met:

(a) Some or all of the payment is used by the trustee to acquire shares under the terms of the employee share purchase agreement; and
(b) Some or all of the payment used by the trustees would be income of an employee under s CE 1(1)(d), which deems a benefit received under a share purchase agreement to be an amount derived in connection with employment.

This exclusion applies for the 2008-2009 and later income years. However, it is grand-parented so that it does not apply to a tax position taken between the beginning of the 2008-2009 income year and 7 December 2009 (inclusive) in relation to a payment to an employee share purchase agreement in consideration for a salary sacrifice made by the employee in reliance on para (a)(i) of the definition of “settlor” in the ITA 2004.
(2) Binding rulings

Section HZ 7 provides a savings mechanism for binding rulings in relation to the definition of settlor where certain conditions are met.

1420.70 Taxation of settlors [ss HD 12(2), HC 29, HC 10(4)]

A New Zealand resident settlor of any foreign or non-complying trust can be liable for tax in New Zealand on trustee income as agent of the trustee.

The settlor regime applies for any trust and any income year in which the trustee derives trustee income and a settlement is made to the trust after 17 December 1987, except in any of the following circumstances:

(a) The trust is a charitable trust;
(b) The trust has a resident trustee at all times during the income year;
(c) The settlement is to a superannuation fund;
(d) The settlor was not a resident in New Zealand at the time of any settlement on the trust and has not at any time, unless the settlor has elected to pay income tax on trustee income;
(e) To the extent to which the settlor can satisfy the CIR that the settlor’s liability for income tax on trustee income exceeds the liability that the settlor should bear by comparison to other settlors having regard to their respective settlements; or
(f) The trustee income is derived through the application of the financial arrangements rules to any amount remitted by the settlor.

1420.75 Trusts settled by persons before becoming New Zealand resident [ss HC 30, HC 10]

Any settlor, trustee, or beneficiary of a foreign trust may, within 12 months of the day on which the settlor becomes a resident, elect to pay income tax on the trustee income. The foreign trust thereby becomes a complying trust. Where this is done, for the purposes of the definition of “taxable distribution” the trust is deemed to be:

(a) A foreign trust to the extent that any distribution consists of income, capital profits, and capital gains derived by the trustee before the date on which the election was made.
(b) A complying trust to the extent that any distributions consist of income, capital profits, and capital gains derived by the trustees after the date on which the election was made if the trustees’ income tax liability on trustee income has been satisfied. However, if in that year or any subsequent year, the trustees’ obligations are not satisfied, the trust is deemed to be a non-complying trust for distributions made, except for distributions which are deemed to be from a foreign trust relating back to the date before the date on which the election was made.

Where this election is not made, for the purposes of the definition of “taxable distribution” the trust is deemed to be:

(a) A foreign trust to the extent to which any distribution consists of income capital profits and capital gains derived by trustees before the election expiry date (ie 12 months from when the settlor first became resident in New Zealand).
(b) A non-complying trust to the extent to which any distribution consists of income, capital profits, and capital gains derived by the trustees after election expiry date.

The income, capital profits, and capital gains apportioned to either part of the income year is proportionally allocated on a day-to-day basis.

Where the settlor of the trust is a transitional resident, the 12-month period in which to elect that the trust become a complying trust runs from the date on which the settlor ceases to be a transitional resident. During this period, the trustee is not subject to New Zealand tax on foreign income of the trust [see 370.35].
1420.80 Ordering rules for distributions from foreign and non-complying trusts

Ordering rules determine the nature of a distribution from any trust and remove the ability for foreign and non-complying trusts to make non-taxable distributions to New Zealand resident beneficiaries.

Distributions made from a trust are in order of priority:

(a) Trustee income derived in the current income year;
(b) Distributions of accumulated trustee income from preceding income years;
(c) Capital profits realised during the current income year less any current year capital loss;
(d) Capital profits or gains from all preceding income years less any prior year capital losses; and
(e) Trust corpus [see 1420.115].

Where accounting records are not sufficient to enable any distribution to be ordered, the entire distribution is deemed to be a taxable distribution. These ordering rules do not apply to:

(a) Distributions from complying trusts (unless the trust was first settled before 18 December 1987 and an election was made before 1 June 1989 to pay tax on trustee income);
(b) Distributions from a testamentary trust or a non-discretionary trust on which no settlement has been made after 17 December 1987;
(c) Deemed distributions which have only fallen within the definition of “distribution” because they involve either the disposition of property or the provision of services to a beneficiary for less than market value; and
(d) Distributions from foreign trusts which become complying trusts.

A distribution specified in items (a), (b), or (d) above, is deemed to consist of such amounts as reflect the terms of the trust or the terms of the exercise of the trustee’s discretion. A distribution specified in (c) is a taxable distribution.

Two anti-avoidance provisions exist:

(a) If the trust records are inadequate to allow the rules to be applied accurately in calculating the component parts of a distribution, the distribution becomes a “taxable distribution”.
(b) In calculating the component parts of a distribution, it must be shown that the amounts distributed to other beneficiaries arose from a genuine transaction which is entered into and carried out in good faith and which places the amount beyond the trustee’s possession.

1420.85 Nature of trust income

Income earned by a trust retains its nature on distribution to beneficiaries. This means that:

(a) Capital gains remain capital gains when distributed to beneficiaries.
(b) Distributions of dividends derived by a trust retain their nature as dividends and can have imputation credits distributed with them.
(c) Income that has a foreign source retains that foreign source and is not, therefore, taxable in the hands of a non-resident beneficiary on distribution.

TaxNote: Beneficiary income derived by a minor is excluded income and is taxed as trustee income.

1420.90 Taxation of beneficiaries in a complying trust [ss HC 17, HC 20, CW 53, CV 13]

Beneficiaries of a complying trust are taxable only on beneficiary income [see 1420.110] distributed to them. Any other distribution from a complying trust is exempt income in the hands of a beneficiary of a complying trust. For example:

(a) Income taxed in the hands of the trustees in prior income years;
(b) Capital gains;
(c) The corpus of the trust [see 1420.115].

**1420.95 Taxation of beneficiaries in a foreign trust** [ss HC 15, HC 17, HC 18, CV 13]

Beneficiaries of a foreign trust are taxed on two types of income:
(a) Beneficiary income;
(b) Taxable distributions.

For the purposes of a foreign trust, the term “taxable distribution” is defined in s HC 15 as any amount distributed to a beneficiary that is not:
(a) Beneficiary income;
(b) A capital gain; or
(c) Trust corpus [see 1420.115].

Any current year income distributed to a beneficiary falls within the definition of “beneficiary income”. Distributions of capital gains and corpus are excluded from the definition of “taxable distribution”. Therefore the most common item that remains to fall within the latter definition is distributions of income earned in prior years. However, income earned by the trust prior to 1 April 1988 is not caught by the regime and does not fall within the definition of “taxable distribution”.

TaxNote: Included in the definition of “taxable distribution” are items that may at first sight appear to be corpus or a capital gain, but which actually fall outside of those definitions.

A capital gain, in the definition of “taxable distribution”, is a realised capital gain not derived from a transaction or series of transactions between a trustee and any person associated with a trustee, net of any capital loss incurred in the same income year.

**1420.100 Taxation of beneficiaries in a non-complying trust** [ss HC 15, HC 17, HC 19, CV 13, CX 59]

Amounts distributed to a beneficiary of a non-complying trust are taxed as follows:
(a) **Beneficiary income**: at the beneficiary’s marginal tax rate
(b) **Taxable distributions**: at 45 per cent.

For the purposes of a non-complying trust, the term “taxable distribution” means any distribution that is neither beneficiary income nor corpus [see 1420.115]. Therefore beneficiaries are taxed at the rate of 45 percent on any distribution of income earned by the trust in prior income years and on any capital gain. The one exception is that trust income prior to 1 April 1988 is not caught by the regime.

**1420.105 Summary of the taxation of beneficiaries**

The following table summarises the different tax treatments applying to beneficiaries of qualifying, foreign, and non-complying trusts.

**TaxNote:** Beneficiary income of minors is (under some circumstances), taxable in the hands of the trustee at 33 per cent [see 1420.60].

**1420.110 Meaning of beneficiary income** [s HC 6]

“Beneficiary income” means any income derived during any income year by a trustee of a trust which:

(a) Vests absolutely in interest in the beneficiary during that income year; or

(b) Is paid to the beneficiary in the longer of the following periods:

(i) During, or within six months after the end of that income year;

(ii) By the date on which the trust’s tax return for the income year is filed (or is required to be filed, if earlier).

**TaxNote:** “Paid” includes distributed, credited and dealt with in the interest of or on behalf of the person in some other way [s YA 1].

Beneficiary income includes foreign-sourced amounts which have vested or been paid or applied where that amount would have been income of the trustee had any settlor been resident in New Zealand during the income year [see TES 20 (October 2004) 277, 279].

It does not include income derived by a trust which is a superannuation fund. This is because the taxation of superannuation funds is intended to result in a non-taxable distribution under the “Taxed-Taxed-Exempt” (TTE) policy which underlies the legislation. This results in both the employer’s contributions to the fund and the fund’s taxable income being fully taxed as a proxy for taxing the beneficiaries’ interests in the fund. A distribution is not income of the beneficiary under s HC 20 because a distribution from a superannuation fund cannot be beneficiary income.

Section HC 20 is subject to s HC 21, which applies to distributions from community trusts. Section HC 21 is effective from the 2004-2005 income year and provides that, despite the provisions of ss HC 15 and HC 20, the distribution is income of the recipient in the year of receipt to the extent to which the distribution does not represent:

(a) Trustee income derived in or before the 2003-2004 income year;

(b) Corpus of the trust;

(c) Capital gains derived by the trust; or

(d) A distribution, settlement or dividend made to the community trust in the 2004-2005 or 2005-2006 income year, where the community trust provided the corpus of the trust to be used for charitable purposes, or the company is wholly-owned by the community trust and maintained and carried on exclusively for charitable purposes. In both cases, the fact of the distribution, settlement, or dividend, is ignored in determining whether the charitable purpose test is met.

The provisions applicable to beneficiary income do not apply to unit trusts. Unit trusts are deemed to be companies, and the unit holders are deemed to be shareholders. Nor do they apply to management fees paid by a group investment fund to a trustee company on behalf of, or as agent for, its investors.

Where the trust instrument directs that a beneficiary is to have the use and occupation for life of a property free of outgoings, the income assessable to that beneficiary as beneficiary income includes any outgoings on the property paid by the trustees for the benefit of the life tenant (ie any outgoings which the life tenant would otherwise be liable to pay, such as rates).
Trusts and Estates

Example:
An estate is held on trust to pay the income for life to the deceased’s widow, and she is to have for life the free use of the deceased’s home and the income from the interest. The net income available to the widow is $20,000, and the trustees pay $400 in rates on the widow’s free house. The beneficiary income for the widow is therefore $20,400.

If any income is paid to a beneficiary subject to an obligation or trust to maintain another person, whether out of that income or otherwise, the beneficiary is assessable as if the income were derived free of any such obligation.

Income of a trust which is vested absolutely in interest for the benefit of any beneficiary (whether adult or infant) during the income year is deemed to be beneficiary income. Vesting can arise under the express provisions (if any) of the trust instrument or the discretionary powers (if any) conferred on the trustees by the trust instrument.

An anti-avoidance provision exists to counter arrangements whereby property is transferred, or services or other benefits are provided, by a trustee to a person other than a beneficiary which has the effect for that beneficiary of defeating the intent and application of ss HC 17 to HC 23 (income assessable to beneficiaries). The property, services, or other benefits are deemed to be received or enjoyed by the beneficiary [s GB 22]. This provision does not apply where the trust is a Maori authority.

(1) Case law

Once income has vested in beneficiaries and they are entitled to its distribution, they are entitled to possession of that income: Dalyrymple v Commissioner of Taxes [1934] NZLR 366 (CA). It is possible for income to be vested in beneficiaries without it being in their possession.

In Simpson v Commissioner of Inland Revenue (1987) 9 NZTC 6,147 (HC), the trustees resolved to appropriate the whole trust income to two infant children. The trust deed provided a good and valid discharge to the trustees if payment was made to their parents and guardians. The income was paid to the parents’ joint account. The High Court held that the good and valid discharge to the trustees meant the infants had taken an indefeasibly vested interest in the trust income which was thus income of the infant beneficiaries. This was upheld on appeal: Commissioner of Inland Revenue v Simpson (1989) 11 NZTC 6,140 (CA). Note this case related to law under the earlier tax regime.

An application of funds whereby the beneficiary’s position is improved (eg by settling funds on another trust for the same beneficiaries) is a payment or application of income: Re Pilkington’s Will Trusts [1964] AC 612 (HL).

Income which is applied in a beneficiary’s favour, at the time of the trustee’s resolution, is beneficiary income even though it is not immediately used by the beneficiary: Commissioner of Inland Revenue v Ward [1970] NZLR 1 (CA).

An agreement between waterside unions and container terminal companies, whereby equity payments were paid by the companies to a trustee, was income received by the trustees as nominees or agents for the union beneficiaries, and accordingly was derived by the unions and not the trustees: TRA Case K70 (1988) 10 NZTC 562.

Trustees were given a discretionary power by the trust deed to apply the trust income for the personal support and benefit of the beneficiary. However, the deed provided that any unpaid or unapplied income by 31 March in any year was to vest in the beneficiary provided she was alive on that date. During the income year none of the income was paid or applied for the benefit of the beneficiary, and it fell to be taxed as trustee income. However, the trustees claimed that the tax on the trustee income was an application of that part of the trustee income for the benefit of the beneficiary, since the unapplied income vested in the beneficiary on that date. The TRA decided that the payment of the tax on the trustee income was not a payment for the benefit of the beneficiary but rather it was to discharge a liability of the trustees. In any case, it could not be the beneficiary’s income because it could not be known that she had survived 31 March until the next day, 1 April. Consequently, on 31 March she was only contingently entitled to the unpaid or unapplied income: TRA Case C28 (1978) 3 NZTC 60,270.
Legal costs which the trustees paid out of the trust income to reimburse the settlor for the setting up of the trust were not a payment for the benefit of the beneficiaries under the Land and Income Tax Act 1954, and the income represented by the payment was assessable as trustee income: TRA Case C29 (1978) 3 NZTC 60,276.

1420.115 Meaning of corpus [s HC 4]

“Corpus” means the market value at the date of settlement of any property settled on the trust. It does not include property which:

(a) Would have constituted beneficiary income or a taxable distribution for a New Zealand resident beneficiary of another trust, which is settled directly or indirectly by the trustee of the other trust.

(b) Is settled directly or indirectly in trust which would otherwise, but for that disposition, have constituted income of a New Zealand resident settlor.

(c) Is settled directly or indirectly in trust and which the settlor is able to claim as a deduction in calculating the income for income tax purposes.

1420.120 Changes in residence for beneficiaries in foreign or non-complying trusts [ss CV 15, HC 23]

A New Zealand resident beneficiary of a foreign trust or a non-complying trust who ceases to be a resident, but within a period of five years becomes a New Zealand resident again, is deemed to derive, on the day of again becoming a New Zealand resident, any amount that would have been assessable as beneficiary income or a taxable distribution had he or she remained resident in New Zealand.

1420.125 Trust loss or expenditure cannot be passed to beneficiary [s DV 9]

A person who has beneficiary income is not allowed a deduction for any expenditure or loss incurred by a trustee in deriving that income. The net income of a trust may be allocated as beneficiary income. Only the net income is the amount derived after the trustee has claimed a deduction for any related expenditure or loss. If the expenditure or loss in a trust exceeds the income of the trust, a net loss arises and that net loss cannot be allocated to a beneficiary. It must be carried forward within the trust and is deductible, under the normal provisions, from future income of the trust.

Example:

| Income of the trust | $10,000 |
| Allowable expenditure | $12,000 |
| Loss to be carried forward to next year | $2,000 |

The loss of $2,000 cannot be allocated to a beneficiary and there is no net income that can be allocated to a beneficiary.

1420.130 Imputation and dividend withholding payment credits on beneficiary or trustee income

Dividend income derived in a discretionary trust is able to be allocated in such proportions as the trustees determine. In a fixed trust, the distribution is determined by the terms of the trust deed. However, tax credits in the form of imputation credits and dividend withholding payment credits are allocated proportionately across all amounts distributed to beneficiaries in that income year. This includes all distributions whether income or capital in nature. This restricts a trust being used to stream dividends with their associated tax credits in a tax cost effective way (eg away from exempt or low tax rate shareholders), to bypass the anti-avoidance provisions in the company income tax regime [see 670.55].
Trusts and Estates

1420.132  **Substitution payments for resident withholding tax**

Trustees in receipt of resident passive income from which resident withholding tax (RWT) has been deducted, have the option of passing credits through to beneficiaries when distributing that income or effectively retaining the credits to be offset against tax payable on trustee income. Where the credits are retained in the trust, the trustees are able to make an RWT substitution payment to the beneficiary concerned to compensate for the loss of the credit. The payment can be the amount of the RWT credit or a lesser amount. An RWT substitution payment is treated as resident passive income in the hands of the beneficiary but is not, itself, subject to deduction of RWT. The substitution payment does not give rise to a credit in the hands of the beneficiary but the trustees have a credit equal to the amount of the payment.

1420.135  **Foreign tax credits on beneficiary or trustee income**

A foreign tax credit is allowed for foreign tax paid on trustee or beneficiary income, but limited to the lesser of either the foreign tax paid or the New Zealand tax payable on that income. Foreign tax credits are allowed for foreign taxes paid on taxable distributions but are limited to the equivalent of the foreign NRWT [see 760.40 and 760.45].

1420.140  **Non-resident beneficiaries**

A non-resident beneficiary is only liable for tax on income deemed to be derived in New Zealand. Beneficiary income of non-resident beneficiaries in a trust which has come from foreign sources is not assessable for New Zealand income tax or NRWT. However, income which is derived in New Zealand for non-resident beneficiaries is subject to either NRWT or income tax, as the case may be. Normally, the person or company paying the non-resident passive income is required to deduct the NRWT, but when interest, dividends, royalties, or know-how payments are made to New Zealand trustees for non-resident beneficiaries, this responsibility depends on the terms of trust.

1420.145  **NRWT where all trust income is received for foreign beneficiaries**

When the trustees are bare trustees [see 1420.190] and all of the income apart from commission or collection costs is passed on to the foreign beneficiaries, the original payer must deduct NRWT. In some cases, Inland Revenue allows the trustees to deduct the tax.

1420.150  **Where part of the trust income is received for foreign beneficiaries**

When the trustees have power to withhold income from non-resident beneficiaries, or the income is received for both New Zealand and non-resident beneficiaries:

(a) The responsibility for deducting the tax is not on the original payer but falls on the trustees at the time at which they pay or credit the income to the foreign beneficiaries.

(b) NRWT is deducted from the gross income allocated to each non-resident beneficiary, ie before deducting remittance costs or other direct expenses of that person.

(c) Where the trust income comprises income from various sources, such as dividends, interest, royalties, rent, and business or farming income, and there are both resident and non-resident beneficiaries, the trustees may choose to pay the shares of the non-resident beneficiaries out of the class of income (eg the business income), which does not attract NRWT, and pay the income of the local beneficiaries out of the dividends, interest, or royalties, or vice versa. However, imputation credits will be lost where dividend income is streamed [see 1420.130, 670.55].

**Example:**

A discretionary family trust has the following income:

* Australian sourced income of $500;
* Business income of $500;
* Interest income of $1,000; and
Trusts and Estates

1420.160

There are two beneficiaries of the trust, one resident in New Zealand, and the other resident in Australia. The trustees wish to distribute an equal amount to each beneficiary. To achieve the best tax position for the beneficiaries, the trustees would allocate the income as follows:

- Dividend income of $500.
- As foreign sourced income of a non-resident is not subject to tax in New Zealand, the $500 Australian sourced income would be allocated to the Australian beneficiary.
- As the $500 business income is not subject to NRWT, it would be allocated to the Australian beneficiary.
- As the $1,000 interest income would be subject to NRWT if allocated to the Australian beneficiary, it would be allocated to the New Zealand beneficiary.
- To maximise the benefit of imputation credits, the dividend income would be allocated evenly between the two beneficiaries.

The trustees would need to draft their resolution carefully so as to evidence the source of the income distributions.

(d) A discretionary family trust with income consisting of dividends, interest, or royalties (or a combination of them) may have income applied for the benefit of non-resident beneficiaries, e.g. in paying their personal life insurance premiums. NRWT must be calculated on a grossed-up amount to include both the premiums and the NRWT because the payment of the premiums is deemed to be income derived by the non-resident beneficiary.

Example:
A discretionary family trust has dividend income of $700 from which no NRWT has been deducted. The funds are used to pay a personal debt of a beneficiary who is not resident in New Zealand. The rate of NRWT applying to that beneficiary is 30 per cent. The NRWT liability in respect of the allocation of the $700 funds to the non-resident beneficiary is $300. This is arrived at by grossing up the distribution by the amount of the NRWT ($700 × 100/70) × 30 per cent = $300.

1420.160 Where the trustees deduct NRWT instead of the payer

Often the payer does not know the terms of the trust, or does not know that the trustees are receiving the interest, dividends, royalties, or know-how payments as agent of a non-resident beneficiary. In these cases, it is better for the payer and the trustee to arrange between themselves for the trustee to deduct and account for the NRWT. Where such an arrangement is made, the Dunedin branch of Inland Revenue (where absentee records are held), should be advised.

1420.165 When tax returns are not needed

NRWT is the final liability on company dividends and interest or investment society dividends paid to non-residents of New Zealand, where the payer and recipient are not associated persons. Estate or trust tax returns are therefore not needed if:

(a) All of the estate or trust income is from company dividends, and interest or investment society dividends;

(b) All of the beneficiaries are non-residents; and

(c) NRWT has been paid on the dividends and interest.

When the original payer does not deduct the NRWT, the responsibility rests on the trustees. If a trustee files an IR3 return on behalf of a non-resident beneficiary, it should be sent to:
Non-resident Centre
Inland Revenue
PO Box 1932
Dunedin
Call 0800 246 224
1420.170 Requirement for trustees to pay tax on behalf of beneficiaries

[ss HC 32, HD 12(1)]

The trustee is under an obligation to deduct tax from the beneficiary income or the taxable distribution, and the beneficiary may claim this amount as a tax credit when completing the annual personal income tax return (IR3).

Although, with effect from the 2004-2005 income year, distributions from a community trust cease to be exempt income, trustees of community trusts are not required to make deductions from amounts distributed by them.

The income of any person includes any beneficiary income and any taxable distribution derived. However, a distribution of tax-paid trustee income to a beneficiary is not income to the beneficiary. Where it is distributed after the later of six months after the end of the trust income year, or the date on which the trust’s return of income is filed (or required to be filed if earlier), it is not to be brought back in as beneficiary income. Beneficiary income takes precedence over trustee income and the income from the trust cannot be taxed as both beneficiary and trustee income.

Inland Revenue accepts the non-payment of tax by the trustee on beneficiary income and may assess the beneficiary directly where the trustees obtain the beneficiary’s permission and explain to the beneficiary the obligation to furnish returns and pay provisional tax. Inland Revenue looks to the trustee for payment in the event of default by the beneficiary or in the event of the arrangement proving unsatisfactory to the beneficiary.

Problems can arise for the beneficiary when trusts make a distribution of beneficiary income after the end of the beneficiary’s income tax year. The beneficiary would need to wait until the distribution was made before filing a tax return, or would need to file an amended return for the previous year when a subsequent distribution is made within the statutory time limit (see above) and that distribution relates back to the previous income year. The problem is further compounded when the trust has an approved late balance date and the beneficiary has a standard balance date.

The accounts (and possibly the tax return) of a trust for an income year may have been filed with Inland Revenue before the trust income has been paid or applied for the benefit of the beneficiaries within the six-month period following the close of the income year. If the return has not been filed by the time the income has been paid out, a statement setting out the position should be attached to the return, and if the return has already been filed, a letter to Inland Revenue giving the information is sufficient. Entries in the accounts for the following year should be made in such a way that Inland Revenue can follow the entries through. Income which is paid or applied within the statutory time limits cannot be counted a second time as beneficiary income in the subsequent income year. The appropriate share of the estate or trust income is also included in the beneficiary’s provisional tax calculations. The trustee is also obliged to pay provisional tax on beneficiary income as well as on trustee income. If the beneficiary income from the estate or trust is not known by the date for filing the beneficiary’s tax return, this should not delay filing the return, but a note should be included in the return form to the effect that “Income from interest in Estate (or Trust) of (name) not yet known”. Inland Revenue can be informed later of the amount.

Trustees are personally responsible to ensure that all tax is paid and should, before the trust assets are finally distributed, ensure that all income derived by the trust is returned for income tax purposes and that sufficient cash is retained to meet all taxation liabilities.

If a beneficiary is contingently entitled to income and capital on, for example, attaining a certain age, all of the income which has not been paid to, or applied for the benefit of, the beneficiary is assessable as trustee income. The total income for the year in which the contingency is met is met is assessable as beneficiary income.

Where a trustee who is also life tenant has, in breach of trust, failed to maintain the capital of the estate either by excessive realisation of assets or by neglecting to provide for depreciation of leasehold interests, and has been assessed on the whole income from the estate in each year, it may become necessary for the succeeding trustees to recover the amount of the deficiencies from the life tenant’s estate. The tax previously assessed on the life tenant’s income may be reviewed within the limitations of the Act in order to assess the correct
income to the life tenant in respect of previous years. The balance is assessed as trustee income. This usually results in a refund to the deceased life tenant’s estate, and is payable to the trustees of the head estate.

The CIR is empowered to reopen back year assessments, notwithstanding that the estate has been wound up and a final distribution made to the beneficiaries. Such an assessment would be raised on the administrator of the estate who would be responsible for the payment of the tax.

**1420.175 Assessment of tax payable by trustees**

The trustee pays provisional tax in the same manner as other provisional taxpayers. The amount is calculated on beneficiary income and trustee income.

Some tax credits are allowed in calculating tax on beneficiary income. Income taxes assessed against the returns filed by the executor are recoverable from the beneficiary: *Public Trustee v Flower* (1991) 13 NZTC 8,042 (HC).

**1420.180 Trust income tax return form (IR6)**

The correct income tax return form for declaring trust income is Form IR6. It shows the classification of the trust income into trustee income and beneficiary income. The same taxation concepts apply to inter-vivos trusts as to the estates of deceased persons. The form also reports on taxable distributions.

**1420.185 Directors’ fees**

If trustees, by virtue of holding shares in a company as part of a trust estate, become directors of the company, they must account to the trust for directors’ fees earned. These fees are treated as non-distributable income of the trust and are assessable as trustee income. A trustee is entitled to retain the remuneration personally only where the trust shares are not used to obtain the appointment as a director, or where the appointment as a company director is to replace the testator or settlor, and the trustee is empowered by the testator or settlor.

**1420.190 Bare constructive trusts**

A bare trustee is one who merely holds property on trust with no interest in or duty as to the trust property, except to convey it when required according to the wishes of the beneficial owner. A constructive trust is raised by the construction of equity in order to satisfy the demands of justice and good conscience without reference to any presumed intention of the parties. Some companies will not register an infant as a shareholder. Where the registration in the name of a nominee or trustee is simply for reasons of legal need because of the infancy of the true owner, Inland Revenue adheres to the long-standing practice of looking behind the status of the nominee or the possible constructive trust and assessing the income to the true owner.

**1420.195 Estates of deceased persons**

When a taxpayer dies, various taxation issues must be addressed. These can be classified into:

(a) Recently deceased taxpayers;
(b) Immediately distributable estates;
(c) Continuing trusts under an estate.

One of the first taxation matters that the personal representative of a deceased taxpayer attends to is the making of returns of income which the deceased would have been liable to make had he or she remained alive, make any other returns as may be necessary and to pay the tax assessed. The tax returns (IR3) that are furnished for periods up until the taxpayer’s date of death use the IRD number of the deceased person. After the taxpayer’s death, the personal representative holds the property of the deceased person as an administrator, executor, or personal representative. The estate becomes a new taxpayer with a new IRD number and the income of the estate is returned in an estate income tax return (IR6).

**Deemed disposals on death and distribution** [ss FC 1, FC 2, FC 3, FC 4, FC 5, FC 6, FC 7, FC 8]

**(1) Background**

The death of a person results in two deemed disposals. The first occurs at the time of the taxpayer’s death. The second occurs on the subsequent distribution of assets to the beneficiaries. In both cases the deemed disposal occurs at market value. The same market value applies to the deemed acquisition by the trust administrator or executor or by the beneficiary as the case may be. Only assets that are already in the tax base are affected. Assets such as the family home and personal chattels are generally excluded and can be ignored when determining whether rollover relief applies. Assets that are within the tax base are:

(a) Assets which have been depreciated for tax purposes;
(b) Assets held on revenue account;
(c) Financial arrangements, unless the deceased taxpayer accounted for the arrangements on a cash basis;
(d) Interests in a foreign investment fund.

**(2) Rollover relief**

Under s FC 3, transfers of assets to a spouse, civil union partner, or de facto partner on the death of a taxpayer are treated as a transfer of property under a settlement of relationship property under subpart FB. Therefore, they occur at tax book value where any other property that is within the deceased person’s tax base pass only to family members who are within the second degree of relationship to the deceased. The second degree covers spouses, parents, grandparents, children, grandchildren and siblings [see 960 MATRIMONIAL AND RELATIONSHIP PROPERTY].

Under s FC 4, transfers of a person’s estate to an executor or administrator on the death of a person and any subsequent transfer from the administrator or executor to the beneficiaries occur at tax book value where the following conditions are met:

(a) The only beneficiaries of the estate are any one or more of the person’s spouse, relatives of the deceased to within the second degree of relationship or charities;
(b) No life interest is established under the estate;
(c) Under the will or intestacy, no property of the deceased is required to be held in trust; other than for the period in which the property is subject to administration or executorship; and
(d) In the tax year during which the property is subject to administration or executorship, or in which it is held in trust for that purpose, the net income of the estate is distributed beneficially to the maximum possible extent.

A transfer of timber, standing timber, or a right to take standing timber, which is owned by a deceased person, occurs at tax book value where a person who is related to the deceased to within the second degree of relationship is beneficially entitled to the forest. This applies irrespective of whether a life tenant is entitled to part of the trust property and irrespective of who the trustees of the estate are [s FC 6].

The 10-year rules for land sales under ss CB 7 (Land dealing business), CB 8 (Land development or subdivision business), CB 9 (Business of erecting buildings), and CB 12 (Land affected by zoning changes) do not apply to a transfer of an interest in land to the administrator or executor and the subsequent transfer to the beneficiaries, where the property passes to a person related to the deceased person to within the second degree of relationship.

A deduction is allowed against the deemed proceeds for the original cost of the land to the deceased person and all other costs incurred, whether by the deceased or by the executor or administrator, if the person to whom the land is transferred:

(a) Later disposes of it within 10 years of its acquisition by the deceased person; and
(b) As a result of this disposition, income would arise under any of those sections [s FC 5].
Under s FC 7, prepayments are valued at cost when transferred to the administrator or executor and again when transferred to the beneficiary.

Financial arrangements are transferred at cost where the deceased person was a cash basis person as at the date of death. This applies to both the transfer to the administrator or executor and a subsequent transfer to a beneficiary [s FC 8]. For examples see TES 28 (July 2005) 417, 418, 419, 420, 421.

**1420.200 Returns for period prior to death to be furnished** [TAA, s 43]

The executor or administrator of a deceased estate must file income tax returns for the period prior to date of death as follows:

(a) A return of income derived by the deceased for the year ended on the preceding 31 March (or other balance date), if not already furnished. Note the special provisions exempting pay-period taxpayers from filing returns.

(b) A return of income derived during the current income year from the end of the previous income year to the date of death. This should be furnished even if the deceased would otherwise be a pay-period taxpayer.

In these circumstances, a personal income tax return (IR3) is filed.

The provisions relating to income statements [see 1270.75] and taxpayers not required to furnish tax returns [see 1270.70] do not apply to individuals who act in the capacity of executors or administrators of deceased taxpayers.

**1420.205 Income tax return to date of death**

The income, which is deemed to be derived by the deceased person in the period from the last balance date to the date of death, includes:

(a) All interest, annuities, superannuation, and rents actually received during the period.

(b) All fees actually received during the period.

(c) All salaries and wages actually earned during the period, irrespective of the date of payment including back pay authorised before the taxpayer’s death.

(d) All business income earned during the period.

(e) All dividends derived or declared payable during the period prior to death.

(f) The balance of any income received in advance and which the CIR has permitted to be returned as income over a period of years. This includes income received by way of anticipation, income from compulsory acquisition of land, and income from sale of patent rights.

(g) Any deposits that a taxpayer has in a farm income equalisation account, unless the trustee elects in writing either to:

   (i) Have the whole or part assessed as income derived during the lifetime of the deceased in the earlier years in which the relevant deposits were deducted. An amendment to earlier assessments may be made notwithstanding the statutory time limits for reassessment; or

   (ii) Spread the amount, or any part of it, forward into any of the three years after the death but limited to the balance of the maximum five-year deposit term, in which case the funds so allocated to each of the succeeding years must remain in the reserve account until the time specified in the application. It eventually becomes trustee income.

(h) The excess value of any commercial bill owned by the deceased over the cost to the deceased of the bill. A person who dies, owning a commercial bill, is deemed to have sold the bill on the day of death. The difference between the cost of the bill and its value at the date of death represents income derived during the lifetime by the deceased.

Where returns have properly been made on an earnings basis by the deceased taxpayer, the trustee should furnish the return to the date of death on an earnings basis. This applies in general to business and farming...
profits. Where returns have properly been made on a receipts basis (eg rents, interest) by the deceased taxpayer, the trustee should furnish the return to the date of death on a receipt basis.

1420.210 **Tax returns for period after death**

The income derived by the estate after the date of death must also be furnished in an income tax return for as long as the estate or testamentary trust remains undistributed. An IR6 income tax return form is used.

A decision has to be made about which tax return (the IR3 before death, or the IR6 after death) should account for income that straddles the date of death. Income accrued to the date of death and received subsequently by the trustee is assessable as trustee income and included in the estate income tax return (IR6). All income accrued to the date of death, which is not assessable as income derived by the deceased taxpayer in the final IR3, must be returned by the trustees in the estate income tax return, even though the whole of the estate may pass immediately to beneficiaries who are absolutely entitled in possession to the corpus and income of the estate. It forms part of the capital of the estate [ss HC 8, CV 12].

1420.215 **Special points relating to income**

(1) **Advances owing to partnership by deceased partner**

Where A and B are in partnership, and B dies with money owing to the partnership while A continues the partnership business, the following apply:

(a) Until B’s share is transferred to B’s trustees, A is bound (unless the partnership deed provides to the contrary) to account to B’s trustees for:
   - The share of income to which B, if alive, would have been entitled to; or
   - Interest on the deceased’s assets, as the trustees may elect [Partnership Act 1908, s 45].

(b) If A applies the resultant partnership income of B’s estate to reduce B’s indebtedness to the firm, the income is not applied for the benefit of B’s beneficiaries during the income year, and neither is it income to which the beneficiaries are entitled during the year. Accordingly, that income up to the date on which A covenants to take over all partnership assets and debts is assessable as trustee income.

(2) **Bonuses for dairy, meat, and fruit produce sold**

Bonuses accrued to the date of death on produce supplied up to that date, although received by the trustee, are assessable as income derived by the deceased in the period to the date of death. This is so, notwithstanding that, during the farmer’s lifetime, it was permitted as a matter of convenience to return the bonuses as income as and when received.

(3) **Business income**

If trustees carry on a business with the express authority of the beneficiaries but with no power under the will, they are regarded as agents for the beneficiaries and are not trustees. Consequently, the beneficiaries are really partners and both income and losses are transferred to them.

(4) **Dividends accrued**

Where dividends are actually derived in the period after death, no apportionment should be made under the Property Law Act 1952 unless the dividend resolution expressly states that it is for a fixed period of time which commences before and ends after the date of death. Where an apportionment is to be made, the part applicable to the period before death is assessable as trustee income, while the part for the period after death is assessed as either beneficiary income or as trustee income according to the terms of the will. In no case is any part of the dividend treated as the income of the deceased.

(5) **Financial arrangements income**

Financial arrangements income accrued in the period to date of death and received subsequently is income to be included in the estate tax return (IR6), unless it is interest which may be uplifted with the capital at any time on demand.
(6) **Holiday pay accrued**
Where employment is terminated by the death of the employee, the holiday pay for holidays due but not taken at the date of death is payable to the trustee and is assessable as trustee income, and not as income derived in the period up to the date of death.

(7) **Income from other estates**
Where the deceased was a beneficiary in an estate carrying on a business, the deceased’s income from the estate to the date of death is the amount of cash available for the beneficiary to that date, unless the estate’s accounts are actually balanced at the date of death so that the correct income due to the beneficiary is ascertained. Where the deceased was in receipt of income from an estate with all its assets invested, the income deemed to be derived by the beneficiary to the date of death is the share of income received on his or her behalf by the trustees of that estate up to the date of death.

(8) **Interest**
Interest, which may be uplifted with the capital invested at any time on demand, such as interest from a bank savings account or from current accounts with stock firms, is considered to be derived on a day-to-day basis and the proportion accrued up to the date of death is assessable as income of the deceased, irrespective of the date received. It is included in the personal income tax return (IR3).

(9) **Interest on advances made to a beneficiary**
A beneficiary entitled to a share in an estate may have obtained a prior advance against that share, with interest payable on the advance. Where advances are made to a beneficiary in accordance with the terms of the will, and the advances, together with interest at a fixed rate, are brought into account for the purpose of ascertaining the shares of the beneficiaries, the interest is merely notional interest charged for the purpose of adjusting the respective shares of the beneficiaries and is not real interest for taxation purposes. The interest on the advances is credited to the estate in order to increase the share of the other beneficiaries but is deducted from the share of the beneficiary who received the advances.

In other cases, a proportion of the interest is returned as income in the distribution by the trustee of the estate income; and the position of the beneficiary from a taxation point of view is as follows:

(a) The “mutuality principle” that taxpayers cannot derive a profit from dealing with themselves does not apply. The interest is payable by the beneficiary to the trustee and not to the beneficiary. The fact that the beneficiary derives part of the income from the trustee does not prevent the interest from being real interest which is ultimately income.

(b) The interest payable by the beneficiary is allowable as a deduction only where a nexus exists between the interest payable and the income earned from the borrowing.

(10) **Partnership income**
Where the deceased derived income from a share in a partnership business, the partnership trading stock on hand at the date of death must be brought into account at the probate valuation, and a return of the partnership income derived to the date of death should be furnished on this basis. Where the deceased derived income from partnership investments, ie from interest, rents, or dividends, the income derived by the deceased partner for the period to date of death is the share of the income actually received by the partnership during the period.

(11) **Rents accrued**
Rental income is considered to accrue on a day-to-day basis and any rent accruing but unpaid at date of death should be returned as income of the deceased. It is included in the personal income tax return (IR3).

Where rents from more than one property have accrued at date of death, it is necessary, when computing the deductions allowable for rates, insurance, interest, and depreciation, to consider each property separately and to allow for each property a proportion of the fixed charges equivalent to the period of time over which the accrued rents were being earned.
(12) Solicitors recently deceased

Fees, to the extent to which they are billable by a deceased solicitor prior to the date of death, should be included in the returns of the deceased up to the date of death, even though they were not rendered prior to the date of death. Fees, to the extent to which they were not billable as at the date of death, and for which work has since been completed by or on behalf of the trustees, should be included in the estate return in the year in which the work was completed and the fees rendered by the trustees. These fees are assessable as trustee income.

1420.220 Allowable deductions

In calculating net income, the following special features apply.

(1) Bad debts

For bad debts written off by trustees [see 90 BAD DEBTS AND BAD DEBTS RESERVES].

(2) Depreciation

Where the beneficiaries have an absolute vested interest in an estate property from which income is derived, depreciation is deductible when calculating net income.

However, where a person has a life interest only in the income produced by the property, no depreciation can be allowed against that beneficiary’s income because no losses are sustained by that person through the diminution in the value of the property. An exception is made where a reserve for depreciation is created out of income and the income reserved is credited to capital in terms of a power conferred on the trustees. Trustees have this power in the following cases:

(a) Where the person with a life interest is entitled to the net profits from a business (not rents) the trustees may charge depreciation in ascertaining the net profits; and

(b) Where there is a trust for conversion, with or without power to postpone conversion, depreciation may be deducted, except where the will provides that, pending conversion, the beneficiary is to receive the actual income from the unconverted assets.

Where all estate income is assessable as beneficiary income, depreciation is allowable as a deduction from the beneficiary income from the estate assets according to the beneficiary’s vested interest in the assets. Where income is assessable partly as beneficiary income and partly as trustee income, with the latter income including no non-deductible items of expenditure, the depreciation is apportioned between the beneficiary income and the trustee income according to the vested capital shares in the assets.

Where the income is assessable partly as beneficiary income and partly as trustee income and the trustee income consists partly or wholly of non-deductible expenditure, the depreciation is allowed as follows:

(a) The total depreciation allowable on income-producing assets is first divided amongst the beneficiaries with vested capital shares in proportion to their respective capital shares. This gives the loss sustained by each beneficiary by reason of depreciation.

(b) The depreciation so allocated to each beneficiary is then allowed:

(i) First, against income to which that beneficiary is actually or constructively entitled (ie if the beneficiary is an adult or a minor with a vested interest, against income assessable as beneficiary income); and

(ii) Secondly, against any non-deductible items assessable as trustee income.

(c) Where a capital share is not vested in any beneficiary but is held for beneficiaries contingently entitled, depreciation is not allowable against the income derived from that contingent share unless both the capital and income of the contingent share are held in trust so that the beneficiaries ultimately entitled to the contingent share also become entitled to both capital and accumulated income from that share.
Where a deduction for depreciation or expenditure allowable against trustee income creates a loss because it either exceeds that income (or there is no such income in the particular year), the loss may be carried forward and offset against future trustee income.

**Example:**
The trustees return income derived during the year from a property is as follows:

<table>
<thead>
<tr>
<th>Items</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rents received</td>
<td>$22,500</td>
</tr>
<tr>
<td>Expenses:</td>
<td></td>
</tr>
<tr>
<td>- Rates</td>
<td>$1,500</td>
</tr>
<tr>
<td>- Insurance</td>
<td>$1,000</td>
</tr>
<tr>
<td>- Interest</td>
<td>$4,000</td>
</tr>
<tr>
<td>- Repairs</td>
<td>$10,000</td>
</tr>
<tr>
<td>Total expenses</td>
<td>$16,500</td>
</tr>
<tr>
<td>Net income</td>
<td>$6,000</td>
</tr>
</tbody>
</table>

The repairs consist of $10,000 spent in remodelling shop fronts which is not deductible for taxation purposes.

One beneficiary, a son, has a vested share in one-half of the estate and the other beneficiary, a daughter, has a life interest in the income of one-half of the trust property, with the remainder to her children absolutely on her death. Depreciation on buildings amounting to $9,000 is deductible. Income for the year is calculated as follows:

**The son:**
- Assessed as beneficiary income: $3,000
- Less depreciation: One-half of $9,000 = $4,500. Allow $3,000
- Income: nil

No tax is payable. Note that the balance $1,500 of the beneficiary’s share of depreciation is allowed against the trustee income.

**The daughter:**
- Assessed as beneficiary income: $3,000
- Depreciation: nil
- Income: $3,000

Income tax is payable on $3,000.

**The trustee:**
- Income assessed: $10,000
- Less depreciation allowable: $9,000
- Allowed to son: $3,000
- Net: $6,000
- Income: $4,000

Income tax is payable on $4,000.

Where a beneficiary in a farming estate is employed as the farm manager and is entitled to the sole use of the homestead, the trustees are allowed depreciation at the full rates on the homestead. Where the homestead is occupied by a beneficiary manager jointly with other beneficiaries who are in occupation not as employees but as beneficiaries, the trustees are entitled to a deduction of one-quarter of the depreciation on the homestead. Depreciation is allowable for vacant farm buildings ordinarily used for farming, unless there is something more than a temporary cessation of use.

**3) Expenses allowable in period to date of death**

In calculating income in the period to date of death, the expenses deductible from the income derived to the date of death are as follows:
(a) A proportion of the fixed charges (ie rates, interest, insurance, rents, and depreciation) calculated on a day-to-day basis over the whole year (according to the Property Law Act 1952), diminished by the amount of any expenses deductible against any income accrued to the date of death and received subsequently by the trustees.

(b) Expenditure other than fixed charges (ie repairs and legal costs) are deductible from the income derived to date of death in the period when they were incurred regardless of when they were paid.

(4) Farm development expenditure

Development expenditure is deductible against trustee income. If this results in a net loss, the usual rules governing the carry forward of losses apply to permit the loss to be offset against future trustee income.

Development expenditure may be claimed against beneficiary income only in the following circumstances:

(a) When a life tenant under the terms of a will has the free use, income, and enjoyment of an estate and carries on the estate business personally, development expenditure may be deductible and be claimed against the life tenant’s income.

(b) When expenditure is actually charged in the accounts to the life tenant and the cost is borne by the life tenant, development expenditure may be claimed against the income. This does not apply if the trustees intend to refund the amount, directly or indirectly, at a future time or the amount is borne by the life tenant as a loan or advance from accumulated income.

(c) When a beneficiary has a vested interest in the capital of the estate, the development expenditure may be set off against the income.

(5) Interest on legacies

Interest on legacies is not a deductible expense in calculating the income in any year. Income paid to legatees is a distribution of the trust income and if actually paid to or applied for the benefit of a legatee, is beneficiary income.

(6) Legal expenses

Legal expenses are not deductible if incurred for the following purposes:

(a) In connection with the capital administration;

(b) The distribution of income to the beneficiaries;

(c) The appointment of new trustees.

Legal expenses incurred by estate trustees for the purposes of defending a testamentary promises claim were held to be expenditure of a private or domestic nature prohibited from being deductible: TRA Case L53 (1989) 11 NZTC 1,304.

Legal expenses incurred in applying to the Court for trustee remuneration are treated in the same way as trustee remuneration and allowed as a deduction in the same proportion as the remuneration is deductible.

(7) Livestock values

In the first estate return, the commencing value of the livestock is the value of the livestock entered as the closing value in the return to the date of death (ie market value).

(8) Losses carried forward

A loss incurred by a deceased taxpayer cannot be offset against income derived subsequently by the estate because the estate is a new taxpayer with a new tax file number.

When a loss has been incurred by trustees in an estate, the will should be examined to ascertain whether the loss should be borne by corpus or income. If the will provides that losses are to be borne by corpus, and does not grant a trustee with power to make reservations from income, the trustee is not deprived of any statutory right to carry the losses forward for offset against future profits. A life tenant may receive the income each year without making good any previous losses. However, the trustee may have the right to offset previous losses incurred against any business income.
Beneficiary income cannot be calculated as a negative amount through the estate incurring a loss. A loss incurred by an estate in any year cannot be offset in a life tenant’s individual assessment against the income derived by the life tenant from other sources during the same year. Neither can it be carried forward and offset against a life tenant’s income from the estate in a subsequent year. However, where the beneficiaries have a vested share in both the income and capital of the estate, the trustees are entitled to carry forward and offset the loss against future beneficiary income.

A loss incurred by an estate may be carried forward in the estate and offset against trustee income derived in future years. This applies even if the will directs that the loss must be made good out of corpus. A trustee may carry forward losses and have them offset against future income even though the income would otherwise normally be assessable as beneficiary income: Rutherford v Commissioner of Inland Revenue [1965] NZLR 444 (CA).

Where a will gives power to a trustee to carry on a business formerly conducted by the deceased, and power to make provision for depreciation, losses incurred in one year may be carried forward to future years.

Expenditure incurred by trustees in attempting to mitigate losses made in connection with shares held by the trustees was non-deductible, being capital expenditure incurred to preserve capital assets of the trust fund and not in the course of any business activities which had by then ceased: TRA Case J39 (1987) 9 NZTC 1,225.

(9) Repairs and maintenance

The cost of repairs needed to an estate property at the testator’s death are not deductible if the repairs place the property in a better condition and a capital improvement is made.

(10) Repairs recouped from beneficiary income

A trustee is empowered to carry out repairs from the capital of the estate and recoup the cost of the work from future beneficiary income [s 15(1)(a) of the Trustee Act 1956]. The amount recouped is not income available to the income beneficiaries and is assessable as trustee income. Where the expenditure exceeds the trustee income for the year, the loss of trustee income is carried forward and offset against future trustee income.

Example:

In the first year rental income is $30,000. Repair expenses of $12,000 are paid by the trustee but withheld from the beneficiaries under s 15(1)(a) of the Trustee Act 1956 over a period of three years.

Staples Tax Guide 2012
(11) Trading stock

Trading stock on hand at the date of death should be brought into account at its true value (i.e., probate value).

(12) Trustee remuneration

Only the proportion of the trustee charges related to the production of income are deductible. Any amount which relates to the administration of the capital assets and to the distribution of income is not deductible.

Trustee remuneration payable under a court order obtained by the trustees is assessable in the year of receipt, notwithstanding the fact that the services for which the payment is made were performed over a period of years. The trustees are not actually entitled to any remuneration until the court order is obtained.

Where the trustee is bequeathed shares as consideration for agreeing to act as trustee under the will, the market value of the shares is assessable as income in the year of receipt.

1420.225 Person who administers an estate under the Aged and Infirm Persons Protection Act is not a trustee

A person appointed to control and administer the estate of an infirm person under the Aged and Infirm Persons Protection Act 1912 is not a trustee but a manager and, therefore, an agent of the aged or infirm person. The manager is deemed to be a trustee for the purposes of the Trustee Act 1956, but not for the purposes of the ITA 2007. Consequently, the returns of income which the manager is required to make are not trust tax returns, but are personal income tax returns.

1420.230 Valuation of assets where existing trusts become subject to New Zealand tax [s HC 31]

Where a trust which was previously not liable to New Zealand income tax on trustee income becomes liable, the cost for tax purposes of items such as premises, plant, machinery, equipment, and trading stock is deemed to be (at the option of the person liable to pay income tax on trustee income) either:

(a) Historical cost less accumulated depreciation or a value (being no higher than market value) at that date used for the purposes of income tax calculations in any country in which the trustee income has been liable to income tax; or

(b) The value which would be used as if the trustee income had at all times been liable to income tax.

The acquisition price of any financial arrangement is (at the option of the person), either:

(a) Market value; or

(b) The result of the following formula:

\[ \text{consideration paid to the person} + \text{expenditure} - \text{consideration paid by the person} - \text{income}. \]

1420.235 Disclosure [TAA, ss 93B, 59]

Where a New Zealand resident makes a settlement on a trust on or after 17 December 1987 and, at the time of settlement, no trustee was resident in New Zealand, or if subsequently there is no trustee resident in New Zealand, the settlor must disclose to the CIR by the later of three months from the date of settlement or the date of there being no trustee resident in New Zealand, the fact of that settlement, the names and addresses of trustees and beneficiaries, and such other details the CIR may require [TAA, s 59].
Any person who has made a settlement on a trust as nominee for any other person where, at the time of settlement, no trustee was resident in New Zealand, must disclose to the CIR by the later date of within three months of settlement or by 31 May 1989 of the fact of the settlement, the name and address of the person deemed a settlor, and any further details required by the CIR.

The disclosure requirements do not apply to any trust that is a superannuation fund.

Where disclosure has not been made or insufficient information is available to calculate trustee income, the CIR may determine the amount of trustee income for the income year in a fair and reasonable manner [TAA, s 93B].

1440.10  Purposes of the Unclaimed Money Act

The Unclaimed Money Act 1971 has these purposes:

(a) To ensure people or organisations who hold funds on behalf of someone else take adequate steps to find the owners of unclaimed deposits and other amounts owing;

(b) To enable businesses and the personal representatives of deceased people to clear their accounts of unclaimed money;

(c) To require unclaimed money be paid to the Crown as the custodian for the owner of the funds, with the benefit from the use of the money accruing to the community in the interim; and

(d) To establish a mechanism for the owner to recover the unclaimed money at a future date.

The Act sets out the procedures to follow for unclaimed money. It defines unclaimed money and holders of unclaimed money. Generally, money held in an account where there is no activity for six consecutive years (or 25 consecutive years, for some deposits), becomes unclaimed money. There are special provisions for amounts of $100 or less.

The Act applies to all companies, banks, building societies, insurance offices, moneylenders, auctioneers, real estate agents, accountants, sharebrokers, and motor vehicle dealers that hold defined classes of unclaimed money. There are special provisions where the holder has ceased to carry on business or has died. The CIR may also enter into special arrangements to exempt holders from some of the administrative requirements of the Act.

The Act does not apply where provisions relating to unclaimed money exist under other legislation, eg for solicitors. However, any person or organisation who is not required to comply with the Act may elect to become a holder, and use the facilities to clear unclaimed money.

The Act sets out the obligations of holders and the CIR for unclaimed money held on behalf of the owner. Inland Revenue administers the Act on behalf of The Treasury.

1440.20  Unclaimed money

Unclaimed money falls into three broad groups:

(a) Deposits of money;
Unclaimed Money

(b) Life assurance proceeds;
(c) Certain types of trade debts.

Money only becomes unclaimed money after it has been held for a certain length of time and it is situated in New Zealand. Money unclaimed in another country is generally subject to that country’s law.

The following money is treated as unclaimed money.

1) **Fixed term deposits**

Money (including interest), deposited by the customer to earn interest for a fixed term. The money becomes unclaimed money if the holder has held the money for six years after the end of the fixed term.

2) **Deposits for indefinite periods**

Money (including interest) deposited by the customer to bear interest for an indefinite period, eg an ordinary savings account. The money becomes unclaimed money if the customer has not used the account for 25 years by making a deposit, withdrawing money, or giving written instructions.

3) **Automatically renewable fixed term deposits**

Money (including interest) deposited by the customer to bear interest for a fixed period where the money is automatically reinvested at the end of the term. For example, the customer may give a written standing instruction that the holder should reinvest the deposit on the expiry of each deposit term. This money becomes unclaimed money if the customer has not used the account for 25 years by making a deposit, withdrawing money, or giving written instructions.

4) **Non-interest bearing current accounts**

Money deposited by the customer in a current account which does not bear interest. The money becomes unclaimed money if the customer has not used the account for six years by making a deposit, withdrawing money, or giving written instructions. If the amount is held by a savings bank, the money becomes unclaimed if the customer has not used the account for 25 years. Savings banks include the Post Office Bank Ltd, trustee savings banks, private savings banks, and building societies.

5) **Life assurance proceeds**

Money payable on the maturity of a policy of life assurance. This money becomes unclaimed if held by the holder for longer than six years after the earlier of the date that the policy matures (otherwise than by death) or the date that it matures due to death. The holder only needs to have reason to suppose that the policy has matured due to death. The holder does not need to ensure that the death is legally proved, even if this is a condition of the life assurance policy itself. Example: If a policy holder disappears while swimming, the six-year period starts to run from the date of the probable drowning, although the death may not be legally presumed until later.

6) **Trade debts and other money**

Any other money which has been owing by a person who is defined as a “holder” (explained below). Examples of money falling into this group include trade debts, wages, and unpresented cheques. This money becomes unclaimed money if it has been owing for six years after the due date for payment.

7) **Case law**

In *Westpac Banking Corporation v Commissioner of Inland Revenue* (2009) 24 NZTC 23,076 (HC), the High Court found that bank cheques and foreign currency drafts not presented for payment are unclaimed money within the meaning of s 4(1)(e) of the Unclaimed Money Act 1971. The decision was confirmed by the Court of Appeal in *Westpac Banking Corporation v Commissioner of Inland Revenue* [2009] NZCA 376, (2009) 24 NZTC 23,755. Westpac has been granted approval to appeal the case to the Supreme Court.

1440.30 **What is not unclaimed money**

Three types of money can never become unclaimed money (except where the holder or person owing the money ceases business [see 1440.62]). These are:
(a) Dividends: This exclusion does not apply to dividends payable by mutual associations if the dividends are effectively interest on members’ contributions or deposits;
(b) Mutual association rebates: This exclusion applies to rebates on store trading payable by mutual associations to their members Interest on members’ contributions or deposits can become unclaimed money; and
(c) Benefits payable from a pension or superannuation fund.

In *Commissioner of Inland Revenue v Thomas Cook (New Zealand) Ltd* [2003] 2 NZLR 296 the Court of Appeal held that international cheques (drafts) that are not presented by the payee become unclaimed money when they become stale. The drawer is not liable on a cheque until it is presented at a bank for payment. If it is not presented, the drawer becomes liable for payment when the cheque becomes stale (six months after the date of the draft). At this point, the drawer has an immediate and unconditional obligation, and the money is payable at this time for the purposes of s 4(1)(e) of the Unclaimed Money Act 1971.

On appeal, the Privy Council confirmed that Thomas Cook (New Zealand) Ltd was obliged under s 8 of the Unclaimed Money Act 1971 to pay to the CIR the amount of the unpresented cheques. The Council questioned the Court of Appeal’s finding that the cheques became payable when they became stale, and found that the cheques were payable on issue: *Thomas Cook (New Zealand) Ltd v Commissioner of Inland Revenue* (2004) 21 NZTC 18,933 (PC).

In *Westpac Banking Corporation v Commissioner of Inland Revenue* [2011] NZSC 36 the taxpayer banks brought proceedings against the CIR to determine whether certain categories of bank cheques and foreign currency drafts were unclaimed money within the meaning of s 4(1)(e) of the Unclaimed Money Act 1971. The banks’ position was that, when bank cheques or drafts were not presented for payment, the banks, as issuers, were not the holders of unclaimed money and therefore not liable to record particulars or pay the unclaimed amounts to the CIR.

The High Court granted the CIR’s application for summary judgment and declarations finding that the unpresented bank cheques and foreign currency drafts were unclaimed money within s 4(1)(e). The Court of Appeal dismissed the taxpayers’ appeal finding that it was bound by the Privy Council’s decision in *Thomas Cook*, as there were no material differences in the facts of the cases in relation to the form, use or practice of the instruments.

The Supreme Court held that the Privy Council was correct in its decision and interpretation of the relevant law in *Thomas Cook*. That decision applied to foreign drafts and bank cheques and the banks were not entitled to retain the money that was paid under them. Therefore, six years after their purchase, the money represented by those financial instruments became unclaimed money under s 4(1)(e).

The Supreme Court considered the meaning of “payable” in s 4(1)(e) and held that, in this case, customers were in substance putting the taxpayers in funds, against which both the customer and bank expected a third party to draw. Where that expectation was not fulfilled, the situation was covered by one of the purposes stated by the Minister in his speech introducing the Bill in 1971, that money in the hands of another and which is not claimed by the owner is not to be retained and treated as the holder’s revenue.

**1440.40 Other legislation**

The Unclaimed Money Act does not override any special provisions for the treatment of unclaimed money contained in any other Act. Other Acts that include such special provisions are:

(a) The Law Practitioners Act 1982;
(b) The Companies Act 1955 and the Companies Act 1993 (liquidations);
(c) The Innkeepers Act 1962;
(d) The Public Trust Office Act 1957.

**1440.50 Holders**

Holders of unclaimed money fall into one of the following three groups:

(a) General mandatory holders;
(b) Restricted mandatory holders;
(c) Voluntary holders.

(1) General mandatory holders
These are companies, banks, building societies, and insurance offices. General holders are liable to account for all classes of unclaimed money.

(2) Restricted mandatory holders
There are certain holders (who are not companies) who are only obliged to account for particular kinds of unclaimed money. These holders, and the unclaimed money they must account for, are:
(a) Moneylenders: Money they have borrowed in the course of the money lending business;
(b) Auctioneers: The balance of any proceeds of goods sold at auction;
(c) Real estate agents: Money held in the real estate agent’s trust account;
(d) Sharebrokers: Money held on behalf of clients;
(e) Members of the New Zealand Institute of Chartered Accountants (NZICA): Money held on behalf of clients; and
(f) Motor Vehicle Dealers: Proceeds a dealer receives when acting as agent.

(3) Voluntary Holders
Any person, firm, body, or institution not included above may elect to be a holder and comply with the provisions of the Act. In addition, any of the restricted holders mentioned above may elect to be a holder of additional money except:
(a) Money which they hold as a mandatory holder; and
(b) Funds which do not qualify as unclaimed money (eg dividends, mutual association rebates, or pension and superannuation fund benefits).

Any person (or personal representative) may elect to be a holder where the business has ceased or death has occurred.

Before the CIR can accept the unclaimed money held by a person who has elected to be a holder, the person must give the CIR a copy of the entry in the holder’s unclaimed money register. In the case of business cessation or death, the holder must give the CIR brief details of the money and its owner.

1440.51 Requirements for holders
On 1 June each year, holders must enter in an alphabetical register details of unclaimed money arising in the preceding year. The register must be available for inspection by the public.

By 30 June each year, the holder must send a letter to each owner (at the last known address), providing details of the unclaimed money.

By 30 September each year, the holder must advise the CIR of the entries made in the register.

If the money is not claimed by the owner, the holder must pay it to the CIR according to the requirements set out below.

The holder must make an election for amounts not exceeding $100 for any one owner according to the requirements set out below.

The CIR may authorise officers to examine at any time any register kept by a holder and any accounts of the holder that relate to unclaimed money. The officer may require the holder to correct any errors in the register.

1440.60 Payment of unclaimed money
The money is payable to the Crown through the CIR when:
(a) The money is deemed to be unclaimed money;
(b) It has been held unclaimed for the required number of years (six years or 25 years as applicable); and
(c) It is held by a holder.

The holder of unclaimed money in any year ending on 31 May, where either the money has not been paid to
or claimed by the owner by 30 September, must pay the money to the CIR by 31 October. Where the holder
pays unclaimed money to the CIR in accordance with the Act, the holder has no further liability to anyone
who claims the money.

1440.61 Amounts of $100 or less

There are special provisions to overcome the expense of handling small amounts of unclaimed money that
do not exceed $100 for any one owner. A holder can choose within 12 months after the end of the six-year
or 25-year period not to search out owners and not to pay the unclaimed money to the Crown. The money
ceases to be unclaimed money. The holder can apply the amount for personal benefit or for the benefit of
any other person or for any purpose or object. The owner can still claim the money from the holder in the
future.

1440.62 Where the holder has ceased business or died

Where a business ceases or a death occurs, money that has been held unclaimed for six months after cessation
or death may be paid to the Crown to hold as custodian. This applies to money which would:

(a) Become unclaimed money when the time limits expired; or

(b) Have become unclaimed money if it had not been one of these items:
   (i) Dividends;
   (ii) Rebate from a mutual association to members for trading transactions; or
   (iii) Benefits payable from any pension or superannuation fund.

This is an option that assists in the early clearing of books, and is available to anyone who ceases business
or in the event of death.

1440.63 Role of Inland Revenue

The CIR administers the Act on behalf of The Treasury. All unclaimed money received is paid into the
Consolidated Account. The Act provides that all Inland Revenue officers must maintain secrecy about all
information obtained in administering the Act. Inland Revenue only communicates such information for the
purpose of administering the Act. There is one exception to this strict secrecy requirement; the CIR may
make available for publication the names of owners and amounts of unclaimed money paid to the CIR.

1440.64 Special arrangements

The CIR may enter into a special arrangement in writing to exempt any holder or class of holder from the
following obligations:

(a) Keeping an unclaimed money register;

(b) Notifying owners (although this particular exemption would be rare);

(c) Supplying register entry copies to the CIR; and

(d) Paying unclaimed money to the CIR by 31 October, where no person has established a valid claim
    by 30 September.

1440.65 Repayment of money

If a claimant establishes a valid claim for unclaimed money paid to the Crown, the CIR repays the money
out of the Consolidated Account. A claimant must satisfy the CIR that he or she is the owner of the money.
There are no specific rules as to what is satisfactory evidence of ownership. In some cases it may be necessary
to consult the former holder. For example, Inland Revenue might consult a former holder such as an insurance
company or bank, for comparison of signatures or other evidence. Where the CIR pays money to a claimant
and another person later claims to be the owner, the CIR is not responsible for repayment. The second claimant
may have a claim against the first claimant.
Inquiries about unclaimed money should be made to:
Unclaimed Money,
BusinessDirect,
Inland Revenue Department,
PO Box 895,
Wellington.

1440.70 Offences
It is an offence for a holder to wilfully or negligently fail to comply with the Act. Where the holder is a company, both the company and the executive officer who authorised or permitted the failure are open to prosecution. The Court can impose a fine of up to $500 upon conviction for each offence [see TIB vol 5:7 (December 1993)].
Chapter 1450
Unit Trusts

1450.10 Unit trusts
A unit trust is treated as a company, the unit holders are treated as shareholders and the income and other payments to the unit holders are treated as dividends. The remuneration paid to the manager and to the trustee of the unit trust is deductible from the income of the trust. Public ruling BR Pub 95/5A sets out the relationship between a unit trust and a qualifying trust [see TIB vol 8:10 (December 1996) at 15]. On 20 April 2000, the CIR issued a notice of non-renewal of BR Pub 95/5A (ie the ruling is no longer binding on Inland Revenue). However, the CIR also stated that Inland Revenue’s approach to the issue remained the same.

A unit trust does not include the following:
(a) A trust for the benefit of debenture-holders;
(b) The Common Fund of the Public Trustee or any Group Investment Fund established by the Public Trustee;
(c) The Common Fund of the Maori Trustee;
(d) Any Group Investment Fund established under the Trustee Companies Act 1967;
(e) Any friendly society registered under the Friendly Societies and Credit Unions Act 1982;
(f) Any superannuation fund;
(g) Any employee share purchase scheme in terms of s DC 12;
(h) Any employee funeral trust in terms of s CW 45; or
(i) Any other trust declared by the Governor-General, by Order in Council, not to be a unit trust for these purposes.

Small investment clubs may not come within the scope of the section. Before the provisions can apply, the scheme or arrangement must be in the nature of a trust. This test is not satisfied if the scheme is merely a partnership, a syndicate, or a joint venture. Where a club is formed and the members manage and control the club directly without the intervention of a trustee, it is essentially the same as a partnership or joint venture. It is neither in form, nor in nature, a trust. This is not negated through a rule enabling securities to be held in the name of two or three members as trustees for the club. These persons are custodians and do not, by virtue of their appointment, manage and control the club. Control remains directly with the members even though it may be exercised through officers or a committee vested with authority.

Unit trusts that meet certain criteria are able to elect to become portfolio investment entities (PIEs) [see 1130 PORTFOLIO INVESTMENT ENTITIES].

1450.20 Public unit trusts
Many of the provisions contained in the ITA 2007 which deal specifically with unit trusts differentiate between those which are “public unit trusts” and those which are not. A public unit trust generally will be a
unit trust which is widely held (ie have 100 or more unit holders). However, there are some exceptions to this general rule.

The term “public unit trust” includes unit trusts that meet defined criteria. In order for a unit trust to be a public unit trust, it must fit within one of three broad categories:

(a) Unit trusts which have at least 100 unit holders;
(b) Unit trusts that are held by other institutions; or
(c) Unit trusts which have less than 100 investors, but which meet other criteria.

(1) At least one hundred unit holders

The first category of public unit trust refers mainly to public unit trusts. All of the following criteria must be met:

(a) The unit trust offers securities to the public in accordance with the Securities Act 1978;
(b) The unit trust has 100 or more unit holders; and
(c) The unit trust’s unit holders are:
   (i) Unit trust managers who hold units in the ordinary course of the manager’s activities in respect of the unit trust;
   (ii) Persons with an interest of 25 per cent or less in the unit trust; or
   (iii) Persons with an interest of 25 per cent or more provided that the person’s interest is 25 per cent or more due to unusual or temporary circumstances, such as the recent establishment or forthcoming termination of the public unit trust.

(2) Unit trusts held by other institutions

The second category refers mainly to unit trusts whose unit holders are any one or more of the following:

(a) A public unit trust within the meaning of one of the other categories;
(b) A group investment fund;
(c) A life insurance company;
(d) A superannuation fund;
(e) A unit trust manager, a trustee, or a person nominated by the manager or the trustee, who holds units in the ordinary course of the management activities in relation to the unit trust;
(f) A person with an interest of 25 per cent or less in the unit trust if the unit trust is one that offers securities to the public in accordance with the Securities Act 1978; or
(g) A person with an interest of 25 per cent or more if:
   (i) The person’s interest is 25 per cent or more due to unusual or temporary circumstances such as the recent establishment or forthcoming termination of the unit trust, being a unit trust that falls within one of the other categories of public unit trust; and
   (ii) The unit trust is one that offers securities to the public in accordance with the Securities Act 1978.

(3) Unit trusts with less than 100 unit holders

The third category refers to unit trusts which have less than 100 investors, but which meet the following specified criteria:

(a) The unit trust could reasonably be regarded as a widely-held investment vehicle for direct investment by members of the public despite the lesser number of unit holders or investors;
(b) The existence of less than 100 unit holders or investors is due to unusual or temporary circumstances, such as the recent establishment or forthcoming termination of the unit trust, being a unit trust that otherwise would be a public unit trust; or
(c) The unit trust could reasonably be regarded as a vehicle primarily for investment by widely-held vehicles for direct investment, being unit trusts, group investment funds, life insurance companies or superannuation funds.

(4) **Number of unit holders**

When counting the number of unit holders, all persons associated with each other are treated as being one person. To make this counting possible, the trustee is entitled to request the unit holders to disclose their associations. The unit holders are required to comply with the request and the trustee is entitled to rely on the disclosures unless there are reasonable grounds for believing that the disclosure is not correct.

**1450.30 Expenditure of member funds** [ss DV 5, DV 6, DV 7, IA 2(4), IA 7(4)]

It is common for a unit trust (a member fund) to invest in another unit trust (a master fund). The member fund may incur deductible expenditure but earn income only in the form of fully imputed dividends from the master fund. Where this occurs, the member fund will have insufficient net income to fully utilise the imputation credits. The legislative solution is as follows:

(1) **Expenditure of the member fund**

(a) Where the member fund incurs expenditure that is deductible under s DA 1 (the general permission), that expenditure can be transferred to the master fund.

(b) Expenditure that is either:
   
   (i) Revenue account property; or
   
   (ii) Expenditure on a financial arrangement, other than a financial arrangement that is denominated in New Zealand dollars and for which expenditure is allocated using the yield to maturity method,

   cannot be transferred.

(c) The member fund can transfer expenditure only to the extent to which it has a net loss.

(d) The member fund and the master fund must agree that the expenditure incurred by the member fund be transferred.

(e) If the member fund is a group investment fund that derives category A income, only expenditure that relates to the category A income may be transferred.

(f) The expenditure is treated as if it were expenditure incurred by the master fund in deriving its gross income in the income year in which the expenditure is transferred by the member fund.

(g) The expenditure is treated as not having been incurred by the member fund.

(h) Where the member fund incurs more expenditure than both funds agree can be transferred, the member fund can carry that expenditure forward for transfer in a later income year.

(i) Any expenditure carried forward by the member fund can be treated as a “tax loss component”. A tax loss component is able to be carried forward to the next income year.

(j) In the income year in which the member fund ceases to invest in the master fund, neither the member fund nor the master fund may deduct expenditure that would otherwise be transferable, and the member fund must treat the expenditure as a tax loss component.

(2) **Deduction to the master fund**

(a) The maximum amount of expenditure that may be transferred to a master fund is the amount of the master fund’s taxable income for the year minus the total of its non-resident withholding income of the kinds to which s RF 2(5), (6) apply (where the NRWT is a minimum tax), derived in the year when the expenditure was incurred.

(b) A master fund that is a group investment fund that derives category A income may deduct expenditure only in respect of its category A income.
(c) If the master fund has filed its return of income and then finds that it is able to deduct more that was deducted in its return, the CIR has the power to allow the member fund to transfer additional expenditure to the master fund.

(d) The transfer provisions are available only where the member fund has some or all of its funds invested in the master fund at all times from the time at which the expenditure was incurred to the end of the income year in which the master fund is seeking a deduction for that expenditure.

1450.40 Measurements of interests for the continuity provisions [s YC 12]

The unit holders of a “public unit trust”, in their collective capacity are treated as holding all shares in the public unit trust as if they were always the same notional single person that is not a company, exists while the unit trust exists and holds nothing but the shares in the unit trust.

1450.50 Disclosure requirements for the purposes of the continuity provisions [TAA, s 32D]

For the purposes of the continuity provisions, the trustee of a public unit trust can require unit holders to provide the trustee with a written statement of persons associated with the shareholder. The request must be in writing.

Upon receipt of such a request, the unit holder has 20 working days in which to provide the statement. The trustee is entitled to rely on the statement as being correct unless the trustee has reasonable grounds for believing that the statement is not correct.

1450.60 Redemption of units [s CD 16]

From 1 April 1996, units in a unit trust on issue as at that date are treated as not having been issued on terms that their redemption would be subject to the slice rule. However, a unit trust manager may elect out of this provision. [s CZ 13].

Special imputation rules apply where:

(a) Fund A unit trust manager which derives category A income acquires units from a unit holder; and

(b) Those units are acquired in the ordinary course of the trustee’s or manager’s activities in respect of the unit trust and in accordance with the issue terms of the units.

Under these circumstances, the dividend derived by the manager or trustee does not include the amount of any imputation credit or dividend withholding credit attached to the dividend to the extent to which the dividend, exclusive of the credit, exceeds the amount paid by the manager to acquire the units. The measure was introduced to preclude the double claiming of credits.

1450.70 Imputation [ss OB 45, OP 45]

A special imputation debit may arise to the ICA of a unit trust manager or the trustee or manager of a Group Investment Fund (GIF). The debit arises where the manager or trustee derives a dividend on redeeming units purchased from investors in the ordinary course of the manager’s or trustee’s activities. The debit is effectively an amount equal to the greater of the total imputation and DWP credits attached to the dividend or the amount of income tax liability of the manager or trustee that is attributable to the dividend [see TIB vol 7:9 (February 1996) at 7].
APPENDICES
# Chapter 2000

## Tax Calendar

### 2000.10  Tax calendar (2012-2013)

The schedule below sets out important due dates for tax returns and payments for the year ending 31 March 2013. The following points should be noted:

- Tax payments must be made on or before the due date. If the due date falls on a weekend or a public holiday, the payment is due on the next working day [see 1100.13].
- A “large employer”, for PAYE purposes, is one whose PAYE deductions for the previous year were $500,000 or more [see 1080.81]. A “small employer” is an employer whose annual PAYE deductions are less than $500,000.
- PAYE tax deductions falling due for payment on a particular date include any ESCT, earner levy, student loan repayments, child support, or KiwiSaver deductions relating to the relevant period.
- The approved issuer levy is paid by approved issuers in relation to interest payments made to non-residents [see 1020.80].

**Note:** The due dates in the following schedule are the effective due dates, adjusted as necessary where the statutory due date falls on a weekend or public holiday. If the effective due date is not the same as the statutory due date, the statutory due date is shown in brackets.

</table>
9 July
Annual income tax returns (2011-2012) for taxpayers with balance dates between 1 October 2011 and 31 March 2012.
Annual imputation returns for taxpayers with balance dates between 1 October 2011 and 31 March 2012.
Company dividend statements for balance dates between 1 October 2011 and 31 March 2012.
Maori authority credit account returns for balance dates between 1 October 2011 and 31 March 2012.

20 July
Large employers — PAYE deductions for 1-15 July 2012 and employer deductions form.
Small employers — PAYE deductions for all of June 2012, employer deductions form, and employer monthly schedule for June 2012.
NRWT deducted during June 2012 for monthly payers.
Approved issuer levy for interest payments made in June 2012.
RWT deducted from interest during June 2012, for monthly payers.
RWT deducted from dividends and taxable Maori authority distributions during June 2012.
FBT return and payment for quarter ended 30 June 2012.

30 July
GST return and payment for period ended 30 June 2012.

31 July
Annual ICA return for year ended 31 March 2012 for Australian ICA companies not required to file New Zealand returns of income.

6 August

7 August
Annual income tax returns for taxpayers with April 2012 balance dates.
Annual imputation, BETA, policyholder credit account, Maori authority credit account returns, and company dividend statement for taxpayers with April 2012 balance dates.

20 August
Large employers — PAYE deductions for 1-15 August 2012 and employer deductions form.
NRWT deducted during July 2012 for monthly payers.
Approved issuer levy for interest payments made in July 2012.
RWT deducted from interest during July 2012, for monthly payers.
RWT deducted from dividends and taxable Maori authority distributions during July 2012.

28 August
GST return and payment for period ended 31 July 2012.
Provisional tax [see 2000.20].

5 September
Large employers — PAYE deductions for 16-31 August 2012, employer deductions form, and employer monthly schedule for August 2012.
7 September
- Terminal tax (October 2011 balance dates).
- Terminal student loan repayment (October balance dates).
- QCET and interest for companies with October balance dates that become QCs for the 2011-2012 income year.
- Annual income tax returns for taxpayers with May 2012 balance dates.
- Annual imputation, BETA, policyholder credit account, Maori authority credit account returns, and company dividend statement for taxpayers with May 2012 balance dates.
- FBT return and payment for employers with October 2011 balance date paying on income year basis.

20 September
- Large employers — PAYE deductions for 1-15 September 2012 and employer deductions form.
- NRWT deducted during August 2012 for monthly payers.
- Approved issuer levy for interest payments made in August 2012.
- RWT deducted from interest during August 2012, for monthly payers.
- RWT deducted from dividends and taxable Maori authority distributions during August 2012.

28 September
- GST return and payment for period ended 31 August 2012.
- Provisional tax [see 2000.20].

30 September
- Second instalment of 2012-2013 non-resident student loan repayments.

5 October

8 October
- Terminal tax (November 2011 balance dates).
- Terminal student loan repayment (November 2011 balance dates).
- QCET and interest for companies with November balance dates that become QCs for the 2011-2012 income year.
- Annual income tax returns for taxpayers with June 2012 balance dates.
- Annual imputation, BETA, policyholder credit account, Maori authority credit account returns, and company dividend statement for taxpayers with June 2012 balance dates.
- FBT return and payment for employers with November 2011 balance date paying on income year basis.

22 October
- Large employers — PAYE deductions for 1-15 October 2012 and employer deductions form.
- Small employers — PAYE deductions for all of September 2012, employer deductions form, and employer monthly schedule for September 2012.
- NRWT deducted during September 2012 for monthly payers.
- NRWT deducted 1 April 2012 to 30 September 2012 for six-monthly payers.
- Approved issuer levy for interest payments made in September 2012.
RWT deducted from interest during September 2012, for monthly payers.
RWT deducted from interest 1 April 2012 to 30 September 2012, for six-monthly payers.
RWT deducted from dividends and taxable Maori authority distributions during September 2012.

FBT return and payment for quarter ended 30 September 2012.

29 October
GST return and payment for period ended 30 September 2012.

Provisional tax [see 2000.20].

5 November

7 November
Terminal tax (December 2011 balance date).
Terminal tax (October 2011 balance date and with tax agent).
Terminal student loan repayment (December 2011 balance dates).
QCET and interest for companies with December balance dates that become QCs for the 2011-2012 income year.
Annual income tax returns for taxpayers with July 2012 balance dates.
Annual imputation, BETA, policyholder credit account, Maori authority credit account returns, and company dividend statement for taxpayers with July 2012 balance dates.
FBT return and payment for employers with December 2011 balance date paying on income year basis.

20 November
Large employers — PAYE deductions for 1-15 November 2012 and employer deductions form.
NRWT deducted during October 2012 for monthly payers.
Approved issuer levy for interest payments made in October 2012.
RWT deducted from interest during October 2012, for monthly payers.
RWT deducted from dividends and taxable Maori authority distributions during October 2012.

28 November
GST return and payment for period ended 31 October 2012.
Provisional tax [see 2000.20].

5 December

7 December
Terminal tax (January 2012 balance date).
Terminal tax (November 2012 balance date and with tax agent).
Terminal student loan repayment (January 2012 balance dates).
QCET and interest for companies with January balance dates that become QCs for the 2011-2012 income year.
Annual income tax returns for taxpayers with August 2012 balance dates.
Annual imputation, BETA, policyholder credit account, Maori authority credit account returns, and company dividend statement for taxpayers with August 2012 balance dates.

FBT return and payment for employers with January 2012 balance date paying on income year basis.

**20 December**

Large employers — PAYE deductions for 1-15 December 2012 and employer deductions form.

NRWT deducted during November 2012 for monthly payers.

Approved issuer levy for interest payments made in November 2012.

RWT deducted from interest during November 2012, for monthly payers.

RWT deducted from dividends and taxable Maori authority distributions during November 2012.

Third instalment of 2012-2013 non-resident student loan repayments.

**2013**

**7 January**

Annual income tax returns for taxpayers with September 2012 balance dates.

Annual imputation, BETA, policyholder credit account, Maori authority credit account returns, and company dividend statement for taxpayers with September 2012 balance dates.

**15 January**

Provisional tax [see 2000.20].

Terminal tax (February 2012 balance date).

Terminal tax (December 2011 balance date and with tax agent).

Terminal student loan repayment (February 2012 balance dates).

QCET and interest for companies with February balance dates that become QCs for the 2011-2012 income year.

FBT return and payment for employers with February 2012 balance date paying on income year basis.

GST return and payment for period ended 30 November 2012.

**21 January**

Large employers — PAYE deductions for 1-15 January 2013 and employer deductions form.

NRWT deducted during December 2012 for monthly payers.

Approved issuer levy for interest payments made in December 2012.

RWT deducted from interest during December 2012, for monthly payers.

RWT deducted from dividends and taxable Maori authority distributions during December 2012.

FBT return and payment for quarter ended 31 December 2012.

**28 January**

GST return and payment for period ended 31 December 2012.
Provisional tax [see 2000.20].

5 February  

7 February  
Terminal tax for taxpayers (without tax agents) with balance dates between 1 March and 30 September 2012.
Terminal tax (January 2012 balance date and with tax agent).
Terminal student loan repayment (balance dates between 1 March and 30 September 2012).
QCET and interest for companies with balance dates between 1 March and 30 September 2012 that become QCs for the 2012-2013 income year.
FBT return and payment for employers with balance dates between 1 March and 30 September 2012, paying on income year basis.

20 February  
Large employers — PAYE deductions for 1-15 February 2013 and employer deductions form.
NRWT deducted during January 2013 for monthly payers.
Approved issuer levy for interest payments made in January 2013.
RWT deducted from interest during January 2013, for monthly payers.
RWT deducted from dividends and taxable Maori authority distributions during January 2013.

28 February  
GST return and payment for period ended 31 January 2013.
Provisional tax [see 2000.20].

5 March  

7 March  
Terminal tax (February 2012 balance date and with tax agent).

20 March  
Large employers — PAYE deductions for 1-15 March 2013 and employer deductions form.
NRWT deducted during February 2013 for monthly payers.
Approved issuer levy for interest payments made in February 2013.
RWT deducted from interest during February 2013, for monthly payers.
RWT deducted from dividends and taxable Maori authority distributions during February 2013.

28 March  
GST return and payment for period ended 28 February 2013.
Provisional tax [see 2000.20].

1 April (or [31 March])  
Annual income tax returns for the year ended 31 March 2012 for taxpayers (with a tax agent) with balance dates between 1 October 2011 and 31 March 2012.
Fourth instalment of 2012-2013 non-resident student loan repayments.
ICA balance must be nil or in credit at close of business, or 10 per cent imputation penalty incurred [see 670.105].

Chapter 4000
Charities List

4000.10 Publication of Charities List

Staples Tax Guide no longer includes a list of the institutions and funds recognised by Inland Revenue as donees qualifying for the charitable gifts and donation tax credits. Similarly, Staples Tax Guide no longer includes a list of entities whose donee status has ceased and which are no longer registered as charities.

The full list of charitable organisations with donee status - including those with ceased donee status - is available at Inland Revenue’s website, at www.ird.govt.nz/donee-organisations/. This searchable list is updated continuously and can be viewed in its entirety in spreadsheet form.

Alternatively, the Charities Commission also provides a comprehensive means of searching for any particular registered charity (ie which has donee status) at: www.register.charities.govt.nz/CharitiesRegister/Search.aspx. The search of the Charities Commission Register can be undertaken by reference to the organisation’s name or part thereof; addresses; activities undertaken; officers; beneficiaries; and registration number.

Once a search is complete, the results provide all details relevant to the particular charity. These details include the name of the charity; date of registration; addresses; beneficiaries; charitable purposes; supporting documents; area of operation; officers; annual returns; and any exemptions applying to the organisation.

The Charities Commission Register also maintains records for entities which have ceased to be registered and which no longer have donee status for tax purposes. All details are included for organisations which have been de-registered, including the date of and reasons for, de-registration.
**Chapter 5000**

**Depreciation Rates**

5000.10 Economic depreciation rates

5000.20 Depreciation rates (assets acquired from 1 April 2005) — industry categories

5000.30 Depreciation rates (assets acquired from 1 April 2005) — asset categories

5000.40 Amortisation rates for listed horticultural plants

### 5000.10 Economic depreciation rates

**How the Schedules Work**

The economic depreciation rates are set out in the following schedules:

(a) Industry category — for assets acquired from 1 April 2005 [see 5000.20]; and

(b) Asset category — for assets acquired from 1 April 2005 [see 5000.30].

The rates including the 20 per cent loading (shown in the schedules in the columns headed “DV+20%” and “SL+20%”) apply only to assets acquired before 21 May 2010 [see 250.270]. The 20 per cent loading does not apply to buildings and certain other assets.

To select the appropriate depreciation rate from the schedules of economic depreciation rates in 5000.20 and 5000.30, follow the procedure set out in the following flowchart.

For assets acquired before 1 April 2005 (19 May 2005 in the case of buildings), see *Staples Tax Guide (2008) 6000 OLD AND HISTORIC DEPRECIATION RATES* (Online and CD only).

When an asset is peculiar to a specific industry, it is listed under the relevant industry category. The industry categories (and the assets within them) are alphabetically listed. When an asset is typically used in a variety of different industries, it is listed under the asset category in alphabetical order. Some assets are listed within...
two or more industry categories. In some cases the depreciation rate is the same, and in other cases the
depreciation rates are different, which reflects the different industrial environment in which each is used.

(2) Definitions of terms used in depreciation rates

“Gross vehicle mass” is the greater of the gross vehicle mass of the vehicle as specified by the vehicle’s
manufacturer and that specified by the Director of Land Transport Safety. Refer to the LTSA website for
further information.

(3) Industry categories

- Agriculture, horticulture, and aquaculture
- Audio and video recording studios, and professional photography
- Bakeries
- Battery manufacturing
- Brewing, winemaking, and distilleries
- Cable making
- Cement manufacturing
- Chemical plant (including soap, detergent, paint, glue, starch, colour, personal products, and fertiliser)
- Cigarette manufacturing
- Cleaning, refuse and recycling
- Concrete and plaster
- Contractors, builders, and quarrying
- Dairy plant
- Electrical and electronic engineering (for test equipment, see also “scientific, medical, and laboratory”)
- Engineering (including automotive)
- Fishing (see also “meat and fish processing”)
- Food processing
- Footwear manufacturing
- Glass works and moulding
- Hotels, motels, restaurants, cafes, taverns, and takeaway bars
- Laundry
- Leisure
- Manufacturers (not elsewhere specified)
- Meat and fish processing
- Medical and medical laboratory equipment
- Metal industries (primary) and foundries
- Milling (including grain handling and seed cleaning)
- Mining (see also “contractors, builders, and quarrying”)
- Oil and gas industry
- Packaging (excluding plastic packaging)
- Pharmaceuticals
- Plastics
- Pottery, tile and brick making
- Power generation and electrical reticulation systems
- Printing and photographic
- Pulp and paper manufacturing
- Residential rental property chattels
- Rubber and tyre manufacturing
- Shops (retail and wholesalers)
- Tanning and fellmongering
- Telecommunications
- Textile, garment and carpet manufacturing
Depreciation Rates

- Timber and joinery industries
- Undersea maintenance (where equipment used under salt water or on maintenance barge on salt water) (from 1997 year)

4. Asset categories

- Boilers and heaters (where not industry specified)
- Books, music, and manuscripts
- Buildings and structures
- Building fit-out (where in books separately from building cost)
- Clothing
- Compressed air plant (where not industry specified)
- Computers
- Factory and other sundries
- Hire equipment
- Hire equipment (where on short term hire of one month or less only)
- Lifting
- Office equipment and furniture
- Pumping sets (where not industry specified)
- Refrigeration
- Reticulation systems including power generation
- Scientific and laboratory equipment (excluding equipment used in a medical laboratory)
- Software
- Tanks, vats, and reservoirs (where not industry specified)
- Transportation
- Water and effluent treatment
- Weighing machines (where not industry specified)

5000.20 Depreciation rates (assets acquired from 1 April 2005) — industry categories

### 5000.40 Amortisation rates for listed horticultural plants

A 20 per cent loading is added to the diminishing value amortisation rate percentage to arrive at the total diminishing value amortisation rate available each income year.

**Note:** A 10 per cent amortisation rate (which does not include the 20 per cent loading), applies to most other horticultural plants that are not listed below.

### Layby Sales

- **Definition**: Layby sales are a type of sale where the customer pays a deposit on an item and then makes periodic payments until the item is delivered. The sale is considered complete only when the final payment is made.

- **Impact of GST Rate Change**: When the GST rate changes, the tax liability on layby sales is recalculated based on the new rate. This is done by applying the new rate to the total amount of the layby agreement to date, and the adjusted amount is then passed through to the customer.

### Lease Inducement Payments

- **Definition**: Lease inducement payments are provided to tenants as incentives to enter into a lease agreement. These payments can be in the form of cash, rent-free periods, or other services.

- **Impact of GST Rate Change**: Lease inducement payments are deductible to the recipient of the payment. If the rate of GST changes, the net amount of the deductible is adjusted to reflect the new rate, which affects the amount of tax that can be deducted by the recipient.

### Legal Expenses

- **Definition**: Legal expenses refer to the costs incurred in the course of legal services. This includes fees paid to lawyers, accountants, and other legal professionals.

- **Impact of GST Rate Change**: Legal expenses are generally treated as ordinary and necessary expenses. If the rate of GST changes, the deduction for legal expenses is adjusted to reflect the new GST rate, impacting the net amount of deductible expenses.

### Local Authority Rates

- **Definition**: Local authority rates are fees imposed by local governments for services such as garbage collection, water, and sewage.

- **Impact of GST Rate Change**: Local authority rates are not subject to GST. However, if local authorities provide goods and services that are subject to GST, the rate of GST may change, affecting the total amount charged by the local authority.

### Loyalty Programme Transactions

- **Definition**: Loyalty programmes are schemes where customers earn points or rewards for their purchases. These programmes often involve periodic payments or payments based on the customer's spending.

- **Impact of GST Rate Change**: Loyalty programme transactions are generally exempt from GST. If the rate of GST changes, the exempt status of these transactions remains, but the tax liability on other transactions may be recalculated.

### Mixed Use of Goods and Services

- **Definition**: Mixed use of goods and services refers to the use of the same goods and services in both taxable and non-taxable activities.

- **Impact of GST Rate Change**: When the GST rate changes, the taxable and non-taxable portions of mixed use goods and services are recalculated to reflect the new rate. This may affect the overall tax liability.

### New Start Grant, Relief Provision

- **Definition**: New start grants provide financial assistance to newly established businesses. Relief provisions may be available to help businesses during start-up or expansion periods.

- **Impact of GST Rate Change**: New start grants and relief provisions may be affected by changes in the GST rate. This can impact the amount of tax-free relief granted to businesses.

### Place of Supply

- **Definition**: The place of supply is the location where the supply of goods or services occurs. This affects the jurisdiction in which GST is payable.

- **Impact of GST Rate Change**: Changes in the GST rate can affect the place of supply. For example, if the rate changes, the tax implications may shift from one jurisdiction to another, depending on the location of the supply.

### Postal Delivery

- **Definition**: Postal delivery refers to the shipment of goods or services by mail. This is a common method of delivery for businesses and consumers.

- **Impact of GST Rate Change**: Changes in the GST rate can affect the tax implications of postal delivery. This can impact the calculation of GST on deliveries and the amount of refund or tax payable.

### Priority of Amount Owing on Bankruptcy, Liquidation, Receivership, or Mortgagee Sale

- **Definition**: Priority of amount owing refers to the order in which creditors are paid in the event of a business failure. This is determined by relevant laws and regulations.

- **Impact of GST Rate Change**: Changes in the GST rate can affect the priority of amount owing. This can impact the tax liabilities and obligations of creditors during a bankruptcy, liquidation, receivership, or mortgagee sale.

### Private Training Establishments

- **Definition**: Private training establishments are businesses that provide training services to individuals. These establishments may be subject to GST.

- **Impact of GST Rate Change**: Private training establishments are generally subject to GST. If the rate changes, the tax liability for these establishments may be recalculated to reflect the new rate.
