Staples Tax Guide
2012
In 1972 I was drawn into the politics of animal protection when I was invited to join the committee of the SPCA, Auckland. A year later I was elected vice-president of the Royal New Zealand Federation of Societies for the Prevention of Cruelty to Animals (later to be renamed the Royal New Zealand Society for the Prevention of Cruelty to Animals) and in 1975 I was elected President of that Federation. The first seed was probably sown in my early days in the New Zealand Police. In the mid-1960s I was called to a cruelty complaint in South Auckland and ended up keeping the victim – a fantastic German Shepherd I named Karl. He died some 14 years later.

I was naïve enough to think that I could change the law overnight. But I was not a lawyer—then. Thirty-nine years later the work is not done—and probably never will be done as animal protection law will always reflect the moral values of society at the time. As that changes so too will animal welfare law, sometimes tardily—but mostly eventually.

In 1976 I came to the harsh realisation that, while the Department of Agriculture (as it was then known) was appointing inspectors under the Animals Protection Act 1960 on the recommendation of the RFNZSPCA, there was no training. Inspectors were given their warrant and a copy of the Animals Protection Act 1960 and cast into the world. That started a life-long obsession to provide at least some rudimentary training for animal welfare inspectors and that led, in 1977, to my writing a correspondence course for inspectors. It covered the following topics:

• Powers and appointment of Inspectors
• Definitions and exemptions
• Offences and exemptions
• Offences of cruelty and aggravated cruelty
• Parties to offences, attempts and other offences
• Inspectors' practice
• Investigations and prosecutions
• Freezing works
• Euthanasia.

Looking back it was woefully deficient but at the time there was nothing else. Some of my research from those days is still relevant and is included here.

The attraction to animal welfare was sufficient to draw me further into animal law. If I was to make any inroads on animal law I had to become a lawyer so I left the world of advertising in 1978 and enrolled at the University of Auckland. In 1983 I graduated with an honours degree in law and a bachelor's degree in arts focussing on political science and history.

At that time—the early 1980s—animal law was not a topic taught at any law school; there were no professors of animal welfare; the first appointment to the first chair in animal welfare was Donald Broome, at Cambridge University in 1986; and the animal liberation movement did not exist although Peter Singer had published Animal Liberation in 1975. The animal liberation movement was later founded in Australia and then the rest of the world based on the tenets of Singer's work.

Despite there being no Animal Law course I made up my own by combining criminal law, advanced criminal law, environmental law, administrative law, and advanced administrative law. My honours dissertation in 1983 was entitled: The Moral Status of Animals: Reform of Animal Protection Law.

Recent Developments

Canterbury Earthquake Amendments

The substantive depreciation recovery income/loss on disposal provisions have been amended as a consequence of the Canterbury earthquakes.

The main issues covered by the amendments discussed below are:

• When the depreciation disposal rules apply;
• The deductibility of a loss when a building is not destroyed by an event beyond the owner’s control, but has to be subsequently destroyed as a consequence of such an event;
• Timing of recognition of income from business interruption insurance;
• Timing of recognition of depreciation recovery income; and
• Depreciation recovered income and roll-over relief.

An amendment also provides similar roll-over relief when insurance receipts are received for buildings held on revenue account and it is planned that they are to be replaced.

The amendments all came into force on 4 September 2010.

When the depreciation disposal rules apply

Section EE 47 defines certain “events” that trigger the depreciation disposal rules. Section EE 47(4) previously referred to an event that is the irreparable damage of an item of property. This now refers to:

(a) The irreparable damage of an item of property that is not a building or grandparented structure; or
(b) The damage of an item of property that is a building or grandparented structure, or of the neighbourhood of the building or grandparented structure, causing the building or grandparented structure to be:
   (i) useless for the purposes of deriving income; and
   (ii) demolished or abandoned for later demolition.

The effect of the amendment has been to broaden the events that trigger the depreciation recovery/loss on disposal rules.

Note: it need not be the owner of the building that demolishes the building.

Losses on buildings

Section EE 48 is the provision that deems depreciation recovery income to arise when the consideration for an item of depreciable property exceeds its adjusted tax value. Similarly, it deems an amount of depreciation loss when the consideration is less than the adjusted tax value.

However, for buildings, losses on disposal were only available when the building was irreparably damaged and rendered useless as a consequence of an event beyond the control of the owner. Losses on disposal of a building could not be claimed if an event beyond the control of the owner did not irreparably damage the building, but nonetheless the building still had to be destroyed as a consequence.

An amendment to s EE 48(3)(a) allows a deduction for an amount of depreciation loss when a building or grandparented structure has been rendered useless for the purposes of deriving income; and the building or grandparented structure is demolished or is awaiting demolition as a result of damage to the building or grandparented structure itself or to the neighbourhood of the building or grandparented structure.

The deduction is available when the damage is caused by a natural event that is not under the control of the person, an agent of the person or an associated person. The deduction is not permitted if the damage is caused as a result of the action or failure to act of the person, an agent or an associated person.
Recent Developments

**EXAMPLE:**

ABC syndicate owns a small office block with shops on the street front. The building itself survived the earthquakes. However, it is no longer able to be occupied as it is in the red zone and is due for demolition. The building is deemed to have been disposed of in terms of the amended s EE 47(4) for the consideration amount in s EE 45(8) and consequently any gain or loss on sale is triggered. Section EE 48(3)(a) will allow any loss on disposal.

**Timing of recognition of income from business interruption insurance**

A new rule has been inserted to govern the timing of recognising income arising from business interruption insurance. The new rule is in s CG 5B and provides that the part of the insurance, indemnity or compensation attributable to income that the person would have received but for the event, is income of the person in the earlier of the income year in which the amount is received or the income year in which the amount is reasonably able to be estimated.

**Timing of recognition of depreciation recovery income**

A provision is inserted in s EE 48(2B) to modify when depreciation recovery income arises. The amendment deems the income to arise in the income year that is the earliest income year in which the consideration (insurance proceeds/compensation) can be reasonably estimated. This provides relief from the previous position that gave rise to this income in the income year in which the event that gave rise to the depreciation recovery income occurred.

The amendment will assist in getting a better match between the receipt of the insurance proceeds and its recognition as income for tax purposes under the depreciation recovery rules when assets have been destroyed as a consequence of the earthquake.

**Note:** The amendment will require a further amendment to ensure that it also applies for the purposes of recognising a depreciation loss. That is, as drafted it only applies when a person derives depreciation recovery income.

**Depreciation recovered income and roll over relief**

Section EX 23B is inserted to provide roll-over relief from depreciation recovery income when it is intended to replace an asset after an amount of insurance or compensation is received in respect of an item of depreciable property. This depreciation recovery income would otherwise be taxable. The intention is that the depreciation recovery income reduces the tax value of the replacement asset.

The criteria for suspending the depreciation recovery income are:

- The section applies for income years prior to the 2016-17 income year; and
- When the person receives insurance or compensation for items of depreciable property that, as a result of the Canterbury earthquakes:
  - In the case of an item of property that is a building or grandparented structure, is rendered useless for the purpose of deriving income, and is demolished or abandoned for later demolition because of damage to the building or grandparented structure or because of damage to the neighbourhood of the building or grandparented structure; or
  - In the case of other depreciable property, the property is irreparably damaged; and
  - In the absence of s EZ 23B the person would have net depreciation recovery income from the insurance or compensation received. In this regard, the depreciation recovery income is measured on a class of depreciable property basis (not item by item) as set out in s EZ 23(10)(b).

If the above requirements are met, the person must plan to acquire property to replace the affected property to suspend the depreciation recovery income. Requirements for the replacement property are set out in s EZ 23B(7).

Finally, the person must give written notice to the CIR to suspend the depreciation recovery income specifying the depreciable property and linking that property to one of the defined classes. Sections EZ 23B(9) and (10) contains rules on when the notice is required to be furnished.
Recent Developments

**Note:** Importantly, a notice given under s EZ 23B(9) to suspend depreciation recovery income must be given in the year in which the income arises (referred to as the estimate year) and each subsequent income year until the affected property is replaced. Failure to give this notice means that the depreciation recovery income is no longer suspended. Thus, it is very important to have regard to the timing rules for filing the notice of election.

**Depreciation recovery income suspended**

If the above requirements are met, depreciation recovery income is suspended for the affected class of depreciable property. The classes of property are set out in s EZ 23B(10).

The amount of suspended depreciation recovery income is reduced when a person acquires an item of replacement property and links the replacement item with the affected property (that is the property in respect of which the insurance recovery was received).

If a person chooses not to replace all affected property, or the cost of the replacement property is less than the affected property then depreciation recovery income in respect of those assets will still be present under s EZ 23B(2) and (4)(b).

**Cost of replacement property**

When the cost of the replacement property equals or exceeds the cost of the affected property, the cost of the replacement property for tax depreciation purposes is reduced by the amount of suspended depreciation recovery income linked to that building.

**EXAMPLE 1:**

A building that cost $3 million and has an adjusted tax book value of $2 million is located in a red zone and due for demolition. The insurance proceeds are $6 million. The taxpayer files a notice of election under s EZ 23B(9) to defer the depreciation recovery income pending replacement. The building is replaced in the taxpayers 2014-15 year. The cost of the replacement building is $6 million. The $1 million suspended recovery income reduces the depreciable value of the building to $5 million. While of course the depreciation rate is zero per cent, the reduction in value will be taxable as depreciation recovery income if the building is subsequently sold at or above its $6 million cost.

**EXAMPLE 2:**

A machine that cost $1 million and has an adjusted tax book value of $700,000 is destroyed as a consequence of an earthquake in Canterbury. The asset is replaced in the 2013-14 year at a cost of $800,000. The formula in EZ 23B is:

\[
\frac{800,000 \times 300,000}{1,000,000}
\]

This gives $240,000 suspended depreciation recovery income which is rolled into the value of the replacement machine. The replacement machine has an adjusted tax book value of $560,000. As the value of the asset replaced was less than the affected asset, $60,000 suspended depreciation recovery income will be taxable in the year in which the asset was replaced under s EZ 23B(4)(b).

**Requirement for replacement property**

To be replacement property, the property must be depreciable property (not intangible depreciable property) that is acquired on or before the person’s 2015-16 income year. The property must also be included in the same category under s EZ 23B(10) as the affected class and be located in the greater Christchurch area, as defined in the Canterbury Earthquake Recovery Act.

**Amount of depreciation recovery income**

A person will have depreciation recovery income in an income year equal to the amount of suspended depreciation recovery income for the affected property and an income year:

- If the person decides not to acquire replacement property; or
- If the person becomes bankrupt or is liquidated; or
Recent Developments

- The end of the 2016-16 income year is reached and an amount of suspended depreciation recovery income remains.

**Consequential amendment to s EE 44**

A consequential amendment has been made to s EE 44 to ensure that it does not apply when items of depreciable property are destroyed by the earthquake and an amount of insurance is received to which s EZ23B applies. Recall, s EE 44 is the general provision that triggers application of the depreciation recovery rules.

As the amendment to s EE 44 only applies when the rule in s EZ 23B applies, insurance recoveries not covered by s EZ23B will be subject to the normal rules.

**Section CZ 23 Insurance compensation for buildings replaced as revenue account property affected by Canterbury earthquakes**

Section CZ 23 is a sister provision to s EX 23B, only it deals with revenue account property that is a building, as opposed to property of all types held on capital account.

Depreciation has not been available for building held on revenue account. Thus, there is no issue with depreciation recovery income in theory. What s CZ 23 aims to do is provide roll over relief for the insurance/compensation received that would otherwise be taxable income when the building is replaced.

The criteria for the roll-over relief are:

- The section applies for income years prior to the 2016-17 income year; and
- The person receives insurance or compensation for a building that is revenue account property that is rendered useless for the purpose of deriving income, and is demolished or abandoned for later demolition because of damage to the building or because of damage to the neighbourhood of the building; and
- In the absence of s CZ 23, the person would have net income from the insurance or compensation received under s CG 6 that exceeds the deduction for the cost of the property under s DB 23; and
- Plans to acquire property to replace the affected property and gives written notice to the CIR by 31 January 2012 or a later date set out in ss CZ 23(6) and (7).

If met, the amount of income arising under s CG 6 is not taxable income of the person. Further, the value of the building for the purposes of s EA 2 is reduced by the formula in s CZ 23(3).

There are rules in s CZ 23(4) that require the replacement property to be a building that is revenue account, acquired in or before the person’s 2015-16 income year, and located in the greater Christchurch area.

If the building is not replaced by the end of the 2015-16 income year or the person decides not to replace the building, or the person goes into liquidation or bankruptcy then the suspended income will be liable to tax.

**Note:** There are detailed requirements in ss CZ 23(6) and (7) for notices of election that must be met in order for the provision to apply. Importantly, a notice given under s CZ 23(6) to suspend recovery income must be given each year that it is necessary to suspend the income. Failure to give this notice means that the recovery income is no longer suspended. Thus, it is very important to have regard to the timing rules for filing the notice of election.

**Family Assistance**

A law change has confirmed that payments to relieve the adverse effects of emergency events such as the Canterbury earthquakes are not included in a person’s family scheme income [see 420.62].

**Foreign workers in Canterbury**

Interest relief on tax obligations relating to certain foreign workers assisting in the recovery from the Canterbury earthquakes is now in place. When foreign workers stay in New Zealand for more than a given period, tax obligations relating to PAYE withholding and provisional tax are backdated to the first day of presence in New Zealand. The backdating often means that payments of tax are overdue. Previously, interest
Recent Developments

was imposed on the overdue tax, but this is inappropriate in the circumstances. A new section required the CIR to cancel the liability to pay the interest. The relief is available for payments of tax due after 4 September 2010 and periods ending on 4 September 2011 at the latest.

Penalties and interest

The Canterbury earthquake of 4 September 2010 and its aftershocks have been declared an emergency event for the purposes of interest remission under s 183ABA of the TAA [see 1110.342]. Interest charged to non-residents working in the Canterbury earthquake recovery programme on overdue PAYE and provisional tax instalments will be cancelled during the period 5 September 2010 to 3 September 2011 inclusive [see 1110.343].

Tax credits

The period during which redundancy payments qualify for the six per cent redundancy payment tax credit has been extended from 31 March to 30 September 2011 [see 1395.90].

Assessments

The rules relating to the time bars for amending income tax and GST assessments have been changed from 29 August 2011, with the effect that if a taxpayer successfully challenges a CIR’s refusal to accept a late notice, the four-year period is extended by the amount of time it takes for the TRA or Court to finally decide the matter [see 60.80, 60.90].

Charities

A number of recent court decisions have clarified the meaning of “charitable purpose” [see 150.40]:

• A trust set up to teach biblical financial principles, by offering a scheme enabling members to pool their financial resources and obtain interest-free housing loans, had a charitable purpose in that it advanced religion and existed for the public benefit: Liberty Trust v Charities Commission, HC WN, CIV 2010-485-000831, 2 June 2011.
• Greenpeace was denied charitable status because its non-charitable activities, consisting of non-violent but potentially illegal activities such as trespass, were more than merely ancillary to its charitable purposes. See Re Greenpeace of New Zealand Incorporated HC WN CIV 2010-485-829, 6 May 2011.
• A trust established to protect and promote democracy and natural justice in New Zealand was held not to be a charity because its purposes were not exclusively charitable: Re Draco Foundation (NZ) Charitable Trust, CIV 2010-485-1275, 15 February 2011.
• The New Zealand Computer Society was held not to be a charitable entity because its purposes were not exclusively charitable. Its functions as a professional society, which are not charitable, constitute an independent purpose: Re New Zealand Computer Society Inc, CIV 2010-485-924, 28 February 2011.

Child support

For the year ended 31 March 2012, the maximum amount of taxable income of the liable parent on which child support is calculated has increased from $120,463 to $121,833 [see 160.60] and the minimum amount of child support payable by a liable parent has increased from $815 to $848 [see 160.80]. The CIR has released a standard practice statement explaining how the CIR’s discretion will be exercised when liable parents seek to pay overdue child support debt by instalment [see 160.60].

Depreciation

From the 2011–2012 income year, no depreciation can be claimed on buildings with an estimated useful life of 50 years or more [see 250.240]. However, new rules have been introduced to enable commercial building owners, who did not previously identify and depreciate building fit-out when they acquired a building, to amortise 15 per cent of the building’s adjusted tax value on a straight line basis over 50 years [see 250.340].
Recent Developments

The CIR has published an interpretation statement on the meaning of the term “obsolescence”, in relation to an asset’s estimated useful life. Obsolescence involves a reduction in the period for which an asset might be expected to be useful in deriving assessable income for reasons such as economic, technological or other external causes that affect the estimated useful life of the item. The statement includes a list of factors that may cause an asset to become obsolete. It also includes examples of factors that are not considered to be related to obsolescence (eg, a decision to scrap an asset) [see 250.230].

The CIR’s position on the deductibility of unsuccessful software development costs has changed. With effect from the start of the 2011–2012 income year, the CIR will not allow a deduction for expenditure on software development if the software is never used in the taxpayer’s income-earning process [see 250.410].

A new asset category – fleet tracking units – has been added to the transportation asset category with effect from the 2010–2011 income year [see 5000.30].

The asset descriptions of motor vehicles used for short-term hire have been amended to make it clear that short-term hire means a period of one month or less [see Transportation asset category in 5000.30].

Disputes and challenges

With effect from 29 August 2011:

• The small claims jurisdiction of the Taxation Review Authority (TRA) has been abolished [see 260.25, 260.125, 260.150].

• If the CIR rejects a taxpayer-initiated notice of proposed adjustment (NOPA) to an assessment, the taxpayer may now only challenge the assessment if the CIR has issued a “challenge notice”. If the CIR fails to issue a challenge notice within the prescribed four-year period, the CIR is deemed to accept the proposed adjustment. The CIR can apply to the High Court to issue a challenge notice outside the four-year period in exceptional circumstances [see 260.10, 260.40, 260.45, 260.50, 260.67, 260.70].

• The CIR now does not have to issue a NOPA before making an assessment if the assessment extinguishes a taxpayer’s tax loss [see 260.20].

• If the CIR decides not to grant an extension of time for a taxpayer to file a notice of response, a NOPA or a statement of position because of exceptional circumstances, the CIR must issue a “refusal notice” within one month. The disputant may challenge the refusal notice [see 260.50].

• The CIR is required to issue a statement of position (SOP) in response to a disputant’s statement of position if the CIR was not required to issue one when issuing a disclosure notice [see 260.55].

• The evidence exclusion rule has been relaxed so that it limits the taxpayer and the CIR to the issues and propositions of law disclosed in their respective SOPs. Previously it also applied to facts and evidence disclosed in the SOPs [see 260.100].

Double Tax Agreements

The double tax agreement between New Zealand and Turkey came into force on 28 July 2011 [see 310.187].

The double tax agreement between New Zealand and Hong Kong came into force on 9 November 2011 [see 310.92].

The withholding tax rate on royalties paid between residents of New Zealand and Chile has been reduced (retrospectively) from 10 per cent to five per cent from 1 May 2010 [see 310.60].

The withholding tax rate on dividends paid between residents of New Zealand and Mexico has been reduced (retrospectively) from 15 per cent to either five per cent or zero from 1 May 2010 [see 310.127].

Duties and levies

Gift duty has been repealed. No gift duty is payable on gifts made on or after 1 October 2011 [see 315.10].
Recent Developments

Employment relationship

The CIR’s interpretation guideline on whether a person is an employee or an independent contractor has been updated to take into account recent case law, particularly Bryson v Three Foot Six Ltd [see 335.20].

Family assistance

As an anti-avoidance measure, the definition of family scheme income has been widened from 1 April 2011 to include:

- The undistributed income of a trust of which the person is a settlor;
- The taxable value of attributable fringe benefits, and the corresponding fringe benefit tax, of major shareholders;
- Deposits into the person’s main income equalisation account;
- Half of certain pensions and annuities;
- Investment and beneficiary income of dependent children, in excess of $500;
- Non-residents’ foreign-sourced income of the person’s spouse, civil union partner or de facto partner;
- Certain other receipts used to replace lost income or to meet living expenses [see 420.60].

A law change has confirmed that payments to relieve the adverse effects of emergency events such as the Canterbury earthquakes are not included in a person’s family scheme income [see 420.62].

The prescribed amounts for the family tax credit have been increased for the year ended 31 March 2012 [see 420.25].

The minimum family tax credit has been increased to ensure a minimum family scheme income of $22,204 for the year ended 31 March 2012.

Financial Relief

The CIR’s practice for providing financial relief by way of instalment arrangements has been revised. The new practice applies from 16 February 2011 [see 480.35].

Fringe Benefit Tax

The prescribed interest rate for low interest loans fell from 6.24 per cent to 5.90 per cent from the quarter starting 1 April 2011 [see 540.135].

Benefits provided to employees to give them relief from the adverse effects of the Canterbury earthquakes in September 2010 and February 2011 are not subject to fringe benefit tax [see 540.200, 540.257].

For the year ended 31 March 2012, the rate of FBT under the single rate option is 49.25 per cent for all four quarters and, under the alternate rate option, employers can choose between 43 and 49.25 per cent for each of the first three quarters [see 540.280, 540.315].

The rates used to calculate FBT on attributed fringe benefits have dropped for the year ended 31 March 2012 in line with the lower income tax rates [see 540.300].

GST

New definitions of “dwelling” and “commercial dwelling” apply from 1 April 2011 [see 580.20, 580.24].

From 1 April 2011, zero-rating applies to most supplies of land by a registered person to another registered person who intends to use it in carrying on a taxable activity [see 580.49].

From 1 April 2011, the application of the reverse charge mechanism is based on the intended and actual use of the imported service in the making of taxable supplies. Previously it was based on the type of supplies made by the importer’s business [see 580.101].

Where a purchaser nominates another person (a nominee) to be the recipient of the goods and services, special rules apply. The GST treatment depends on whether both the contractual purchaser and the nominee are both registered or not registered or whether one is registered and the other is not. The new treatment applies from 1 April 2011 [see 580.123].
Recent Developments

From 1 April 2011, new apportionment rules apply to the adjustments for partial taxable or non-taxable use of assets. The new rules apply to assets acquired on or after 1 April 2011. They also apply where a person registers for GST on or after 1 April 2011 and uses goods and services that they previously acquired for making taxable supplies after the date of registration [see 580.125].

**GST input tax credit claims on goods and services acquired before 1 April 2011**

A technical error in the GST changes enacted in December 2010 meant that there was an inability to claim input tax credits on goods or services acquired or produced before 1 April 2011 that were not at that time acquired or produced for making taxable supplies, but were used for that purpose from 1 April 2011.

A transitional provision (section 21HB) has been added to the legislation to allow a registered person to claim an input tax credit to the extent a claim has not been made under the input tax credit rules that applied before the December 2010 amendments. The goods or services are treated as having been acquired on 1 April 2011 at the original cost of the supply.

Note that the new section targets supplies made on and after 1 April 2011 that are taxable as a result of the changes to the definitions of “dwelling” and “commercial dwelling”. While the change in definitions contributed to the issue, other situations may arise that also produce the same unintended outcome.

The amendment came into effect on 29 August 2011 and is retrospective, applying to supplies made on or after 1 April 2011 [see 580.126].

**Income from New Zealand and foreign sources**

The method of calculating the amount of New Zealand tax relating to each segment of foreign-sourced income, when determining the maximum foreign tax credit allowed, has been clarified [see 760.45].

**KiwiSaver**

The CIR is now required to take a number of additional factors into account when considering an application for a refund of KiwiSaver contributions due to financial hardship as a result of the Canterbury earthquakes [see 860.95].

From 1 July 2011, the maximum member tax credit has been halved from $1,042.86 to $521.43 a year, and the rate at which the credit is paid is reduced from $1 to 50 cents for each $1 contributed by members [see 860.135].

With effect from 29 August 2011:

- The rules relating to the operation of the KiwiSaver holding account by the CIR have been revised [see 860.75].
- When a member transfers to a new KiwiSaver fund provider, the CIR can pay the member tax credit to the new fund provider. Previously the old fund provider had to request that the credit be paid to the new provider [see 860.140].

There have been some changes to the list of default KiwiSaver schemes [see 860.55].

**Look-through companies**

The look-through company regime applies for income years commencing on or after 1 April 2011. A look-through company is transparent for tax purposes. Income, expenses, gains, losses, tax credits and rebates pass through to the shareholders and are taxed at the shareholders’ marginal tax rates. Some tax matters are dealt with at the company level such as GST, PAYE and other withholding taxes and matters related to the amalgamated companies regime [see 920].

**Motor vehicles**

The rate for calculating the business-use expenditure of a motor vehicle when business travel is 5,000 kilometres or less a year has increased to 74 cents per kilometre for the 2011 income year (previously 70 cents per kilometre) [see 990.65].
Recent Developments

Non-residents and absentees
From 1 April 2011:

- The circumstances in which an excess debt entity must apportion its interest expenditure under the thin capitalisation rules have been amended; and
- The default percentage that may be used as the debt percentage of the worldwide group of an excess debt entity has been changed [see 1000.90].

Payment and collection of tax
From 29 April 2011, IRD has revised its practice on the use of deduction notices to require banks to make deductions from their customers’ accounts [see 1100.22].

From 29 August 2011:

- The CIR is able to offer taxpayers the ability to pay their tax by credit or debit card. A 1.42 per cent fee is payable for this service [see 1100.17].
- The CIR can seize tax pooling deposits by means of a deduction notice [see 1100.20].

Penalties and interest
The Canterbury earthquake of 4 September 2010 and its aftershocks have been declared an emergency event for the purposes of interest remission under TAA s 183ABA [see 1110.342].

From 29 August 2011 the absolute liability, knowledge, and evasion or similar offences have been amended by removing reference to the requirement to keep “books”. These offences now simply refer to failing or knowingly failing to keep the documents (previously books and documents) required to be kept by tax law. A definition of the term “document” has also been inserted in the TAA [see 1110.225, 1110.230, 1110.235].

Interest charged to non-residents working in the Canterbury earthquake recovery programme on overdue PAYE and provisional tax instalments will be cancelled during the period 5 September 2010 to 3 September 2011 inclusive [see 1110.343].

QCs and LAQCs
The rules governing qualifying companies and loss attributing companies have been changed with effect from the year commencing 1 April 2011. The changes were announced in the 2010 Budget, and were enacted by way of a supplementary order paper to the Taxation (GST and Remedial Matters) Act 2010.

Existing qualifying companies (QCs) and loss-attributing qualifying companies (LAQCs) are able to continue to use the current QC rules, but without the ability to attribute losses, pending a review of the dividend rules for closely held companies. Companies that are not already QCs are unable to enter the QC regime from 1 April 2011.

A new regime is introduced, called “look-through companies”. Existing QCs and LAQCs are able to transition into the new regime or change to another business model, such as a partnership or sole trader, without a tax cost, during the period 1 April 2011 to 31 March 2013.

A special report summarising the changes is available on Inland Revenue’s Policy Advice Division website: www.taxpolicy.ird.govt.nz.

Student loans
The CIR has issued a standard practice statement on granting relief from student loan repayments on the grounds of serious hardship [see 1380.15].

The Student Loan Scheme Act 1992 has been replaced by the Students Loan Scheme Act 2011 from 1 April 2012. The objectives of the new act are to make it easier for borrowers to manage their loans and to pay back what they owe, and to encourage earlier repayment of loans. The act does not introduce any significant policy changes [see 1380.10 to 1380.70].
**Student Loan Scheme Act 2011**

The Student Loan Scheme Act 2011 reforms the way student loans are repaid, the way borrowers can manage their loans, and the way loans are administered. It also rewrites the current student loan legislation.

This Act replaces the Student Loan Scheme Act 1992, and generally applies from 1 April 2012. Its main purpose is to make it easier for borrowers to manage their loans, pay back what they owe, and encourage earlier repayment. It is not intended as a wider review of student loan scheme policy. The Act also contains a number of minor miscellaneous amendments.

**Moving borrowers to an electronic environment**

**Electronic administration of the student loan scheme**

The changes mean that borrowers will be able to manage their loan accounts by interacting electronically with Inland Revenue. As well as having online access to up-to-date loan information, borrowers will be able to communicate electronically with Inland Revenue to manage their loans.

**Consolidated view of loan balance**

The following changes have been made:

- Inland Revenue will provide borrowers with a consolidated view of their total loan balance, removing the need to contact two agencies to obtain this information;
- The near real-time transfer of a borrower’s loan advance information and contact details from the loan manager to Inland Revenue. As loan advances are drawn down or borrowers’ contact details are changed, this information will be transferred to Inland Revenue to keep borrowers better informed of their loan details and obligations. Inland Revenue will inform borrowers of their total loan balance by providing them with access to viewing their loan on an internet site; and
- The sharing of information between the loan manager and Inland Revenue on people applying for student loans: to confirm the applicant’s identity, and to prevent fraud and ensure loans are assigned to the correct borrowers.

**Informing and notifying borrowers**

The Act changes the way Inland Revenue communicates with borrowers. Specifically, Inland Revenue will:

- Communicate with borrowers electronically when an active email address is available;
- Make as many services as possible available electronically, to enable borrowers to self manage their loans; and
- Provide borrowers with personal access to information about their loan, via the Inland Revenue website.

The Act also introduces four new terms to refer to the different types of communication between Inland Revenue and borrowers:

- “Inform”: Inland Revenue provides information to the borrower in a passive way, typically by providing a website or physical service where borrowers can access relevant information, or by giving public notice.
- “Notify”: the borrower or Inland Revenue actively communicates information through a broad range of methods. This can be by paper, by telephone, in person, by electronic means, or by any other manner acceptable to the CIR. This method will be used when a degree of flexibility over the form of communication is appropriate because of the type of information required.
- “Notify a person in writing”: to communicate using the methods available in “Notify”, including by electronic means such as an email, but excluding in person or by phone. This form of communication will be used to communicate with borrowers in a formal way, when it is not appropriate for the information to be communicated in person or by phone.
- “Formally notify”: to communicate to borrowers in writing and on paper. Electronic communications are excluded from this definition.
Recent Developments

Changes will apply from 1 April 2012, while changes to the transfer of the consolidated loan balance will apply from 1 January 2012.

**Methods of meeting repayment obligations**
The following changes take place from 1 April 2012.

**Pay-period repayment obligations**
The annual assessment process will be removed for salary and wages earners, who make up the majority of borrowers. Salary and wage earners will continue to have deductions made from that income for student loan repayments.

For the majority of borrowers whose income is mainly from salary or wages, the amount deducted for a pay-period will be the borrower’s final repayment obligation for that pay. This will provide certainty every payday that the repayment obligation has been met, and should result in reductions in overdue debt assessments, and compliance and administration costs.

**Unused repayment threshold transfer for secondary jobs**
Student loan borrowers whose income is solely from salary or wages, who have two or more jobs at the same time, and whose income from their main job is under the repayment threshold, will be able to use any unused repayment threshold from their main job against their secondary jobs. Currently, deductions are made from a borrower’s main job at 10 per cent of each dollar of income over the pay-period repayment threshold, and at 10 per cent of each dollar of income from each of a borrower’s secondary jobs. If income from the main job is less than the repayment threshold, a borrower’s student loan repayments are higher than for someone for whom their income is from the one job.

**Salary and wage deduction exemption for full-time students**
Full-time, full-year, students who expect to earn under the annual repayment threshold will be able to apply for an exemption from student loan deductions. The exemption must be applied for in advance.

**Significant under- and over-deductions**
The Act contains amendments that allow the CIR to not take corrective action for under- and over-deductions of student loan repayments, unless the amounts are considered to be significant. The thresholds for taking action will be set by the CIR each year, and notified to borrowers. Borrowers will be able to request a refund for a significant over-deduction, and the CIR will be able to collect significant under-deductions from future salary and wages.

**Extra deductions from salary and wages**
The Act allows Inland Revenue (or a borrower) to ask employers to make additional student loan deductions from a borrower’s salary or wage, using a new “SLADR” tax code.

Borrowers may ask their employer to make extra deductions at an extra deduction rate, or of a specific amount. This may be because the borrower wishes to pay unpaid amounts, or to make excess repayments to reduce their loan balance, which may qualify for the 10 per cent excess repayment bonus. The CIR may require extra deductions if a borrower has not had enough deducted through the standard deductions.

**Special assessments**
The CIR will be able to make an assessment to determine the amount of deductions a borrower should have had deducted from their salary or wages, and which has not been collected through other means. Such assessments will be able to be made in relation to borrowers who earn salary or wage income, or salary and wage and pre-taxed income such as dividend or interest income.

The assessment will not be used for borrowers who are required to file a tax return (eg borrowers who have a mixture of salary and wages, and business-type income). These borrowers’ repayment obligations will be determined on an annual basis, as at present.
Recent Developments

Pre-taxed repayment obligations

The Act includes a separate loan repayment mechanism for borrowers who do not have to file a tax return, and who have pre-taxed income, such as income from interest or dividends, salary or wages from casual agricultural employment, or election day employment. These borrowers will now be required to make an online declaration of their pre-taxed income.

The new mechanism is designed to assess and collect repayments relating to income derived from sources that are not required to have student loan deductions made, when the borrower would not otherwise be required to declare that income for tax purposes as income tax has already been withheld from it.

The pre-taxed loan repayment obligation will apply to borrowers who earn $1,500 or more net pre-taxed income for a tax year, and whose combined income from net pre-taxed income and salary or wages for a tax year is $1,500 or more than the annual repayment threshold.

**EXAMPLE:**

Peter has salary or wage income of $30,000, which is above the repayment threshold of $19,084. Student loan repayment deductions are correctly made from his salary or wage income. Peter also earns $15,000 of interest income for the 2012-2013 tax year, and files his pre-taxed income declaration on 7 July 2013. Peter has made no payments towards his pre-taxed repayment obligation during the year. The CIR assesses Peter’s pre-taxed repayment obligation at $1,500, being 10 per cent of his interest income which is required to be paid in three remaining repayments on 28 August 2013, 15 January 2014, and 7 May 2014.

Peter will also be required to pay interim payments for the 2013-2014 tax year. Peter’s interim payments for the 2013-2014 year are 105 per cent of his pre-taxed loan repayment obligation for the 2012-2013 tax year: 105 per cent x $1,500 = $1,575 divided by the number of due dates.

His interim repayments are due on three dates, so one-third ($525) is due on each of the following dates: 28 August 2013, 15 January 2014, and 7 May 2014.

Alignment with provisional tax payment dates

The Act aligns the payment of interim payments for student loans with the provisional tax payment dates for borrowers who are required to file a tax return. Certain borrowers will also be allowed to pay, over a number of due dates, an outstanding loan repayment obligation for a tax year. The changes apply to borrowers required to file a tax return because, for example, they have business income.

Borrowers who have net income for a tax year that is more than the annual repayment threshold will have their “other income” repayment obligation for that tax year determined as follows:

Other income repayment obligation = [10 per cent x (Net income – annual repayment threshold)] – salary and wage deductions

**EXAMPLE:**

Helen has net income for the tax year of $42,000, comprising $30,000 in salary income and $12,000 from a rental property. The student loan deductions from her salary and wages amount to $1,000. Because Helen had income from a rental property, she is required to file a return of income for tax purposes. When she files her return of income, her other income repayment obligation is calculated as follows:

other income repayment obligation = [10 per cent x ($42,000 – $19,084)] – $1,000 = $1,291.60

**EXAMPLE:**

Jim has a March balance date, and is required to file his tax return by 7 July 2013. For student loan purposes, Jim has an “other income repayment obligation” of $800 for the 2012-2013 tax year. He will be required to pay his remaining repayment on 28 August 2013, which is his provisional tax date that follows 7 July 2013.

Interest and alignment of penalties with income tax rules

Overseas-based interest and late payment interest

The following changes have been made under the Act:

- StudyLink will cease to charge interest on student loans in the period before the loan is transferred to Inland Revenue;
Recent Developments

- Inland Revenue will only charge interest when borrowers are overseas-based;
- Overseas-based interest will be charged at the base interest rate, which is currently 6.6 per cent;
- The current late payment penalties of approximately 19.56 per cent per annum will be replaced by late payment interest, which will be set at the significantly lower rate of four per cent above the base interest rate (currently 6.6 per cent), giving a combined rate of 10.6 per cent per annum;
- The late payment interest rate will be reduced by two per cent if the borrower enters into an instalment arrangement; and
- Interest will not be charged if the unpaid amount is less than $500. In these cases, the unpaid amount will be added back to the loan balance.

Penalties and offences

The Act contains amendments that impose penalties for offences relating to the late or non-filing of information by borrowers, and aligns the imposition of both civil and criminal penalties for non-compliant activities with those that apply to other tax offences. Specifically, the Act introduces the following changes:

- Late filing penalties will be imposed for incomplete or absent declarations, or notifications in certain circumstances. The late filing penalty will be the same amount that applies for income tax purposes, depending on the borrower’s income. For example, the penalty imposed will be $50 if the borrower’s income is less than $100,000, $250 if the borrower’s income is between $100,000 and $1,000,000, and $500 if their income is over $1,000,000;
- Student loan shortfall penalties will be imposed at the same rate that would apply from taking an incorrect tax position. The student loan shortfall penalty will apply when a borrower has taken an incorrect tax position which is lower than the correct tax position and is also liable to pay a shortfall penalty for income tax; and
- Penalties for wilfully or negligently failing to provide information to Inland Revenue will be aligned with those for other tax types.

CIR may recall loans

A section has been inserted into the Act, the purpose of which is to give the CIR the authority to exercise any right or power in a student loan (whether or not the CIR is the lender under the agreement) to recall or demand repayment of all or any of the loan advance or loan balance. This measure is required because the Ministry of Education, the Ministry of Social Development, or StudyLink are the lender in many of the loans administered by Inland Revenue, rather than Inland Revenue.

Superannuation fund withdrawal tax

Superannuation fund withdrawal tax has been repealed and does not apply to withdrawals made on or after 1 April 2011.

Taxation (Tax Administration and Remedial Matters) Act 2011

Donee organisations

The following organisations have been added to the list of charities donations to which qualify for the charitable donations tax credit, with effect from the year ended 31 March 2013:

- Jasmine Charitable Trust No 2
- New Zealand Good Samaritan Heart Mission to Samoa Trust
- NZ-Iraqi Relief Charitable Trust
- RNZWCS Limited
- Ruel Foundation
- The Cambodia Charitable Trust
- The Unions Aotearoa International Development Trust [see 1395.75].
Recent Developments

**Gift duty abolition**

Gift duty is to be abolished for gifts made on or after 1 October 2011.

**Relaxing the taxpayer secrecy rules**

The secrecy rules contained in Part 4 of the TAA are amended. The previous rule allowing the CIR to release taxpayer information under the Inland Revenue Acts is replaced with the discretion to release taxpayer information in executing or performing the powers, duties and responsibilities of the CIR to administer, implement, improve, research, and reform the tax system. The change will allow the CIR more flexibility to release taxpayer information.

In deciding whether to exercise the discretion to release information, the CIR will have to consider the integrity of the tax system, the importance of promoting voluntary compliance, the resources available to him, the personal or commercial interest or sensitivity of the taxpayer concerned, and whether the information is currently in the public domain. The requirement to obtain Ministerial authorisation for the release of aggregate or process information will be removed. The release of this information will be at the discretion of the CIR, but subject to the criteria set out above.

The new rules also allow the CIR to respond when taxpayers make incorrect statements to the media about Inland Revenue, or about their dealings with Inland Revenue.

**Information sharing**

Changes to facilitate the sharing of tax information between Inland Revenue and other government agencies have also been made. This allows more efficient use of information collected by Inland Revenue, and reduces the need for individuals to provide the same information to more than one government agency.

The changes allow an Order in Council to be made, authorising the sharing of Inland Revenue information with another government agency, provided certain criteria are met. The government agency seeking access to the information must have the ability and authority to collect the information in its own right, and the information must be available and already collected by Inland Revenue. Information will only be shared if it is not so sensitive that it would inhibit individuals from providing accurate information in the future. It must also be economically inefficient for the agency seeking access to collect the information itself, or there must be clear compliance benefits to individuals for the information to be shared rather than collected separately.

**Disputes rules**

**Small claims jurisdiction of TRA**

The small claims jurisdiction of the TRA is removed. It has been used infrequently, and is not adequately fulfilling its policy intention. The general jurisdiction of the TRA is sufficiently flexible to deal with the any specific requirements of a dispute related to a small amount of tax.

**Evidence exclusion rule**

The evidence exclusion rule (EER) is relaxed so that it limits the parties only to the issues and propositions of law disclosed in their SOP.

In the event that a dispute reaches court, the EER currently limits the CIR and the taxpayer to the facts, evidence, issues, and propositions of law that are disclosed in their respective SOPs. The EER is amended so that it limits the parties only to the issues and propositions of law contained in the SOP, and not the facts and evidence. This change should mean that the parties still have considerable certainty on the scope of the dispute, while eliminating the pressure to include every fact and piece of evidence in the SOP for fear of not being able to raise them at a later date. The SOP will still need to contain an outline of the facts and evidence to be relied upon.
Recent Developments

Exceptional circumstances

Previously, a late notice from a taxpayer can be accepted by the CIR if exceptional circumstances exist. This rule is now expanded to allow the CIR to accept late documents if the taxpayer has a demonstrable intention to enter into or continue the disputes process. If the CIR does not exercise the discretion to accept late documents, that decision will be able to be challenged in the TRA.

Although statutory timeframes are considered essential to ensuring that the disputes process is completed in a timely and efficient manner, there will be situations when a late response is justified and the party to the dispute should not be unduly penalised for failing to meet a deadline. This is particularly the case for tax disputes, when it is considered that the consequence of late filing is that the party is deemed to accept the position of the other disputant.

In order to avoid a situation where taxpayers can extend the process indefinitely by continually asserting an intention to dispute without actually acting on that intention, the existing requirement that the disputant send the relevant notice to the CIR as soon as practicable after becoming aware of their failure to respond in time will remain.

A new provision is to be added so that the time bar for the substantive dispute is suspended while the appropriateness or otherwise of the CIR’s exercise of his discretion is considered by the courts.

Taxpayer right to opt out of disputes process

A new rule introduced removes the current right in s 138B(3) of the TAA that allows taxpayers to opt out of the disputes process during disputes they have initiated. This change ensures there is consistency in the process between disputes initiated by the CIR and those initiated by taxpayers. Complementary changes will ensure that the full process is followed by both parties unless a truncated process is agreed upon.

Taxpayers currently have a right to take to court a dispute they have initiated at any time after the CIR has issued the notice of response (NOR). This ability means that a dispute can be fast-tracked to court without having the benefit of a conference between the parties. There is also a significant information deficit in taxpayer-initiated disputes. These disputes, by their nature, often come as a surprise to the CIR. The CIR has two months to issue the NOR, after which the challenge can commence. The period between the receipt of the NOPA and the issuing of the NOR will not always be long enough for the CIR to form a definitive view on the issues raised, particularly in the limited cases where the taxpayer is uncooperative. This process has the potential for disputes to reach court without the issues being properly defined and debated between the parties — therefore defeating a key objective of the disputes process.

The new rule retains the taxpayer’s challenge right, but only in circumstances when the CIR has issued a “challenge notice” (as introduced in the Act) in respect of the dispute. This notice is the CIR’s final view that the assessment will not be amended in the way proposed by the taxpayer. It is anticipated that these notices will generally be issued by Inland Revenue once the dispute has been fully considered in the adjudication process.

The changes mean that the SOPs must be exchanged before the CIR issues an amended assessment or challenge notice. These changes ensure that, unless an exception applies (such as when the parties agree to opt out), the full process must be followed in both taxpayer- and CIR-initiated disputes. They also resolve an existing technical argument that the CIR does not have to issue a SOP in a taxpayer-initiated dispute.

A fast-track procedure for taxpayer-initiated disputes that are ancillary to other substantive disputes is to be introduced. This applies to disputes where the taxpayer has adopted a position across numerous tax periods, or when a taxpayer is affected by a position taken by another taxpayer. In these circumstances, the CIR can issue a challenge notice immediately, and the taxpayer can challenge the assessment in court.

TRA regulations

The TRA Regulations are updated in order to bring them into consistency with the District Court and High Court Rules.
Recent Developments

Tax pooling

The following changes to the tax pooling rules have been made:

• Taxpayers using a provisional tax pooling facility have 75 days (currently 60 days) from the terminal tax date to access funds held by a tax pooling intermediary to meet their provisional or terminal tax liabilities at backdated effective dates. This will provide more time for taxpayers with a December balance date to request a transfer from a pool before filing a return, in order to access pooling funds with a backdated effective date.

• The time limit to access funds will not apply for “own funds” provided the taxpayer is not overdue in filing their return for the tax year. Limits to the amount a taxpayer may request an intermediary to transfer are to be introduced. This restriction will not apply to taxpayers who use their own funds, except when the funds are used to meet an increased obligation or deferred tax.

• An amendment allows the CIR to seize tax pooling deposits by way of a deduction notice. The amendment clarifies that when a taxpayer has made a deposit and fails to instruct their tax pooling intermediary to transfer the deposit to meet their tax obligations, the concessions available for using tax pooling funds voluntarily will not apply. The amendment provides that, when a deduction notice is applied, the effective date is the date the tax pooling intermediary pays the funds to the CIR. Previously it could have been argued that the deposit date of the funds was the effective date.

• Previously the tax pooling rules only permitted tax pooling funds to be used to meet an actual tax obligation. Consistent with the policy intent, the funds transferred from the pool to a taxpayer’s own account is limited to the amount of tax actually owing. However, sometimes a taxpayer may wish to purchase tax pooling funds before they file their return for the relevant year, because they expect to have an obligation that they cannot quantify at that time. An amendment allows taxpayers to use funds in a tax pooling account towards the payment of a future tax liability if certain criteria are met. This section only limits the use of acquired funds; taxpayers who use their own deposited funds will not be subject to this limit.

• A new rule allows pooling funds to be used for a voluntary disclosure when there has not been a previous assessment, provided the relevant return has previously been filed for that year. Because not all adjustments will arise from a voluntary disclosure, pooling funds will be able to be used when the CIR makes an assessment or adjustment increasing an amount previously payable, provided the relevant return has previously been filed for that year or period. Any original amounts payable will not be able to be paid with tax pooling funds. Tax pooling funds can only be used for the adjustment resulting from the difference between the return filed and the increased amount owing. If second or subsequent adjustments are made that result in more tax to pay, the new rule also allows tax pooling to be used, provided each subsequent adjustment results in an increased amount of tax to pay than the immediately preceding adjustment.

• The Act introduces an amendment to require taxpayers purchasing funds in a tax pool to nominate an effective date that is no earlier than the original due date (or the first provisional tax due date, in income tax cases) of the applicable year or period in which the tax pooling funds are used. The change is required because provisional tax pooling rules previously included an unintended ability to use tax pooling funds to eliminate imputation account debit closing balances. This occurs when a taxpayer purchases or otherwise acquires pooling funds at an effective date that falls before the tax year in which the tax pooling funds are to be used to meet an income tax obligation. This effectively allows a company to receive a backdated effective date for imputation purposes, while paying a current provisional or terminal tax obligation.

• The revenue types that tax pooling can be used to pay are to be extended to include income tax, FBT, GST and imputation tax. The withholding taxes defined in “amount of tax” in the s YA 1 definition are also to be brought into the tax pooling rules. These measures better reflect the policy intent of which revenues and in what circumstances tax pooling can be used. The 10 per cent imputation penalty tax
Recent Developments

can also be met using tax pooling, to the extent that this relates to an increased amount of further income
tax payable following an assessment by the CIR.

Using credit cards to pay tax
From 1 July 2011, an amendment allowed the CIR to charge taxpayers a fee if they chose to pay their tax or
social liabilities by credit card. The fee, set at 1.42 per cent of the total transaction, will not apply to overseas-
based student loan borrowers and overseas-based child support liable parents who choose to make their
payments by credit card.

Dividends paid within a wholly-owned group
At present, in order for a dividend paid by one company to another within a wholly-owned group to be exempt
under s CW 10, the companies must satisfy a common balance date requirement. This requirement is to be
removed for dividends derived by a company on or after the first day of that company’s 2010-2011 income
year.

Portfolio investment entities (PIEs)
Two new categories of PIE have been introduced.
The first category invests only in foreign-sourced income earning assets, although there is a de minimis five
per cent allowance for New Zealand sourced interest and one per cent for New Zealand shares. Non-resident
investors in this category of PIE are taxed at zero per cent.
The second category can invest in both New Zealand and foreign-sourced income earning assets. The tax
rates applying to non-resident investors reflect the rates that they would pay if they had made a direct
investment in those assets.

Non-resident investment in PIEs
The Act introduces changes relating to the treatment of non-resident investment in PIEs. These changes are
intended to ensure that non-resident investors in PIEs are taxed in a similar way on their PIE income as if
they invested directly. Certain multi-rate PIEs can now choose to become foreign investment PIEs and treat
their notified foreign investors as having either a prescribed investment rate of zero per cent (if the PIE earns
only foreign-sourced income), or a variable rate that depends on the income source or investment type of the
income they earn (if they earn both foreign-sourced income and other amounts).

Remedial matters
The Act also addresses a number of minor remedial matters. These include:
• Allowing building societies to use the amalgamation tax rules for companies;
• Giving trustees the choice of substituting money for RWT credits in beneficiary income;
• Giving relief when a forestry right is extinguished and re-granted in whole or in part solely for the
  purpose of facilitating a Treaty of Waitangi claim settlement process;
• Allowing employers the choice of a flat 33 per cent rate of employer superannuation contribution tax
  for contributions to defined benefit funds; and
• Ensuring that the elections and methods used for tax of a qualifying company are correctly dealt with
  when the qualifying company transitions into a look-through company.

Tax credits
The period during which redundancy payments qualify for the 6% six per cent redundancy payment tax credit
has been extended from 31 March 2011 to 30 September 2011 [see 1395.90].
The following organisations have been added to the list of charities donations to which qualify for the
charitable donations tax credit, with effect from the year ended 31 March 2013:
• Jasmine Charitable Trust No 2;
• New Zealand Good Samaritan Heart Mission to Samoa Trust;

- Ruel Foundation;
- The Cambodia Charitable Trust;
- The Unions Aotearoa International Development Trust [see 1395.75].
Future Developments

Depreciation
From the 2011-2012 income year, no depreciation can be claimed on buildings with an estimated useful life of 50 years or more [see 250.100].

New rules have been introduced with effect from the 2011-2012 income year to enable commercial building owners, who did not previously identify and depreciate building fit-out when they acquired a building, to amortise 15 per cent of the building’s adjusted tax value on a straight line basis over 50 years [see 250.103].

Double tax agreements
The double tax agreement between New Zealand and Hong Kong is expected to enter into force by the end of 2011 [see 310.40].

Taxation (International Investment and Remedial Matters) Bill
TaxNote: At the time of publication of the Staples Tax Guide 2012, 72nd edition, the Taxation (International Investment and Remedial Matters) Bill had not been passed into law. It is anticipated that the content of Staples Tax Guide will be changed following the passing of the Bill. When enacted, these changes will also be available in the Staples Tax Guide online at www.brookersonline.co.nz. The changes will also be included in the Staples Tax Guide 2012 - Mid-Year Supplement.

Foreign Investment Fund Rules for non-portfolio FIF interests
From the 2007-08 year significant changes were made to the FIF rules for calculating income from less than 10 per cent shareholdings in foreign companies (portfolio foreign investment funds). As a consequence, many investors were exposed to the FIF rules for the first time. Investors generally calculated FIF income based on the fair dividend rate method, which applies an assumed five per cent return on the market value of their aggregate taxable FIF interests, although a natural person and trustees of family trusts can choose to be taxed on the actual returns of all of their foreign portfolio investments (although any losses are reduced to zero) by using the comparative value method for that year. The portfolio FIF rules are contained in 850.130–850.290.

With the changes to the portfolio rules, the non-portfolio rules were essentially left unchanged and the FIF income calculation methods remained the same, with the comparative value method the generally applied method.

The Taxation (International Investment and Remedial Matters) Bill introduces a new suite of rules to tax interests in non-portfolio FIFs. The key features are the removal of the grey list and an extension of the active income exemption, which was introduced in 2009 for offshore subsidiaries that are controlled foreign companies, so that joint ventures and other significant shareholdings in foreign companies are now treated similarly.

The CFC reforms were designed to ensure that New Zealand businesses that expand offshore by operating subsidiaries in foreign countries can compete on an even footing with foreign competitors operating in the same country.

The Taxation (International Investment and Remedial Matters) Bill aims to provide consistency of tax treatment with the CFC rules. It achieves this by extending the active income exemption, with some modifications, to non-portfolio FIFs. It also extends the portfolio FIF income methods to non-portfolio investors unable to use the active income exemption due to having an insufficient shareholding or access to information. These investors will be taxed under the fair dividend rate or cost methods. An exception is available for non-portfolio FIFs that are resident and subject to tax in Australia. This is consistent with the CFC reforms that replaced the eight-country grey list exemption with an exemption for CFCs that are resident...
and subject to tax in Australia, and with the portfolio FIF rules that exempt ASX-listed Australian resident companies.

Changes have also been made to the portfolio FIF calculation methods, and are discussed in more detail under Changes to FIF Income Calculation Methods below.

The new rules apply for income years commencing on or after 1 July 2011, which for many will be the income year commencing 1 April 2012.

**Income calculation methods for non-portfolio FIFs**

The FIF calculation methods that can be used to calculate FIF income from interests in non-portfolio FIFs are:

- The new active income method;
- The fair dividend rate method;
- The cost method; and
- If the investor is a natural person or trustee of a family trust, the comparative value method.

**Attributable FIF income method [s EX 50]**

The new method for calculating FIF income and loss from non-portfolio FIF interests is based on the method used for calculating attributed CFC income [see 850.40–850.90].

This new method, referred to as the attributable FIF income method, replaces the branch equivalent method. Under this new method investors in the FIF generally calculate their FIF income as though the FIF were a CFC using the active income exemption. This is the same approach the branch equivalent method took; that is, in calculating the branch equivalent income or loss of a FIF, the CFC rules were read as though the FIF were a CFC.

No income is attributed from FIFs that satisfy the active business test, either independently or as part of a consolidated group of FIFs. This is consistent with the CFC rules. The active business test is discussed below.

Again, consistent with the CFC rules, investors that do not satisfy the active business test attribute the portion of attributable (passive) income that corresponds with their income interest in the FIF. Because a FIF is not a CFC, investors are unlikely to have the same level of control as shareholders in a CFC, and also the interest will be accounted for differently in the financial statements of the investors. Thus, the attributable FIF income method contains some features unique to the FIF rules. Specifically, some of the key modifications to the CFC rules are found in s EX 50, and are:

(i) Under the CFC rules, New Zealand investors that have more than one majority-owned CFC in a jurisdiction are allowed to use consolidated accounts (referred to as test groups in the CFC rules) for all their majority-owned CFCs in that jurisdiction for the purposes of the active business test.

The non-portfolio rules also allow the use of consolidated accounts to simplify the active business test. The equivalent consolidation rule for investors in non-portfolio FIFs is broader than its CFC counterpart. This enables investors to use consolidated accounting information (before removing amounts for minorities) for chains of FIFs, including FIFs that are resident in different jurisdictions. This is discussed more fully below.

(ii) The accounting standard requirements in s EX 21C for the active business test are made more accommodating for people with interests in non-portfolio FIFs. For non-portfolio FIFs the applicable accounting standard requirements (whether for a test group or otherwise) will be met if:

- The interest holder or other person has accounts that include the accounts of the FIF, including by proportionate consolidation under IAS31; or
- The FIFs accounts are prepared under US GAAP and meet the requirements of s EX 21C(8) (auditor requirements) and the interest holder or other person has accounts that include dividends and fair value changes in relation to the FIF under NZIAS 39, or accounts for the investment under the equity method in NZIAS 28 or NZIAS 31.
**Future Developments**

Note in relation to the first point that allows proportionate consolidation, there is an assumption that the New Zealand interest holder will be able to access sufficient records of the FIF to identify whether the income is active or passive. In relation to the second point, while it is acceptable to use the accounts of the FIF prepared under US GAAP, this is subject to the inclusion of income from the FIF in the IFRS accounts at some level – even if only as dividends or an equity-accounted amount.

(iii) Under the existing CFC rules, in the event the active business test is not met, there is an exemption from attributable CFC amounts in s EX 20B for royalty, rent and financial arrangement income derived from associated CFCs, as long as the CFCs are in the same jurisdiction and the CFC that makes the payment is a non-attributing active CFC (ie passes the active business test).

This exemption is modified for non-portfolio FIFs to limit its application to payments between FIFs that are commonly controlled; that is when a group of persons holds more than 50 per cent of the voting interests in the FIF and the foreign company making the payment (thus the recipient foreign company must have an income interest of more than 50 per cent in the foreign company making the payment). This is designed to limit the exemption to payments between sister FIFs, or when a FIF holding company controls an active FIF. The other conditions are:

- The payer is a foreign company that the person uses the attributable income method for; and
- If the payer company were a CFC, it would be a non-attributing active CFC; and
- The FIF and the foreign company each have a “taxed FIF connection” with the same country or territory. This taxed FIF connection replaces the “same jurisdiction rule”. The definition of “taxed FIF connection” describes a company that is a resident of and liable to tax in the country or territory concerned, and is not resident or liable to tax in another country, nor does it have a permanent establishment in another country. FIFs that are wholly owned by a FIF that meets these rules, and is liable to tax on the FIFs income in the same country, will also satisfy the taxed FIF connection.

(iv) In many cases a New Zealand investor will own shares in a foreign company which itself owns shares in a second foreign company. The scheme of the CFC and (the soon to be repealed) branch-equivalent FIF rules (BE FIF) has always been that when a CFC or BE FIF owns a FIF, any FIF income is not included in the attributable CFC income or BE FIF income, but rather the person with the interest in the CFC or BE FIF has an additional amount of FIF income taxed directly to the New Zealand investor.

Under the new rules for non-portfolio FIFs, if the investor is using the attributable FIF income method in respect of the first foreign company, they will be required to “look-through” and to apply a FIF calculation method with respect to their indirect interest in the second foreign company. This is consistent with the prior BE FIF method.

However, the new non-portfolio FIF rules contain exceptions to the “look-through” rule in s EX 50(6). The purpose of the exceptions is to enable investors to apply the active business test using consolidated accounting information in situations when they have a direct interest in a FIF that holds shares in other foreign companies, thus, overcoming the need to look through.

Thus, under the new attributable FIF income method, where a FIF has an interest in another FIF, the person does not have additional FIF income if:

- The second foreign company is able to apply and pass the active business test on its own terms, independent of the first tier FIF – but note an indirect interest of 10 per cent in the second foreign company is required to use the attributable foreign method; or
- The FIF and the second foreign company meet the test for a non-attributing active CFC under s EX 21B(2) as part of a test group; or
- The second foreign company would meet the test for a non-attributing active CFC under s EX 21B(2) if the following amounts were included in the items “added passive” and “reported revenue” in s EX 21E:
  - Amounts recognised in the profit and loss under the equity method, as per NZIAS 28, NZIAS 31 or an equivalent IFRS standard or US GAAP standard;
Future Developments

- Amounts recognised in profit or loss under proportionate consolidation under NZIAS 31, an equivalent IFRS standard or US GAAP standard;
- Dividends and fair value changes recognised in profit and loss for investments accounted for under whichever is appropriate of NZIAS 39, an equivalent IFRS standard or US GAAP standard; or
- The interest in the foreign company would be exempt under the Australian resident company exemption in s EX 35 if held by the person.

This is discussed in more detail below.

**Active business test [ss EX 21D, EX 21E and EX 50]**

The active business test is passed and no income is attributed if less than five per cent of the gross income of the non-portfolio FIF is passive. If the test is failed, then only the passive income (such as interest, rent or royalties) is attributed to the New Zealand shareholder.

Under the CFC rules [ss EX 21D and EX 21E], for the purposes of the active business test, New Zealand investors that have an interest in more than one majority-owned CFC in the same jurisdiction are allowed to use consolidated accounts (test groups) for all their majority-owned CFCs in that jurisdiction.

The non-portfolio FIF rules are based on the CFC consolidation rule, but with three notable differences (contained in s EX 50(4B)) designed to make the active business test more accessible:

- The CFC rules require the investor to have a more than 50 per cent income interest in each CFC. Under the attributable FIF income method it is the FIF in respect of which that method is used that must have a more than 50 per cent voting interest in the lower-tier foreign companies. Voting interests include interests that are held directly or indirectly.
- The CFC rules require all relevant CFCs to be subject to the laws of the same jurisdiction in order to apply the active business test on a consolidated basis. Under the attributable FIF income method, the foreign companies can be in different jurisdictions (as long as none of those companies is a CFC).
- Finally, the CFC rules require the investor to remove amounts corresponding to minority interests. The attributable FIF income method omits this requirement so amounts belonging to other investors are included in the calculations. This is because of concerns about the practical difficulties for a non-controlling shareholder identifying amounts attributable to other shareholders.

**Applying the FIF calculation methods to lower-tier foreign companies – look through rule [ss EX 50(6), EX 50(7) and EX 50(7B)]**

As above, the new rules modify the approach to looking through a first-tier FIF to its underlying FIFs when the new attributable FIF income method is used.

When a person with an interest in a FIF has itself an interest in an underlying FIF (the second FIF), the person will not have additional FIF income under the look through rules when:

- The second foreign company meets the test for a non-attributing active CFC under s EX 21B(2) (that is, it meets the active business test in its own right), and the person would be able to use the attributable FIF income method if the person held the FIF interest directly. In this regard note that under new s EX 46(3) the person’s indirect interest in the second foreign company would have to exceed 10 per cent for the person to be entitled to use the attributable FIF income method [see s EX 50(7B)(a)(i)]; or
- The FIF and the second foreign company are able to apply and pass the active business test as part of the same test group. To be part of the same test group the FIF must hold a 50 per cent or greater voting interest in the second foreign company, and the second foreign company must not be a CFC [see s EX 50(7B)(a)(ii)]; or
- The FIF is able to apply and pass the accounting-based active business test in s EX 21E (as modified by s EX 50(4B)(cb), (cc), (cd) and (ce)) even after some relevant amounts from the second foreign company are included in the “added passive” item as per s EX 50(7B)(b).
Future Developments

Note in relation to the third point, the commentary to the Bill noted “the relevant amounts will differ depending on the level of shareholding that the FIF has in the second foreign company. If the FIF holds a joint venture interest in the foreign company the amounts which would be recorded in that FIF’s accounts under New Zealand Equivalent to International Accounting Standard 31 (NZIAS 31) would need to be included. If the FIF holds 20 per cent or more, but less than 50 per cent of the foreign company, then amounts recorded under the equity method in that FIF’s accounts under NZIAS 28 would need to be included. If the FIF holds less than 20 per cent of the foreign company then any dividends and holding gains recorded under NZIAS 39 for that company would need to be included.” Note: it is understood that the intention is that including the point three amounts in the “added passive” item is optional. This is not clear from the legislation and may need amending.

An example based on the commentary to the Bill illustrates how this may work:
Future Developments

If the New Zealand investor chooses to apply the attributable FIF income method to FIF 1 (recall the FDR method can now be used for non-portfolio FIFs which only looks at direct interests so does not look through), it can apply the test for a non-attributing CFC under s EX 21B(2) as per normal to determine if FIF 1 passes the active business test. That is, it can apply the active business test based on the accounts of FIF 1, or it could use the consolidated (test) group accounts.

Consolidation is based on whether FIF 1 has a voting interest of more than 50 per cent in the other companies [s EX 50(4B)(b)]. Also, consolidation is not limited to subsidiary companies in the same jurisdiction [s EX 21E(2)(b)] does not apply as written for FIFs, see s EX 50(4B)(g)]. This being the case, line items in FIF 1’s accounts will consolidate amounts from FIF 2 and FIF 3. These amounts will be included in the “reported passive” item for the purposes of the test in s EX 21E.

FIF 4 is unable to be consolidated as such. However, it will not be necessary to look through to FIF 4 if, by applying s EX 50(7B)(b) FIF 1 would still meet the active business test. That is, if by including amounts from FIF 4 under the appropriate accounting standard (for example as income from equity in associates), in “reported passive” and “reported revenue” for the test group the active business test is met, then look through is not necessary. If the test was not met, it would be necessary to look through to FIF 4.

Changes to FIF income calculation methods

Changes have been made to the existing FIF income calculation methods to remove the accounting profits and branch equivalent methods and accommodate the introduction of the new attributable FIF income method. These changes are summarised below. As with the changes to the non-portfolio rules these apply for income years beginning on or after 1 July 2011.

Attributable FIF income method (and repeal of the branch equivalent method)

Section EX 46(3) previously allowed the use of the branch equivalent method. This has been replaced by the new attributable FIF income method. Section EX 46(3) only permits the use of the attributable FIF income method if the person can provide to the CIR, if requested, sufficient information to enable the CIR to check the calculations required by s EX 50, and at all times in the FIF’s accounting period:

- The FIF is a company; and
- The income interest of the person in the FIF, as defined in s EX 50(4), is 10 per cent or more; and
- The person is not a PIE.

If use of the attributable FIF income method is not available the other methods available are the FDR method or its sister method, the cost method. The Comparative value method is also available but this is limited to natural persons and trustees of family trusts. Thus, PIEs must use FDR or the cost method if the attributable FIF income method is not used.

The income interest of the person as set out in s EX 50(4) refers to the provisions that define an income interest in a CFC, and includes indirect interests. In the FIF rules, the general rule is that a FIF interest is a direct interest. That is, generally FIFs are not looked through. However, when the attributed FIF income method is used, like its branch equivalent method predecessor, the look through rule in s EX 50(6) applies. Generally, for these purposes, the New Zealand resident must have an indirect income interest of 10 per cent or more in the FIF that is being looked through to. However, look through may not be necessary if the active business test is passed in relation to underlying FIFs and this test needs to be considered first. In determining if a person has an indirect interest of 10 per cent or more, the interests of associated persons are not taken into account [s EX 50(4)].

An exception to the requirement to have an income interest of 10 per cent or more is made for a limited number of shareholders who were understood to be using the branch equivalent method to calculate income from a foreign company that is also a CFC when their interest was not 10 per cent or more, as required by s EX 14. By repealing the branch equivalent method the most likely FIF income method available would be the cost method (i.e. FDR may not be available as no market value is available except by independent valuation – see s EX 46(9)(b)). This is considered a harsh outcome if, under the branch equivalent method, the tax liability was lower than a deemed return of five per cent. Thus, s EX 46(3)(b) allows shareholders with
Future Developments

interests of less than 10 per cent in a FIF that is also a CFC to use the attributed FIF income method provided the market value of the interest is not available, otherwise than by independent valuation. The shareholder cannot be a listed company, group investment fund, PIE, superannuation scheme, unit trust or a trustee of a trust with a beneficiary who is one of the aforementioned entity types. Further, s EX 46(3)(b) does not apply if the CFC has any other shareholder with an interest of 10 per cent or more that is one of those entity types.

Fair dividend rate (FDR) and cost methods

The FDR and cost methods are no longer limited to portfolio FIF interests of less than 10 per cent. This is achieved by removing ss EX 46(7) and EX 46(9)(a). Thus, there is nothing to prohibit a person using the FDR or cost method for non-portfolio FIF interests if this would give a better result. Of course the consistency rules in s EX 62 will need to be considered. These allow a change to or from the attributable FIF income method without the need to give a reason for the first change, but subsequent changes to or from the attributing FIF income method must be due to a change of circumstances that changes the ability to obtain information to comply with the attributable FIF income method, and altering their income tax liability is not the principal purpose or effect of the change [s EX 62(6) and (7)].

If a person does not choose a FIF calculation method (and is not required to use a certain method), they are deemed to have chosen to use the FDR method, or the cost method if it is not practical to use the FDR method. This is achieved by changes to the default calculation methods in s EX 48. This provision would apply when a person has not complied with their FIF obligations and the CIR is seeking to NOPA or raise an assessment.

Proposed repeal of accounting profits method

The accounting profits method is repealed with application from an investor’s first income year beginning on or after 1 July 2011. This means the accounting profits method can still be used for the 2010-11 income year, and the 2011-12 income years if this started prior to 1 July 2011. Persons who used the accounting profits method in the year immediately preceding the repeal of this method are able to change to any other method (see new s EX 62(10)), subject to the limits on the choice of method in s EX 46.

Comparative value (CV) method

Investors are able to choose the CV method if:

• They are a natural person or a trustee of a family trust and do not use the fair dividend rate or cost method for any of their other interests; or
• The interest is a non-ordinary share under s EX 46(10).

This reflects the existing limitations on choosing the CV method under the portfolio FIF rules. Section EX 46(6)(c), which prevented the above limitations from applying to FIF interests of 10 per cent or more, has been repealed. Thus natural persons and trustees of family trusts can use CV for both portfolio and non-portfolio interests. Companies and other entity types are not able to use CV at all.

When a person chooses to use the CV method for one FIF interest they are not able to use the FDR method or cost method for their other FIF interests for which the FDR method could be used. This result is achieved by s EX 46(8)(b). This is the existing rule.

Note although the legislations says that CV “may be used” if an investor has a “non-ordinary share” (share that is equivalent to debt) as defined in s EX 46(10), CV is the only FIF method available if it is practical to get an end of year market value for that share [s EX 46(6)(d)]. If a market value is not available deemed rate of return is required to be used.

Note also that FIF losses under the CV method are now reduced to nil for all CV FIF losses other than when the CV method is essentially compulsory for non-ordinary shares. Other losses using the CV method are limited to zero. This applies for both portfolio and non-portfolio FIF interests. Previously non-portfolio losses calculated under the CV method were deductible in full. The repeal of s EX 51(7)(a) achieves this result.
Deemed rate of return method

Investors will only use the deemed rate of return method when they have a non-ordinary share and it is not practical to get an end of year market value for that share to undertake the CV method. This is achieved through the repeal of s EX 46(4) and amendments to s EX 46(5).

Previously, the deemed rate of return method was available for non-portfolio interests. However, with the ability to use FDR and cost methods (which apply tax to an assumed five per cent return) for portfolio and non-portfolio investments, it is no longer necessary to retain the deemed rate of return method as this deems a higher return (circa nine per cent) than the five per cent deemed income under FDR and the cost methods. Thus, the deemed rate of return method is now just a back up method to CV when a market value is unavailable as per s EX 47.

Other changes to the FIF rules

Opting out of the $50,000 De Minimis rule

Amendments have been made to the $50,000 de minimis rule in s CQ 5(1)(d) and (e) and s DN 6(1)(d) and (e) to allow taxpayers to disregard the de minimis threshold, below which the FIF rules do not apply. This allows persons that have not exceeded the threshold to apply the FIF rules if that gives a better tax outcome. This can often be the case with foreign superannuation for example. To prevent taxpayers opting in and out of the $50,000 de minimis threshold, taxpayers that have returned FIF income from FIF interests that cost $50,000 or less in any of the preceding four income years must continue to do so. To get the benefit of the $50,000 de minimis threshold again taxpayers would have to cease to hold attributing FIF interests that cost $50,000 or less for four complete tax years.

Inherited FIF interests

Shares in former grey list companies that were inherited prior to 1 April 2007 have, until now, been regarded as having a cost of nil. This has meant that, unless the person that inherited the share had other FIF interests exceeding $50,000, no FIF income was calculated on these foreign shares. This was discussed in the Institute of Chartered Accountant’s Journal, vol 88, Issue 5, June 2009 at 26 and 27.

However, from the date of enactment of the Taxation (International Investment and Remedial matters) Act (which at the time of printing is awaiting enactment) persons holding inherited FIF shares are deemed to dispose of the shares and reacquire them for an amount equal to their market value at that time. If this value exceeds $50,000 the person will then be treated as though the cost of their FIF interests exceeded that threshold at that time. This will mean for most that dividends will from that time forward be subsumed into the FIF income calculation rules, and from the start of the next income year, the person will have to calculate income under the FDR method.

For those people who hold these shares on capital account, no income tax liability will arise on the deemed disposal and reacquisition. However, in the rare case when the shares were held on revenue account, for the purposes of determining any taxable gain on the deemed disposal:

• The cost of the shares is deemed to equal the lesser of the market values at the time of inheritance and the time of deemed disposal; and
• The tax liability is spread forward over three income years under s EX 67B(3); and
• No liability for penalties and interests arises on these amounts.

Zero rate of AIL on bonds

The amendments to lower the rate of AIL on certain bonds issued in New Zealand to zero per cent is designed to lower the tax barrier to non-resident investment in New Zealand corporate bonds. Also, if the incidence of this tax falls on the New Zealand borrower this impacts on the cost of capital in New Zealand more broadly.

The changes apply a zero per cent rate of AIL on certain qualifying bonds, essentially widely-held and issued in New Zealand. The change will apply to interest payments made on or after the date the bill is enacted, which will allow the zero rate to be used in respect of future interest payable on bonds issued before enactment.
The key requirements for a qualifying bond are:

The security must first comply with the usual AIL registration requirements in s 32M of the TAA and s 86H of the Stamp and Cheque Duties Act 1971. That is, it must have been eligible to apply AIL of two per cent to the security and:

- The security is denominated in New Zealand dollars; and
- The security is offered to the public for the purposes of the Securities Act 1978; and
- The security is not issued as a private placement; and
- The security is not an asset backed security; and
- The registry and paying agent activities for the security are conducted through a fixed establishment in New Zealand; and
- The security is listed on an exchange registered under the Securities Markets Act 1988 (NZDX) or the widely-held test is met.

These requirements are explained in a little more detail below.

Normal registration required

To access the zero rate of AIL the issuer of the security must be an approved issuer under s 32M of the TAA and must have registered the security under s 86H of the Stamp and Cheque Duties Act 1971. This allows AIL to be paid at two per cent.

Section 86I of the Stamp and Cheque Duties Act 1971 is amended so that AIL is considered to be paid when either the existing two per cent rate is paid, or the new nil rate applies. When AIL is considered to be paid, a nil rate of non-resident withholding tax will apply under s RF 12 so long as the borrower and lender are not associated and so long as the interest is not jointly derived with a New Zealand resident. Regardless of whether they pay AIL at two per cent or zero per cent, approved issuers will need to continue to file an AIL return/payment slip by the 20th day of the month following the month in which the interest payment was made. This slip will now require the approved issuer to record the total amount of interest payments that have been zero-rated. A person will not generally be able to get the zero rate of AIL in respect of any interest payments in which they fail to provide this information by the 20th day of the following month. However, there is scope in s 86I(2)(b)(ii) of the Stamp and Cheque Duties Act 1971 for the CIR to provide a later deadline in a notice given to the approved issuer. Alternatively an approved issuer that is late at supplying this information would still be able to get a two per cent rate of AIL under s 86I(2)(a) if they pay AIL at a later date along with interest and penalties.

Issued publicly in New Zealand

The security must be denominated in NZD and issued under an offer to the public for the purposes of the Securities Act 1978 and are not a private placement [Stamp and Cheque Duties Act 1971, s 86IB(1)].

In terms of being offered to the public, the securities must be an offer to the public in compliance with the Securities Act 1978. The Securities Act does not define an offer of securities to the public, but s 3 of the Act lists people who are not considered to be members of the public. These include associates, institutional investors, underwriters and investors who pay a minimum subscription price of at least $500,000 before allotment of the securities. The Securities Act requires the preparation of an investment statement, a registered trust deed and (generally) a registered prospectus before a debt security can be issued to the public.

Private placements are excluded. A “private placement” is not a formally defined term in the Income Tax Act so this exclusion relies on the ordinary meaning of the term. For example, securities that were exclusively issued to a group that were pre-selected by the issuer would probably be considered to be a private placement.

Not an asset-backed security

Again, an “asset-backed security” is not formally defined so would be interpreted using the ordinary meaning of this term. For example, securities with interest payments directly financed out of cash-flows from a pool of financial assets, such as mortgages or other loans, could be considered to be asset-backed securities. Inland
Revenue’s explanation of the purpose of this requirement is to deny the zero rate of AIL in cases where a group of loans have been bundled together and securitised into a bond. The concern is that such securities could be used to shift the margin earned on closely-held loans (such as mortgages) outside the New Zealand tax base. Note that this measure is not intended to exclude bonds that are simply secured against a collateral asset that the bond holder can claim in the case of default.

**Listed on the NZDX or widely held**

The securities must either be listed on an exchange registered under the Securities Market Act 1988, or alternatively pass a widely-held test.

Currently, the NZDX is the only debt exchange that is registered under the Securities Markets Act 1988. Securities listed on the NZDX will not need to apply the widely-held test and are expected to generally satisfy the other requirements listed above.

The widely-held test is outlined in new s 86IB(2). A bond needs to satisfy the widely-held test at or before the time of the interest payment. This means that if the test has been satisfied on one previous occasion it is not necessary to re-apply the test a second time.

There are four limbs to the widely-held test that must all be satisfied:

- The bond is one of a number of identical debt securities that are registered securities; and
- The securities must be held by at least 100 separate persons; and
- The issuer has reasonable grounds for expecting that each of the 100 or more bond holders is not associated with the issuer, or associated with another bond holder; and
- That no person or group of associated persons holds more than 10 per cent of the value of the securities at the time the test is applied.

Note: the securities need not all be issued on the same date so long as the debt securities are identical. For example if half the bonds were issued in January and half in August and by 14 September the total number of bondholders has reached 100 persons, then the test could be satisfied in respect of interest payments made on or after 14 September. This means that issuers can build up to 100 investors over time, although they will only get the nil rate of AIL in respect of interest payments made on or after the first day that the securities satisfy the widely-held test.

If the number of bond holders subsequently drops below 100, the test will still be satisfied so long as this threshold was not met simply because of an arrangement (that the issuer could reasonably be expected to be aware of) that was intended to temporarily increase the number of persons holding the bonds [s 86IB(2)(c)(ii)].

**Other Changes**

**PIEs with non-portfolio interests in CFCs or FIFs**

For income years beginning on or after 1 July 2011, proposed amendments will treat all CFC interests held by a portfolio investment entity (PIE) as if they were not CFC interests. This does not mean that the foreign company would stop being a CFC; it means the PIE will use the FIF rules as opposed to the CFC rules. A similar amendment will prevent PIEs from accessing the foreign dividend exemption (currently only multi-rate PIEs are excluded from this exemption). PIEs will not actually be taxed on foreign dividends, because they will be treated as only having FIF income from their FIFs.

**Branch equivalent tax accounts (BETAs) of companies and conduit tax relief accounts (CTRAs)**

**Repeal of BETAs of companies and CTRAs**

Following changes in the Taxation (International Taxation, Life Insurance and Remedial Matters) Act 2009, all credits in BETAs of companies were cancelled. However, the BETA was retained for a period of two years, to allow the use of BETA debit balances to prevent the double taxation of attributed foreign income.
**Future Developments**

To complete the repeal of BETAs for companies, BETAs with debit balances and related rules are to be repealed from the beginning of the fourth income year that the taxpayer is required to comply with the new international tax rules (ie the first income year beginning on or after 1 July 2012).

CTRAs and related rules are to be repealed from the beginning of the first income year beginning on or after 1 July 2011. Dividends not paid before this date will not be able to have conduit tax credits attached to them.

Elections to use BETA debit balances to relieve tax on attributed foreign income will only be available for tax on attributed foreign income that is allocated to the second year, under the international tax rules, or to an earlier year. This would apply from the first income year beginning on or after 1 July 2009.

Note: Although the BETA rules were retained for three income years after the introduction of the new international tax rules in 2009, the ability to use BETA debit balances remains for the third year only, to allow determination of the income tax position and filing of returns for the second year. Because BETAs balance to the imputation year of 31 March, there may be some taxpayers for whom the final year (eg for a 31 December balance date company, the BETA will not be available from 1 January 2013) falls in an imputation year. In this case, the BETA will have to be kept for the imputation year ending 31 March 2013.

**Remedial amendments: BETAs of companies**

Minor changes are to be made to the ITA to ensure that BETAs cannot go into credit. These changes apply to income years beginning on or after 1 July 2009.

**Changes to the thin capitalisation rules**

**Applying the thin capitalisation rules to active FIFs**

The thin capitalisation rules are to be amended so that investors using the attributable FIF income method, or the exemption for FIFs resident in Australia, are subject to the same thin capitalisation rules that currently apply to investors in CFCs.

The amendments to outbound thin capitalisation rules would apply to New Zealand residents with CFCs or FIFs for which they use the attributable FIF income method, or New Zealand residents that use the s EX 35 exemption for FIFs resident in Australia. Assets from these entities will be included in the worldwide group assets, but not in the New Zealand group’s assets, for the purposes of determining if the New Zealand group’s debt to asset ratio is below 110 per cent of the worldwide ratio. The proposed changes would apply to income years beginning on or after 1 July 2011.

**New thin capitalisation test for low-asset companies**

A new thin capitalisation test is proposed for certain New Zealand-based groups with offshore investments. This will give certain New Zealand taxpayers an alternative test to comply with the thin capitalisation rules. Where New Zealand multinational groups have a high level of arm’s length debt, and if certain other conditions are met, they can choose that the test for thin capitalisation be based on a ratio of interest expenses to pre-tax cash flows, rather than on a debt-to-asset ratio.

The proposed changes apply for income years beginning on or after 1 July 2009, and will apply retrospectively so that companies that experienced difficulties immediately after the extension of the thin capitalisation rules will be able to obtain relief.

**State-owned banking groups**

The thin capitalisation rules are to be altered to permit the Kiwibank group of companies to be treated separately from the rest of the New Zealand Post group. The reason for this is to reduce compliance costs, and to ensure that the appropriate thin capitalisation test is used for the non-banking part of the New Zealand Post group. This amendment would apply retrospectively for income years beginning on or after 1 July 2009.

**Application to non-residents with no fixed establishment**

The thin capitalisation rules are to be amended to limit their application in the case of non-resident companies that do not carry on business through a fixed establishment in New Zealand. Such companies will no longer
be subject to the rules if all their New Zealand-sourced income that is not relieved under a double tax agreement is non-resident passive income. This will apply to income years beginning on or after 1 July 2011.

**Exemption from the outbound rules**

A provision [s FE 5(1B)(b)] which exempts excess debt outbound companies from the thin capitalisation rules if total interest deductions for the New Zealand group do not exceed $250,000 is to be repealed. This exemption is rendered effectively redundant by another provision, which reduces to zero the deductions subject to apportionment under the thin capitalisation rules where the finance costs of an outbound entity do not exceed $1 million. This will apply to income years beginning on or after 1 July 2011.

**Miscellaneous remedial changes**

**Qualifying companies amendment**

It is proposed that qualifying companies be excluded from having any income interests in a CFC, or interests of 10 per cent or more in an FIF. Currently, the legislation refers to “attributing interests”, which has unintended consequences. The change would apply to income years beginning on or after 1 July 2009.

**Amendment to non-resident exclusion from conduit anti-avoidance rule**

The conduit anti-avoidance rule in s GZ 2 is to be amended to exclude conduit tax relief received by a CTR-group member to the extent that the CTR-group member is owned by non-residents. The change would apply to income years beginning on or after 1 July 2009.

**Attributed foreign income**

For income years beginning on or after 1 July 2009, the scope of income that can be excluded from attributed foreign income is to be expanded by permitting some companies, which are not recognised for tax purposes in the country they operate in, to nevertheless be treated as resident in that country. This amendment is retrospective so that affected taxpayers can benefit from the policy from the inception of the international tax rules.

**Insurance CFC determination**

The CIR is currently able to issue a determination that an insurer is a non-attributing active CFC. The authorising provision is to be amended, for income years beginning on or after 1 July 2009, to expressly give the CIR the ability to stipulate conditions that must be satisfied in addition to the existing requirements for a CFC or CFC group member to qualify as a non-attributing active CFC.

**Foreign dividend exemption — deductible dividends**

Under existing law, deductible foreign equity distributions are specifically excluded from the foreign dividend exemption in s CW 9. A proposed amendment, to apply from the date of introduction of the Bill, widens the definition of “deductible foreign equity distribution” to include payments received by a company that give rise to a deduction for foreign tax of any person, whether a company or not. Previously, the definition was limited to amounts that were deductible to the company making the distribution, and to companies in the same group of companies as the distributing company.

**Losses of CFCs**

The transitional provisions dealing with CFC losses arising under the old international tax rules, and being carried forward under the new international tax rules, are to be reworded to ensure that the transitional rule applies to all ring-fenced losses, as intended. This applies for income years beginning on or after 1 July 2009.

**Foreign tax credits of CFCs**

The transitional provisions dealing with foreign tax credits arising under the old international tax rules, and being carried forward under the new international tax rules, are to be reworded to make it clear that the transitional rule applies to all carried-forward credits, as intended. This applies for income years beginning on or after 1 July 2009.
Future Developments

**Taxation (Income-sharing Tax Credit) Bill**

At the time of publication, the Finance and Expenditure Committee had reported back to Parliament on the Taxation (Income-sharing Tax Credit) Bill and recommended that it proceed. The Bill was introduced on 16 August 2010 and proposes to provide an annual tax credit to resident couples who are married, or are partners in a de facto relationship or a civil union, and who have responsibility for a dependent child aged up to 18 years. The effect of the credit would be to assess such couples for income tax as if they each received half of the total household income. The cost of the credit is estimated to be $500 million annually.

**Taxation (Annual Rates, Returns Filing and Remedial Matters) Bill**

**Return filing requirements**

Proposals include:

- Taxpayers who choose to file a return when not required by law to do so will be required to also file a return for each of the four years prior to the year that they wish to file.
- The requirement that taxpayers file a return of income merely because they are in receipt of Working for Families is to be abolished.
- The two most common returns, being the IR 3 return for individuals and the Personal Tax Summary, are to be amalgamated.
- The Commissioner of Inland Revenue is to be able to authorise data storage providers to store clients’ tax records offshore. Any such authorisation will be able to be revoked.
- Taxpayers who file returns electronically are to be able to store them electronically rather than being required to retain a paper copy.

**Profit distribution plans**

Under a profit distribution plan, a company issues bonus shares to its shareholders. The shareholders are able to elect to have the company repurchase the bonus issue shares immediately following their receipt by the shareholder. The bonus issue is treated as a non-taxable bonus issue. If the shares are repurchased, the cash amount received is treated as a taxable dividend and imputation credits are able to be attached. The Bill proposes to make the bonus issue taxable. One of the reasons for the reform is to prevent the possibility of PDPs being used as an imputation credit streaming mechanism.

**Tax treatment of unsuccessful software developments**

The proposal is to allow an immediate deduction for expenditure incurred on unsuccessful software development projects. The deduction will be allowed in the year in which the development is abandoned.

**GST**

An amendment is to be made clarifying that late payment fees charged by a business to a customer are subject to GST. Interest charged on overdue amounts will continue to be GST-exempt. The application date of the change to be 1 April 2003 with a savings provision to preserve the past GST treatment where a person has adopted a practice of treating late payment fees as exempt supplies. In these cases, the application date is to be 1 April 2012.

Liquidators, receivers and voluntary administrators are to be prohibited from changing a registered person’s GST accounting basis from the payments basis to the invoice basis.

**Banking industry**

The minimum equity threshold of a reporting bank’s New Zealand banking group is to be increased from four per cent to six per cent of risk-weighted exposures.

**Income tax rates**

Income tax rates for the 2012–13 income year are to remain the same as for the 2011–12 income year.
Chapter 20

Accident Compensation

20.10 Purpose and recent history

The purpose of the Accident Compensation Corporation (ACC) scheme is to provide a universal, no-fault system of health care, rehabilitation and compensation for all personal injuries caused by accidents. In broad terms, the scheme pays for the medical and rehabilitation costs of personal injuries caused by accident. The scheme also provides compensation, where applicable, for income lost during the period of incapacity. Due to the schemes existence, apart from exemplary damages, there is no right to sue for accidents incurred in New Zealand.

The ACC scheme is funded by levies imposed upon employers, employees, self-employed persons, and motorists. Accident compensation levies are compulsory. The levies apply for a levy year that runs from 1 April to 31 March. In March 2000, following a brief period when accident compensation was available from various insurance companies, legislation was enacted so that the statutory scheme became reinstated as the only supplier of accident compensation cover to employers.
20.15 Types of ACC levies payable

The levies are set each for each levy year, and are effectively made up of two parts, to cover:

(a) Claims for work and non-work accidents for the year ahead (which also includes funds to cover the lifetime cost of injuries that will occur); and

(b) Residual claims levy, which in general terms is for claims relating to injuries prior to 1 July 1999.

Both employees and self-employed pay levies into the work account, (for work-related accidents), and the earners account (for injury outside the work place). For employees, the work account levy (referred to as WorkPlace Cover) is paid by the employer [see 20.55] and the earner’s levies are deducted from their salary and wages through the PAYE system. For self-employed, the work and earners account levies are paid by the self-employed person through either the ACC CoverPlus or CoverPlus Extra products [see 20.40 and 20.45].

The residual claims levy is payable by both employers and self-employed. The residual claims levy is payable in respect of both the work account and earner’s account. The levy is designed to meet the on-going costs of work injuries that happened before 1 July 1999, and non-work injuries that happened before 1 July 1992. There is also an earners residual claims levy which meets the costs of non-work-related injuries to earners between 1 July 1992 and 30 June 1999 (although this levy has not been charged for the 2008-2009 levy year and the previous two years). As with the work and earners accounts, employers pay or deduct the residual levies on behalf of employees. For self-employed people on CoverPlus or CoverPlus Extra it is invoiced directly, but residual levies for non-PAYE shareholder-employees on CoverPlus Extra are invoiced to the employer.

The various levy rates for the work account depend on the different industry classifications and are set out in yearly ACC publications [ie Agent’s Guide — Your Guide to Business Industry Descriptions, Codes and ACC Levies]. Levies payable by employees are based on earnings and are collected through the PAYE system, while levies payable by employers and self-employed persons are invoiced direct from the ACC.

Levies are also paid by Government into a non-earners account for people not in paid employment. A motor vehicle levy is paid through the annual vehicle registration fee and incorporated in the price of petrol for injuries to people using public roads.

Summary of ACC accounts:

Staples Tax Guide 2012
(1) Earner’s levy rates

Employees pay the earner’s levy to ACC to cover non-work injuries. The earner’s levy must be paid by employees, persons receiving schedular payments, and self-employed persons. The earner’s levy is imposed at the following flat rate for all liable earnings [see 20.25]:

<table>
<thead>
<tr>
<th>Earnings period</th>
<th>Rate per $100 of liable earnings</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 April 2003 – 31 March 2004</td>

</tr>
<tr>
<td>1 April 2012 – 31 March 2013</td>
<td>$1.70 (including GST)</td>
</tr>
</tbody>
</table>

For employees, the earner’s levy is deducted by the employer from salary and wages along with PAYE tax deductions and paid to Inland Revenue on the same due dates as for PAYE. The earner’s levy is built into the PAYE tables. The earner’s levy is not deducted from any employee earnings which exceed the maximum earnings [see 20.35].

20.25 Earnings liable for levies

Generally, liable earnings include:

(a) Salary and wages and other income subject to PAYE (ie a bonus or extra pay);
(b) Income from self-employment;
(c) Schedular (withholding) payments;
(d) Partnership income derived by working partners; and
(e) Salary of a shareholder-employee.

Liable earnings for self-employed must be amounts that are subject to income tax and arise as a result of an individuals “personal exertion” or levies cannot be charged [IPRCA 2001, s 14]. Personal exertion includes any physical task. For example, management, book work, and administration are sufficient for the personal exertion test to be satisfied: *Caverhill v Accident Rehabilitation and Compensation Insurance Corporation* HC Rotorua AP93/97, 2 October 1998.
The principal point is that if the earnings are dependent on the person’s physical exertion then they will be liable. Earnings derived from physical exertion by some other person, for example when a sleeping partner of a partnership receives a share of the business profits, are not liable. That is, the personal exertion earnings of another partner can not be taken into account: Amies v Accident Rehabilitation and Compensation Insurance Corporation DC 119/95, 6 October 1995. Even when the income is of a business nature, some items of income (ie depreciation recovered), may not be considered income from personal exertion: G v Accident Compensation Corporation DC Wellington 151/2006, 20 June 2006. The income must also be income in the ordinary sense of the word. For example, partnership drawings are not considered income from personal exertion: Rockx v Accident Compensation Corporation DC Napier 43/2005, 14 February 2005. However, losses brought forward from a prior year are to be deducted from personal exertion income for the purposes of assessing the amount of compensation: Robinson v Accident Compensation Corporation DC Wellington 34/2006, 8 February 2006. Thus, the cases illustrate that an analysis of the nature of the income can look further into its respective components to determine both liability and compensation entitlement.

In the case of shareholder-employees, the personal exertion test is not applied. Entitlement is based on the earnings as a shareholder-employee [IPRCA 2001, s 15]. Under s 15(3) of the IPRCA 2001, other earnings from the company (eg director’s fees and dividends) may be taken into account if ACC believes that they provide a better reflection of the remuneration: Bow v Accident Rehabilitation and Compensation Insurance Corporation [1998] NZAR 385 (DC) when dividends were taken into account as earnings as a shareholder employee.

However, a subsequent appeal from a review decision has clarified the circumstances when other earnings from a company may be taken into account by a shareholder employee. In Nicholas v Accident Compensation Corporation DC Wellington 110/2008, 29 May 2008, the claimant was a shareholder employee of a company and received a salary of $60,000 for the year ended 31 March 2003. During the year the claimant also had drawings of $126,428. ACC determined the claimant’s weekly compensation on the basis of $60,000. The claimant argued that s 15(3) allowed him to value the true worth of his services as an employee and director, and had an independent assessment of the value of his services at $109,600. In rejecting the appeal, Judge Beattie found that s 15(3) of the IPRCA 2001 only permitted a reallocation of income actually returned for tax purposes. Further, Judge Beattie found that that provision had to be read in tandem with cl 31(b) of the IPRCA 2001. Clause 31(b) requires that, in determining earnings, the income tax return furnished to the CIR is to be used, provided that the return as furnished has not been influenced by the claimant’s incapacity. Judge Beattie interpreted this latter requirement as meaning that the remuneration declared can only be adjusted under s 15(3) of the IPRCA 2001 if the income returned was in some way “loaded” because of the fact of incapacity.

Thus, while Bow v Accident Rehabilitation and Compensation Insurance Corporation allowed dividends to be reallocated as earnings, it is hard to see how this could be the case following the decision in Nicholas v Accident Compensation Corporation, unless the amounts were declared as income and the amounts had not been overstated as earnings (that is, influenced by the incapacity) related to the person’s services as a shareholder employee.

For circumstances such as those in Nicholas v Accident Compensation Corporation, the approach for ACC earnings entitlement purposes would be to use CoverPlus Extra [see 20.45].

Note: Effective from 1 April 2010 a new s CD 34B of the Income Tax Act 2007 has changed the way the returns from some co-operative companies are taxed. In short, s CD 34B allows certain dividends, in the cooperative company context, to be deductible to the company and fully assessable as normal taxable income of the recipient.

Thus, for some taxpayers, and dairy farmers in particular, their return may now be a mix of dividends and trading profit. In the case of Fonterra dividends subject to s CD 34B, ACC has confirmed that the Fonterra dividend income will be treated in the same way as the value return payment (the trading profit) was treated, namely as taxable income of the recipient. Consequently, there will be no change (other than normal annual income fluctuations up or down) in the level of liable income on which levies are calculated.
For employees, the employer pays levies to ACC for work related accidents [see 20.55], and the earners account levy is deducted through the PAYE system. However, self-employed people (which includes people in a partnership, non-PAYE shareholder-employees, and people in receipt of schedular payment income) are billed by ACC in respect of their liable earnings. The information used to prepare the bill is sourced from the IR3 tax return provided to Inland Revenue. However, in the case of non-PAYE shareholder-employees, the information is sourced from the IR4 company return of income. Inland Revenue then provide ACC with the relevant earnings, so ACC is able to calculate the invoice amount.

Care needs to be taken when completing the IR3 to ensure the income liable for ACC levies is declared correctly. There are three different types of income a self-employed person can declare to Inland Revenue that are liable for ACC levies:

(a) Schedular payments (withholding payments);
(b) Partnership income; and
(c) Self-employed income.

Liable earnings are declared on an IR3 under the following key-points:

(a) Schedular payments (withholding payments) — declared under key-point 12B;
(b) Partnership income — declared under key-point 18B; and
(c) Self-employed income — declared under key-point 22

A self-employed person can also declare expenses under key-point 26 on an IR3 tax return. This figure is then deducted from the person’s total earnings to give the liable earnings.

Earnings that do not result from personal effort are not liable for levies and similarly ACC does not provide earnings-related compensation for earnings that do not result from personal exertion. This is because the income source would not cease if the person was unable to work as a result of an accident.

Beneficiary income from a trust (including trading trusts) is considered by ACC to fall into this category and is not regarded by ACC as income from personal exertion. For persons operating through a trading trust, ACC will only regard the person as an earner if they have a contract of employment with the trustees.

Earnings not liable for levies include:

(a) Interest and dividends (although note the exception in the case of certain cooperative company dividends discussed above);
(b) Foreign investment fund income;
(c) Business drawings;
(d) Amounts that are capital and not taxable;
(e) Rental income;
(f) Depreciation recovered when no continuing source of income;
(g) Non-taxable allowances;
(h) Student allowances;
(i) Income-tested benefits;
(j) New Zealand superannuation;
(k) Veteran’s pension;
(l) Living-alone payments;
(m) Redundancy payments;
(n) Retiring allowances;
(o) Jury and witness fees;
(p) Royalties;
(q) Partnership income derived by non-working partners;
Accident Compensation

20.30 Full-time and part-time self-employed earners

The hours a self-employed person works can affect the amount of ACC they pay and also the compensation they may be entitled to. This is particularly the case with minimum earnings [see 20.35], as full-time people are subject to a minimum income for levy purposes.

It is important that they notify the ACC’s Business Service Centre if the levy payer works part-time in their business. If ACC is not aware or is uncertain of the person’s part-time status, it will assume the person is full-time. If the person is not a full-time earner they may be incorrectly billed. Thus, it is important to notify ACC of part-time status.

To calculate full-time or part-time status, the levy payer needs to take the number of hours worked and average this over a 12-month period, even if they have only worked for eight months of the year, to get the average hours worked per week.

The status of the levy payer is:

(a) **Full-time**: If they work 30 hours or more per week; or
(b) **Part-time**: if they work less than 30 hours per week.

20.35 Maximum and minimum earnings

All ACC levies have a maximum level of cover. Minimum levels of cover apply to full-time self-employed. These are set by the Act or regulations and change from year to year.

(1) **Maximum**

Self-employed persons (whether full-time or part-time) who earn over the maximum will be charged a levy based on the maximum figure for that year. If the person has an accident and is incapacitated and unable to work, they will receive weekly compensation based on up to 80 per cent of the maximum.

**Example:**

The self-employed maximum for the 2009 levy year is $99,817. If a person declared self-employed income of $120,000, because they have earned over $99,817, they would receive an invoice from ACC based on the full-time maximum figure.

For employees, like self-employed persons, no ACC levy is payable on income exceeding the maximum. The PAYE tables do not include the earners levy for those weekly, fortnightly, or monthly earnings which equate to annual earnings of more than the maximum. Further, the employer does not pay the residual claims levy or earners account residual claims levy on the earnings of any employee which exceed the maximum. However, it is worth noting if an employee changes jobs during the year, and their combined earnings exceed the maximum, ACC levies in respect of both the work and earners accounts may be overpaid. In this case ACC should be contacted. Similarly, if a person derives both salary and wages and income from self-employment that collectively exceed the maximum then ACC levies on the self-employed income should be adjusted by ACC to reflect this [see 20.70].

The maximum amount of earnings on which levies are payable are:

<table>
<thead>
<tr>
<th>Earnings period</th>
<th>Maximum earnings for employees</th>
<th>Maximum earnings for self-employed</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 April 2003 – 31 March 2004</td>

</tr>
<tr>
<td>1 April 2012 – 31 March 2013</td>
<td>$113,768</td>
<td>$111,669</td>
</tr>
</tbody>
</table>

The maxima above differ as levies for employees are assessed on a current year’s basis, but for the self-employed the levy is assessed on prior year’s earnings. For this reason the figures for the self-employed trail the maximums for the current year as applicable to employees. However, if the self-employed person is using CoverPlus Extra, then a different maximum and minimum applies [see 20.45].

(2) Minimum

There is no minimum for employees and part-time self-employed people. Instead, those people pay levies based on actual earnings. The minimum level of cover only applies to a full-time self-employed person. A full-time person is a person who works on average at least 30 hours per week (whether or not as an employee). A full-time self-employed person who earns under the minimum will pay their levies based on the minimum figure (see table below) for that year, reduced by any earnings as an employee [see Example 4 below]. If the person has an accident and is incapacitated and unable to work, they will receive weekly compensation based on an amount of 80 per cent of the minimum.

The minimum specified amounts are:

<table>
<thead>
<tr>
<th>Earnings period</th>
<th>Persons 18 and over</th>
<th>Persons under 18</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 April 2003 – 31 March 2004</td>
<td>$16,016</td>

</tr>
<tr>
<td>1 April 2012 – 31 March 2013</td>
<td>$27,040</td>
<td>$27,040</td>
</tr>
</tbody>
</table>

Before 1 April 2009, the minimum levy for persons under age 18 was 80 per cent of the adult minimum. The age was taken as at the last day of the income year under consideration. From 1 April 2009, there is no differentiation.

Example 1:
Joshua is a 25-year-old self-employed lawn mowing contractor. He works 45 hours per week on average. During the 2007-2008 year he derived net income from his business of $9,763. Joshua’s levy is calculated on the specified amount of $19,760.
Example 2:
Hyacinth, aged 42, works on average 20 hours per week as a self-employed flower arranger. The net income from her business for the 2007-2008 year was $11,428. Hyacinth’s levy is calculated on her actual earnings of $11,428 as her average hours are less than 30.

Example 3:
Max, aged 17, earned $8,714 as a self-employed handyman during the 2007-2008 year. He works an average of 35 hours per week. Max’s levy is calculated on the specified amount of $15,808.

Example 4:
During the 2007-2008 year Beryl, aged 23, earned $3,148 in wages and $8,649 as a self-employed knitting contractor. She works 35 hours per week on average. Because Beryl’s total earnings of $11,797 are less than the specified amount, her levy is calculated on the specified amount reduced by her employee earnings: $19,760 - $3,148 = $16,612.

20.40 CoverPlus for self-employed earners

CoverPlus is the standard default cover that all self-employed people have. It is automatically applied once a person starts self-employment and registers for GST with Inland Revenue. If a newly self-employed person does not register for GST immediately upon commencing self-employment (eg because their earnings are below the minimum threshold for GST registration), ACC is only notified when it receives the data from Inland Revenue based on the IR3 tax return.

CoverPlus is based on your previous year’s income for compensation purposes. If a person has an injury, in the standard case, they can receive up to 80 per cent of their previous year’s earnings for compensation. However, for people who are newly self-employed (ie the person is incapacitated in the first year of self-employment) or recently self-employed (people that are incapacitated in the year after the first year of self-employment) then the cover is:

(a) **Newly self-employed**: cover is the greater of the statutory minimum, or earnings from employment for 52 weeks prior to the period of incapacity. A newly self-employed person who has no earnings as an employee in the previous year or is a part-time person has no cover for loss of earnings under CoverPlus, not even the minimum (as that only applies to full-time people). This is irrespective of their earnings and despite the fact that they will still be liable for levies on their income. Newly self-employed, particularly those with no period of employment immediately prior to self-employment, should consider taking out CoverPlus Extra (if full time) or private loss of earnings insurance for their first year as a self-employed person.

(b) **Recently self-employed**: cover is established based on the earnings from self employment divided by the weeks the person was self-employed in the relevant year. However, earnings as an employee for the period of 52 weeks before the period of incapacity can also be taken into account if this increases the cover.

In all cases there is a one week stand down period on CoverPlus. The person will need to prove loss of earnings at the time of the injury to be eligible for compensation.

(1) **How CoverPlus levies are calculated**

Under CoverPlus, the previous year’s liable earnings are used to calculate both levies and entitlements, including weekly compensation. CoverPlus levies are calculated using:

(a) The liable earnings figure provided on the previous year’s IR3 tax return; and

(b) The appropriate classification unit and Work levy rate for ACC CoverPlus; and

(c) An Earner levy which covers all non-work injuries; and

(d) Residual Claims and Health and Safety in Employment levies.
(2)  **What is covered by the various parts of the CoverPlus levy**

<table>
<thead>
<tr>
<th>Levy name</th>
<th>What the levy covers</th>
<th>How it is calculated</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACC CoverPlus levy</td>
<td>Medical, rehabilitation and weekly compensation costs for injuries that happen at work</td>
<td>The classification unit rate × each $100 of liable earnings</td>
</tr>
<tr>
<td>Residual Claims levy</td>
<td>Provides funds for the ongoing costs of work injuries that occurred before 1 July 1999 and non-work injuries to earners before 1 July 1992. This levy is spread across all levy payers.</td>
<td>The Residual Claims levy rate × each $100 of liable earnings</td>
</tr>
<tr>
<td>Earner levy</td>
<td>Medical, rehabilitation and weekly compensation costs for any injury sustained outside work</td>
<td>The Earner levy rate × each $100 of liable earnings</td>
</tr>
</tbody>
</table>

Health and Safety in Employment levy

 ACC collects this levy on behalf of the Department of Labour. It is used to help fund Occupational Safety and Health.

---

20.45 **CoverPlus Extra for self-employed earners**

CoverPlus Extra (CPX) is an alternative to the standard CoverPlus that self-employed are automatically covered under. CPX allows self-employed people to nominate a level of cover (eg $50,000 per annum), as opposed to being covered on their previous year’s earnings, as with the standard CoverPlus. It will give a guaranteed level of weekly compensation, agreed in advance with ACC, if someone is unable to work as a result of injury. CPX is not in addition to CoverPlus, it is instead of the latter.

**Note:** Levies for the compensation a person chooses are now based on that person’s individual occupation or main work task, rather than the industry classification unit of the employer company, as was the case previously. For example, a road freight company with two shareholder employees with one working in the office and the other driving the freight truck would previously have used the road freight classification unit rate 61100 for the CPX levy rate for both shareholder employees regardless of their individual occupation within that company. Now the individual occupation rate applicable for that industry can be used and the office manager would use the office administration classification rate 78540 and the truck driver 61100. A declaration of business activities form is required to be completed.

(1)  **Minima and maxima**

The minimum and maximum compensation people can receive changes from year to year. The CPX maxima and minima differ from the standard. Under CoverPlus Extra the minimum and maximum levies are based on 80 per cent of the statutory minima and maxima that relate to the current year [see 20.35].

Currently they are:

<table>
<thead>
<tr>
<th>2013 Calculation</th>
<th>Standard CPX</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum</td>
<td>$21,632× 80% $17,305.60</td>
</tr>
<tr>
<td>Maximum</td>
<td>$91,015 × 80% $72,812</td>
</tr>
</tbody>
</table>

However, within these minimum and maximum amounts, the cover can be altered (raised or lowered) by between 40 per cent and 120 per cent of the average of the person’s last three year’s earnings to better fit a person’s circumstances, as illustrated in the examples below. However, the income can not drop below the minimum.
(2) **Levies and invoicing**

Under CPX people are required to pay two levies:

(a) *CoverPlus Extra*: Invoiced in advance and sent within two to four weeks of the acceptance being received by ACC and processed.

(b) *Residual and health and safety in employment (HSE) levies*: Invoiced when previous year’s liable earnings are received by ACC from Inland Revenue.

Because the residual claims and HSE levies are based on a client’s actual earnings that they declare in their IR3 tax return, people with ACC CoverPlus Extra will receive an additional invoice when they file their tax returns for these components only. For shareholder-employees this invoice goes to the employer company.

(3) **Who is eligible?**

People eligible for CPX are:

(a) Full-time self-employed and non-PAYE shareholder-employees; or

(b) Part-time self-employed and non-PAYE shareholder-employees, when the average earnings from the past three years are above the CoverPlus Extra minimum [see 20.35].

(4) **Different options under CPX**

CoverPlus Extra (CPX) provides greater flexibility and certainty for self-employed people by paying a predetermined level of weekly compensation in the event of an injury resulting in time off work. People receive 100 per cent of the amount of weekly compensation until they are fit to return to full-time work. Lower Levels of Weekly Compensation (LLWC) is an option that allows lower levels of compensation in return for a lower levy. Under this option the agreed weekly compensation decreases as the individual gradually returns to full-time work after an injury. Weekly compensation stops once they are able to work 30 hours a week. Part-time self-employed people are not eligible for this option as part-time self-employed people work less than 30 hours a week.

(5) **How CoverPlus Extra levies are calculated**

Under CoverPlus Extra (CPX), the agreed level of lost earnings cover is used to calculate both levies and entitlements (including weekly compensation). CPX levies are calculated using the:

(a) Agreed level of earnings cover; and

(b) The liable earnings figure provided on the previous year’s IR3 tax return for the residual claims and health and safety in employment (HSE) levy components; and

(c) The appropriate levy classification unit and work account levy rate for ACC CoverPlus Extra.

(6) **What is covered by the various parts of the CoverPlus Extra levy**

</tr>
</tbody>
</table>

**Example 1:**
John is an engraver earning $100,000 per annum. Bridget, John’s daughter, runs the administration side of the business. The annual earnings is split 60/40. Under CoverPlus John would receive $48,000 and Bridget $32,000. However, under CPX the income can be split differently from that used for tax purposes to reflect the different earning capacities. In this case, John is the central income earner for the business. John and Bridget adjust the yearly compensation amounts so that if John has an injury and cannot work John will be paid $72,000 and Bridget $28,000.

**Example 2:**
Kelly started her own business. Her first year’s activities resulted in a net loss. Kelly suffered an injury and requires four weeks off work. As she made a loss she was only entitled to the minimum compensation as she has no income as an employee in the immediately prior year. If Kelly had taken up ACC CoverPlus Extra prior to injury she would have received compensation based on a pre-agreed amount.

### 20.50 Difference between CoverPlus and CoverPlus Extra

At a broad level the key differences between CoverPlus and CoverPlus Extra (CPX) are illustrated below:

<table>
<thead>
<tr>
<th><strong>CoverPlus</strong></th>
<th><strong>CoverPlus Extra</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 80 per cent of previous year’s earnings.</td>
<td>100 per cent of the weekly compensation as agreed with ACC.</td>

<tr>
<td>Seven-day wait period before compensation starts.</td>
<td>Seven-day wait period before compensation starts.</td>
</tr>
<tr>
<td>Weekly compensation is reduced as hours of work increase.</td>
<td>Weekly compensation remains at 100 per cent until fully fit to return to work.</td>
</tr>
<tr>
<td>Proof of loss of income is required.</td>
<td>No proof of loss of income is required. Weekly compensation will be paid even when the business continues generating income.</td>
</tr>
<tr>
<td>Minimums and maximums apply.</td>
<td>Minimums and maximums apply.</td>
</tr>
</tbody>
</table>

CoverPlus Extra does cost a little more than CoverPlus. For self-employed and non-PAYE shareholder-employees comparing CoverPlus and CoverPlus Extra, the cost of CoverPlus Extra is not prohibitive compared to the advantages. The principal advantage is that CPX is based on 100 per cent of the agreed amount until the person is eligible to return to work full time. Thus, if a person is in receipt of CPX their weekly compensation will not reduce if the person’s business continues to generate income or the person returns to work in a part-time capacity.

With CoverPlus, weekly compensation will be reduced if the business continues to generate income or when there is a partial return to work. This is because CoverPlus is based on actual loss of earnings. This also means that if a person is off work beyond the end of their financial year, then an end-of-year wash up is undertaken to ensure that ACC has not overpaid weekly compensation to the person. In some cases then, CoverPlus weekly compensation can be seen as an interim payment with a year-end overpayment or underpayment adjustment required.

### 20.55 WorkPlace cover

WorkPlace Cover pays for the current and future costs of work-related injury claims that occur in the levy year. ACC WorkPlace Cover is the product name given to the weekly compensation payable to employees for work-related injuries and is funded from the work account.
(1) **How WorkPlace Cover levies are calculated**

The levies are calculated based on:

(a) Employees liable earnings as provided by the employer to Inland Revenue on the Employer Monthly Schedule (IR348); and

(b) The appropriate levy classification unit.

(2) **What is covered by the various parts of the WorkPlace Cover**

### 20.60 TimeOut cover for loss of earnings

A person ceases to be an earner after four weeks of leave without pay, even if the person remains in employment. To avoid a period when there is no cover (eg extended leave or a sabbatical) employees, and self-employed who take a break from work, can purchase loss of earnings cover from ACC known as TimeOut. The cover provides weekly compensation in the event of an injury during a break from paid work.

Cover under TimeOut is set at 80 per cent of a person’s earnings before they cease working. The cover provides weekly compensation for a period of up to five years. TimeOut has to be purchased while the person is still in employment or self employment or within one month of ceasing. TimeOut is purchased in blocks of three months up to a maximum of 24 months. However, it is not available for overseas travel if the person remains outside New Zealand for more than six months.

In the case of parental leave an employee may be eligible for weekly compensation if they are unable to return to work at the agreed date due to an injury suffered while on parental leave. This requires that there is a written agreement between the employer and employee that verifies the parental leave and the period of the leave. Otherwise, the TimeOut product could be considered for periods of parental leave.

Seasonal workers are an example of people who could utilise ACC TimeOut. With seasonal workers, unless they can show a pattern or seasonal work, periods of no work in an off season are not covered by the levy paid while working.

### 20.65 Shareholder-employees

A shareholder-employee is someone who is both a shareholder in the company and an employee of the company. For ACC purposes there are two categories of shareholder-employees: those who are paid through the PAYE system (as with any other employee) and those who are not. The latter type of shareholder-employee is not subject to PAYE on their remuneration and instead pays provisional tax. For ACC purposes these earners are referred to as non-PAYE shareholder-employees.

Non-PAYE shareholder-employees’ earnings are declared on the company tax return form IR4, which is the source of the information provided to ACC by Inland Revenue. Most non-PAYE shareholder-employees will not pay themselves a regular wage, and instead the level of their remuneration depends on the profit the company makes. The income or salary of the shareholder-employee is provisional income and subject to provisional tax in the usual manner.
Shareholder-employee remuneration is regarded as a payment made to a shareholder-employee for services they have provided, and as such is liable to ACC [see 20.25].

Shareholder-employees who are non-PAYE shareholder-employees can opt to use CoverPlus Extra as the basis for paying their ACC levies. In this case, the levy will be based on a pre-determined amount. The maximum earnings rules will apply [see 20.45]. This applies whether the shareholder-employee is a tax resident of New Zealand or a non-resident. Although the levies will apply to non-resident shareholder-employees, they will only get entitlement to ACC benefits if they were resident in New Zealand at the time of their injury.

The ability to use CPX is undoubtedly an advantage [see 20.50]. Until recently take up of CPX by non-PAYE shareholder employees was hampered because the premiums were technically not deductible by either the employer company or the shareholder employee. This was due to the fact that the CPX policy is in the name of the non-PAYE shareholder-employee and is billed by ACC to the non-PAYE shareholder-employee, not the company. Further, any compensation paid under CoverPlus Extra is regarded as “income from employment”. The result was that for the purposes of s DA 2, the employment limitation applied and the levies were not deductible. Further, if the company paid the levy on behalf of the non-PAYE shareholder-employee the payment was regarded as taxable income under s CE 1(b) as the levy is the liability of the shareholder-employee. See also Chartered Accountants Journal of New Zealand vol 81:11 (December 2000) at 46; vol 82:6 (July 2003) at 53; and vol 82:10 (November 2003) at 51.

However, in September 2010 ACC issued a statement to say that the deductibility issue had changed and that the work account levy component of the CPX premium would be deductible to the employer. The earner levy component remains non deductable. Inland Revenue confirmed this in their Agent’s Answer newsletter for November 2010. Further, it does not matter if the employer company pays the levy directly or by way of reimbursement. This is discussed in the Chartered Accountants Journal of New Zealand vol 89:11 (December 2010). The invoice for CPX will be modified to split the earner rate out, but for the present the following formula should be used:

\[
1.7245 \times 1.25 \times \text{cover amount}/100
\]

Example

\[
1.7245 \times 1.25 \times \$60,000/100 = \text{earner levy of } \$1293.37
\]

For non-PAYE shareholder-employees, the earnings for the residual claims levies are based on actual earnings and not the agreed amount. For this reason, these levies are billed separately. For non-PAYE shareholder-employees that do not opt to use CPX, the company will be billed for their WorkPlace Cover levy. However, the billing process differs from ordinary employees in that the income of the non-PAYE shareholder-employee does not go through the employer monthly schedule. Instead it is advised to ACC by Inland Revenue once the IR4 company return of income is processed. Thus there will be a provisional and year-end invoice. The residual claims levies will also be invoiced when the actual earnings are known.

20.70 Mixed earners

A mixed earner is a person who derives income from both employment and self-employment. ACC is able to identify a mixed earner based on the information received from Inland Revenue. If a self-employed person has declared income in the following key-points on the IR3, ACC treats them as mixed earners:

(a) Gross earnings as an employee (key point 11B);
(b) Earnings not liable for levy (key point 11C); and
(c) Shareholder-employee salaries (key point 20)

When a person is a full-time earner and has mixed earnings, say for example, from a partnership and a salary, then the following applies:

(a) If the earnings as a self-employed and employed person exceed the maximum, the ACC levy will be based on the lesser of the maximum less earnings as an employee or the self-employed earnings.
(b) If the earnings as a self-employed and employed person do not exceed the maximum, the ACC levy will be based on the self-employed earnings.

(c) If the earnings as a self-employed and employed person are less than the minimum the levy will be payable on the minimum amount less the income from employment [see Example 4, 20.35].

20.75 Partnerships

A partner who actively works in the partnership business is liable to pay levies on their share of the partnership income for the year [see 20.25]. A partner who has capital in a partnership and shares in its profits without taking any part in the management or day-to-day running of the business (that is, a sleeping partner), is not liable for the levies on their share of the partnership profits as this amount does not come about from personal exertion and would not cease if the partner was incapacitated through an injury [see TIB vol 7:3 (September 1995) at 13; TIB vol 13:3 (March 2001) at 17].

20.80 Private domestic workers

A private domestic worker is someone who works in someone else's home or garden. There are a few different factors which apply to a private domestic worker:

(a) The work must not be regular full-time work;
(b) The work must not be related to the other person’s business;
(c) The other person must not be making tax deductions for the private domestic worker (eg cannot be employing them through PAYE);
(d) The private domestic worker files an IR56 tax return and pays PAYE to Inland Revenue in respect of their earnings. The earnings information disclosed on the Employer Monthly Schedules provided to Inland Revenue is provided to ACC for invoicing;
(e) There are about 2000 private domestic workers. Some of these may be caring for someone who is off work on ACC.

Private domestic workers are covered by WorkPlace Cover as they are taken to be their own employer as they pay their own PAYE to Inland Revenue. Private domestic workers are not sent an estimate invoice unlike other employers. The year-end invoice will include the WorkPlace Cover levy and the residual and HSE levies. The Earner levy for private domestic workers is collected via their PAYE.

20.85 Business industry descriptions and classification units

ACC gives every business an “industrial classification unit” based on the main type of work it does. ACC group similar businesses this way to ensure that the costs of claims are shared fairly among the industries responsible for those costs. Depending on the actual number and cost of injury claims made each year, classification units can move into a higher-rated or lower-rated business industry description, which leads to a higher or lower levy.

(1) Business industry description

A business industry description is a way of classifying a business by the main activity it is involved in. ACC use business industry descriptions to determine classification units. Each business industry description has its own unique business industry code. Currently, there are 117 business industry descriptions covering 534 classification units.

(2) Classification unit

A “classification unit” (CU) represents a group of businesses with a similar risk of workplace injury. Each CU has an ACC levy rate, which is used to calculate ACC levies for workplace injury cover and residual claims. Each CU has its own unique CU code. A CU can have a large number of businesses or just a few. The CU information is also reflected on the ACC invoice.
(3) Importance of choosing the correct business industry description
Choosing the correct business industry description means records at Inland Revenue and ACC will be set up with the right information, and invoices will be calculated correctly. In most cases, this will relate to the primary business (that is, the goods produced or the services provided). There may be more than one appropriate CU for your client’s business. If so, you use the CU with the highest levy rate, unless your client is eligible to use multiple CUs. In some cases there may not be a CU for an activity. In these situations it may be necessary to contact ACC to have one established.

(4) What to do if the business involves two or more business activities
If your client is Self-employed, and you are unsure which description to use. Then It will be necessary to call the ACC Business Service Centre.
An employer with employees carrying out different tasks, Check the “multiple description guidelines” on they will need to choose a single description reflecting their main business activity, if they are involved in two or more Website. business activities.

20.90 Employer invoicing
Employers are invoiced for ACC under a policy called ACC WorkPlace Cover [see 20.55]. Employers will receive two invoices each year: one an estimate invoice and the other a year-end invoice. The reason for invoicing twice is because employers are charged levies based on their actual liable earnings for a particular year. However, because actual liable earnings are not determined until year end, and they are invoiced in the current cover period, it is necessary to base the current period invoice on an estimate (provisional invoice) based on their previous year’s information. When ACC receives details of the actual liable earnings from Inland Revenue, it sends a wash up (year-end) invoice if there is a difference. For close companies (when shareholder-employee remuneration has not been subject to PAYE, whether the shareholder-employee pays CPX or not) the employer invoice will include an invoice for earners residual levy and any earner levy deductions for amounts for the prior year ending 31 March. This is because these levies are based on actual earnings for the period. The GST is included in the earner levy rate and not invoiced as such.

(1) Provisional invoices
ACC calls employer invoices provisional because they are an estimate based on previous year’s liable earnings, adjusted for expected wage and salary increases. The provisional invoice should be paid by the due date to avoid additional charges. However, if an employer believes the information ACC used to calculate the provisional invoice is incorrect (because the business activities or the liable earnings have changed); the employer can request a reassessment. The request must be lodged within 30 days of the provisional invoice although the provisional invoice is still payable. A reassessment can be requested by either contacting ACC or completing and sending ACC the (ACC1767) Changes to your business information (employers).

(2) Final debt adjustment
To ensure that employers pay no more or less than they should, ACC issues a final debt adjustment when they have the actual liable earnings for the employer. The final debt adjustment will be either a credit or debit amount. Final debt adjustment and provisional invoices are sent at the same time each year (between July and August) — a final debt adjustment for last year and a provisional invoice for next year. Residual levies and earner levies for non-PAYE shareholder-employees will be billed on this invoice. If there is a credit on your client’s account from a reassessment or a final debt adjustment, the refund can be either paid out or credited to other ACC account balances. Interest will be paid on credit adjustments due over $1,000.
20.95 Levy Discount schemes

(1) Workplace Safety Discounts

*Workplace Safety Discounts* (WSD) is an incentive programme offered to self-employed people and small businesses in the seven industry sectors with the highest number of work-related injuries: namely agriculture, forestry, fishing, construction, road freight transport, waste management and motor trades.

The workplace safety discounts programme aims to improve workplace safety through offering levy discounts to small employers and self-employed people who can demonstrate capability in hazard management, staff training in safe work practices and emergency readiness. Businesses and self-employed people in the programme are given a 10 per cent discount on the work account component of their levies. The discount is valid for three years from application, though an annual declaration that operations remain the same will be required.

The criteria to apply are:

(a) Liable earnings of $450,000 or less — that is up to about 10 full-time staff; and
(b) Relevant “prior experience” in managing health and safety issues in their industry; or
(c) Attend a free industry specific training programme that covers hazard management for the sector in which the small business or self-employed person operates (see the ACC website for details).

To participate in the workplace safety scheme, the business or self-employed person needs to complete a self assessment (which can be downloaded from ACC’s web site), that shows they have sufficient capability in hazard identification and management, injury and incident investigation, emergency readiness, and in training employees. Included in the self assessment is the business owner’s description of how their business does:

(a) Hazard identification and management (ACC has selected the most common hazards in each industry for the self assessment);
(b) Incident investigation;
(c) Emergency readiness.

After the assessment is complete, the small business can send the results to ACC and ask for a discount on their ACC levies.

(2) Workplace Safety Management Practices

*Workplace Safety Management Practices* (WSMP) is a programme that was developed to recognise employers who have established health and safety systems and good practices in injury prevention. In return for having systems and processes for managing and improving workplace safety, employers can receive discounts on their ACC Workplace Cover Levy.

The benefits are:

(a) Gives employers an externally audited, national safety framework to work to;
(b) Proves their safety commitment to staff;
(c) ACC Levy discounts; and
(d) Reduces work injuries.

There are three levels of discount that can be achieved depending on the level of their workplace practices:

(a) Primary: 10 per cent discount;
(b) Secondary: 15 per cent discount; and
(c) Tertiary: 20 per cent discount.

An independent audit takes place and the outcome of the audit will determine which level of discount the customer will receive. The discount will apply for 24 months, starting from the first month after the audit takes place.

The application is a three-step process:
(a) Step 1: Complete a self assessment (this can be downloaded from the ACC website)
(b) Step 2: Complete the application form (also available from website)
(c) Step 3: Undertake an independent audit. This is paid for by ACC but the employer can select an auditor from an approved list and arrange for the audit to be completed.

3 ACC partnership programme

Employers have an option to join the ACC Partnership Programme. This provides levy discounts to employers when they take responsibility for their own workplace health and safety, injury management and rehabilitation of employees’ workplace injuries.

20.100 Accidental death claims and entitlements

A person’s death is covered by ACC entitlements if all of the following three criteria are met. A person must have suffered:

(a) An accident;
(b) A personal injury; and
(c) Death that is a direct consequence of the personal injury.

Entitlements include:

(a) Funeral grant: An estate is eligible for a funeral grant upon confirmation of cover by ACC for the actual cost of the funeral up to the current indexed rate for the date at which the person died. The deceased claimant’s estate must provide an itemised account that shows the actual costs of the funeral. This includes costs related to the burial or cremation, and any associated ceremonies. These can be standard and basic costs, as well as costs specific to the claimant’s ethnic and religious requirements.

(b) Survivor’s grant: A survivor’s grant is a one-off non taxable payment to a dependant of the deceased as compensation. A survivor’s grant can be paid to a person who qualifies as a surviving spouse or a child under the age of 18 years.

(c) Childcare: Childcare is a weekly payment towards the cost of supervising or caring for the dependant children of the deceased. Childcare can be paid for a child that qualifies as a dependant child of the deceased. The child must live in New Zealand and be under the age of 14 at the date of death. Childcare is paid to the person who arranges care for the child. This is often the surviving spouse but may be a guardian or CYFS. Childcare is never paid to the child themselves. There are three rates of payment for childcare, which are calculated on the number of qualifying dependants:

(i) A single weekly amount for when there is one child;
(ii) When there are two children, a single amount paid for each child; or
(iii) When there are three or more children, a single amount pro-rated between all the qualifying dependant children.

(d) Weekly compensation: Weekly compensation is a payment made to the dependants of a deceased person if the deceased was an earner, to compensate them for the impact of the deceased person’s loss of income. Weekly compensation payable to a surviving spouse, child or other dependant is based on a proportion of the weekly compensation that would have been paid to the deceased claimant had they survived with full incapacity. If there are a number of dependants, the total compensation payable for all dependants must not exceed the compensation that would have been paid to the deceased. In this situation, a pro-rata calculation is performed. Weekly compensation is payable to surviving dependants from the date of the deceased’s death. There is no first week stand down period, even if the deceased suffered a non-work injury. There are rules around how long each dependant can receive an entitlement to weekly compensation.

Payments to a spouse continue until the latest of the following dates:

(a) The end of five consecutive years from the date on which the entitlement first became payable;
Accident Compensation

(b) The date the youngest child of the deceased turns age 18 — this criteria only applies if the spouse is continuing to provide care to that child;

(c) The date the spouse no longer provides care for the children of the deceased who are under the age of 18 years; or

(d) The date the spouse no longer provides care for any person who qualifies as an other dependant.

20.105 Taxation of accident compensation [ss CF 1, CW 35]

(1) Taxable income
The following forms of accident compensation are liable for income tax [s CF 1]:

(a) Payments of earnings-related compensation under the Accident Compensation Act 1982;

(b) Payments under s 80(4) of the Accident Compensation Act 1982;

(c) Payments of the following under the Accident Rehabilitation and Compensation Insurance Act 1992 (ARCIA 1992):
   (i) Vocational rehabilitation allowance;
   (ii) Compensation for loss of earnings;
   (iii) Compensation for loss of potential earning capacity;

(d) Payments of weekly compensation under the Accident Insurance Act 1998 (AIA 1998);

(e) Payments of compensation for loss of earnings or loss of potential earning capacity, as it relates to work related personal injury, under policies of personal accident or sickness insurance under s 188(1)(a) of the AIA 1998;

(f) Payments of weekly compensation by the ACC under the Injury Prevention, Rehabilitation, and Compensation Act 2001 (IPRCA 2001); or

(g) From 1 July 2008, personal service rehabilitation payments [see 20.110] for claimants under the IPRCA 2001.

These taxable compensation payments are also included in income when calculating the family assistance tax credits.

Compensation payments are included in the definition of “salary or wages” for the purposes of student loan repayments. Therefore, if a person with a student loan receives accident compensation, and has total income over the repayment threshold, a deduction of 10 cents in the dollar is made from the compensation payments by ACC [see TIB vol 7:3 (September 1995) at 28, and 1380 STUDENT LOANS].

(2) Exempt income
Payments of the following kinds, made under Part 5 or Part 13 of the AIA 1998, or Part 11 of the IPRCA 2001, are exempt from income tax [s CW 33]:

(a) Payments to an insured person for treatment or rehabilitation;

(b) Independence allowance;

(c) Funeral grant;

(d) Survivor’s grant; or

(e) Childcare payment.
20.110 Attendant care payments [ss CE 12, CF 1, CW 33, CW 35, DF 4, LB 7, LB 8, RD 3]

From 1 July 2008, ACC Payments made by ACC (or an employer that is an accredited employer under the IPRCA 2001) for payments for the following services are subject to a scheduler payment tax of 15 cents (12.5 cents from 1 October 2008) in the dollar under sch 4, Part I:
(a) Attendant care;
(b) Home help;
(c) Childcare;
(d) Attendant care services related to training for independence;
(e) Attendant care services related to transport for independence.

Inland Revenue has always considered ACC’s payments to caregivers to be “earnings”. The change in tax law requires ACC to deduct tax at source from these payments.

If a person (ACC claimant) is paid by ACC, and then on-pays their caregiver:
(a) 12.5 per cent (15 per cent before 1 October 2008) tax will be deducted from the claimant’s ACC payments;
(b) If the ACC claimant fully uses the after-tax payment received to purchase care, the total amount of the payment will be treated as exempt income to the claimant. The amount paid to the caregiver, together with the amount of the withholding tax will be taxable to the caregiver, with the tax credit available to the caregiver to be offset against his or her tax liability. If part of the amount is retained by the claimant, both the claimant and the caregiver will have taxable income; and
(c) If the claimant fails to give ACC their IRD number, ACC will be required to deduct tax at the non-declaration rate.

Example 1:
Bruce was involved in a car accident (post-1 October 2008) that reduces his ability to care for himself. ACC assesses his entitlement to attendant care at $500 a week. ACC deducts withholding tax of $62.50 from this and pays Bruce a net amount of $437.50. Bruce fully uses this to pay Lorraine to assist him. Because Bruce has fully used the amount he received, his payment is treated as exempt income under CW 35. Lorraine’s income for tax purposes is the amount received ($437.50) plus the amount of the withholding tax (under s CE 12) that was deducted ($62.50), making a total of $500. Lorraine is given credit for the tax deducted (the $62.50) to offset against her tax liability.

If the ACC claimant retains part of the payment, that part of the payment is taxable income to the ACC claimant, with a deduction allowed for the pre-tax equivalent amount. The tax credit is apportioned between the two.

Example 2:
In Example 1, instead of using the full amount received to pay for a caregiver, Bruce arranges for his friend Cliff to assist him for $350 a week. Bruce is taxable on the $500 payment less a deduction equal to the pre-tax equivalent of the amount he paid Cliff, which is $400, making his net taxable income $100. Bruce receives a proportional amount of the total tax deduction of $62.50, which in this example is $12.50. Cliff is taxable on the amount he received ($350), plus a proportion of the tax credit, which in this example is $50.00, making his total taxable income $400, with a tax credit of $50.

If caregivers are paid directly by ACC, they:
(a) Will have 15 per cent (12.5 per cent from 1 October 2008) tax deducted from their payments, unless the caregiver is a company or local / public / Maori authority.
(b) Need to give ACC their IRD number otherwise ACC is required to deduct tax at the non-declaration rate.
(c) Have the option of providing ACC with a “certificate of exemption” (obtained from Inland Revenue) so zero per cent tax is deducted.
(d) Have the option of providing a “special tax certificate” (obtained from Inland Revenue) for a different amount of tax to be deducted.

Note: If caregivers are employed by an agency, this tax law change will not affect them.

An ACC claimant whose only income is from personal service rehabilitation payments will not be required to file a tax return if their total income for the tax year does not exceed the income threshold and tax was withheld at the respective threshold rate (eg from 1 July 2008 to 31 March 2009, $14,000 at 15 per cent or 12.5 per cent) [TAA, s 33C].

Changes to the first taxable income threshold and respective tax rate are outlined below:

20.115 Interest paid by ACC [ARCIA 1992, s 72]

Interest paid by ACC under s 72 of the ARCIA 1992 is not assessable income for income tax purposes. It is a penalty for administrative delay and inefficiency, and does not fall within the definition of “interest” in s YA 1 because it is not paid for money lent. The interest payments also do not come within the common law concept of income because there is no periodicity, regularity or recurrence, and the payment does not result from business activities, a deliberate seeking of profit, or a performance of services: Commissioner of Inland Revenue v Buis (2005) 22 NZTC 19,278 (HC). Inland Revenue take a different view on the law in this situation, and are reluctant to accept the position in that case [see Exposure draft QB0033: Payments made in addition to financial redress under Treaty of Waitangi Settlements].

20.120 Deductibility of levies and premiums [ss DA 1, DA 2, EF 3]

ACC levies are deductible if the general permission [s DA 1] is satisfied. Employer levies are deductible as part of the costs of employing staff. Like salary and wages, there is a definite nexus between the expenditure incurred and carrying on a business in order to derive income. However, a question could be raised on whether any of the levies which relates to wages paid to staff involved in constructing a capital asset should be capitalised and included in the cost of the asset, rather than being immediately deductible: Christchurch Press Co Ltd v Commissioner of Inland Revenue (1993) 15 NZTC 10,206 (HC) [see 1230.10].

No tax deduction is available to employees for expenses incurred in deriving employment related income and this also applies to the ACC earner levy [s DA 2(4)].

Earner levies paid by self-employed people and partners are deductible. These may be claimed as a tax deduction because weekly compensation is taxable income. There is a nexus between the expenditure and deriving the income. There is a similar analogy here to the deduction available for accident and sickness insurance premiums.

Earner levies paid by shareholder-employees are not deductible, whether they are non-PAYE shareholder-employees or not. They are not deductible to the company: the levy is either a deduction from salary and subject to the employment limitation or are paid directly by the non-PAYE shareholder-employee through their CoverPlus Extra policy [see 20.65].

If deductible, the deduction is allocated to the income year in which the levy becomes due and payable [s EF 3(1)]. If a deduction for an ACC levy has been allocated to an income year earlier than the income year in which the levy is due and payable, and the CIR is unable (because of the time bar [TAA, s 108]) to amend the assessment for that year, the deduction is allocated to the earlier year [s EF 3(2)].

When the ACC levy is due and payable on the taxpayers terminal tax date, and their balance date falls between 1 October and 6 April (inclusive), and the tax return is linked to a tax agent, then the levy is treated as if it
was due and payable on the terminal tax date of someone who does not have a tax agent (ie two months earlier).

**Example:**
A self-employed person has a 31 March balance date and the IR3 is completed and filed by a tax agent. The earners account residual claims levy and residual claims levy for the year ended 31 March 20X1 is required to be paid on or before 7 April 20X2 which is the date when they are due and payable. Although this falls within the year ended 31 March 20X3, for the purposes of determining when the levies are deductible, they are treated as being due and payable on 7 February 20X2 which falls within the year ended 31 March 20X2.

**20.125 Treatment of GST on levies and premiums**

The provision of accident compensation is a taxable supply and GST is imposed on the levies as a consequence [see 580.07, 580.10].

Employers are able to claim an input tax credit for the GST component of the residual claims levy if they are registered for GST and hold the relevant tax invoice [see 580.80]. If they are not registered, they can claim a deduction against income for the whole of the levy, including the GST component. Employers cannot claim an input tax credit for the GST component of earner levies deducted from employees’ earnings because the GST is imposed on the employee, not on the employer.

Self-employed people who are registered for GST can claim an input tax credit for the GST component of levies if the hold the relevant tax invoice. If they are not registered, they can claim a deduction against income for the whole of these levies, including the GST component.
Chapter 30
Advertising

30.10 Advertising expenditure [ss DA 1, EA 3]
Generally, advertising expenses are deductible in the income year in which they are incurred [ss BD 2, DA 1], but they are subject to the prepayments rules [see 1140 PREPAYMENTS]. Under s EA 3, any prepaid expenditure (such as prepaid advertising) as at the end of an income year must be added back to assessable income for the year. It may then be deductible in the following income year.

However, Determination E12 [see 1140.70] allows prepaid advertising expenditure to be deducted in full in the income year it is incurred if the total of all prepaid advertising is less than $14,000 and the expenditure will have expired within six months after balance date. There is an overriding requirement that if the expenditure has been treated as prepaid for financial reporting purposes, then it must be treated as prepaid for income tax purposes.

A private company’s expenses incurred in advertising and sponsoring the go-kart racing activities of its major shareholder were held deductible:
TRA Case L7 (1989) 11 NZTC 1,052.

The cost of hoardings and permanent signs is not deductible [s DA 2(1)] and should be capitalised and depreciated:
TRA Case H1 (1986) 8 NZTC 101. Repairs and maintenance to hoardings and permanent signs is deductible, as is any loss on discarding them [see 1230 REPAIRS AND MAINTENANCE].

There may be other instances when advertising expenditure may be subject to the capital limitation [s DA 2(1)]. In Associated Newspapers Ltd v Federal Commissioner of Taxation (1938) 1 AITR 403 (HCA), a distinction was illustrated between capital and revenue:

“a profitable enterprise such as the sale of a patent medicine may depend almost entirely on advertisement. In the beginning the goodwill may have been established by a great initial outlay upon a widespread advertising campaign carried out upon a scale which it was not intended to maintain or repeat. The outlay may properly be considered to be of a capital nature. On the other hand the goodwill may have been gradually established by a continual advertisement over a period of years growing in extent as it proved successful. In that case the expenditure upon advertising might be regarded as an ordinary business outgoing on account of revenue.”

In such cases, if an amount on account of advertising was held to be subject to the capital limitation, this could constitute blackhole expenditure, in the sense that no tax relief is available for this outlay, whether by way of deduction, depreciation or amortization.

An advertising agent may not deduct the cost of placing advertising at the time a non-cancellation period commenced that was before the advertisement was published, because at the start of the non-cancellation period the taxpayer was not subject to the liability: Ogilvy & Mather Pty Ltd v Federal Commissioner of Taxation (1990) ATR 841, 90 ATC 4,836 (FCA).

Advertising expenditure that is incurred by way of entertainment could potentially be subject to the limitation rules [see 350 ENTERTAINMENT EXPENDITURE]. However, it will not generally be subject to the limitation rule when the expenditure is incurred mainly to advertise or promote a person’s goods or services to the public and no employee, existing business contact or associated person has a greater opportunity to enjoy the entertainment than the public generally [s DD 5].

The supply of advertising services to a non-resident is zero-rated for GST purposes if the service is supplied contractually for and to the non-resident who is outside New Zealand at the time the service is performed [see 580.42].
**30.20  Gifts** [ss DB 41, LD 1, LD 2, LD 3]

Individuals (whether in business or otherwise) making gifts or donations to any society, institution, association, organisation or trust that applies funds for charitable, benevolent, philanthropic or cultural purposes may qualify for a tax credit under s LD 1. Generally, the donor is unable to claim the tax credit if the donor receives any benefit in return for the donation [see 1395.75, TIB vol 23:7 (August/September 2011) at 2–3]. The amount of the tax credit is one-third of the total of all charitable or other public gifts, made by the person in a tax year.

Under s DB 41, companies may claim a deduction for charitable or other public benefit gifts made to any society, institution, association, organisation or trust described in s LD 3(2) or listed in sch 32 of the ITA 2007. Section DB 41(4) clarifies that the deduction rule for gifts supplements the general permission and is subject to the general limitations.

**30.30  Sponsorship** [ss BD 2, DA 1]

Sponsorship expenditure is expenditure that a taxpayer intends will promote their business in some way, but that will also benefit the recipient or other person in some manner other than by the receipt of ordinary income.

There are no specific rules that apply to sponsorship expenditure. The general permission and general limitations are the key statutory rules.

IRD has issued an interpretation statement **Deductibility of sponsorship expenditure** [see TIB vol 14:9 (September 2002) at 33-49]. The interpretation statement defines sponsorship expenditure as expenditure that will promote the payer’s business in some way, but that the recipient, or some other person, will also benefit in some manner other than by the receipt of ordinary income from business or income-earning activities. The interpretation statement principally analyses the general rules of deductibility, which includes an analysis of capital and private limitations, with some specific cases on sponsorship considered. The statement recognises that sponsorship expenditure may differ from other expenditures in that some benefit may accrue to the recipient of the expenditure.

The statement confirms that sponsorship expenditure will be incurred under s DA 1(1), when a nexus (ie connection) exists between the expenditure and the taxpayer’s assessable income. Whether such a nexus exists depends upon the character of the advantage sought by the taxpayer in incurring the expenditure. This in turn requires an analysis of the taxpayer’s purpose, which in turn requires an objective analysis of the surrounding circumstances, including the effect of the expenditure. In relation to expenditure incurred in the course of carrying on a business under s DA 1(1)(b), expenditure will be deductible where it is dictated by the business ends to which it is directed, those ends forming part of or being truly incidental to the business.

In order for the nexus test to be satisfied, the taxpayer must show that they intended that the business would be promoted by incurring the sponsorship expenditure.

The statement highlights the following four factors as relevant evidence in this regard:

(a) The specific terms of the sponsorship arrangement. For example, is there a specific requirement for the recipient to promote the taxpayer’s business? What is the extent and prominence of the business exposure specified in the agreement?;

(b) The place of the sponsorship arrangement in a coherent marketing strategy. For example, if a business’s market research has identified potential customers that frequently attend cultural events, then part of its marketing strategy may be to sponsor such events in return for its name and products being promoted during the event;

(c) The relationship between the market or potential market exposure capable of being reached and the taxpayer’s business. For example, market exposure at a tennis tournament is directly related to the business of a sports equipment retailer; and

(d) The relationship between the expenditure and the resulting income derived (ie can it be shown that the expenditure resulted in income being derived). For example, the sale of 10 tractors at an agricultural field-day, by a tractor manufacturer sponsoring the event in return for being able to
display the tractors, shows a direct relationship between the sponsorship expenditure and the derivation of income.

Sponsorship expenditure will be incurred under s DA 1(1)(b) when the expenditure is incurred by the taxpayer in the course of carrying on a business for the purpose of deriving the taxpayer’s assessable income, where the expenditure is dictated by the business ends to which it is directed. An example of this may be sponsorship expenditure required by the type or nature of the business, or in terms of a franchise or license agreement. This type of expenditure requires a determination of the character of the advantage sought by the taxpayer in incurring the expenditure and the relationship to the business.

Voluntary expenditure (a term introduced in the interpretation statement) may be deductible provided it is directed to business or income-earning ends.

The quantum of the expenditure is not material to the issue of whether or not it is deductible, except when there are associated party or avoidance concerns.

By the very nature of sponsorship expenditure, a third party may benefit from it. The person benefitting may be an unrelated arms-length recipient, or could be a principal shareholder and director in the company making the payment. When the recipient of the sponsorship is associated or related to the entity making the payment, the private limitation [s DA 2(2)] will need to be considered.

A New Zealand case in which there was evidence of a direct relationship between the sponsorship expenditure and the taxpayer’s income was TRA Case P16 (1992) 14 NZTC 4,107. The taxpayer in this case was a national courier that had acquired and raced a Jaguar motor car, having marked it with the company’s logo. Evidence that showed that there was a marked increase in turnover as a result of the racing promotion supported the conclusion drawn by Judge Keane that the related revenue expenditure was deductible.

Other relevant considerations in any analysis on deductibility will include the general limitations in s DA 2, such as the capital and private limitation. The Courts have developed a number of tests for distinguishing between capital and revenue expenditure [see 230.35]. The interpretation statement in TIB vol 14:9 (September 2002) at 43 also provides guidance. In that statement the CIR observed that the “identifiable asset” test is the most important in identifying sponsorship expenditure that is of a capital nature.

If sponsorship expenditure is incurred in relation to depreciable property, a depreciation deduction will be available under s DA 1 and subpart EE [see 250 DEPRECIATION].

A deduction for sponsorship expenditure is not prohibited if a private or domestic benefit is merely incidental to the payer’s income-earning or business activity. However, where it is the intention of the taxpayer that a private or domestic benefit results from part of the expenditure, apportionment (between deductible and non-deductible portions of the expenditure) will be required, or in the case of a company, the dividend rules may need to be considered. TRA Case L7 (1989) 11 NZTC 1,052 is a further example of sponsorship expenditure and the relationship to business income. In this case, the proprietor of a radiator repair business was able to satisfy the TRA that a nexus existed between the expenditure on go-kart racing and promoting the radiator repair business. Judge Barber stated:

“I am satisfied that there was a sufficient link between the expenditure and the income earning process of the radiator manufacturing and repair business, with regard to the entire expenditure and not merely to 50 per cent of it.”

TRA Case L7 and TRA Case P16 can be contrasted to TRA Case P73 (1992) 14 NZTC 4,489 which, although a GST case, highlights the circumstances when the private benefit obtained from the sponsorship may be considered to be more than merely incidental.

The deduction for sponsorship expenditure available in any particular income year may be limited to the portion that relates to that income year by ss BD 4(2) and EA 3 [see 1140 PREPAYMENTS].

Example 1:
A contracting company sponsors the local rugby team. Under the terms of the sponsorship agreement, which covers the year to 31 March, the contracting company agrees to pay an amount up-front towards the team’s running costs. In return, the team agrees to display the company’s business logo on all rugby uniforms, bags and vehicles used by the team during the year. The expenditure incurred by the company will be fully deductible under the general permission [s DA 1]. The requirement that the team display...
the company’s business logo on the uniforms, bags and vehicles is a strong indicator that the expenditure was incurred to promote the company’s business and is therefore deductible.

**Example 2:**
Suppose the company (in Example 1), also agreed to reimburse the team for the purchase of their van (ie the team owns the van), provided the business logo is prominently displayed on it. Alternatively, what if the company purchased the van, retaining ownership of it, but allowing the team full use of it provided the company’s business logo is prominently displayed on it. If the company reimburses the team for the purchase of their van, although the van is a capital item to the team, the capital limitation does not apply to the expenditure since the company does not own the van. This result is consistent with the company gifting money and the team using the money to purchase both its capital and operational needs. Therefore, no enduring asset results to the company from this expenditure. However, if the company purchased the van and retained ownership of it, the capital prohibition [s DA 2(1)] would apply as the expenditure results in an enduring asset (ie the van) owned by him. A deduction to the company for depreciation may be allowed under subpart EE.

**Example 3:**
Jenny is in business as a scuba-diving instructor. She enjoys horse riding and horse riding competitions. She decides to organise a gymkhana with prizes being given for the winning rider. She arranges for a billboard to be erected at the site of the competition with her business name and contact details on it. She expends a total of $2,000 in arranging the competition. In this case, Jenny’s scuba-diving instructing business bears no relationship to horse riding. The attendees are not a natural audience for scuba-diving promotion so as to reasonably form a potential market. This, considered with the fact of Jenny’s private enjoyment of horse riding, strengthens the conclusion that there is no identifiable nexus between the expenditure and her business. While there is some business exposure in the form of a billboard, the expenditure on the competition was likely to have been incurred for private enjoyment, with any business promotion being incidental to that private enjoyment purpose. On this basis, and in the absence of further evidence as to Jenny’s purpose in incurring the expenditure, no deduction would be allowed for expenditure on organising the competition. However, Jenny could take a deduction for the billboard, which, depending on the nature of the billboard, could be by way of depreciation.

**Example 4:**
John is a shareholder-employee of a marine products supplier, MPS Ltd. His hobby is to race yachts. MPS Ltd purchases a yacht, which John races in various yachting competitions. The company’s name and logo is painted on the hull of the boat. Here, a physical asset is acquired by the business and therefore no deduction is allowed by reason of the capital limitation in s DA 2. However, because the company’s name is displayed on the yacht, and MPS Ltd’s business of supplying marine products would be potentially promoted in a yachting competition, a deduction for depreciation will be allowed under subpart EE. The fact that John enjoys yachting does not preclude a depreciation deduction being allowed. The other expenses of yacht racing, will also be deductible.
Chapter 40
Agency

40.10 Agent’s obligations and rights generally ......................................................... 29

An agent is a person declared by the ITA 2007 to be an agent for the purposes of income tax [s YA 1]. A person who is an agent (as defined) is treated for the purposes of the ITA 2007 and the TAA as an agent of another person in relation to the tax obligations of that other person [s HD 1(1)].

For income tax purposes, a principal and an agent are jointly and severally liable for the tax obligations related to the agency. The CIR may issue an assessment for the same tax to both agent and principal, and both are liable in relation to the tax assessed [s HD 2].

Where a principal derives income through a business carried on in New Zealand by an agent then, for the purposes of sections HD 8 to HD 27 [see 40.20], the agent must:

(a) Make the assessments that their principal is required to make;
(b) Provide all returns their principal is required to make under the TAA; and
(c) Satisfy the principal’s income tax liability.

If more than one person is liable as agent in relation to the same tax, those persons are jointly and severally liable. An agent is treated as a separate person in their capacity as agent. Only tax credits or exemptions to which the principal is entitled may be claimed in relation to agency income [s HD 3].

The principal remains liable for their own tax obligations and is not released from them merely through the existence of an agency. This means that if the agent fails to fulfil their statutory obligations, the onus falls back on the principal to fulfil them. The principal may undertake the duties normally carried out by the agent, if the CIR agrees [s HD 4].

An assessment by the CIR is sufficient authority for the agent to pay the tax so assessed. Tax paid by an agent can be recovered from the principal or subtracted from money held by the agent that belongs or is payable to the principal. The agent can retain, from money belonging or payable to the principal, an amount sufficient to pay the principal’s tax liability. The CIR may set a new due date for an agent to pay a principal’s tax liability if:

(a) The agent is unable to pay the tax out of money the agent is holding on behalf of the principal (ie there is insufficient money);
(b) The agent has not disbursed any of the principal’s money after being assessed; and
(c) The enforcement of payment would cause the agent hardship [s HD 5].

If a person who is carrying on a business in New Zealand is sufficiently under the control of another person in business, whether in New Zealand or elsewhere, so that the relationship between them is effectively that of principal and agent, the CIR may treat the first business as the principal’s business carried on by the agent on behalf of the principal [s HD 6].
The rate of tax used to calculate an agent’s income tax liability is determined by reference to the taxable income of the principal. The amount of income tax payable is the amount determined by the amount of agency income as a proportion of the taxable income of the principal [s HD 7].

### 40.20 Persons deemed to be agents [Subpart HD]

A person may be treated as an agent of another person for income tax purposes in a variety of circumstances, as specified in subpart HD. An agency relationship arises in the following situations:

<table>
<thead>
<tr>
<th>Persons deemed to be agents</th>
<th>Section</th>
</tr>
</thead>
<tbody>
<tr>
<td>A person is treated as an agent if, while acting as a guardian or manager, they receive, control or dispose of income derived by a person who has a legal disability.</td>
<td>HD 9</td>
</tr>
<tr>
<td>A person is treated as an agent if, as mortgagee in possession of land or other property, they derive income on behalf or for the benefit of the mortgagor.</td>
<td>HD 10</td>
</tr>
<tr>
<td>A nominated company is treated as the agent of a consolidated group or an imputation group, and of each company that is a member of that group.</td>
<td>HD 11, FM 34(2), FN 6(3)</td>
</tr>
<tr>
<td>The trustee of a trust is treated as the agent of a beneficiary who derives beneficiary income or a taxable distribution from the trust.</td>
<td>HD 12(1), HC 32</td>
</tr>
<tr>
<td>The settlor of a trust (other than a charitable trust) is treated as the agent of the trustee for income tax payable by the trustee in a tax year if a settlor of the trust is resident in New Zealand in that tax year. This does not apply to income tax that the trustee is liable for as agent.</td>
<td>HD 12(2), HC 29</td>
</tr>
<tr>
<td>The trustee of a unit trust is treated as agent of the unit trust in relation to income derived by the unit trust.</td>
<td>HD 13</td>
</tr>
<tr>
<td>A company is treated as an agent of a debenture holder who derives income from the debenture [see 40.30].</td>
<td>HD 14</td>
</tr>
<tr>
<td>Directors and shareholders who have left a company with insufficient assets to meet a tax liability are treated as agents of the company [see 40.40].</td>
<td>HD 15</td>
</tr>
<tr>
<td>A person paying a premium to a non-resident general insurer, or the insured person, may be treated as agent of the insurer [see 40.50].</td>
<td>HD 16, HD 17</td>
</tr>
<tr>
<td>A person is treated as an agent if they receive, control or dispose of income derived by an absentee.</td>
<td>HD 19</td>
</tr>
<tr>
<td>A person is treated as an agent if they carry on in New Zealand, a business for an absentee, whether or not the income is received by the agent.</td>
<td>HD 20</td>
</tr>
<tr>
<td>A person is treated as the agent of an absentee in relation to the absentee’s partnership share of a partnership’s income under s HG 2 if:</td>
<td>HD 20B</td>
</tr>
<tr>
<td>(a) The person: (i) carries on a business in New Zealand in a partnership that is not a limited partnership, or (ii) is a general partner of a limited partnership that carries on a business in New Zealand; and</td>
<td></td>
</tr>
<tr>
<td>(b) The person carries on the business with an absentee or, as a general partner, is responsible for the management of a limited partnership in which a limited partner is an absentee.</td>
<td></td>
</tr>
<tr>
<td>A company incorporated in New Zealand is an agent of an absentee shareholder who receives a dividend from the company.</td>
<td>HD 21</td>
</tr>
<tr>
<td>A person (including a banking or other company) is treated as an agent if, in the course of their business activities, they hold money as a deposit and pay interest of more than $100 to an absentee on the money deposited.</td>
<td>HD 22</td>
</tr>
</tbody>
</table>
**Persons deemed to be agents**

A trustee of a group investment fund is treated as an agent in relation to a dividend paid to an absentee investor. HD 23

The master of ship is treated as an agent in relation to a business carried on with the ship, when it is owned by or under charter to an absentee. HD 24

A tenant, mortgagor or other person who remits money from New Zealand to an absentee landlord, mortgagee or creditor is treated as an agent if the amount is income of the absentee. This only applies if the CIR has notified the person that they are accountable as the absentee’s agent. HD 25

An employer is treated as an agent in relation to the employment income of a non-resident employee who has an income tax liability. HD 27(1)

A non-resident trader is treated as an agent in relation to the employment income of an employee in New Zealand. HD 27(2)

If a non-resident person derives a pension or annuity from the New Zealand Government or under an unregistered superannuation scheme established in New Zealand, any income tax payable on the pension or annuity must be withheld from the pension or annuity and paid to the CIR on the person’s behalf. HD 28

If a New Zealand resident agent of a non-resident principal is instrumental in arranging the purchase of goods from the principal and the goods are either in New Zealand or are to be imported into New Zealand, the: (a) principal is deemed to be carrying on a business in New Zealand, (b) agent is treated as the principal’s agent in relation to the income derived from the business; and (c) income from the business is treated as having a source in New Zealand. HD 29

The agent has no liability if the income would not be liable for income tax in the principal’s country of residence.

A shareholder who makes an election under s HA 5 that a company become a qualifying company is personally liable for their share of the company’s income tax liability [see 1160.30]. HA 8

For the purposes of the agency rules, an absentee means:

(a) A natural person who is for the time being out of New Zealand;

(b) A foreign company, unless it has a fixed and permanent place of business in New Zealand at which it carries on a business in its own name; or

(c) A foreign company when the CIR declares that it is an absentee by giving notice to the company, or its agent or representative in New Zealand [s HD 18(2)].

A person may also be an agent of a GST registered person in certain circumstances [see 580.89, 580.160].

**40.30 Company acting as agent of its debenture holders** [s HD 14]

A company is treated as an agent of a person if the company has issued a debenture and the person, as a debenture holder, derives income from the debenture. This applies whether or not the debenture is charged on the company’s property or the debenture holder is an absentee.

A company is not treated as an agent if the debenture is:

(a) A profit-related debenture or substituting debenture to which s FA 2 applies (ie a debenture which is treated as a share) [see 830.20], or a stapled debt security to which s FA 2B applies [see 830.40]; or

(b) Issued to a New Zealand resident and, before an assessment is made, the company provides the CIR with a certified list containing:
40.40  When director or shareholder is agent of company [s HD 15]

The directors and controlling shareholders of a company may be held personally liable to pay a company’s income tax (including civil penalties and interest) if:

(a) An arrangement has been entered into the effect of which is that the company cannot meet a current or future income tax liability;

(b) It is reasonable to conclude that this was done so deliberately; and

(c) It is reasonable to conclude that if a director of the company had made reasonable inquiries at the time of the arrangement, they could have anticipated that the income tax liability would be likely to arise.

All of the directors at the time the arrangement is entered into are treated as agents of the company, and they have joint and several liability for the company’s tax obligations. However, a director is not held liable if:

(a) They do not derive a benefit from the arrangement and, at the first reasonable opportunity after becoming aware of the arrangement, they formally record their dissent with the company and with the CIR; or

(b) They were not involved in the executive management of the company at the time the arrangement was entered into and had no knowledge of the arrangement or the aspects of it that invoke s HD 15.

A person who is a controlling shareholder or an interested shareholder when the arrangement is entered into is treated as an agent of the company in relation to its tax obligations, but the tax liability (and associated penalties and interest) is limited to the greater of:

(a) The market value of the person’s direct and indirect shareholding in the company at the time of the arrangement; and

(b) The value of the benefit the person derives from the arrangement.

The CIR may (subject only to the time bar) make an assessment of a company after it has gone into liquidation, in order to give effect to s HD 15. In making this assessment, the CIR must nominate one or more persons as having the tax obligations set out in the assessment. The nominated persons are treated as agents of the company in relation to any notification or objection procedure concerning the assessment.

The directors and shareholders of a company are not liable for the company’s income tax for any tax year in relation to which:

(a) The company has provided returns within the time allowed by s 37 of the TAA [see 1270.50] for providing returns for the tax year in which the company is liquidated; and

(b) The CIR has not issued a notice of assessment of the company for the tax year before the end of four years following the end of the tax year in which the company is liquidated.

No liability arises in relation to an arrangement if:

(a) The CIR is a party to it; and

(b) The tax obligation is no more than an amount of income tax that arises as a direct result of the performance of the arrangement, and that obligation has been met.
A “controlling shareholder” is a person whose voting or market value interest in a company at the time of the arrangement (including those of associated persons) is 50 per cent or more. If the person or associate is a company, the voting or market value interest is calculated as if they were not a company and as if ss YC 4 (look through rule) and s YC 6 (disregarding certain securities) did not apply.

An “interested shareholder” is a person who has a voting or market value interest in a company at the time of the arrangement and, because of the size of the benefit the person receives from the arrangement, it is reasonable to conclude that the person is a party to the arrangement.

40.50 Agents for non-resident general insurers [ss HD 16, HD 17]

When a non-resident general insurer derives income under s CR 3 [see 800.75], certain residents may be treated as agents liable to provide returns and pay income tax on behalf of the insurer. No other person has a tax obligation in relation to a non-resident general insurer to the extent that:

(a) The insurer provides the return and pays the income tax; or
(b) A person acting on behalf of the insurer, including a broker or other agent, provides the return and pays the income tax.

If a return is not provided or if the income tax liability is not met in full, the following persons are liable (in the order set out) to provide the return or pay the income tax:

(a) First, the person (including a broker or agent) who pays the premium to the insurer, or the person who provides a bank or building society with funds from which the premium is paid;
(b) Secondly, a person who pays the premium, whether or not through a broker or agent;
(c) Thirdly, the insured person.

If a premium is paid by a registered bank or a building society on behalf of a person to the insurer (or to some other person not carrying on a business in New Zealand through a fixed establishment in New Zealand), the person who provides the bank or building society with the funds from which the premium is paid is an agent of the insurer. The bank or building society is not an agent in these circumstances [s HD 16].

If the non-resident general insurer, or other person who receives a premium, is treated as resident in Switzerland for the purposes of the double tax agreement between New Zealand and Switzerland, a person who is an agent of the insurer under s HD 16 is required to disclose details of the payment of the premium to the CIR [s HD 17].

40.60 The Maori Trustee

See 950 MAORI AUTHORITIES for income that consists of rent, royalties, or interest derived by the Maori Trustee that is not also beneficiary income.

40.70 Tax agents [TAA, s 34B]

The CIR is required to compile and maintain a list of tax agents. From 19 December 2007, a person is eligible to be a tax agent if they are a practitioner carrying on a professional public practice, a person carrying on a business or occupation in which returns of income are prepared, or the Maori Trustee, and the person prepares the returns of income for 10 or more taxpayers.

A person wishing to become a tax agent must apply to Inland Revenue, stating they wish to be listed as a tax agent, and providing any other information required by Inland Revenue. If the applicant is not a natural person, the names of the following persons must be included in the application:

<table>
<thead>
<tr>
<th>Type of entity</th>
<th>Persons to be named</th>
</tr>
</thead>
<tbody>
<tr>
<td>Corporate body that is not a closely-held company</td>
<td>Each person having the duties of tax manager, chief financial officer, chief executive officer or director.</td>
</tr>
<tr>
<td>Closely-held company</td>
<td>Each shareholder.</td>
</tr>
<tr>
<td>Partnership</td>
<td>Each partner.</td>
</tr>
<tr>
<td>Unincorporated body</td>
<td>Each member.</td>
</tr>
</tbody>
</table>

Staples Tax Guide 2012 33
Existing tax agents as at 19 December 2007 (the date s 34B of the TAA came into force) which are not natural persons and have not applied to be tax agents must provide the names as shown in the above table to Inland Revenue by 19 December 2008.

Inland Revenue may request further information from an applicant and obtain information about the applicant from other sources before deciding whether to list the applicant as a tax agent. Inland Revenue may list an applicant if satisfied that the applicant is entitled to make the application and that listing the applicant would not adversely affect the integrity of the tax system. Listing takes effect from the date of the notice advising the applicant of the CIR’s decision.

The Inland Revenue must refuse to list an applicant as a tax agent if the applicant is not entitled to make the application or if listing the applicant as a tax agent would adversely affect the integrity of the tax system. Inland Revenue may remove a person from the list of tax agents for the same reasons. However, before refusing to list an applicant or removing a person from the list, Inland Revenue must notify the person of the reasons for the proposed decision and consider any arguments put forward by the person. The person has 30 days from the date of the notice to put their arguments to the CIR, although the CIR can reduce this period if necessary to protect the integrity of the tax system. The CIR can also extend the 30-day period if this is considered appropriate in the circumstances.
Chapter 50

Armed Forces and Police

50.10 Members of armed forces
Any member of the armed forces (ie Army, Navy, or Air Force) absent from New Zealand in the service of the Government of New Zealand is a tax resident of New Zealand throughout their period of absence.

50.20 Operational areas pay
Allowances and any amount decided on by the ministerial committee (see below) are exempt income if they are received from the New Zealand Government by a member of the New Zealand Defence Force or Police force for a period of service in an operational area. The exemption does not extend to a regular force gratuity or any bonus or bounty for re-engagement in a regular force. An operational area is an area that the Minister of Defence has ordered the deployment of New Zealand Defence Force members for a specific mission authorised by the Government and which the Chief of Defence force delineates for that mission.
A special committee comprising the Prime Minister, Minister of Defence, Minister of Police, Minister of Finance and Minister of Foreign Affairs, determines whether an area is an “operational area”. This committee also prescribes rules for calculating the period of service in an operational area.
The extension of the exemption to members of the Police force applies from 18 March 2007.

50.30 Deferred military pay
Deferred military pay granted or paid under the Defence Act 1990 for military service in an active service area is exempt income.

50.40 Armed services or police annuity for disability
An annuity, pension, or allowance granted in New Zealand or elsewhere by any Government for any war or for a disability attributable to or aggravated by service in any Army, Navy, Air, or Police force, is exempt income. Any pension or allowance under the War Pensions Act 1954, other than a veteran’s pension is similarly exempt.
Chapter 60
Assessments

60.10 Assessments [TAA, ss 92, 92AA]
Most taxpayers self-assess their tax liability as part of meeting their return filing obligations.

“Assessment” means, according to the context:
(a) An assessment of tax made under a tax law by either a taxpayer or the CIR;
(b) An assessment of a net loss;
(c) An assessment of terminal tax or a refund;
(d) An assessment of a GST refund;
(e) An amendment of an assessment by the CIR [TAA, s 3(1)].

A taxpayer who is required to furnish a return of income for a tax year must make an assessment of their taxable income and income tax liability and, if applicable, their net loss, terminal tax, and refund due. A taxpayer assessment is made on the date on which the taxpayer’s return of income is received at an office of Inland Revenue.

The self-assessment rules do not apply for a tax year to a taxpayer:
(a) For whom a tax credit is allowed under subparts MA to MF and MZ [see 420 FAMILY ASSISTANCE]; or
(b) In respect of whom the CIR has made an assessment.

The nominated company for a consolidated group is treated as a taxpayer for the purposes of making an assessment for the group. A company that is part of a consolidated group must not make a separate assessment. The CIR must make an income tax assessment for a tax year for a taxpayer who has a tax credit under Part M (family assistance) [TAA, s 92AA].

The CIR may, before or after the passing of the annual taxing Act, assess the income tax of any taxpayer for a tax year at the basic rates specified in sch 1. Any such assessment is valid even if it is made before the passing of the annual taxing Act. If the annual rates of tax for a tax year differ from the basic rates on which
an assessment is made, the amount of the assessment is increased or decreased accordingly and the assessment has the same effect as if the amended amount were specified in the assessment [TAA, s 92A].

Despite the self-assessment rules, the CIR retains the power to make an amended assessment, for example following an audit of a taxpayer’s assessment [see 60.70]. A taxpayer cannot amend an assessment once made [see TIB vol 13:11 (November 2001) at 45-49].

Any assessment or determination made by the CIR that is made automatically by a computer or other electronic means in response to or as a result of information entered or held in the computer or other electronic medium is treated as an assessment or determination made by or under the delegated authority of the CIR [TAA, s 105].

In filing their GST returns, taxpayers are required to make an assessment of the amount of GST payable for the return period. The assessment is made on the date the GST return is received at an office of Inland Revenue. Any assessment made by the CIR will override a taxpayer self-assessment [TAA, s 92B].

The Court of Appeal reviewed the meaning of an assessment. It is the quantification by the CIR of the statutorily imposed liability of a particular taxpayer to tax for the year in question. The making of an assessment, including an amended assessment, requires the exercise of judgment on the part of the CIR in quantifying that liability on the information then in the possession of the CIR. It involves the ascertainment of the taxable income and of the resulting tax liability: Commissioner of Inland Revenue v Canterbury Frozen Meat Co Ltd (1994) 16 NZTC 11,150 (CA).

In Commissioner of Inland Revenue v New Zealand Wool Board (1999) 19 NZTC 15,476 (CA), the taxpayer challenged the validity of an amended assessment made by the CIR shortly before the time bar expired. In the High Court, it was held that the assessment was invalid and unenforceable on the grounds that:

(a) The pre-assessment inquiry was inadequate and the CIR did not make an honest judgment when reassessing the Board;
(b) The Board had a legitimate expectation of being consulted by the CIR before the assessment was issued;
(c) The reassessment was motivated by the improper purpose of countering criticism of Inland Revenue in Parliament and the Winebox Inquiry.

However, the Court of Appeal overturned this decision and held that:

(a) The evidence did not establish that the CIR did not exercise an honest judgment in making the assessment. At the date the assessment was made, it could not be said that the CIR had insufficient information on which to make an honest judgment on tax liability, or that it acted arbitrarily or in disregard of the law or facts known to it. In reaching this conclusion, the Court of Appeal relied on the meaning of assessment as expounded in Commissioner of Inland Revenue v Canterbury Frozen Meat Co Ltd (1994) 16 NZTC 11,150 (CA) (see above).

(b) Any scope for invoking legitimate expectation of being consulted by the CIR is necessarily limited by the scheme and purpose of the income tax legislation. Legitimate expectation cannot frustrate an honest appraisal by the CIR of the taxpayer’s income tax liability by means of an assessment of that liability. Faced with the time bar, if the CIR concludes that there is a proper basis for making an assessment the CIR is required to make an assessment. It is impossible to read into the legislation an obligation on the CIR to set a timetable that would always allow time for consulting before making an assessment within the time bar.

(c) Even if the CIR is influenced by extraneous factors in considering the taxpayer’s position, the CIR may nevertheless end by making a proper assessment by altering or adding to an existing assessment in order to ensure its correctness. It is the CIR’s judgment that counts — given the finding that the assessment was an honest exercise by the CIR of its judgment as to the tax liability of the Board, there is simply no room for denying its validity.
The CIR performs a statutory duty imposed on it in imperative and unconditional terms which is solely susceptible to objection under statutory procedures: *Commissioner of Inland Revenue v Lemmington Holdings Ltd* [1982] 1 NZLR 517, (1982) 5 NZTC 61,268 (CA).

The CIR’s functions are directed by statute to the quantification of liability for tax which is imposed by the statute itself. They are not a matter of balancing management and collection responsibility as in England. The CIR does not have a general dispensing power and cannot be estopped by past conduct from performing the statutory obligations in making assessments reflecting the present judgment as to that statutorily imposed liability: *North Island Wholesale Groceries Ltd v Hewin* (1982) 5 NZTC 61,289 (CA).

A notice of assessment mistakenly generated by the Inland Revenue computer is not necessarily an assessment: *Paul Finance Ltd v Commissioner of Inland Revenue* (1994) 16 NZTC 11,257 (HC).

### 60.20 Notices of assessment to be given to taxpayer [TAA, s 111]

The CIR must give the taxpayer a notice of assessment as soon as conveniently possible after making an assessment. However, if the CIR omits to provide the taxpayer with a notice of assessment, this does not invalidate or affect the operation of the assessment. If requested to do so, the CIR must give a notice of assessment to a taxpayer who accepts an income statement [see 1270.75] as correct.

It is not necessary for the notice to show any particulars other than the tax payable or refund due, where:

(a) The taxpayer has calculated on the return form the taxable income or the tax payable. The form contains provision for self-calculation by the taxpayer of the tax payable or refund due;

(b) The assessment is a default assessment;

(c) The assessment is made after the taxpayer has failed to meet their obligations in relation to an income statement under s 80F of the TAA;

(d) An assessment is deemed to be made under the income statement rules; or

(e) A separate statement is given to the taxpayer setting out the taxable income and tax payable.

If the CIR makes an assessment in relation to goods sold in satisfaction of a debt (under s 5(2) of the GSTA 1985), the CIR must send a copy of the assessment notice to the person who is not assessed (ie either the person whose goods were sold or the person who sells them).

### 60.30 Illustration of an individual assessment

Examples are based on income tax rates for the 2011-12 income year.

**Example 1:**

Laura derived the following income during the tax year:

<table>
<thead>
<tr>
<th>Income</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salary (gross)</td>
<td>$62,954.00</td>
</tr>
<tr>
<td>Interest (gross)</td>
<td>$1,158.00</td>
</tr>
<tr>
<td>Dividends (gross, fully imputed)</td>
<td>$2,874.00</td>
</tr>
<tr>
<td>Income from self employment (net)</td>
<td>$13,665.00</td>
</tr>
</tbody>
</table>

Laura’s summary of earnings from Inland Revenue shows that PAYE of $11,895.14 (exclusive of the earner premium) was deducted from her salary.

Laura holds shareholder dividend statements showing that imputation credits of $804.72 were attached to the dividends and RWT of $143.70 was deducted.

She holds interest RWT deduction certificates for $382.14.

She made provisional tax payments totalling $4,236 for the tax year.

**Assessment:**

<table>
<thead>
<tr>
<th>Income</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salary</td>
<td>$62,954.00</td>
</tr>
<tr>
<td>Interest</td>
<td>$1,158.00</td>
</tr>
<tr>
<td>Dividends</td>
<td>$2,874.00</td>
</tr>
<tr>
<td>Income from self employment</td>
<td>$13,665.00</td>
</tr>
</tbody>
</table>
### Assessments

- **Taxable income**: $80,651.00
- **Income tax on $80,651**: $17,534.83
- **Less tax credits**:
  - Imputation credits: $804.72
  - PAYE: $11,895.14
  - RWT – dividend: $143.70
  - RWT – interest: $382.14
  - **Total**: $13,225.70
- **Residual income tax**: $4,309.13
- **Less provisional tax paid**: $4,236.00
- **Terminal tax**: $73.13

Laura will be required to pay ACC levies on her income from self-employment [see 20 ACCIDENT COMPENSATION].

---

### Example 2:
Nigel derived the following income during the tax year:
- **Wages (gross)**: $21,348.00
- **Interest (gross)**: $207.00
- **Payment for supply of whitebait (gross)**: $2,425.00

Nigel’s summary of earnings from Inland Revenue shows that PAYE of $2,750.02 was deducted from his wages. He holds a RWT certificate for $36.22 in respect of the interest received. His summary of earnings shows that tax of $606.25 was deducted from the payment for whitebait.

- **Wages (gross)**: $21,348.00
- **Interest (gross)**: $207.00
- **Payment for supply of whitebait**: $2,425.00
- **Taxable income**: $23,980.00
- **Income tax on $23,980**: $3,216.50
- **Less tax credits**:
  - PAYE: $2,750.02
  - RWT: $36.22
  - **Tax deducted from payment for whitebait**: $606.25
  - **Total**: $3,392.49
- **Refund due**: $175.99

Nigel will be required to pay ACC levies on his income from the supply of whitebait [see 20 ACCIDENT COMPENSATION]. Nigel may also be entitled to family assistance if he has dependent children [see 420 FAMILY ASSISTANCE]. Nigel does not qualify for the independent earner tax credit because his net income is less than $24,000.

---

### 60.40 Default assessments [TAA, s 106]

If any person defaults in furnishing a return, or if the CIR is not satisfied with the return furnished, the CIR has the power to make an assessment which, in its opinion, is the tax that ought to be levied, and the taxpayer is liable to pay the tax assessed, unless he or she can establish that the assessment is excessive, or is not chargeable. This is commonly referred to as a default assessment.

If the CIR considers that any of the particulars in an income statement [see 1270.75], are incorrect, it can issue an assessment of the amount of tax the CIR considers ought to be imposed. A default assessment will not be issued if the taxpayer informs Inland Revenue that there is an error in the income statement and provides the information necessary to correct it by the due dates prescribed in s 80F of the TAA. The tax assessed...
under a default assessment is payable unless the person disputes the assessment and complies with the requirements of s 89D of the TAA [see 260.20].

A taxpayer cannot dispute a default assessment unless the taxpayer has issued a NOPA [see 260.20] and filed the missing return within the two-month response period: *Allen v Commissioner of Inland Revenue* (2005) 22 NZTC 19,473 (CA).

The CIR may make a default assessment of the GST payable by a person for a return period if the person:

(a) Fails to provide a GST return for the period when required to do so; or
(b) Provides a GST return that the CIR is not satisfied with.

A person who is assessed in this way must pay the GST assessed unless they establish in proceedings challenging the assessment that it is excessive, or that the person is not chargeable with GST.

Taxpayers who were in partnership as milk vendors were issued with amended assessments for the income years from 1974-1980. Their objection was allowed. The CIR’s assessments were to a large extent arbitrary and without foundation and the taxpayer satisfied the onus of proof by showing that the amended assessments were wrong: *TRA Case F144* (1984) 6 NZTC 60,270.

The manager of Inland Revenue’s Adjudication Unit has delegated authority under s 7 of the TAA to make assessments. An Adjudication Unit report may contain an assessment of income tax or GST, and the original or a copy of that report is admissible as evidence in court: *Marshall v Commissioner of Inland Revenue* (2008) 23 NZTC 21,876 (HC).

### 60.50 Special returns and assessments [TAA, s 44]

The CIR has the discretion to require certain categories of person (see below) to make a special return for specified transactions, or for a specified period, and to assess the person for income tax accordingly. If the person defaults in making the special return, or the CIR is not satisfied with the return, the CIR may assess the person on the amount the CIR thinks reasonable. The CIR must give the person notice of the special assessment.

Persons from whom the CIR can require special returns are:

(a) Agents;
(b) Non-resident traders;
(c) Persons who the CIR believes are about to leave New Zealand, or are about to cease carrying on business in New Zealand;
(d) Persons who have ceased to carry on business in New Zealand or to derive income;
(e) Executors or administrators, in respect of income derived by a deceased taxpayer during his/her lifetime;
(f) Bankrupt persons and companies in liquidation.

A person may challenge a special assessment under Part 8A of the TAA. Tax assessed under a special assessment is payable on demand, and is recoverable in the same way as for tax assessed under an ordinary assessment [see 1100 PAYMENT AND COLLECTION OF TAX]. The making of a special assessment does not preclude a subsequent assessment being made for the tax year in the normal way. However, any tax paid under the special assessment is credited against the subsequent assessment.

### 60.60 Net asset accretion assessments [TAA, s 106]

The CIR may issue assessments on a net assets basis. These are usually the result of an examination of the taxpayer’s records by an inspecting officer. During the examination, the inspector endeavours to ascertain the taxpayer’s correct income for taxation purposes from the books and records, but if it is found these are incomplete or unsatisfactory, the inspector may adopt the net assets method of arriving at the income. Under this method the private and business assets and liabilities of the taxpayer at the beginning and end of each tax year are ascertained and compared. From the increase each year are deducted non-taxable receipts (eg capital accretions, gifts, legacies, and exempt income). An addition is made of any non-deductible expenditure.
Assessments

of loss (eg loss on trade-in of private motor car), together with an estimate of the living expenses of the taxpayer and the taxpayer’s family.

Example:

</tbody>
</table>

Notes:

(1) The motor car is used exclusively for private purposes. Consequently, the loss on sale is not deductible and has been added back to arrive at the income for the 20X1-X2 year.

(2) The legacy, being a capital receipt, has been deducted in arriving at the income for the 20X2-X3 year.

(3) In estimating living expenses the inspector has regard to the taxpayer’s mode of living from such evidence as is available.

(4) The PostBank and Savings Bank interest of the wife and child is included in the balance of the assets each year, and the interest applicable must be deducted in arriving at the taxpayer’s income.
While the assets accretion method has no express statutory authority, it has received recognition and approval by New Zealand Courts, and the following principles arise from the case of Glausiuss v Commissioner of Inland Revenue (1970) 1 ATR 588 (SC) and others:

(a) The assets accretion method is one which the CIR is entitled to apply in estimating the net income of a taxpayer for the purpose of assessing tax.

(b) Provided the CIR employs this method bona fide for this purpose, the assessment must stand save only so far as the taxpayer establishes that the amount is excessive: Babington v Commissioner of Inland Revenue [1957] NZLR 861 (SC).

(c) It is not sufficient for the taxpayer to establish that the income for any particular year, ascertained by this method, is not correct. The taxpayer must also show by how much it is wrong: Babington v Commissioner of Inland Revenue [1957] NZLR 861 (SC) and Commissioner of Taxes (New Zealand) v McCoard [1952] NZLR 263 (SC).

(d) The CIR may properly spread the value of an asset representing income derived by the taxpayer during the period covered by the assets accretion statement equally over each of those years if there is no satisfactory evidence to show the year or years in which it was in fact derived. If it does, the onus is on the taxpayer to prove in what year or years it was derived: Trautwein v Federal Commissioner of Taxation (1936) 56 CLR 63 (HCA).

(e) Spreading should be adopted in such a way as to produce a realistic result, that is, in accordance with the proved facts. The method is not sufficiently accurate for any particular year to afford proof beyond reasonable doubt that a taxpayer’s return of income for that year is wilfully false, on a prosecution: Hall v Commissioner of Inland Revenue [1965] NZLR 184 (SC).

It is not necessary that the CIR’s estimate of living expenses be arithmetically exact. Absence of specificity does not indicate arbitrariness. The CIR’s judgment is entitled to be exercised as a matter of assumption in the sense of judgment based on a knowledge of facts, aided by a vast experience of common affairs in the New Zealand household: Sherwood v Commissioner of Inland Revenue (1987) 9 NZTC 6,059 (HC).

Failure to take account of cash on hand in using the method will make the assessment fundamentally defective: Gregoriadis v Regional Controller (1977) 3 NZTC 61,190 (SC).

Where a defence of the classic assets accretion method is made, there should be some verification of the objector’s evidence. This would apply to cash hoards alleged to exist at the beginning of the investigation period and to liabilities said to exist at the end of the period: TRA Case N21 (1991) 15 TRNZ 758.

The CIR used the add-back method to carry out an investigation, two amounts were held to be capital and, therefore, not assessable on the balance of probabilities. The direct and unshaken evidence of the taxpayer outweighed the slender case on which the CIR based the assessment: Singapore Restaurant Ltd v Commissioner of Inland Revenue (1990) 12 NZTC 7,308, (1990) 15 TRNZ 241 (HC).

The TRA confirmed an assessment using the assets accretion method when the taxpayer failed to produce evidence at the TRA hearing to discharge the onus of proof: TRA Case R4 (1994) 16 NZTC 6,025.

60.70 Amendments to assessments [TAA, s 113]

The CIR may from time to time, and at any time, amend an assessment in order to ensure its correctness, even if the tax already assessed has been paid. The CIR may not amend an assessment if the disputes process has not been completed [see 260.60]. If an amendment imposes a fresh liability or increases an existing liability, the CIR must give notice of it to the taxpayer.

The taxpayer is entitled to challenge the amended assessment in the ordinary manner within the statutory period. Inland Revenue’s practice for exercising the CIR’s discretion under s 113 of the TAA is explained in 60.120.
Assessments

60.80

Where the CIR has examined returns and concluded that no tax was payable, it amounts to an assessment for the purposes of applying the four-year time limitation [see 60.80] for reassessment: Lloyds Bank Export Finance Ltd v Commissioner of Inland Revenue (1988) 10 NZTC 5,088 (HC).

The words “at any time” have been considered in Commissioner of Inland Revenue v McNab (1984) 6 NZTC 61,703 (SC) in an appeal to the High Court against an earlier TRA decision. The taxpayer’s travel expenses had originally been allowed by the CIR as a deduction but it later advised the taxpayer that no deduction was available and issued amended assessments. The TRA upheld the objector’s view that the CIR’s power to alter assessments did not apply to assessments fixed under the previous s 31(1) [TAA, s 127(1)].

The CIR contended that the previous s 23 entitled it to issue amended assessments at any time and it could not be stopped from issuing assessments by any previous decision made. The appeal was allowed and it was held that the CIR is obliged to carry out the duty of assessing tax and cannot be estopped from exercising its statutory assessing power. The CIR, when issuing assessments, exercises an administrative function and the doctrine of res judicata cannot apply. The CIR’s power of amendment is only lost in relation to income which has been determined by the Courts.

Whether the CIR can rely on new grounds at the hearing was considered in Commissioner of Inland Revenue v FH Farnsworth Ltd (1984) 6 NZTC 61,770 (CA). The taxpayer was assessed by the CIR under the previous s 129 and at the Court hearing the CIR advanced the previous s 74 in support of its original assessment. The Court of Appeal refused to allow the CIR to rely on s 74 as at the hearing the CIR is tied to the basis on which he arrived at the assessment. The Court distinguished between cases where the CIR amplifies the grounds on which it originally relied in making the assessment and cases where it advances new contentions to support the application of a statutory principle. The CIR cannot, after the tax year limitation has expired, advance a different ground for assessment. Section 125 of the TAA does not allow the taxpayer to respond if the CIR is free to adopt a fresh basis for assessing an item under objection.

This decision must be contrasted with the decision in Hornby Leaseholds Ltd v Commissioner of Inland Revenue (1984) 6 NZTC 61,736 (HC), where the words “fresh liability” and “existing liability” were considered by the High Court. In this case, the CIR originally issued assessments under the previous s 88AA(1)(b). Subsequently, prior to the hearing it issued an amended assessment relying on all provisions of s 88AA. The TRA decided the amended assessment was invalid but on appeal the Court held the CIR was entitled to issue an amended assessment including additional grounds without amending the amount assessed.

The manager of Inland Revenue’s Adjudication Unit has delegated authority under s 7 of the TAA to make assessments. An Adjudication Unit report may contain an assessment of income tax or GST, and the original or a copy of that report is admissible as evidence in court: Marshall v Commissioner of Inland Revenue (2008) 23 NZTC 21,876 (HC).

60.80 Time bar for reassessing income tax [TAA, s 108]

The CIR may not amend an assessment so as to increase the amount of income tax assessed if:

(a) A taxpayer furnishes an income tax return and an assessment has been made; and

(b) Four years have passed from the end of the tax year in which the tax return was filed.

The time bar does not apply if the CIR considers that a tax return provided by a taxpayer:

(a) Is fraudulent or wilfully misleading; or

(b) Does not mention income which is of a particular nature or was derived from a particular source, and for which a tax return is required to be provided.

In these circumstances, the CIR may amend the assessment at any time so as to increase the amount.

If a taxpayer successfully challenges a CIR’s refusal to accept a late notice, etc, under s 89K(4) [see 260.50], the four year period referred to above is extended by the number of days in the period that:

(a) Starts on the day of the refusal, and

(b) Ends on the day the challenge is finally judged successful by the relevant TRA or Court, or the day on which the CIR concedes.
The CIR must not issue an income statement [see 1270.75] if four years have passed since the end of the tax year that follows the tax year to which the income statement would apply, unless the return is fraudulent, etc (as set out above), or the taxpayer has agreed to extend the time bar under s 108B of the TAA [see 60.100]. Section 108 of the TAA overrides every other provision, whether in the TAA or any other Act, that limits the CIR’s right to amend assessments.

When the taxpayer has a non-standard balance date, the four-year statutory period commences on the 1 April next following the date on which the taxpayer files their return [see TIB vol 14:11 (November 2002) at 94].

Example:
A taxpayer with a 30 September balance date files their 20X1-X2 income year (the year ending 30 September 19X2) return on 15 January 20X3. The four-year statutory period begins on 1 April 20X3. Increases to the assessment are time barred after 31 March 20X7 unless the return was fraudulent, etc.

In TRA Case F146 (1984) 6 NZTC 60,283, the taxpayer was a drug dealer who had filed returns for the 1970-1979 income years. Subsequently, an amended return for 1976 was filed which included income from secret commissions. Following an investigation by the CIR, amended assessments for the years 1970-1979 were issued. The taxpayer’s objection was allowed in part. It was held that the CIR had reasonable grounds for believing that the taxpayer’s returns for the years 1970-1974 were fraudulent or wilfully misleading.

An appeal may be made from the exercise by the CIR of its discretion on the ground that the CIR was not justified in reopening assessments beyond the four-year period. The objection is referred to the TRA or in certain circumstances direct to the High Court in which case the TRA (or the High Court) must substitute its own opinion for that of the CIR, and not merely satisfy itself whether there was no ground, or insufficient ground, for the CIR’s opinion: Legarth v Commissioner of Inland Revenue [1967] NZLR 312 (SC). See also the discussion of Commissioner of Inland Revenue v New Zealand Wool Board (1999) 19 NZTC 15,476 (CA) at 60.10.

Where a taxpayer omitted from the return all mention of income from a particular source (eg interest or rent for any year), the CIR would automatically have the right to reopen the assessment for the relevant year or years at any time without the necessity of applying its mind to the question of whether the particular return was fraudulent or wilfully misleading. This aspect did not concern the Court in the above case.

In Cross & Goulding v Commissioner of Inland Revenue [1987] 1 NZLR 498 (1987) 9 NZTC 6,101 (CA), 1974 income year accounts attached to filed returns clearly showed substantial sums had arisen from a sizeable development, and expenses had been incurred. It was held that this was sufficient to draw the item to the CIR’s attention. The returns did not omit all mention of income in the form of gains from land sales. Thus, the CIR was prevented from relying on the former s 25(2) to reassess the 1974 income year, the statutory period having expired.

A notice of assessment sent to a taxpayer in error is not a valid assessment for the purposes of determining whether the four-year period in s 108(1) of the TAA has been exceeded: Golden Bay Cement Co Ltd v Commissioner of Inland Revenue (1996) 17 NZTC 12,580 (CA).

The “BASF principle” states that where, in relation to an assessment, a case stated has been filed on a particular point, the CIR is barred from amending the original assessment so far as that point is concerned. The CIR is not prevented from issuing amended assessments in relation to issues not covered in the case stated: BASF New Zealand Ltd v Inland Revenue (1995) 17 NZTC 12,136 (CA); Commissioner of Inland Revenue v Dandelion Investments Ltd (1999) 19 NZTC 15,317 (HC); Dandelion Investments Ltd v Commissioner of Inland Revenue (2000) 19 NZTC 15,585 (CA).

Despite the time bar, the CIR may not amend an assessment so as to increase an amount of research and development tax credit under s LH 2 if:
(a) A taxpayer furnishes an income tax return for the 2008-2009 or a later tax year; and
(b) Two years have passed from the latest date to provide a return of income for the relevant tax year. (For a member of an internal software development group to which s 68E of the TAA applies, the latest date means the latest date for any member of the group); and
Assessments

(c) The taxpayer:
   (i) Has not issued a NOPA to the CIR for an amount of research and development tax credit for the relevant tax year within the relevant response period; and
   (ii) Has not asked for an assessment to be amended under s 113 of the TAA, having provided a detailed research and development statement under s 68D or 68E of the TAA, as applicable, within the time limit referred to in (b).

60.90 Time bar for reassessing GST [TAA, s 108A]

If a taxpayer provides a return for a GST period and an assessment has been made, the CIR may not amend the assessment to increase the amount of GST assessed if four years have passed from the end of the GST period in which the GST return was provided.

Example:
Traders Ltd filed its GST return for the two months ended 31 March 20X1 on 26 April 20X1. The return contains an unintended error that understates the amount of GST payable. The GST return was filed during the GST period ended 31 May 20X1. Inland Revenue cannot amend the assessment after 31 May 20X5.

However, if the CIR considers that a taxpayer has knowingly or fraudulently failed to disclose all the material facts that are necessary for determining the amount of GST payable for a return period, the CIR may at any time amend an assessment to increase the amount of GST assessed.

If a taxpayer successfully challenges a CIR’s refusal to accept a late notice, etc, under s 89K(4) [see 260.50], the four year period referred to above is extended by the number of days in the period that:
(a) Starts on the day of the refusal, and
(b) Ends on the day the challenge is finally judged successful by the relevant TRA or Court, or the day on which the CIR concedes.

60.100 Extension of time bars [TAA, s 108B]

The time bars (referred to below) may be delayed by waiver for up to 12 months, by written agreement between the CIR and the taxpayer. The taxpayer may extend the time bar by a further six months by giving written notice to the CIR.

A waiver does not affect the application of a time bar to an assessment by the CIR on a ground that was not identified before the original time bar would have applied.

A waiver must be in the prescribed form, and must be signed and delivered to the CIR before the expiry of the relevant four-year period.

The time bars that may be extended by waiver are those occurring under:
(a) Section 25 of the ITA 1976;
(b) Section 107A of the TAA;
(c) Section 108 of the TAA (as it applied before being amended by the Tax Administration Amendment Act (No 2) 1996);
(d) Section 108 of the TAA (as amended by the Tax Administration Amendment Act (No 2) 1996);
(e) Former s 31 of the GSTA 1985 (as that section applied on 30 September 1996);
(f) Section 108A(1) of the TAA.

In Commissioner of Inland Revenue v Vela Fishing Ltd (2001) 20 NZTC 17,242 (CA), the Court of Appeal ruled that a waiver of time bar signed by the taxpayer was valid. The High Court had ruled that the waiver was invalid because when the taxpayer filed its 1991 tax return (19 July 1993) the applicable provision (s 25 of the ITA 1976) provided no power of waiver and, following the passing of the ITA 1994 and TAA 1994, s 25 was saved by s YB 5(2) of the ITA 1994: Vela Fishing Ltd v Commissioner of Inland Revenue [2001] 1 NZLR 437, (2000) 19 NZTC 15,885 (HC). The Court of Appeal held that the time bar was valid because
the corresponding provision elements of s 227(4) of the TAA 1994 applied to relate the new s 108 of the TAA 1994, and linked s 108B of the TAA 1994 to s 25 of the ITA 1976.

60.110 Reopening assessments when accounts information form (IR10) used

The CIR’s policy on the reopening of assessments when returns were filed with an IR10 rather than with financial statements is stated in TIB vol 10:3 (March 1998) at 40.

The IR10 is an integral part of Inland Revenue’s E-File (electronic filing of returns) system. Inland Revenue use it to provide information to the Statistics Department and to build up data for audit case selection. Accountants and taxpayers who file returns manually may either send in an IR10 or a set of financial statements with tax returns. Inland Revenue encourages accountants to use both the E-File and the IR10 systems.

The IR10 has limited disclosure facilities. This might cause difficulties in discrepancies and allow reassessments to work against the taxpayer. If such a discrepancy is an item that is recorded in the financial statements (obtained at the time of audit or investigation), but which did not need to be recorded on the IR10, s 108(2) of the TAA could be used to reopen the statute-barred assessment with the argument that full disclosure was not given in the return for that particular item. The problem does not exist when the financial statements are filed with the tax return. The CIR applies the following policy when auditing or investigating back year returns filed with an IR10:

(a) If it is revealed that an item is incorrectly recorded in the financial statements, which is deemed to be either assessable income or non-deductible expenditure, but which did not have to be so recorded on the IR10, then:
   (i) If no conclusive evidence is held to prove a fraudulent or wilful misleading by the taxpayer, a statute-barred back year assessment is not reopened; or
   (ii) If there is conclusive evidence that a taxpayer intended to fraudulently or wilfully mislead, then a statute-barred assessment is reopened.

(b) If it is revealed that there is an omission of income, then:
   (i) If the omission is because disclosure was not required on the IR10 (but the income was recorded in the financial statements which were not filed with the CIR) then this is not a reason for reopening a statute-barred assessment; or
   (ii) If the income was omitted from the financial statements then a statute-barred assessment may be reopened.

(c) Persons who are parties to a financial arrangement which must be disclosed to the CIR are required to file a Disclosure Return (IR4A) or a Property Disclosure Return (IR4T) unless there is a reporting exemption for the arrangement. If the profit on an item has been disclosed and there has not been an omission of all mention of the item, this is not reason to open the assessment, whether or not the profit recorded in the disclosure return is recorded in the financial statement.

60.120 Taxpayer requests to amend assessments [TAA, ss 108, 113; s RM 2]

When a taxpayer files a tax return, and then later discovers that there is an unintended error in the return such as a calculation error or a figure incorrectly transcribed, the taxpayer may ask Inland Revenue to correct that error. Under s 113 of the TAA [see 60.70] the CIR has the discretion to alter an assessment to ensure its correctness. This applies to income tax and GST, but not to gift duty or gaming duties.

Standard practice statement SPS 07/03 (which applies from 17 May 2007) [see TIB vol 19:5 (June 2007) at 8-15] explains how the CIR will exercise the discretion under s 113 of the TAA to amend an assessment to ensure its correctness.

A request by a taxpayer or their agent to amend an assessment must be given in writing and should include the following information:
(a) The tax types and periods containing errors;
(b) The amount of tax in error;
(c) A description of the errors, including the background circumstances and the reason for their occurrence;
(d) The nature of the errors, including any relevant tax laws;
(e) How and why the errors were identified;
(f) Details of any incorrect advice given directly to the taxpayer by Inland Revenue and how the taxpayer relied on that advice;
(g) The action required to correct the errors; and
(h) All relevant documents and records supporting the amendment request.

Strictly speaking, a taxpayer cannot correct an error in a filed tax return simply by submitting an amended return. However, a copy of a tax return showing the amended calculations can be used as a supporting document for an application under s 113 of the TAA.

The CIR has no legal obligation to consider all amendment requests or to amend an assessment even if an error is identified. When considering an amendment request, the CIR must take into account all relevant factors and merits on a case-by-case basis, including:

(a) The reasons for the errors;
(b) The amount of time which has passed since the errors were made;
(c) The resources required or difficulty faced by the CIR in verifying the errors; and
(d) The relative importance or amount of the amendments sought.

Except for the application of the statutory time limitations, the length of time that has passed since the errors were made will not be a determining factor for exercising the discretion in relation to arithmetical or transposition errors that are clear and result in incorrect tax positions.

The CIR will normally amend an assessment if the taxpayer can show that the original tax return incorrectly recorded the tax position they intended to take (eg a transposition error). However, the CIR will not exercise the discretion under s 113 of the TAA if the request for amendment involves a matter of regretted choice (eg a taxpayer wants to change the way they have calculated depreciation or valued their trading stock).

The CIR will only amend an assessment to ensure its correctness if:

(a) The amendment request is clear (ie the errors are identified clearly), both factually and legally;
(b) The taxpayer has provided all relevant information;
(c) The CIR has verified the errors as genuine;
(d) The amendments are to be made within the relevant time limits [TAA, s 108; s RM 2; GSTA, s 45]; and
(e) None of the other limitations apply (see below).

When amending assessments, the CIR will ensure that all consequential amendments to other tax types and periods are also made. If the CIR is already investigating the tax type and period to which the amendment request relates, the amendment request will be considered as part of the overall investigation. The CIR will not (assuming the CIR agrees with the requested change) amend an assessment to reflect the amendment request before finalising the position in relation to the other issues arising from the investigation.

Where a taxpayer requests an amendment to an assessment to reflect a court decision that affects them or another taxpayer, the CIR will consider the following factors in deciding whether or not to make such an amendment:

(a) Whether the taxpayer has consistently asserted that they are entitled to take tax positions reflecting the court decision;
(b) Whether the taxpayer has been associated with claims or actions against Inland Revenue on issues relevant to the request;
Assessments

(c) Whether Inland Revenue has advised the taxpayer that the outcome of a particular issue would apply to them; and

(d) Whether Inland Revenue has previously advised the taxpayer directly in relation to particular matters and the taxpayer has acted on that advice, which has later proved to be incorrect.

The CIR will not usually amend an assessment if a taxpayer makes an amendment request because of a change in the CIR’s practice in administering the tax laws (unless the change in practice is backdated). When an amendment request is the subject of a current dispute under Part 4A, the CIR will not amend the assessment except to reflect agreed adjustments and if there are no other disputed issues in the period to which the agreed adjustments relate. The CIR’s ability to amend assessments and make refunds of tax is limited by s 108 of the TAA [see 60.70]; 108A of the TAA, [see 60.80], s RM 2, [see 1215.10] and s 45 of the GSTA 1985, [see 560.137].

Although the four-year time limits in ss 108 and 108A of the TAA restrict the ability of the CIR to amend an assessment so as to increase the amount of tax payable, they do not limit the CIR’s ability to amend an assessment so as to reduce the amount of tax payable. However, when a taxpayer applies for a reduction (credit adjustment) in an assessment after the four-year time limit expires, the CIR will reduce the credit adjustments requested by the taxpayer by any adjustments which would have increased the amount of tax payable (debit adjustments). If the debit adjustments exceed the credit adjustments, the CIR cannot increase the assessment outside the four-year time limit, but the CIR can decline to make the credit adjustments because amending the assessment in this situation would not ensure their correctness.

Taxpayers cannot challenge the exercise of the CIR’s discretion under s 113 of the TAA [TAA, s 138E(1)(e)(iv)], but the exercise of this discretion is subject to judicial review.

60.125 Correction of minor errors in subsequent returns [TAA, s 113A]

If a person makes an error in a return, the CIR may allow the person to correct it in the next return due following the discovery of the error if:

(a) The person has provided a return for income tax, FBT or GST, and the assessment includes one or more minor errors;

(b) The error was caused by a clear mistake, simple oversight or mistaken understanding on the person’s part; and

(c) For a single return, the total discrepancy caused by the error is $500 or less. For this purpose, income tax, FBT and GST are treated separately.

This provision applies from 7 December 2009.

60.130 Set-off of excess tax paid when taxpayer investigated [TAA, s 166]

When Inland Revenue investigates a taxpayer’s liability for tax over a number of successive years, it sometimes happens that, although there is an overall deficiency of tax, there is an overpayment of tax in one or more of those tax years. In these circumstances the CIR may, if the CIR considers it equitable, allow the overpayment to be offset against any tax due for any of the other tax years investigated, even if the time limit for making a refund [see 1215.10] has expired.

60.140 Assessment of shortfall penalties [TAA, s 94A]

The CIR may make or amend an assessment of a civil penalty in the same way as the CIR may make or amend an assessment of the tax to which it relates.

A shortfall penalty, unless it is a penalty under s 141ED (failure to pay an employer monthly schedule amount), must be assessed in the same way as the tax to which it relates, but separately from that tax.

The CIR may assess a shortfall penalty before or after unpaid tax has been assessed, or has become assessable or payable, or has been paid. If the CIR assesses a shortfall penalty for unpaid income tax before the passing of the annual taxing Act, the unpaid income tax is calculated by reference to the rates in the most recent annual taxing Act.
Unless a tax law specifically provides otherwise, a payment made by, or an amount applied on behalf of, a taxpayer on account of a shortfall penalty does not give rise to a credit towards or in respect of any other tax or tax liability.

### 60.150 Validity of assessments [TAA, s 114]

An assessment made by the CIR is not invalidated:

(a) Through a failure to comply with a provision of the TAA or another Inland Revenue Act; or

(b) Because the assessment is made wholly or partly in compliance with:

(i) A direction or recommendation made by an authorised officer on matters relating to the assessment; or

(ii) A current policy or practice approved by the CIR that is applicable to matters relating to the assessment.
Chapter 70
Associated Persons and Relatives

70.10 Overview
TaxNote: A new definition of “associated persons” applies as follows:
(a) For the purposes of the land sales provisions other than s CB 11 [see 880 LAND SALES], to land acquired from 6 October 2009. In the case of s CB 11, which relates to the disposal of land within 10 years of completing improvement, the new definition applies to land on which improvements are commenced from 6 October 2009 [see 70.60 to 70.85];
(b) For all other purposes, from the commencement of the 2010-2011 income year [see 770 INCOME YEAR AND BALANCE DATE].

For the definitions that applied for various purposes prior to these dates, see Staples Tax Guide 2010.
The associated persons and relatives provisions are anti-avoidance in nature. The assumption underlying these provisions is that taxpayers who have a close relationship with each other are more likely to enter into transactions on a non-arm’s length basis and avoid tax.

70.40 Nominees [s YB 21]
A person holds or does something as a nominee for another person if the person acts on the other person’s behalf. However, a trustee is a nominee only if the trustee is a bare trustee. If a person holds something or does something as a nominee for another person, the nominee is ignored. The person on whose behalf the nominee was acting is deemed to have done whatever the nominee has done on their behalf.

70.45 Relatives [s YA 1]
The word “relative” has the following three meanings in s YA 1:
(a) General meaning;
(b) Meaning for beneficiary income of minors; and
(c) Meaning for the purposes of the definition of “relative” in the Securities Act 1978.

(1) General meaning
Unless one of the two specific meanings explained below applies, the word “relative” means a person connected with another person by being:
(a) Within the second degree of blood relationship to the other;
(b) In a marriage, civil union, or de facto relationship with the other;
Associated Persons and Relatives

(c) In a marriage, civil union, or de facto relationship with a person who is within the second degree of blood relationship to the other;
(d) An adopted child of the other;
(e) An adopted child of a person who is within the first degree of relationship to the other; or
(f) The trustee of a trust under which a relative of the other person has benefited or is eligible to benefit.

Meaning for beneficiary income of minors

For the purposes of s HC 36, the word “relative” is defined in s HC 36(5). Under that provision, the general definition above is extended to also include being in a marriage, civil union, or de facto relationship with:

(a) A person who is the adopted child of the other person;
(b) A person who is an adopted child of a person who is within the first degree of relationship to the other; or
(c) A person who is connected to the other person through guardianship.

The word “guardian” is defined in s 15 of the Care of Children Act 2004. Persons are connected by guardianship if one is the guardian of the other. However, “guardian” does not include a guardian appointed under any of the following:

(a) Section 110(1)(a) to (d) of the Children, Young Persons, and their Families Act 1989;
(b) Section 31 of the Care of Children Act 2004;
(c) Section 53 of the Public Trust Office Act 1957 by a Court order;
(d) Section 7(4) of the Adoption Act 1955.

Meaning for the purposes of the definition of “relative” in the Securities Act 1978

Section 2 of the Securities Act 1978 defines “relative” by reference to the meaning in the Income Tax Act 2007. The definition for this purpose is a person connected with another person by being:

(a) A person who is within the fourth degree of blood relationship to the other;
(b) Being in a marriage, civil union, or de facto relationship with the other;
(c) A person who is in a marriage, civil union, or de facto relationship with a person who is within the fourth degree of blood relationship to the other;
(d) A person who is adopted as a child of the other or as a child of a person who is within the third degree of relationship to the other; or
(e) A person who is the trustee of a trust under which a relative of the other person has benefited or is eligible to benefit.

This meaning applies for:

(a) Section CX 19 (benefits provided instead of allowances);
(b) Section EX 4 (limits to requirement to include associated person interests in the CFC and FIF rules);
(c) Section GB 27 (attrIBUTION rule for income from personal services);
(d) Section HG 11(12) (limitation on deducTIONS by partners in limited partnerships); and
(e) The 1988 version provisions of the associated persons definitions.

Degrees of relationship

The procedure for determining the degree of relationship between two persons is to count backwards from one of those persons to a common ancestor and then forward to the other person:

(a) The first degree of relationship is determined on the basis that a husband and wife or a parent and child are within the first degree;
(b) The second degree of relationship is that of either:
(i) Brothers and sisters to each other; or...
(ii) Grandparents and grandchildren to each other (this arises because it is necessary to count through two steps of first degree of relationship);

(c) The third degree of relationship is that of either:
   (i) Great grandparents and great grandchildren to each other; or
   (ii) Aunts and uncles to nephews and nieces (this arises because it is necessary to count through three steps of first degree of relationship);

(d) The fourth degree of relationship is that of either:
   (i) Great great grandparents and great great grandchildren to each other;
   (ii) Great aunts and great uncles to great nephews and great nieces; or
   (iii) First cousins to each other (this arises because it is necessary to count through four steps of first degree of relationship).

Example 1:
Alan and Barry are first cousins. Alan has a first degree of relationship with his mother and a second degree of relationship with his maternal grandmother, a third degree of relationship with his uncle (ie his mother’s brother), and a fourth degree of relationship with his first cousin Barry, as Barry is his uncle’s son.

Example 2:
Lyn and John are married. Therefore, they have a first degree of relationship with each other.

70.60 New “associated persons” definition: application dates

A new definition of “associated persons” applies as follows:

(a) For the purposes of the land sales provisions other than s CB 11 [see 880 LAND SALES], to land acquired from 6 October 2009.

(b) For the purposes of s CB 11, which relates to the disposal of land by a person in the business of erecting buildings or by their associates where that land is sold within 10 years of completing an improvement, the new definition applies to land on which improvements are commenced from 6 October 2009 [see 880.35].

(c) For all other purposes, from the commencement of the 2010-2011 income year [see 770 INCOME YEAR AND BALANCE DATE].

70.65 “Associated persons” definition: overview

The definition of “associated persons” consists of 12 basis tests of association.

The 12 basic tests are:

(a) Two companies which have common control;
(b) Company and a person other than a company;
(c) Two relatives;
(d) A person and a trustee for a relative;
(e) A trustee and a beneficiary of the trust;
(f) Trustees (ie trusts) which have a common settlor;
(g) A trustee (ie a trust) and a settlor of the trust;
(h) A settlor of a trust and a beneficiary of that trust;
(i) A trustee of a trust and a person with a power of appointment or removal of trustees;
(j) A partnership (including a limited partnership) and a partner in that partnership;
(k) A look-through company and an owner who is a director or employee in the LTC; and
(l) A look-through company and an owner who has effective look-through interests of 25 per cent or more.

**TaxNote:** Where a trustee is an associated person, it is the person in their capacity as trustee that is associated, not the person in their personal capacity.

These are then buttressed by two additional rules:

(a) The tripartite test which can deem two persons to be associated with each other if they are each associated with the same third person [see 70.75]; and

(b) The aggregation rules in the company and limited partnership tests which can deem a person (“A”) to hold anything which is held by another person (“B”) where “A” and “B” are associated persons of each other [see 70.80].

There are also a number of rules which vary the outcome of the general rules under specified circumstances.

**70.70 “Associated persons” definition: basic tests of association** [ss YB 2, YB 3, YB 4, YB 5, YB 6, YB 7, YB 8, YB 9, YB 10, YB 11, YB 12, YB 13]

The basic categories of “associated person” are:

(a) Two companies;

(b) A company and a person who is not a company;

(c) Two individuals who are relatives;

(d) Person and a trustee for a relative of that person;

(e) Trustee and beneficiary;

(f) Two trusts with common settlor;

(g) Trustee and settlor;

(h) Settlor and beneficiary;

(i) Trustee and person with power of appointment or removal;

(j) Partnership and partner;

(k) Look-through companies and owners of interests; and

(l) Other specific tests.

(1) **Two companies** [s YB 2]

Two companies are associated persons of each other if there is a group of persons whose voting or market value interests [see 170 COMPANIES] in each company total 50 per cent or more, or who control both companies by any other means.

**Example:**

A Co has only one class of share and these are owned as to 70 per cent by John and 30 per cent by Joseph. B Co also has only one class of share and these are owned as to 50 per cent by John and 50 per cent by Sam. As there is a group of persons (John) who has at least a 50 per cent interest in both A Co and B Co, the two companies are associated persons.

The following exceptions apply to the “two companies” rule:

(a) The “control by any other means” part of this test does not apply to two companies if either or both of them are:

(i) A State enterprise;

(ii) A Crown Research Institute;

(iii) A Crown health enterprise;

(iv) A company that is part of the same group of companies as State enterprise, a Crown Research Institute or a Crown health enterprise.
(b) For the purposes of the international tax rules [see 850 INTERNATIONAL TAX REGIME], two companies are not associated if one of them (but not both of them) is non-resident.

(c) For the purposes of the land sale provisions, two companies are not associated persons if one of them is a portfolio investment entity (PIE) or an entity that qualifies for PIE status.

(2) A company and a person who is not a company [s YB 3]

A company and a person other than a company are associated persons if the person has a voting interest or market value interest in the company of 25 per cent or more.

Example:
A Co has only one class of share and these are owned as to 80 per cent by John and 20 per cent by Joseph. John and Joseph are friends, but are not otherwise related. As John’s interest in the company is at least 25 per cent, John and the company are associated persons. As Joseph’s interest is less than 25 per cent, Joseph and the company are not associated persons.

For the purposes of this test, “a person other than a company” includes a company acting in its capacity as a trustee of a trust.

Example:
All of the shares in Jones Shoes Ltd are owned by the Jones Family Trust. The Trustee of the Jones Family Trust is Jones Family Ltd. Jones Shoes Ltd and Jones Family Ltd in its capacity as trustee (and therefore the Jones Family Trust) are associated persons.

(3) Two individuals who are relatives [s YB 4]

Two individuals are associated persons if any one or more of the following applies:

(a) They are within two degrees of blood relationship [see 70.50];

(b) They are married to each other or are in a civil union or de facto relationship with each other; or

(c) One of them is within two degrees of blood relationship to the other person’s spouse, civil union partner, or de facto partner.

Example:
Jason and his grandmother, Julie, are associated persons as they are within two degrees of relationship. Jason has entered into a civil union with Trevor. Julie and Trevor are associated persons under item (c).

Adopted children are treated as being a natural child of the adoptive parents and not of the birth parents.

An individual is not associated with another individual if the person cannot reasonably be expected to know of the existence of that other person and/or the fact that the other person is within two degrees of blood relationship.

Example:
Sam has not seen his mother since he was baby. His mother has now remarried and has a daughter, Julie. If Sam is not aware of the existence of Julie and/or is not aware of the fact that she is within two degrees of blood relationship to him, Sam and Julie will not be associated persons.

The relatives test of association is limited for the purposes of the land sale provisions [see 880 LAND SALES], the low turnover trader trading stock valuation [see 1400.15] and the transfer of livestock due to a self-assessed adverse event [see 430.05]. For these purposes, two individuals are associated with each other only if:

(a) They are married to each other or are in a civil union or de facto relationship with each other; or

(b) One is the infant child of the other.

(4) Person and a trustee for a relative of that person [ss YB 5, YB 16]

A trustee of a trust and relative of a beneficiary of that trust are associated persons. “Relative” means a person associated under s YB 4 (see above).
**Associated Persons and Relatives**

**Example:**
Mary and her granddaughter, Mollie, are associated persons under s YB 4 as they are relatives within the second degree. Mary is an associated person of any trustee (ie trust) under which Mollie has benefited or is eligible to benefit.

This test of association does not apply:
(a) For the purposes of the land sales provisions;
(b) Where the trust is a lines trust established under the Energy Companies Act 1992;
(c) Where the trust is an approved unit trust referred to in cl 2 of the Income Tax Act (Exempt Unit Trusts) Order 1990 (ie bonus bonds).

**(5) Trustee and beneficiary**

A trustee of a trust and a person who has benefited or is eligible to benefit under the trust are associated persons.

**Example:**
Mollie is a beneficiary of the Jones Family Trust. As a beneficiary, Mollie is eligible to benefit from the trust. Therefore she is an associated person of the trustee (ie the trust).

This test of association does not apply:
(a) For the purposes of the land sales provisions;
(b) Where:
   (i) The trust is only for the benefit of employees; and
   (ii) Neither the beneficiary nor any person associated with the beneficiary directly or indirectly controls the trust;
(c) Where the trust is a lines trust established under the Energy Companies Act 1992;
(d) Where the trust is an approved unit trust referred to in cl 2 of the Income Tax Act (Exempt Unit Trusts) Order 1990 (ie bonus bonds); or
(e) Where the beneficiary is a charitable organisation.

**(6) Two trusts with common settlor [ss YB 7, YB 10, YB 15(2), YB 15(3)]**

Trustees of two trusts (ie two trusts) which have been settled by the same person are associated persons. For the purposes of this test, two persons who are married to each other, or who are in a civil union or de facto relationship with each other are treated as being the same single person.

**Example:**
Sam and Samantha are husband and wife. Sam has settled a trust for the benefit of Samantha and their children. Samantha has settled a trust for the benefit of Sam and their children. As Sam and Samantha are married, they are treated as being the same single person. Therefore, the two trusts have the same settlor. This means that the two trusts are associated persons of each other.

For the purposes of this test, “settlor” has the has the meaning set out in s HC 27 [see 1420.65] but does not include a person who provides services to a trust for less than market value.

This test does not apply in either of the following circumstances, both of which concern employee trusts:
(a) **Settlor is not a company:**
   (i) The settlor is not a company;
   (ii) The settlor settles property on the trust only for the benefit of the settlor’s employees; and
   (iii) Neither the settlor nor any person associated with the settlor directly or indirectly controls the trust.

(b) **Settlor is a company:**
   (i) The settlor is a company; and
   (ii) None of the following persons directly or indirectly controls the trust:
- The settlor;
- An executive of the settlor;
- A director of the settlor; or
- A person holding a direct voting or market value interest of 25 per cent or more in the settlor.

(7) **Trustee and settlor** [ss YB 8, YB 10, YB 15(2), YB 15(3)]

A trustee of a trust (ie a trust) and a settlor of that trust are associated persons.

For the purposes of this test, “settlor” has the meaning set out in s HC 27 [see 1420.65] but does not include a person who provides services to a trust for less than market value.

The following exceptions apply to this test:

(a) **Charitable trusts**: This test does not apply if the trust is a charitable trust.

(b) **Employee trusts where the settlor is not a company**: This test does not apply where:

   (i) The settlor is not a company; and
   (ii) The settlor settles property on the trust only for the benefit of the settlor’s employees; and
   (iii) Neither the settlor nor any person associated with the settlor directly or indirectly controls the trust.

(c) **Employee trusts where the settlor is a company**: This test does not apply where:

   (i) The settlor is a company;
   (ii) The settlor settles property on the trust only for the benefit of the settlor’s employees; and
   (iii) None of the following persons directly or indirectly controls the trust:
        - The settlor;
        - A person associated with the settlor;
        - An executive of the settlor;
        - A director of the settlor; or
        - A person holding a direct voting or market value interest of 25 per cent or more in the settlor.

(8) **Settlor and beneficiary** [ss YB 9, YB 10, YB 15(2), YB 15(3), YB 16]

A settlor of a trust (ie a trust) and a person who has benefited or is eligible to benefit under the trust are associated persons. For the purposes of this test, “settlor” has the meaning set out in s HC 27 [see 1420.65] but does not include a person who provides services to a trust for less than market value.

The following exceptions apply to this test:

(a) **Land sale provisions**: This test does not apply for the purposes of the land sale provisions.

(b) **Employee trusts where the settlor is not a company**: This test does not apply where:

   (i) The settlor is not a company;
   (ii) The settlor settles property on the trust only for the benefit of the settlor’s employees; and
   (iii) Neither the settlor nor any person associated with the settlor directly or indirectly controls the trust.

(c) **Employee trusts where the settlor is a company**: This test does not apply where:

   (i) The settlor is a company; and
   (ii) The settlor settles property on the trust only for the benefit of the settlor’s employees; and
   (iii) None of the following persons directly or indirectly controls the trust:
        - The settlor;
        - A person associated with the settlor;
        - An executive of the settlor;
Associated Persons and Relatives

- A director of the settlor; or
- A person holding a direct voting or market value interest of 25 per cent or more in the settlor.

(d) Charities: This test does not apply where the beneficiary is a charitable organisation.

(9) Trustee and person with power of appointment or removal [ss YB 11, YB 15(4)]

A trustee of a trust (ie the trust) and a person who has a power of appointment or of removal of the trustees of that trust are associated persons. This test does not apply to a trust that is only for the benefit of employees where neither the person who has a power of appointment of trustees, nor an associated person of that person, directly or indirectly controls the trust.

(10) Partnership and partner [s YB 12]

A partnership and a partner in the partnership are associated persons.

In the case of a limited partner in a limited partnership, a different test applies. A limited partnership and a limited partner are associated persons if the limited partner has a 25 per cent or greater interest in the limited partnership. This is calculated on the basis of a partnership share in a right, obligation, or other property, status, or thing of the limited partnership.

TaxNote: The scope of all of the above tests can be broadened significantly by the application of the tripartite test and the aggregation rules [see 70.75 to 70.85].

(11) Look-through company and owners of interests [s YB 13]

A look-through company and a person who has a look-through interest in the company and is a director or employee of the look-through company are associated.

Also associated are a look-through company and a person who has a 25 per cent or greater interest in any right, obligation, or other property interest or thing in the look-through company. For this test, the interests of any two persons who are associated under any of ss YB 2 to YB 11 and YB 14 are aggregated.

For the purposes of the land provisions, the aggregation rule applies to two persons who are associated under any of ss YB 2, YB 3, YB 4(1)(b) and YB 4 (2) to YB 4 (4), YB 7, YB 8, YB 10, YB 11 and YB 14.

(12) Other specific tests

Specific tests of association apply for various provisions in the Act:

(a) Section DS 4(5) provides that a shareholder in a loss-attributing qualifying company (LAQC) and that LAQC are treated as associated persons for the purposes of s DS 4 (meaning of film reimbursement scheme).

(b) Section EB 13(2) provides a special rule for the purposes of subpart EB (valuation of trading stock (including dealer’s livestock)) to determine when a low-turnover trader is associated with a company.

(c) Section EX 4(1) provides a special rule for the purposes of s EX 3 to determine when a New Zealand resident is associated with a non-resident relative under the controlled foreign company and foreign investment fund rules.

(d) Section LP 2(6) provides a special rule applies for the purposes of s LP 2 to determine when a company is associated with a supplementary dividend holding company.

70.75 Tripartite test [s YB 14]

The tripartite test provides that two persons are associated persons where they are both associated with the same third person. However, the test applies only where each is associated with the third person under a different test of association.

Example 1:
Sam has settled a family trust for the benefit of her children. She also holds all of the shares in a family company. Sam and the trust are associated persons by virtue of s YB 8 (trustee and settlor). Sam and the company are associated persons by virtue of s YB 3 (a company and a person other than a company). As both the trust and the company are associated with the same person
(Sam) and the association arises under different limbs of the associated persons tests, the family trust and the company are associated persons.

Example 2:
Josh holds 30 per cent of the shares in A Co and 40 per cent of the shares in B Co. There is no other person who holds shares in both companies. Josh is an associated person of each of the companies by virtue of s YB 3 (company and a person other than a company). However, as both companies are associated with the same third person (Josh) under the same limb of the associated persons tests, Josh’s shareholdings do not result in the two companies being associated with each other under the tripartite test.

70.80 Tripartite aggregation rules [ss YB 2, YB 3, YB 12]

There are three aggregation rules which broaden the scope of the associated persons definition.

The first is contained in s YB 2 and applies when determining whether or not two companies are associated with each other. The second, in s YB 3, applies when determining whether a company is an associated person of a person who is not a company. The third, in s YB 12 applies in determining whether a limited partner is an associated person of a limited partnership.

In each case, a different, and more limited, test applies for the purposes of the land sales provisions.

(1) Two companies — general rule

For the test of when two companies are associated, if two persons (person A and person B) are associated under any of the tests in ss YB 4 to YB 14, person A is deemed to hold anything held by person B. Sections YB 4 to YB 14 include all of the tests other than the “two companies” and the “company and a person other than a company” tests. It also includes the tripartite test [s YB 2(4)].

Example:
Janet and Colin are brother and sister. Therefore, Janet and Colin are associated persons under s YB 4. Janet owns all of the shares in J Co and is therefore an associated person of J Co. Colin owns all of the shares in C Co and is therefore, an associated person of C Co. Under the aggregation rule, John is deemed to hold anything held by Janet (ie the shares in J Co) and Janet is deemed to hold anything held by Colin (ie the shares in C Co). As all of the shares in each of the companies are deemed to be held by the same person (either Janet or Colin), the two companies are associated persons of each other.

(2) Two companies — land sales provisions

For the purposes of the land sales provisions, the test is a little narrower. In order for person A to be deemed to hold anything held by person B, A and B need to be associated persons under any one of ss YB 4(1)(b) and (2) to (4) (one is the other’s spouse or infant child), YB 7 (two trusts with a common settlor), YB 8 (trustee and settlor), and YB 10 to YB 14 (trust and a person with the power to appoint a trustee, partner and partnership, and the tripartite test) [s YB 2(5)].

(3) Company and a person other than a company — general rule

For the test of when a company and a person other than a company are associated, if two persons (person A and person B) are associated under any of the tests in ss YB 4 to YB 14, person A is deemed to hold anything held by person B. Sections YB 4 to YB 14 include all of the tests other than the “two companies” and the “company and a person other than a company”. It also includes the tripartite test [s YB 3(3)].

Example:
Richie and Temepara are father and daughter. Richie owns all of the shares in R Co and Temepara owns all of the shares in T Co. Richie and Temepara are associated persons under s YB 4. Under the aggregation rule, Richie is deemed to hold anything held by Temepara (ie the shares in T Co). Therefore, Richie and T Co are associated persons. The same applies for R Co and Temepara.

(4) Company and a person other than a company — land sales provisions

For the purposes of the land sales provisions, the test is a little narrower. In order for person A to be deemed to hold anything held by person B, A and B need to be associated persons under any one of ss YB 4(1)(b) and (2) to (4) (one is the other’s spouse or infant child), YB 7 (two trusts with a common settlor), YB 8 (trustee and settlor), and YB 10 to YB 14 (trust and a person with the power to appoint a trustee, partner and partnership, and the tripartite test) [s YB 3(4)].
Associated Persons and Relatives

(5) Limited partnerships — general rule
For the test of when a limited partner and a limited partnership are associated persons, if two persons (person A and person B) are associated under any of the tests in ss YB 2 to YB 11 and YB 14, person A is deemed to hold anything held by person B. Sections YB 2 to YB 11 and YB 14 include all of the tests other than the “partner and partnership” test. It also includes the tripartite test [s YB 12(3)].

Example:
Aaron and Becky are grandfather and granddaughter. Becky is a limited partner in the Becketal Ltd Partnership, holding a 30 per cent interest. As Aaron and Becky are associated persons, Aaron is deemed to hold anything held by Becky (ie the partnership interest). Therefore, Aaron and Becketal Ltd Partnership are associated persons.

(6) Limited partnerships — land sale provisions
For the purposes of the land sales provisions, the test is a little narrower. In order for person A to be deemed to hold anything held by person B, A and B need to be associated persons under any of ss YB 2, (two companies), YB 3 (company and a person other than a company), YB 4(1)(b) and (2) to (4) (one is the other’s spouse or infant child), YB 7 (two trusts with a common settlor), YB 8 (trustee and settlor), YB 10 and YB 11 (trust and a person with the power to appoint a trustee) and YB 14 (the tripartite test) [s YB 12(4)].

70.85 Tripartite test and aggregation rule operating in tandem
As the tripartite test and the aggregation rules operate in tandem, they have the potential to significantly increase the scope of the associated persons rules.

Example:
Daisy settles a trust for the benefit of her husband, Donald and their three sons, Huey, Duey and Luey. The trust owns all of the shares in Duck Co which, in turn, owns a large block of bare land. Donald is a land developer. Are Donald and Duck Co Ltd associated persons of each other?

Donald is an associated person of Daisy as they are the spouse of each other [s YB 4]. Daisy is an associated person of the trust as she is the settlor of the trust [s YB 8].

As Daisy is associated under different tests with both Donald and the trust, Donald is an associated person of the trust under the tripartite test [s YB 14].

As Donald is an associated person of the trust, he is deemed to hold anything held by the trust (ie the shares in Duck Co Ltd under the both the general aggregation rule and under the aggregation rule relating to land [ss YB 3(3), YB 3(4)]).

As Donald is deemed to hold the shares in Duck Co, he is an associated person of Duck Co [s YB 3].
Chapter 80
Avoidance

80.05 Overview
The tax avoidance provisions have been a difficult set of rules to apply, as indicated by the volume of litigation now appearing. These provisions primarily target transactions that apply tax rules in a manner contrary to the intention of those rules. The anti-avoidance rules either have general application or target specific transactions.

80.10 Definitions [s YA 1]
Section YA 1 provides the following definitions:

“Arrangement” means any agreement, contract, plan, or understanding (whether enforceable or unenforceable) including all steps and transactions by which it is carried into effect.

“Tax avoidance” is defined as including:
(a) Directly or indirectly altering the incidence of any income tax;
(b) Directly or indirectly relieving any person from liability to pay income tax; and
(c) Directly or indirectly avoiding, postponing, or reducing any liability to income tax.

“Tax avoidance arrangement” is defined in s YA 1 as an arrangement, whether entered into by the person affected by the arrangement or by another person, that directly or indirectly:
(a) Has tax avoidance as its purpose or effect; or
(b) Has tax avoidance as one of its purposes or effects, whether or not any other purpose or effect is referable to ordinary business or family dealings, if the tax avoidance purpose or effect is not merely incidental.

80.15 General income tax anti-avoidance provisions [ss BB 3, BG 1, and GA 1]
Sections BB 3 and BG 1, in conjunction with s GA 1, contain the general anti-avoidance rules. The following discussion explains how these rules provide the CIR with the authority and mechanisms to counteract tax avoidance.

A tax avoidance arrangement is void against the CIR for income tax purposes [s BG 1(1)]. The CIR, in accordance with Part G (Avoidance and Non-Market Transactions), may counteract a tax advantage obtained by a person from or under a tax avoidance arrangement [s BG 1(2)].
Avoidance

Where the avoidance is in the form of claiming tax credits, the CIR may disallow the credits, in whole or in part, or allow another person to take the benefit of some or all of the tax credits if the credits are part of a tax avoidance arrangement [s GA 1(3)].

Section GA 1 is a reconstruction provision and gives the CIR the power to adjust assessable income, deductions, and tax losses and tax credits to counteract the tax advantage arrangement.

The section will apply if tax avoidance is only one of the purposes or effects but it must be something more than being merely an incidental purpose or effect. This statutory wording overcomes a difficulty which had developed in New Zealand under an earlier anti-avoidance provision in s 108 of the Land and Income Tax Act 1954 as a result of the decision in Mangin v Commissioner of Inland Revenue [1971] NZLR 591, (1970) 1 ATR 835 (PC). In this case, the Privy Council considered that an arrangement could not be set aside unless tax avoidance was, if not the sole purpose, the principal purpose of the arrangement. It is interesting to note that the Australian Courts did not appear to go along with this approach in relation to s 260 of the Australian Act, which was their counterpart anti-avoidance section. In Hollyock v Federal Commissioner of Taxation (1971) 2 ATR 601 (HCA) at 606 the High Court of Australia distinguished Mangin's case holding:

“To say that the section applies only to arrangements whose sole purpose is tax avoidance would be contrary to the decisions in Newton’s and Hancock’s cases. …

“To hold that tax avoidance should be the principal purpose of the arrangement would seem to me to be opposed to the reasoning on which these decisions rest, and would introduce into s 260 a refinement which is not suggested by the words of the section itself … on the other hand, if tax avoidance is an essential or incidental feature of the arrangement, that may well serve to show that the arrangement cannot necessarily be labelled as a means to avoid tax.”

In Federal Commissioner of Taxation v Gulland (1985) 17 ATR 1, 85 ATC 4,765, the Australian High Court considered three separate instances where doctors sold their respective medical practices to unit trusts in which their family trusts held the units. The doctors then became employees of the unit trusts. By majority decision the Australian Tax Office was held entitled in each instance to void the arrangement for the purposes of assessing income tax.

The definition of “tax avoidance arrangement” [s YA 1] ensures that an arrangement that gives rise to an incidental tax avoidance effect will be subject to the general anti-avoidance provisions except where that effect is incidental to the arrangement. In addition, this definition encompasses an arrangement that gives rise to a tax avoidance effect directly or indirectly. This ensures that taxpayers cannot place themselves outside the scope of the section by arranging for a trustee of a family trust to enter into an arrangement that gives rise to a tax avoidance effect for those taxpayers through the trust.

The provisions also apply whether or not the arrangement can be explained or is referable to ordinary business or family dealings. Previously, the Courts tended to accept the view that if a particular arrangement could be explained by ordinary family or business dealings, the arrangement would be acceptable — no matter how significant the element of tax avoidance was. The reference to ordinary family or business dealings could be put in its proper perspective by the following example: if a farmer transfers his farm outright to his family trust, the CIR’s would views this transaction as falling outside the scope of the avoidance sections as any reduction in tax could be regarded as being merely an incidental feature. On the other hand, if the farmer merely leased a part of the farm to his family trust under a “paddock trust arrangement”, the transaction would fall within the scope of the avoidance sections. The taxpayer could not claim that the significant element of tax avoidance present in the creation of the trust amounted to common practice simply because paddock trusts were so common in his particular area. Similarly, with share transactions, the CIR will accept that, if shares are sold in the ordinary course on the share market, the avoidance provisions will not apply [see 80.22]. However, if shares in a defunct company which has accumulated profits are sold, the CIR would consider that the avoidance sections may apply as tax avoidance is more than an incidental feature of the transaction. Again it would not be open to the taxpayer to argue that the selling of shares in these circumstances is so common that it would amount to ordinary business dealing and therefore explain the avoidance.

To sum up, the whole effect gives a close parallel to what Woodhouse J said in Elmiger v Commissioner of Inland Revenue [1966] NZLR 683 (SC):
“Accordingly it is my opinion that family or business dealings will be caught … despite their characteristics as such, if there is associated with them the additional purpose or effect of tax relief … pursued as a goal in itself and not arising as a natural incident of some other purpose.”

**80.20 Adjustments arising through the general income tax anti-avoidance provisions** [s GA 1]

Section GA 1 provides the following rules:

(a) Where an arrangement is void in accordance with s BG 1, the amounts of assessable income, deductions tax losses and tax credits included in calculating the taxable income of any person affected by that arrangement may be adjusted by the CIR in the manner the CIR thinks appropriate, so as to counteract any tax advantage obtained by that person from or under that arrangement;

(b) Without limiting the generality of this subsection, the CIR may have regard to such amounts of income, deductions tax losses and tax credits as, in the CIR’s opinion, that person would have, would in all likelihood have, or might be expected to have if that arrangement had not been made or entered into; and

(c) If the CIR includes any amount of income or deduction in calculating the taxable income of any person, it must not be included in the calculation of the taxable income of any other person.

In ordinary circumstances, the CIR considers that the income:

(a) Is assessable to the party who has attempted to divert the income; and

(b) Is assessable to that person as and when the income is derived by the other party to the arrangement.

However, there is specific provision made for dividend stripping in s GB 1) [see 80.22].

In *Miller v Commissioner of Inland Revenue* (1998) 18 NZTC 13,961 (CA), the Court reviewed the CIR’s use of s 99 of the ITA 1976 (now ss BG 1 and GA 1) to treat as void and to reconstruct two examples of an arrangement designed and marketed by Mr J G Russell.

Under this arrangement, a group of companies having tax losses bought a profit-making company from the plaintiffs. The plaintiffs largely retained control over their profit-making company, which continued to trade normally and make taxable profits. The loss company then offset those tax losses against the taxable profits of the profit-making company in order to reduce the group’s total income tax liability. The plaintiffs received their former company’s profits by way of loan repayments from the group, who had funded the purchase by mortgaging the shares in the plaintiffs’ company to the plaintiffs. Some of the profits went to the owners of the tax-loss company, and other payments and business arrangements occurred.

The CIR considered that the purpose and effect of the arrangement was tax avoidance, and applied the general income tax anti-avoidance provision [ITA 1976, s 99] to void this arrangement and assessed the profit-making company for tax that would otherwise have paid in the absence of the tax avoidance arrangement. However, because of risk that the profit making company would be stripped of its assets to leave it in a position of being unable to satisfy the assessed income tax liability, the CIR also assessed the plaintiff shareholders directly.

The taxpayers appealed, seeking a judicial review of the administrative processes in arriving at these assessments.

In reviewing the administrative processes involved, the Court of Appeal held that:

(a) The CIR’s assessment and process in arriving at the assessment were reasonable actions and as such, the motivations underlying the assessment were proper.

(b) Unless the assessments were invalid on other grounds, they could not be challenged except in objection proceedings.

(c) There was no reason why, if two taxpayers are liable in the alternative, the CIR should not select the more likely to be able to pay.

(d) To apply the general income tax anti-avoidance provision, the CIR must first come to a view on the legal nature or character of an arrangement. Following this, the CIR must form the view that the
purpose or effect, or a more than incidental purpose or effect of the arrangement is tax avoidance, and then decide how the arrangement is to be reconstructed.

(e) Where the CIR disallows a deduction for losses under the loss grouping rules [see 940 LOSSES], this does not prevent the CIR from assessing another party under the general income tax anti-avoidance provisions to counteract any tax advantage under a tax avoidance arrangement.

80.22 Share sales affected by the general income tax anti-avoidance provisions [s GB 1]

Section GB 1 provides the anti-avoidance rules for dividend stripping. The rules apply where, during an income year, a person disposes of shares in a company and the disposal is part of a tax avoidance arrangement. If some or all of the consideration that the person derives from the disposal is in substitution for a dividend that the person would have, in all likelihood would have, or might be expected to have derived, that amount is treated as a dividend derived by the person. The derivation of the dividend is deemed to occur in the income year in which the disposal occurs.

**TaxNote:** The sales of shares will not be caught unless tax avoidance was something more than a merely incidental purpose or effect of the sale. The provisions operate to assess so much of the full consideration as could be expected to have been received by way of dividends in the ordinary course of events. The dividends are deemed to be derived as and when the consideration is received and not as and when dividends are declared by the company in which the shares are sold.

**Example:**

A owns all the shares in X Ltd which has capital of $1,000 and accumulated profits of, say, $2,000. He is paid $2,800 for his shares which is calculated as 100 per cent of the capital and 90 per cent of the accumulated profits. The question is whether $2,000 is treated as dividends or $1,800. A literal interpretation is that the taxpayer in this case would be assessable on $2,000 and not $1,800.

In *Miller v Commissioner of Inland Revenue* (1998) 18 NZTC 13,961 (CA), the Court held that the CIR is not obliged to apply the dividend stripping rule to a tax avoidance arrangement if the CIR considers that another form of construction is preferable under s GA 1.

In *TRA Case P34* (1992) 16 TRNZ 836, these provisions were invoked and upheld by the TRA when an arrangement was entered into whereby a third company passed the consideration to the shareholders on a change in shareholdings in two other companies. The effect of the transactions was in the nature of tax avoidance and not mitigation. This was so because the effect of the arrangement was simply to reduce the taxpayers’ tax liability without involving them in any loss or expenditure which entitled them to that reduction.

80.25 Inland Revenue policy on general income tax avoidance

The CIR has issued interpretation guidelines for identifying a sham in TIB vol 9:11 (November 1997) at 7-8. The TIB gives the essential features of a sham, which are summarised here:

(a) There must be a common intention between parties to the sham that the acts done or documents executed do not create the legal rights or obligations which they appear to create.

(b) A sham is the act done or document executed that is intended to deceive a third person.

(c) A sham may exist at the commencement of an act or the execution of a document or emerge over time.

(d) Where a portion of a transaction is a sham, its effect is limited to that portion. The rest of the transaction is not considered a sham.

(e) To decide whether a transaction is a sham or an effective transaction, the character of the legal arrangements entered into and carried out must be considered. In considering the genuineness of the agreement (as evidenced by the documents), it is necessary to consider whether the meaning of the transaction in the documents is the true meaning, or not the true meaning, and whether the documents conceal the true nature of the transaction.
Avoidance

A Court will do its best to give effect to the intentions of the parties. There is no sham where transactions are intended to take effect and do take effect between the parties for example, where the transactions have the effect of fraudulently preferring one creditor to others, even if this result was deliberately planned. The transaction cannot be construed as giving a false or misleading impression to a third party.

A policy statement on how the CIR applies the general anti-avoidance legislation was released in February 1990: TIB vol 1:8 (February 1990). The focus of the policy is to evaluate arrangements in terms of whether they frustrate the underlying scheme and purpose of the relevant legislation. The CIR approach is to make a careful and thorough analysis of:

(a) The underlying scheme and purpose of the Act as a whole and of the specific provision under review;
(b) The arrangement, to ascertain its purpose or effect;
(c) Whether a fair and reasonable inference can be drawn that tax avoidance is one purpose of the arrangement (other than merely incidental); and
(d) Whether following this analysis it can be inferred that the arrangement frustrates the underlying scheme and purpose of the legislation.

Relationship to other sections of the Income Tax Act

The question has been raised as to whether taxpayers run foul of the general anti-avoidance provisions when they take advantage of a specific benefit or allowance expressly provided by the Act itself. Based on dicta from the Courts, the CIR would normally accept that, if taxpayers take advantage of specific provisions of the Act, they are doing no more than establishing their true liability for tax and therefore cannot be said to have avoided any tax in doing so. This is in line with the decision in the Australian case of Cridland v Federal Commissioner of Taxation (1977) 8 ATR 169 (HCA), in which the taxpayer entered into a transaction under which he became a beneficiary of a trust in which the trustees were carrying on business as primary producers. The Australian Income Tax Assessment Act provides that a beneficiary of such a trust is deemed to be carrying on the business of the trustees, with the consequence that the taxpayer became entitled to certain concessions available to primary producers, and so reduced his tax liability. It was held that the Australian anti-avoidance s 260 did not apply because an arrangement, the purpose or effect of which is to qualify a taxpayer for taxation concessions specifically provided by the Act, is not an arrangement having the purpose or effect of tax avoidance. However, if the taxpayer creates artificial situations to take undue advantage of specific provisions in the Act, he could well run foul of the section.

Fiscal nullity doctrine

The “fiscal nullity” doctrine arose from the decisions in WT Ramsay Ltd v Inland Revenue Commissioners (1981) 54 TC 101 (HL) and Inland Revenue Commissioners v Burmah Oil Co Ltd (1980) 54 TC 200 (HL). In effect, the doctrine requires no reference to be made to specific anti-avoidance legislation and merely results in the holding of a transaction ineffective for taxation purposes if its only purpose was to obtain a tax advantage. Application of the doctrine requires both a preconceived series of transactions and steps which have no business or commercial purpose other than that of achieving a tax advantage. The types of transactions subject to the doctrine were extended in Funniss v Dawson (1984) BTC 71 (HL).

The prime importance of the doctrine in New Zealand is that it was applied by the Privy Council in its interpretation of s 99 in Commissioner of Inland Revenue v Challenge Corp Ltd (1986) 8 NZTC 5,219 (PC).

The doctrine was applied in Magnavox Electronics Co Ltd v Hall (1986) BTC 455, where it was held that artificial transactions had occurred which had no purpose other than tax avoidance.

However, in several circumstances English Courts have not applied the doctrine. In Craven v White (1985) BTC 418 (HL), the Court held the doctrine inapplicable as a proper commercial purpose existed for the transaction. Hindsight could not be applied to fix a single purpose of tax avoidance when in reality at the relevant time a dual purpose existed. In Reed v Nova Securities Ltd (1985) BTC 121 (HL), the House of Lords did not apply the doctrine to a transaction where an advantage was sought under a specific statutory
Avoidance provision. The approach of Craven v White has been followed in both Inland Revenue Commissioners v Bowater Property Developments Ltd (1985) BTC 8,071 (HL) and Baylis v Gregory (1986) BTC 22 (EWCA). In Australia, the High Court in John v Federal Commissioner of Taxation (1989) 20 ATR 1, 89 ATC 4,101 (HCA) expressly rejected the doctrine, holding it inappropriate for interpretation of the Australian Income Tax Assessment Act either generally or for a specific provision.

In contrast to the fiscal nullity doctrine, the New Zealand Courts have generally adopted an approach to the effect that the legal character of a transaction is decisive and not the overall economic consequences to the parties. The documents themselves may only be brushed aside if and to the extent they are sham.

The above approach originated in the case of Inland Revenue Commissioners v Duke of Westminster [1936] AC 1 (HL) and has subsequently been approved in the cases of Re Securitibank Ltd (No 2) [1978] 2 NZLR 133 (CA), Commissioner of Inland Revenue v Europa Oil (New Zealand) Ltd [1971] NZLR 641 (PC), and Buckley & Young Ltd v Commissioner of Inland Revenue [1978] 2 NZLR 485, (1978) 3 NZTC 61,271 (CA).

80.45 Leading decisions
(1) The Ben Nevis decision

The Supreme Court case of Ben Nevis Forestry Ventures Ltd v Commissioner of Inland Revenue (2009) 24 NZTC 23,188 (SC), was an appeal from the Court of Appeal case Accent Management Ltd v Commissioner of Inland Revenue (2007) 23 NZTC 21,323 (CA), which was itself an appeal from the High Court decision in Commissioner of Inland Revenue v Accent Management Ltd (2005) 22 NZTC 19,027 (HC). Ben Nevis Forestry Ventures Ltd was a party to that case.

(a) Facts

The case involved investors in a syndicate called “Southern Lakes Joint Venture”, which was involved in forest development in the Southland region. The forest is to be harvested in 2048.

A three-tiered structure was used for the arrangement. The Trinity Foundation Charitable Trust held the shares in Trinity Foundation Ltd, which in turn owned Trinity Foundation (Services No 3) Ltd (“Trinity 3”). Trinity 3 owned the land on which the forest was planted. Southern Lakes Forestry Ltd acted as the agent for the joint venture.

The arrangement involved an occupation licence (and later a licence agreement) between Trinity 3 and Southern Lakes Forestry to carry on the forestry business on the land owned by Trinity 3. This agreement provided for $2,050,518 per plantable hectares in the land (484 ha). The licence term was from 24 March 1997 to 31 December 2048, by which time the cutting and extraction was to be completed. This agreement also set out the priority order for the application of proceeds of sale.

A further payment from the investors to Trinity 3 was payable on 21 March 1997, being the amount of $1,250 per hectare for the establishment of the forest and a further $1,946 per hectare for an option to purchase the land in 2048. Investors were required to pay a further $1,000 each for a lease option and $50 per annum licence fee. The licence premium was to be paid from the eventual sale of the trees.

To cover the contingency that the proceeds would be insufficient to cover the premium cost, insurance was taken out by the individual investors with CSI Insurance Group (BVI) Ltd, which was incorporated in the British Virgin Islands for the specific purpose. The insurance covered any event which prevented the market value at sale being at least $2,050,518 per hectare between the time of the event and 31 December 2048. The insurance premiums payable by the investors were $1,307 per hectare in 1997, and $32,791 per hectare payable on or before 31 December 2047, and $410,104 per hectare on or before 31 December 2047 for Trinity 3. The premium payable by Trinity 3 was to scale dollar for dollar up to a maximum of $1,230,311 per hectare to the extent that the market value of stumpage at 13 December 2047 would be less than $2,050,518 per hectare. The scaling resulted in the CSI being potentially liable for a maximum of only $787,416 per hectare, even though the insured amount was $2,050,518 per hectare.
Avoidance

The obligations of the syndicate members to pay the licence premium and to meet their liability to pay the insurance premium in 2047 were covered by way of promissory notes issued by the members. These promissory notes were secured by way of debenture, thereby giving CSI first rights over the forest.

Deductions claimed by the investors in relation to their proportionate shares in the syndicate were as follows:

1997 income year:
(a) Insurance premiums of $34,098 per hectare being $1,037 paid in March 1997 and $32,791 to be paid in cash terms in 2047; and
(b) A small portion of the licence premium to be paid in 2048 as a depreciation allowance.

1998 income year:
(a) The amortised licence premium figure of about $41,000 per hectare.
(b) Excluding the actual costs of planting and tending trees over which there was no issue, investors had outlaid less than $5,050 per hectare in order to qualify for the deductions (which exceeded $75,000).
(c) This result was achieved by way of the application of specific provisions of the Income Tax Act.
(d) The licence premium gave rise to “a right to use land” which is depreciable property. As such, it is able to be depreciated.
(e) The insurance contract falls outside of the definition of “accrual expenditure” and, therefore, did not need to be spread.

(b) The general anti-avoidance provision

The Court found that the specific provisions in the Act are meant to work in tandem with the general anti-avoidance provision. Ascertaining whether the deployment of a specific provision crosses the line and turns what may otherwise be a permissible arrangement into a tax avoidance arrangement should be firmly grounded in the statutory language of the provisions themselves, rather than seizing on past judicial glosses and elaborations on the statutory language.

Where a taxpayer relies on a specific provision, the taxpayer must satisfy the Court that the provision has been used within its intended scope. If, viewing the arrangement as a whole, use of the specific provision alters the incidence of tax in a way which cannot have been within the contemplation and purpose of Parliament, the arrangement will be a tax avoidance arrangement. In this case, the licence premium fell within the specific provision as “a right to use land” but, viewing the arrangement as a whole, had additional features which caused it to represent, and be part of, a tax avoidance arrangement.

The general anti-avoidance provision does not confine the Court as to matters which may be taken into account when considering whether a tax avoidance arrangement exists, and the significance of relevant factors depend on the particular facts of the case.

A classic indicator of a use of a provision in such a way that it is outside the contemplation of Parliament is the structuring of the arrangement in such a way that the taxpayer gains the benefits of the specific provision in an artificial or contrived way. The ultimate question is whether, viewed in a commercially and economically realistic way, the arrangement makes use of the specific provision in a manner that is consistent with Parliament’s purpose.

(c) The licence premium

The Court found that the expenditure on the licence premium was incurred when the promissory notes were executed. However, the giving of promissory notes before the expenditure was incurred introduced an artificial element to the arrangement. The clarity of the tax advantage was in marked contrast to the prospect of any commercial profit. Thus, it was concluded that the primary, if not sole, purpose of the promissory note was to generate a tax deduction for the licence premium. Also, the timing difference between the incurring of the expenditure on the licence premium and the commercial payment of it, meant that the taxpayers would receive the benefits of tax deductions but probably never incur the real expenditure.
Avoidance

(d) **The insurance**

The Court found that the formation of a special, single purpose, company in a tax haven to undertake the insurance risk, suggested that CSI was not intended to be anything more than a pro forma vehicle for obtaining the anticipated tax benefits. A letter of comfort given to CSI by the Trinity Foundation Charitable Trust provided a substantial element of circularity to the entire insurance arrangement. This led to the inference that the insurance was nothing more than a method whereby substantial tax benefits could be obtained by deducting one lump sum in 1997 for a premium which was not payable in commercial terms until 2047. The insurance arrangements were a material contributor to the whole Trinity scheme being a tax avoidance arrangement.

(e) **Conclusion**

The use by the taxpayers of specific provisions was not within Parliament’s purpose and contemplation when it authorised deductions of the kinds in question. The taxpayers altered the incidence of tax by means of a tax avoidance arrangement which was void as against the CIR. All taxpayers entered into a tax avoidance arrangement simply by virtue of the fact that they became members of the syndicate and parties to the agreements with Trinity 3. Once the existence of a tax avoidance arrangement has been established, all those taxpayers who have benefited from it may be subject to adjustments by the CIR, even where the taxpayer is not aware of the tax avoidance aspect or not directly involved.

(f) **Penalties**

Although the expenditure for the licence premium and the insurance premium satisfied the ordinary meaning of the specific provision, this was not enough on its own. The Court had concluded that the arrangement was clearly a tax avoidance arrangement and therefore the taxpayers took an incorrect tax position. The taxpayers had failed to meet the required standard of “about as likely as not to be correct”. The dominant purpose to be considered is the dominant purpose of the arrangement itself, not the dominant purpose in the minds of each taxpayer. It followed that the taxpayers each took an abusive tax position and were liable for the 100 per cent penalty imposed by legislation.

(g) **Practical application of the Ben Nevis decision**

The approach adopted by the Court in *Ben Nevis* was followed in the High Court case of *Westpac Banking Corporation v Commissioner of Inland Revenue* (2009) 24 NZTC 23,834 (HC). Between 1998 and 2000, Westpac entered into a number of structured finance deals with foreign counter-parties. The CIR was of the view that the transactions amounted to tax avoidance. There were a number of such transactions typically involving Westpac acquiring redeemable preference shares from a subsidiary. This was structured as a sale and buy-back transaction under which the subsidiary was obliged to repurchase the shares at the termination of the arrangement. The shares carried a fixed rate of dividend receivable by Westpac. The dividend, which was calculated to share the tax benefits arising from the deals, was exempt from tax and, due to the operation of the conduit tax mechanism (for most of the transactions) or the foreign tax credit regime (for one of the transactions) and was also relieved from the application of the foreign dividend withholding payment regime. The subsidiary’s obligation to repurchase the shares was covered by a guarantee which Westpac procured from the counter-party in return for a guarantee procurement fee (“GPF”). Westpac borrowed funds to finance the transaction and entered into a swap whereby Westpac paid interest at a fixed rate and received interest at a floating rate. The deductions claimed by Westpac for the funding costs and the GPF exceeded the dividends that it received. However, the tax exempt nature of the dividend resulted in the overall transaction being commercially profitable. Similar transactions were entered into by a number of New Zealand’s major trading banks.

The issue considered by the Court was stated as being whether, by using all of the specific provisions — both the conduit and FTC regimes for income and the interest deductibility provisions for expenditure — Westpac crossed the line and changed the character of the transactions from lawful to unlawful. That inquiry will take into account:

(a) The nature of the contractual relationship between Westpac and the counter-party and the legal effects of the documents;
Avoidance

(b) The economic substance of the transaction (investment or loan);
(c) The structure of the transaction and whether Westpac obtained the benefit of the specific provisions in an artificial or contrived way, including but not limited to:
   (i) The existence and amount of the GPF, the circumstances in which it was agreed, and its objective value – that is, whether it was at a market or commercial rate;
   (ii) The use of a pricing mechanism to fix the dividend rate and in particular whether it provided for the parties to share all of Westpac’s taxation benefits — that is, both cross-border and domestic asymmetries;
   (iii) The cost of funds to Westpac and the profitability of the transaction (both pre and post-tax);
   (iv) The relationship between a transaction and the relevant level of Westpac’s tax shelter or estimated tax ratio;
   (v) The use of currency and interest swaps (both internal and external); and
   (vi) The financial consequences of the transaction.

In respect of the Ben Nevis decision, Harrison J:

(a) Stated that the Ben Nevis and Glenharrow decisions render analysis of previous avoidance case law unnecessary;
(b) Accepted the CIR’s submission that the cases are not a restatement of existing law, and represent a rejection of Richardson J’s juristic scheme and purpose approach in Challenge;
(c) Disagreed with the CIR’s submission that the avoidance provisions only bite once the Court is satisfied that the specific provisions have been complied with;
(d) Referred to the factors for consideration listed at [108]-[109] of Ben Nevis and stated that:
   (i) Ben Nevis represents “a significant shift in identifying the principles to be applied when construing s BG 1, mandating a broader inquiry than was previously required”;
   (ii) “The previous constraints imposed by a legalistic focus, to the exclusion of economic realism, have gone”;
   (iii) Ben Nevis prescribes “a combined form and substance test”;
   (iv) The ratio of Ben Nevis is “designed to prescribe the permissible scope of the substance inquiry”;
(e) Noted Glenharrow’s emphasis that anti-avoidance provisions are concerned with the purpose of the arrangement, not the purpose of the parties. Subjective intention may be relevant to the issue of whether there was (for example) a business purpose for a scheme.

A more comprehensive discussion of the Westpac decision can be found in TIB vol 21:9 (December 2009), at 19-21.

(2) Penny and Hooper v Commissioner of Inland Revenue [2011] NZSC 95

(a) The decision

The taxpayers, both orthopaedic surgeons separately and in different circumstances established structures with common features, a registered company of which the taxpayer was the sole director and in which the shares were held by family trusts. Each then sold their orthopaedic practice, from which they had been deriving a substantial income, to the company for a consideration which included an amount of goodwill. They each became an employee of the company. The practice continued as before but the staff previously employed by the taxpayer were employed by the company, patients were billed by the company (rather than the taxpayer) and equipment and other assets owned (or leased from an associated entity) by the company. From the point (1 April 2000) at which the maximum personal tax rate was increased from 33 cents in the dollar to 39 cents in the dollar, each taxpayer received from his company remuneration well below the level he had earned when he conducted the practice in his own name (the timing was a coincidence that did not go unnoticed by the Courts). The balance of the annual net practice income was distributed to the family trust
as a dividend and taxed at the 33 cent rate for trustee income (or the rate for individual beneficiaries). The effect was the taxpayers and their family were relieved from payment of the additional six cents in the dollar with savings of $20,000 - $30,000 per annum for the each taxpayer in the years in issue.

With respect to the taxpayer, Mr Penny, he established a company/trust structure several years before the increase in the maximum individual tax rate and at a time when he would have obtained no tax advantage from use of the structure. After the tax rate change Mr Penny limited the level of his salary and arranged for his family trust to lend back to him interest free and with no repayment terms, a large part of the distributions of company profits that it received by way of dividend.

The CIR made assessments increasing the taxable incomes of the taxpayers in the years ending 2002, 2003 and 2004 by an amount equal to the difference between the salaries actually paid and what the CIR assessed as commercially realistic salaries. The CIR contended that the taxpayers’ arrangements had the purpose or effect of tax avoidance in terms of s BG 1. In Penny v Commissioner of Inland Revenue [2009] 3 NZLR 523 the High Court held that what the taxpayers did was not an arrangement which had the purpose or effect of tax avoidance. In Commissioner of Inland Revenue v Penny (2010) 24 NZTC 24,287 by a majority, the Court of Appeal held the arrangements to be void against the CIR. The majority found that not only did the arrangements have the effect of altering the incidence of income tax but that was also at least one of its purposes and not merely an incidental purpose or effect. The issue before the Supreme Court was whether the way in which the taxpayers used their corporate and family structures constituted tax avoidance arrangements for the purposes of s BG 1.

The Supreme Court dismissed the taxpayers’ appeal. The case was different from Ben Nevis. In this case the Court found that there was no question of the taxpayers failing to comply with specific tax provisions. The structures they adopted were entirely lawful and did not in themselves involve tax avoidance. The taxpayers were entitled to make this choice. Further, there was nothing unusual or artificial in a taxpayer then causing the company under his control to employ him on a salaried basis. There was no failure to comply with any express requirement of the Act in the setting of the salaries since there is none. This was a case in which, compliance in other respects being accepted, the Court found it possible to move straight to s BG 1 and ask whether the use of the structure which was adopted when the salaries were fixed was beyond parliamentary contemplation and resulted in a tax avoidance arrangement.

The Court said that tax avoidance can be found in an individual step in a wider arrangement. That step, when taken, can make the wider arrangement a tax avoidance arrangement. Where a particular step is done repetitively, such as in this case in the annual setting of the salary levels, the step may or may not amount to a tax avoidance depending on its purpose or effect on each occasion. The question to be asked is why the salary was fixed as it was on a particular occasion. Whether that involved tax avoidance can be answered by looking at the effect produced by the fixing of the level of the salary in combination with the operation of the other features of the structure.

The Court noted that the fixing of the low salary enabled most of the profits of the company from the practice to be transferred by way of dividend straight through to the trust, avoiding payment of the highest personal tax rate, and then used by the trust for the taxpayer’s family purposes. Neither taxpayer was a trustee; however the Court noted, they could, naturally expect that the trustees would act (and did act) so that the benefits of the use of the funds would be secured without the impost of the highest personal tax rate.

The Court did find another purpose of the arrangements (the protection of assets from professional claims). However, that was not seen as the sole or dominant purpose because of the protection already in place through the combination of the accident compensation scheme and insurance cover. That was demonstrated by Mr Penny’s preparedness to borrow money back (never having left his hands) regardless of the supposed risk to him of claims by patients. Their Honours could also infer a genuine desire to build up assets for the benefit of the family in both cases. The tax advantage was, objectively one of the principal purposes and effects of each arrangement. The taxation advantage produced by the fixing of the salaries at low levels could be seen as the predominant purpose.

In response to a submission for the taxpayers that it was considered to be revolutionary, their Honours referred to the decision of Peate v Commissioner of Inland Revenue (1962-1964) 111 CLR 443 (HCA). Peate’s case
Avoidance

involved incorporation and the use of family trusts by medical professionals and was held to be tax avoidance in both the High Court of Australia and the Privy Council. It was observed that it was not the novelty of doctors trading through corporate structures in the 1950s which caused what they did to be regarded as tax avoidance but, rather, the way in which they used those structures to obtain tax advantages, in particular by the fixing of the salary levels.

The Supreme Court accepted the taxpayers’ contention that there was no concept of a commercially realistic salary to be found in the ITA and that it does not require that an employee be remunerated on such a basis. However, the Court stated that what the Act does require of taxpayers, is that they should not structure their transactions with a more than merely incidental purpose of obtaining a tax advantage unless that advantage was in the contemplation of Parliament, such an example being found in the setting up of Portfolio Investment Entities. It is appropriate for the CIR to examine whether a salary has been set at a certain level on a commercial basis or for family reasons in which the tax consequences played no more than an incidental role. If the salary is not commercially realistic or, objectively, is not motivated by a legitimate (non-tax driven) reason, it will be open to the CIR to assert that it was, or was part of, a tax avoidance arrangement.

(b) Revenue alert

The CIR has issued a revenue alert RA 11/02 updating his view regarding the diversion of personal services income by structuring activities through an associated entity such as a company or trading trust. The main conclusions reached by the CIR are:

(a) The use of a structure such as a company or trust does not, of itself, give rise to revenue concerns. However, it does provide opportunities for the diversion of income.

(b) Whether or not such a diversion of income is legitimate requires a focus on whether the individual controller of the structure is adequately compensated for his or her skills and exertion. If the person is not adequately compensated, whether there are any valid commercial reasons for the low level of remuneration. Such reasons could include, for example, low business profitability or the need to retain profits in the business for future use.

The full text of the revenue alert can be found in TIB vol 23:8 (October 2011) at 4-7.

(3) White v Commissioner of Inland Revenue (2010) 24 NZTC 24,600 (HC)

In arriving at his decision in this case, Heath J distinguished the Court of Appeal case Penny (see above). The decision provides useful guidance regarding the practical application of Penny and the meaning of the closing comments of Randerson J in that case.

The High Court has overturned the TRA’s finding in TRA Case Z24 (2010) 24 NZTC 14,354 that an arrangement whereby the taxpayer, an anaesthetist who had incorporated a company to employ her, in respect of her private work, and to lease two avocado orchards and into which she paid all her private practice income, was a tax avoidance arrangement.

The orchards ran at a loss during the 2003 and 2004 tax years. Those losses were offset against the company’s income which was derived principally from the taxpayer’s personal effort. The taxpayer received no salary from the company for her services during those years and, as a consequence, she paid no tax for the relevant period. The CIR reassessed the taxpayer on the basis that the transactions in that period represented an arrangement that was void in terms of s BG 1. The taxpayer contended that she took a legitimate advantage of a provision entitling her to use a company structure in the way she did and that the Act allows individual taxpayers to establish closely held companies, by which they may be employed. The taxpayer contended that she did not declare a salary because the company had no money to pay.

After discussing Westpac, Ben Nevis, Glenharrow and Challenge Corporation v Commissioner of Inland Revenue [1986] 2 NZLR 513 (CA) Heath J said:

“… it follows that evidence of a subjective nature from the taxpayer and others may assist the Court in determining issues of avoidance. However, its use must be restricted to providing the context in which the arrangement was brought into being, in order to assist the Court to understand any genuine commercial arrangements involved.”
Heath J noted that the companies operated by the taxpayers in *Penny* had sufficient monies to pay salaries. That was not the position in this case. The taxpayer, as in *Penny*, also claimed that the possibility of exposure to litigation not covered by accident compensation legislation as the reason for the new financial structure. Citing *Ben Nevis*, Heath J considered it was necessary to look at the nature of the alleged arrangement and how it was carried into effect to determine whether its purpose or effect was to obtain an impermissible tax advantage.

Heath J found that, at the time the arrangements were entered into, the taxpayer did not expect there would be financial losses caused from the business activities. He further stated:

"... the reason that no money was available for Wharfedale [the company] to pay a salary to Dr White was because income had to be diverted to pay real (not contrived) debts. To adopt Woodhouse P’s comments in Challenge Corporation Ltd v Commissioner of Inland Revenue, Dr White formed and used a closely held company to obtain a tax advantage in a manner that was not inconsistent with the purpose for which the use of such a company was allowed. In arranging her affairs in that way, Dr White did nothing more than obtain the tax advantage that Parliament intended would follow to someone in her position."

Heath J went on to say that:

"The 'close company' regime specifically allows small family companies and their shareholders to account for the tax payable on the salary of a shareholder-employee under the provisional tax regime, rather than the PAYE system. The ability of a shareholder-employee to defer receipt of salary until the end of the tax year necessarily means there may be some circumstances in which it will be necessary, in fragile financial circumstances, for the working shareholder to donate his or her time, if funds are not available to pay proper remuneration."

It was considered that the Court of Appeal in *Penny* had accepted that a company and trust could be used in cases in such similar fact circumstances. *Penny* could be distinguished because this was not a case where a reduced salary was deliberately paid. A salary was not paid to the taxpayer because the company lacked the funds. Heath J stated:

"In my view, the possibility of unexpected losses that could result in salaries not being paid is expressly contemplated by the ability to use closely held companies to employ individual taxpayers on a provisional basis. Additionally, the evidence in this case was that Dr White did continue to pay provisional tax on the basis of income actually received from source. There is not evidence that Dr White would, inevitably, have received no or a minimal salary from the company in the relevant tax years."

The taxpayer’s arrangement was considered to be, (using the words of Ellen France J in *Penny*) “acceptable business practice and the opposite of artifice or contrivance”. Heath J cited the Court of Appeal in *Grieve v Commissioner of Inland Revenue* [1984] 1 NZLR 101, (1984) 6 NZTC 61,682, (1983) 6 TRNZ 461 (CA):

"It is not for the Courts or the Commissioner to confine the recognition of businesses to those that are always profitable or to do so only as long as they operate at a profit."

It was considered that, although the comments above were made in the context of what constituted “business”, it also gave an insight into the scheme and purpose of the ITA.

Heath J concluded that, at the time the arrangements were put in place, there was a realistic expectation of sufficient profit to pay the taxpayer a salary from which she would pay tax and that the main factor that contributed to the company making the losses was not foreseeable. This was supported by the taxpayer continuing to pay provisional tax on the pre-existing basis. It was a “permissible” tax advantage. The fact that the company happened to make a loss does not result in what would otherwise be an acceptable business arrangement being characterised as artificial or a contrivance: He stated:

“While the effect of the arrangement was (for unseen reasons) to negate the need for Dr White to pay income tax, the purpose was not to obtain an impermissible tax advantage. In my view, the purpose or effect of the arrangement was not to avoid payment of tax, having regard to the way in which the authorities have defined the words “purpose or effect”, as a composite phrase."
Avoidance

Even if that conclusion is wrong, I consider that purpose or effect was “merely incidental” and therefore falls outside the scope of the definition of tax avoidance.”

(4) Alesco New Zealand Ltd v Commissioner of Inland Revenue (No 2) [2011] NZHC 1750

In 2002, the Australian listed company, Alesco Corporation Ltd (Alesco Corporation) raised around $85 million through debt and equity financing to enable its nominated purchaser, Alesco New Zealand (the taxpayer) to purchase two New Zealand businesses. With a view to securing the most tax effective means of financing the transactions and following receipt from its tax advisers Alesco Corporation used a form of zero coupon optional convertible notes (OCNs) to record payments amounting to $78 million to the taxpayer. The OCNs were interest free and at maturity could be converted into ordinary shares in the taxpayer or be redeemed for cash at an amount equivalent to the issue price.

Under the provisions of Determination G22, each OCN contained debt and equity components which Alesco Corporation was advised would allow the taxpayer to claim interest deductions in accordance with the methodology set out in the determination. Note that the arrangement pre-dated the release of Determination G22A which prohibits this treatment where the issuer and subscriber are members of the same wholly-owned group of companies.

The CIR disallowed the interest deductions and loss offsets claimed by the taxpayer on the grounds that it was a tax avoidance arrangement. Heath J dismissed the taxpayer’s challenges finding the OCNs to be nothing more than a means of obtaining tax benefits. His Honour concluded:

(a) **Artificiality** - There was no commercial purpose served by the taxpayer providing an option for Alesco Corporation to convert the debt to shares; There was no negotiation between the parties as there would be in an arm’s length transaction. Rather, the terms were crafted to secure the tax advantages and were therefore artificial.

(b) **Economic cost** – There was no economic cost incurred by the taxpayer. There was no commercial reason for a wholly owned subsidiary to issue an OCN to its parent company at par.

(c) The option element had no practical purpose or value because Alesco Corporation already owned the taxpayer.

(d) **The deductions claimed were not within parliamentary contemplation** – There was an absence of any match between expenditure incurred and income to be returned.

**TaxNote:** This decision has been appealed. The appeal may be heard by the Court of Appeal sometime in August or September 2012. There are similar financing structures used by 15 other taxpayers who have challenged the CIR’s decision to treat the arrangements as tax avoidance arrangements. The total amount in dispute in all these cases is said to be over $300 million. Agreement has been reached between some of the taxpayers and the CIR whereby the parties have undertaken to be bound by the ultimate outcome of the Alesco litigation after the appeal processes have been exhausted. See Telstra New Zealand Holdings Ltd v Commissioner of Inland Revenue [2012] NZHC 101.

**TaxNote:** In late 2011, Inland Revenue released Draft Interpretation Statement INS0121: Tax Avoidance and the Interpretation of Sections BG 1 and GA 1 of the Income Tax Act 2007, which sets out the CIR’s view of the correct approach when considering the application of s BG 1 and the adjustment power in s GA 1. The statement discusses:

• Issues relating to “arrangement”;
• The statutory definitions relating to tax avoidance;
• The Parliamentary contemplation test from Ben Nevis Forestry Ventures Ltd v Commissioner of Inland Revenue [2008] NZSC 115;
• Factual features that might indicate tax avoidance;
• The “merely incidental” test; and
• The adjustment power in s GA 1.
The draft interpretation statement also contains comments on some previous judicial approaches and other related avoidance issues. The draft interpretation statement has been released for comment and it is not yet known when it will be finalised or what changes will be made as a result of the consultation.

### 80.50 Other cases

The decision of the Supreme Court in *Ben Nevis* [see 80.45] has rendered many of the previous cases on the application of the general tax avoidance provision superfluous to an examination of the current state of the law on the matter. This view was expounded in the case of *Westpac Banking Corporation* [see 80.45]. Cases post-dating *Ben Nevis* provide guidance on the practical application of the principles laid down in that case. Cases on specific anti-avoidance provisions continue to have some relevance.

1. **Use of LAQC for home ownership**

   Mrs B settled a family trust. Mrs B and her accountant were the trustees. Mrs B and her daughter were the discretionary beneficiaries. An LAQC was incorporated with Mrs B being the sole shareholder and her accountant being the sole director. Mrs B borrowed money from the Public Trust, which she on-lent along with other money to the family trust. The trust then provided an interest-bearing loan to the LAQC. The LAQC used the funds to acquire a residential property. The borrowings from the Public Trust were secured by way of a mortgage granted by the LAQC. The trust entered into a tenancy agreement with Mrs B. Mrs B paid $300 per week to the Public Trust in respect of her borrowings. The LAQC treated this as rental paid to it. The LAQC returned tax losses for the rental activity. These losses were attributed to Mrs B which reduced her tax liability. Judge Barber stated that the *Ben Nevis* decision constitutes a comprehensive statement of law of income tax avoidance in New Zealand. His Honour went on to determine that the arrangement entered into by Mrs B was not of a kind that would conceivably have been contemplated by Parliament when enacting the LAQC and deduction provisions. He found that the arrangement was artificial and contrived, allowed for deductions that would otherwise be private or domestic and therefore non deductible, and constituted a tax avoidance arrangement that was void.

2. **Use of company structure to divert personal exertion income**

   *Russell v Commissioner of Inland Revenue* (2010) 24 NZTC 24,463 (HC)

   The taxpayer appealed the TRA’s decision in *TRA Case Z19* (2009) 24 NZTC 14,217 finding that he was involved in a tax avoidance arrangement and that he obtained a tax advantage from that arrangement. The taxpayer was assessed with the income of a partnership that he controlled. The partnership was involved in a tax avoidance arrangement based on a template. Under the template arrangement, the partnership would receive consultancy fees from trading companies in the template group. The income of the companies in the group would be offset against losses of loss companies in the group. Those loss companies would be acquired by the taxpayer when insolvent and, after obtaining control, the taxpayer purported to trade the insolvent companies under agency and management agreements. The taxpayer’s personal exertion income was treated as income of the partnership diverted to the loss companies under the agency and management agreements. The taxpayer’s personal exertion income was treated as income of the partnership diverted to the loss companies under the agency and management agreements. Surpluses or net profits from those untaxed monies were forwarded daily from that partnership to the group finance companies. All the entities were controlled by the taxpayer, who directed the use of those funds. The finance companies acted as bankers to the taxpayer’s template group of companies and other entities; and all cash in the group was used at the taxpayer’s direction, including the business income of the partnership. On a yearly basis, there were changes to the companies which made up the partnership, and the loss companies were replaced when losses were extinguished.

   The taxpayer’s appeal was dismissed. Wylie J found that the taxpayer structured the arrangement in order to gain a tax advantage in an artificial and contrived way. He set up a complex corporate structure so as to divert income from his personal exertions, whether generated either directly or indirectly through his control of the employees, into companies who were able to access the losses in the unrelated companies to avoid paying income tax. Overall, the most relevant factor was that the taxpayer controlled everything. Although the taxpayer did not directly receive any of the income generated by the arrangement, it was considered that he...
Avoidance was affected by the arrangement because he obtained a tax advantage by not paying tax on the income he would have earned but for the arrangement. It was concluded that the steps taken by the taxpayer to divert the income generated by his personal exertions into the CM partnership was not within the contemplation of Parliament. Parliament’s intention being that individuals should pay income tax at the appropriate rate on their net income.

(3) Use of loans rather than profit distributions

Krukziener v Commissioner of Inland Revenue HC Auckland CIV-2010-404-728, 17 September 2010

The case concerned a property developer who operated his business through a series of trading trusts. As a development project was completed, the profits were distributed to the next trust which, by then, had commenced another development and was in a start-up loss position. In all, over 80 development projects were undertaken in this manner. Rather than take a salary, the taxpayer funded his living expenses from interest-free loans made to him by the various entities in the “group”. Effectively, the businesses were paying interest on borrowings to fund the taxpayer’s interest-free loans which totalled over $5 million over a nine-year period.

The matters considered by the Court were:

(a) Was there an arrangement and, if there was, was it tax avoidance or was the tax advantage merely incidental?
(b) Were some years time barred as against the CIR?
(c) Were penalties correctly imposed?

In answer to the first question, the Court found that there was a plan that the taxpayer would not repay any loan unless there was a capital distribution available from which to make the repayment, thus ensuring that no taxable income was derived by the taxpayer. Her Honour said:

“Where the proprietor of a business has expended time and effort on a project, and incurred debt waiting for the project to be completed, and the project is completed at a profit, there would seem to be no legitimate reason for some of that profit not to be distributed. The need of the next project for funds does not preclude such distribution since it is always open to the proprietor of the business to advance funds for the next project. In the circumstances of this case, therefore, I do not accept that the level of income provided to Mr Krukziener over such a long period can be regarded as legitimate.”

Her Honour found the arrangement to be tax avoidance.

In answer to the second question, the Court found that the nature of the income was loans from the trusts. As these had not been disclosed in a return of income, the time bar did not apply [TAA, s 108(2)].

On the matter of shortfall penalties, the Court found that tax benefits were the dominant purpose of the arrangement and that the taxpayer had taken an abusive tax position.

80.60 Specific income tax anti-avoidance provisions

Various specific anti-avoidance sections exist in the legislation, as follows:

(a) Section GB 1 allows the CIR to tax the proceeds from the sale of shares in a dividend stripping arrangement [see 80.22];
(b) Section GB 2 allows the CIR to arbitrarily calculate income for businesses controlled by non-residents as a percentage of either receipts or payments [see 1000 NON-RESIDENTS AND ABSENTEES];
(c) Section GB 3 allows the CIR to determine that the required shareholder continuity provisions have not been met in the carry forward of losses by a company [see 940 LOSSES];
(d) Section GB 4 allows the CIR to strike down contrived shareholder commonality percentages brought about to allow offset of losses within companies in a group [see 940 LOSSES];
(e) Section GB 5 allows the CIR to strike down the continuity provisions where shares are held in trust and there are changes to the beneficiaries in the trust brought about to defeat the application of the shareholder continuity provisions [see 940 LOSSES];

(f) Section GB 6 allows the CIR to strike down contrived shareholdings intended to defeat the shareholder requirements for qualifying companies [see 1160 QUALIFYING COMPANIES];

(g) Section GB 7 allows the CIR to count the shareholdings of nominees which are intended to defeat the application of the controlled foreign companies regime [see 850 INTERNATIONAL TAX REGIME];

(h) Section GB 8 allows the CIR to strike down arrangements intended to defeat the application of the controlled foreign companies attributed repatriation provisions [see 850 INTERNATIONAL TAX REGIME];

(i) Sections GB 9 to GB 14 allow the CIR to defeat variations in control and income interests in foreign companies [see 850 INTERNATIONAL TAX REGIME];

(j) Sections GB 15 and GB 16 allow the CIR to defeat arrangements for elections made for attributed foreign income and foreign investment fund income [see 850 INTERNATIONAL TAX REGIME];

(k) Sections GB 17 to GB 19 allow the CIR to defeat arrangements in acquiring film rights [see 460 FILM INDUSTRY];

(l) Section GB 20 allows the CIR to defeat arrangements in petroleum mining [see 980 MINING COMPANIES AND OPERATORS];

(m) Section GB 21 allows the CIR to defeat arrangements involving the financial arrangements rules [see 470 FINANCIAL ARRANGEMENTS];

(n) Section GB 22, allows the CIR to see through trust arrangements where persons other than beneficiaries derive a benefit from the trust [see 1420 TRUSTS AND ESTATES];

(o) Sections GB 23 to GB 25 which allow the CIR to disallow the payment of excessive remuneration to associates [see 170 COMPANIES AND 270 DIVIDENDS];

(p) Section GB 26 allows the CIR to defeat arrangements regarding the repatriation of commercial bills;

(q) Sections GB 27 to GB 29 which, in defined circumstances, attribute income from personal services to the person who provided the effort [see 740 INCOME ASSIGNED OR ALIENATED];

(r) Section GB 30 allows the CIR to treat amounts as being consideration under a restrictive covenant;

(s) Section GB 31 allows the CIR to look through arrangements whereby a motor car which is provided as a fringe benefit is acquired from an associated person, and to look through any other arrangements to defeat the fringe benefit tax regime [see 540 FRINGE BENEFIT TAX];

(t) Section GB 32 allows the CIR to deem fringe benefits provided to associates of employees to have been enjoyed or received by the employee [see 540 FRINGE BENEFIT TAX];

(u) Section GB 33 enables the CIR to disallow a depreciation deduction outside the intended provisions [see 250 DEPRECIATION];

(v) Sections GB 34 to GB 41 allow the CIR to strike down arrangements to defeat the imputation regime, the dividend withholding payment regime and the branch equivalent payment account regime [see 670 IMPUTATION];

(w) Sections GB 42 and GB 43 allow the CIR to counter arrangements to defeat the Maori Authority credit account provisions;

(x) Allows the CIR to strike down any arrangements to defeat the family support provisions [see 420 FAMILY ASSISTANCE];

(y) Sections GB 45 to GB 48 allow the CIR to counter arrangements involving money not at risk such as limited-recourse or non-recourse loans;
(z) Section GB 49 allows the CIR to strike down arrangements involving returning share transfers [see 1340 SHARE SALES]; and

(za) Section GB 50 allows the CIR to substitute a market value amount for the consideration under an arrangement entered into by a partner in a partnership.
Bad Debts and Bad Debts Reserves

Chapter 90

Bad Debts and Bad Debts Reserves

90.10 Statutory provisions [ss CG 3, DB 31]

A deduction for a bad debt is allowed only to the extent that the debt has been written off as bad in the income year [s DB 31]. In order to be deductible, a debt must therefore be bad [see 90.20] and it must be written off in the income year in which the deduction is claimed [see 90.30].

Any bad debts written off which are subsequently recovered must be included in assessable income in the year in which they are recovered [s CG 3]. The taxpayer must keep the necessary records to support the write-off [see 90.30]. If the bad debt relates to an amount owing under a financial arrangement, a deduction is allowed only if certain additional requirements are met [see 90.50].

90.20 When debts are bad

It is a question of fact whether or not a debt is bad and it depends in each case on the prospects of recovery. It is not possible to formulate any rules by which it may be determined as a matter of law whether a debt is a bad debt. It has always been contended by Inland Revenue that to obtain a deduction the debt must be bad and must be actually written off. Inland Revenue takes a practical approach to the determination of the stage when a debt becomes bad, but is not prepared to accept a practice of writing-off provisions or percentages of good debts almost immediately they arise and of allocating block percentages of debts as bad throughout various areas of the country without any regard to the facts or probabilities of the case.

It is not necessary to exhaust all available legal remedies before deciding whether a debt is wholly or partly bad, but intrinsically there must be no reasonable or probable expectation of recovery. The debt must be genuinely irrecoverable at the point where the decision is made to write it off. On being satisfied this is the case and a bona fide decision is made and the debt is wholly or partly written off, the position is accepted by Inland Revenue.

In Budget Rent A Car Ltd v Commissioner of Inland Revenue (1995) 17 NZTC 12,263 (HC), a taxpayer company was allowed to write off a bad debt of $2 million even though it had entered into a covenant not to sue the debtor for the amount owing.

In TRA Case S73 (1996) 17 NZTC 7,454, a letter to the CIR advising him that a debt had been written off was accepted as evidence that a debt was bad and had been written off. Judge Willy held (at 7,458) “[t]hat letter is as good an item of evidence as an entry in the taxpayer’s books of account”.

What constitutes evidence that a debt has been written off will depend on the nature of the accounting records maintained by the particular taxpayer.
90.30  Public ruling on bad debts [s DB 31]

The CIR’s policy on writing-off bad debts for income tax and GST purposes is set out in public ruling BR Pub 05/01 [see TIB vol 17:2 (March 2005) at 5-20]. The ruling applies from 1 April 2004 for an indefinite period.

The ruling permits an income tax deduction under s DB 31(1) and an input tax deduction under s 26(1)(c) of the GSTA for a bad debt if the following conditions are met:

(a) An existing debt is owing to the taxpayer;
(b) The debt is adjudged as “bad” when a reasonably prudent commercial person would conclude that there is no reasonable likelihood that the debt will be paid; and
(c) The bad debt is “written off” in accordance with the accounting and record keeping systems maintained by the taxpayer (see below for details).

The key elements of the ruling are that the debt must be both bad and written off before an income tax or GST deduction can be claimed.

(1) Debt must be bad

Whether a debt (or part of a debt) is bad is a question to be determined objectively, rather than by the subjective opinion of any particular individual. The test to be used in deciding whether a debt is bad, is whether a reasonably prudent commercial person would conclude that there is no reasonable likelihood that the debt will be paid. This objective test was outlined by Tompkins J in the High Court decision of Budget Rent A Car Ltd v Commissioner of Inland Revenue (1995) 17 NZTC 12,263 (HC).

At the time of deciding whether a debt is bad, a person will need to have sufficient information to enable a reasonably prudent commercial person to form the view that there is no reasonable likelihood that the debt will be paid. The debt must be more than doubtful. A debt cannot be bad if there is a real and continuing dispute as to whether or not the debt is payable. The facts needing to be gathered depend on the circumstances. While no factor is decisive in itself, factors that are likely to be relevant in considering whether a debt is bad are:

(a) The length of time a debt is outstanding — the longer a debt is outstanding the more likely it is that a reasonably prudent commercial person would consider the debt to be bad;
(b) The efforts that a creditor has taken to collect a debt — the greater the extent to which a person has tried (unsuccessfully) to collect a debt, the more likely it is that a reasonably prudent business person would consider the debt to be bad;
(c) Other information obtained by a creditor — a creditor may have obtained particular information about a debtor (eg through business or personal networks) that would be a factor in leading a reasonably prudent commercial person to conclude that a debt is bad. For example, a creditor may know that the debtor is in financial difficulties and has defaulted on debts owed to other creditors;
(d) A debt may be considered bad if the debtor has died leaving no, or insufficient, assets out of which the debt may be satisfied;
(e) The debtor cannot be traced and the creditor has been unable to ascertain the existence of, or whereabouts of, any assets against which action could be taken;
(f) Where the debt has become statute-barred and the debtor is relying on this defence (or it is reasonable to assume that the debtor will do so) for non-payment;
(g) If the debtor is a company, it is in liquidation or receivership and there are insufficient funds to pay the whole debt, or the part claimed as a bad debt.

A debtor does not need to be insolvent for a debt to be bad (although this will often be the case).

Taxpayers should document and retain evidence to show that their decision to treat a debt as bad was reasonable. Documentation may include noting down the information from which the decision was made that the debt was bad, and keeping copies of any correspondence relating to the debt.
The amount of information required to decide whether a debt is bad depends on the particular circumstances of each case. The test is whether the taxpayer has sufficient information to reasonably draw the conclusion that there is no reasonable likelihood that the debt will be paid, even if further or any recovery action were to be taken.

A debt may be bad even though the taxpayer is still taking action to recover it. Recovery action may be taken for a number of reasons, even though a reasonably prudent commercial person would consider there is no reasonable likelihood that the debt will be paid. It is not essential that recovery action be taken before a decision is made that a debt is bad.

Taxpayers cannot claim an income tax or GST deduction for a provision for doubtful debts. A provision for doubtful debts is an estimate of the amount that will become bad debts in the future. Bad debts are individually identifiable debts that are unlikely to be recovered.

If a creditor has a reasonable expectation that only a part of a debt will be recovered, the part that is unlikely to be recovered is a bad debt.

Example 1:
A supplier has supplied goods on credit to Mr B. Mr B owes the supplier $2,000 for the goods. The supplier knows that Mr B has left town, and that mail addressed to him is returned marked "Gone no address". In this case it is reasonable to assume that the debt will not be recovered. The money owed by Mr B is a bad debt.

Example 2:
A debtor of Mr F is a company in liquidation. Mr F has given the liquidator notice of a debt of $10,000 owed for goods and services supplied. Mr F is an unsecured creditor. The liquidator has held a meeting of creditors. Mr F attended the meeting and received formal notice of the outcome of the meeting. The liquidator has stated that unsecured creditors will probably receive about 45 or 50 cents in the dollar. It is reasonable for Mr F to assume that $5,000 of the total debt is bad. He is entitled to write off that part of the debt that is bad in the income year in which he received the formal notice, and to claim a deduction for income tax and GST purposes.

(2) Debt must be written off
Writing-off the bad debt is important because this will fix the time at which the deduction can be made. There is no requirement that a debt be written off in the year it becomes bad: *Budget Rent A Car Ltd v Commissioner of Inland Revenue* (1995) 17 NZTC 12,263 (HC).

Taxpayers must be able to clearly show that the debt has actually been written off as bad. The bad debt must be “written off” in accordance with the accounting and record keeping systems maintained by the taxpayer. Write-off action would involve, at a minimum, the following action:

(a) By a large corporate or business taxpayer with a computerised bad debts system: an authorised person making the appropriate entry recording the debt as written-off.

(b) By a company (other than the above): an executive or other responsible officer of the company with the authority to do so, making the appropriate bookkeeping entries in the books of account recording the debt as written off.

(c) By a taxpayer (other than a company) with double-entry accounts: an authorised person making the appropriate bookkeeping entries in the books of account of the business recording the debt as written off.

(d) By an unincorporated sole trader or small unincorporated business taxpayer without double-entry accounts: the taxpayer noting, in the bookkeeping records setting out the amount owed by the bad debtor, that the debt has been written off, and the date of the writing off.

The necessary writing off must take place before the end of the income year or GST taxable period in which the bad debt deduction is claimed. Writing-off a bad debt cannot be backdated.

The business records kept by the taxpayer must comply with the requirements of s 22 of the TAA and s 75 of the GSTA.

If a person keeps double-entry accounting records, the bad debt must be struck out of the records on which the double-entry accounts are based. If a debtors ledger is maintained, the writing-off can be clearly shown...
by the authorised persons having made appropriate bookkeeping entries in the debtors ledger. No matter what processes are followed in the course of preparing a person’s double-entry accounts, it is the completion of the appropriate authorised entries actually writing-off a debt which has been judged as bad in accordance with the tests already outlined that is essential to deductibility.

Where a taxpayer does not keep double-entry accounting records and/or does not keep a debtors ledger, the taxpayer must write the debt off according to the form of records used. Whatever the form of records used, those showing the amount owed by the bad debtor must clearly record that the creditor, having made the decision that the debt is bad, has written the debt off accordingly.

Examples of bad debts accepted by the CIR as having been written off are:

(a) If a taxpayer’s only records of debts are copies of invoices issued, placing the invoice in a “bad debts” file and indicating on the invoice whether all or part of the invoiced amount is bad and the date.

(b) If a taxpayer’s only records of debts are copies of invoices and copies of statements of account issued from a duplicate account book, marking the copy of the final statement sent out “bad debt — written off” (noting the amount of the debt that is bad and the date) is sufficient. It would also be sufficient for the taxpayer to place the relevant invoice in a “bad debts” file indicating on the invoice whether all or part of the invoiced amount is bad and the date this was done.

90.40 Debts owing within a group of companies [s DB 31(5)]

A limited deduction for a bad debt is allowed when the taxpayer is a company (referred to as company A) and the debt is owed by another company (referred to as company B) and the amount giving rise to the debt is taken into account in calculating a loss incurred by company B or any other company funded (directly or indirectly) by company B (referred to as company C) and the loss has already been included as a deduction to company A (or any other company which is, at any time in the income year in which company B or company C has the net loss, in the same group of companies as company A).

The deduction is limited to the difference between the debt written off and the amount of the debt included in the loss of the other company that has been offset in the group. This provision prevents a double deduction for the write-off of a bad debt that could, for example, be obtained by taking a bad debt deduction in a subsidiary company and offsetting any resulting loss under the loss grouping rules.

Note: Section DB 31 applies only when the loss is incurred before the income year in which the bad debt is written off. The circumstance when the loss arises in the same income year as the bad debt deduction is covered in s IC 12, which prevents the loss offset to the extent of the bad debt deduction.

90.50 Bad debts under financial arrangements [s DB 31(2)-(5)]

When a bad debt relates to an amount owing under a financial arrangement, a deduction is allowed to the extent that the debt is written off as bad in the income year [see 90.10, 90.30] and if the following additional requirements are met.

A person who derives assessable income from a financial arrangement to which the financial arrangements rules [as defined in s EW 1(2)] apply is allowed a deduction for an amount owing under the financial arrangement if the amount is attributable to that income, and s DB 31(5) [see 90.30] does not apply. A deduction is available for the amount owing under a financial arrangement (ie the capital or principal amount), if the debt is written off as bad in the income year and the person carries on a business for the purpose of deriving assessable income that includes dealing in or holding financial arrangements that are the same as the financial arrangement in question. However, a bad debt deduction is not available for the principal amount when the parties are associated persons.

Trade debts that are financial arrangements will be deductible to the extent that the amount is written off as bad, the financial arrangement is an agreement for the sale and purchase of property or services and the person is in the business of dealing in the property or services that is the subject of the financial arrangement.

A base price adjustment under the financial arrangements rules does not arise merely because a bad debt is written off by the lender.
Bad Debts and Bad Debts Reserves

For further discussion on the deductibility of bad debts under the financial arrangement rules, see the commentary on public ruling BR Pub 05/01 [see TIB vol 17:2 (March 2005) at 15-20].

90.60  **Trade credits** [ss DB 31(1) and (4), EZ 40(2)(b)]
Short-term agreements for the sale and purchase of property are excepted financial arrangements that are not subject to the financial arrangement rules, unless an election is made under s EW 8. Trade debts that are not financial arrangements are subject to general rule in s DB 31(1).
There is no limitation on the deduction for a loss of capital when the trade debt is a financial arrangement and the person carries on the business of dealing in goods and services for which the trade credit is a debt.

90.70  **Bad debts reserve is not deductible** [s DB 31(1)(a)]
A bad debts reserve (provision for doubtful debts) is an amount set aside to account for bad debts, without actually writing-off the bad debts. A reserve for bad debts is not allowed as a deduction.

90.80  **Security payments received** [ss DB 14, DB 15, EW 51]
A security payment is money received by the holder of a security arrangement that relates to a loss suffered for the failure of performance of the arrangement secured. The value of the security payment is assessable. A taxpayer may, therefore, receive a security payment for a loss. However, the loss incurred by the holder of the security arrangement may not be deductible.
When a person receives a security payment to reduce a loss which is not allowable, a deduction of the loss is allowed under s DB 14 but limited to the amount of the security payment received in terms of s EW 51. This offset ensures that no assessable income arises because of receipt of a security payment when the loss reimbursed was not deductible.
A security payment arises when money is paid to the holder of a security arrangement to cover a loss incurred through failure of the secured arrangement’s performance. The payment is taken into account in determining the holder’s income. Expenditure or loss by the person who stood surety is not deductible under s DB 15 if it was due to the actions of the surety person or to an event’s occurrence (or failure to occur) that was actually or potentially subject to the influence of the surety person (or any person who was an associated person during the term of the security arrangement). Alternatively, the loss may not be deductible if the security holder is not in the business of holding or dealing in financial arrangements.
A “security arrangement” means a financial arrangement that secures a party against another person failing to perform the person’s obligations under a secured arrangement. A “secured arrangement” means an arrangement whose non-performance is secured against by a financial arrangement [s YA 1].

90.90  **Bad debts owed to estates** [s DB 32]
A deduction is allowed when a trustee of a deceased person’s estate writes off some or all of a debt owing to the person at their date of death if:
(a) The debt relates to assessable income of the deceased person or the trustee of their estate; and
(b) The debt was written off because it was not recoverable.
The deduction is allowed for the amount of debt written as follows:
(a) First, against trustee income, to the extent of that income for the income year;
(b) Secondly, against beneficiary income, to the extent of assessable income derived in he income year by or in trust for the beneficiary, and to the extent that the amount is chargeable against the capital of the beneficiary; and
(c) Thirdly, against trustee income or income of a beneficiary in the next tax year, as in (a) and (b), and so on.

90.100  **Principles established from case law**
In TRA Case N69 (1991) 13 NZTC 3,541, TRA Case P53 (1992) 14 NZTC 4,370, and TRA Case T48 (1998) 18 NZTC 8,325, the following concepts have been established:
Bad Debts and Bad Debts Reserves

(a) An objective test should be made to indicate whether a reasonable and prudent business person, on the balance of probability, would consider a debt unlikely to be recovered. This does not preclude the taxpayer from continuing to hope for and seek recovery. It is not a criteria that the debt is unlikely to be recovered within 12 months;

(b) The decision to write off the bad debt must be made by an authorised person within the organisation;

(c) The writing-off requires both a business decision and also appropriate writing-off in the books of account or accounting procedures. There is no single formula for the mechanics to write off bad debts. There is no legal requirement for a journal to be maintained; and

(d) The decision and the recording must be made in the financial year. It is too late if it takes place after the end of the financial year.
## Chapter 100

### Bankruptcy

#### 100.10 Profits subsequent to adjudication [s CW 38]

On adjudication, the property of a bankrupt passes to the Official Assignee, who is by law obliged to realise the assets of the bankrupt and apply the moneys received on registration in the manner set forth in the Insolvency Act 1967. The definition of “person” in the ITA 2004 only applies for the purposes of the income equalisation schemes. Accordingly, the new definition of “person” is now found in s 29 of the Interpretation Act 1999 which states:

> “Person includes a corporation sole, a body corporate, and an unincorporated body;”

The Advisory Panel has determined that there is no change in outcome, and no unintended legislative change from the new definition. The new definition of person continues to have all the components of the former definition in the ITA 1994. The former definition of “person” in the ITA 1994 included “a local or public authority”. Accordingly, the Official Assignee is a “public authority”, which comes within the definition of a “person” in the ITA 2004.

Although s CW 38 exempts the income of any public authority, it does not extend to income received in trust. As the income of the Official Assignee is received in trust for the bankrupt person and creditors, the s CW 38 exemption does not apply. However, the Official Assignee can be regarded as an administrator. As the definition of “trustee” includes an executor or administrator the income derived in a bankrupt’s estate is taxed as a trust.

#### 100.20 Losses prior to adjudication

The Official Assignee who carries on a business formerly carried on by the bankrupt is a new taxpayer and consequently is not entitled to carry forward losses incurred by the bankrupt prior to adjudication. Any mortgagee who enters into possession of the bankrupt’s property and who carries on a farming or other business is accountable to the Official Assignee and is similarly unable to carry forward such losses. Where the Official Assignee exercises a right of disclaimer for a mortgaged property, and the property is taken over by the mortgagee, the latter assumes possession as owner.

The bankrupt person is also affected where a debt has been taken into account in arriving at a loss and the taxpayer’s liability for that debt has been remitted or cancelled. The loss to be carried forward is reduced by the amount remitted or cancelled. This precludes bankrupt persons who have entered into compositions with their creditors from setting-off or carrying forward any losses which are represented by cancelled debts. This may not arise where:

(a) The provable debts (or some of them) were non-business debts and, therefore, not related to losses in the business.

(b) The losses available prior to bankruptcy exceed the provable debts.

(c) The provable debts were on capital account.

(d) After discharge from bankruptcy the revenue debts were paid voluntarily. In this case the amounts paid are allowed as a deduction in the year in which payment is made.

See 470 FINANCIAL ARRANGEMENTS for commentary regarding the impact of bankruptcy on the base price adjustment calculation.
**100.30  Preferential claims — tax rankings** [TAA, ss 137, 170, 172]

Income tax is not a preferential claim in bankruptcy or company liquidations. In a liquidation Inland Revenue ranks as an unsecured creditor for income tax on income derived by the company prior to the date of liquidation. Unless the company is solvent, the liquidator may be unwise in paying the income tax immediately merely to avoid late payment penalties, as this would amount to undue preference to one particular creditor.

PAYE tax deductions and non-resident withholding tax deductions are deemed to be held in trust for the Crown. If they are kept separate or can be traced, they do not form part of the bankrupt’s estate. Unpaid deductions not kept separate constitute a charge on the property of the payer.

These amounts do not form part of the assets of the company or bankrupt person and are not available for payment of creditors. In a winding-up or bankruptcy the debt to the Crown ranks, in order of priority, immediately after preferential claims for wages and in priority to all other claims. Similarly, any Resident Withholding Tax withheld is held on trust for the Crown, is not available for the payment of creditors and constitutes a charge on the property of the bankrupt person.

Bankruptcy does not terminate the disputes procedure. Penal tax has been held to be a civil debt provable in bankruptcy and if bankruptcy is subsequent to the imposition of penal tax, Inland Revenue must comply with the Insolvency Act 1967 to recover: TRA Case H85 (1986) 8 NZTC 592.

**100.40 Special returns** [TAA, s 44]

The CIR is empowered to require a person who has become bankrupt to file a special return of income.

**100.50 Unpaid tax** [TAA, ss 177A, 177C, 177CA]

The likelihood that a taxpayer may become bankrupt is excluded from the definition of “serious hardship” for the purposes of the remission and relief powers of the CIR. Any outstanding tax that cannot be recovered must be written off by the CIR but may be reinstated if further funds become available. The write off provisions do not apply to tax or penalties for an abusive tax position or evasion.

Amounts outstanding under an instalment arrangement must be included in the CIR’s proof of debt.
Chapter 115

Binding Rulings

115.10 Types of binding rulings [TAA, ss 91A to 91J]

The CIR is able to make binding rulings on how it applies the taxation laws. The stated purpose of binding rulings is to provide taxpayers with certainty about the way the CIR applies taxation laws and to help them meet their obligations under those laws [TAA, s 91A]. The CIR can issue four types of binding rulings:

(a) Public rulings [see 115.40];
(b) Private rulings [see 115.50];
(c) Product rulings [see 115.60]; and
(d) Status rulings [see 115.70].

Taxpayers cannot apply for public rulings but they can suggest to the CIR any topics that may be appropriate for public rulings. Public and product rulings are available to the public, but private rulings are only available to those who applied for them. Before 1 April 1996 private rulings were only issued for arrangements not entered into as at the date of application. From 1 April 1996 the CIR may also issue private rulings on current and completed arrangements. Status rulings are rulings on how a law change affects a private or product ruling. The legislation dealing with binding rulings is contained in ss 91A to 91J of the TAA and the Tax Administration (Binding Rulings) Regulations 1999.

115.20 Scope of binding rulings [TAA, s 91C]

The CIR can make a binding ruling on any provision contained in:

(a) The Estate and Gift Duties Act 1968;
(b) The Gaming Duties Act 1971;
(c) The Goods and Services Tax Act 1985, except s 12 (imposition of GST on imports) and s 13 (goods liable to excise duty and supplied at “in bond” prices) of that Act;
(d) The Stamp and Cheque Duties Act 1971;
(e) The ITA 1994, except to the extent that the matter in question is or could be the subject of a determination of the CIR:
   (i) In relation to financial arrangements under ss 90 or 90AC of the TAA;
   (ii) In relation to the extent to which a financial arrangement under s 90A provides funds to a party to the arrangement;
   (iii) For determinations in relation to petroleum mining operations under s 91 of the TAA;
Binding Rulings

(iv) For determinations in relation to accrual expenditure under s EF 1(3) of the ITA 1994;
(v) For the setting of basic economic depreciation rates under s EG 4 of the ITA 1994, or for special or provisional economic depreciation rates under s EG 10 of the ITA 1994, or for higher maximum pooling values under s EG 11 of the ITA 1994, or (until the end of the 2001-2002 income year) for the deduction of the remaining adjusted tax value of property that can no longer be used under s EG 12 of the ITA 1994; and
(vi) For the calculation method of specified livestock costs under the national standard cost scheme under s EL 4 of the ITA 1994 or the standard values of non-specified livestock under s EL 9(3) of the ITA 1994.

(f) The ITA 2004, except to the extent that the matter is or could be the subject of a determination of the CIR:
   (i) In relation to a financial arrangement under ss 90 or 90AC of the TAA;
   (ii) In relation to the extent to which a financial arrangement provides funds to a party under the arrangement, under s 90A of the TAA;
   (iii) In relation to petroleum mining under s 91 of the TAA;
   (iv) In relation to livestock under ss 91AAD or 91AAE of the TAA;
   (v) In relation to depreciation under ss 91AAF to 91AAM TAA; or
   (vi) In relation to prepayments under s EA 3(8).

(g) The ITA 2007, except to the extent that the matter is or could be the subject of a determination of the CIR:
   (i) In relation to a financial arrangement under ss 90 or 90AC of the TAA;
   (ii) In relation to the extent to which a financial arrangement provides funds to a party under the arrangement, under s 90A of the TAA;
   (iii) In relation to petroleum mining under s 91 of the TAA;
   (iv) In relation to livestock under ss 91AAD or 91AAE of the TAA;
   (v) In relation to depreciation under ss 91AAF to 91AAM of the TAA; or
   (vi) In relation to prepayments under s EA 3(8) of the ITA 2007.

(h) Any Order in Council or regulation made under s 225 of the TAA or under any of the Acts listed above, except:
   (i) A provision that is or could be subject to a determination of the type listed under (e) or (f) above; or
   (ii) Section RD 24 of the ITA 2007.

The CIR can issue a status ruling on how a change in tax law will affect an existing ruling [TAA, s 91GB]. The CIR may also make a binding ruling on how the CIR will exercise his/her discretion when deciding whether to make a binding ruling. “Discretion” is defined to include the exercising of a power by the CIR, the forming of an opinion by the CIR, or the attaining by the CIR of a state of mind, in relation to a taxation law [TAA, s 91B]. A binding ruling cannot be made on any provision that authorises or requires the CIR to: impose or remit a penalty; inquire into the correctness of a return or other information supplied by any person; prosecute any person; or to recover a debt owing by any person [TAA, s 91C(3)]. The CIR may not make a binding ruling on:

(a) Whether a person meets the eligibility requirements for a research and development tax credit [s LH 3];
(b) Whether expenditure or depreciation is eligible expenditure for the purpose of calculating a research and development tax credit [s LH 4];
Whether an activity is a research and development activity for the purpose of a research and development tax credit [s LH 7; TAA s 91C(4)].

115.30 Applicants with outstanding debts [TAA, s 91J]

The CIR may refuse to issue a private, product, or status ruling to an applicant if the applicant has an outstanding debt (arising on or after 1 June 1999) that relates to an earlier binding ruling application.

An applicant has an outstanding debt if they have not paid the amount stated in an invoice issued by Inland Revenue within 60 days of the date of the invoice.

115.40 Public rulings [TAA, ss 91D, 91DA, 91DB, 91DC, 91DD, 91DE]

The CIR is able to issue a public ruling at any time on how a taxation law applies to a category of person and a type of arrangement. If a public ruling on a taxation law applies to a person in relation to an arrangement, and the person applies the taxation law in the way stated in the ruling, the CIR must apply the taxation law in accordance with the ruling.

A public ruling applies to a person and an arrangement only if all the following conditions are met:

(a) The taxation law is expressly referred to in the ruling;
(b) The arrangement is of the type specified in the ruling;
(c) The arrangement is entered into during the period or tax year for which the ruling applies, or in the case of a ruling issued for an indefinite period, on or after the date, or on or after the first day of the tax year, from which the ruling applies.

A binding ruling does not apply to a taxpayer if the taxpayer has issued the CIR with a NOPA to change the effect of the ruling previously applied by the taxpayer.

The CIR notifies the making of a public ruling by notice in a publication chosen by the CIR. The notice states the subject of the ruling and where a copy of the ruling can be obtained. The CIR must publish each public ruling, in full, in an Inland Revenue publication. It is the CIR’s practice to publish the full text of public rulings in the Tax Information Bulletin. In order to take effect, a public ruling must state:

(a) That it is a public ruling made under s 91D of the TAA;
(b) The taxation law or laws on which it rules;
(c) The arrangements to which the ruling applies;
(d) How the taxation law or laws apply to the arrangement; and
(e) The period or tax year for which the ruling applies, or in the case of a ruling issued for an indefinite period, the date or tax year from which the ruling applies.

The CIR can extend the period for which a public ruling applies by publishing a notice of extension. This notice must state:

(a) That it is an extension of a public ruling under s 91DD of the TAA;
(b) The original period or tax year for which the ruling applied; and
(c) The new period or tax year for which the ruling applies.

The CIR can withdraw a public ruling at any time by publishing a notice of withdrawal in a publication chosen by the CIR. The notice of withdrawal must state:

(a) That it is a withdrawal of a public ruling under s 91DE of the TAA;
(b) The ruling that is being withdrawn;
(c) The original period or tax year for which the ruling applied, or in the case of a ruling issued for an indefinite period, the original date or tax year from which the ruling applied; and
(d) The date of the withdrawal.

The effective date of the withdrawal is the date stated on the notice. It can be no earlier than the date the notice is published. In other words, a withdrawal cannot have effect retrospectively. Once a ruling is
withdrawn, it does not apply to any arrangement entered into after the date of withdrawal but it continues to apply to any arrangement entered into before the date of withdrawal for the remainder of the period or tax year specified in the ruling. If the ruling was issued for an indefinite period, the ruling continues to apply for three years after the date of withdrawal.

For a comprehensive list of the public rulings issued to date [see 3000 BINDING RULINGS].

115.50 Private rulings [TAA, ss 91E, 91EA, 91EB, 91EC, 91ED, 91EE, 91EF, 91EG, 91EH, 91EI, 91EJ]

Any person, either in their own right or on behalf of a person who is yet to come into legal existence, may apply to the CIR for a private ruling on how a taxation law applies, or would apply, to the person (or the prospective person) and to any arrangement (whether a single or recurring arrangement), and the CIR must make such a private ruling. Two or more persons may apply jointly, or a person may apply on behalf of two or more persons who are yet to come into legal existence, for a private ruling on how a taxation law applies, or would apply, to each person and to an arrangement (whether a single or a recurring arrangement). An application for a private ruling must be made on form IR713 and must:

(a) Identify the applicant;
(b) Disclose all relevant facts and documents relating to the arrangement;
(c) State the taxation laws in respect of which the ruling is sought;
(d) State the propositions of law (if any) which are relevant to the issues raised in the application; and
(e) Provide a draft ruling.

The CIR can waive the last three requirements if it would be unreasonable to require the applicant to comply with them. The CIR can also request further relevant information from the applicant.

The CIR can decline to make a private ruling if:

(a) The CIR considers that the correctness of the ruling would depend on assumptions about future events or other matters;
(b) The arrangement on which the ruling is sought, or separately identifiable part of that arrangement, is substantially the same as an arrangement which is subject to objection, challenge, or appeal in relation to the applicant or any other person; or
(c) The applicant has outstanding debts relating to earlier binding ruling applications.

The CIR is not able to make a private ruling if:

(a) The CIR is required to determine a “proscribed question” (unless the application relates to how ss GC 6 to GC 14 or YD 5 applies, or would apply, to the applicant and the arrangement (whether a single or recurring arrangement), for which the ruling is sought). A proscribed question means whether a fact is correct or exists; what a person’s purpose or intention is; what the value of something is; or what commercially acceptable practice is (for the purposes of any provision of the ITA 2007 which refers to the latter concept);
(b) In the CIR’s opinion the arrangement is not seriously contemplated by the applicant; or
(c) The application is frivolous or vexatious; or
(d) The matter on which the ruling is sought:
   (i) Concerns a tax (excluding provisional tax), duty, or levy that is already due and payable, unless the application was received by the CIR before the tax (excluding provisional tax), duty, or levy became due and payable; or
   (ii) Is being dealt with or, in the CIR’s opinion, should be dealt with under a double taxation agreement procedure; or
(e) A private ruling already exists dealing with the same taxation law, person, and arrangement, and the proposed ruling would apply (wholly or partly) to the same period or tax year; or
(f) An assessment relating to the person, the arrangement, and a period or tax year to which the proposed ruling would apply has been made, unless the application is received by the CIR before the date an assessment is made [see TIB vol 20:5 (June 2008) at 13-15]; or

(g) The CIR is auditing or investigating how the taxation law applies to the person and the arrangement for any period or tax year to which the proposed ruling would apply; or

(h) The application is for a ruling in relation to a tax type or a separately identifiable issue, for an arrangement, that is the subject of a NOPA for the arrangement; or

(i) The applicant has not provided sufficient information in relation to the application after the CIR has requested further information; or

(j) The CIR believes it would be unreasonable to make a ruling in view of the resources available to the CIR; or

(k) The application for the ruling requires the CIR to form an opinion as to a generally accepted accounting practice.

If the CIR considers that the correctness of a private ruling would depend on assumptions regarding future events or other matters, the CIR can either make appropriate assumptions when making the ruling or decline to make the ruling. The CIR cannot make assumptions about information which the applicant is able to provide.

The CIR may make assumptions about the answer to a proscribed question, and in doing so, the CIR will not infringe the rule which prevents the CIR from ruling where the CIR has to determine a proscribed question. That is, making assumptions about the answer to a proscribed question does not prevent the CIR from also making the private ruling itself.

If the proposed ruling differs from that requested by the applicant, the CIR must consult with the applicant before making the ruling.

A private ruling must state:

(a) That it is a private ruling made under s 91E of the TAA;

(b) The identity of the person, the taxation law, and the arrangement to which the ruling applies;

(c) How the taxation law applies to the arrangement and to the person;

(d) The period or tax year for which the ruling applies;

(e) Material assumptions about future events or other matters made by the CIR; and

(f) Conditions stipulated by the CIR.

The CIR may stipulate conditions about the answer to a proscribed question, and in so doing the CIR will not infringe the rule which prevents the CIR from ruling where the CIR has to determine a proscribed question. That is, stipulating conditions about the answer to a proscribed question does not prevent the CIR from also making the private ruling itself.

The CIR notifies the making of a private ruling by sending a copy of the ruling to the applicant.

If a private ruling applies to a person in relation to an arrangement and a tax type for an arrangement, and the person applies the taxation law for the tax type in the way stated in the ruling, the CIR must apply the taxation law in accordance with the ruling unless the taxpayer has issued the CIR with a NOPA to change the effect of the ruling previously applied by the taxpayer.

A private ruling applies to a person and an arrangement only if the taxation law for a tax type is expressly referred to in the ruling. A private ruling binds the CIR only for the period or tax year for which the ruling applies. A person cannot apply a private ruling to a tax type for an arrangement to the extent to which, in relation to the tax type:

(a) The arrangement is materially different from that identified in the ruling;

(b) There was a material omission from, or misrepresentation in, the application for the ruling;
115.50(1) Binding Rulings

(c) The CIR makes an assumption about a future event or another matter material to the application of the ruling, and that assumption subsequently proves to be incorrect; or

(d) The CIR stipulates a condition that is not satisfied.

(1) Withdrawal of private ruling

The CIR can withdraw a private ruling at any time by notifying in writing the person to whom the ruling applies. The ruling is withdrawn from the date specified in the notice of withdrawal. This date cannot be earlier than the date on which the person could reasonably be expected to receive the notice.

A status ruling on a withdrawn private ruling ceases to apply from the date specified in the notice of withdrawal.

Once a private ruling is withdrawn, it does not apply to any arrangement entered into after the date of withdrawal, but it continues to apply to any arrangement entered into before the date of withdrawal for the remainder of the period or tax year specified in the ruling.

A status ruling on a withdrawn private ruling continues to apply to any arrangement entered into before the date of withdrawal for the remainder of the period or tax year specified in the private ruling.

(2) Treatment of information

The information supplied by the applicant is the factual basis for the CIR’s ruling. Nevertheless, the CIR may as part of the process of making the private ruling, inquire into the correctness or existence of those facts. Further, the CIR is not prevented from later denying, outside of the ruling process, the correctness or existence of the facts contained in the information supplied by the applicant.

115.60 Product rulings [TAA, ss 91F, 91FA, 91FB, 91FC, 91FD, 91FE, 91FF, 91FG, 91FH, 91FJ, 91FK, 141EC]

Any person, either in their own right or on behalf of an entity yet to come into legal existence, may apply to the CIR for a product ruling on how a taxation law applies, or would apply, to an arrangement or to the consumer of the product and the arrangement. The person making the application (or the prospective person) must intend to be a party to the proposed arrangement or a promoter of the proposed arrangement.

A “promoter” means a person who is a party to, or is significantly involved in formulating, a plan or programme from which an arrangement is offered; or a person who is aware of material and relevant aspects of the arrangement and who sells, issues or promotes the selling or issuing of, the arrangement, whether or not they receive payment for doing so. A person who merely provides legal, accounting, clerical or secretarial services to the promoter is not themselves a promoter.

A “consumer” is a party to the arrangement who is not the applicant.

An application for a product ruling must be made on form IR714 and must:

(a) Identify the applicant;

(b) Disclose all relevant facts and documents relating to the arrangement for which the ruling is sought;

(c) If the applicant is a promoter of the arrangement, make a statutory declaration that all relevant facts and documents have been disclosed, and that all relevant facts are correct;

(d) Explain why it is not practicable to seek a private ruling and why the characteristics of the taxpayers who may enter into the arrangement are not relevant to the content of the ruling;

(e) State the taxation laws in respect of which the ruling is sought;

(f) State the propositions of law (if any) which are relevant to the issues raised in the application; and

(g) Provide a draft ruling.

The CIR can waive requirements (e) to (g) if the CIR considers it would be unreasonable to require the applicant to comply with them. The CIR can also request further relevant information from the applicant.

The applicant may withdraw a product ruling application at any time by notifying the CIR in writing.

The CIR can decline to make a product ruling if:
(a) The CIR considers that the correctness of the ruling would depend on assumptions about future events or other matters;
(b) The arrangement on which the ruling is sought, or a separately identifiable part of that arrangement, is substantially the same as an arrangement which is subject to objection, challenge, or appeal in relation to the applicant or any other person; or
(c) The applicant is a promoter who in the CIR’s opinion, did not comply with the relevant disclosure requirements (see above) in relation to an earlier binding ruling application; or
(d) The applicant has outstanding debts relating to earlier binding ruling applications.

The CIR is not able to make a product ruling if:

(a) The CIR would be required to determine a proscribed question. A proscribed question means whether a fact is correct or exists; what a person’s purpose or intention is; what the value of something is; or what is commercially acceptable practice (for the purposes of any provision of the ITA 2007 which refers to the latter concept);
(b) In the CIR’s opinion, the arrangement is not seriously contemplated by the applicant;
(c) The application is frivolous or vexatious;
(d) The matter on which the ruling is sought is being dealt with or, in the CIR’s opinion, should be dealt with under a double taxation agreement procedure;
(e) A product ruling already exists on how the relevant taxation law applies to the arrangement, and the proposed ruling would apply (wholly or partly) to the same period or tax year;
(f) The applicant has not provided sufficient information in relation to the application after the CIR has requested further information;
(g) The CIR believes it would be unreasonable to make a ruling in view of the resources available to the CIR; or
(h) The application for the ruling requires the CIR to form an opinion as to a generally accepted accounting practice.

If the CIR considers that the correctness of a product ruling would depend on assumptions regarding future events or other matters, the CIR can either make appropriate assumptions when making the ruling or decline to make the ruling. The CIR cannot make assumptions about information which the applicant is able to provide.

The CIR may make assumptions about the answer to a proscribed question, and in doing so the CIR will not infringe the rule which prevents the CIR from ruling where the CIR has to determine a proscribed question. That is, making assumptions about the answer to a proscribed question does not prevent the CIR from also making the product ruling itself.

If the proposed ruling differs from that requested by the applicant, the CIR must consult with the applicant before making the ruling.

A product ruling must state:

(a) That it is a product ruling under s 91F of the TAA;
(b) The name of the person who applied for the ruling;
(c) The taxation law and the arrangement to which the ruling applies;
(d) How the taxation law applies to the arrangement;
(e) The period or tax year for which the ruling applies;
(f) Material assumptions about future events or other matters made by the CIR; and
(g) Conditions stipulated by the CIR.

The CIR may stipulate conditions about the answer to a proscribed question, and in doing so the CIR will not infringe the rule which prevents the CIR from ruling where the CIR has to determine a proscribed question.
That is, stipulating conditions about the answer to a prescribed question does not prevent the CIR from also making the product ruling itself.

The CIR must send a copy of the ruling to the applicant as soon as practicable after the date the ruling is made.

The CIR cannot publish a product ruling until two months after the date the ruling is made unless earlier publication is requested in writing by the applicant. If the applicant requests earlier publication, the CIR must notify the making of the product ruling by notice in a publication chosen by the CIR and publish the product ruling, in full, in an Inland Revenue publication. Only the applicant can obtain a copy of the product ruling before it is published by the CIR.

A product ruling cannot be extended; a fresh application for a product ruling must be made.

If a product ruling applies to a person in relation to an arrangement and a tax type for an arrangement, and the person applies the taxation law for the tax type in the way stated in the ruling, the CIR must apply the taxation law in accordance with the ruling, unless the taxpayer has issued the CIR with a NOPA to change the effect of the ruling previously applied by the taxpayer.

A product ruling on a taxation law for a tax type applies to an arrangement only if the taxation law is expressly referred to in the ruling. A product ruling binds the CIR only for the period or tax year for which the ruling applies. A person cannot apply a product ruling to a tax type for an arrangement, to the extent to which, in relation to the tax type:

(a) The arrangement is materially different from that identified in the ruling;
(b) There was a material omission from or misrepresentation in the application for the ruling;
(c) The CIR makes an assumption about a future event or another matter material to the application of the ruling, and that assumption subsequently proves to be incorrect; or
(d) The CIR stipulates a condition that is not satisfied.

(1) **Withdrawal of product ruling**

The CIR can withdraw a product ruling at any time by publishing a notice of withdrawal in a publication chosen by the CIR. The notice of withdrawal must state:

(a) That it is a withdrawal of a public ruling under s 91FJ of the TAA;
(b) The ruling that is being withdrawn;
(c) The original period or tax year for which the ruling applied;
(d) Any status ruling that applied to the product ruling;
(e) That the status ruling is also being withdrawn; and
(f) The date of the withdrawal.

The effective date of the withdrawal is the date stated on the notice of withdrawal. It can be no earlier than the date the notice is published in the publication chosen by the CIR.

A status ruling on a withdrawn product ruling ceases to apply from the date specified in the notice of withdrawal.

Once a product ruling is withdrawn, it does not apply to any arrangement entered into after the date of withdrawal, but it continues to apply to any arrangement entered into before the date of withdrawal for the remainder of the period or tax year specified in the ruling.

A status ruling on a withdrawn product ruling continues to apply to any arrangement entered into before the date of withdrawal for the remainder of the period or tax year specified in the product ruling.

(2) **Treatment of information**

The information supplied by the applicant is the factual basis for the CIR’s ruling. Nevertheless, the CIR may as part of the process of making the product ruling, inquire into the existence or correctness of those
facts. Further, the CIR is not prevented from later denying, outside of the ruling process, the correctness or existence of the facts supplied by the applicant.

(3) **Product rulings issued**

Copies of product rulings issued to date are available from Inland Revenue. Most product rulings are published in TIBs. All product rulings can be found in Brokers Tax Service or downloaded from Inland Revenue’s website [see www.ird.govt.nz].

115.70 **Status rulings** [TAA, ss 91GA, 91GB, 91GC, 91GD, 91GE, 91GF, 91GG, 91GH, 91GI]

If a taxation law that is stated as applying in a private or product ruling is amended or repealed, the person who applied for the ruling may apply to the CIR for a ruling on whether the law change has affected the way the law applies in the ruling. This type of ruling is called a “status ruling”.

The CIR must make a status ruling on whether the change in a taxation law, that is stated as applying in a private or a product ruling, has changed the way that the law applies in the ruling.

The CIR may make a status ruling on whether the change in a taxation law has changed the way that the law applies in a private or a product ruling, whether or not the application referred to that taxation law.

The CIR may not make a status ruling if:

(a) The application is frivolous or vexatious;
(b) The CIR considers that the correctness of the private or product ruling would depend on which assumptions were made about a future event or other matter; or
(c) The CIR considers that it would be unreasonable to make a ruling in view of the resources available to the CIR.

An application for a status ruling must be made on form IR712 and must:

(a) Identify the applicant;
(b) Identify the private or product ruling on which the status ruling is sought;
(c) State the taxation laws that are stated as applying in the private or product ruling that have been amended or repealed;
(d) State any propositions of law that are relevant to the issues raised in the application; and
(e) Provide a draft ruling.

If the CIR considers that it would be unreasonable to require the applicant to comply with either of the requirements in (d) or (e), the CIR may waive those requirements.

The CIR may at any time request further relevant information from an applicant for a status ruling.

Before the CIR makes a status ruling, the CIR must give the applicant a reasonable opportunity to be consulted if the content of the proposed ruling differs from that requested by the applicant.

A status ruling must identify the private or product ruling to which it applies and state:

(a) That it is a status ruling made under s 91GA of the TAA; and
(b) Whether the amendment or repeal of a taxation law has changed the way that the law applies in the ruling.

The CIR must send a copy of a status ruling to the applicant as soon as practicable after the date on which the ruling is made.

In the case of a status ruling on a product ruling, the CIR must also:

(a) Notify the making of a status ruling by notice in the *Gazette*; and
(b) Publish the status ruling in an Inland Revenue publication.
The CIR must notify the making of and publish a status ruling as soon as possible after the two-month period specified in s 91FH(3) of the TAA has passed, unless the applicant has requested earlier publication of their product ruling.

If a person applies a taxation law in accordance with a status ruling, the CIR must also apply the taxation law in accordance with the status ruling.

The CIR does not have to withdraw and reissue a new ruling to correct a typographical or a minor error if the correction does not change the meaning of the ruling. A ruling that is not withdrawn and reissued remains valid.

115.80 General provisions [TAA, ss 91G, 91H]

A binding ruling ceases to apply from the date a taxation law is repealed or amended, to the extent that the repeal or amendment changes the way the taxation law applies in the ruling [TAA, s 91G].

The fact that an application for a private or product ruling has been made does not release the applicant from the obligation to provide a return, make a tax payment, or do any other act, and does not affect the CIR’s power to make or amend any assessment [TAA, s 91H].

115.90 Fees for private and product rulings [TAA, s 91I]

Regulations prescribing or providing for the fixing of fees payable in respect of applications for private, product, and status rulings are made by Order in Council by the Governor-General. These regulations may specify the persons by whom fees are payable, prescribe specific fees for specific work or services, prescribe a scale of fees or a rate based on the time involved in carrying out the work or services, and allow the CIR to waive, in whole or in part, any fees that are payable [TAA, s 91I].

The Tax Administration (Binding Rulings) Regulations 1999 provide for the payment of fees for status, private, and product rulings as follows:

(a) An application fee of $310 to accompany the application. This fee covers the first two hours of work in processing the application.

(b) A further fee of $155 per hour (or part hour), for any hours in excess of the first two, spent by the CIR in processing the application, including any time spent in consultation with the applicant. This additional hourly fee is not payable for time spent by the CIR in considering:
   (i) The apportionment of income or expenditure under s YD 5 [see 1000.105]; or
   (ii) The determination of an arm’s length amount of consideration under ss GC 6 to GC 14 [see 1000.140].

(c) The reimbursement of any fees paid by the CIR for external advice sought, or of any costs and reasonable disbursements incurred by the CIR in relation to the ruling.

(d) If an application for a ruling is withdrawn, the applicant is liable to pay all fees incurred before the CIR received the notice of withdrawal.

(e) The CIR must make every reasonable effort to minimise the fees an applicant is liable to pay for a ruling.

(f) The CIR is required to provide the applicant with an estimate of any fees that are payable in excess of the application fee. If the CIR considers an estimate provided to an applicant is incorrect, the CIR must as soon as practicable revise the estimate and notify the applicant.

(g) The CIR may waive all or part of a fee payable under these regulations if the CIR considers it is fair and reasonable in the circumstances to do so, having regard to the nature of the issue that is the subject of the application, the level of skill and experience required in the consideration of the application, and any other relevant factors. This applies to applications for binding rulings received by the CIR on or after 7 September 2010.

(h) All fees are inclusive of GST. However, for a supply that is zero-rated, the fee prescribed by the regulations is reduced by an amount equal to the tax fraction of the fee under the GSTA. The tax
fraction is calculated in accordance with the formula in s 2(1) of the GSTA. This rule applies to applications for binding rulings received by the CIR on or after 7 September 2010.

The regulations also provide that if the CIR considers that it takes longer than four weeks to issue the ruling, the CIR must provide the applicant with an estimate of the likely date for the issue of the ruling. If the CIR considers that such an estimate given to an applicant is incorrect, the CIR must as soon as practicable revise the estimate and notify the applicant.

115.100 Non-binding statements

The CIR may issue three types of non-binding statements as well as binding public rulings. The following is the explanation of the three types of statements provided in TIB vol 8:2 (August 1996) at 1.

(1) Interpretation statements

These statements set out the CIR’s view of the law in cases where a binding public ruling cannot be issued or is inappropriate. For example, the CIR issued an interpretation statement as a result of the Court of Appeal decision in Newman v Commissioner of Inland Revenue (1995) 17 NZTC 12,097 (CA). Situations when a particular type of arrangement cannot be conveniently identified may also give rise to an interpretation statement.

(2) Interpretation guidelines

These statements discuss the CIR’s approach to the interpretation of a general area of law. A statement on the CIR’s approach to sham transactions or the interpretation of the general anti-avoidance provision in the ITA would be an example of the type of statement that might be issued as an interpretation guideline.

(3) Standard practice statements

These statements describe how the CIR will, in practice, exercise a statutory discretion or deal with practical issues arising out of the administration of the Inland Revenue Acts. An example of a statement on a practical issue is the CIR’s statement on the rates that will be accepted as “reimbursement” for the use of a motor vehicle.

115.110 Impact of company amalgamations on binding rulings [s FO 4]

There is no provision in the TAA or the ITA which specifically addresses the issue of whether an amalgamated company is entitled to rely, after amalgamation, on a binding ruling issued to one of the companies prior to amalgamation. However, s FO 4 provides, among other things, that when an amalgamating company ceases to exist on amalgamation, the amalgamated company is entitled to the rights, powers and privileges of the amalgamating company under the Inland Revenue Acts for the tax year corresponding to the income year of amalgamation and all earlier tax years.

An Inland Revenue interpretation statement considers that an amalgamated company is entitled to rely on private, product, or status rulings that an amalgamated company was previously entitled to rely on. However, the ability to rely on a pre-amalgamation ruling is subject to the amalgamated company continuing to fulfil any conditions and assumptions specified in the ruling, and the arrangement not being materially different to the arrangement ruled upon. This applies to a ruling that could be relied upon by either an amalgamating company (which ceases to exist after amalgamation) or an amalgamated company. Inland Revenue considers that the right to rely on a pre-amalgamation ruling also arises by virtue of the principle of “continuance” set out in s 225(d) of the Companies Act 1993 [see TIB vol 17:6 (August 2005) at 12-19].
Chapter 120
Building Societies

120.10 Taxation and deductions [s DV 10]
Income tax is imposed on the taxable income of a building society at the company rate. A building society is allowed a deduction for the following expenditures:

(a) Any expenditure incurred for money borrowed in the form of withdrawable shares (e.g., dividends on fixed deposit accounts, savings accounts, and bonus balloting shares). The timing of this allowable deduction is determined under the financial arrangements rules [see 470 FINANCIAL ARRANGEMENTS].

(b) Any interest and other financial charges incurred in providing money used in the income year to make an interest-free loan to any holder of a terminating share.

(c) Any payment made in purchasing any balloted loan right from a holder of any terminating share. A “balloted loan right” means a right arising from a ballot of terminating shares, where the ballot was held to ascertain which of the holders of the shares are entitled to receive an interest-free loan for those shares.

120.20 Assessability of distributions
The following rules apply to distributions from a building society:

(a) Dividends derived by a New Zealand resident company from a building society registered under the Building Societies Act 1965 are taxable to the company;

(b) Dividends paid on withdrawable shares are interest for RWT purposes [see 1260.25].

(c) Any tangible or intangible benefit derived by a building society member or shareholder, on sale back to the building society, of shares in the society are defined as an investment society dividend and income. This need not be in money, nor convertible into money [s YA 1];

(d) A cash prize received under s 31A of the Building Societies Act 1965 is income derived on the day the bonus ballot giving the prize is held;

(e) A cash prize received under s 31A of the Building Societies Act or equivalent benefit is interest for income tax purposes [s CC 6]; and

(f) A cash prize which would otherwise have been received but which is taken in the form of an advance is income on the day the first payment of the advance is made.
Chapter 130

Business

130.10 Business definition is linked with a motive of profit [ss BC 4, CB 1, YA 1]
A “business” includes any profession, trade, or undertaking carried on for profit [s YA 1]. This definition of a business is not exhaustive. In ordinary circumstances no difficulty arises in determining when a business exists. The difficulties arise in cases of unusual transactions or transactions not in the ordinary course of trading. The question is one of law and is so wide that a discussion of it is outside the scope of this book. For tax purposes, an illegal activity may constitute a business.

This definition has been interpreted as meaning that the operations must be carried on to such an extent, or in such a manner that it could reasonably be expected that they would result in a profit. The fact that the operations in one year (particularly in the initial stages), may result in a loss, would not in itself exclude them from being a business undertaking if there remained the intention to derive income. Consistent losses may, however, point to an activity which could not be classed as a business.

Gross business receipts are included in assessable income [s CB 1] and where business losses occur in an income year, the excess allowable deductions are included in calculating the net loss for that income year [s BC 4]. In the entertainment tax regime “business” includes any recurrent income-earning activity.
See also the Inland Revenue Booklet Smart Business (IR320).

130.20 The consequences of being found not to be in business [s DA 1]
If a business is not being carried on, expenditure and losses associated with the operation are not allowed as a deduction unless they are incurred in deriving assessable or excluded income for any income year. Where expenditure is incurred in carrying on a business, it is deductible even where no income is derived by the business in that year [s DA 1]. The business test is based on the circumstances that existed at the time. There is also the question of whether a person is an employee or an independent contractor to consider [see 335 EMPLOYMENT RELATIONSHIP].

130.30 Costs incurred on cessation of business
Expenses and losses incurred after a business ceases are unlikely to meet the business nexus test for deductibility. However, in some situations a deduction may still be allowed if the expenditure or loss was incurred in deriving assessable or excluded income prior to cessation.

In TRA Case N7 (1991) 13 NZTC 3,048, (1990) 15 TRNZ 519, the liability for a debt incurred prior to the termination of a partnership plus accrued interest was held not deductible following the termination of the partnership.
In *IT Case No 490* (1942) 12 SATC 72, maintenance expenses on property, e.g., rent, rates, repairs, incurred during the income year after the closing down of a business were not allowable as a deduction from income derived prior to the date of cessation.

In *TRA Case F73* (1983) 6 NZTC 59,931, the taxpayer owned a fishing boat which was removed from water to await sale. Expenses relating to the vessel of insurance, interest, and depreciation were deducted from the taxpayer’s income. The TRA held that the taxpayer did not discharge the onus of proof to show that the expenditure was made otherwise than to preserve the vessel for sale as a going concern.

### 130.40 Expenditure incurred before start of business

Expenditure preparatory to the commencement of a business is of a capital nature and non-deductible: *TRA Case L73* (1989) 11 NZTC 1,426, applying the principles of *Calkin v Commissioner of Inland Revenue* (1984) 6 NZTC 61,781 (CA). Preliminary expenses are neither incurred in carrying on a business nor incurred in deriving assessable or excluded income. Therefore they do not satisfy the nexus tests for deductibility in s DA 1 and cannot be allowable deductions. Examples of preliminary expenses include legal costs of preparing a company’s constitution and issuing share capital.

### 130.50 Business case law

*Grieve v Commissioner of Inland Revenue* [1984] 1 NZLR 101, (1984) 6 NZTC 61,682, (1983) 6 TRNZ 461 (CA) is the most compelling authority on the business test. The case concerned a husband and wife partnership that was developing a 216-acre beef unit. The farm had traded at a loss for the previous six years with accumulated losses of about $19,000 and the CIR sought to disallow the losses on the basis that there was no reasonable prospect of the farm producing a profit. However, the Court of Appeal held that a taxpayer is in business merely if there is an intention to make a profit, and the Grieves having that intention were held to be in business despite the accumulated losses. Richardson J cited the following factors as relevant to ascertain whether the taxpayer could have held an intention to make a profit:

(a) The nature of the activity;
(b) The period over which it was engaged;
(c) The scale of operations and the volume of transactions;
(d) The commitment of time, money, and effort;
(e) The pattern of activity and financial results; and
(f) Whether the activity is of the same kind and carried on in the same manner as would be expected from a “profitable” farm, in the sense that the usual operations are characteristic of a type of “profitable” farming.

Prior to this decision the Courts had held that a business for tax purposes existed when a taxpayer had both the intention of making a profit and a reasonable prospect of making a profit in the future. The Court also discussed what constituted a “pecuniary profit” under the definition of business. It held that pecuniary profits were to be ascertained on ordinary commercial principles, and were not to be equated with profits for tax purposes. Therefore, capital expenditure and other incentive deductions should be disregarded in determining whether a business is carried on for pecuniary profit.

Following this decision Inland Revenue released a technical circular outlining its policy for determining whether a taxpayer is carrying on a business. The circular stated:

“In *Intention* is not to be judged purely subjectively, but is to be determined by taking into account not only the words of the taxpayer but also actions. A totally unrealistic venture could be excluded on this test on the basis that no reasonable person could realistically have expected (and thereby by implication intended) to make a pecuniary profit having regard to the manner in which the activity was conducted. As a practical measure in evaluating the taxpayer’s actions, the IRD will consider the various matters of inquiry as suggested by the Court.

“In order to gauge the extent of a taxpayer’s operations the IRD will continue to request details of development plans and budgets of income and expenditure where necessary. These will give
an indication of the manner in which the activity is to be carried on and whether the necessary intention to make a profit exists. However, the taxpayer must be able to show that the plans have been carried into practical effect if credence is to be given to the taxpayer’s stated intention. There may be deviations from the stated plan or budget for very good commercial reasons or because of factors outside the taxpayer’s control which were not anticipated at the time and where these exist, they would not necessarily affect the acceptance of the venture as a business. As indicated by the Court in the final analysis it is the character and circumstances of the particular venture which are crucial and each case must be considered according to its own facts.

(1) Profit prospects

*TRA Case C3* (1977) 2 TRNZ 175 concerned a taxpayer who, in 1964, while still serving as an officer in the Royal New Zealand Navy, bought a 50-acre farm property which was swampy and in poor condition and was situated some 140 miles from his home in Auckland. Improvements were made up to 1968 but no claim was made for expenditure incurred. In 1968 the taxpayer began to run sheep on the property, carrying an average of 27 sheep a year in the years 1969 to 1974. He estimated he spent 90 per cent of his weekends and his periods of leave working on the farm. During week days, a neighbour looked after the sheep, moved them when necessary and arranged for shearing at appropriate times. The taxpayer claimed for farm losses for the years 1969 to 1974 inclusive and again in 1975. Losses for the earlier years were allowed by Inland Revenue but that sustained in 1975 was disallowed as it was considered the taxpayer was not in business. That view was supported by a report from a farm advisory officer who stated the property was unlikely to be an economic unit under conventional livestock farming. The taxpayer failed to demonstrate before the TRA that he was carrying on a business within the meaning of the legislation with a view to making a profit and that he had a reasonable expectation of so doing. The TRA held that as far as the 1975 year was concerned the objection to disallow the loss must fail.

In *TRA Case H63* (1986) 8 NZTC 460, in 1981 a naval officer purchased a 74-acre property for his retirement in eight years’ time and leased 62 acres to a neighbour. He worked on the farm in his holidays for about two months a year, his father managing the property in his absence. In the 1983 income year 10 stock were run and a loss of $2,061 was incurred. The taxpayer’s plans showed profitability should be achieved within five years. The TRA held there was an inadequate level of activity to support the business concept having regard to the taxpayer’s personal farming activity and to his letting and other activities with regard to the 74 acres, most of which activities could only be related to the holding, preserving, and improving of the 74-acre capital asset. During the 1983 income year the taxpayer did not have a genuine intention to achieve a profit.

In *TRA Case 4* (1981) 5 TRNZ 44, the taxpayers’ plans for an amusement park project were delayed. In the meantime the taxpayers grazed sheep on the land. It was held that the intention to make a profit out of the grazing activities had not been established and the disallowance of the loss relating to those activities was therefore upheld.

In *TRA Case F3* (1983) 6 NZTC 59,575, the taxpayer was a medical specialist who, in 1974 and 1976, purchased a five-acre and a 27-acre block of rural land respectively. After unsuccessfully breeding cattle, he sold them and purchased black sheep which he also sold following a fall in black wool prices. In 1979 he began to grow a licorice crop which was destroyed by an accidental spraying of poison. It was held the activities constituted a business because the taxpayer throughout showed an intention of making a profit and there was a reasonable prospect of doing so.

In *TRA Case J2* (1987) 9 NZTC 1,004, it was held that once a taxpayer reached a conclusion that he could never farm his property at a profit, a business could not exist.

In *TRA Case J78* (1987) 9 NZTC 1,459, the taxpayers farming on a reduced scale with knowledge that a profit would not be made were held not to be in business.

In *TRA Case K36* (1988) 10 NZTC 308, husband and wife farmers progressively subdivided a farm, continuing to farm the reduced area and for four income years the operations made losses, followed by a small profit. The CIR disallowed the loss deductions on the ground the venture was not a “business”. On the facts it was held to be a business, as the parties were intent on operating the business and carrying on farming for a pecuniary profit.
In Mainzeal Holdings Ltd v Commissioner of Inland Revenue (2000) 19 NZTC 15,914 (HC), Mainzeal Holdings (MH) was a privately owned property development company with interests in both New Zealand and Australia. Mainzeal Australia (MA) was a subsidiary of MH carrying on business as a property developer in Australia. MA purchased sites in Queensland for commercial development. One of the sites was developed but difficulties were encountered in obtaining tenants, due to a market downturn. Development of a second site did not proceed. MA informed MH that it required financial assistance. A formal deed was entered into whereby MA would pay all expenses in respect of its business operations, MA would collect all rents from its business operations, MH would pay a fee to MA in partial reimbursement for its continuation in business, and the net profit from the eventual sale of the sites would be apportioned between MH and MA. The CIR disallowed the deduction claimed by MH for the fees paid to MA. The grounds for disallowance were that the amounts paid were not fees but, rather, injections of capital. In the High Court, Nicholson J considered that the true nature of the payments was that of an investment of capital. MH appealed the decision to the Court of Appeal where Blanchard J, citing the decision in Grieve (above), found that there was no prospect of profit for the joint venture and that MH had not established that it genuinely had a profit-making intention or purpose when the venture was entered into. Therefore, the expenditures were not deductible: Mainzeal Holdings Ltd v Commissioner of Inland Revenue (2001) 20 NZTC 17,409 (CA).

(2) Constitutions

The business of a company is generally defined by its constitution. Transactions which would not ordinarily constitute the carrying on of a business in a general sense may, in specific circumstances, amount to the carrying on of a business. When an association or a company is formed for a purpose, that purpose is its business. A single transaction effected by a company within the ambit of its purposes may constitute the carry-on of its business: Commissioner of Taxes v Miramar Land Co Ltd (1906) 26 NZLR 723 (CA).

In a Malaysian case American Leaf Blending Co v Director-General of Inland Revenue [1978] 3 All ER 1185 (PC), it was decided by the Privy Council that the company, in letting its premises (which it was authorised to do by its memorandum), was carrying on a “business”, thus enabling it to deduct from the rents earlier business losses. The Board pointed out that the memorandum, while not conclusive in law, is very persuasive and in fact raises a presumption that any activity covered by it is a business.

The question was not so much whether the company had power to buy land and to sell it again but whether, in fact, its business as carried on comprised dealings in such property: James Shand & Co Ltd v Commissioner of Taxes [1928] GLR 411. Further, the profits of a business are not taxable unless two parties can be distinguished: the person who makes the profit, and the person from whom the profit is made. Where these two parties are identical, no taxable profit can be derived from their mutual transactions. Thus, in the case of certain clubs and similar institutions, where the transactions were confined to the members, the so-called profits have been held to be mere overcharges and not assessable profits.

(3) Extent of activities

A business must be habitually or systematically exercised; it is not constituted by isolated transactions: Erichsen v Last (1881) 1 TC 351. However, “habitually” does not imply frequency. There is no difference between making one contract to govern all the transactions of a year and dealing with each transaction separately: De Beers Consolidated Mines Ltd v Howe (Surveyor of Taxes) [1906] AC 455, (1906) 5 TC 198 (HL). A business may be habitually or systematically carried on, although a very few transactions, or only one, may be effected, as, for example, only one contract in the course of it: Californian Copper Syndicate v Harris (1904) 5 TC 159 IH (2 Div).

In Stevens v Commissioner of Inland Revenue (1989) 11 NZTC 6,001 (HC), a business was held not to have commenced where orders had been obtained but were not fulfilled because of difficulties in obtaining a manufactured article. The decision of MNR v MP Drilling Ltd 76 DTC 6,028 was approved to the effect that a business had commenced, notwithstanding ultimate abandonment, where associations had proceeded with suppliers and potential foreign customers, culminating in expressions of intent. The permanent structure, the market and the products all existed and the taxpayer’s efforts were directed to bringing them together with a resultant profit.
Whether a business exists is determined by the intention of the taxpayer (as compared to the motive) as evidenced by the taxpayer’s conduct: *G v Commissioner of Inland Revenue* [1961] NZLR 994 (SC). In that case, an evangelist supported by unsolicited voluntary donations was held to have the intention of making a profit because he knew gifts would be made to him which would be used by him for his support and maintenance. He was in business.

In *TRA Case H19* (1986) 8 NZTC 206, it was held that a venture which had not gone beyond a preliminary or preparatory stage had not blossomed into a business despite several months work and subsequent abandonment when the Customs Department lost a vital product. The view that all that is necessary for a valid business is to create a customer was rejected. A retired couple with $30,000 lent on mortgage with loans continually renewed or readvanced over a 13-year period were held to be carrying on a business: *TRA Case H27* (1986) 8 NZTC 264.

In *TRA Case K37* (1988) 10 NZTC 314, a butcher was held to have carried on a gambling business. His gambling was large scale, time-consuming, well organised, serious, and planned. It involved an accounting operation and took up a significant part of his daily living. His continued repeated and regular large scale betting set it apart from that of more casual, less organised punters.

In *TRA Case J84* (1987) 9 NZTC 1,486, a five-year substantial commitment of time and effort, which could only be equated with the seeking of profit, was held on the facts to be sufficient to justify an allegation that a horticultural business existed.

In a stock agent/auctioneer’s practise of buying up cattle and sheep left over after auction and selling them later at a profit was held over time to constitute a business: *TRA Case K80* (1988) 10 NZTC 639.

In *TRA Case L19* (1989) 11 NZTC 1,125, a farming activity which had incurred losses for 10 income years prior to making a modest profit was held to be “business”: *TRA Case L12* (1989) 11 NZTC 1,090.

In *TRA Case Q17* (1993) 15 NZTC 5,092, a polytechnic lecturer reduced his teaching duties from full time to part time so that he could spend more time developing his farming and rental properties. His primary income over the relevant period was derived from lecturing. There was no farming income other than a small amount from grazing and from the rental of a beach house. The CIR only allowed deductions to the extent of that income. Although the taxpayer spent considerable time and money in developing the two farm properties (1.05 and 28.8 hectares respectively), they were never viable economic units. He later sold one of them at a small profit. The other was on the market at the date of the hearing. The taxpayer maintained that he undertook all his activities on the properties for business purposes, with the intention of making a profit. Since the relevant period, he had moved to another area, bought and sold 20 hectares as a potential lifestyle block, and then purchased another 68 hectare block. Throughout the relevant period he had appraised other properties for purchase and development but had been unable to obtain finance to purchase them. The TRA held that the taxpayer was not in business and that expenditure incurred in developing the farming and rental properties was only preparatory to an income earning process. However, since one of the taxpayer’s purposes in acquiring the properties was the purpose of resale, the TRA applied the *Inglis and Stockwell* decisions and held that the taxpayer’s expenditure on the farm properties must be regarded as being in respect of circulating capital held on the revenue account. Accordingly, the expenditure was deductible.

In *TRA Case H89* (1986) 8 NZTC 615, a serviceman posted overseas rented his property and in the year in question did not intend to reoccupy. A contention of dual purpose failed, the serviceman being held to be in the business of renting for a profit.

In *Land Projects Ltd v Commissioner of Inland Revenue* [1964] NZLR 723 (SC), a business was held to have existed during the nine-day period during which a farm (purchased as a going concern) was owned.

In *Commissioner of Inland Revenue v Watson* (1993) 15 NZTC 10,010 (HC), consultancy activities conducted by the taxpayer on a part-time basis amounted to a business carried on for pecuniary profit.

In *TRA Case R10* (1994) 16 NZTC 6,059, a business was not being carried on by taxpayers who abandoned their intention to build and operate boarding kennels on a rural property when it was realised that the zoning conditions attached made it impossible to establish the kennels on the property without further planning.
consent. When a second property was acquired to establish the boarding kennels, the deductions claimed for losses incurred for the first property were disallowed.

In *Pukepine Sawmills Ltd v Commissioner of Inland Revenue* (1985) 7 NZTC 5,114 (CA), the taxpayer acquired an interest in a forestry business and entered into an agency agreement whereby the agent was required to plant, maintain, and dispose of timber. The Court of Appeal held that the taxpayer was not engaged in a forestry business. The agency deed did not contain any provisions for the direction, control, or supervision by the taxpayer or any provisions for the taxpayer’s rights to information.

However, in another case the High Court held that the taxpayer was carrying on a forestry business: *AM Bisley & Co Ltd v Commissioner of Inland Revenue* (1985) 7 NZTC 5,082 (HC). The case was distinguished from *Pukepine* as the management agreement gave Bisley the right to direct employment of a forester or consultant and the right to receipt of management reports. Thus, the extent of delegation in the management agreement was not so complete as to detract from the fact that Bisley carried on the business.

In *TRA Case H106* (1986) 8 NZTC 707, an evangelist was held not to be in business for tax purposes as he had no intention of making a profit and no organisation or arrangement existed for that purpose.

To prove change of purpose of use of an asset there must be positive proof of change and not merely proof of knowledge of unprofitability which has given rise to the making of short term arrangements: *New Zealand Co-operative Dairy Co Ltd v Commissioner of Inland Revenue (No 2)* (1989) 11 NZTC 6,066 (HC).

In *Commissioner of Inland Revenue v Port Chalmers Waterfront Workers Union* (1996) 17 NZTC 12,523 (CA), payments received and invested by a union over a number of years were exempt from income tax because they were not derived from “business carried on”.

In *TRA Case S53* (1996) 17 NZTC 7,347, it was held that it is not unlawful for a taxpayer to offer services to a company in return for a salary and then offer professional services to the public without reference to the company.

In *Slater v Commissioner of Inland Revenue* (1996) 17 NZTC 12,453 (HC), a die-owning partnership was entitled to deduct general expenditure and depreciation for one income year despite producing no income.

### 130.60 Deciding whether an operation is a business or hobby

The following are examples of the kind of small venture which may be either the carrying on of a business or the indulging of a hobby:

(a) Farmlets of a few acres bordering taxpayers’ private residences;

(b) Boat owners receiving small amounts from fish sales but incurring outgoings on their boats each year considerably in excess of the receipts; and

(c) Owners using assets such as boats largely for private purposes but also claiming they are available for hire, the hire charges usually being considerably less than the outgoings and depreciation [see PIB 105 (June 1980) and PIB 118 (November 1982)].

The fundamental matters to consider are:

(a) Whether the operations are such that they can be said to be a business undertaking, ie carried on with the intention of making a profit; or

(b) Whether the operations should be disregarded for tax purposes as being the indulgence of a hobby or being carried on in such a small way that the receipts merely defray expenses incurred in holding the asset for purposes other than business operations.

### 130.70 Cases on whether an operation is a business or hobby

In *TRA Case F15* (1983) 6 NZTC 59,627, an employee of a local body acquired a fishing boat for hobby purposes. Encouraged by her catches, she further equipped the vessel and extended her activities into a commercial operation. In the next year poor catches were common and a loss resulted. The CIR disallowed the loss claiming it resulted from a hobby but it was held to be a part-time business and the loss allowed
In TRA Case H86 (1986) 8 NZTC 597, the objectors were held to be either pursuing a hobby interest or were getting together a sufficient capital base of horses to begin a horse breeding business.

In TRA Case K40 (1988) 10 NZTC 343, the objectors were held to be in a stud breeding business.

In TRA Case K65 (1988) 10 NZTC 520, the taxpayer’s claimed “hobby” of raising and breeding of horses was, on the facts, held to be a “business”. The activities were coherently organised and conducted in a businesslike manner.

In TRA Case L24 (1989) 11 NZTC 1,154, a taxpayer’s activity of restoring and selling vintage cars and of selling parts thereof was a “hobby” and not a business:

In TRA Case L57 (1989) 11 NZTC 1,326, a farmer was held to be also engaged in the profession of an artist with an objective of pecuniary profit. Accordingly, his claim for deduction of overseas travel and accommodation costs succeeded.

In Lawrence v Commissioner of Inland Revenue (1994) 16 NZTC 11,263 (HC), a loss suffered by a dentist from operating a launch was held to be non-deductible. There had been no serious inquiry into the feasibility of a chartering business before the taxpayer purchased the launch, and no serious attempt to promote the charter venture. There had been only a small proportion of chartering compared with personal use during the income year in question, the launch was not readily available for chartering, and after that year the taxpayer retained the launch for personal use [see TIB vol 6:2 (August 1994) at 29].

130.80 Considerations when purchasing a business

When purchasing a business run by a company, one of the first considerations is whether to continue trading as a company. If so, the next consideration is whether to use the existing company to continue trading (ie the purchaser just acquires the shares in the existing company and the existing company continues trading). An appropriate valuation of the shares to be taken over must be agreed on, but in the meantime all administration and operational functions usually do not need changing immediately.

The alternative is for the purchaser to arrange for a new or completely different company to purchase the trading assets as a going concern from the vendor company. In these circumstances, the vendor company remains in existence after it has sold its assets, and may get into a non-functional state with its capital represented by undistributed assets and waiting to be wound up.

The next paragraphs mention some of the issues needed to be addressed in either set of circumstances.

130.85 Purchase of shares in a company which continues running a business

Income tax matters to consider follow:

(1) Taxation liability of company

A company is a separate legal entity from its shareholders and, irrespective of its shareholders, Inland Revenue will look to the company in satisfaction of all taxation liabilities. It is a relatively simple matter to determine current taxation liability at the date of purchase and make an adjustment in the purchase price. On the other hand, it is not so simple to determine the liability which would arise if Inland Revenue were to investigate the affairs of the company subsequent to the date of the purchase and impose additional liability on account of errors in previous returns.

These investigations invariably go back four years and in certain circumstances Inland Revenue has powers of reassessment as well as publicity of the tax defaulter’s name which could be serious for the taxpayer. Although it is usual for the vendor to undertake liability for tax on income derived prior to the date of sale, such an agreement is purely a personal arrangement between the vendor and purchaser and is in no way binding on Inland Revenue. Even though the vendor may agree to be responsible for any tax liability of the company prior to the date of sale, Inland Revenue will look to the company for satisfaction of the liability. The purchaser should proceed very cautiously when buying shares, in order to avoid or minimise the risk of buying a taxation liability. Other contingent liabilities might also not be apparent.
(2) **Losses carried forward**
Where a company has sustained tax losses, these may be carried forward to be offset against income of subsequent years but subject to relevant continuity of shareholdings being maintained. If sufficient shares are sold, the right to carry forward losses will be lost [see 940 LOSSES].

(3) **Debtors**
The basis of valuation of debtors is always important, whether the business is a company or a sole trader. Where shares in a limited liability company are sold, the continuing entity of the company is not disturbed and the problems do not arise with debtors, as they might otherwise arise when the business trading assets are sold. The company would simply carry on and collect its debts in the ordinary way, and if any proved bad and were written-off they would be deductible at that point [see 90 BAD DEBTS AND BAD DEBT RESERVES]. The purchaser will, of course, be concerned with the value of debts but only as part of the process of determining the quantum of purchase price. The purchaser should watch that there is no reserve for bad debts: a reserve is not allowable as a deduction for income tax purposes and in any case where a bad debt reserve exists there is a liability for tax on discovery by Inland Revenue. The only reserve permitted for debtors is a discount reserve for debtors as at balance date to whom discount at current commercial rates will be allowed on settlement.

(4) **Stock reserves**
The purchaser will be vitally concerned with the existence of a stock reserve, ie trading stock which has illegally not been disclosed for income tax purposes. There is a taxation liability on the amount of the undisclosed reserve and this affects the valuation of the business. Stock reserves may exist which have been disclosed to Inland Revenue for tax purposes, but which may not have been disclosed for financial reporting purposes. Inquiries should be made into the methods of stock valuation.

(5) **Revenue reserves**
If there are substantial revenue reserves, the inference is that the company has been ploughing back its profits in past years for the purpose of building up the business, and that the reserves are probably represented by fixed assets. If so, the company has already reached the stage where consideration should be given to capitalising accumulated profits, which is normally accomplished by making a bonus issue of shares. There are taxation implications arising [see 270 DIVIDENDS]. Furthermore, the consideration received by a vendor of shares wanting to avoid a potential taxable dividend where such reserves exist, may be treated by Inland Revenue as a dividend derived by the vendor of the shares [see 1340 SHARE SALES].

(6) **Imputation, withholding payment, and branch equivalent tax credits**
On a change of shareholding, the continuity of shareholding tests may not be met with the consequence that the credits will no longer be available. Advance planning prior to acquisition may be required [see 670 IMPUTATION].

(7) **Tax incentive deductions**
Where the company is receiving the benefit of concessions, these benefits remain with the company on a share transfer, whereas it would not necessarily follow that if the assets of a business were sold the purchaser of such assets would receive the same concession as that to which the company was entitled.

(8) **Asset values**
Market values of assets on a break-up basis may be substantially different from the value of the shares in a company.

130.90 **Purchase of business assets**
Income tax matters to consider follow.
(1) **Debtors**
Debtors represent an asset which may be sold like any other asset. To the purchaser the debtors taken over represent a capital asset and any subsequent loss on realisation is a capital loss, while any realisation in excess of the book value is a capital profit. It is necessary to value the debtors very carefully, as any writing off of book debts is not a permissible deduction, in these circumstances.

**TaxNote:** Most trade debtors will be excepted financial arrangements and not subject to the financial arrangements rules [see 470.25].

In *Wrightson Ltd v Commissioner of Inland Revenue* (1998) 18 NZTC 13,715 (HC), Wrightson NMA Ltd purchased farmers’ advance account debts from Dalgety Crown Ltd, at net realisable value less 10 per cent, as part of a merger agreement between the two companies. The High Court held that the subsequent profits or gains made by Wrightson NMA from the advance account debts were not gross income because the purchase of the debts was not part of any profit-making scheme. The purchase of the debts at a discount was to allow for the risk of default, not to create a margin for profit by the purchaser. The purpose of the taxpayer must be formed at the date the property is acquired.

(2) **Asset values**
Where a business is purchased as a going concern and no separate amount is allocated to the various assets comprising the business, the amount paid is required to be apportioned on the basis of relative market values. As a general rule, the agreement for sale and purchase specifies the separate amounts applicable to the various assets.

(3) **Goodwill**
There is a certain conflict of interests as between the purchaser and vendor as to the allocation of the purchase price between goodwill and other assets. Goodwill is normally neither assessable to the vendor nor deductible to the purchaser. The vendor would prefer to load the goodwill of the business at the expense of the stock and assets: the price received for stock represents income to the vendor and any amount received in excess of the book value of the plant, to the extent to which it does not exceed original cost, will be treated as depreciation recovered as income in the year of disposal. On the other hand, it is to the advantage of the purchaser to have a higher price allocated to stock and assets, as the cost of stock is allowable as a deduction in the first return of income and depreciation is allowable on the cost price of assets.

(4) **Goods and services tax**
The sale of a business as a going concern is zero-rated for GST [see 580 GOODS AND SERVICES TAX].

(5) **Granting of an annuity as part of the purchase consideration**
Where an annuity is granted as consideration or as part consideration on the purchase of a business, no deduction is allowable to the purchaser for annuity payments. Similarly, where property is purchased subject to the payment of an existing annuity, the annuity payments are not deductible by the purchaser [see 1120 PENSIONS AND ANNUITIES].

(6) **Sale of plant subsequent to purchase**
Where plant is sold within a short time subsequent to the date of purchase any loss on disposal is a capital loss. Inland Revenue takes the view that such a loss does not arise through use in the production of the purchaser’s income. This consideration would not apply where the shares in a limited liability company are purchased as the company would then be the taxpayer suffering the loss.

(7) **Repairs to newly-acquired assets**
If any of the assets purchased require repairs before being put into use, such repairs are a capital expense [see 1230 REPAIRS AND MAINTENANCE].
Chapter 150
Charities

150.05 General position
A range of tax incentives are available to charities and people who donate to them. These include:
(a) The non-business income of charities is exempt from income tax [see 150.10];
(b) The business income of charities used for charitable purposes within New Zealand is exempt from income tax [see 150.20];
(c) Cash donations by individuals to charities qualify for a tax credit equal to one-third of the amount of the donation [see 1395.75];
(d) Cash donations by companies to charities are deductible [see 300.20];
(e) Donations by Maori authorities to Maori associations and charities are deductible [see 950.50]; and
(f) Gifts to charities are exempt from gift duty (prior to 1 October 2011) [see 315.20].

The income of certain organisations which are not charitable, but provide some public benefit, is also exempt. These include:
(a) Friendly societies [see 225.50];
(b) Bodies promoting amateur games and sports [see 225.60];
(c) Bodies promoting scientific or industrial research [see 1240.30];
(d) Veterinary services bodies [see 370.15];
(e) Herd improvement bodies [see 370.15]; and
(f) Community trusts [see 370.15].

Non-profit organisations are allowed a deduction of up to $1,000 a year [see 225.60]. Further information on the tax incentives available to charities can be obtained from the Inland Revenue Booklet Charitable organisations (IR255).

150.10 Exempt non-business income [s CW 41]
All income derived by an organisation carried on for charitable purposes is exempt from income tax if, at the time the income is derived, the organisation is a tax charity. This applies to income derived by a trustee in trust for charitable purposes, and to income derived by societies and institutions established and maintained exclusively for charitable purposes and not carried on for the private pecuniary profit of any individual. The meaning of “charitable purpose” is explained in 150.40.

A “tax charity” means the trustee or trustees of a trust, society, or institution that is registered as a charitable entity under the Charities Act 2005 [see 150.50]. A tax charity also includes a non-resident organisation,
carrying out its charitable purposes outside New Zealand, which is approved as a tax charity by the CIR in circumstances where registration as a charitable entity under the Charities Act 2005 is unavailable.

The exemption does not apply to the business income of charitable trusts, societies or institutions. A separate exemption applies to the business income of charities [see 150.20]. The exemption also does not apply to income derived by council-controlled organisations, or by local authorities from council-controlled organisations, other than a council-controlled organisation operating a hospital as a charitable activity [see the definition of “council-controlled organisation” in s YA 1].

150.20 Exempt business income [s CW 42]

Income derived directly or indirectly from a business is exempt if the business is carried on by an organisation for charitable purposes in New Zealand and if, at the time the income is derived, the organisation is a tax charity. The term “tax charity” is explained in 150.10. The exemption applies to trusts established for charitable purposes, and to societies or institutions established and maintained exclusively for charitable purposes and not carried on for the private pecuniary profit of any individual. The exemption applies whether the business is carried on by, or for, or for the benefit of the charitable organisation. The meaning of “charitable purpose” is explained in 150.40.

A trustee is treated as carrying on a business if the trustee derives rents, fines, premiums or other revenues from an asset that was disposed of to the trust by a person having control over the business, as described in items (a) to (d) below, and either the person retains or reserves an interest in the asset or the asset will revert to the person.

The exemption does not apply if any person who has some control over the business is able to direct or divert an amount (which includes money or money’s worth) derived from the business to their own benefit or advantage. Any amount that is not exempt for this reason is trustee income. The exemption also does not apply to income derived by council-controlled organisations, or by local authorities from council-controlled organisations, other than a council-controlled organisation operating a hospital as a charitable activity.

If the charitable purposes of the organisation are not limited to New Zealand, income derived from the business in a tax year must be apportioned reasonably between charitable purposes in New Zealand and those outside New Zealand. Only the part of the income apportioned to New Zealand purposes is exempt.

(1) Control over business

A person is treated as having some control over the business of a charity, and as being able to direct or divert amounts from the business to their own benefit or advantage if in the tax year they are in any way, either directly or indirectly, able to determine or materially influence the determination of the nature or extent of a relevant benefit or advantage, or the circumstances in which a benefit or advantage is given or received, because they are:

(a) A settlor or trustee of the trust by which the business is carried on;
(b) A shareholder or director of the company by which the business is carried on;
(c) A settlor or trustee of a trust that is a shareholder of the company by which the business is carried on; or
(d) An associated person of any settlor, trustee, shareholder or director referred to in items (a) to (c).

A person is treated as a settlor of a trust, and as gaining a benefit or advantage in the carrying on of a business of the trust, if they have disposed of an asset to the trust that is used in carrying on the business, and they retain or reserve an interest in the asset or it will revert to them. Thus, income arising from any income-producing asset sold to the trust in these circumstances will not be exempt.

Persons (ie accountants or lawyers in public practice), who are in a position to determine or influence the nature or extent of benefits or advantages merely because they provide professional services to a business (including a trustee company, the Public Trust and the Maori Trustee) are not treated as having some control over the business for the purposes of the exemption.
The term “benefit or advantage” means something that may or may not be convertible into money, and includes income under one or more of the following provisions:

(a) Income under ordinary concepts [s CA 1(2)];
(b) Income from business or trade-like activities [ss CB 1 to CB 23];
(c) Property obtained by theft [s CB 32];
(d) Income from land [s CC 1];
(e) Income from financial arrangements [ss CC 3 to CC 8];
(f) Royalties [s CC 9];
(g) Dividends [s CD 1];
(h) Employment income [s CE 1];
(i) Attributed income from personal services [s CE 8];
(j) Benefits, pensions, compensation and government grants [s CF 1];
(k) Bad debt repayments [s CG 3];
(l) Attributed controlled foreign company income [s CQ 1]; and
(m) Foreign investment fund income [s CQ 4].

Specifically excluded from these items of income is interest earned on money lent if the interest paid does not exceed current commercial rates having regard to the nature and term of the loan.

150.30 Exempt charitable bequests [s CW 43]

Income derived by the executor or administrator of a deceased person’s estate is exempt income to the extent that:

(a) The income arises from or is attributable to assets of the estate that have been left to a trust established for charitable purposes, or to a society or institution established and maintained exclusively for charitable purposes and not carried on for the private pecuniary profit of any individual; and
(b) The income, if it had been derived by the charity, or by a business carried on by or for the charity, would be exempt under s CW 41 [see 150.10] or CW 42 [see 150.20].

In deciding whether the above requirements have been met, the following matters must be taken into account:

(a) The terms of the deceased person’s will, including the rights of annuitants, legatees, and other beneficiaries;
(b) The nature and extent of the debts and liabilities of, and other charges against, the estate and their likely effect on the income and assets available for distribution to the beneficiaries; and
(c) The shares and prospective shares of the beneficiaries in the income and assets of the estate.

The broad intent of s CW 43 is to exempt income accruing to an executor or administrator of a deceased’s estate to the extent to which the income can be said to arise from, or be attributed to, assets of the estate which have been bequeathed or devised to a charity. There can often be a considerable time-lag between the date of death and the distribution of an estate from which there has been a general or specific legacy to a charity. If the legacy could be handed over immediately the charity would be exempt from income tax on any income arising from the asset received. A delay in distribution would mean that income accruing after the date of death regardless of the ultimate destination of particular assets in the estate will be taxable. Section CW 43 thus enables income attributable to any assets that will ultimately pass to a charity to be exempt from income tax. It is recognised that administration of this provision may have problems and it is envisaged that there will be three main classes of cases arising.

Income derived by the deceased’s executor or administrator between the date of death and the end of the income year following the date of death will not be prevented from being exempt just because the charity is not registered as a charitable entity under the Charities Act 2005 [see 150.50]. The requirement in ss CW 41 and CW 42 that a charity must be registered in order for exemption to apply is
disregarded until the end of the income year following the income year in which death occurred. Any such income derived by the charity after this period will not be exempt, however, unless the charity has registered as a charitable entity.

Example:
Arthur, an amateur thespian, died on 12 September 20X1. In his will he left shares with a market value of $500,000 to establish a new charitable trust for the support of out-of-work actors and musicians. The trust was set up on 3 September 20X2 and registered as a charitable entity on 22 October 20X2, at which date the shares were transferred to the trust. Assuming a standard balance date, the income derived by the executor of Arthur’s estate from the shares between 12 September 20X1 and 22 October 20X2 will be exempt under s CW 36.

Inland Revenue’s approach is generally as follows:
(a) Specific legacies: When the legacy or devise is of a specific nominated asset it is usually apparent whether that asset directly produces income (eg company shares, a block of flats, a house property, a motor car, or a stamp or art collection). When the asset gifted to the charity produces income in the estate before the estate is distributed, and that income is able to be segregated from other estate income, then that particular income is exempt. If the asset gifted does not produce any income, then this provision does not apply.

(b) General legacies: Where a general legacy of a sum of money is given to a charity, and even though at the date of death there is sufficient cash held to satisfy the payment of the legacy, it cannot be assumed that only interest will arise. In fact, there may be no interest at all. The cash liquidity may have been a temporary state (eg in an estate comprising a farming or non-farming business). Consequently, a full appraisal of the estate assets and income may be required to show that the funds represented by the income are held for the benefit of the charities concerned.

(c) Residual estate to charity: Where the estate is left to a charity subject to a prior life interest to some person (eg a surviving spouse or other dependant), it will generally be the case that the income arising each year is for the benefit of the life tenant and assessable [see Inland Revenue Technical Rulings Manual, 13.3.31].

150.40 Charitable purpose [s YA 1]
The expression “charitable purpose” [s YA 1] includes every charitable purpose, whether it relates to the relief of poverty, the advancement of education or religion, or any other matter beneficial to the community.

A trust, society or institution has a charitable purpose if its purpose would satisfy the public benefit requirement apart from the fact that the beneficiaries of the trust, or the members of the society or institution, are related by blood.

A marae has a charitable purpose if the physical structure of the marae is situated on land that is a Maori reservation referred to in Te Ture Whenua Maori Act 1993 (Maori Land Act 1993) and the funds of the marae are used only for:
(a) The administration and maintenance of the land and the physical structure of the marae; and
(b) A purpose that is a charitable purpose as set out above.

(1) Case law
The New Zealand Council of Law Reporting’s principal function is the preparation and publication of the New Zealand Law Reports. It was held that the existence of the power to make grants to law societies for non-charitable purposes did not impair the Council’s conceded central charitable purpose of publishing the official law reports of New Zealand and therefore did not deprive it of its status as a charity: New Zealand Council of Law Reporting v Commissioner of Inland Revenue (1979) 3 TRNZ 93 (SC); Commissioner of Inland Revenue v New Zealand Council of Law Reporting (1981) 5 NZTC 61,053 (CA).

The Auckland Medical Aid Trust was formed to establish and maintain a comprehensive health service related to the human reproductive process (whether by means of contraception, sterilisation, abortion, or otherwise) and to educate the public in the facts of human reproduction. In the years with which the case was concerned the income of the trust was derived almost exclusively from providing abortion services. The High Court
Charities

held that the services of the trust were available to a wide enough section of the public to be charitable, and that the dissemination of education and learning is a charitable purpose, and, accordingly, the trust was charitable. The trust had not acted illegally, and although its activities were the object of public controversy, it could not be found that the controversy had harmed the public: Auckland Medical Aid Trust v Commissioner of Inland Revenue (1979) 4 NZTC 61,404 (HC).

A trust set up to hold gaming licences and operate gaming machines, and later to invest in commercial property, was held by the High Court to be a charitable trust. The objects of the trust were charitable and the fact that lack of funds and delays in obtaining gaming machine licenses temporarily inhibited the trust from making distributions did not change its essential character. However, the Court found that the trust’s business income was not exempt from tax under s 61(27) of the ITA 1976 [now s CW 42] because the trustees were able to (and did) receive benefits from the trust’s business income and to influence the nature, amount and circumstances of the benefits received by virtue of their capacity as settlor and trustee: Commissioner of Inland Revenue v Dick (2001) 20 NZTC 17,396 (HC). The decision of the High Court was confirmed by the Court of Appeal in Dick v Commissioner of Inland Revenue (2002) 20 NZTC 17,961 (CA).

The Crown Forestry Rental Trust (“CFRT”) was established to hold rent collected from tenants of Crown Forest Land and to use the income generated from investing that rent to assist claimants making claims before the Waitangi Tribunal involving Crown Forest Land. If the Tribunal recommended that Crown Forest Land be returned to Maori ownership, the accumulated rents relating to that land were paid over to the successful Maori claimants. However, when the Tribunal recommended that particular land not be returned to Maori ownership, the accumulated rents relating to that land were paid to the Crown. The CFRT claimed that its income was exempt under s CB 4(1)(c) of the ITA 1994 [now s CW 41].

In the High Court, O’Regan J held that the trust had more than one purpose and that one of those purposes (the transfer of capital back to the Crown) was not charitable. Therefore, the trust was not entitled to the exemption under s CB 4(1)(c) of the ITA 1994 [now s CW 41]. The Court of Appeal held that the first limb of s CB 4(1)(c) of the ITA 1994 [now s CW 41(1)(a)] does not require that a trust be established for charitable purposes, merely that the income in question be received for charitable purposes in the sense that the trustees are not empowered to hold or apply it for any other purpose. The assistance provided by CFRT to claimants was a charitable purpose because there was a public benefit. The requirement to pay surplus rents to the Crown on winding up meant that the trust was not dedicated at all times exclusively for charitable purposes. For this reason, the CFRT was not entitled to an exemption under s CB 4(1)(c) of the ITA 1994 [s CW 41(1)(a)].

On appeal the Privy Council held that the CFRT was entitled to exemption under s CB 4(1)(c) of the ITA 1994 [now s CW 41(1)(a)]. The Privy Council agreed with the Court of Appeal that in order to qualify for an exemption from tax, it was not necessary that a trust be established for charitable purposes. However, it was sufficient that the trust funds are applied exclusively for charitable purposes. The fact that the ultimate trust was in favour of the Crown was the critical feature of the case. Insofar as the rental income was needed to assist Maori to prosecute their claims, it was devoted to charitable purposes and so exempt from tax, and insofar as it was not applied for such purposes, it remained beneficially the tax-exempt income of the Crown. The latter never came within the scope of income tax at all: Latimer v Commissioner of Inland Revenue (2004) 21 NZTC 18,478 (PC); Latimer v Commissioner of Inland Revenue (2002) 20 NZTC 17,737 (CA); Latimer v Commissioner of Inland Revenue [2002] 1 NZLR 535, (2001) 20 NZTC 17,311 (HC).

A trust for the encouragement of the playing of football or other games or sports is not a trust for charitable purposes in a UK case: Inland Revenue Commissioners v McMullen [1978] 1 All ER 230 (HL). This is likely to be the case in New Zealand, unless the objectives of the trust as they relate to sporting are incidental.
However, in New Zealand there is specific exemption from tax on the income of a club formed to promote amateur sport [s CW 46].

In Calder Construction Co Ltd v Commissioner of Inland Revenue [1963] NZLR 921 (SC), there was power in the memorandum given to the directors to set aside out of the profits such reserves as they deemed necessary for the needs and development of the company’s operations and it was immaterial that the whole of the income was not obliged to be paid over immediately to the charities. The company was entitled to the exemption because the resulting assets had ultimately to be applied for charitable purposes.

Where the funds of an employees’ health and relief fund were provided for the assistance of needy employees and their dependants, it was held that the trust was for the relief of poverty; the class of beneficiaries was sufficiently wide to constitute the public element which was necessary to make it charitable and, therefore, the trust was a charitable trust: Gibson v South American Stores Ltd [1949] 2 All ER 18 (CA).

A fund set up to provide ministers of religion and their widows with financial security in retirement was exempt from tax under ss CB 4(1)(c) or CB 4(1)(e) of the ITA 1994 [now ss CW 41 or CW 42]. The income of the fund was held to be derived for charitable purposes: Presbyterian Church of New Zealand Beneficiary Fund v Commissioner of Inland Revenue (1994) 16 NZTC 11,185 (HC).

In Travis Trust v Charities Commission (2009) 24 NZTC 23,273 (HC) the Travis Trust appealed against a decision by the Charities Commission not to register it as a charitable entity under the Charities Act 2005. The trust was established to provide funds to support the New Zealand racing industry by sponsoring a horse race, and in fact the entire income of the trust had been applied as prize money for the race. The main beneficiary of the trust was the Cambridge Jockey Club Inc. The issue before the Court was whether the provision of prize money for a horse race is a charitable purpose. Joseph Williams J, in the High Court, held that the promotion of a horse race is not a charitable purpose in and of itself, nor is the promotion of horse racing generally. In his judgment, Joseph Williams J stated (at [59]):

“A trust to promote racing could only be charitable in nature if its deeper purpose was the pursuit of some other objective, either in principle or, in accordance with charities jurisprudence, a charitable purpose in its own right within the spirit and intendment of the Statute of Elizabeth. Thus, if it could have been established that the true intention of the support for this race was the promotion of health, education or perhaps even animal welfare, it might have satisfied the test.”

A jockey club is not the community or a sufficient section of it to amount to “the public”. The Charities Commission was correct not to register the trust as a charitable entity.

The High Court confirmed the Charities Commission’s decision to deny charitable status to the Grand Lodge of Antient Free and Accepted Masons in New Zealand, despite it holding charitable status for more than 50 years. The Grand Lodge was unable to show that all of its purposes were charitable. Under its constitution, all of its funds could be applied towards purposes that were not charitable. The purposes of freemasonry do not meet the requirements of a charity because it existed primarily for its members, and membership was limited to men over 21 years of age: Re the Grand Lodge of Antient Free and Accepted Masons in New Zealand HC Wellington CIV-2009-485-2633, 23 September 2010.

A trust established to protect and promote democracy and natural justice in New Zealand was held not to be a charity because its purposes were not exclusively charitable. The non-charitable purposes in its trust deed were not ancillary to its charitable purpose, and a significant part of the material published on its websites was partisan rather than educational: Re Draco Foundation (NZ) Charitable Trust CIV 2010-485-1275, 15 February 2011.

The New Zealand Computer Society Inc was held not to be a charitable entity because its purposes were not exclusively charitable. The society’s non-charitable purposes aimed at benefiting the profession are not ancillary to the purpose of advancing information technology as a discipline. Its professional society (non-charitable) functions constitute an independent purpose, and they are not ancillary to the learned society (charitable) functions: Re New Zealand Computer Society Inc CIV 2010-485-924, 28 February 2011.

In Re Greenpeace of New Zealand Incorporated [2011] NZHC 77, Heath J ruled that the Charities Commission was correct in holding that non-violent, but potentially illegal activities such as trespass,
designed to put (in the eyes of Greenpeace) objectionable activities into the public spotlight were an independent and non-charitable objective disqualifying it from registration as a charitable entity. The charitable purposes of Greenpeace could be met without resort to the type of political activities that deny its right to registration. The extent to which Greenpeace relies on its political activities to advance its causes means that the political element cannot be regarded as “merely ancillary” to Greenpeace’s charitable purposes. The political activities are an independent purpose – they are not necessary to educate members of the public on the issues of concern to Greenpeace.

The case Liberty Trust v Charities Commission, HC Wellington CIV 2010-485-000831, 2 June 2011 considered the issues of when an activity advances religion and when it meets the public benefit test. The Liberty Trust was established in 1989 for charitable purposes and was registered as a charitable entity under the Charities Act 2005 in 2007. The principal activity of the Trust is a mortgage lending scheme, funded mainly by donations, which makes interest-free loans to donors and others. The Trust contended that the lending scheme advances religion by teaching, through action, financial principles derived from the Bible. The Charities Commission reviewed the Trust’s charitable status and formed the view that the main purpose of the Trust, through its lending scheme, was to provide private benefits to members. The Commission considered that, at best, the lending scheme was conducive to religion but did not advance religion. The issues on appeal to the High Court were: (a) whether Liberty Trust “advances” religion, and (b) whether it meets the “public” benefit test.

On the first point, the Court held that the Charities Commission erred in finding that Liberty Trust does not have a charitable purpose as its main purpose. The Trust was set up to advance religion, which it seeks to do by teaching financial principles that it proclaims are the Bible’s financial principles. It seeks to teach those principles through providing a scheme which allows its followers (and anyone else who wishes to join up) to pool financial resources for the benefit of themselves and others. The religious beliefs upon which this scheme is based are reinforced by literature promoting the scheme and the Trust’s other publications and teaching activities. It is not merely inspired by or conducive to religion. Its purpose, through this scheme, is to spread what is viewed as being the Bible’s message.

On the second point, the Court held that the Charities Commission also erred in finding that Liberty Trust’s activities do not exist for the public benefit. As a trust which has as its purpose the advancement of religion, the starting assumption is that it has a public benefit. The activities are not contended to be subversive to morality or a sham. It is not for the Court to impose its own views as to the religious beliefs that are advanced through the scheme. The benefits of the scheme are not focussed too narrowly on the religion’s adherents. It is open to anyone and the money donated is “recycled” for the benefit of others.

On the basis of these findings, Mellor J allowed the Trust’s appeal and ordered that it be reinstated to the Charities Register.

150.50 Registration of charities [Charities Act 2005]

The Charities Commission (the “Commission”) was established on 1 July 2005 under the Charities Act 2005. The Commission’s main functions are to establish and maintain a registration and monitoring system for charitable organisations (the “Charities Register”); and to support and educate the charitable sector on good governance and management.

Although registration is not compulsory, charities are not able to claim exemption from income tax [see 150.10 to 150.30] or gift duty [see 315.20] unless they are registered as charitable entities under the Charities Act 2005. This includes charitable trusts and incorporated societies.

The function of registering donee organisations for the purposes of personal tax credits under ss LD 1 to LD 3 remains with Inland Revenue. Apart from tax-exempt status, the other advantage of being registered is that the charitable organisation will receive a registration number that can be displayed on its promotional material. This will give the public confidence that the organisation is a genuine charity.

An organisation can register as a charitable entity if:

(a) It is established and maintained for charitable purposes;
(b) It is not for the private profit of any individual or group;
(c) It has a name that complies with the Charities Act 2005; and
(d) All the officers of the charitable organisation are qualified to be officers.

The Commission will adopt the common law test for “charitable purposes”. This test requires the organisation to have a purpose that:
(a) Advances education;
(b) Advances religion;
(c) Relieves poverty; or
(d) Is otherwise beneficial to the community.

The charitable organisation’s object (purpose) must be to benefit the public. If the organisation has a secondary or supplementary non-charitable function (ie advocacy), this will not necessarily disqualify it from registering: *Travis Trust v Charities Commission* (2009) 24 NZTC 23,273 (HC) [see 150.40].

In *Canterbury Development Corporation v Charities Commission* (2010) 24 NZTC 24,143 (HC) the High Court (Ronald Young J) held that the Canterbury Development Corporation and its associated entities were unable to register as charities under the Charities Act 2005 because their main purposes were not charitable. Their main purposes were to assist individual businesses to develop and to improve the general economic wellbeing of the Canterbury region. The charitable aims stated in the Corporation’s constitution were ancillary to its main purposes.

The Charities Act 2005 does not provide for separate registration of businesses carried on by or on behalf of charities. A business that is carried on by a separate legal entity from the charity cannot itself register as a charitable entity unless it meets the general charitable purposes tests in its own right. A non-registered business would need to meet the requirements of s CW 42 for its income to be exempt from income tax. A registered charitable entity that derives business income in its own right must also meet the requirements of s CW 42 in order for its income to be exempt [see TIB vol 17:7 (September 2005) at 60].

Registration is not compulsory and there is no fee for registering.

All registered charities must complete an annual return. Charitable organisations with gross annual income of more than $10,000 must pay an annual return filing fee of $50 (on-line), or $75 (paper).

Inland Revenue and the Charities Commission work together to provide information on the tax status of charitable entities [see 150.55].

1) Further information

For further information on registration, see the Charities Commission’s website: www.charities.govt.nz.

150.55 Interaction of tax and charities rules

Inland Revenue’s operational statement on how the Charities Commission (the “Commission”) and Inland Revenue will monitor and advise charitable entities of the requirements for income tax and gift duty exemptions and donee status, following the opening of the charities register on 1 February 2007, is set out in TIB vol 18:11 (December 2006) at 23-30.

A working protocol has been agreed between Inland Revenue and the Commission through which entities that register as charitable entities under the Charities Act 2005 will also be advised of the requirements for the charities tax exemptions.

The following is a summary of Inland Revenue’s operational practice from 1 February 2007:

(a) Entities (other than council-controlled organisations) with non-business income that are registered with the Commission will prima facie qualify for the income tax exemption in respect of that income;

(b) For entities that derive business income, registration alone will not be sufficient for the business income tax exemption and they must self assess the extent to which their charitable purposes are carried out in New Zealand. This is because the s CW 42 exemption requires more than simply charitable status — the exemption only applies to income applied for charitable purposes within New Zealand.
Zealand, and it does not apply if individuals are able to benefit personally from the business [see 150.20];

(c) Entities that currently enjoy income tax exemption should register with the Commission by 1 July 2008. Failure to do so will result in the loss of their tax exempt status until they are subsequently registered;

(d) The CIR’s approval is required for donee status whether or not the entity is registered as a charity. Entities currently (ie pre-1 July 2008) listed as donee organisations will continue to enjoy donee status even though they may decide not to register with the Commission;

(e) Newly registered charities will generally not need to make separate application to Inland Revenue for donee status. If the charity indicated on its application for charitable status that it receives donation income, Inland Revenue will automatically check whether the requirements of s LD 3(2) and sch 32 have been met before granting donee status;

(f) Organisations that choose not to become registered charitable entities (eg because their purposes are benevolent, philanthropic or cultural rather than charitable) may still apply to Inland Revenue for approval as donee organisations;

(g) During the transitional period (from 1 February 2007 to 30 June 2008) charities will retain their existing tax exempt status for income tax, gift duty and resident withholding tax;

(h) The exemption from gift duty for gifts to charitable trusts, societies and institutions will cease from 1 July 2008 where the entities have not registered with the Commission;

(i) From 1 July 2008 Inland Revenue will not issue certificates of exemption from resident withholding tax to charitable entities unless they are registered with the Commission. Charitable entities must continue to apply to Inland Revenue for certificates of exemption;

(j) Charitable organisations are still required to have IRD numbers;

(k) After 30 June 2008 Inland Revenue will attempt to contact charitable organisations that its records show have an exemption from income tax, and have not registered with the Charities Commission, to determine their position; and

(l) In the past Inland Revenue has suggested that entities include restrictions in their rules preventing them from altering certain clauses without prior approval. Inland Revenue strongly recommends that organisations remove any requirement in their rules for Inland Revenue to consent to rule changes. To enable this to happen, Inland Revenue has given blanket consent to an amendment removing any such rule.

150.60 Reimbursement of volunteers [ss CO 1, CW 62B]

The general position is that payments to volunteers are income [s CO 1]. However, a payment is exempt if it reimburses actual expenses incurred by a volunteer in undertaking voluntary work [s CW 62B].

The person or organisation making the payment may estimate the expenditure likely to be incurred by a volunteer and the estimate, provided it is reasonable, is treated as the exempt amount.

The exemption also applies to reimbursements in non-cash form, such as petrol vouchers, and transport costs incurred in getting to and from the place of volunteering.

For the purposes of the exemption, a “volunteer” is a person who freely undertakes, in New Zealand, an activity:

(a) That was chosen by the volunteer or by a group of which they are a member;

(b) That provides a benefit to a community or another person; and

(c) For which there is no purpose or intention of private pecuniary profit for the volunteer.

If a payment to a volunteer exceeds the actual expenditure incurred, the person making the payment must treat the excess as an honorarium. An honorarium is a schedular payment, which is subject to the PAYE rules. Tax must be deducted from honoraria at the rate of 33 per cent [sch 4, Part B, cl 1]. The person making
the payment may apply to the CIR for a determination under s RD 8(3) of the amount or proportion of a payment that is expenditure incurred in deriving the payment. A determination made by the CIR under s RD 8(3) [see 1320.40] modifies the amount of expenditure that is exempt under s CW 62B.

For these purposes, an honorarium is an amount that a person receives for providing services:

(a) That is paid at a rate that is less than the market rate for the services; and
(b) For which, in the normal course, no payment is fixed for the services provided.

The exemption applies whether or not the reimbursement is paid in a lump sum or in multiple sums, and whether or not the amount is paid during an income year or at the end of an income year.

150.70 Overseas donee status [s LD 3(1), sch 32]

Generally, charitable organisations are only approved as donee organisations if their funds are used wholly or mainly for charitable, benevolent, philanthropic or cultural purposes within New Zealand [s LD 3(2)(a)]. However, an organisation that applies its funds mainly outside New Zealand may still become a donee organisation by applying for listing in sch 32 [s LD 3(1)(a)]. This is done by seeking Parliamentary approval. Application is made to Inland Revenue, which makes a recommendation to Government.

Cabinet will only consider including organisations in sch 32 if their funds are principally applied towards:

(a) The relief of poverty, hunger, sickness or the ravages of war or natural disaster;
(b) The economy of developing countries (recognised as such by the United Nations); or
(c) Raising the educational standards of a developing country.

Charities formed for the principal purpose of fostering or administering any religion, cult or political creed are specifically excluded.

Applications for inclusion in sch 32 should include:

(a) An indication of the amount of donations likely to be received each year;
(b) An indication of the proportion of annual income which is likely to be applied to charitable purposes outside New Zealand; and
(c) Any other information which the applicant would like used to support their case [Operational statement 06/02, TIB vol 18:11 (December 2006), at 29-30].

(1) Cabinet criteria

The following guidelines were released by the Government on 9 December 2009 to provide greater guidance to organisations seeking charitable donee status for their overseas activities. They are intended to be an interim measure only, to be followed in 2010 by a review of the Cabinet guidelines and the process for adding organisations to sch 32.

Organisations seeking overseas donee status must be credible, transparent and accountable, and their activities must be ones that the Government would want to support, being mindful that tax credits should not be available where donations are made to an organisation if there is a risk of private benefit or other misuse.

A number of questions are asked of these organisations. The responses to any of these questions may not necessarily be determinative.

(a) Types of organisations

The following questions help to clarify the types of organisations that the Government may consider for inclusion in sch 32.

Key questions include:

• Is the organisation carried on for any private pecuniary profit of an individual?
• In the event that the organisation winds up, does it distribute funds to charitable purposes (consistent with the Cabinet criteria) within New Zealand or to those organisations already listed in sch 32?
• Is the organisation registered as a charity with the Charities Commission?
• Does the organisation have an IRD number?
• Is the organisation established in New Zealand or does it have a very strong connection to New Zealand?

(b) **Credibility and sustainability of the organisation**

The following questions help to determine whether an organisation is credible and sustainable. Organisations should have robust internal management and potential longevity.

Key questions include:

• How long has the organisation been operating?
• What are its sources of funding (if any)?
• What is the manner of operation? (for example, business plans and finances).
• Who are the recipients of the funds raised in New Zealand?
• Are the funds derived from donations in New Zealand held and used prudently? (For example, do the funds achieve the purpose that was the reason for the donation and, as much as is possible, are they used for this purpose?) Ideally, at all times, the organisation should account for funds received from donations and clearly evidence a commitment to ensuring that funds are used to support the purpose, and are not diverted into unnecessary administration and management.
• Are its founding documents (such as a constitution or trust deed) and formal documents (such as annual plans and reports) and the activities of the organisation, consistent with the Cabinet criteria?

(c) **Project management and financial systems**

The following questions help to verify the adequacy of an organisation’s project management and financial systems. Organisations should be aware that there are a number of risks involved when charities are operating internationally. Examples of risks include political, personal, financial loss, and regulatory compliance risks. Adequate checks and balances for its project management and financial systems are necessary so that taxpayer funds are used appropriately.

Key questions include:

• Does the decision-making body of the organisation have relevant knowledge and experience of the relevant field, and other project and financial management systems? For example, is there a process for assessing, and monitoring projects and selecting beneficiaries?
• Does the organisation give funds to non-resident organisation(s)? If so, are the activities of the non-resident recipient(s) consistent with the Cabinet criteria?
• If the organisation works with non-resident organisation(s), does it have access to regular and accurate information from these organisation(s)?
• Does the organisation have a set of financial accounts that clearly identify receipts of donations and transfers of funds, on a regular basis, to its designated charitable purposes?
• Can the organisation demonstrate that its activities are likely to be effective in the long term?

(d) **Internal controls for regulatory compliance**

The following questions help to assess whether the tax relief afforded by overseas donee status is targeted appropriately, and that the associated tax benefits and entitlements are not abused.

Key questions include:

• Does the organisation have procedures to prevent funds going directly, or indirectly, to individual(s) for private pecuniary benefit?
• Does the organisation have procedures to prevent funds going directly, or indirectly, to individual(s) or organisation(s) associated with terrorism?
• Does the organisation have procedures to ensure that no support is given to any individual(s) or organisation(s) that may carry out activities that could result in conviction in New Zealand under the law, such as the Crimes Act 1961, or similar laws in the relevant country?

(e) **Ongoing requirements**

The Government has an expectation that organisations included in sch 32 will maintain adequate systems that can produce:
• Accurate information about project progress and activities;
• Adequate financial reports;
• Information about donations receipts that have been issued with correct details of funds received from its donors; and
• Other particulars as may be required by Inland Revenue in respect of the organisation’s activities, funding and finances.

### 160.10 Purpose [CSA, s 4]

The purpose of the Child Support Act 1991 (CSA) is to assess the minimum level of financial support payable by certain parents in respect of their children, and to provide for the collection and payment of child support and spousal maintenance. In basic terms, the CSA requires parents who do not live with their children to pay financial support to the person who is responsible for the day-to-day care of them.

The specific aims of the CSA [s 4] are:
To affirm the right of children to be maintained by their parents;

(b) To affirm the obligation of parents to maintain their children;

(c) To affirm the right of caregivers of children to receive financial support for those children from non-custodial parents;

(d) To provide that the level of financial support to be provided by parents for their children is to be determined according to their capacity to provide financial support;

(e) To ensure parents with a like capacity to provide financial support for their children should provide like amounts of financial support;

(f) To provide legislatively fixed standards in accordance with which the level of financial support to be provided by parents for their children should be determined;

(g) To enable caregivers of children to receive support for those children from parents without the need to resort to Court proceedings;

(h) To ensure equity exists between custodial and non-custodial parents for the costs of supporting children;

(i) To ensure obligations to birth and adopted children are not extinguished by obligations to step-children;

(j) To ensure the costs to the State of providing an adequate level of financial support for children and their custodians is offset by the collection of a fair contribution from non-custodial parents; and

(k) To provide a system whereby child support and domestic maintenance payments can be collected by the Crown and paid by the Crown to those entitled to the money.

Parents liable to pay child support [CSA, s 6]

A person who is a parent of a qualifying child is liable to pay child support for that child if they are:

(a) A New Zealand citizen;

(b) Ordinarily resident in New Zealand; or

(c) Ordinarily resident in a country with which New Zealand has entered into a reciprocal agreement for the enforcement of child support.

However, child support will be payable only if the parent is not living with the eligible custodian [see 160.30].

A person is “ordinarily resident” in New Zealand if they meet the definition of a resident in the ITA 2007 [see 1250 RESIDENCE; CSA, s 218].

Meaning of parent [CSA, ss 7, 7A]

For child support purposes, a person is a parent of a child if:

(a) The person’s name is entered in the Register of Births in New Zealand, or an equivalent overseas register, as a parent of the child;

(b) The person is or was a party to a legal marriage and the child was conceived by or born to the person, or the other party to the marriage, during that marriage;

(c) The person adopted the child and that adoption order has not been discharged;

(d) A New Zealand or overseas court has ruled that the person is a parent of the child, and the finding has not been cancelled or set aside;

(e) The person has, in any New Zealand or overseas court proceeding, or in writing signed by the person, acknowledged that he or she is a parent of the child;

(f) A court has, under the Family Proceedings Act 1980, made a paternity order against the person in respect of the child;

(g) The person is the natural mother of the child;
160.25 Child Support

(h) The person has been declared to be a step-parent of the child by a Family Court; or
(i) A New Zealand or overseas court has appointed the person to be a guardian of the child, or has declared the person to be a guardian of the child, by reason of being the father of the child, and that appointment has not been cancelled or set aside.

However, if the CIR is satisfied (upon reviewing relevant evidence) that a person is not a parent of a particular child and has not been declared to be a step-parent of the child under s 99 of the CSA, then the person is not a parent of the child for child support purposes. A sperm donor is not a parent for child support purposes, unless the donor adopts the child.

The CIR may disregard either of the following if the CIR is not satisfied that the document is valid and authentic:

(a) A document purporting to be the original or a copy of a certificate, entry or record of a birth, death or marriage alleged to have taken place in an overseas jurisdiction; or
(b) A document purporting to be the original or a copy of an order or decree made by a court or public authority of an overseas jurisdiction.

160.25 Qualifying child [CSA, s 5]

Child support is payable only in respect of a qualifying child. A “qualifying child” is defined as any child:

(a) Under 19 years of age;
(b) Not living with another person in a marriage, civil union or de facto relationship;
(c) Not financially independent; and
(d) Who is a New Zealand citizen or ordinarily resident in New Zealand.

A person is “financially independent” if they are:

(a) Working as an employee or a self-employed person for at least 30 hours a week on average;
(b) Receiving a student allowance (basic grant or independent circumstances grant);
(c) Receiving a social security benefit; or
(d) Receiving a payment, under a Government-assisted scheme, that is equivalent to a social security benefit [CSA, s 2].

160.30 Custodial parent may apply for child support [CSA, s 8]

A person who is the eligible custodian of a qualifying child may apply for child support to be paid by a parent of the child. The eligible custodian may be the other parent or another person who is responsible for the care of the child (eg an adoptive parent).

An “eligible custodian” of a child is a person who is:

(a) The sole or principal provider of ongoing daily care for the child, or shares ongoing daily care of the child substantially equally with another person [see 160.40]; and
(b) Is not living with the person from whom payment of child support is sought in a marriage, civil union or de facto relationship.

If two or more people living together are both eligible custodians (as defined above) in relation to a child, only one of them may be the eligible custodian for child support purposes. If one of those persons is a parent of the child, that parent is the eligible custodian. The non-custodial parent may apply to pay child support if he/she is not living with the custodial parent [CSA, s 10].

160.35 Custodial parent receiving benefit [CSA, s 9]

A person who is the eligible custodian of a qualifying child must apply for child support if they are receiving a social security benefit. The application must be made at the same time as the application for the social security benefit is made. This is because child support collected from the liable parent is payable to the
Child Support

Government to offset the cost of the benefit. If the amount of child support exceeds the benefit, the excess is paid to the eligible custodian.

If a sole parent refuses to make an application for child support or to identify who the other parent of a child is, the rate of benefit is reduced by $22 per week. The benefit is reduced by a further $6 per week after 13 weeks if the sole parent has still not made an application for child support or identified who the other parent of a child is. Certain exceptions apply, for example, if there is insufficient evidence to establish who the other parent is, if the person or their children would be at risk of violence if the other parent were named, or if the child was conceived as a result of incest or sexual violation [Social Security Act 1964, s 70A].

A “social security benefit” [CSA, s 2] is:

(a) A domestic purposes benefit;
(b) An unsupported child’s benefit;
(c) Where the person is a sole parent:
   (i) A widow’s benefit;
   (ii) An invalid’s benefit;
   (iii) An unemployment benefit;
   (iv) A sickness benefit;
   (v) An emergency benefit.

160.40 Principal provider of childcare [CSA, ss 11, 12, 13]

In determining who the eligible custodian of a child is [see 160.30], the person who has the greatest responsibility for a child is the person who is the principal provider of ongoing daily care. If there is disagreement as to who the principal provider of ongoing daily care is, the decision is made by WINZ. If WINZ has not made a ruling the CIR decides who the principal provider of ongoing daily care is, having regard primarily to the periods the child is in the care of each person and then to the following factors:

(a) How the responsibility for decisions about the daily activities of the child is shared;
(b) Who is responsible for taking the child to and from school and supervising the child’s leisure activities;
(c) How decisions about the education or health of the child are made;
(d) The financial arrangements for the child’s material support; and
(e) Which parent pays for which expenses of the child.

If one person is the principal provider of ongoing daily care for a child and another person has care of the child for at least 40 per cent of the nights in a year, the second person is to be taken to share ongoing daily care substantially equally with the first person.

160.45 Liability for child support [CSA, ss 18, 19, 20]

If the CIR accepts an application for child support, child support is payable under a formula assessment by the liable parent from the date on which the CIR received the application. If the application is declined because it has not been properly made, child support is payable from the day the application is properly made.

Any voluntary agreement between the custodian and the liable parent for the payment of financial support is suspended as long as child support is payable under a formula assessment [see 160.60].

160.50 Assessments and objections [CSA, ss 24, 90-96, Part 6]

(1) Assessments

As soon as practicable after approving an application, the CIR must assess the amount of child support payable by the liable parent. An assessment must be made for the year of application and each subsequent child support year (a year ending on 31 March) [CSA, s 24].
A person who has been assessed for child support or domestic maintenance may object to an assessment only on the following grounds:

(a) The amount taken by the CIR to be the liable parent’s income is incorrect;
(b) The annual or monthly rate of financial support specified in the assessment has been incorrectly calculated;
(c) The assessment incorrectly specifies the days for which financial support is payable;
(d) The annual rate of financial support specified in the assessment is not correctly assessed [CSA, s 91].

(2) Objections
An objection must be posted or delivered to the CIR within 28 days of the date of the notice of assessment. The CIR has the discretion to accept a late objection. The notice of objection must state fully and in detail the grounds of the objection [CSA, s 92]. As soon as practicable, the CIR must notify the objector:

(a) Whether the objection has been allowed or disallowed;
(b) If the objection has been allowed, the effect of allowing the objection;
(c) If the objection has been disallowed, that the objector can appeal the decision to a Family Court [CSA, s 93].

The objector must pay financial support assessed pending the outcome of the objection. An exception applies if the objector has appealed to a Family Court against a decision by the CIR to accept an application for child support, on the grounds that the objector is not a parent of the child. In this situation, no payment of financial support will be required until there is a final decision of a Court [CSA, s 95].

(3) Inland Revenue policy on acceptance of late objections
Inland Revenue’s policy on accepting late objections to child support assessments or decisions under s 92(2) of the CSA is set out in SPS 10/03 [TIB vol 22:7 (August 2010), at 61-63]. Inland Revenue’s practice is based on the Court of Appeal decision in Commissioner of Inland Revenue v Wilson (1996) 17 NZTC 12,512 (CA), which suggested a two-step approach to considering late objection requests.

Step 1: Consider the reasons given by the objector for their failure to make a timely objection. A reasonable explanation for the delay is all that is required at this point. For example, where the delay was caused by the ill health of the objector or other circumstances beyond their control (such as being overseas for the whole of the 28-day objection period and there being no arrangements in place to receive and deal with notices), this will be sufficient to satisfy step 1. If the failure is due to inadvertence, negligence, an agent’s action or a deliberate decision of the objector, the request is likely to be declined.

Step 2: If the reasons given by the objector for the late objection are considered reasonable, the CIR will then consider all the circumstances surrounding the objection to decide whether, as a matter of fairness, the objection should be allowed.

Factors that support the acceptance of a late objection are:

- When the proposed objection has merit.
- When the objector has consistently asserted their entitlement and only failed to lodge an objection because of the CIR’s insistence that the entitlement was not available to them.
- When there are no practical or administrative difficulties in considering the situation at that time.
- When the objector has been told that a test case could apply to them.
- When an assessment notice or decision has been sent to the objector’s home and the objector is temporarily away during the 28-day objection period.
- The serious ill health or death of an agent, or the agent’s office is shut for the annual holidays.
- When granting the relief requested would not violate the CIR’s responsibility to be even-handed.
- When the objector is seeking legal or other professional advice.
Child Support

- When the objector is ignorant of procedures to follow.
- When the objector has fallen ill.

Factors that support declining a late objection are:

- If an objector has a professional adviser, Inland Revenue may be reluctant to accept a late objection because the advisor should be aware of the legislative requirements. Omitting to lodge an application because of an oversight by the advisor will usually not, on its own, constitute satisfactory grounds for accepting a late objection.
- How late an objection is and any history of making late objections by either the objector or the agent.
- Where the objector had never contemplated seeking a benefit but had tried to take advantage of a subsequent change in the interpretation of the law (eg as a result of a subsequent court decision or the issue of a standard practice statement).

The above factors are guidelines only and are not exhaustive. All circumstances will be considered. Decision-makers should always remain open to the possibility of new factors arising in any case that may make it unfair not to accept the objection. The weight given to each factor is to be decided by the CIR on the circumstances of each case. Inland Revenue will document the factors taken into account, the weight that has been applied to each factor, the reasons for the decision, and the decision.

The need to ensure that an assessment is correct is an important factor in deciding whether to accept a late objection, but it is not necessarily the paramount consideration. Where there is a clear error in an assessment or decision, an amendment can be made under s 87 of the CSA. If the error can be established only after further investigation or consideration (and the error does not arise from a subsequent change in the interpretation of the law), the procedures set out in steps 1 and 2 will need to be followed. A liberal approach should be taken when considering such claims.

There is no right of appeal under the CSA where the CIR does not exercise his discretion to accept a late objection. However, the decision can be challenged by way of judicial review to the High Court.

Case law

In Re M (child support) (No 2) (1993) 15 NZTC 10,015 (HC), the High Court upheld the Family Court’s decision not to alter the CIR formula assessment where the income was insufficient to meet outgoings, and “special circumstances” did not apply. Expenditure on private health insurance, obtaining further academic qualifications, and belonging to a superannuation scheme, while arguably prudent and responsible, could not be given priority over the need to maintain a child: Commissioner of Inland Revenue v Blakely (1993) 15 NZTC 10,311 (HC).

Matters such as an unplanned pregnancy, lack of contact between the parents, and the father’s lack of involvement with the child have no relevance to economic considerations and should not be taken into account to determine whether special circumstances exist to make the application of the formula of an unjust and inequitable determination of financial support. These provide no grounds for departure from the formula assessment although the percentage was varied for a specified period: L v W (1994) 16 NZTC 11,279 (CA).

An interest-free loan made by a non-custodial parent to a custodial parent is not a ground on which a departure order from a formula assessment for child support can be granted: Commissioner of Inland Revenue v Johnston (1996) 17 NZTC 12,588 (HC).

In Hudson v Commissioner of Inland Revenue (1996) 17 NZTC 12,594 (HC), a non-custodial parent was required to continue paying child support to the custodial parent regardless of the fact that the child concerned boarded with another family for 11 months while the custodial parent was overseas. It was held that the custodial parent continued to be the principal provider of ongoing daily care despite her absence.

In D v C (2002) 20 NZTC 17,548, (2001) 15 PRNZ 474 (CA), both parents shared the custody of their three children equally. One of the parents had a much higher income than the other, and the lower income parent applied for a departure order on the basis that the formula assessment was insufficient to adequately support the children. The High Court made a departure order on the basis of the principle of proportionality of relative

Staples Tax Guide 2012

123
incomes. The Court of Appeal, in reaching a revised departure order, rejected the principle of proportionality adopted by the High Court and held that the higher income earner’s non-financial contribution also needed to be taken into account.

In *McBrearty v Peck* FC Christchurch FP009/906/01, 6 May 2002, the Family Court held that the use of inappropriate means to reduce or evade liability for child support may constitute special circumstances justifying the granting of a departure order. The liable parent had understated his income for income tax purposes by claiming deductions for non-deductible items. Consequently his family support liability was reduced. The Family Court, in granting a departure order, added back the false deductions to the liable parent’s income and increased his child support liability accordingly.

### 160.55 Termination of liability for child support [CSA, ss 25, 26, 27]

A parent’s liability to pay child support in respect of a child ends when the child turns 19, is adopted, marries, enters a civil union or de facto relationship, becomes financially independent, ceases to be a New Zealand citizen and ordinarily resident in New Zealand, or dies.

A person’s liability to pay child support also ends if the person:

1. Becomes the sole provider of ongoing daily care for the child;
2. Ceases to be a New Zealand citizen, ordinarily resident in New Zealand and ordinarily resident in a country with which New Zealand has entered into a reciprocal agreement;
3. Is determined by the CIR (under s 7(2) of the CSA) not to be a parent of the child;
4. Dies; or
5. Begins living with the eligible custodian in a marriage, civil union or de facto relationship.

If the eligible custodian dies, the liable parent’s liability to pay child support ceases 28 days after date of death unless a new application for child support is made for the child within 28 days. A person’s liability to pay child support also ends if the eligible custodian ceases to be the sole or principal provider of ongoing daily care for the child, or ceases to share ongoing daily care substantially equally with another person.

An eligible custodian who is not receiving a social security benefit may elect that the liability of a liable parent to pay child support end from a specified future date.

### 160.60 Basic amount of child support [CSA, ss 29, 30, 31, 32, 33]

The annual amount of child support payable by a liable parent is the greater of the minimum annual rate [see 160.80], or the amount (for the child support year), calculated using the following formula:

\[
(a - b) \times c
\]

Where:

- \(a\) is the liable parent’s child support income for the child support year [see 160.65];
- \(b\) is the living allowance to which the liable parent is entitled for the year [see 160.70];
- \(c\) is the child support percentage [see 160.75].

**Example:**

Jack and Jill have separated, with Jack living alone and Jill having custody of two children from their marriage. Jack’s taxable income for the year ended 31 March 2011 was $31,946. Jill is the custodian. Jack is the liable parent. Jack’s child support liability for the year ended 31 March 2012 is:

\[
($31,946 - $14,281) \times 24\% = $4,239.
\]

Income figures used in the formula do not include any income that Jack’s new partner (should he have one) may derive. It does not take into account Jack’s current level of income. Neither does it take account of any income which Jill might have derived while Jack and Jill were together, nor Jill’s current level of income.

Where a parent is liable to pay child support to two eligible custodians who share the ongoing daily care of a child, the amount of child support payable to each custodian is 50 per cent of the amount calculated under the above formula.
160.65 Child support income [CSA, s 38, 39, 39A]

(1) Income consists only of withholding income

If the liable parent’s income is derived solely from withholding income (employment income subject to PAYE, and interest and dividends subject to RWT), their child support income is their taxable income for the most recent tax year. Because child support assessments are issued before the end of the tax year (to allow liable parents time to object), actual taxable income for the 10 months to the end of January may be grossed up by Inland Revenue to an annual income amount. No inflation adjustment is made. When the full annual income amounts are known, Inland Revenue will reassess the liability if the final taxable income amount is at least $500 more or less than the estimated taxable income.

(2) Income from sources other than withholding income

If the liable parent’s income is derived from any source other than withholding income, their child support income is their taxable income for the tax year immediately preceding the most recent tax year, increased by the CPI for the calendar year preceding the child support year. Thus a person’s child support liability for the year ended 31 March 2011 will be based on their inflation adjusted taxable income for the year ended 31 March 2009.

If the liable parent is resident in a country outside New Zealand the CIR may, in calculating the liable parent’s child support liability, take into account any income derived in and taxable in that other country [CSA, s 39A].

(3) Maximum child support income

Child support income cannot exceed the following maximum:

<table>
<thead>
<tr>
<th>Year ended</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>31 March 2010</td>
<td>$114,191</td>
</tr>
<tr>
<td>31 March 2011</td>
<td>$120,463</td>
</tr>
<tr>
<td>31 March 2012</td>
<td>$121,833</td>
</tr>
</tbody>
</table>

If actual taxable income for a year exceeds the maximum, the liable parent’s child support income (item “a” in the calculation of child support [see 160.60]) is based on the maximum figure.

160.70 Living allowance [CSA, s 30]

The living allowance depends on the liable parent’s living circumstance and the number of dependent children they have, as follows:

<table>
<thead>
<tr>
<th>Living arrangement</th>
<th>Dependent children</th>
<th>Year ended</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>31 March 2010</td>
<td>31 March 2011</td>
</tr>
<tr>
<td>Single</td>
<td>0</td>
<td>$14,038</td>
</tr>
<tr>
<td>Married, civil union or de facto</td>
<td>0</td>
<td>$19,088</td>
</tr>
<tr>
<td>Single, married, civil union or de facto</td>
<td>1</td>
<td>$26,901</td>
</tr>
<tr>
<td>Single, married, civil union or de facto</td>
<td>2</td>
<td>$29,663</td>
</tr>
<tr>
<td>Single, married, civil union or de facto</td>
<td>3</td>
<td>$32,425</td>
</tr>
<tr>
<td>Single, married, civil union or de facto</td>
<td>4</td>
<td>$35,187</td>
</tr>
</tbody>
</table>

160.75 Child support percentage [CSA, s 29]

The child support percentage is based on the number of children for whom the liable parent is paying child support.
160.80 Minimum annual rate of child support [CSA, s 72]

The minimum annual amount of child support payable by a liable person, regardless of the number of children involved is outlined below.

<table>
<thead>
<tr>
<th>Year ended</th>
<th>Minimum annual amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>31 March 2008</td>
<td>$749</td>
</tr>
<tr>
<td>31 March 2009</td>
<td>$773</td>
</tr>
<tr>
<td>31 March 2010</td>
<td>$799</td>
</tr>
<tr>
<td>31 March 2011</td>
<td>$815</td>
</tr>
<tr>
<td>31 March 2012</td>
<td>$848</td>
</tr>
</tbody>
</table>

160.85 Split custody [CSA, s 34]

Split custody occurs when a parent of two or more qualifying children has ongoing daily care for one or more of those children and, at the same time, the other parent has the ongoing daily care of the other child or children. In this situation, each parent has a liability to pay child support to the other. However, one parent’s liability is offset against the other so that only the parent with the larger liability has to pay child support. This cannot be done where one or both of the parents is a social security beneficiary.

Example:
Bob and Penny (neither of whom is a social security beneficiary) have split custody of their children. If Bob has a child support liability of $3,024 and Penny has a liability of $4,293, the result is that Bob pays nothing and Penny pays $1,269.

160.90 Shared custody [CSA, s 35]

Shared custody occurs when the parents of qualifying children are living apart and each parent has the ongoing daily care of one or more of their children for at least 40 per cent of the time consistently during the year [see 160.40].

Shared custody affects the formula used to calculate the amount of child support. Both parents are treated as eligible custodians and liable persons. The percentage rate of each liable person’s income is reduced. Each child for whom custody is shared is counted as 0.5 of a child for the purposes of the child support percentage.

If the liable parent shares the care of the children with the custodian, the child support percentages are as follows:

<table>
<thead>
<tr>
<th>Number of children</th>
<th>Child support percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.5</td>
<td>12%</td>
</tr>
<tr>
<td>1</td>
<td>18%</td>
</tr>
<tr>
<td>1.5</td>
<td>21%</td>
</tr>
<tr>
<td>2</td>
<td>24%</td>
</tr>
<tr>
<td>2.5</td>
<td>25.5%</td>
</tr>
<tr>
<td>3</td>
<td>27%</td>
</tr>
</tbody>
</table>
**Number of children**  | **Child support percentage**
--- | ---
3.5 | 28.5%
4+ | 30%

**Example:**
Frank and Susan are divorced. They have three children, and each parent has full-time custody of one child each and shared custody of the third child. Frank’s taxable income for the previous year is $46,105 and Susan’s taxable income for the previous year is $36,328. Each parent is liable to pay the other for child support for 1.5 children. Their child support liabilities for the year ended 31 March 2012 are calculated as follows (calculations are rounded to the nearest dollar):

**Frank**
- Taxable income: $46,105
- Less living allowance: $30,558
- Balance: $15,547
- Multiplied by 21 per cent for 1.5 children: $3,265

**Susan**
- Taxable income: $36,328
- Less living allowance: $30,558
- Balance: $5,770
- Multiplied by 21 per cent for 1.5 children: $1,212

Provided neither parent is a social security beneficiary, the amounts can be offset with the result that Frank will pay Susan $2,053.

In *Andrews v Commissioner of Inland Revenue* [2003] NZFLR 193 (HC), the High Court found that a father who had night care of his children for 35 per cent of the time did not provide substantially equal care of his children. The Court emphasised that no arithmetical formula could be applied to the factors in s 12(b) of the CSA, and an assessment of overall care was necessary to decide whether there was substantially equal sharing.

**160.95 Child support based on estimated income** [CSA, ss 40, 41, 42, 43]
A liable parent may apply to the CIR to have their child support liability calculated on the basis of their estimated taxable income. This can be done only if the estimate is 85 per cent or less of the person’s taxable income for the last relevant tax year (as increased by the appropriate inflation factor, if applicable). The application must be given to the CIR before or during the child support year, and must be accompanied by information and evidence that is sufficient to support the estimate.

A child support liability based on estimated income takes effect from 1 April, if the election was made before 1 April. If the election was made after 1 April, the estimate takes effect from the first day of the month in which the election was made.

**Example:**
A liable parent’s taxable income for the year ended 31 March 20X1 was $46,759. Because of a change in his employment situation, his taxable income for the year ended 31 March 20X2 will be approximately $37,000. He obtains a letter from his employer confirming his expected earnings. On 24 March 20X1 he advises the CIR in writing that he wishes his child support liability to be based on his estimated income of $37,000 and includes a copy of the letter from his employer. Because the estimated income is 79 per cent of his taxable income from the previous tax year (ie less than 85 per cent), his child support liability for the year ended 31 March 20X2 will be based on his estimated income of $37,000.

A liable parent cannot apply to re-estimate their taxable income within three months of any previous estimate unless the new estimate exceeds the old estimate by at least $500. If a liable parent revokes their estimate, or no longer meets the threshold for estimating income, their child support liability will revert to what would have been payable had they not estimated.
160.100  End-of-year reconciliation following estimate [CSA, ss 44, 45]

If a liable parent’s child support liability for a year is based on estimated income then, following the end of the child support year, the CIR will complete an end-of-year reconciliation to ensure that the correct amount of child support has been paid. The amount of child support that should have been paid is the lesser of:

(a) The amount of child support based on the liable parent’s actual taxable income for the year; and

(b) The child support that would have been payable (under s 29 of the CSA) if the parent had not made an election.

If a liable parent who has estimated their income does not file an income tax return to enable Inland Revenue to make an end-of-year reconciliation, Inland Revenue will issue a reconciliation assessment for the amount that the liable parent would have been required to pay had they not estimated. The liable parent can object to this reconciliation only by filing a tax return within 28 days of receiving notification of the assessment. If they do not file a return within this period, the reconciliation stands. The liable parent will also be prevented from estimating again until they have filed their outstanding tax returns. All liable parents will have their liability capped at the amount they would have had to pay had they not estimated their income.

If child support based on an estimate is less than 80 per cent of the amount of child support that would have been payable if an estimate had not been made, the liable parent is liable for a penalty of 10 per cent of the difference.

Example:

A liable parent paid child support of $3,600 based on an estimate of income. Child support based on taxable income for the year was $6,000. A penalty of $240 [10 per cent of ($6,000 − $3,600)] will be charged on the underestimate. $3,600 is only 60 per cent of $6,000, ie less than 80 per cent.

160.105  Voluntary agreements [CSA, ss 47-66A, Part 3]

A liable person and an eligible custodian may make a voluntary written agreement at any time, setting out the amount the liable parent will pay to the custodian for the support of the children. It does not need to be registered in the Family Court. It may also be made where one person agrees to make a payment to support a former partner, even when no children are involved (domestic maintenance).

The parties to a voluntary agreement can have it administered by Inland Revenue provided the amount payable under the agreement is at least $10 per week. If the person receiving the payments is a social security beneficiary [see 160.35], the amount of support payable must be greater than the amount that would be calculated under a formula assessment [see 160.60].

If Inland Revenue accepts a voluntary agreement, the amount is paid direct to Inland Revenue, which then passes the amount in excess of what is due under the formula through to the eligible custodian, the balance being passed to the Government to offset the custodian’s social security benefit. If the liable person fails to pay, Inland Revenue follows up the non-payment as if it were a formula assessed payment that was owing. A voluntary agreement can be changed or withdrawn at any time, and either party can apply for a formula assessment at any time. The formula assessment will automatically override the voluntary agreement.

Court-ordered domestic maintenance is collected and enforced through Inland Revenue, although the recipient of the maintenance may choose not to have it collected by Inland Revenue.

160.110  Temporary exemptions [CSA, ss 89A-89ZE, Part 5A]

(1)  Long-term hospital patients [ss 89B, 89C, 89F, 89G, 89H]

A liable person is exempt from paying child support for the whole, or part, of a long-term period of hospitalisation if:

(a) The person’s income for the period is nil, or consists only of income from investments or a social security benefit at the rate applicable to long-term hospital patients [sch 22 of the Social Security Act 1964]; and
(b) The person’s income from investments (if any) during that period does not, on a weekly basis, exceed the minimum annual rate of child support [see 160.80].

A long-term period of hospitalisation is defined as a continuous period of 13 weeks or more during which the person is a hospital patient. A person seeking an exemption must apply for it within three months after the period of hospitalisation ends. An application for exemption may relate to the whole of the period of hospitalisation or to one or more parts of it.

(2) **Long-term prisoners [CSA, ss 89B, 89D, 89F, 89G, 89H]**

A liable person is exempt from paying child support for the whole, or part, of a long-term period of imprisonment if:

(a) The person’s income for the period is nil, or consists only of income from investments; and

(b) The person’s income from investments (if any) during that period does not, on a weekly basis, exceed the minimum annual rate of child support [see 160.80].

A long-term period of imprisonment is defined as a continuous period of 13 weeks or more during which the person is a prisoner. A person seeking an exemption must apply for it before the period of imprisonment ends. An application for exemption may relate to the whole of the period of imprisonment or to one or more parts of it.

(3) **Liable parents under the age of 16 [CSA, ss 89E, 89F, 89G, 89H]**

A liable person is exempt from paying child support if the person is under 16 years of age and:

(a) The person’s income for the period is nil, or consists only of income from investments; and

(b) The person’s income from investments (if any) during that period does not, on a weekly basis, exceed the minimum annual rate of child support [see 160.80].

A person seeking an exemption must apply for it within three months after the day on which the person turns 16. An application for exemption may relate to the whole of the period before the person turns 16 or to one or more parts of it.

(4) **No entitlement to refund [CSA, s 89J]**

If a liable person is exempted from paying child support during a long-term period of hospitalisation, long-term period of imprisonment, or before the person turns 16, the person is not entitled to a refund of any child support paid during the period of exemption. Instead of refunding the excess, the CIR may:

(a) Apply the excess to any unpaid child support or penalty;

(b) Hold the excess and apply it to any future child support liability; or

(c) Amend any assessment.

**Example:**

A liable person paying weekly child support of $75 goes into hospital. At the time he was admitted he did not know long he would be in hospital. After four weeks in hospital, he was advised by his doctor that he would have to remain in hospital for at least another three months. At this point, he applies for exemption from child support under s 89C of the CSA. The exemption is granted by the CIR two weeks later. By this time, the liable person has paid $450 in child support in relation to the exempt period. Inland Revenue cannot refund this overpayment, but it will be applied against any arrears of child support or penalties, or held and applied to any future child support liability.

160.115 **Exemption for victims of sex offences [CSA, ss 89Y-89ZE]**

A liable parent may be permanently exempted from paying child support in relation to a particular child if the liable parent is the victim of a sex offence and the child was conceived as a result of that offence. The period of exemption applies from the day the CIR accepts an application for formula assessment of child support for the child if:

(a) The application for formula assessment was made on or after the day the offender was convicted of the offence; and
(b) The liable parent (ie the victim of the sex offence) applied for the exemption within 28 days after the CIR notified the liable parent that the application for formula assessment had been accepted. Otherwise, the period of exemption commences on the day the CIR receives the application. The CIR may obtain information from the Ministry of Justice and the New Zealand Police in order to determine whether the applicant is eligible for the exemption. If the conviction for the sex offence is subsequently quashed, any exemption granted is void from the start. If, following a retrial, a person is convicted of a sex offence, the victim may reapply for an exemption.

160.120 Payment by liable parents [CSA, ss 128-138, Part 8]

Child support that is payable is a debt due to the Crown. A person who is liable to pay child support may choose the method of payment. The available options are:

(a) Deductions from a benefit;
(b) Automatic payments from a bank account;
(c) Online payments;
(d) Payment by cheque to Inland Revenue;
(e) Payment by cash or cheque at any Westpac branch; or
(f) Deductions from salary or wages (if the liable person is in arrears).

However, if a liable person defaults in the payment of child support, Inland Revenue may require future payments to be made by automatic deduction from salary or wages, ACC payments, tax refunds or bank accounts [see 160.140]. If a liable person receives a social security benefit, payments of child support are deducted from the benefit.

Child support is payable on the 20th of the month following the month in which the liability arises. Thus child support calculated for the month of August is due for payment on 20 September. An exception applies to the first child support payment — in this case the payment is due on the later of the 20th of the following month or 30 days after the notice of assessment is issued.

160.125 Late payment penalty [CSA, s 134]

If a child support payment is not paid by the due date, a 10 per cent penalty (minimum $5) is added. For each additional month after the original due date that the amount owing, or any part of it, remains unpaid a further two per cent penalty is added. The 10 per cent penalty is referred to as the initial late payment penalty; the two per cent penalty is referred to as the incremental late payment penalty.

160.130 Relief from late payment penalties [CSA, ss 128-138, Part 8]

1. Discretionary relief [CSA, ss 135A-135G]

The CIR may grant relief from the whole or part of a late payment penalty in the following circumstances:

(a) There was a reasonable cause for the delay in payment of the debt and the default was remedied as soon as practicable. “Reasonable cause” means an event or circumstance beyond the control of the liable person, including a serious illness, accident or disaster, that caused the delay in payment [CSA, s 135B].

(b) The delay in payment was caused by a failure to make a deduction under Part 10 of the CSA (eg the failure of an employer to deduct child support from salary or wages) and the liable person has taken reasonable steps to mitigate the effect of that failure [CSA, s 135C].

(c) The delay in payment was due to an honest oversight by the liable person, who has no history of default, and the debt was paid as soon as the person became aware of the oversight [CSA, s 135D].

(d) The delay in payment was due to an error made by an officer of Inland Revenue, and the liable person acted in good faith and altered their position in reliance on the error [CSA, s 135E].
(e) The eligible custodian has uplifted the debt to which the penalty relates under s 180 of the CSA [CSA, s 135F]. Section 180 of the CSA allows the eligible custodian to elect that the CIR not pursue a child support debt.

(f) The CIR may grant relief from incremental penalties if the liable parent has paid all of the child support debt and initial late payment penalties, and the recovery of the incremental penalties would involve an inefficient use of the CIR’s resources and would place the liable person in serious hardship. The CIR must have regard to ss 6 and 6A of the TAA, which relate to the requirements to protect the integrity of the tax system and to collect over time the highest net revenue practicable [CSA, s 135G]. “Serious hardship” has a similar meaning to that in the financial relief provisions in the TAA [see 480.25].

(2) **Mandatory relief [CSA, ss 135H-135N]**

The CIR must write off an initial late payment penalty in the following circumstances:

(a) The penalty relates to the first payment of child support payable by the liable person and:

(i) Within three months of the date the assessment was issued, the person enters into an agreement with the CIR to pay their current and future child support by instalment, and all those instalments are paid in full and on time as per the agreement; or

(ii) Within three months of the date the assessment was issued, the CIR gives a person (eg an employer) a deduction notice under s 154 of the CSA for the purpose of collecting the liable person’s current and future child support by deduction, and all deductions are made as required [CSA, s 135H].

(b) The amount of the penalty is $5 or less, the amount of debt that the penalty relates to is less than the amount of the penalty, and the person has no history of defaulting on their child support payments. The CIR must refund any part of the penalty that has already been paid [CSA, s 135I].

The CIR must write off incremental penalties in the following circumstances:

(a) A liable person has entered into a payment agreement with the CIR on or after 25 September 2006 and has met all their obligations under the agreement up until a particular review date. A review date is six months after the agreement was entered into and every six months thereafter. The CIR must review the incremental penalties that were unpaid at the time the agreement was entered into and write off those penalties in proportion to the amount of the initial debt that has been paid during the past six months. The CIR must refund any part of a penalty written-off that has already been paid [CSA, s 135J]. In applying s 135J of the CSA, the CIR may disregard a failure to make a payment under the agreement if the failure was caused by the circumstances that entitle a person to relief under ss 135B to 135E of the CSA (ie reasonable cause for the delay, failure of a person to make a deduction, honest oversight, or error by an Inland Revenue officer) [CSA, s 135L].

(b) A liable person entered into a payment agreement with the CIR before 25 September 2006 and has met all their obligations under the agreement up until a particular review date; or the CIR has issued a deduction notice to a person (eg an employer) and that person has made all the deductions and payments required to be made up until a particular review date. A review date is six months after 25 September 2006 and every six months thereafter. The CIR must review the incremental penalties that were unpaid as at 25 September 2006 and write off those penalties in proportion to the amount of the initial debt that has been paid off since 25 September 2006. The CIR must refund any part of a penalty written-off that has already been paid [CSA, s 135K]. In applying s 135K of the CSA, the CIR may disregard a failure to make a payment under an agreement if the failure was caused by the circumstances that entitle a person to relief under ss 135B to 135E of the CSA (ie reasonable cause for the delay, failure of a person to make a deduction, honest oversight, or error by an Inland Revenue officer) [CSA, s 135L]. The CIR may also disregard a failure to make a deduction or payment in accordance with a deduction notice if the failure was caused by the circumstances that entitle a person to relief under ss 135B, 135C or 135E of the CSA [CSA, s 135L].
The incremental penalty relates to a child support debt that is payable in one or more instalments under a payment agreement, and all of the payments due under the agreement have been paid. The CIR must write off the incremental penalty. The CIR must refund any part of the penalty that has already been paid [CSA, s 135M].

The incremental penalty relates to a child support debt in respect of which deductions are required to be made under a deduction notice, and all of the deductions and payments required under the notice have been made. The CIR must write off the incremental penalty. The CIR must refund any part of the penalty that has already been paid [CSA, s 135N].

### 160.135 Payments to eligible custodians [CSA, ss 139-152A, Part 9]

If the eligible custodian is not a social security beneficiary, all payments of child support received by the CIR in respect of a qualifying child, whether under a formula assessment or a voluntary agreement, must be paid to the eligible custodian [CSA, s 141].

If the eligible custodian is a social security beneficiary, child support payments received by the CIR under a formula assessment are applied firstly in payment of the benefit and any balance remaining is paid to the eligible custodian [CSA, ss 142, 143]. All payments of domestic maintenance received by the CIR must be paid to the person in respect of whom they are paid [CSA, s 145].

Payments received by the CIR on or before the 20th of the month must be paid out to eligible custodians on or before the seventh day of the following month. The CIR is not required to pay out any amount less than S5 [CSA, s 146].

An amount of child support that has been deducted from money payable to a liable person (eg by an employer) but not paid to Inland Revenue by the 20th of the following month is deemed to have been received. Thus the eligible custodian will receive payment from Inland Revenue even though Inland Revenue has not yet received the amount [CSA, s 147].

All payments of child support by the CIR must be by direct credit to the payee’s nominated bank account [CSA, s 148].

### 160.140 Automatic deductions [CSA, ss 153-177, Part 10]

If child support is payable by automatic deduction [see 160.100] the CIR may issue a deduction notice to any person requiring them to make deductions from money payable to the liable person and to pay the amount of those deductions to Inland Revenue [CSA, s 154]. For example, the CIR can require that amounts be deducted by an employer from salary or wages, or by a bank from amounts on deposit. A copy of the deduction notice must be given to the liable person [CSA, s 156].

A deduction notice remains in force until revoked or until a new deduction notice is issued [CSA, s 158]. The person to whom the deduction notice is given (the “payer”) is obligated to make the required deduction, is deemed to be acting under the authority of the liable person, and is indemnified in respect of the deduction [CSA, ss 159, 162]. Deductions made under a deduction noticed during a month must be paid to Inland Revenue by the 20th of the following month [CSA, s 163].

Despite the requirements of the deduction notice, the amount deducted from employment earnings by an employer or PAYE intermediary must not exceed 40 per cent of the liable person’s net earnings (ie source deduction payment less PAYE) for the pay period. However, if the liable person has more than one employer and agrees, a deduction may exceed 40 per cent of the person’s net earnings from any one employer provided the total deductions from all sources of earnings for the pay period do not exceed 40 per cent of net earnings [CSA, s 166].

Automatic deductions of child support must be held in trust for the Crown and are not the property of the payer [CSA, s 167]. Where a payer has failed to make a required deduction, the amount constitutes a debt payable to the CIR and becomes a charge on the real and personal property of the payer [CSA, ss 168, 169]. A payer must keep a record of all amounts deducted from money payable to a liable person and keep those records for at least seven years [CSA, s 177].
160.145 Offences and penalties [CSA, ss 170, 171, 172, 208, 210]

It is an offence for a payer under Part 10 of the CSA, or a payer’s employee, to communicate any information regarding a liable person to any other person except for the purpose of performing the payer’s child support obligations [CSA, ss 170, 172]. The penalty is a fine of up to $15,000 for each offence for the first conviction and up to $25,000 for each offence for any subsequent conviction [CSA, s 210(2)].

It is also an offence for an employer to discriminate against an employee because of the fact that they are a liable person, or because the employer has received a deduction notice in relation to the liable person [CSA, s 171].

The following are also offences under the CSA:

(a) Failure by an exempted person to notify the CIR that they have received extra income that may affect their exemption;
(b) Making a deduction in excess of 40 per cent an employee’s net earnings;
(c) Failure by a liable person or a payee to notify the CIR of a change in their address or any change in circumstances required by the CIR to be notified;
(d) Knowingly providing the CIR with a false document, statement or declaration or false information;
(e) Intentionally misleading or attempting to mislead the CIR;
(f) Knowingly falsifying records;
(g) Obstructing an Inland Revenue officer;
(h) Aiding, abetting, inciting or conspiring with any person to commit any offence [CSA, s 208].

The penalty for the above listed offences [except (h)] is:

(a) A fine of up to $2,000 for each offence, on the first conviction;
(b) A fine of up to $4,000 for each offence, on the second conviction;
(c) A fine of up to $6,000 for each offence, on each subsequent conviction [CSA, s 210(3)].

The penalty for aiding and abetting is a fine not exceeding the maximum fine applying to the offence that the person aided, abetted, incited or conspired with [CSA, s 210(4)].

160.150 Refund of excess financial support [CSA, ss 216-240, Part 14]

A person who has paid more financial support than they are required to may apply to the CIR for the excess to be refunded, or to be transferred and credited against:

(a) Any tax liability of the person;
(b) Any tax liability another person;
(c) Another person’s financial support liability [CSA, ss 216, 216B].

The request for transfer must be in writing [CSA, s 216C].

If a person fails within 12 months to apply for a refund of an overpayment of $5 or less, the CIR must transfer the amount to the person’s income tax credit account [CSA, s 216(5)].

160.155 Reciprocal agreement with Australia

The Child Support (Reciprocal Agreement with Australia) Order 2000, which came into effect on 1 July 2000, allows the relevant agencies in Australia and New Zealand to enforce payment of child support and domestic maintenance owing to a custodial parent living in the other country, and to exchange information regarding liable parents’ income and addresses. The Order applies to formula based child support, voluntary arrangements and Court awarded child and domestic maintenance.

Each country uses its own debt collection procedures to enforce payment. According to Inland Revenue, this usually means requiring employers to make deductions from liable parents’ salary or wages [see TIB vol 12:6 (June 2000) at 9].
Existing arrangements that have been agreed to by the custodial parent and the liable parent are allowed to continue outside the reciprocal agreement.

**160.160 CIR’s practice on child support instalment arrangements**

Standard practice statement SPS 11/02 [TIB vol 23:2 (March 2011) at 17–23] sets out Inland Revenue’s practice on how the CIR’s discretion will be exercised when dealing with requests for instalment arrangements for the payment of overdue child support debt. The statement also explains how the CIR’s discretion with respect to the write-off of incremental penalties will be exercised. The statement is dated 16 February 2011.

Liable persons are encouraged to contact Inland Revenue at the earliest opportunity if they are not going to be able to pay their child support obligations on time and in full to discuss their options for payment, which may include an instalment arrangement.

Requests for an instalment arrangement may be made in writing, by telephone, or in any other manner acceptable to the CIR. For example, the Inland Revenue website on-line service may be used. Requests will be considered on a case-by-case basis. A liable person will need to show why they cannot make immediate payments towards their child support obligation. They may be asked to supply further information about their financial circumstances.

When the CIR is satisfied that a liable person is not able to make immediate payment, an instalment arrangement may be agreed to. Instalment arrangements that include current year child support obligations must include the minimum annual rate of child support payable for a current year, plus a reasonable amount toward reducing the child support debt. Consequently, any instalment arrangement must be for more than the minimum annual amount of child support payable.

An instalment arrangement will be structured so that the child support debt will be paid in the shortest possible time.

When the CIR agrees to an instalment arrangement, the terms will be confirmed in writing. That confirmation will set out both the liable person’s and the CIR’s obligations under the arrangement.

Liable persons who enter into an instalment arrangement must inform the CIR as soon as practicable if there is a change in their circumstances that may impact on an earlier decision to provide financial relief, or their ability to repay their child support debt.

The CIR will review instalment arrangements every 26 weeks (from the date of commencement) to confirm that the liable person has made the agreed payments. As long as the agreement has been complied with, incremental penalties relative to the debt paid during that period will be written-off.

Default on payment of an instalment may not undo the overall instalment arrangement. When the CIR is satisfied that a liable person is unable to pay their child support debt under an instalment arrangement, the terms of the instalment arrangement may be varied following discussion with the liable person. However, when an instalment arrangement is cancelled because a liable person does not comply with their repayment obligations, the CIR will consider whether other options may be available to collect the child support debt. Penalties will accrue on any unpaid amount.
Chapter 170

Companies

170.05 Definitions

A company is taxed in New Zealand under the principles of source and residence [see 760 INCOME FROM NEW ZEALAND AND FOREIGN SOURCES].

For the purposes of the ITA 2007, the term “company” is defined in s YA 1 and includes any body corporate or other entity which has a legal existence separate from that of its members, whether it is incorporated or created in New Zealand or elsewhere. It does not include a partnership, but it does include a listed limited partnership and a foreign corporate limited partnership. The definition also includes:

(a) A unit trust;
(b) A group investment fund that is not a designated group investment fund to the extent to which it results from investments made into it from a non-designated source on or after 23 June 1983;
(c) Airport operators;
(d) Statutory producer boards;
(e) Incorporated societies;
(f) Industrial and provident societies;
(g) Friendly societies; and
(h) Building societies.

“Widely-held company” means any company which has not less than 25 shareholders (with associated shareholders treated as one person) and is not a closely-held company. This concept is intended to refer to companies previously referred to as public companies [s YA 1].

“Close company” means a company for which there are five or fewer natural persons (with all natural persons who are associated being treated as one):

(a) The aggregate of whose voting interests in the company exceeds 50 per cent; or
(b) In any case where, at the time, a market value circumstance exists for the company, the aggregate of whose market value interests in the company exceeds 50 per cent,
but does not include a special corporate entity. The term “close company” replaces the previous terms “proprietary company” and “private company”.

“Closely-held company” means a company in which five or fewer persons (with associated shareholders treated as one person) own, in the aggregate, over 50 per cent of the direct voting interests or the direct market value interests where a market value circumstance exists [s YA 1]. Closely-held companies are considered to operate in a similar manner to partnerships and as a result, this definition is fundamental to the qualifying company regime, see 1160 QUALIFYING COMPANIES.

“Limited attribution company” means any building society, cooperative company, listed company, widely held company, or foreign company that is not a closely-held company [s YA 1]. This definition relates to the measurement of voting and market value interests in a company [see 170.15 to 170.25].

“Special corporate entity” means any public or local authority, any State-owned enterprise, any statutory producer board, any statutory body established by Act of Parliament which does not issue shares, any group investment fund (GIF), any Crown research institute, any life insurance fund, or any entity which has not issued shares and is mainly in the business of providing life insurance or other types of insurance to the public. This definition relates to the measurement of voting and market value interests in a company [see 170.15 to 170.25].

The provisions relating to a “qualifying company” are covered in 1160 QUALIFYING COMPANIES.

170.10 Control of company defined

The definition of “control” is important to the “associated persons” provisions in subpart YB [see 70 ASSOCIATED PERSONS AND RELATIVES]. The definition of control, in relation to a company, is as follows:

A company is under the control of the group of persons:

(a) Whose direct voting interests in the company exceed 50 per cent;

(b) In any case where a market value circumstance exists for the company, whose direct market value interests in the company exceed 50 per cent; or

(c) Who have control of the company by any other means [s YC 1].

A natural person is treated as holding rights held by a relative of that person [s YC 1(2)].

Where any nominee holds any rights at any time on behalf of or to the order of another person, the rights are deemed to be held at the time by the other person [s YB 21].

A general definition of the term “person” is not provided in the ITA 2007, other than for the purposes of the income equalisation regimes, which apply to the farming sector. The general definition of the term is now found in s 29 of the Interpretation Act 1999, which states:

“Person includes a corporation sole, a body corporate, and an unincorporated body:”

170.15 Voting and market value interests generally

The rules for measuring voting and market value interests apply for the purposes of:

(a) Loss carry-forward and grouping [see 940 LOSSES]

(b) The qualifying companies regime [see 1160 QUALIFYING COMPANIES]

(c) Carry-forward of credit under the imputation regime [see 670 IMPUTATION]

(d) Liability of directors and shareholders for tax of a company with insufficient assets to meet its tax liabilities under s HD 15 [see 40 AGENCY]

(e) The allowable deduction for interest under s DB 8 [see 830.40], and

(f) The consolidated companies regime [see 190 COMPANIES — CONSOLIDATION].

The voting and market value interests tests also prevent the trading of losses (eg by preventing a company from belonging to more than one group).
170.20 Voting interests [ss YA 1, YC 2, YC 3, YC 4, YC 18, YC 18B]

A voting interest is the percentage that a person holds of the total rights in a company attaching to shares or options to vote or participate in shareholder decision-making rights. Shareholder decision-making rights cover the issues of:

(a) Dividends and distributions by the company;
(b) The constitution of the company;
(c) Any variation of share capital of the company; and
(d) The appointment or election of directors.

Where percentages for these matters differ, the voting interest is an average of the differing percentages.

Example:

Ellen and Bill hold all the shares in Zed Ltd which has two classes of shares. Class A shares carry the right to vote on matters other than the payment of dividends and appointment of directors. Class B shares carry unrestricted voting rights. Ellen holds all 1,000 of the Class A shares. Bill holds all 1,000 of the Class B shares. In calculating the voting rights for Ellen, the average of each of the differing percentages is:

- Dividends and distributions: 0%
- Constitution of the company: 50%
- Variation of share capital: 50%
- Appointment or election of directors: 0%

Ellen’s average is 25 per cent. The same calculations for Bill produce an average of 75 per cent.

If a company holds shares in another company, the corporate chain is “looked through” to the ultimate shareholders. This involves applying the tracing test in s YC 4 to determine indirect voting interests. An ultimate shareholder’s indirect voting interest in a company held through interposed companies is their proportionate interest in that company, after taking into account any shareholding interests through the corporate chain.

Example:

John owns 40 per cent of the direct voting interests in Holdco Ltd. Holdco owns 60 per cent of the direct voting interests in SubCo1 Ltd. SubCo1 Ltd owns 100 per cent of the direct voting interests in SubCo2 Ltd. John’s indirect voting interests in SubCo2 are determined by multiplying his direct voting interest in Holdco Ltd against that company’s direct voting interest in SubCo1 Ltd and also against SubCo1 Ltd’s direct voting interest in SubCo2 Ltd. This calculation is 40% × 60% × 100% = 24%. This means John has a 24 per cent indirect voting interest in SubCo2 Ltd.

1) Corporate restructuring

The aim of the continuity rules is to ensure that a significant percentage of the economic ownership of a company remains in the hands of the same shareholders in order for the tax benefits of losses and imputation credits to remain available. However, unintended circumstances can arise where the standard rules are breached even where the economic ownership of a company has not changed. Special rules have been enacted to preserve continuity in certain circumstances.

Under s YC 18, which applies which apply when both companies involved in the takeover or merger are limited attribution companies [see 170.05], continuity will not be lost if:

(a) Immediately before the change in ownership, the initial parent is treated under the continuity rules as holding all of the ownership interests in the subsidiary;
(b) Immediately after the change in ownership, the new parent is treated under the continuity rules as holding all of the ownership interests in the subsidiary; and
(c) Before and after the change in ownership, each shareholder in the initial parent owns shares in the new parent as a result of the takeover in the same proportion to each other (ignoring any other interest that the shareholder may have in the new parent).
Where these tests are met, for the purposes of the continuity rules for loss carry-forward (49 per cent) and imputation (66 per cent), if the initial owners hold a sufficient interest in the new parent immediately after the change in ownership, the new parent is treated as having held those interests for the period for which they were treated as being held by the initial parent.

Under s YC 18B, which applies where the initial parent company in a group of companies is replaced by a new parent company but there is no change in the economic ownership of the group, continuity will not be lost where all of the following conditions are met:

(a) The initial parent is a limited attribution company [see 170.05] that is treated under ss YC 11(3) and YC 11(4) [see 170.05 para (g)] as holding ownership interests in another company prior to commencement of the restructuring;

(b) As a result of the restructuring, a new company is the parent and that new parent company is a limited attribution company;

(c) The percentage ownership that each shareholder receives in the new parent is the same as the percentage that they held in the old parent;

(d) No person who held shares in the initial parent receives a dividend, gift or other direct benefit as a result of the arrangement.

Note that a nominal amount of shares issued to facilitate the restructuring or in order to comply with securities law requirements are ignored in calculating these percentages. Also ignored in calculating the percentages are certain “excluded preference shares” that are disregarded under s 703-37 of the Australian Income Tax Assessment Act.

Where all of the above conditions are met, the new parent “steps into the shoes” of the old parent.

**170.25 When market value interest must also be calculated** [s YC 3]

A number of specified circumstances, called market value circumstances, require a market value test to be applied in addition to the voting interest test. This test ensures that shareholders must take into account any economic interests that differ from their voting interest in determining their total ownership interests in a company. Market value circumstances include:

(a) The issue of floating rate debentures and debentures issued in substitution for shares which do not have restricted rights to vote or participate in decision-making;

(b) The issue of a share where the dividends are guaranteed or secured by a third party with the knowledge or reasonably expected knowledge of the directors;

(c) The issue of put or call options (not being excluded options) to acquire shares in the company; and

(d) The entering into an arrangement to defeat the continuity provisions.

A market value circumstance also applies on any occasion where a direct market value circumstance is deemed to exist for any other shareholder company where the shareholder company is associated with the company and where any market value interest held by the shareholder company in the company is deemed to be held by any other person. A market value circumstance will not apply for a company where no share or option over a share in the company has a value higher than nil. In this situation, shareholders’ interests in a company will be measured solely by reference to voting interests. It is expected, given that a market value circumstance is narrowly defined, that the application of the market value test will be the exception rather than the rule. In the vast majority of cases, it should only be necessary to apply the voting interest.

The market value of an interest for shares or options listed on a recognised exchange is generally determined by reference to quotations on that exchange. For unlisted shares or options, it is the market price that a willing third-party purchaser would pay in an arm’s-length acquisition using a method that conforms with commercially acceptable practice. In appropriate cases it may have regard to the present value of the company’s anticipated income and cash flows and/or realisable value of assets. It must result in a value that is fair and reasonable taking into account the tenor of the rules.
**170.30 Instruments not counted in determining interests** [ss YA 1, YC 6]

Certain instruments are not counted when determining the continuity of voting interests and market value interests. These are:

(a) Excluded fixed rate securities, which mean any fixed rate shares or debentures with restrictive voting rights that only arise in protective situations. The voting rights are essentially passive, may only be used defensively to protect a shareholder’s interest in the company. The rights arise only in circumstances where the position of the holder may be altered to the holder’s detriment. They are granted to the holder for the purpose of assisting the holder to prevent that alteration. At the time of issue of the share or debenture the protective voting rights are not expected to arise.

(b) Excluded options are an option to acquire or dispose of a share where any of the following applies:

(i) The directors did not have actual or constructive knowledge that the option had been granted;

(ii) Neither the grantor (not being the company) nor any person associated with the grantor holds at the time the option is granted, any share over which the option is granted;

(iii) The option is granted on an arm’s-length basis (subject to an anti-avoidance provision) and the option does not carry any voting rights (other than protective voting rights);

(iv) The option exercise price is not materially different from the market value of the share at the date of exercise of the option and the option does not carry any voting rights (other than protective voting rights);

(v) The share is a fixed rate security subject to s YC 20 for the purposes of the credit account continuity provisions; or

(vi) The option is over a share issued before 30 July 1991.

A number of rules simplify calculations required under continuity provisions. The provisions specify when changes in shareholding and voting and market value interests are not required to be taken into account in determining the shareholder percentage requirements for loss carry-forward and grouping purposes. This limits the situations when tracing through shareholdings held through interposed companies to the natural person shareholders is required. The rules also apply to continuity provisions under the imputation regime.

**170.35 Modifications to measurements of interests for the continuity provisions**

Special rules exist in certain circumstances to modify the measurement of interests for the shareholder continuity provisions. These include:

(a) *The date of acquisition where there has been a transfer through a relationship property agreement or death.* Shares and options acquired from a spouse [see 960.10] or former spouse under a relationship property agreement or under a will or intestacy do not have an impact on the continuity calculations. They are deemed to be held from the original date of acquisition by the transferor or the deceased person [ss YC 8, FB 10].

(b) *The disposal of shares or options by a trustee company.* Where shares or options in a company (the first company) are held by a corporate trustee (other than the Public Trustee, a subsidiary of the Public Trustee or a statutory trustee company) and any shares or options in the corporate trustee are disposed of, issued, or granted, then the corporate trustee is deemed to have disposed of the shares or options in the first company at that time to an unrelated third party and to have reacquired those shares or options immediately afterwards. This does not apply where it can be established that the disposal of the shares or options did not change the beneficial ownership of the shares or options or it otherwise can be shown not to have a purpose or effect of defeating the intent and application of the continuity provisions [s YC 9].

(c) *Changes in beneficiaries in a trust.* Where there is a change in the beneficiaries of a trust under an arrangement which has a purpose or effect of defeating the intent and avoiding the application of the
Companies

continuity provisions, there is a deemed disposition by the trustee of the share or option to an unrelated third party and an immediate reacquisition. This could affect continuity calculations [s GB 5].

(d) Treatment of trustees. Shares or options held by trustees of a trust are deemed to be held by the same single person at all times notwithstanding any change in the trustees. Changes in trustees do not affect continuity provisions unless the establishment or termination of the trust or a change in trustees has a purpose or effect of defeating the intent and application of the continuity provisions [s YC 9].

(e) The unit holders of a “public unit trust” (formerly a “qualifying unit trust”), in their collective capacity. These persons are treated as holding all shares in the public unit trust as if they were always the same notional single person (other than a company) whose existence is co-extensive with that of the public unit trust and who only holds shares in the public unit trust. If a qualifying unit trust exists on the first day of the 2001-2002 income year and chooses to use this provision, on the first day of that year, the balances of the public unit trust’s imputation credit account and any losses carried forward are treated as having been accumulated by the same notional single person, and that person is treated as always having existed in respect of the balance [s YC 12].

(f) Direct interests of less than 10 per cent. Where any person has a direct voting interest or market value interest of less than 10 per cent in a company and the person is not a company associated with the company, the interest of that person is pooled with all other interests of other persons with interests of less than 10 per cent and all the interests are deemed to be held by a notional single person. As a result transfers of shares between shareholders holding less than 10 per cent shareholdings can be disregarded [s YC 10].

Example 1:
Six shareholders (who are not corporate shareholders) each hold nine per cent interests in Loss Co Ltd. These interests are all deemed to be held by one nominee shareholder having a 54 per cent interest. The pooling of all less than 10 per cent direct interests takes place before the application of the corporate look-through rules. Therefore, it is not necessary to look through companies which hold less than a 10 per cent direct interest in another company. As a result transfers of shares between shareholders holding less than 10 per cent shareholdings can be disregarded.

Example 2:
In Example 1 there would be no change to the result if each of the shareholders was a corporate shareholder, provided that they were not associated companies.

Example 3:
If in Example 1, the six shareholders were corporate shareholders associated with each other and all shares in each of the six companies were 100 per cent owned by Bruce, each of the interests of those six companies are aggregated and attributed to Bruce. Consequently, when Bruce sells all of his shares in each of the six companies to Ross (a transfer of a 54 per cent interest), there is a breach of the 49 per cent continuity requirements necessary for Loss Co Ltd to carry-forward losses that are to be offset in a subsequent year. When the 10 per cent threshold is reached, the total interests of the person must be taken into account individually.

Example 4:
A shareholder with a six per cent interest in a company acquires additional shares to get a 14 per cent interest and consequently falls out of the 10 per cent pool. The increase in the shareholder’s interest is treated as a 15 per cent change in ownership in the company [see item (h) below].

(g) Limited attribution companies and minor shareholders [s YC 11]. Where a shareholder company is a limited attribution company and has voting interests or market value interests (as the case may be) of less than 50 per cent, or a shareholder (who is not associated with another shareholder) has a less than 10 per cent direct interest and would be deemed to have an interest of less than 10 per cent, the interests held by these shareholders need not be traced through for the continuity provisions. Accordingly, it is not necessary to trace through direct or indirect voting or market value interests of a listed company or a widely-held company to determine the ultimate individual shareholders where
the interests total less than 50 per cent. Such interests are not counted in calculating shareholder continuity requirements.

**Example 1:**
Sub Ltd is a listed company. The shareholders of Sub Ltd are Parent Ltd with a 45 per cent interest and 55 individual shareholders with one per cent interest each. Sub Ltd has a 100 per cent owned subsidiary (Subone Ltd) which holds 40 per cent of Subtwo Ltd. As Sub Ltd’s indirect interest in Subtwo Ltd is less than 50 per cent, ie 40 per cent (100% × 40%) no changes in shareholding of Sub Ltd affect the calculation of the continuity requirement in Subtwo Ltd in order to carry-forward losses in Subtwo Ltd.

The corporate look-through rules do not apply when a limited attribution company holds directly or indirectly a less than 50 per cent voting or market value interest in another company.

**Example 2:**
LAC Ltd increases its interests in Sub Ltd from 49 per cent to 51 per cent. This increase can be considered as a two per cent change instead of a 15 per cent change by both Subsidiary Ltd and Parent Ltd.

(h) It is intended to allow those interests that are less than 10 per cent to be counted separately if that assists in satisfying the shareholder continuity requirements [s YC 14].

**Example:**
A shareholder in a loss company with an eight per cent interest acquires additional shares to get a 12 per cent interest. Without this application it would be treated as a 12 per cent change in shareholding. It enables the shareholder’s interest to be counted separately from the beginning of the continuity period and the increase can be counted as four per cent and not 12 per cent.

(i) When continuity provisions are deemed not to be satisfied. An anti-avoidance provision exists so that the continuity provisions are deemed not to be satisfied when the directors of a company know or could reasonably be expected to know that the requirements of any continuity provision would not have been satisfied. It is not applied if a breach in continuity is due solely to ordinary trading on a recognised exchange between persons with less than 10 per cent interests in the company [s YC 15].

(j) The requirements of a continuity provision are deemed to be satisfied where the sole reason for a breach in continuity is due to one or a combination of:
   (i) A change in the market value of the tangible and intangible assets of the company; or
   (ii) A change in the market value of any one or more shares in the company which is not attributable to any change in the terms of those shares [s YC 16].

(k) There are special disclosure requirements for public unit trusts [see 1450.20].

170.40 **Retrospective adjustments to shareholder-employee salaries**

Standard practice statement SPS 05/05 sets out the CIR’s criteria for considering whether or not to recognise retrospective reductions to shareholder-employee salaries. The policy (which takes into account the decision in *TRA Case U27* (1999) 19 NZTC 9,261), takes effect from the 2005-2006 income year.

For the CIR to amend assessments in accordance with a request, the following criteria must be met:

(a) A genuine error has been made in the accounts of the company resulting in a legitimate deduction not being claimed or a receipt being miscategorised;

(b) As a result of correcting the error, the company decides to reduce the amount of salary previously allocated to a shareholder-employee;

(c) The company has passed a resolution reflecting the reduction in light of the relationship between the company and the employee; and

(d) A request for correction, and a copy of the resolution, have been filed with the CIR.

It is expected that any request will be made in a “timely fashion”, a term the meaning of which depends on the circumstances of the particular case [see TIB vol 17:4 (May 2005) at 18-21].
170.45  **Excessive remuneration to shareholder, director, or relative of close companies**  [s GB 25]

Where any sum paid or credited by a close company as remuneration for services rendered by a shareholder or director of the company, or a relative of such shareholder or director, exceeds such an amount as in the opinion of the CIR is reasonable, the amount of the excess is not deductible in the assessment of the company and is deemed to be a dividend paid by the company to that person  [s GB 25].

This does not apply where the CIR is satisfied that the person to whom the sum is paid or credited is

(a) An adult employed substantially full time in the business of the company;

(b) Participates in the management or administration of it; and

(c) The determination of the amount of the remuneration was not influenced by the fact that the recipient is a relative of a shareholder or director, and who is resident in New Zealand.

The mode of applying these provisions to approve a fair and reasonable remuneration of $28,000 to a wife shareholder/director/employee is set down in **TRA Case J99** (1987) 9 NZTC 1,560.

Where any claim is made for remuneration paid to a relative, the following information should be available, if necessary, to support the claim:

(a) Business qualifications possessed by that person;

(b) The nature of the services rendered;

(c) The approximate amount of time spent by the relative in the company’s business.

In **TRA Case J53** (1987) 9 NZTC 1,297, husband and wife shareholder directors of a close company were held entitled to reasonable directors fees of $1,500 each. The facts of the case were taken into consideration but the duties could be considered relatively minimal.

170.50  **Apportionment of expenditure of holding companies**

The CIR considers that expenses incurred by a company which acts as a holding company within a group of companies should be treated as follows:

(a) Where the holding company’s only income is dividends that are exempt income, the expenses are incurred in producing exempt income and no deduction is permitted for tax purposes  [see 230.20].

(b) Where the holding company has other income (eg investment income or fees from management or administrative services provided for a subsidiary or other companies in the group) the holding company is entitled to charge whatever expenses could be justified on an arm’s-length basis. It makes no difference whether the expenses are paid for, or charged by way of journal entry. Any such amount for those services is fully deductible to the subsidiary company and assessable to the parent. The expenses must then be allocated to exempt income and taxable income on the following bases:

(i) Expenses which directly relate to a particular type or class of income must be charged against that income.

(ii) Expenditure which cannot be directly related must be apportioned. Where the holding company is an investment company holding such assets as shares in a subsidiary, property, mortgages, or bonds, etc, the expenditure may be apportioned on the basis of assets employed in deriving each type of income.

(iii) Where there is also income from other activities (eg providing management services to the subsidiary or to other companies in the group), the expenditure may be apportioned on the basis of the time spent in the management or operational function relative to each activity.

(c) However, a holding company within a consolidated group is allowed a deduction for some administrative expenses even if the company derives no gross income  [see 190.41].

In **Marshall Richards Machine Co Ltd v Jewitt** (1956) 36 TC 511 (Ch), a holding company’s contribution to a subsidiary’s operating expenses was held not to be deductible, the payments being of the nature of capital financing advance. However, in **Robinson v Scott Bader Co Ltd** (1981) 2 All ER 1116 (EWCA Civ), salary
payments made to a holding company employee whilst engaged in rescuing a subsidiary were held to be deductible. The real purpose of payment was the improvement of the holding company’s operations.

170.55 New companies only assessable on income derived since incorporation

Where a newly incorporated company takes over a business, the company includes in its return of income only the amount of assessable income derived since incorporation. Any assessable income arising in carrying on that business prior to incorporation is derived either by the vendor or the trustee for the company to be incorporated.

Debts taken over by a company represent a capital asset. Consequently any amounts subsequently written-off as bad are a loss of capital, and any recoveries of those debts, or of debts written-off by the vendor, are not assessable.

However, if a company is formed for the purpose of acquiring by purchase or otherwise book debts or hire purchase agreements, the realisation of such debtors or agreements constitutes a business carried on by the taxpayer: *Batty v Parker* (1941) 23 TC 739. Consequently, realisations in excess of the purchase price are liable to taxation while losses are deductible. No preliminary expenses, eg brokerage, legal expenses incurred in the formation of the company etc, are allowable as a deduction.

In the case of a business acquired by a company, the stock on hand in the first return should be brought in at the price appearing in the agreement or contract of sale. In the case of fixed assets taken over, the basis on which depreciation is allowed in the first year is the actual cost price to the company (except where the vendor is not at arm’s length, and the cost to the company exceeds the original cost to the vendor).

170.60 Companies in liquidation

The term “liquidation”, for a company, includes:

(a) Removal of the company from the register of companies under the Companies Act 1993; and
(b) Termination of the company’s existence under any other procedure of New Zealand or foreign law [s YA 1].

“Liquidate” has a corresponding meaning.

A liquidator is liable to furnish a return of assessable income calculated up to the date of liquidation. The income tax on taxable income derived may be assessed and demanded immediately under s 44 of the TAA. Any assessable income arising subsequent to the date of liquidation requires a subsequent return of income derived during the period from the date of liquidation to the company’s annual balance date. Subsequent returns must be rendered annually to the date of the company’s annual balance. In arriving at the net income, only expenses actually incurred in the production of the income of the year are allowable.

In *Federal Commissioner of Taxation v Marr (EA) & Sons (Sales) Ltd* (1984) 15 ATR 879, 84 ATC 4,580 (FCA), the company had leased equipment from finance companies which it made available to wholly owned subsidiaries on the basis that they paid the rentals due. While the company was in liquidation it derived no income directly from the leases but payments of rentals were assumed by the liquidators and were held deductible to the company. Costs of realisation of the assets are generally not deductible. In addition to annual accounts from the liquidator, the CIR insists on final accounts being furnished, showing the final realisation.

A company retains its corporate entity despite the process of liquidation. The fact of liquidation does not result in the company or the liquidator being a separate taxpayer to that prior to the date of liquidation. If, after the liquidation commences, business is carried on, it is carried on not by the directors but by the liquidator, and whatever the liquidator does in carrying it on is done in the name of and on behalf of the company. It follows, therefore, that the liquidator may claim the benefit of past losses incurred by the company which are ordinarily deductible against future profits.

Special provisions determine whether amounts distributed on a liquidation are dividends [see 270 DIVIDENDS].
170.65 Corporate migration [ss FL 1, FL 2, CD 14, CD 26, CD 43, OC 5, OC 31, RA 18, OB 60; TAA, ss 49, 51]

A company that migrates, and thereby becomes non-resident, on or after 21 March 2005 is treated for tax purposes as if it had realised all of its assets at market value, been liquidated, and distributed the proceeds to its shareholders [s FL 1].

A company has migrated if it is no longer resident in New Zealand under s YD 2 [see 1250.60]. The migration rules do not apply where a company is dual resident and treated under a double tax agreement as tax-resident in another country.

The deemed distribution is taxable in the hands of the company’s New Zealand resident shareholders [ss FL 2, CD 14]. The company is able to attach imputation credits to the deemed distribution and is required to withhold tax in the normal way. Imputation credits arising from tax payable as a result of the migration are able to be used in addition to any imputation credits already in existence [s OB 60]. Resident shareholders are subject to resident withholding tax (RWT). The company must pay the RWT within three months of emigration [s RA 18; TAA, s 51]. Non-resident shareholders are subject to non-resident withholding tax. The company must pay the RWT within three months of emigration [s RA 18; TAA, s 49]. For resident shareholders and non-resident shareholders who are not related companies, there is an exclusion for available subscribed capital and realised capital reserves [s CD 26]. There is no exclusion for realised capital reserves on amounts distributed to non-resident related corporate shareholders.

The amount of the deemed distribution is added to the company’s available subscribed capital to remove the potential for double taxation in the event that the company distributes a dividend to its shareholders after it has migrated [s CD 43(16)].

Property that was subject to the deemed disposal is deemed to have been reacquired by the company at the same market value as was used for the deemed disposal. Where the property remains subject to tax in New Zealand, a new cost base is thereby established [s FL 1(2)(b)].

Companies that migrate cease to be an FDP company and also cease to be a conduit tax relief company. A conduit tax relief company is also required to make an additional FDP payment of the amount of any credit balance in its conduit tax relief account [ss OC 5, OC 31].

TaxNote Both the FDP rules and conduit tax relief rules have been repealed and foreign dividends derived by a New Zealand resident company are exempt from tax, both with effect from the beginning of the first income year commencing on or after 1 July 2009 [see 850 INTERNATIONAL TAX REGIME, 215 CONDUIT TAX RELIEF].

170.70 Own-your-own flat companies

It is usual for “own-your-own” flat companies to levy their shareholders to cover administration and management costs as well as repairs and maintenance, depreciation, etc. For practical purposes these companies are similar to trust companies. Generally, any portion of the levies paid by shareholders and not expended during the year is simply held in trust and does not constitute income of the company.

If a shareholder uses the flat in the production of income, depreciation at the appropriate rate (where depreciation is not already included in the levy) is allowed as a deduction. If the actual cost is not known the following formula is used to arrive at the cost of the building:

\[
\text{Cost} = \frac{\text{Government Valuation of Improvements}}{\text{Total Government Valuation}} \times \frac{\text{Total Cost}}{1}
\]

The shareholder’s proportion of the cost will then be calculated in the proportion that the shareholding bears to the total shareholding in the own-your-own flat company.

“Flat-owning company” is defined in s CD 22(2) and means a company:

(a) Whose constitution provides that each registered shareholder is entitled to the use of a residential property in New Zealand owned by the company; and
(b) Whose only significant assets are residential properties available for use by specific shareholders and funds reserved for meeting the company’s costs.
Chapter 180
Companies — Amalgamation

180.10 Purpose [ss FO 1, FO 4(3)]
Companies may amalgamate into an existing or a new company under s 219 of the Companies Act 1993. Taxation provisions exist:
(a) To specify certain taxation consequences of the amalgamation of companies;
(b) For resident’s restricted amalgamations (formerly “qualifying amalgamations”), to permit certain property to be transferred to an amalgamated company on a concessional taxation basis and an amalgamated company to succeed to tax losses and imputation credit account and other credits of amalgamating companies, subject to tests of continuity and commonality of ownership being met; and
Companies — Amalgamation

180.15 Definitions [s YA 1]

“Amalgamated company” means the one company that results from, and continues after, an amalgamation. It may be one of the amalgamating companies or a new company. For an amalgamation of building societies, it is the building society that is described as “society B” in the definition of “amalgamation” (see below).

“Amalgamating company” means any company which amalgamates with one or more other companies under an amalgamation. For an amalgamation of building societies, it is the building society that is described as either “society A” or “society B” in the definition of “amalgamation” (see below).

“Amalgamation” means any amalgamation under:

(a) Part 13 or Part 15 of the Companies Act 1993; or
(b) The law of any country or territory other than New Zealand which is to the same or similar effect, whereby two or more companies amalgamate and continue as one company.

For an amalgamation of building societies, “amalgamation” means a transfer by a building society (“society A”) all of its engagements to another building society (“society B”) under s 33 of the Building Societies Act 1965, if all of the following conditions are met:

(a) A notice of transfer is registered under s 34(3) of the Building Societies Act 1965;
(b) Society A’s funds, property, and assets are transferred to society B, except to the extent necessary to settle its affairs before being removed from the register of building societies;
(c) Society A does not carry on business after the notice is registered, except to the extent necessary to settle its affairs before being removed from the register of building societies; and
(d) Society A’s liabilities are either satisfied or assumed by society B; Society A is, or will be, removed from the register of building societies as soon as practicable after the notice is registered.

“Attributed CFC income” is defined in s CQ 2 [see 850.50].

“Attributed CFC loss” is defined in s DN 2 [see 850.50].

“CFC tax credit” means a tax credit available for crediting under s LK 1(1) [see 850.95].

“Depreciating property” (in relation to a taxpayer) means property for which the taxpayer is allowed a deduction for depreciation or amortisation expenditure in calculating net income [see 250 DEPRECIATION].

“Financial arrangement” has the meaning assigned to that term by s EW 3 [see 470.20].

“Resident’s restricted amalgamation” (formerly “Qualifying amalgamation”) means any amalgamation where:

(a) Each of the amalgamating companies and the amalgamated company is, at the time of the amalgamation, resident in New Zealand and is not:
   (i) A company which is not treated under a double tax agreement as being resident in another country for the purpose of the agreement; or
   (ii) A company which derives only exempt income other than income which is exempt under s CW 9 (foreign dividends) and s CW 11 (dividends received by a conduit relief holding company), including any local authority that is not a council-controlled organisation; and
(b) If the amalgamated company is, immediately after the amalgamation, a qualifying company (as defined in s HA 2), each of the amalgamating companies is a qualifying company; and
(c) If the amalgamated company is, immediately after the amalgamation, a loss attributing qualifying company (as defined in s HA 3), each of the amalgamating companies is a loss attributing qualifying company (LAQC); and
Companies — Amalgamation

(d) The amalgamating companies and the amalgamated company have not elected that the amalgamation will not be a resident’s restricted amalgamation.

“Revenue account property” is property that falls within any one or more of the following categories:

(a) Property that is trading stock of the person; or

(b) Property that, if disposed of for valuable consideration, would produce income for the person other than income under ss EE 48 (depreciation recoveries), FA 5 (Assets acquired or disposed of after deductions of payments under lease), or FA 9 (Lessee acquiring asset when lease ends); or

(c) Property that is an emissions unit of the person.

“Trading stock” has the meaning assigned to that term by s YA 1 [see 1400 TRADING STOCK].

180.20 Notice of amalgamation to CIR [TAA, s 75]

Where an amalgamation occurs, the amalgamated company must, within 63 working days of the date on which:

(a) Documents evidencing the amalgamation are delivered to the Registrar of Companies for registration under Part 13 or Part 15 of the Companies Act 1993;

(b) For any amalgamation under s 24A of the Co-operative Dairy Companies Act 1949, the extraordinary resolution referred to in s 24A(3)(g) is passed; or

(c) For any amalgamation occurring under foreign law, the equivalent procedure occurs under foreign law,

give notice in writing to the CIR, in an approved form, detailing:

(a) The name and tax file number (if any) of each amalgamating company and the amalgamated company;

(b) The date upon which the amalgamation has effect;

(c) In any case where the amalgamated company has a non-standard balance date, the non-standard balance date; and

(d) Such other information as may be required.

180.25 Available subscribed capital when amalgamating company shares cancelled [s CD 43(24), (25)]

Where:

(a) An amalgamated company is one of the amalgamating companies; and

(b) Any shares in that amalgamating company held by another amalgamating company are cancelled on an amalgamation,

in calculating the available subscribed capital remaining on issue after the amalgamation, the “returns” amount [see 270.40] that is included in the calculation of available subscribed capital is increased by the amount calculated in accordance with the following formula:

\[
\text{cancelled shares} \times \text{asc per share}
\]

Where:

“asc per share” is the available subscribed capital per cancelled share is calculated under the slice rule immediately before the amalgamation; and

“cancelled shares” is the number of cancelled shares.

180.30 No taxable dividends when amalgamating company ceases to exist [ss CD 35, CD 44(8)]

Where an amalgamating company ceases to exist on a resident’s restricted amalgamation:

(a) The amalgamated company is deemed not to derive a dividend from the amalgamating company by virtue of:
(i) Acquisition by the amalgamated company of any property of the amalgamating company; or
(ii) Relief of the amalgamated company from any obligation owed to the amalgamating company; and

(b) If the amalgamating company has capital gain amounts available for distribution at the time of the amalgamation and which are not distributed to its shareholders (other than the amalgamated company) in the course of the amalgamation, the amalgamated company is treated as deriving a capital gain amount equal to the capital gain amount of the amalgamating company.

180.35 Amalgamated company shares cancelled [s FO 6]
Where shares in any amalgamating company are:
(a) Held by another amalgamating company, and
(b) Cancelled on the amalgamation,
the shares are deemed to have been disposed of by the shareholder amalgamating company immediately before the amalgamation for a consideration equal to the cost of the shares to the shareholder amalgamating company.

180.40 Obligations when amalgamating company ceases to exist [ss FO 4, FO 5; TAA s 76]
Where any amalgamating company ceases to exist on an amalgamation, the amalgamated company must, in accordance with s 225 of the Companies Act 1993, comply with all obligations of and meet all liabilities of, and be entitled to all rights, powers and privileges of, the amalgamating company under the Inland Revenue Acts for the income year in which the amalgamation occurs and all preceding income years.
The assumption by an amalgamated company of the liabilities and obligations of an amalgamating company does not result in the amalgamating company deriving income from the remission of debt under ss CG 2 or DB 47.

180.45 Bad debts or expenditure when amalgamating company ceases to exist [s FO 8]
Where:
(a) Any amalgamating company ceases to exist on a resident’s restricted amalgamation; and
(b) The amalgamated company at any time:
   (i) Writes off as a bad debt any debt acquired from the amalgamating company at the time of the amalgamation; or
   (ii) Incurs any expenditure, loss, or depreciation by virtue of anything done or not done by the amalgamating company; and
(c) The amount of the bad debt, expenditure, loss, or depreciation would not otherwise be allowed as a deduction in calculating the net income of the amalgamated company; and
(d) The amount would have been allowed as a deduction in calculating the net income of the amalgamated company but for the amalgamation,
the amount is allowed as a deduction under s DV 15(2) in calculating the net income of the amalgamated company for the period.

180.50 Interest on money borrowed to acquire shares in amalgamating company that ceases to exist [s DB 8(3) (4), (5)]
A continuing deduction is allowed to a company for the interest payable on money that it borrowed to acquire shares in an amalgamating company when the amalgamating company ceases to exist following a resident’s restricted amalgamation of the two companies. The interest continues to be allowed as a deduction in
subsequent income years after the amalgamation has taken place. The two companies must be members of the same group of companies immediately before the amalgamation.

Example:
Action Ltd borrowed funds to purchase shares in Defeat Ltd. Action Ltd and Defeat Ltd join together in a resident’s restricted amalgamation and Defeat Ltd ceases to exist. Immediately before the amalgamation both Action Ltd and Defeat Ltd were members of the same group of companies. Interest payable on the funds borrowed both in the income year when the resident’s restricted amalgamation has taken place and in subsequent income years, continues to be an allowable deduction for Action Ltd.

180.55 Unexpired accrual expenditure of amalgamating company which ceases to exist and profits derived by amalgamated company

[ss FO 9, FO 7, CV 4]

Where any amalgamating company ceases to exist on an amalgamation during any income year:
(a) The unexpired portion of any amount of prepayment expenditure of the amalgamating company for the income year is deemed to be the unexpired portion of an amount of prepayment expenditure of the amalgamated company for the income year. It is also deemed not to be prepayment expenditure of the amalgamating company for the income year; and
(b) Any profit or gain derived by the amalgamated company at any time after the amalgamation which:
   (i) Is derived by virtue of anything done or not done by the amalgamating company; and
   (ii) Would have been income of the amalgamating company but for the amalgamation,
is income of the amalgamated company.

Paragraph (a) requires the amalgamating company to transfer unexpired prepayment expenditure to the amalgamated company on amalgamation. As a result, the amalgamating company must include this amount of unexpired accrual expenditure in its calculation of taxable income in preparing its final tax return to the date of amalgamation. The amalgamated company will then be allowed a deduction for the unexpired portion of the accrual expenditure (as at the date of amalgamation) in the year of amalgamation. Paragraph (b) provides that the profit or gain will be assessable to the amalgamated company if it would have been assessable to the amalgamating company.

180.60 Property or obligations under a financial arrangement acquired by an amalgamated company in a non-resident’s restricted amalgamation

[ss FO 11, FO 15]

Where any amalgamated company, on an amalgamation other than a resident’s restricted amalgamation, acquires any property of an amalgamating company, or succeeds to any obligations of an amalgamating company for a financial arrangement of which the amalgamating company is a party:
(a) The amalgamating company is treated as having disposed of the property or relieved itself of the obligations immediately before the amalgamation; and
(b) The amalgamated company is treated as having acquired the property or assumed the obligations immediately after the amalgamation,

for a consideration equal to the market value of the property, or market price for assuming the obligations, at the time.

However, the amalgamating company under a non-resident’s restricted amalgamation is treated as being in existence at the time of amalgamation for the purposes of s EE 41. This means that, where the amalgamating company which owns the asset in question meets the associated person test with the amalgamated company, the amalgamated company will not be able to claim any greater amount of depreciation than the amalgamating company could have claimed.
Example:

Company A, which has a share capital of $100 currently owned by Anne, and Company B, which has share capital of $50 currently owned by Bob, are amalgamating into new Company C which will have a combined share capital of $150 owned as to $100 by Anne and $50 by Bob. All shares carry equal voting rights. As Company A and Company C are associated, assets transferred by Company A will be subject to the associated persons rule whereas assets owned by company B will not.

180.65 Property acquired by an amalgamated company in a resident’s restricted amalgamation [ss FO 10, FO 16, DV 15]

Where an amalgamated company, on a resident’s restricted amalgamation, acquires any property of an amalgamating company:

(a) The amalgamating company is treated as having disposed of the property, and the amalgamated company is treated as having acquired the property, immediately before the amalgamation [s FO 10(3)]; and

(b) The amalgamated company is deemed to have acquired the property on the date on which it was acquired by the amalgamating company; and

(c) The amalgamated company is deemed to have acquired the property from the amalgamating company for consideration equal to:

(i) The original purchase price of the property;

(ii) Any expenditure incurred in purchasing or improving the property; and

(iii) Any expenditure incurred in securing or improving the legal rights of the amalgamating company for the property;

(d) Where the property forms the whole of a pool of property that is depreciated by the amalgamating company, the adjusted tax value of the pool immediately before the amalgamation [s FO 16(2)].

(e) Where the property forms part only of any pool, the lesser of:

(i) The market value of the property acquired by the amalgamated company; and

(ii) The adjusted tax value of the whole of the pool immediately before the amalgamation [s FO 16(3)];

(f) Where an amalgamated company, on a resident’s restricted amalgamation, acquires depreciating property (other than pooled property) of the amalgamating company, the amalgamated company is deemed to have been allowed a deduction for the same amounts of depreciation or amortisation as has been allowed in calculating the net income of the amalgamating company [s FO 16(1), (4)].

The transfer of depreciating property to an amalgamated company on a resident’s restricted amalgamation does not give rise to any income or deductions as a result of depreciation recovered or additional depreciation. However, the amalgamating company is permitted a deduction for depreciation for the period from the first day of the income year to the day immediately preceding the day of amalgamation [ss DV 15, FO 10(7)].

180.70 Trading stock acquired by an amalgamated company in a resident’s restricted amalgamation [s FO 10(5)]

Where an amalgamated company, on a resident’s restricted amalgamation, acquires any property of an amalgamating company which is trading stock for both the amalgamating company and the amalgamated company, the amalgamating company is deemed to have disposed of the trading stock and the amalgamated company is deemed to have acquired the trading stock for a consideration equal to the value of the trading stock under subpart EB (the trading stock rules) at the time of the amalgamation.

180.75 Revenue account property and land acquired by an amalgamated company in a resident’s restricted amalgamation [ss FO 10(6), FO 17]

Where an amalgamated company, on a resident’s restricted amalgamation, acquires any revenue account property of the amalgamating company which is not revenue account property of the amalgamated company,
the amalgamating company is deemed to have disposed of the property and the amalgamated company is
debt to have acquired the property at the time of the amalgamation for a consideration equal to its market
value at that time.

This does not apply where the property is land that is (or may be) revenue account property of the
amalgamating company only by virtue of the 10 year rules applying to certain profits on land sale transactions.
However, if the amalgamated company disposes of the property within 10 years after the date of its acquisition
by the amalgamating company, any profit or gain from the disposition is income of the amalgamated
company.

Where an amalgamated company, on a resident’s restricted amalgamation, acquires any amalgamating
company’s land which is not revenue account property of the amalgamating company but is revenue account
property of the amalgamated company, the amalgamating company is deemed to have disposed of the land
and the amalgamated company will be deemed to have acquired the land at the time of the amalgamation for
a consideration equal to its market value at that time.

180.80 Land or business acquired by amalgamated company and
amalgamating company ceases to exist [s DV 14]

In calculating the net income of an amalgamated company for an income year, a deduction is allowed where
all of the following apply:

(a) An amalgamating company ceases to exist on a resident’s restricted amalgamation;
(b) As a result, the amalgamated company acquires any land or business of the amalgamating company;
(c) But for the amalgamation, the amalgamating company would have been entitled to a deduction for
expenditure on land improvements for farming, horticulture, forestry, or aquaculture for the land or
business; and
(d) After the amalgamation and for the remainder of the income year the land is held, or the business is
carried on, by the amalgamated company.

The amount of the deduction is the amount that the amalgamating company would have been allowed had
the amalgamation not occurred.

180.85 Financial arrangement acquired by amalgamated company in a
resident’s restricted amalgamation [ss FE 6, FE 7]

Where during an income year and on a resident’s restricted amalgamation (and in spite of the rules relating
to non-market dispositions in s GB 21), any amalgamated company acquires a financial arrangement of an
amalgamating company, special provisions apply provided that the following conditions are satisfied:

(a) The financial arrangement rules apply to the financial arrangement;
(b) The amalgamating company and the amalgamated company were members of the same wholly-
owned group of companies at all times in the income year before the amalgamation;
(c) The method of calculating the income or expenditure for the financial arrangement remains the same
notwithstanding the amalgamation;
(d) The amalgamating company is not entitled to carry forward to the income year and deduct or set off
any net loss of the company for any preceding income year (except where the whole of the net loss
may be set from the net income of the amalgamated company for the income year under s IE 2); and
(e) The amalgamated company makes an election when filing its tax return for the income year.

If the above conditions are satisfied:

(a) The amalgamating company is treated as if it had never held the financial arrangement before the
amalgamation, with the result that the base price adjustment calculation does not apply to the
amalgamating company for the disposition by the amalgamating company of the financial
arrangement; and
(b) The amalgamated company is treated as if it had:
(i) Acquired the financial arrangement at the same time and for the same acquisition price as the amalgamating company;
(ii) Incurred all other expenditure and derived all gains incurred or derived by the amalgamating company for the financial arrangement before the amalgamation; and
(iii) Included in its returns of income the same amounts of income and expenditure for the financial arrangement as were included by the amalgamating company,

for the income year in which the amalgamation takes place and each subsequent income year:

In any other case where the method of calculating income or expenditure for the financial arrangement remains the same notwithstanding the amalgamation, the:

(a) Amalgamating company is treated as having disposed of the financial arrangement; and
(b) Consideration for the disposition by the amalgamating company is deemed to be equal to an amount which will result in the base price adjustment for the amalgamating company being an amount (whether negative, positive, or a nil amount) that would represent the income and expenditure that the amalgamating company would have derived or incurred in the income year had the amalgamation not occurred [s FO 13].

In any other case, the consideration for which the disposition takes place is deemed to be equal to the market value of the financial arrangement at the date of amalgamation [s FO 14].

Where any amalgamated company succeeds during an income year, on a resident’s restricted amalgamation, to the obligations of an amalgamating company for a financial arrangement the circumstances apply in reverse to the amalgamated company acquiring the financial arrangement.

180.90 Treatment of financial arrangements when parties amalgamate
[ss FO 18, FO 19, FO 20]

Where the parties to a financial arrangement amalgamate, the treatment differs between situations where the borrower is solvent and situations where the borrower is insolvent.

(1) Borrower is solvent or is insolvent but is likely to be able to meet its obligations under the financial arrangement

Where, immediately before the amalgamation, the amalgamating company that is the borrower is solvent or is insolvent but likely to meet its obligations under the financial arrangement:

(a) The financial arrangement is, for the purposes of the base price adjustment, deemed to be discharged immediately before the amalgamation; and
(b) The amalgamating company is deemed to have paid to the other party in consideration for the discharge:
   (i) For a resident’s restricted amalgamation, the outstanding accrued balance; or
   (ii) In any other case, the market value of the financial arrangement as at the date of the amalgamation.

No remission occurs as a result of the discharge. However, the amalgamated company is deemed to have remitted an amount equal to the excess (if any) of the outstanding balance over the market value (see below).

(2) Borrower insolvent

The borrower is treated as being insolvent if it does not satisfy the solvency test in ss 4 of the Companies Act 1993.

Where, immediately before the amalgamation, the amalgamating company that is the borrower is insolvent and is unlikely to meet its obligations under the financial arrangement:

(a) The financial arrangement is, for the purposes of the base price adjustment, discharged immediately before the amalgamation; and
The amalgamating company is deemed to have paid to the other party in consideration for the discharge the market value of the financial arrangement as at the date of the amalgamation;

(c) The other party to the financial arrangement is deemed to have remitted the excess over market value of the borrower’s outstanding accrued balance [s FO 18(4)].

(3) Outstanding accrued balance

The amalgamating company’s accrued balance is calculated under s FO 19 as follows:

\[
\text{consideration} + \text{prior expenditure} + \text{expenditure accrued in year of amalgamation} - \text{income accrued in year of amalgamation} - \text{consideration paid before amalgamation}
\]

Where:

“Consideration” is the consideration paid to the amalgamating company under the financial arrangement.

“Prior expenditure” is expenditure incurred less income derived by the amalgamating company under a spreading method or a s EW 53 avoidance adjustment in all previous tax years since the financial arrangement was entered into.

“Expenditure accrued in year of amalgamation” is expenditure incurred by the amalgamating company under the financial arrangement for the part of the tax year up to the date of amalgamation using the appropriate spreading method.

“Income accrued in year of amalgamation” is income accrued by the amalgamating company under the financial arrangement for the part of the tax year up to the date of amalgamation using the appropriate spreading method.

“Consideration paid before amalgamation” is the consideration paid by the amalgamating company for the financial arrangement before the amalgamation.

The formula for the other party to the amalgamation is calculated under s FO 20 as follows:

\[
\text{consideration} + \text{prior income} + \text{income accrued in year of amalgamation} - \text{expenditure accrued in year of amalgamation} - \text{consideration paid before amalgamation}
\]

Where:

“Consideration” is the consideration paid by the party under the financial arrangement.

“Prior income” is income derived less expenditure incurred by the other party under a spreading method or a s EW 53 avoidance adjustment in all previous tax years since the financial arrangement was entered into.

“Income accrued in year of amalgamation” is the income accrued by the party from the beginning of the tax year in which the amalgamation occurs up to the date of amalgamation.

“Expenditure accrued in year of amalgamation” is expenditure accrued by the party under the financial arrangement for the part of the tax year up to the date of amalgamation using the appropriate spreading method.

“Consideration paid before amalgamation” is the consideration paid to the party under the financial arrangement before the amalgamation.

In most cases, the parties will both be using either one of the IFRS methods or the yield to maturity method to account for the financial arrangement. However, if the borrower and lender have used different methods, the lender’s deemed income will reflect a matching of the borrower’s total deductions, and not the accrued value of the financial arrangement to the lender.

180.95 Loss incurred by, or tax credits held in, an amalgamating company that ceases to exist [ss IE 1, IE 2, IE 3, IE 5, IQ 1, LK 12, LK 13, LK 14, LK 15]

An amalgamating company that ceases to exist on a resident’s restricted amalgamation may have and available net loss, an attributed CFC net loss, or a foreign investment fund (FIF) net loss. These losses may not have been set off against the net income of the amalgamating company or any other company in any period prior to the amalgamation. The amalgamating company may also have a controlled foreign company
(CFC) tax credit that has not been credited against the income tax payable by the company for any period, and there are no restrictions on the company offsetting the losses or utilising the tax credit.

In these circumstances, those losses are treated as if they were incurred by the amalgamated company and offset against its net income, and the tax credit may be treated as a tax credit of the amalgamated company.

Where a net loss, an attributed CFC net loss, a FIF net loss, or the tax credits apply to two or more amalgamating companies, those losses or tax credits must be deducted in the same order as incurred or arising, or in the order elected by the amalgamated company, or on a pro rata basis. Similar provisions exist allowing an amalgamated company to carry forward and/or offset pre-existing unutilised losses and tax credits to the period after the amalgamation occurs, subject to the amalgamated company satisfying the standard requirements for carry forward and offset.

180.100 Fringe benefit tax payments when amalgamating company ceases to exist [ss CX 37, RD 45, RD 46]

Where any amalgamating company ceases to exist on an amalgamation if the amalgamating company pays fringe benefit tax on a quarterly basis and the amalgamation occurs during a quarter, the *de minimis* exemption amount is proportionately adjusted.

180.105 Provisional tax payments when amalgamating company ceases to exist [s RC 33]

Where any amalgamating company ceases to exist on an amalgamation, the residual income tax of the amalgamated company in the income year preceding the income year in which the amalgamation takes place is deemed to be equal to the amount which would have been such residual income tax had the amalgamating company and the amalgamated company always been one company. This applies only for instalments of provisional tax payable after the amalgamation.

180.110 Imputation credit account balances when amalgamating company ceases to exist [ss OA 9, OA 10, OA 11, OA 14, OA 15, OA 16, OA 17, OB 24, OB 53]

Where any amalgamating company ceases to exist upon a resident’s restricted amalgamation (formerly “qualifying amalgamation”), and where, immediately before the amalgamation, a credit or debit exists in the amalgamating company’s imputation credit account, dividend withholding payment account, branch equivalent tax account, or policyholder credit account, that amount is treated with effect from the time of the amalgamation as a credit or debit in the equivalent account of the amalgamated company. If the amalgamated company does not have an equivalent account (except for a branch equivalent tax account) the credit or debit is recorded in its imputation credit account. The effect is as if, for all times prior to the amalgamation, the amalgamated company did not separately exist and was instead the amalgamating company with the same holders of shares and options over shares as the amalgamating company each holding the same number and class of shares and options over shares as they held in the amalgamating company.

Where any amalgamating company ceases to exist upon a resident’s restricted amalgamation, and any credit which would have arisen, but for the amalgamation, is to be recorded in the imputation credit account, dividend withholding payment account, or branch equivalent tax account of the amalgamating company on a date after the amalgamation, that credit or debit is instead recorded in the equivalent account of the amalgamated company.

These provisions apply, with any necessary modifications, for any tax paid by the amalgamating company as if it and the amalgamated company were a single company. Similar provisions exist for a consolidated group.

### 190.05 Consolidating tax affairs for company groups

The consolidation regime treats a group of companies owned by the same shareholders as one economic entity and enables tax-free intra-group asset transfers to take place. A consolidated group is effectively treated as a single company for tax purposes. An important aim of the regime is to simplify the administration of the tax affairs of a group of companies. One of the original objectives of consolidation was to reduce the disadvantage to wholly-owned groups caused by the removal of the inter-corporate dividend exemption. However, the inter-corporate dividend exemption for wholly-owned groups (whether or not they consolidate) has been retained [see TIB vol 4:5 (December 1992)].

Under the consolidation regime, wholly-owned groups of companies are able to:

(a) Transfer assets within the consolidated group, with deferred income tax consequences and no gift duty consequences;

(b) Claim deductions for administration and other costs of holding companies which may not be deductible to the company that incurred the expenditure;
Companies — Consolidation

190.10 Companies able to consolidate [ss FM 35, FM 31]

Companies can only be members of the same consolidated group if they meet all the following conditions:

(a) They are all eligible companies;
(b) The companies are a wholly-owned group of companies;
(c) All the companies have the same balance date;
(d) If one of the companies is a qualifying company then all the companies are qualifying companies;
(e) If one of the companies is a mining company, all the companies are mining companies; and
(f) No shares in the companies have been subject to any arrangement whose purpose is to defeat the intent of the consolidation rules.

These criteria are now explained in more detail.

1 Eligible companies

Consolidation is restricted to “eligible companies” as defined in s FM 31(1). To be an “eligible company”, a company must meet all the following conditions:

(a) Resident in New Zealand;
(b) Not a foreign company;
(c) Not a company that derives only exempt income (other than dividends that are exempt under s CW 9 (foreign dividends), s CW 10 (wholly-owned group company dividends) and s CW 11 (conduit relief holding companies);
(d) Not a loss attributing qualifying company; and
(e) Unless the company is a “grandparented consolidated company”, it must either be incorporated in New Zealand or be carrying on business in New Zealand, and not be liable to income tax in another jurisdiction by reason of domicile, residence, or place of incorporation.

A loss attributing qualifying company may not consolidate because it can only have one class of share and, by definition, a group consisting of two companies has at least two classes of shares.

The requirement in para (e) buttresses the loss offset rules by preventing losses from being offset in two different jurisdictions [see 190.55]. The amended definition of eligible company does not apply to taxpayer companies that were members of a consolidated group under the previous law where:

(a) The company elected to be part of the consolidated group before 17 May 2006;
(b) The company is carrying on a business; and
(c) Less than 50 per cent of the company’s total allowable deductions for the previous income year were interest deductions or deductions under the financial arrangement rules.

Tax positions taken prior to the amendment are preserved by the definition of “grandparented consolidated company” [s FM 31(3)]. The effect of the definition is as follows:

(a) Where the taxpayer company was a member of the consolidated group at the time at which the position was taken, positions taken in the 1998 to 2005 income years are protected; and
(b) Existing dual-resident members of a consolidated group are protected for the 2006 and 2007 income years provided that they elected to join the consolidated group before 17 May 2006.
(2) Wholly-owned group
Consolidation is only available to New Zealand resident companies that are a wholly-owned group. Section IC 4 sets out the way in which 100 per cent common ownership is determined. At any one time, a group of people must own between them 100 per cent of the interests in every company in the group. In addition, they must own the interests in the same proportions for each company.

Example:
Group made up of a holding company and its subsidiaries:

```
        X
rail        Y
rail        Z
rail
Holding Co
rail
Sub Co 1
rail
Sub Co 2
rail
Sub Co 3
```

Example:
Group of commonly owned related companies:

```
  Shareholders
  
X
Co 1

Y
Z

Shareholders

X
Co 2

Y
Z
```

Companies that are less than 100 per cent commonly owned may be permitted to consolidate where there is a variation of not more than three per cent in common shareholding due to shares held by employee share purchase schemes approved under s IC 4.

There is no requirement to include the parent company in the regime. This means a consolidated group may comprise associated subsidiaries that are wholly-owned.

(3) Same balance date
A group of companies cannot consolidate unless they all have one common balance date. This ensures that the group’s income for any income year relates to the same period, not to an amalgam of different periods. Where a group has several tax balance dates, they must decide on one tax balance date [s FM 31(4)].

(4) Qualifying companies
A qualifying company cannot consolidate with a non-qualifying company. Therefore, all companies in a group must be qualifying companies or all companies must be non-qualifying [s FM 31(2)].

(5) Mining companies
A mineral mining company may only form a consolidated group with other mineral mining companies. A mining company is a company whose sole or principal source of income is from mining minerals, or whose sole or principal activity is mineral exploration [ss FM 31(2), CU 22].
Companies — Consolidation

(6) **Arrangement to defeat purpose of regime**
Companies are not able to consolidate if any shares in those companies have been subject to an arrangement or series of related or connected arrangements, or had any rights attaching to those shares extinguished or altered, directly or indirectly, for the purpose of enabling the companies to form a consolidated group so as to defeat the intent and application of the consolidation rules [s FM 31(6)].

**190.15 Formation of a consolidated group** [ss FM 35, FM 38]
A group of companies that wishes to consolidate must give Inland Revenue written notice (on Inland Revenue Form IR494) of their election to form a consolidated group. The notice must contain:

(a) An undertaking by each company to be jointly and severally liable for the group’s income tax liabilities; and

(b) Nomination of an agent or “nominated company” of the group.

Generally, a company commences being treated as a member of a consolidated group:

(a) From the start of the income year in which it notifies Inland Revenue, provided it gives this notice within 63 working days of the start of that income year; or

(b) In any other case, from the start of the following income year.

There is special provision for a group of newly incorporated companies to be treated as a consolidated group from the beginning of the income year of incorporation and formation, provided they notify Inland Revenue within 63 working days of the latest of those incorporations.

There is also a special provision allowing a group of companies that have become entitled to form a consolidated group during an income year to be treated as a consolidated group from the day of first entitlement, provided they notify Inland Revenue within 63 working days of the first entitlement.

An anti-avoidance provision prevents groups consolidating during an income year, instead of at the start of the year, where there is an arrangement to abuse the regime.

Companies that form a consolidated group during an income year rather than from the start of an income year must furnish a set of part-year accounts in the return for that year.

**Example:**
Tomcat Ltd and Jerry Ltd become wholly-owned on 1 July 20X1. The group has a 31 March balance date. The group elects to be a consolidated group within 63 working days of first becoming commonly owned. Consolidation commences on 1 July 20X1. Part-year accounts are required for the period 1 April to 30 June 20X1.

Inland Revenue may accept notification given outside the 63-day period if the CIR is satisfied that the notice of election could not reasonably have been furnished earlier.

**190.16 Entering an existing group** [ss FM 36, FM 38]
The rules for entering an existing consolidated group are similar to those for forming a consolidated group.

A company electing to join an existing consolidated group must give the CIR a written election notice (on form IR495) which contains an agreement to be jointly and severally liable for the group’s income tax.

A company that joins an existing consolidated group generally commences being treated as a member of the group:

(a) From the start of the income year in which it notifies Inland Revenue, provided it gives this notice within 63 working days of the start of the income year; or

(b) In any other case, from the start of the following income year.

A newly incorporated company can join an existing group from the beginning of the income year of incorporation provided it notifies Inland Revenue within 63 working days of incorporation.

A newly acquired company can also join an existing consolidated group from the day it becomes entitled to become a member, provided it notifies Inland Revenue within 63 working days of entitlement.
An anti-avoidance provision prevents companies joining a consolidated group partway through an income year, rather than from the start of the year, where there is an arrangement to abuse the regime.

Companies that join a consolidated group during an income year must furnish a set of part-year accounts in the return for that income year.

Inland Revenue may accept notification given outside the 63-day period if the CIR is satisfied that the notice of election could not reasonably have been furnished earlier.

**190.20 Joint and several liability**  [ss FM 3, FM 4, FM 5]

A company forming or joining a consolidated group must give an undertaking to be jointly and severally liable for the group’s income tax. This includes provisional tax, PAYE, RWT, NRWT, ESCT, and FBT. There are limited provisions for relaxation of the joint and several liability.

The requirement for joint and several liability may be limited to one or more companies of the group, when the group makes its election. Election is made on form IR495. In this case the CIR must be satisfied that the company or companies bearing liability for the group tax have sufficient assets to meet the group’s tax liability. The reason for this provision is so that groups of companies with financial arrangements subject to negative pledge clauses can still consolidate. If the companies liable for the group tax default in paying it, the CIR may raise separate assessments on the companies excluded from joint and several liability for the amount of the group tax liability attributable to them. The excluded companies would thus be liable for their share of the group tax in the event of a default.

Joint and several liability may be removed from a company that leaves a consolidated group if the CIR is satisfied that removing such liability would not significantly prejudice the collection of income tax.

**190.25 Nominated company**  [ss FM 34, FM 40, FM 32]

The nominated company must be a member of the consolidated group. The group can change which company is the nominated company by sending written notice (on form IR495), to Inland Revenue. Where there are changes to the group, the role of the nominated company may be significant. For example, if two members in a consolidated group of four companies become wholly-owned by new owners, it is possible for both groups to claim continued consolidated group status. To overcome this potential problem, the group of which the nominated company is a member continues as the consolidated group. Tax consequences are therefore not triggered for that group.

Where a company is a member of more than one consolidated group at any time, it is treated as a member only of the first consolidated group it joined, as long as it still meets the requirements for being treated as a member of that group [s FM 32].

**190.30 Leaving a group**  [ss FM 37, FM 39, FM 40, FM 41, FM 42]

A company may leave a consolidated group voluntarily by sending Inland Revenue a written election (using form IR495), to cease being treated as a member. The company’s membership ceases from the beginning of the income year after the year Inland Revenue receives the notice if so requested in writing. Otherwise the company is treated as a non-member from the beginning of the income year in which Inland Revenue receives the notice.

There are also provisions which deem a company in certain circumstances to have ceased being a member of a group. These circumstances are when:

(a) The company ceases to be an “eligible company” as defined.

(b) The company ceases to be entitled to be a member of the same consolidated group as the nominated company.

(c) The consolidated group to which a company belongs ceases to have a nominated company. However, if the nominated company of the group is wound up and Inland Revenue receives notice within 20 days of the wind up that another company is to be the new nominated company, the company does not cease to be a member. The CIR has discretion to accept a notice after the 20-day period.
In the first two of these situations the company is treated as a non-member from the beginning of the income year in which the deemed cessation occurs, or from the date of deemed cessation if the company specifically requests this in writing. However, Inland Revenue declines this request where tax avoidance is involved.

In the third situation above, the company is treated as having ceased to be a member from the beginning of the income year in which the deemed cessation occurs if there is no new nominated company within the 20-day period.

Where a cessation date occurs partway through an income year, the company leaving the group must furnish part-year accounts for that income year [see 190.35].

A company that ceases to be a member of a consolidated group through being wound up is treated as having ceased to be a member from the date of winding up. This is not conditional on adequate accounts being furnished.

190.35 Part-year accounts [s FM 14]

A company that enters or leaves an existing consolidated group partway through an income year must furnish part-year accounts. These are necessary because the company becomes a different tax entity and is subject to different tax rules in the income year of entry or exit. The company should include these part-year accounts in its tax return for that year and file it by the usual due date.

Example:

If a company with a 31 March balance date joins a consolidated group three months into its income year, it must furnish a set of part-year accounts with its return for that income year. The part-year accounts replace the normal full year accounts that would otherwise have been furnished.

The company’s net income is calculated (to a fair and reasonable extent and with any necessary modifications) by treating the part-year as a complete income year. Where accounts cover six months they should include only half the normal allowable deductions for items such as depreciation or amortisation. As the part-year is treated as a complete income year, the net income or net loss of the separate part-year periods are not netted off. This is relevant in determining part-year net losses and profits for carry forward and offset [see 940 LOSSES].

Example:

ABC group is a consolidated group which DCo joins on 30 September 20X1. Both ABC group and DCo have 31 March balance dates. On an individual taxpayer basis DCo determines its income to 30 September 20X1 and includes it in its own return for the income year ended 31 March 20X2. DCo’s pre- and post-consolidation results are not offset against each other. If the pre-consolidation result was a loss of $100 and the post-consolidation result attributable to DCo is a profit of $90, DCo is allowed a pre-consolidation loss of $100. It would not be limited to $10.

190.40 Returns, assessments, and liability of consolidated group [s FM 3]

A consolidated group files one tax return, receives one notice of assessment, and consequently has only one tax liability for any income year. A consolidated group files one tax return which includes the total net income for all companies in the group. The group files that return under an IRD number that is separate from the individual companies’ IRD numbers. The member companies do not have to file separate returns unless these are needed because of part-year consolidations.

The CIR can grant an extension of time for filing the consolidated group’s tax return under s 37 of the TAA. The CIR has discretion to determine what information (in addition to the consolidated tax accounts) Inland Revenue needs to enforce the consolidation regime and the ITA generally. A consolidated group receives only one income tax notice of assessment, based on the tax return it files. Separate notices of assessment are not issued unless they are required by part-year consolidations.

Subject to the usual quarantining rules, the groups total taxable income is calculated before taking into account available credits (foreign tax credits and CFC credits). This means the credits belonging to individual companies that do not have any New Zealand taxable income can be offset against the income of other companies in the group. In this way, the group can use credits that would otherwise not be available. On the other hand, where the credits are attributed to individual group members that have taxable income but the
Companies — Consolidation

190.41 Calculating group taxable income [ss FM 3, FM 8, FM 9, FM 10, FM 11, FM 12, FM 13]

A consolidated group calculates its taxable income as the sum of the member companies’ taxable incomes, with some special rules applying to:

(a) Intra-group items of income and expenditure;
(b) Treatment of the consolidated group as a single company; and
(c) The determination of thresholds on a group level.

(1) Assessable and deductible items

Assessable and deductible items arising from intra-group transactions are not included in the determination of group taxable income, except for transactions involving:

(a) Disposition of trading stock;
(b) Base price adjustment under the financial arrangement rules; and
(c) Dividends arising from pre-consolidation debt remissions.

This results in intra-group transactions being treated as transactions between branches of the same company, so that there are no taxation consequences.

Only items that would not be income if the group were a single company are not taken into account. This ensures that income arising from transactions with a third party outside the consolidated group, but as part of an intra-group arrangement, is included in the calculation of the group’s taxable income.

Similarly, only those expenses that would not be an allowable deduction if the group were a single company are not taken into account. This ensures that intra-group expenses (including reimbursement between group members for fringe benefits provided) are not allowable deductions. In the case of outlays to a third party (such as fringe benefit tax paid), the expenses are allowed as a deduction.

Example:
ParentCo engages a third party to provide management consultant services. ParentCo on-charges the fees to SubCo. SubCo is a land-holding company deriving no income. ParentCo is not allowed a deduction for the management fees paid to the third party.

(2) Administration expenses of holding company deductible

Deductions are allowed for administration and other expenses of a holding company regardless of whether the holding company itself derives any income. This is because those expenses would be allowable deductions of that consolidated group if it were treated as a single company. However, one qualification is that a nexus must exist between that expenditure item and the derivation of gross income or business activity of another member of that consolidated group. This prevents deductions being allowed to a non-operating consolidated group of companies.

(3) Expenses not allowed as a deduction if group is a single company

Consistent with the treatment of a consolidated group as a single company, expenses which would be deductible to the member but not to the group are not deductible. Interest deductible under s DB 7 is the only exception. This permits a deduction for interest on money that one member borrowed from outside the group so that another group member could purchase at least a 66 per cent shareholding of a third group company. The group must demonstrate a clear and direct link between the borrowing and the intra-group loan used to purchase equity in a manner that meets the requirements of s DB 7.

Example:
SubCo 1 and SubCo 2 are members of a consolidated group. SubCo 1 has tax credits of $100 from tax it has paid overseas and a taxable income of $1,000. SubCo 2 makes a loss of $1,800. Therefore, on a group basis there is a net loss of $800. The $100 tax credits are not available for offset to the group.
Example:
ABC consolidated group purchases land. The land is legally held by subsidiary C as a revenue asset. Parent A uses the land for its head office. Subsidiary C is not allowed a deduction for expenses incurred in acquiring the land.

(4) Income assessable if group is a single company [s CV 2]
Any profit or gain that would not be included in income when derived by a member but which would be income if derived by the consolidated group as a single company is included in the calculation of the group’s taxable income. This provision is intended to prevent intra-group arrangements to transfer assets and recharacterise them to avoid tax. This provision is similar to the provision in s CV 1 aimed at preventing group structuring to avoid tax from certain activities.

(5) Capitalisation of group costs of improvements to fixed assets
Non-deductible expenditure that a group member incurs in relation to an asset held by another group member may be capitalised.

Example:
In consolidated group ABC, ACo owns a building. BCo makes some capital improvements to the building. The cost of those capital improvements can be added to the costs incurred by the owner, ACo.

(6) Threshold levels determined on group basis [s FM 2]
Where a provision of the ITA specifies a threshold, the position of the group is to be determined as if the consolidated group is one entity.

Example:
Consolidated group ABC wants to know under what circumstances it may invoke s EW 17 and use the straight line method of calculating income or expenditure. Section EW 17 permits a straight line method of calculation if the total value of all financial arrangements is less than $1.5 million. Assume each member in ABC group has less than $1.5 million of financial arrangements, but the group as a whole has financial arrangements with a combined value of over $1.5 million. ABC group may not use the straight line method as the group exceeds the threshold value of financial arrangements.

190.45 Dispositions of property [s FM 15, FM 16, FM 17, FM 18, FM 19, FM 20, FM 21, FM 22, FM 23]
A comprehensive set of asset transfer rules applies to intra-group transfers of assets. Generally, no tax is payable on intra-group transfers of assets other than trading stock.

Tax becomes payable in relation to the intra-group transfers when the transferred asset is sold out of the group. Consistent with the treatment of the consolidated group as one entity with separate branches, selling shares of a company in the group that holds the transferred asset constitutes a sale of the asset out of the group. This is to prevent the consolidation regime from being abused.

Example:
In FGH Group, FCo shares are sold to a third party. At the time of sale, FCo is holding land assessable under s CB 6 which GCo transferred to it. The difference between the transferred asset’s market value at the time of the share sale and the deemed transfer value is included in the return of income by the group.

The rules applying to various types of assets follow.

(1) Financial arrangements [ss FM 18, FM 19, FM 20]
Generally, s EW 29 requires a base price adjustment for any transferred asset in order to allocate income or expenditure from the transferred financial arrangement between the transferor and the transferee in the year of transfer. An intra-group transfer of a financial arrangement would require a base price adjustment.

Section FM 18 specifies the deemed consideration for the transfer so that it does not result in any allocation of income or expenditure between the transferor and transferee for the year of transfer. To qualify, both parties must use the same method of allocating income or expenditure (for example, yield to maturity basis) and meet certain conditions. These conditions are:
Companies — Consolidation

190.45(2)

(a) Election by the nominated company of a nil allocation;
(b) The transferor and transferee are members of the same consolidated group for the whole income year of transfer; and
(c) Neither company is entitled to carry forward pre-consolidation losses, unless the group’s income is sufficient to absorb all such losses.

Where the group does not meet these conditions, but there is no change in the method of calculation, it must make a fair and reasonable allocation for the year of transfer [s FM 19]. Where there is a change in the calculation method, the transferor is deemed to have transferred the financial arrangement at market value [s FM 20].

(2) Trading stock [s FM 17]

Unlike the tax treatment on intra-group transfers of other assets, intra-group transfer of trading stock are generally not ignored for tax purposes. Instead, such transfers are deemed to occur at the transferor’s tax value, or at cost for new purchases. However, the nominated company may elect (on Inland Revenue Form IR495) to have transfers ignored according to the general asset transfer rules for all or certain lines of trading stock, provided that the trading stock in question and its ownership can be specifically traced.

(3) Depreciable assets [s FM 15]

Depreciation recovery or further deductions under the ITA are generally based on the tax book value plus subsequent capitalised costs.

Example:
Assume an ice-cream plant is transferred within FGH group. A tax event occurs on the sale of the ice-cream plant out of the group. The details are as follows:

| Purchase date | 1 April 20X1 |
| Transfer date | 31 March 20X2 |
| Tax event | 1 April 20X3 |
| Purchase cost | $10,000 |
| Tax book value on transfer date | $8,000 |
| Consideration for transfer | $8,500 |
| Market value at tax event date | $7,000 |
| Tax book value at tax event date | $6,400 |
| Depreciation recovered | $600 |

The consideration passing between the companies for the transfer is irrelevant. Depreciation is calculated on the tax book value on transfer.

Where depreciable property acquired under a binding contract entered into before 16 December 1991 is transferred intra-group, the depreciation rates prevailing for the 1992-1993 income year continue to apply.

A pool of property may be transferred at its adjusted tax value where the whole pool is transferred intra-group. Where only part of the pool of property is transferred, the lower of the market value of the part of the pool being transferred or the adjusted tax value of the whole pool is the deemed transfer price.

(4) Other assets

Any other assets such as land and revenue assets are deemed to be transferred intra-group at cost to the transferor, including expenditure incurred in purchasing or improving the assets and legal costs in improving legal rights in relation to that asset.

Where an asset is transferred intra-group as part of another asset (rather than in its original form) and its market value cannot be determined, there is provision for its market value as at the time prior to absorption to be taken into account.
(5) **Adjustment on sale of shares on revenue account** [s FM 23]
Where a parent company has consolidated with a subsidiary and the shares in the subsidiary are held on revenue account, any gain or loss on the sale of the subsidiary shares would be determined as assessable income or deduction under normal income tax rules. An adjustment applies to the sale price to take account of any exempt intra-group transaction. Without the adjustment a deduction for “losses” on sale of the shares would be “incurred”.

**Example:**
ParentCo and SubCo are members of a consolidated group. ParentCo’s shares in SubCo are held on revenue account. The purchase price of the shares was $2 per share. While a consolidated member, SubCo transfers most of its assets to ParentCo. This results in a lower share market price of $1 per share. ParentCo sells its shares in SubCo to a third party. The sale price is adjusted to $2, and no loss is available to the group.

(6) **Anti-avoidance provision** [s FM 22]
Section FM 22 is aimed at consolidated groups which consolidate for a brief period solely to obtain the benefit of tax-free asset transfers. In that situation, the transfers are recognised and included in the group’s income.

**190.51 Gift duty**
No gift duty is payable on asset transfers within a consolidated group. Unlike the treatment for income tax, gift duty does not become payable at a later date when the asset is transferred out of the group.

Another provision prevents gift duty becoming payable on transactions between companies, if these transactions constitute dividends.

**190.55 Loss carry forward and grouping** [ss ID 1, ID 2, IS 1, IA 9]
The loss carry forward provisions apply with modifications to a consolidated group as if it were one tax entity. The grouping provisions are also modified to apply to the group as one tax entity. Any loss the consolidated group incurs is treated as net loss of the group. The provisions relating to loss carry forward and loss grouping of consolidated groups do not apply to groups consisting of mining companies [ss IS 1, ID 1(2)].

Any net loss that a company has before it becomes a member of a consolidated group remains that of the member. The member’s pre-consolidation net losses are offset against group net income. The limits on the offset are discussed below.

The member’s pre-consolidation net losses that are not offset against group net income, may be either:
(a) Carried forward for offset against the company’s future net income when it leaves the group; or
(b) Offset to a company 66 per cent commonly owned with it, including another consolidated group.

The consolidated group net losses and pre-consolidation net losses carried forward are offset on a “first in, first out” basis. Where these net losses arise in the same income year, the consolidated group can notify the CIR of the order in which the losses are to be used. In the absence of such notification, the losses are pro-rated [s IA 9].

**Example:**
SubCo 1, SubCo 2, and ParentCo are the members of a consolidated group. SubCo 1 and SubCo 2 have pre-consolidation net losses for the 20X1 income year of $100 and $200 respectively. The group has net income of $200 in the 20X2 income year. The net losses offset against group net income are pro-rated one-third from SubCo 1 and two-thirds from SubCo 2.

**190.56 Limited loss offset where members not a group at all times** [ss ID 4, ID 5]
Under ordinary loss offset rules, a net loss may be offset provided the group existed from the year in which the net loss arises through to the income year of offset. In a consolidated group of members that was not a 66 per cent commonly owned group at all times, the amount of net loss is restricted to the lesser of:
The amounts that the company incurring the pre-consolidation loss ("loss company") is permitted to carry forward; and

The amount permitted to be offset against net income of those members that formed a 66 per cent commonly owned group with the loss company at all relevant times.

The net incomes of the loss company and the other group members (66 per cent commonly owned) in the year of consolidation are calculated in accordance with s FM 6 on a single company basis.

Example:
A consolidated group comprises A Co, B Co, and C Co. A Co has pre-consolidation net losses of $1,000 (incurred in the 20X3 income year). B Co was 66 per cent commonly owned with A Co at all times. C Co was not 66 per cent commonly owned with A Co during the 20X1, 20X2, and 20X3 income years. In the 20X4 income year (first year of consolidation), the consolidated group has net income of $1,200 comprising $300, $300, and $600 arising from A Co, B Co, and C Co respectively. The amount of loss that may be deducted is determined as follows:

<table>
<thead>
<tr>
<th>A Co’s net income in 20X4</th>
<th>$300</th>
</tr>
</thead>
<tbody>
<tr>
<td>B Co’s net income in 20X4</td>
<td>$300</td>
</tr>
<tr>
<td>From the available net losses of A Co ($1,000)</td>
<td>$600</td>
</tr>
</tbody>
</table>

No offset can be made against the income of C Co as that company did not form a group with A Co at the time at which A Co’s loss was incurred.

Where a company with pre-consolidation net losses is a member for only part of the consolidated group’s income year, the amount of loss offset against the consolidated group’s income is also restricted, taking into account any net income derived in the part-period before consolidation. Section ID 2 takes into account the possibility that the loss company may have been a member of another consolidated group in the part-period before consolidation. Accordingly, the amount of net loss offset is restricted to the lesser of:

(a) The amount of pre-consolidation net loss to be carried forward against group net income, less any net income of the company or another consolidated group of which the loss company was a member during the part-year period before consolidation; and

(b) The part-year net income of the consolidated group.

Example:
A Co left XYZ group to join ABC group midway through the income year. The net incomes for the relevant periods are:

<table>
<thead>
<tr>
<th>A Co (available net loss)</th>
<th>$1,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>A Co (net income)</td>
<td>Nil</td>
</tr>
<tr>
<td>XYZ Group (income)</td>
<td>$400</td>
</tr>
<tr>
<td>ABC Group (income)</td>
<td>$500</td>
</tr>
</tbody>
</table>

The lesser of:

(a) $1,000 − (0 + 400) = $600; or
(b) $500,

may be carried forward. Only $500 may be carried forward.

Where pre-consolidation net losses are carried forward against future consolidation net income, for the purposes of s IP 3 the net income of the consolidated group is treated as if it were the net income of the loss company.

190.60 **Attributed CFC income and FIF income** [ss IQ 1, IQ 4, IQ 6, IQ 7, IQ 8]

Only New Zealand resident companies are eligible to consolidate. Members of a consolidated group with interests in controlled foreign companies (CFCs) and foreign investment funds (FIFs) must include in the consolidated group’s income any attributed CFC income and FIF income. For this purpose, the provisions of subpart IQ (relating to CFCs and FIFs) apply as if the consolidated group were one company.
Any tax credit becoming available or any attributed CFC loss or FIF loss incurred is treated as becoming available to or incurred by the consolidated group. There are some modifications to the ring-fencing rules [ss IQ 4(3), IQ 5(3)].

A member’s pre-consolidation tax credits, attributed CFC loss, and FIF loss remain in the ownership of the member company, but they may be carried forward and offset against the consolidated group income subject to the normal quarantining rules. The order of offset is similar to that applicable to other losses [see 190.56]. A member’s pre-consolidation tax credit, attributed CFC loss, and FIF loss may be:

(a) Offset against the group’s income tax or attributed CFC income or FIF income, subject to the quarantining rules;
(b) Credited, deducted, or set off against future income tax payable or income derived by the member when it leaves the consolidated group or joins another group;
(c) Carried forward by the member company to future income years; or
(d) Offset against income tax payable by, or income of, any other company (other than the consolidated group) as permitted under the ITA.

Like other losses, the group’s tax credits, attributed CFC losses, and FIF losses are offset on a “first in, first out” basis. Where the losses are incurred in the same income year, the losses are pro-rated.

Example:
ACo, BCo, and CCo are the members of consolidated group ABC. ACo and BCo have pre-consolidation attributed CFC losses of $100 and $200 respectively, carried forward from the 20X1 income year in respect of their Hong Kong companies. The consolidated group has attributed CFC income from Hong Kong in the 20X2 income year of $200. The losses are pro-rated one-third from ACo and two-thirds from BCo.

190.61 Limited tax credit where members not a 66 per cent commonly owned group [ss LK 8, LK 10]

Where the members of a consolidated group were not members of a 66 per cent commonly owned group when a tax credit arose, s LK 10 restricts the amount that may be offset to the aggregate of:

(a) The amount of the tax credit or loss permitted to be carried forward by the company to a subsequent year; and
(b) The amount permitted to be offset against tax payable or income of other member companies that were at all relevant times members of a 66 per cent commonly owned group.

The income tax payable and the income of the companies in the year of consolidation is determined by applying s FM 3 (that is, on a single company basis).

190.62 Limited tax credits on part-year consolidation [ss LK 8, LK 11]

Where a company is a member of a consolidated group for only part of an income year, the amount of tax credits that may be offset are restricted to take into account the company’s income tax payable or income derived in the part-period before it joined the group. The amount of offset is restricted under s LK 11 to the lesser of:

(a) The amount of pre-consolidation tax credits to be credited against the group’s income tax payable (or loss to be deducted against the group’s income), less any income tax payable (or income derived) by the member (or by another consolidated group of which it was a member) during the part-period before it joined the group; and
(b) The amount of income tax payable (or income derived) by the consolidated group that can be reasonably and fairly attributed to the part of the income year during which the newly joined company was a member of the consolidated group.

The income tax payable or income derived is calculated by applying the provisions in s FM 14 in relation to part-year accounts.
190.65 **Consolidated group provisional tax** [ss RC 28, RC 29, RC 30, RC 31]

A consolidated group’s provisional tax payable is determined by applying the provisions in subpart RC as if the consolidated group were a single company.

Companies forming or joining a consolidated group must give an undertaking to be jointly and severally liable for the consolidated group’s income tax. This extends to provisional tax. However, where a group has approval for joint and several liability to be limited under s FM 4 to one or more of its companies, the provisional tax liability is also modified.

In the first year of consolidation and in any income year in which there are new members, calculating the group’s provisional tax relies on the residual income tax (RIT) that each member incurred in a preceding income year before becoming a consolidated group member. Section RC 29 requires the consolidated group to include in its RIT for the preceding year the proportion of the individual company’s income for the preceding year which reflects the proportion of the provisional tax year in which the company was a member of the consolidated group.

**Example 1:**
XCo joins XYZ consolidated group on 1 April 20X1. The group has a 31 March balance date. XCo was a member for 12 months during the 20X2 income year. XYZ group must include 12 months of RIT derived by XCo in the 20X1 income year (plus five per cent uplift) in its provisional tax calculations for the 20X2 provisional tax year. XCo makes no payment of provisional tax individually.

**Example 2:**
YCo joins consolidated XXX group on 8 July 20X1. XXX group has a 31 March balance date. YCo and the group made their first instalments of provisional tax separately. When YCo joins the group, XXX group must recalculate the preceding year’s RIT for its subsequent instalments of provisional tax. YCo’s provisional tax liability for part of the year is squared up at year end and it does not have to pay any further provisional tax.

Where a company was a member of a consolidated group for all or part of a year and ceases to be a member for all or part of a succeeding year, it must estimate its provisional tax, with associated penalties for underestimation. The consolidated group may estimate down its provisional tax payment.

In respect of the GST ratio method of provisional tax calculation, ss RC 8, RC 9(6), RC 11, and RC 15 to RC 19 apply to the consolidated group with the following modifications:

(a) The group uses the GST ratio method and a new company joins the group:
   (i) If a new company joins at the start of the tax year and, as a result, the $150,000 threshold for using the method is exceeded, the group is no longer eligible to use a GST ratio;
   (ii) If a new company joins at the start of the tax year, and the group, allowing for the inclusion of the company, is eligible to use the GST ratio method, but the ratio must be recalculated;
   (iii) If a new company joins during the tax year, the group may continue to use the GST ratio method for the remainder of tax year, but the ratio must be recalculated. Eligibility ceases if the threshold for use of the method is exceeded;

(b) The group does not the GST ratio method and a new company which uses the GST ratio method joins the group. Where the consolidated group does not calculate its provisional tax using the GST ratio method and a new company that does use the GST ratio method joins the group, the group is precluded from using the GST ratio method for that tax year;

(c) Calculating the new ratio when a new company joins the group:
   (i) The recalculation of the GST ratio must include the residual income tax of the new company for the preceding tax year and the total taxable supplies of the company for the corresponding income year; and
   (ii) the recalculated GST ratio applies to provisional tax payments made on or after the date on which the company joins the group;
190.70 Withholding tax obligations

Joint and several liability for the consolidated group’s income tax extends to resident withholding tax (RWT), non-resident withholding tax (NRWT), fringe benefit tax (FBT), employer superannuation contribution tax (ESCT) and tax deductions under Part R, including PAYE deductions [s FM 3]. However, the members are individually responsible for complying with their respective obligations, such as filing individual returns.

190.75 Imputation credits [subpart OP]

The consolidated group must maintain its own separate imputation credit account (ICA) covering the group’s activities. The opening balance of a newly formed group ICA is nil. An existing consolidated group’s opening balance is equal to the closing balance of the preceding imputation year. The ICA of each member in the group is maintained separately from the group ICA. The individual ICAs generally record the balance to the date of consolidation. Debits and credits arise to the ICA in the same way as for individual companies, but by treating the consolidated group as if it were a single company [see 670.420].

190.76 Debiting and crediting between consolidated group and individual companies [s OP 22]

Post-consolidation credits and debits arising to the group ICA do not arise to the individual ICAs.

A transfer from the individual ICAs to the group ICA is made when a debit arises to the group ICA and that debit is not offset by any group credit that arose earlier or on the same date as the credit in the individual ICA. The ordering procedure in s OP 22(3) applies to the group credits. When a credit transfer occurs, a corresponding debit arises to the individual ICA.

The ordering procedure also applies to the individual credits in the individual ICAs that are transferred. The “first in, first out” rule applies. If two or more credits arose at the same time, the consolidated group may elect which credit to offset. Where no election is made, the credits are offset on a pro-rata basis.

Example:

ACo and BCo are members of ABC Group. Both companies have pre-consolidation credit balances and, in particular, credits of $100 and $200 which arose at the same time (5 July 20X1). On 10 October 20X4 a debit of $100 arises to the group ICA which is not offset by any group credit. Assume no election is made. The credits from ACo and BCo are offset proportionately, that is, one-third from ACo and two-thirds from BCo.

If a debit were to arise to the individual ICA account and cause or increase a debit balance, that debit does affect the company’s ICA but is debited to the group ICA. In this way the individual member does not have to pay further income tax.

An amount of further income tax that a consolidated group member pays may be credited against the group’s income tax payable. To the extent that it is so credited, the credit is not available to the individual member.

190.77 Application of specific imputation provisions to consolidated groups [ss OB 60, OB 61, FN 6, GB 38]

The benchmark dividend rules in ss OB 60 and OB 61 apply to a consolidated group as if it were a single company. However, and intra-group dividends are not taken into account for the purposes of these rules. This means that the imputation ratio and benchmark dividend rules apply to all dividends except intra-group dividends paid by each member in the group. The attachment of imputation credits to intra-group dividends is optional.

A consolidated group’s nominated company is responsible for ensuring that the group furnishes annual imputation returns as well as imputation returns whenever requested by the CIR, or as otherwise required [s FN 6].

The provisions relating to further tax payable and imputation penalty tax apply to the group as if it were a single company and references to a company apply as references to a consolidated group.
Under s GB 38, where an arrangement is entered into (as specified in s GB 37), whereby a shareholder of a company in a consolidated group is paid (directly or indirectly) a dividend by another company in the group, the dividend is deemed to have been paid by the first company and any imputation credits attached to that dividend:

(a) Do not form part of the income of the shareholder;
(b) Are not eligible for a credit of tax or a carry forward of loss; and
(c) Are a debit to the ICA of the first company under ss OB 30 and OP 28.

Section GB 38 also provides that the anti-avoidance provisions in ss GB 35 and GB 36 apply to the consolidated group as if it were a single company and references to provisions of the ITA are references to the equivalent consolidation provisions. These anti-avoidance provisions are explained in more detail in 670 IMPUTATION.

**190.90 Policyholder credit accounts** [ss OP 109, OP 110, OP 111, OP 112, OP 113, OP 114, OP 115, OP 116, OA 7]

A consolidated group must maintain a group policyholder credit account (PCA) if any member of the group is carrying on a business of providing life insurance. The group’s account is maintained separately from the individual PCA account.

The opening balance of a newly formed consolidated group’s PCA is nil. An existing group’s opening balance is equal to the closing balance of the preceding imputation year.

Credits arise in the group’s PCA as follows:

(a) Opening credit balance (arises 1 April) [s OA 7];
(b) Transfer of a credit balance from the group’s imputation credit account (arises on the day on which the ICA is debited for the transfer) [s OP 110];
(c) A credit transferred from a group company’s policyholder credit account (arises on the day on which the group company’s PCA is debited) [s OP 112].

Debits arise in the group’s PCA as follows:

(a) Opening debit balance (arises 1 April) [s OA 7];
(b) A credit balance applied to satisfy a policyholder base income tax or provisional tax liability for income year (arises on the last day of the income year [s OP 115]; and
(c) A credit balance transferred to the imputation credit account (arises on the day of election) [s OP 116].

**190.91 Debiting and crediting between group and individual PCAs** [s OP 112]

Credits may be transferred from the individual PCAs to the group PCA. A transfer is made when a debit arises to the group PCA and that debit is not offset by any group credit that arose earlier or on the same date as the credit in the individual PCA. An ordering procedure applies to the group credits. When a credit transfer occurs, a corresponding debit arises to the individual PCA. The ordering procedure also applies to credits in two or more individual PCAs that are transferred. The “first in, first out” rule applies. If two or more credits arose at the same time, the consolidated group may elect which credit to offset. Where no election is made, the credits are offset on a pro-rata basis.

**190.92 Application of PCA provisions to consolidated groups** [ss OP 115, OP 116]

A consolidated group may elect to use any credit balance in the group PCA in payment of income tax payable on policyholder income the group derives. The election is made by recording the amount of the credit as a debit to the group’s PCA.

The group may also elect to transfer the credit balance in the group PCA to the group ICA.
Sections OJ 9 and OA 2(5) (relating to elections to use a credit balance to reduce income tax and determinations by the CIR on PCA debits and credits) apply as if references to a PCA company and the PCA provisions were references to a consolidated group and to equivalent consolidation provisions.
Chapter 200

Compensation and Damages

200.10 Compensation to fill a “hole in profits”

It is necessary to have regard to the real nature of the loss or injury sustained by the recipient for which the compensation is received in determining whether or not an amount received as compensation on the cancellation of a contract constitutes income. Is the compensation to make good a loss of trading profits, or is it to recompense for the deprivation of a capital asset?

In *Burmah Steam Ship Co Ltd v Commissioners of Inland Revenue* [1931] SC 156, (1931) 16 TC 67, the question arose as to whether damages received by shipowners from the repairers for failure to execute repairs within an agreed time constituted assessable profits. The failure of the repairers had the result of depriving the shipowners of the opportunity of putting the vessel to immediate profitable use in their business, thus making, so to speak, a “hole in the profits”, and damages received went to fill that “hole” and were held to be assessable.

Compensation received in the following circumstances, using the same principle, has been held to be a trading receipt in the ordinary course of business and assessable [s CB 1]:

(a) Compensation received by a shipbuilding company on the cancellation of a contract to build ships: *Short Bros v Commissioners of Inland Revenue* (1927) 12 TC 955.

(b) A sum received from auditors to make good defalcations of employees which the audit had failed to detect: *Gray v Penrhyn* [1937] 3 All ER 468.

(c) A sum awarded for the compulsory taking over of a company’s stock of rum by the Admiralty: *Commissioners of Inland Revenue v Newcastle Breweries Ltd* (1927) 12 TC 927.

(d) A sum recovered from insurers by a timber company on the destruction by fire of their stock of timber: *J Gilksten & Son Ltd v Green* [1929] AC 381, (1929) 14 TC 364 (HL).

(e) Compensation received by commission agents on the cancellation of an agency agreement which had only one year to run: *Kelsall Parsons & Co v Commissioner of Inland Revenue* [1938] SC 238, (1938) 21 TC 608.

(f) A lump sum received as compensation for cancellation of a contract to pay commission where a commission agency was outside the company’s usual line of business: *Shove v Dura Manufacturing Co Ltd* (1941) 23 TC 779. This case indicates that contracts in the ordinary course of a trader’s business connotes contracts of a trading nature and not contracts which form the bulk of the trade. If the proceeds of a contract are of a revenue nature it makes no difference whether a contract is usual or not. A contract does not become a capital asset because it is a contract in a new or unusual line of business.

(g) Compensation received by shipowners for compulsory detention of ships by the Government: *Ensign Shipping Co Ltd v Commissioners of Inland Revenue* (1928) 12 TC 1169.
(h) A lump sum payment made to an employee to compensate for changes in conditions of her employment (withdrawal of the right to trade union membership): *Hamblett v Godfrey* (1987) BTC 83.

(i) An Education Department payment received by a school teacher, being compensation for wages lost as a result of school governors unlawfully refusing to employ the teacher: *TRA Case L94* (1989) 11 NZTC 1,542.

(j) Compensation payments by the Fruit Marketing Council to fruitgrowers for hail damage, which are made with the intention of restoring, to some extent, revenue losses caused through hail damage to enable fruitgrowers to meet their outgoings.

(k) Compensation received by dairy farmers who have cattle slaughtered because of brucellosis. This is income in the year in which the cattle are slaughtered.

(l) Compensation for loss of a capital asset, if the compensation can be regarded as compensating for loss of income, eg, compensation paid to a subdivider upon the compulsory acquisition of land as the subdivisional profits would have been taxable: *Duff v Commissioners of Inland Revenue* (1982) 5 NZTC 61,131 (CA).

(m) Compensation paid by the Government for timber royalty and business income lost by a farmer as a result of a ban on the export of indigenous timber. This is because the compensation takes the place of the revenue receipts which would have been received from the logging and export of timber: *TRA Case T47* (1998) 18 NZTC 8,319.

A company which carried on the business of theatrical agents and producers of plays, purchased the production of a play, imposing certain restrictions on the vendor as to the sale of motion picture rights during the currency of the agreements. Damages received for breach of this agreement were held to be liable to tax. The nature of the respondent company’s business was such that the acquisition of the licence to produce plays was an ordinary incident of their business. The acquisition of each licence to produce a particular play did not constitute that licence a capital asset, but merely the acquisition of the stock-in-trade, while the sum of money awarded as damages for breach of contract was really compensation for loss of profit otherwise receivable for a floating asset: *Vaughan v Archie Parnell and Alfred Zeitlin Ltd* (1940) 23 TC 505.

If a business consists of the making of a number of commercial contracts in the hope of making profits by their performance, any damages that may be recovered as compensation for the breach of one of those contracts is a receipt that must be taken into account for the purpose of arriving at the total profits and ultimately at the net income of the business: *Commissioners of Taxation (NSW) v Meeks* (1915) 19 CLR 568, also *Inland Revenue Commissioners v Fleming & Co (Machinery) Ltd* (1951) 33 TC 57.

If interest is paid as part of a compensation package and the fact that it would be payable was not material to the calculation of the amount of compensation to be paid, it is assessable: *Marshall v Commissioner of Taxes* [1953] NZLR 335 (CA and SC) and *Public Trustee v Commissioner of Inland Revenue* [1960] NZLR 365 (SC).

The taxpayer was retained by a company to assist it on a particular project on the basis he would be appointed to a senior position if it was successful. Although employed for seven years he was never appointed to the senior position. A termination agreement was signed and the loss of office compensation payment was assessable: *Hardy v Commissioner of Inland Revenue* (1986) 8 NZTC 5,035 (HC).

The taxpayer entered a contract to supply Lion Breweries Ltd (“LBL”) with certain products for 10 years. LBL formed a subsidiary to supply its hotels with the goods and an agreement was reached whereby the taxpayer relinquished its contract for a sum of $125,000. A sum of $37,500 was payable in consideration of LBL purchasing the taxpayer’s right of supply of goods other than glassware. In the event of LBL obtaining a glassware franchise, the taxpayer’s right of supply of glassware would terminate in consideration of the sum of $82,500. The High Court held there was no difference in the nature of the payments, the first being a payment for the purchase of the right to supply goods and the other being a compensation for loss. The quantum of each payment was based on the estimated loss of profits for the eight years of the contract to remain. The sum of $37,500 paid was held to be not capital, the taxpayer only losing sales to LBL which for
two years had averaged only a 20 per cent contribution to the company’s profits: *KR Greenslade Ltd v Commissioner of Inland Revenue* (1986) 8 NZTC 5,197 (HC).

A New Zealand manufacturer had entered into a contract with two overseas companies to supply goods worth about $500,000. The overseas buyers later cancelled the contract and the New Zealand company claimed damages for breach of contract. The New Zealand company finally agreed to accept $27,500 in full satisfaction of its claim. Included in this sum was an amount of $20,477 being the value of the tax incentive lost through the breach of contract. The taxpayer company contended that the sum of $20,477 should be exempt because the export incentive allowance was not of an income or revenue nature since taxpayers were not taxed thereon and, accordingly, that compensation paid for the loss of that incentive was not assessable. Inland Revenue, on the other hand, considered that the amount in question constituted profits or gains derived from a business and that the sum constituted income according to ordinary concepts. The TRA held that the sum of $20,477 was of a revenue nature and formed part of the taxable income of the objector company: *TRA Case C7* (1977) 2 TRNZ 231.

Earnings-related accident compensation is assessable in full in the year of receipt, notwithstanding that it may be calculated by reference to loss of earnings over a period longer than a year [s CF 1, see 20.25].

### 200.20 Compensation payments to fill a “hole in capital assets”

Compensation to fill a “hole in the capital assets” is not assessable [s CB 1(2)]. For example, compensation received by shipowners for the loss of a ship which had been negligently run down and sunk by a vessel belonging to another shipowner.

In each of the following cases compensation received has been held to be a capital receipt:

(a) A lump sum received for the cancellation of an agency contract involving the closing down of the business: *Californian Oil Products Ltd (in liq) v Federal Commissioner of Taxation* (1934) 52 CLR 28 (HCA) and *Barr Crombie & Co Ltd v Inland Revenue Commissioners* (1945) 26 TC 406. This should be distinguished from where an agency agreement with only one year to run was cancelled, which was only one of several similar agreements, and the closing down of the business was not involved: *Kelsall Parsons & Co v Commissioner of Inland Revenue* [1938] SC 238, (1938) 21 TC 608.

(b) A sum received by a fireclay company for leaving unworked the fireclay under a railway. The fact that the damages received are measured by reference to the loss of future income is not conclusive as to the revenue nature of the sum received: *Glenboig Union Fireclay Co Ltd v Commissioner of Inland Revenue* [1922] SC 112, (1922) 12 TC 427 (HL).

(c) Damages received on the premature determination of pooling agreements. The agreements formed the fixed framework within which the circulating capital operated; they were not incidental to the working of their profit-making machine, but were essential parts of the mechanism itself: *Van den Berghs Ltd v Clark (Inspector of Taxes)* [1935] AC 431, (1935) 19 TC 390 (HL).

(d) A sum of £1,406 paid by Mobil Oil NZ Ltd, on behalf of a service station proprietor, to improve the design and layout of a new service station. This was held not to be income in the hands of the service station proprietor. The grounds for the judgment were:

(i) The service station proprietor did not bind itself to deal exclusively in Mobil products;

(ii) Had the expenditure been made by the service station proprietor it would not have been deductible for tax purposes; and

(iii) The expenditure, as far as the service station proprietor was concerned, was not a profit or gain made by the profit-making structure but was part of the profit-making structure itself then in the process of being set up, and therefore the gain was a capital gain to the service station proprietor: *City Motor Service Ltd v Commissioner of Inland Revenue* [1968] NZLR 780 (SC).

(e) An extra $250,000 where the sale of a freezing works for $2 million was later increased to $2.25 million. This was done to allow the purchaser the right to market certain stock which it could not
Compensation and Damages

200.30

have done if the original agreement had remained in place. The decision bore in mind the overall activities of both parties and recognised that it was a payment in compensation for a part of the objector’s continuing business. It was not compensation for lost income but a redistribution of capital between the two companies. *Thomas Borthwick & Sons (Australasia) Ltd v Commissioner of Inland Revenue* (1991) 13 NZTC 8,063, (1991) 15 TRNZ 679 (HC). The CIR’S appeal was dismissed: *Commissioner of Inland Revenue v Thomas Borthwick & Sons (Australasia) Ltd* (1992) 14 NZTC 9,101 (1992) 16 TRNZ 777 (CA).

(f) Compensation for libel.

Certain compensation payments are specifically exempt [ss CW 34 and CW 35, see 370.15].

200.30 Compensation payments for damage to vehicles

Some aspects of the assessability of compensation can be difficult to decide especially when income depends on the continued running of an asset like a motor vehicle needed by carriers, couriers, taxi drivers, etc. A distinction can be drawn between compensation for the damage to the asset itself, which can be capital, and compensation for loss of profits which would have been made had the asset not been damaged, which is revenue. Any amount received as compensation whether by way of insurance or damages for income lost due to damage to vehicles is business income and assessable.

Insurance compensation received for damage to a vehicle is further discussed in 250 DEPRECIATION.

200.40 General and special damages

Any general or special damages awarded in a common law action is not generally assessable. It is considered that damages are a capital receipt, even when the award is made for loss of past or prospective earnings consequent on forced incapacity to earn, except for earnings-related accident compensation payments [see 200.10].

A totally different question is whether damages awarded for personal injuries based upon the loss of past or prospective earnings should make any reference to income tax. The question is whether an award of damages for loss of earnings should be merely the amount the injured party would have retained after paying income tax on the earnings which determined the amount of the total loss.

In *British Transport Commission v Gourley* [1955] 3 All ER 796 (HL), the House of Lords held that in an action for personal injury or wrongful dismissal, when assessing damages for the loss of actual or prospective earnings, allowance must be made for any incidence of income tax on the earnings where the damages themselves are not taxable in the hands of the recipient. The injured person’s earnings were much reduced as the result of an accident attributable to the defendant (who was not the employer) and the sum of £37,720 which was awarded in the first instance was later reduced by the House of Lords to £6,695, being the estimated residual sum after income tax and surtax had been paid on it. The body which had to pay the damages was obliged only to pay an amount which would put the injured party in the same position after income tax and surtax.

In the New Zealand case of *Smith v Wellington Woollen Manufacturing Co Ltd* [1956] NZLR 491 (CA), the Court of Appeal followed the House of Lords’ decision in the *British Transport Commission* case, thus overruling the Court of Appeal decision in *Union Steam Ship Co of New Zealand Ltd v Ramstad* [1950] NZLR 716 (CA), to the effect that the fact that the plaintiff would be liable to pay less income tax in the future because of loss of earning capacity should not be taken into account by the jury when assessing damages.

Another New Zealand case, *North Island Wholesale Groceries Ltd v Hewin* (1982) 5 NZTC 61,289 (CA), related to damages that were awarded for wrongful dismissal. In calculating the damages to be paid, the taxation implications were not considered. This basis of calculation was upheld in the Court, so it was decided that the rule in the *British Transport Commission* case should not be extended to claims for loss of office.

For the taxability of compensation payments for humiliation, loss of dignity or injury to feelings under the Employment Relations Act 2000 and the Human Rights Act 1993 [see 1300.60].

Staples Tax Guide 2012

175
200.50 Deductibility of costs of compensation action [ss DA 1, DA 2(1)]

The costs of either a successful or unsuccessful claim for compensation are deductible for income tax purposes under s DA 1 when the claim is for amounts which would be assessable if recovered. Costs are not deductible if the compensation, if recovered, were a capital receipt [s DA 2(1)].

Compensation is deductible in the year in which the liability arose (ie, was incurred), and not the year in which payment was made. Any legal costs involved are generally deductible when the fee is rendered. However, Inland Revenue is generally prepared to allow the deduction in the year when it is actually paid.

200.60 When compensation payments are not deductible [ss DA 2(1), DC 1]

Compensation paid has been held to be not deductible in the following cases.

In *Royal Insurance Co Ltd v Watson (Surveyor of Taxes)* [1897] AC 1, (1897) 3 TC 500 (HL), an insurance company acquired the business of a similar company. The agreement provided that the manager of the acquired company should be retained but subject to termination of employment on payment of a lump sum. When employment was terminated the lump sum was held to be a part of the cost of acquisition of the business and not deductible. In New Zealand, it is possible for a lump sum payment made by an employer to an employee to qualify as a deduction being a bonus, gratuity, or retiring allowance paid on the occasion of the employee’s “retirement” [s DC 1].

In *Commissioner of Inland Revenue v The Anglo Brewing Co Ltd* (1925) 12 TC 803, a company on closing its business agreed to pay its employees certain sums as annuities or compensation for loss of office. The payments were not made for carrying on the business of the company but to wind it up and were not deductible.

In *Mallett (Inspector of Taxes) v Staveley Coal & Iron Co Ltd* [1928] 2 KB 405, (1928) 13 TC 772, a payment by a colliery company as the price of being allowed to surrender unprofitable seams in its leasehold was held to be capital expenditure, and not deductible.

In *Commissioner of Inland Revenue v McKenzies New Zealand Ltd* (1988) 10 NZTC 5,233 (CA), a payment to the lessor to rescind a lease agreement was not deductible, the Court of Appeal holding that the relevant lease was not part of the company’s trading stock but part of the business profit-making structure. Accordingly, the lump sum paid for surrender of the lease was itself an expenditure of capital and non-deductible.

Further examples of non-deductible compensation are:

(a) Compensation paid as consideration for closing down an opposition business in order to exclude competition. This is a payment to acquire an advantage of an enduring nature and is consequently neither deductible by the person making the payment nor assessable to the recipient. This applies even where the restriction as to the operation of a competitor is for a limited period only. The fact that payments made under an agreement of such a nature are weekly or monthly does not make them deductible, as they are merely instalments of capital.

(b) Compensation paid by a lessee for the cancellation of a lease [see 900 LEASED ASSETS].

(c) An agreement by an employee not to continue trade in opposition to their employer. On the discharge of an employee an agreement was made between the employee and former employer under which the employee covenanted not to divulge trade secrets or working methods learnt during the period of employment and also not to carry on or accept employment in any competing business for a period of five years. The agreement provided that so long as the employee observed these covenants the employer would pay the employee a fixed annual amount, paid in quarterly instalments. The payments were regarded as capital payments made for the protection of the goodwill of the business of the employer and therefore not deductible. Such payments were also regarded as not being assessable to the employee even though they were payable over a period of years.

A payment made under a restraint of trade agreement does not automatically lose its character as capital (as the CIR had contended) merely because the agreement is found by the Court to be invalid under the Illegal Contracts Act 1970: *TRA Case L23* (1989) 11 NZTC 1,147. The nature of the payment must be determined by looking at the intentions of the parties to the agreement. Inland Revenue has indicated that in these...
Compensation and Damages

circumstances it would apply the general principles expressed in *Buckley & Young Ltd v Commissioner of Inland Revenue* [1978] 2 NZLR 485, (1978) 3 NZTC 61,271 (CA) [see TIB vol 4:7 (March 1993) at 7]. The CIR clarified his policy on the deductibility of restraint of trade payments in TIB vol 6:10 (March 1995) at 2, by stating that a restraint of trade payment is generally a payment on capital account, because it relates to the income-earning structure of the business rather than the income-earning process, and therefore is not deductible to the payer under s DA 2(1). Payments that are capital in the hands of the payer are usually, but not necessarily, capital receipts in the hands of the recipient. The nature of the payment in the hands of the payer and the recipient depends on the particular circumstances in each case.

Restraint of trade agreements (restrictive covenants), are further discussed in 1265 RESTRICTIVE COVENANTS AND EXIT INDUCEMENTS.

200.70 When compensation payments are deductible [s DA 1]

For compensation payments to be deductible they must be incurred in deriving assessable or excluded income, or in carrying on a business for the purpose of deriving assessable or excluded income [s DA 1]. Compensation or damages paid in the following circumstances are deductible:

(a) Compensation paid as a result of the death or injury of an employee, to the extent that the amount paid is not reimbursed by insurance and the damages are not the result of the employer’s negligence.

(b) Damages paid for injury to person or property caused by an employee of a business, in transporting the goods of that business, or in the performance of other duties associated with the business: *Renfrew Town Council v Commissioner of Inland Revenue* (1934) 19 TC 13. Where the claim arises from the acts of the employer the position is not so clear and it requires a decision on the facts of the particular case. Claims have been allowed even where they were based on the personal acts of the employer where it has been shown that those acts were in the ordinary course of business and the claims were inherent risks of the business.

(c) Damages paid as a result of a nuisance caused to neighbours where the nuisance is an ordinary incident in the carrying on of the business, eg damages paid for a nuisance caused by a smoking chimney on the taxpayer’s factory premises.

(d) Damages and costs paid by a newspaper proprietor in an action for libel, irrespective of whether the newspaper proprietor is successful in the action or whether the matter is settled by compromise: *Herald and Weekly Times Ltd v Federal Commissioner of Taxation* (1932) 48 CLR 113 (HCA). No deduction is permitted, however, where a deliberate infringement of the law has given rise to the suit.

(e) Any amount paid to the customer to obtain release from an onerous trade or business contract or to avoid loss in revenue expenditure is deductible: *Commissioner of Inland Revenue v Northfleet Coal & Ballast Co Ltd* (1927) 12 TC 1102.

(f) An amount paid by a company to terminate connections with a life director, whose presence on the board was regarded as detrimental to the profitable conduct of the company’s business: *Mitchell v BW Noble Ltd* [1927] 1 KB 719, (1927) 11 TC 372.

(g) Compensation payments by a farmer for working dogs worrying sheep are deductible, but not when the dogs are kept for sporting purposes or home pets.

215.10 Relief from conduit taxation [ss LQ 1, LQ 2, LQ 3, LQ 4, LQ 5, RG 7, YD 9, YD 10, YD 11]

(1) Repeal of conduit rules

With the changes to the controlled foreign company rules in the Taxation (International Taxation, Life Insurance, and Remedial Matters) Act 2009 the conduit tax relief rules have been consequentially repealed for income years beginning on or after 1 July 2009. However, parts of the rules have been retained for a period of two years.

Under the new rules, no further conduit tax relief will arise under the conduit mechanism. Section OD 23 has been repealed to remove the tax liability that can arise from CTR debits. In other words, CTR credits will cease to be a contingent liability. An exception to this is if the anti-avoidance rule in s GZ 2 is found to apply.
Conduit Tax Relief

Section GZ 2 is intended to claw back conduit tax relief from arrangements that were entered into in anticipation of the repeal of s OD 23 that had the effect of reducing the tax liabilities of New Zealand shareholders. Section GZ 2 applies to arrangements that generated conduit tax relief credits between 4 December 2008 (when an issues paper announcing this policy was released) and the date from which conduit tax relief was repealed. Section GZ 2 does not apply to conduit tax relief received by the conduit tax relief company itself, or by a CTR holding company for the CTR company.

CTR companies will be able to continue to attach CTR credits to any dividends they distribute to their non-resident shareholders, for a period of two years. This provides time for conduit-relieved income (represented by CTR credits) to be channelled to non-residents and any CFC income on which New Zealand tax has been paid (represented by FDP credits) to be channelled to New Zealand residents.

CTR companies that do not wish to distribute their foreign income in this way, can, under the new rules, elect to cease to be a CTR company under s OD 4 and have their CTR credits extinguished with no liability. Section OD 4(3) has been amended to make it so this election will take effect from the day after the election was made as this allows companies to convert FDP credits into imputation credits (under the previous rules, these companies would have had to wait until the next tax year before the election took effect).

Another option is for CTR companies to simply retain their CTR credits for the two-year transitional period, after which these credits will be extinguished with no tax liability. Inland Revenue advise that the legislation for this final repeal of CTR accounts will be introduced as part of a subsequent tax Bill.

(2) Previous rules

The term “conduit investment” refers to investment by a non-resident into a foreign company that is made through an intermediary company resident in a third country. The term “conduit taxation” refers to taxation of foreign income derived by a resident company on behalf of its non-resident shareholders. “Conduit tax relief” (CTR) is available in such situations.

In New Zealand, conduit taxation occurs because the “controlled foreign company” (CFC) and foreign investment fund (FIF) rules attribute income of foreign entities back to its New Zealand owner, notwithstanding that the New Zealand owner may be a company with non-resident shareholders. In this situation conduit taxation will occur to the extent that the New Zealand company is taxed on its foreign-sourced income on behalf of its non-resident shareholders.

Relief from conduit taxation is provided as follows:

(a) The New Zealand company’s income tax liability is reduced to the extent that it is owned by non-resident shareholders, in respect of foreign attributed income (attributed foreign income from CFCs and FIF income calculated under the accounting profits and branch equivalent methods) and foreign dividend payment (FDP) liabilities on foreign-sourced dividends [see 215.15 and 215.20].

(b) Special rules treat “conduit tax relief” (CTR) holding companies and other members of 100 per cent chains of companies as non-resident for the purpose of determining the amount of CTR to which a company is entitled [see 215.25].

(c) Interest allocation rules reduce the amount of CTR to which a company is entitled if the group of companies to which the company belongs has excessively geared its New Zealand operations relative to its non-grey-list CFC and FIF interests [see 215.95].

(d) The amount of CTR is credited to the “conduit tax relief account” (CTRA). The CTRA ensures that the CTR is passed on to the company’s non-resident shareholders [see 215.40].

(e) Tax paid on foreign attributed income and FDP paid on foreign-sourced dividends is credited to the FDP account [see 670.155].

(f) FDP account credits are attached to dividends paid to resident shareholders while CTR credits are attached to dividends paid to non-resident shareholders [see 215.65].

(g) Allocation and anti-avoidance rules apply to maintain the integrity of the existing anti-streaming rules [see 215.75].
Where CTR credits are attached to dividends paid to non-resident shareholders, the company passes on the benefits of the CTR by paying non-resident shareholders an additional dividend [see 215.30].

In other words, subject to the interest allocation rules, the regime relieves New Zealand resident companies from tax under the CFC and FIF rules to the extent that the company is owned by non-resident shareholders. The amount of CTR is credited to the CTRA. When conduit income is distributed to non-resident shareholders, the CTR received by the company is also passed on to the non-resident shareholders in the form of an additional dividend. New Zealand tax on dividends that carry full CTR credits is limited to non-resident withholding tax (NRWT) at the rate of 15 per cent.

### 215.15 Calculating relief from income tax [ss LQ 1, LQ 2]

A CTR company is entitled to a rebate of income tax (CTR) for any tax year corresponding with a tax year for which the company is a CTR company, provided the company is still a CTR company at the time it files its income tax return for that year.

The amount of CTR on foreign attributed income (attributed foreign income from CFCs and FIF income calculated under the accounting profits and branch equivalent methods) is calculated in accordance with the following formula:

\[
\text{percentage of shareholders} \times (\text{tax rate} \times (\text{company's income} - \text{company's losses} - \text{excess interest allocation}) - \text{company's credits} - \text{amounts credited})
\]

Where:

- “Percentage of shareholders” is the percentage of company shareholders who are non-resident,
- “Tax rate” is the basic rate of income tax for companies, expressed as a percentage, for the income year (currently 30 per cent),
- “Company’s income” is the company’s foreign attributed income for the tax year,
- “Company’s losses” is the company’s foreign attributed loss offsets for the tax year,
- “Excess interest allocation” is the excess interest allocation, if any, for the tax year calculated under s FF 6 [see 215.125],
- “Company’s credits” is all tax credits that would be allowed against the company’s income tax liability for the tax year under subpart LK that could be used to satisfy the company’s income tax liability for the tax year,
- “Amounts credited” is the total of:
  - The amount of “branch equivalent tax account” (BETA) debits available to be credited against the company’s income tax liability for the tax year; and
  - The amount of BETA debits credited by another company in the same group against the company’s income tax liability for the tax year (in both cases calculated as if no CTR was available under s LQ 2).

The above formula is more easily understood if it is broken down into its components:

- First, tax is determined on the company’s foreign attributed income less any foreign attributed losses offset against that income and the amount of any interest expense allocated against the company’s foreign attributed income (eg the part of the formula comprising: “tax rate × (foreign attributed income – foreign attributed loss – excess interest allocation”).
- Secondly, the amount of tax is reduced by any credit for tax paid by a CFC or FIF under the branch equivalent method, and by any offset of available BETA debits (eg the part of the formula comprising: “all tax credits that would be allowed against the company’s income tax liability – the total of amounts credited”).
- Finally, the net amount of tax is reduced by the percentage of resident shareholders in the company (eg the part of the formula comprising: “percentage of shareholders”).
Two points should be noted in respect of the above formula. First, the term “foreign attributed loss offsets” is defined in s YA 1 to include only attributed foreign losses from CFCs and FIF losses calculated under the branch equivalent or account profits methods. Secondly, the CTR calculated under the formula cannot be less than nil or more than the company’s net tax liability attributable to non-resident shareholders.

**215.20 Calculating relief from foreign dividend payments [s RG 7]**

Section RG 7 provides for CTR on foreign-sourced dividends subject to FDP. Companies that are CTR companies at the time they are required to pay a FDP may reduce the FDP by the following amount:

\[ \text{percentage of non-resident shareholders} \times \text{amount of FDP} \]

Where:

“Percentage of non-resident shareholders” is the percentage of non-resident shareholders of the company; and

“FDP” that would otherwise have to be deducted and paid to the CIR (after any loss offsets claimed under s 32M of the TAA).

Four points should be noted in respect of the above formula.

(a) The formula includes special rules for calculating the percentage of non-resident shareholders, including rules specifying the time at which the calculation is made.

(b) In determining the amount of FDP that would otherwise have to be deducted, allowances need to be made for “underlying foreign tax credits” (UFTCs), foreign withholding taxes, loss offsets, and branch equivalent tax account (BETA) offsets.

(c) The interest allocation rules in subpart FF do not apply in determining the amount of relief when the FDP is paid.

(d) When the interest allocation calculations are performed for the relevant tax year, and the excess interest allocation exceeds the group’s net foreign attributed income for the year, the balance will be allocated against FDP relief under s FF 7 [see 215.130].

**215.25 Calculating the percentage of non-resident shareholders [ss CW 10, FE 29, LQ 3, LQ 4, YD 9, YD 10, YD 11]**

Section LQ 3 comprises the rules for determining what percentage of a company’s shareholders are non-resident for the purposes of calculating CTR. Section LQ 3(2) provides that the percentage of shareholders in a CTR company that are non-resident is the lowest of the percentage of direct voting or market value interests (if a direct market value circumstance exists) held by those non-resident resident shareholders, and the percentage of dividends that would be derived by non-resident shareholders if the company were liquidated.

To minimise compliance costs, the applicable time to determine the percentage of shareholders that are non-resident is calculated on the last day on which the company paid a dividend to all shareholders during the tax year.

**Note**: Companies are already required to determine which shareholders are non-resident when paying dividends in order to determine whether to withhold resident withholding tax (RWT) or non-resident withholding tax (NRWT) from the dividend. If the company has not paid a dividend to all shareholders during the tax year, the calculation is made at the end of the tax year. Special rules apply for determining the date on which the calculation is made for companies with more than one class of share.

A listed company may use either:

(a) The record date (the date on which shareholders’ entitlements to dividends are determined) for a dividend instead of the date on which the dividend is paid; or

(b) Any date in the tax year on which the company, for whatever commercial reason, calculates the percentage of non-resident shareholders.

Treasury stock is excluded from the calculation.
Conduit Tax Relief

If a company is a 100 per cent subsidiary of a CTR company, it will use the same measurement date as that determined for the parent.

Special rules treat CTR holding companies and other members of 100 per cent chains of companies (CTR group members) as non-resident for the purposes of the CTR rules. In essence, these rules allow CTR to arise where a non-resident investor holds its New Zealand interests through a holding company structure. These rules [ss YD 9 to YD 11] can be summarised as follows:

(a) A CTR company that is wholly owned by a single non-resident shareholder (other than a CFC or trustee of a non-qualifying trust) can elect to become a CTR holding company.

Note: Nominee shareholders who exist to meet company law requirements are disregarded.

(b) A CTR holding company is treated as non-resident for the purposes of calculating the entitlement to CTR of New Zealand companies in which it holds a direct interest of at least 10 per cent, provided it notifies the New Zealand company that it is a CTR holding company.

(c) A CTR company that wholly owns another CTR company is treated as a CTR group member if a non-resident shareholder holds a direct interest in the CTR group member, or in another New Zealand resident company in the same wholly-owned group of companies which has a 100 per cent interest in the CTR company (disregarding nominee shareholders who exist to meet company law requirements).

Note: A non-resident is deemed to be resident in New Zealand for the purpose of determining whether or not a CTR company is a CTR group member in respect of another CTR company, where that person is associated with either CTR company, and is either a CFC or a trustee of a non-qualifying trust.

(d) A non-resident shareholder is deemed to be resident in New Zealand for the purposes of calculating CTR if it is associated with a CTR company and is either a CFC or a trustee of a non-qualifying trust.

(e) A CTR group company is treated as non-resident for the purposes of calculating the entitlement to CTR of a CTR company, to the extent that the CTR group company is ultimately owned by a non-resident shareholder.

(f) Dividends paid up the 100 per cent chain are exempt from tax [s CW 10]. Dividends paid to CTR holding companies are exempt from tax to the extent to which full CTR credits are attached [s CW 11].

(g) If the CTR holding company's direct interest in another New Zealand company with which it has elected to be a CTR holding company falls below 10 per cent, the CTR holding company will no longer be treated as a non-resident shareholder of that company. Accordingly, the special rules concerning the calculation of CTR and the tax exempt status of dividends with CTR credits attached will no longer apply to that New Zealand company. Note that there is no provision for a claw-back of CTR credits.

(h) If the shares in the CTR holding company are sold to another person other than another single non-resident person, a breach of continuity will be deemed to have occurred and the CTR holding company will be required to pay the CIR an amount equal to any credit in its CTRA at the time that the breach of continuity occurred [see 215.60].

(i) The CTR holding company cannot elect to apply the 66 per cent grouping option under the thin capitalisation rules in respect of any company with which it is treated as a non-resident shareholder, unless the CTR holding company on-pays all dividends it receives with CTR credits attached to its non-resident shareholder in the year in which it receives the dividends [s FE 29, see 1000.110].

215.30 Additional dividends paid to non-resident shareholders [s LQ 5]

Where a CTR company attaches a CTR credit to a dividend paid to a non-resident shareholder, the company is required to pay an additional dividend to the non-resident shareholder equal to the amount of the CTR credit. The additional dividend mechanism ensures that the CTR received by the CTR company is passed on to its non-resident shareholders.
Section LQ 5 introduces the following rules to ensure that the additional dividend mechanism does not contravene credit allocation rules or company law and trust deed requirements:

(a) The payment of additional dividends is ignored when applying the allocation rules in s OA 18 (as modified by ss OD 20 to OD 21) and the anti-avoidance rule in ss GB 35 to GB 36 (as modified by s OD 18);

(b) The payment of additional dividends will not breach company law or the company’s constitution; and

(c) A trustee deriving an additional dividend on behalf of a non-resident beneficiary can distribute that dividend to the non-resident beneficiary without breaching the terms of the trust.

These rules are similar to the rules that apply in respect of supplementary dividends under the FITC regime [see 1010.45].

215.35 Example of conduit tax relief

The following example from TIB vol 10:4 (April 1998) at 4 demonstrates how the CTR mechanism operates. In particular, it illustrates:

(a) How CTR is calculated;
(b) How the CTR and FDP accounts operate; and
(c) How conduit income is distributed.

Note that the example does not consider some of the more difficult aspects of the CTR mechanism, such as the effect of interest allocation rules, changes in shareholding between the time income is derived and distributed, foreign tax credits, and branch equivalent tax account (BETA) offsets.

**Example:**

Resident and non-resident shareholders each own 50 per cent of a New Zealand company (NZCO). NZCO earns $200 of attributed income from a CFC or FIF on which no foreign tax is paid.

Ordinarily, NZCO would have paid $60 ($200 × 30%) of New Zealand income tax in respect of this income, which would have given rise to a credit of $66 in NZCO’s imputation credit account (ICA).

Under the CTR mechanism, NZCO is relieved of 50 per cent of the tax on the CFC or FIF income, based on NZCO being 50 per cent owned by non-resident shareholders. The net New Zealand income tax of $30 is credited to NZCO’s FDP account (instead of its ICA), while the $30 of tax relieved is credited to the CTRA.

NZCO distributes the income to its shareholders as follows:

<table>
<thead>
<tr>
<th>Non-resident shareholders</th>
<th>Resident shareholders</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash dividend</td>
<td>$70</td>
</tr>
<tr>
<td>Additional dividend</td>
<td>$30</td>
</tr>
<tr>
<td>NRWT</td>
<td>($15)</td>
</tr>
<tr>
<td>Net dividend</td>
<td>$85</td>
</tr>
</tbody>
</table>

The first point to note is that the FDP credits are allocated to the resident shareholders, while the CTR credits are allocated to the non-resident shareholders. This is appropriate, as the tax has been paid on behalf of the resident shareholders (giving rise to FDP credits), whereas the relief has been provided for the non-resident shareholders (giving rise to CTR credits).

The second point is that the CTR credits attached to the dividends paid to the non-resident shareholders give rise to a requirement for the company to pay an additional dividend to those shareholders of the amount of the credits. This is to ensure that the benefits of the conduit relief are passed on to non-resident shareholders. The effect is that a cash dividend of $70 is paid to the resident shareholders, while $100 is paid to the non-resident shareholders. However, both resident and non-resident shareholders are liable for tax on $100 of dividend. The FDP credit forms part of the taxable dividend of the resident shareholders.

Following the imposition of tax on dividends, the net effect is that the $100 of foreign income attributable to the resident shareholders has been taxed at 30 per cent, while the $100 attributable to the non-resident shareholders has been taxed at 15 per cent (the rate of NRWT).
Conduit Tax Relief

215.40 Conduit tax relief accounts [s OD 1]
A foreign dividend payment account (FDPA) company may choose to become a CTR company [see 215.45]. The purpose of the CTRA is to ensure that the CTR is passed on to the company’s non-resident shareholders. As such, it must maintain a CTRA for a tax year. The account is a record of CTR credits and CTR debits that arise in the account during the tax year.

Credits to the account include the amount of a tax credit calculated under section LQ 1 or LQ 2 (which relate to tax credits for conduit tax relief) for the income tax imposed on foreign attributed income and the proportion that non-resident shareholders have to total shareholders. Section RG 7 applies to reduce the amount of FDP payable for a foreign dividend.

Debits to the account include the amount of a CTR credit attached to a dividend paid to the company’s non-resident shareholders. A consolidated group must maintain a group CTRA if a group company is a CTR company.

The carrying forward of a credit in the company’s CTRA is subject to the resident shareholder continuity requirements of s OD 16. Section OZ 17 (CTRA reductions) may apply to modify the credits and debits arising under this subpart.

215.45 Election to maintain a CTR account [ss OD 1, OD 2, OD 4]
A FDP account company may elect to maintain a CTRA and become a CTR company. A company must notify the CIR of its election to become a CTR company. The election is generally effective from the start of the tax year, except for the purposes of attaching FDP or CTR credits to dividends paid to non-resident shareholders. In the latter case, the election is effective from the date of notification. This is because it would be impractical to allow the election to be backdated.

A CTR company must maintain its CTRA from the beginning of the tax year and for every subsequent tax year until the end of the tax year in which it revokes its election. Revocation will not be effective until the company files its final annual imputation return and pays any FDP which is payable as result of the revocation under s OD 23 [see 215.80]. Revocation is effective from the beginning of the imputation year following that in which the revocation is made. A company is treated as having revoked its election if it elects to cease to be a FDP company.

A company that ceases to be a FDP account company as a result of emigrating [s OC 5, see 670.145]:
(a) Ceases to be a CTR company;
(b) Must furnish an annual imputation return for the tax year in which the company becomes non-resident by the date specified in s 69 of the TAA [see 670.65]; and
(c) Must pay any FDP payable under s OD 23 as a FDP account company for the tax year.

If a company does not elect to maintain a CTRA, its shareholders will still be entitled to conduit relief when foreign attributed income is distributed, provided that the company elects to maintain a FDP account. Relief is by way of a refund of FDP credits in excess of the non-resident shareholders’ non-resident withholding tax (NRWT) liabilities [see 670.185]. Note that the interest allocation rules will still apply in determining the amount of foreign attributed income subject to relief [see 215.95].

215.50 Information to be recorded in the CTR account [ss OA 2, OA 3, OA 7]
A CTR company must record in its CTRA the opening balance for the imputation year and any credits and debits arising [see 215.36 and 215.38]. The opening balance of the CTRA for a tax year will be the closing balance for the previous tax year. For the first tax year in which the company elects to become a CTR company, the opening balance of the CTRA will be nil. A tax year is a year ending on 31 March.

215.55 Credits to the CTR account [ss OD 5, OD 6, OD 7, OD 8, OD 9]
The following amounts are recorded as credits in the CTRA:
(a) The amount of CTR allowed under ss LQ 1 and LQ 2 [see 215.12]. The credit arises on the last day of the tax year corresponding with the tax year, to the extent that the provisional tax payments have
been made for the year on or before that date. To the extent that provisional tax payments have not been made on or before the last day of the tax year, the credit arises on the date the company files its annual tax return;

(b) The amount of any credit transferred from the company’s FDP account [see 215.80]. This credit arises immediately before the end of the tax year;

(c) The amount of CTR credits attached to dividends received by the company from a lower-tier group company. This credit arises on the date that the dividend is paid;

(d) The amount by which FDP is reduced under s RG 7 for dividends paid to the company during the tax year [see 215.20]. This credit arises on the date that the company is required to pay the reduced FDP to the CIR;

(e) The amount of any debit recorded in respect of an arrangement to obtain a tax advantage which has subsequently been reversed. This credit arises on the date that the debit initially arose.

215.60 Debits to the CTR account [ss OD 10, OD 11, OD 12, OD 13, OD 14, OD 15, OD 16, OD 17, OD 18, OD 19]

The following amounts are recorded as debits in the CTRA:

(a) The amount of any CTR credit attached to a dividend paid by the company during the tax year. This debit arises on the date the dividend is paid.

(b) The amount of any credit transferred from the CTRA to the FDP account [see 215.80]. This debit arises immediately before the end of the tax year.

(c) The amount of a credit transferred to the CTRA of a consolidated group under s OP 84. The debit arises on the date of transfer.

(d) The amount of any further FDP payable under s FF 7(8) [see 215.130]. This debit arises on the date on which the income tax return for the year for which the adjustment is made is filed.

(e) The amount of any credit in the CTRA (that has not been previously cancelled by a debit) for CTR or a reduction in FDP that would not have arisen except for the application of the holding company rules in ss YD 9 to YD 11, and those rules no longer apply. In other words, a debit will arise if the shares in a CTR holding company have been sold to other than a single non-resident person [see 215.25]. This debit arises when the holding company rules cease to apply.

(f) The amount of any credit in the CTRA under s OD 7 (that has not been previously been cancelled by a debit) that arose from dividends received from a lower-tier group company, and that company ceases to be a CTR group member. This debit arises when the company also ceases to be a CTR group member.

(g) The amount of any credit in the CTRA (that has not previously been cancelled by a debit) if the percentage of New Zealand resident shareholders of the company has increased by at least 34 per cent since the time that the credit arose. This debit arises at the time the New Zealand resident shareholding of the company increases by least 34 per cent.

(h) The amount of any allocation deficit that arises under s OA 18(2) as a result of excessive CTR credits being attached to a dividend [see 215.75]. This debit arises at the end of the tax year in which the debit arises.

(i) The amount of any debit arising from a credit streaming arrangement that contravenes ss GB 35 to GB 36 [see 215.75]. This debit arises at the end of the tax year in which the arrangement commenced.

(j) The amount of any credit in the CTRA if the company ceases to be a CTR company during the tax year. This debit arises immediately before the company ceases to be a CTR company.

Where a debit arises under items (g), (h), or (i) above, the company will be required to repay the CIR the amount of that debit by the 20th day of the month following the quarter in which the debit arises [s OD 23]. This payment is treated as a payment of FDP, but does not give rise to a credit in the company’s FDP account.
The object of these provisions is to place the company in the same position as if it had been a FDP account company rather than a CTR company. Put simply, if the company had been a FDP account company, the actions giving rise to a debit under items (g), (h), and (i) above, would also have given rise to a debit under the FDP account rules [see 670.160].

Where a debit arises under items (e), (f), or (j) above, the company will also be required to repay the CIR the amount of that debit by the 20th day of the month following the quarter in which the debit arises [s OD 23]. This payment is treated as a payment of FDP and will give rise to a credit in the company’s FDP account. The rationale is that if the company has not elected to be a CTR company, the payment of FDP on foreign attributed income would have given rise to a credit in its FDP account. This FDP credit would not have been affected by the actions giving rise to a debit under items (e), (f), and (j) above.

Three details should be noted in respect of the continuity test in item (g) above:

(1) The percentage of New Zealand resident shareholders is calculated as the highest of:
   (i) The percentage of direct voting or market value interests (if a direct market value circumstance exists) held by New Zealand resident shareholders; and
   (ii) The percentage of dividends that would be derived by New Zealand resident shareholders if the company was liquidated.

(2) Item (g) above, will not apply if the increase in the percentage of New Zealand resident shareholders is solely attributable to a conduit relief holding company ceasing to be non-resident by reason that it no longer holds a 10 per cent interest in a CTR company.

(3) Section OA 8 contains a specific anti-avoidance provision directed at arrangements manipulating the ownership of shares that have a purpose or effect of defeating the intent and application of item (g) above [s OD 16].

215.65 Attaching CTR credits to dividends [ss OD 20, OD 21, OD 22]
CTR companies may attach CTR credits to dividends paid to non-resident shareholders and FDP credits to resident shareholders. CTR companies are not permitted to attach CTR credits to resident shareholders or FDP credits to non-resident shareholders. However, CTR companies may still attach imputation credits to dividends in addition to FDP or CTR credits, subject to the credit allocation rules in ss OD 20 to OD 22 [see 215.75 and 670.175].

215.70 Administrative requirements [TAA, ss 29(1), 30A, 68A, 69(1)(ea), 69(4)]
When a CTR company attaches a CTR credit to a dividend paid to a non-resident shareholder, it must provide the shareholder with a dividend statement detailing the amount of the CTR credit and the amount of the additional dividend [TAA, ss 29(1), 30A].

When a CTR company attaches a CTR credit to a dividend, it must include the following information in its company dividend statement [TAA, s 68A]:
(a) The additional dividend paid to the non-resident shareholder under s LQ 5;
(b) The FDP ratio (calculated as if the CTR credit were a FDP credit); and
(c) The combined imputation and FDP ratio (calculated as if the CTR credit were a FDP credit), if an imputation credit has been attached to the dividend.

A CTR company is required to include the following particulars relating to its CTRA in its annual imputation return [TAA, s 69(1)(ea)]:
(a) The opening and closing balances of the CTRA for the imputation year; and
(b) The amount and source of all credits and debits that have arisen in the CTRA during the tax year.
215.75  **Allocation and anti-avoidance rules** [ss OD 18, OD 19, OD 20, OD 21, OD 22]

The credit allocation rules that apply to FDP credits in ss OC 27 to OC 29 also apply to CTR credits. See 670.175.

The anti-avoidance rules in ss GB 34 to GB 38 that apply to imputation credits and FDP credits also apply to CTR credits [see 670.110]. For the purpose of these rules, the CTR credits are deemed to be FDP credits.

215.80  **Transfers between CTR and FDP accounts** [ss OC 19, OD 11, OD 23, OD 25]

Notwithstanding that the percentage of non-resident shareholders of a CTR company may change between the time the company receives CTR and the time it distributes that relief to non-resident shareholders, the company may only attach FDP credits to dividends paid to resident shareholders and CTR credits to dividends paid to non-resident shareholders. Section OC 19 provides for transfers to be made between the CTRA and the FDP account where either account has a debit balance at the end of the tax year as a result of the requirement to attach FDP credits to resident shareholders and CTR credits to non-resident shareholders.

If the CTRA has a debit balance and the FDP account has a credit balance at the end of the tax year (which generally indicates that the percentage of non-resident shareholders of the company has increased between the time CTR was provided and the time it was distributed). The transfer is to be made from the FDP account to the CTRA for the lesser of the amount of the debit or the credit. Where a credit balance is transferred from a company’s FDP account to its CTRA, the CIR will refund to the company an amount equal to the transfer made, or apply that refund against an outstanding obligation that the company has to the CIR [s OD 25].

If the CTRA has a credit balance and the FDP account has a debit balance at the end of the tax year (which generally indicates that the percentage of non-resident shareholders of the company has decreased between the time CTR was provided and the time it was distributed), s OD 11 requires a transfer to be made from the CTRA to the FDP account for the lesser of the amount of the debit or the credit. Where a credit balance is transferred from a company’s CTRA to its FDP account, the company will be required to make a FDP payment to the CIR equal to the transfer made. This payment must be made by 20 June following the tax year in which the transfer was made [s OD 23].

**Note:** CTR companies are no longer allowed to make transfers from the FDP account to the imputation credit account (ICA) [see 670.165].

215.85  **Other points relating to CTR accounts** [ss OA 2(5), OA 9, OA 10, OB 24, OB 53; TAA, s 104B]

Section OA 2(5) provides a mechanism for the CIR to correct credits and debits incorrectly recorded in the CTRA, unless the company successfully challenges the CIR’s determination that the CTRA is incorrect.

Section OA 12 deals with the consequences of amalgamation where the amalgamating companies maintain CTRAs. If the amalgamated company is not a CTR company, the credit and debit entries of the amalgamating companies’ CTRAs at the date of amalgamation is transferred to the amalgamated company’s “imputation credit account” (ICA). The amalgamated company will then be required to pay the CIR an amount of FDP equal to the amount of any credits transferred. This payment will not give rise to a credit in either the ICA or the FDP account of the amalgamated company. If the amalgamated company is a CTR company, the credit and debit entries of the amalgamating companies’ CTRAs are transferred to the amalgamated company’s CTRA. The continuity of shareholding test will apply from the date credits arose in the CTRAs of the amalgamating companies until the date the credits are distributed, as if the amalgamation had not occurred.

215.90  **Consolidated groups** [ss OP 78 to OP 116]

From 1 April 1998, consolidated groups have been integrated into the conduit taxation rules, enabling them to maintain CTRAs [see TIB vol 11:9 (October 1999) at 5-6]. A consolidated group is required to maintain a group CTRA for a tax year if any company which is a member of the consolidated group is a CTR company [see 215.45] at any time during the tax year. A group CTRA is a separate account from the CTRA of each...
company in the consolidated group [s OP 78]. The opening balance of the CTRA is nil in the first tax year and, for subsequent years, the closing balance at the end of the preceding tax year [s OA 7].

Every company in a consolidated group is a CTR company, whether or not it has elected to be so, if the consolidated group is required (under s OP 1) to maintain a CTRA for an imputation year [s OP 78].

(1) Credits to group CTR account [ss OP 81 to OP 86]

A group CTRA is credited with various amounts on the relevant dates as set out in Table O23 (located after s OP 96). The following details are relevant to the transactions:

<table>
<thead>
<tr>
<th>Credit</th>
<th>Time credit arises</th>
</tr>

(2) Debits to group CTR account

A group CTRA is debited with various amounts on the relevant dates as set out in Table O24 which is located after s OP 96 in the legislation. The following details are relevant to the transactions:

<table>
<thead>
<tr>
<th>Debit</th>
<th>Time debit arises</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opening debit balance [s OA 7]</td>
<td>1 April.</td>
</tr>
<tr>
<td>CTR credit attached to dividend paid by a group company [s OP 87]</td>
<td>Day on which dividend is paid.</td>
</tr>
<tr>
<td>Transfer of a closing credit balance to groups FDP account [s OP 88]</td>
<td>31 March.</td>
</tr>
<tr>
<td>Adjustment for conduit tax relief [s OP 89]</td>
<td>Day on which return of income with adjustment is filed.</td>
</tr>
<tr>
<td>Debit that would increase debit balance for a group company [s OP 90]</td>
<td>Company’s debit date.</td>
</tr>
<tr>
<td>Increase in resident shareholding by more than 34 per cent [s OP 91]</td>
<td>Day of shareholding change.</td>
</tr>
<tr>
<td>Debit for breach of CTR ratio [s OP 92]</td>
<td>31 March.</td>
</tr>
<tr>
<td>Debit for tax advantage arrangement [s OP 93]</td>
<td>Last day of tax year in which arrangement is made.</td>
</tr>
<tr>
<td>Credit balance when group is no longer required to maintain CTR account [s OP 94]</td>
<td>Day on which account stops.</td>
</tr>
</tbody>
</table>

Note: In determining whether a credit has been cancelled by a subsequent debit:

(a) Section OA 7 does not apply;
(b) A credit arising under s OP 84(2) is treated as arising on the date the corresponding credit arose in the CTRA of the group member;
(c) An amount of debit can cancel out a credit only once; and
(d) Debit are offset against credits in the order in which they arise.
A debit arises under s OP 91 if it would have arisen but for an arrangement that affects the shares of the company in the consolidated group, if it had a purpose or effect to defeat the intent and application of these provisions.

(3) Debiting and crediting between group and individual CTR accounts

If a credit arises to a consolidated group’s CTRA for an amount of CTR arising under s LQ 1 [see 215.12] or s RG 7 [see 215.14], or for a CTR credit attached to a dividend received, the same amount may not be credited to an individual company’s CTRA. Similarly, a debit cannot be posted to an individual company’s CTRA if a debit arises to a consolidated group’s CTRA for:

(a) The amount of CTR credit attached to a dividend paid;
(b) The amount of any CTR credit or tax credit refunded;
(c) Any amount of CTR adjustment calculated under s FF 7; or
(d) Any allocation debit arising under s s OA 18.

If a company is a member of a consolidated group at the time it has a credit in its individual CTRA, the credit must be transferred to the consolidated group’s CTRA to the extent that:

(a) A debit arises under ss OA 2 and OA 3;
(b) That debit is not offset [under s OA 8] against a credit in the consolidated group’s CTRA which arose on or before the date the company credit arose; and
(c) The credit does not exceed the consolidated group’s credit.

If credit amounts in the individual CTRAs of two or more members of a consolidated group would be required to be transferred to the group’s CTRA as above, those amounts must be transferred to the group account and credited:

(a) So far as the relevant debit to the group’s CTRA extends and no further;
(b) In the order in which the credits arose as determined by s OA 8; and
(c) If two or more credits arose at the same time, they are credited in the order elected by the consolidated group or, if no election is made, on a pro rata basis.

If a debit, which would create or increase the debit balance in an individual company’s CTRA arises, that debit is posted to the consolidated group’s CTRA, not the individual company’s CTRA.

(4) Transfer to or from FDP account [ss OP 61, OP 70]

If at the end of the tax year the consolidated group’s FDP account is in credit and its group CTRA is in debit, the consolidated group must:

(a) Apply s OP 84 as if the debit balance were the debit referred to in s OP 84; and
(b) To the extent that any debit balance remains, transfer from the FDP account to the CTRA the lesser of:

(i) The credit balance in the FDP account; and
(ii) The debit balance remaining in the CTRA after item (a) above has been applied.

If at the end of the tax year the consolidated group’s FDP account is in debit and its group CTRA is in credit, the consolidated group must transfer the lesser of the two balances from the CTRA to the FDP account.

(5) FDP payable in respect of group CTR account debits [s OP 95]

If a debit arises to a consolidated group’s CTRA under ss OP 91, OP 92, and OP 93, the group must pay to Inland Revenue an amount of FDP equal to the debit by the 20th of the month following the end of the quarter in which the debit arises. The amount of the payment cannot be credited to the group’s FDP account.

If a debit arises to a consolidated group’s CTRA under s OP 94, the group must pay to Inland Revenue an amount of FDP equal to the debit by the 20th of the month following the end of the quarter in which the debit arises.
If a credit balance is transferred from a consolidated group’s CTRA to its FDP account under ss OP 61 and OP 88, the group must pay to Inland Revenue an amount of FDP equal to the amount transferred by 20 June after the tax year in which the transfer was made.

(6) Application of specific CTR account provisions to consolidated groups

Sections OP 80 and OP 96 contain a number of rules about how specific CTRA provisions apply to consolidated groups. Refer to the section for details.

215.95 Conduit groups — interest allocation rules [ss FF 1 to FF 11]

Subpart FF comprises interest allocation rules which prevent companies from maximising CTR by allocating an excessive amount of interest expense to their New Zealand operations, relative to CFCs and FIFs in which they hold interests. Where the interest allocation rules determine that the company’s foreign attributed income group has excessively geared its New Zealand operations relative to its non-grey-list CFC and FIF interests, the excess interest will be reallocated against conduit income, resulting in a reduction in the amount of conduit relief to which the members of that group will be entitled.

Section FF 2 provides that the interest allocation rules potentially apply to both CTR companies and to companies that have not elected to be CTR companies, but nonetheless are entitled to repatriation-based CTR by electing to maintain FDP accounts. It sets out the safe harbour rules for determining whether the interest allocation rules apply.

Section FF 8 contains the rules for determining a company’s foreign attributed income group and s FF 9 provides the rules for calculating the debt percentage for the New Zealand foreign attributed income group. Where the debt percentage for that group exceeds the safe harbour debt percentage, that company may apply the rules in s FF 10 to calculate the debt percentage for the consolidated foreign attributed income group. Where the debt percentage for the consolidated foreign attributed income group exceeds the safe harbour debt percentage, the amount of excess interest to be allocated against foreign attributed income under s FF 5 will be reduced, and in some cases eliminated.

Section FF 6 provides the rules for determining the company’s excess interest allocation percentage, and also provides the formula for determining the amount of excess interest to be allocated against foreign attributed income for the purpose of calculating CTR under s LQ 1. Where the amount of excess interest exceeds foreign attributed income, the balance will be allocated against dividends subject to FDP under s FF 7.

215.100 Application of interest allocation rules — safe harbours [s FF 4]

The calculations required under the interest allocation rules can impose significant compliance costs on taxpayers. Accordingly, companies are not required to apply the interest allocation rules where either of two safe harbours applies. The object of these two safe harbours is to ensure that companies will not be subject to the interest allocation rules unless that company’s foreign attributed income group has highly geared its New Zealand operations, and a significant amount of CTR is at issue.

The interest allocation rules will not apply to a company if:

(a) The CTR to which the company, and any other company associated with that company, are entitled to is less than $50,000; or
(b) The debt percentage of the company’s foreign attributed income group does not exceed 66 per cent.

(1) First safe harbour

Two points should be noted in respect of the first safe harbour. First, the test is applied to the amount of CTR to which the company would have been entitled to if excess interest were not required to be reallocated against conduit income. In practical terms, this means that taxpayers can determine whether or not they meet this safe harbour without making any interest allocation calculations. Secondly, where the company, or any company associated with that company, are not CTR companies, the test applies as if that company, and all companies associated with that company, had elected to be CTR companies.
(2) **Second safe harbour**

Two points should be noted in respect of the second safe harbour. First, the term “foreign attributed income group” is used throughout the interest allocation rules to refer to the company’s New Zealand group. However, the term “foreign attributed income group” in the interest allocation rules should not be confused with the term “New Zealand group” in the thin capitalisation rules, as the two groups will not necessarily be the same. Secondly, the 66 per cent safe harbour debt percentage in the interest allocation rules is lower than the 75 per cent safe harbour debt percentage that applies to the thin capitalisation rules.

215.105 **Identifying the foreign attributed income group** [s FF 8]

If the CTR to which the company, and any other company associated with that company, is entitled amounts to at least $50,000, it will be necessary to determine whether the New Zealand group of companies of which the company is a member has allocated an excessive amount of interest expense to its New Zealand operations, relative to CFCs and FIFs in which it holds interests. The first step in this process is to identify the company’s foreign attributed income group.

Where the company is subject to the thin capitalisation rules (in other words, it is controlled by a single non-resident person), the company’s foreign attributed income group will be the same as its New Zealand group determined under the thin capitalisation rules [see 1000.110]. Note that for the purpose of calculating the New Zealand group under the thin capitalisation rules, the special grouping rules for holding companies in ss FE 28 and FE 29 will not apply.

Where the company is not subject to the thin capitalisation rules, the company’s foreign attributed income group will comprise:

(a) The company itself; and

(b) Any other company with which it has 66 per cent common ownership, and which is resident in New Zealand or carries on business in New Zealand through a fixed establishment.

The reason why the interest allocation rules apply to the New Zealand group of companies as a whole, rather than the company holding a direct interest in a CFC or FIF, is to prevent the New Zealand group of companies being structured in a manner that circumvents the interest allocation rules. For example, in the absence of a group approach, taxpayers could maximise CTR by loading debt on to group companies which do not hold direct interests in CFCs or FIFs. Following the computation of CTR, loss grouping rules would effectively allow the interest expense to be deducted by any group company.

215.110 **Calculating the New Zealand foreign attributed income group debt percentage** [s FF 9]

After identifying the company’s foreign attributed income group, the next step in determining whether an excessive amount of interest expense has been allocated to the group’s New Zealand operations, relative to CFCs and FIFs in which it holds interests, is to calculate the debt level of the New Zealand foreign attributed income group.

The rules for calculating the New Zealand foreign attributed income debt percentage are similar to those used for calculating the New Zealand group debt percentage under the thin capitalisation rules [see 1000.110]. In essence, the New Zealand foreign attributed income group debt percentage is calculated by:

(a) Applying generally accepted accounting practices for consolidation to the foreign attributed income group to eliminate intra-group transactions; and

(b) Measuring the value of assets and debt by using the principles that apply under the thin capitalisation regime; but

(c) Excluding the value of any interests held by a member of the foreign attributed income group in a CFC or FIF calculated under the accounting profits or branch equivalent methods, to the extent that the member of the foreign attributed income group is owned by non-resident shareholders.

The formula is:
percentage of non-resident shareholders × (CFC rights + FIF interests)

Where:
“Percentage of non-resident shareholders” is either:
(a) For a member receiving CTR through a tax credit, the percentage of that member’s non-resident shareholders used to calculate the credit under s LQ 1(2); or
(b) For a member receiving CTR through a reduction in FDP, the average of the percentages of that member’s non-resident shareholders used to calculate the reduction under s RG 7(1).

“CFC rights” is the total value of the rights that the member has in a CFC.
“FIF interests” is the total value of interests that the member has in a FIF.

215.115 Calculating the consolidated foreign attributed income group debt percentage [s FF 10]

Where the New Zealand foreign attributed income group debt percentage exceeds the 66 per cent safe harbour, the company may calculate its consolidated foreign attributed income group debt percentage. The consolidated foreign attributed income group debt percentage differs from the New Zealand foreign attributed income group debt percentage in that it includes the group’s interests in non-grey-list CFCs and FIFs. If the debt percentage for the consolidated foreign attributed income group exceeds the 66 per cent safe harbour, the company will be subject to a higher threshold for determining the extent to which excessive interest has been allocated against the foreign attributed income group.

The consolidated foreign attributed income group debt percentage is calculated as follows:
(a) The value of assets and debts that were used in the calculation of the New Zealand foreign attributed income group form the basis for the calculation.
(b) All assets and debts of non-grey-list CFCs and FIFs in which the foreign attributed income group has an income interest of 40 per cent or more are included in the consolidation.
(c) A percentage of the assets and debts of non-grey-list CFCs and FIFs in which the foreign attributed income group has an income interest of at least five per cent, but less than 40 per cent, are included in the consolidation. For example, if a company in the foreign attributed income group held an income interest of 20 per cent in a CFC or FIF, 20 per cent of the CFC’s or FIF’s assets and debts would be included in the consolidation.
(d) Assets and debts of non-grey-list CFCs and FIFs in which the foreign attributed income group has an income interest of less than five per cent are excluded from the consolidation.
(e) Assets and debts for CFC and FIF interests are consolidated using values taken from their financial accounts.

215.120 Calculating excess interest to be allocated against conduit income [s FF 5]

Once the New Zealand foreign attributed income group debt percentage and the consolidated foreign attributed income group debt percentage have been calculated, the amount (if any) of excess interest which must be allocated against the group’s foreign attributed income is calculated in accordance with the following formula:

interest expenditure × (NZ foreign group debt percentage – relief debt percentage / NZ foreign group debt percentage)

Where:
“Interest expenditure” is the amount allowed as a deduction to companies in the foreign attributed income group as interest expense under ss DB 6 to DB 8 (as modified by s FE 6) or as lessee expenditure in respect of a specified lease under s FZ 2. Interest expenditure does not include intra-group interest and specified lease expenditure.
"NZ foreign group debt percentage" is the New Zealand foreign attributed income group debt percentage calculated under s FF 9.

"Relief debt percentage" is the greater of:

(a) 66 per cent; or

(b) The New Zealand foreign attributed income group debt percentage that would have been calculated under s FF 9; or

(c) The consolidated foreign attributed income group debt percentage calculated under s FF 10 (if the company has chosen to calculate that percentage).

Item (b) above, is a simplified alternative to the debt percentage calculation for the consolidated group. In essence, it allows non-grey-list CFCs and FIFs to be consolidated on the assumption that they are wholly owned by the foreign attributed income group and are fully equity funded (debt raised by the underlying CFCs and FIFs is ignored). While this simplified form of consolidation is unlikely to result in a higher debt percentage than the full consolidation under s FF 10, it is nonetheless more beneficial than not calculating the consolidated foreign attributed income group debt percentage at all.

215.125 Allocating excess interest against foreign attributed income

[s FF 6]

If the application of the formula in s FF 5 results in an excess interest allocation, the next step is determining how it should be applied against conduit income. The excess interest is allocated against net foreign attributed income (foreign attributed income less foreign attributed losses) derived by members of the foreign attributed income group under s FF 6. If the excess interest exceeds net foreign attributed income, the balance will be allocated against dividends subject to FDP under s FF 7.

Allocating excess interest against net foreign attributed income is a two-step process. First, determine what percentage the excess interest represents of the group’s net foreign attributed income. Secondly, determine the amount of the excess interest to be allocated against a group member’s net foreign attributed income for the purpose of calculating CTR under s LQ 1 [see 215.15].

The formula in s FF 6 for determining what percentage the excess interest represents of the group’s net foreign attributed income is as follows:

\[
\text{foreign income} - \left(\frac{\text{company credits}}{\text{tax rate}}\right) \times \text{apportionment percentage}
\]

Where:

“Foreign income” is the foreign attributed income less foreign attributed losses,

“Company credits” is the total BETA credits available to be offset against the income tax liability of all companies in the foreign attributed income group for the tax year (calculated as if no CTR was available under s LQ 1),

“Apportionment percentage” is the amount calculated as below,

“Tax rate” is the basic rate of income tax for companies, expressed as a percentage, for the income year (currently 30 per cent).

The formula to calculate the apportionment percentage is:

\[
\frac{\text{excess amount} \times \text{tax rate}}{\text{tax rate} \times \text{net foreign attributed income} - \text{credits}}
\]

Where:

“Excess amount” is the excess amount of interest expenditure calculated under s FF 5.

“Tax rate” is the basic rate of income tax for companies, expressed as a percentage, for the income year (currently 30 per cent).

“Net foreign attributed income” is the total foreign attributed income less foreign attributed losses of all companies that are part of the conduit company’s foreign group at the end of the income year.
“Credits” is the total BETA credit amounts that can be credited against the income tax liability of all companies in the foreign attributed income group for the tax year (calculated as if no CTR was available under s LQ 1).

215.130 Allocating excess interest against dividends subject to foreign dividend payments [s FF 7]

If the amount of the excess interest expense allocated to all the companies of the foreign attributed income group is less than the total amount of excess interest expense calculated under s FF 5, then the difference is allocated against foreign-sourced dividends subject to FDP derived by companies of the foreign attributed income group under s FF 7.

Allocating surplus interest expense against foreign-sourced dividends subject to FDP is a three-step process. First, determine the group’s surplus interest allocation percentage. Secondly, determine each company’s share of the surplus interest allocation. Thirdly, determine the adjustment to the company’s CTRA.

The formula for determining the group’s surplus interest allocation percentage is as follows:

\[
\text{surplus amount} \times \text{tax rate} \bigg/ \text{group FDP}
\]

Where:

- “Surplus amount” is the difference between the calculations made under ss FF 5(2) and FF 6(4).
- “Tax rate” is the basic rate of income tax for companies, expressed as a percentage, for the income year (currently 30 per cent).
- “Group FDP” is the total DWPFDPs (calculated after claiming net loss offsets in s RA 6 but before CTR in s RG 7 that must be deducted from dividends paid during the tax year to companies of the foreign attributed income group at the end of the tax year.

Note: The group’s surplus interest allocation percentage cannot exceed 100 per cent.

The formula for determining each company’s foreign dividend adjustment amount is as follows:

\[
\text{company FDP} \times \text{surplus percentage} \bigg/ \text{tax rate}
\]

Where:

- “Company FDP” is the total FDPs (calculated after claiming net offsets in s RG 6 but before CTR in s RG 7 ) that must be deducted from dividends paid to the company during the tax year.
- “Surplus percentage” is the percentage figure calculated above.
- “Tax rate” is the basic rate of income tax for companies, expressed as a percentage, for the income year (currently 30 per cent).

The formula for determining the debit in the company’s CTRA is as follows:

\[
\text{income under s FF 7(7)} \times \text{tax rate}
\]

Where:

- “Income under s FF 7(7)” is the company’s foreign dividend adjustment amount referred to in s FF 7(7).
- “Tax rate” is the basic rate of income tax for companies, expressed as a percentage, for the income year (currently 30 per cent).

In essence, this requires the surplus interest allocation to be converted into its tax cash value, which is then allocated against the FDP liabilities of the companies in the foreign attributed income group before CTR is calculated. Where an allocation is made to a company in the foreign attributed income group, that company is deemed to derive assessable income equal to the allocated cash value divided by the company tax rate. In addition, that company’s CTRA will be debited by an amount equal to the amount of assessable income which it is deemed to have derived multiplied by the company tax rate.
Chapter 220
Cook Islands and Niue

220.10 Local income tax imposed in Cook Islands
Local income tax is imposed by the governments of the Cook Islands and Niue on income derived from sources within those territories.

Income derived from the Cook Islands or Niue by a New Zealand resident is assessable for income tax in New Zealand, but credit is given against the New Zealand tax for tax paid in the Cook Islands or Niue [s LJ 2].

220.15 Cook Island National Superannuation Fund
The Cook Island National Superannuation Fund (the “Fund”) was established to provide employees and self-employed people residing in the Cook Islands with a retirement pension. The Fund is governed by a trust deed, and the trustee of the Fund is the Public Trust of New Zealand. Because the trustee is resident in New Zealand, unintended tax consequences potentially arise under New Zealand tax legislation (ie deeming the Fund to be a New Zealand resident). This unintended tax effect has been eliminated by treating a company acting as trustee of the Cook Island National Superannuation Fund as not resident in New Zealand [s YD 2(3), see TIB vol 17:7 (September 2005) at 47].

220.20 New Zealand company deriving income from Niue [ss CW 59(1), (2), (5), IC 13]
The income of a company incorporated in New Zealand is exempt where the company derives its income wholly or mainly from Niue.

Income derived by the company from New Zealand is not exempt, and the exemption does not apply to companies that would fall within the controlled foreign company (CFC) regime if they were foreign companies. These provisions arise because Niue has no Companies Act of its own and Niue companies have traditionally been incorporated under New Zealand law.

The exemption also does not apply to any dividend that constitutes a distribution of an amount derived by the company from sources in New Zealand.

The 66 per cent threshold for offsetting losses within a group of companies can be varied by Order-in-Council for companies involved in the development of Niue — see 940.30.

220.30 Income from Niue development projects [s CW 59(4), (5), (7)]
Income derived wholly or mainly from a business or enterprise carried on by a company in Niue is exempt from income tax in New Zealand if:
(a) The company is incorporated in New Zealand;
(b) The business or enterprise is declared by Order in Council to be a development project; and
(c) The income is derived from sources in Niue.

A business or enterprise may be declared to be a development project if the Governor-General is satisfied that it is entered into wholly or mainly for the purpose of developing Niue, or is or will be important in the
development of Niue. The exemption does not apply to any dividend that constitutes a distribution of an amount derived by the company from sources in New Zealand.

220.50 Dividends derived from New Zealand company deriving Niue income [s CW 59(3), (5)]
Dividends derived in a tax year from a New Zealand company, that derives its income wholly or mainly from Niue is exempt income, unless the dividend is derived by:
(a) A New Zealand resident;
(b) A company that is a controlled foreign company (CFC) at any time during the tax year; or
(c) A trustee of a trust where a settlor or beneficiary is resident in New Zealand during the tax year.
This exemption does not apply to any dividend that constitutes a distribution of an amount derived by the company from sources in New Zealand.

220.60 Exempt trust fund income [s CW 59B]
Income derived by the trustee of the Niue International Trust Fund and the Tokelau International Trust Fund is exempt. Distributions by these funds are also exempt in the hands of the persons deriving them.
Chapter 225

Cooperatives, Statutory Producer Boards, Mutual Associations, Clubs, and Societies

225.10 Mutual associations
For the purposes of the rules applying to mutual associations, “association” means “a body or association of persons, whether incorporated or not” [s YA 1]. The definition is sufficiently wide to include such things as clubs, unions, cooperative companies and statutory producer boards.

The common law principle of mutuality holds that a group of persons cannot make a taxable profit from trading with themselves. Under this principle, a mutual association will have assessable income only to the extent to which it deals outside its circle of membership. In Travel Agents’ Association of New Zealand Inc v Commissioner of Inland Revenue (1979) 4 NZTC 61,417, (1979) 3 TRNZ 155 (SC), it was found that a mutual association is assessable on income derived from transactions with persons outside the circle of membership such as interest on bank deposits.

However, legislation overrides the common law principle of mutuality in certain circumstances. As a result, when calculating its taxable income, a mutual association must ignore the mutuality principle in relation to particular types of transaction.

225.15 Mutual transactions [ss HE 2, YA 1]
The term “mutual transaction” is defined in s YA 1 to mean a transaction of the kind described in s HE 2 (Classes of mutual transaction) entered into between an association and its members, or with members and other persons who are not members.

Section HE 2 lists the following types of transaction:
(a) The borrowing by the association of money from one or more members, but only to the extent to which the money is applied as a loan to a member; and
(b) The lending by the association of money to one or more members.

Where the association is a statutory producer board (other than one that derives only exempt income) the list includes two additional items:
(a) Levies paid by members; and
(b) Produce transactions.

TaxNote: The ITA 2004 defined “mutual transaction” as being:
Cooperatives, Statutory Producer Boards, Mutual Associations, Clubs, and Societies

225.20

(a) The purchase or other acquisition by the association of trading stock from a member of the association;
(b) The sale or other disposition by the association of trading stock to a member of the association;
(c) The supply of any services by a member of the association to the association;
(d) The supply of any services by the association to a member of the association;
(e) The borrowing by the association of money from a member of the association to the extent to which that money is applied in lending money to a member or members of the association;
(f) The lending by the association of money to a member of the association;
(g) In relation to an association that is a statutory producer board, produce transactions, and the payment of levies to the statutory producer board by its members.

This definition, which applied to all mutual associations, was considerably wider than the definition contained in the ITA 2007. It may be that the drafters of the ITA 2007 are of the opinion that these matters are encompassed in the ordinary meaning of the word “transaction”. However, the *ejusdem generis* principle of construction would suggest that this may not be the case. This matter has been referred to Inland Revenue officials for review.

225.20  **Mutual transactions assessable** [s CB 33]

Where an association enters into a “mutual transaction” [see 225.15] with a member, any amount derived from that transaction is taxable to the association. However, the amount is taxable only if it would be income under ordinary concepts were it not for its mutual character. This means that the non-taxable treatment of such things as capital gains is preserved.

Profits that are derived from member transactions are then able to be distributed to the members.

225.25  **Distributions to members — mutual associations** [ss DV 19, HE 3, HE 4]

The mutual association is allowed a deduction for assessable profits distributed as rebates to its members. The amount of the deduction is equal to the lesser of:

(a) The total rebates paid to members in respect of “mutual transactions” [see 225.15] which are included in the association’s income for that income year; or
(b) The profits attributable to mutual transactions, other than profits that have been distributed as an imputed cash distribution. Member and non-member transactions must be apportioned to determine the profits attributable to mutual transactions.

The association is allowed six months after the end of its trading year to make the distribution. A rebate made in respect of non-member transactions is not allowable as a deduction.

225.30  **Distributions to members — cooperative companies** [ss DV 19, HE 3, HE 4]

A cooperative company is defined in the Co-operative Companies Act 1996 as:

(a) A company, the principal activity of which is, and is stated in its constitution as being, a cooperative activity and in which not less than 60 per cent of the voting rights are held by transacting shareholders; or
(b) A company that is a subsidiary of a company referred to in para (a) above and the principal activity of which is, and is stated in its constitution as being, a cooperative activity.

A cooperative activity is defined in the Co-operative Companies Act 1996 as being one or more of the following activities:

(a) Supplying or providing the shareholders of the company with goods or services (or both);
(b) Supplying or providing the shareholders of the company’s holding company with goods or services (or both);
Cooperatives, Statutory Producer Boards, Mutual Associations, Clubs, and Societies

225.30

(c) Processing or marketing goods or services, or both, supplied or provided by its shareholders;
(d) Processing or marketing goods or services, or both, supplied or provided by the shareholders of its holding company;
(e) Entering into any other commercial transaction with the shareholders of the company;
(f) Entering into any other commercial transaction with the shareholders of its holding company;
(g) Supplying or providing goods or services, or both, that are ancillary to, or that otherwise facilitate, the carrying on by the company or its holding company of a cooperative activity — referred to in any of items (a) to (f) above.

A cooperative company does not include a statutory producer board [s YA 1].

Cooperative companies are generally mutual associations and therefore are able to deduct under s DV 19, distributions of profits arising from transactions with its members. The calculation is identical to that for mutual associations [see 225.25].

Cooperative companies and companies wholly owned by cooperative companies are also able to deduct amounts distributed by way of rebate where those profits arise from transactions with persons outside of its membership base. Section CD 34B ensures that the amount distributed is not treated as a dividend. In order for the rebate treatment to apply to the distribution, all of the following conditions must be satisfied:

(a) The cooperative company is resident in New Zealand for the period to which the distribution relates;
(b) If the distribution is being made by a company owned by the cooperative company, that subsidiary company is also resident in New Zealand for the period to which the distribution relates;
(c) The cooperative company has reasonable grounds to believe that the member is resident in New Zealand or has a fixed establishment in New Zealand at the time at which the distribution is made.

An election must be made by the cooperative company (or a wholly-owned subsidiary) for s CD 34B to apply. When the election is made, and all of the above conditions are met, a distribution to a member is not a dividend when and to the extent to which the distribution is for:

- The number of shares held by the member for trading transactions, or projected trading transactions, in the period to which the distribution relates;
- Limited non-transaction shares. These are shares that are not transaction shares or projected transactions shareholding, and which do not exceed 20 per cent of the shares held for trading transactions or projected trading transactions, whichever is the lesser.

In some cases, the constitution of a cooperative may permit a member to hold shares that exceed the number required for transactions or projected transactions by more than 20 per cent. These additional shares, in some cases, entitle the member to enter into trading transactions. Where this occurs, the non-dividend treatment allowed under s CD 34B applies only to the shares which are held by the member for trading transactions, or projected trading transactions. It does not apply to any excess shares.

Trading transactions are those transactions which involve the sale of trading stock which is tangible property, and which is not sold as part of the disposal of a business.

Under s 125(2) of the Companies Act 1993, a cooperative is required to fix a date for making a resolution to make a distribution to members, which date must be not be more than 20 working days before the resolution is made. However, this 20 day rule does not apply in respect of entitlement to distributions for transaction shares, projected transactions shareholdings, limited non-transactions shares and excess shareholdings, where:

- The cooperative or subsidiary gives a copy of the election for s CD 34B to apply, to the Registrar of Companies, before the distributions are paid; and
- A date has been fixed under s 125(1) of the Companies Act 1993 for making a distribution to members before their entitlement to distributions arises, and that date is within the year or period to which the distributions relate.
Amounts that are excluded by s CD 34B from being a dividend are deductible to the cooperative company under s DV 11.

225.35  Distributions to members — statutory producer boards [ss DV 19, HE 3, HE 4]

Statutory producer boards comprise the following bodies:
(a) New Zealand Horticulture Export Authority;
(b) New Zealand Meat Board;
(c) New Zealand Pork Industry Board;
(d) Marketing authorities under the Primary Products Marketing Act 1953;
(e) Any primary producer board or marketing board established by any Act.

In the case of statutory producer boards, the allowable deduction is the amount of the rebates paid to members in respect of mutual transactions which are included in the income of the statutory producer board. The statutory producer board may elect whether the rebate is deductible in the year of payment or in the year in which the relevant member transactions took place. Where a member of the statutory producer board is itself a mutual association, the rebate is deemed to be assessable to that member in the income year in which the rebate is deductible to the statutory producer board.

For statutory producer boards, the definition of “mutual transaction” includes not only:
(a) The borrowing by the association of money from a member to the extent to which that money is applied in lending money to a member or members; and
(b) The lending by the association of money to a member;
but also the payment of levies by members and produce transactions.

“Produce transactions” are defined in s YA 1 to mean transactions that are between a statutory producer board and its members, and involve the acceptance by the board from its members (in terms of the board’s primary statutory functions) of produce that is trading stock or goods that are trading stock.

Statutory producer boards are also able to make cash distributions and notional distributions, both of which are able to have imputation credits attached to them [see 670.85].

225.40  Taxation of the rebate in the hands of the recipient [s CB 34]

Any part of a rebate from a mutual association, which arises through business transactions of the member with the association, is income in the member’s hands. Any part of the rebate relating to a member’s non-business transactions is tax-free. Where the total rebate paid by the association exceeds the profit attributable to member transactions, the excess is income to the member. If the association is a company, the excess is deemed to be a “dividend” to the member and assessable as such. Imputation credits may be attached.

A rebate is deemed to have been paid to a member when it is credited in account in the books of the association or otherwise dealt with in the interest or on behalf of the member (for example, by off-setting the amount against the member’s account with the association).

Where a rebate is satisfied by:
(a) The issue of fully paid-up or partly paid-up shares in the association; or
(b) Giving credit for the whole or part of the amount unpaid on any shares in the association, that rebate is deemed not to be a bonus issue.

225.45  Taxation of statutory producer boards [s OC 3, sch 37]

Statutory producer boards are taxable on their income. They are deemed to be companies carrying on a business. Levies charged (other than those specifically for capital development) are assessable. Expenditure incurred is deductible in the normal manner.

A statutory producer board is a mutual association in which “member” means any person who:
Cooperatives, Statutory Producer Boards, Mutual Associations, Clubs, and Societies

225.50

(a) Is liable to pay a levy to the board; or
(b) Supplies produce or goods to the board.

Where the statutory producer board is an imputation credit account company, imputation credits may be attached to dividends that are cash distributions or notional distributions.

A statutory producer board falls within the definition of special corporate entity [s YA 1]. The principal effect of a statutory producer board being a special corporate entity is that it is treated as an ultimate shareholder, except where the statutory producer board derives only exempt income.

225.50 Friendly societies [ss CW 44, YA 1]

A “friendly society” is any society or credit union or association of credit unions registered or deemed to be registered under the Friendly Societies and Credit Unions Act 1982. The income of a friendly society is exempt from income tax with the exception of income which is derived from:

(a) Business carried on beyond the circle of its membership; and
(b) A company registered as an insurer under the Accident Insurance Act 1998.

Investment income derived by a friendly society, which is not derived from a business carried on with non-members, is exempt.

225.55 Clubs generally

The mutuality principle applies in that taxpayers cannot derive assessable income, or incur a deductible loss, from dealing with themselves. Profits or surpluses arising from business transactions entered into by a club or association with its members are included in the assessable income of the association. In order for the transaction to be a business transaction, it is necessary that the club or association be carrying on a business. Clubs and societies are not assessable on member transactions or on non-member transactions that meet the following criteria:

(a) The transactions are conducted on premises under the control of the non-profit organisation;
(b) The non-member transactions are indistinguishable from member transactions; and
(c) The relevant activities are conducted substantially for the enjoyment and participation of members.

In practice, this policy is limited to members and to non-members who are bona fide guests, members of other clubs enjoying reciprocal rights, and potential members being introduced to the facilities. The type of transactions to which this policy applies are bar and kitchen takings, raffles, and other fund raising conducted primarily with members, and proceeds from gaming machines after allowing for gaming machine duty. Generally, these transactions meet the criteria listed above.

The types of transactions with non-members to which the exemption policy does not extend include the rental of facilities and interest income, both of which are assessable. Where the club receipts include assessable income, the total expenses must be apportioned between exempt income and assessable income.

225.60 Clubs and non-profit making organisations — deductions [s DV 8]

Clubs and other non-profit organisations are entitled to a deduction of the lesser of $1,000 or the amount of their net income prior to taking the deduction. The provision applies to both incorporated and unincorporated organisations provided that:

(a) It does not have the purpose of making a profit for any proprietor, member or shareholder; and
(b) Its constitution prohibits it from making a distribution of property to any proprietor, member or shareholder.

The types of organisations that qualify are trade associations, progressive associations, political parties, and social clubs that do not qualify for the exemption given to sporting clubs [see 225.65]. Bodies corporate do not qualify for the deduction as s 15(3) of the Unit Titles Act 1972 permits them to distribute money and personal property to the proprietors [see TIB vol 6:4 (October 1994) at 5].
In *Travel Agents’ Association of New Zealand Inc v Commissioner of Inland Revenue* (1979) 4 NZTC 61,417, (1979) 3 TRNZ 155 (SC), the exemption applies only where the club members are prohibited from obtaining any private gain.

**225.65 Amateur sports clubs — general tax exemption** [s CW 46]

Income derived by any society or association established substantially or primarily for the purpose of promoting any amateur sport or game is exempt. The following criteria apply:

(a) The game or sport is for the recreation or entertainment of the general public; and

(b) No part of the income or funds is used or available to be used for the private pecuniary profit of any proprietor, member, or shareholder or of an associated person thereof.

The question as to whether a society or association comes within the provisions of this section is left to the determination of Inland Revenue and it has been decided that the following classes of organisations are entitled to exemption:

(a) District and National Wrestling Associations;

(b) District and National Boxing Associations;

(c) Rugby League Clubs and Associations;

(d) Clubs and Associations connected with amateur cricket, tennis, golf, rugby, and association football;

(e) Generally, any body or organisation established for the promotion of any amateur game or sport.

Where these conditions are met, a sports body is exempt from tax on all income (including income from interest and rents). If these conditions are not met, the sports body is assessable on net income from all sources, except that derived from members’ subscriptions.

The exemption extends to non-residents, provided all other requirements of s CW 46 are met [see TIB vol 10:9 (September 1998) at 7-9].
Chapter 230

Core Provisions — Purpose and Application

230.05 Purpose and application [ss A 2, AA 1]
The main purposes of Part A of the ITA 2007 are to:
(a) Define and impose tax on net income;
(b) Impose obligations concerning tax; and
(c) Set out rules to calculate tax and to satisfy the obligations imposed.
The ITA 2007 applies to income derived in the 2008-2009 and later tax years or corresponding income years. The ITA 2004 is repealed in respect of the 2008-2009 and later tax years or corresponding income years, but continues to have full effect for earlier years.

230.10 Interpretation [s AA 2]
Diagrams, flowcharts, readers notes and lists of defined terms at the end of sections in the ITA 2007 are included only as aids to interpretation. If there is a conflict between a diagram and a provision of the ITA 2007, the provision governs. If a defined term is used in a section, but is not included in the list of defined terms for that section, the term is to be used as it is defined.
In reviewing the principles of statutory interpretation, the Court of Appeal has held that:
(a) It is fundamental to all statutory interpretation that words are to be given their ordinary meaning;
(b) Where words are capable of more than one meaning and the object of the legislation is clear, the words must be given such fair, large, and liberal construction as will best ensure the attainment of the object of the Act;
Where words are unclear, or are reasonably capable of more than one meaning, the Court prefers an interpretation which does not lead to injustice or absurdity, and one which accords with the evident purpose; and

The true meaning must be consonant with the words used, having regard to their context in the Act as a whole, and to the purpose of the legislation to the extent that this is discernible.

In Pepper (Inspector of Taxes) v Hart [1992] 3 WLR 1032 (HL) the Court was prepared to look at extraneous material (such as Hansard) that related to the background against which the legislation was enacted. This indicated a clear departure from according preference to the literal interpretation: Commissioner of Inland Revenue v Alcan New Zealand Ltd [1994] 3 NZLR 439, (1994) 16 NZTC 11,175 (CA).

Definitions [s AA 3]

Definitions of words and terms that are defined for purposes of the ITA 2007 and general provisions relating to the interpretation and construction of the legislation are found in Part O.

Purpose [s BA 1]

The two main purposes of Part B of the ITA 2007 are to:

(a) Impose income tax, provisional tax, withholding liabilities, and other tax obligations; and

(b) Set out procedures to be followed to calculate tax and satisfy tax obligations.

It also provides a basis for applying the other parts of the ITA 2007 and generally sets up the main links between its Parts.

The following diagram illustrates the structure of Part B.
230.25 **Obligations of taxpayers** [ss BB 2, BB 3]

All persons must calculate and satisfy their income tax liability in accordance with subpart BC of the ITA 2007.

All persons must:
(a) If they are provisional taxpayers, pay provisional tax for each income year in accordance with the provisional tax rules;
(b) Satisfy any withholding liabilities of the person in accordance with subpart BE; and
(c) Satisfy any obligations of the person that are specified in subpart BF.

The CIR is empowered to counteract any tax advantage which arises from a tax avoidance arrangement.

Persons affected by a double tax agreement must satisfy their obligations for income tax under the agreement.

230.30 **Taxpayer types and tax calculation** [s BC 1]

Taxpayers are classified as being one of the following:
(a) *Non-filing taxpayers*: whose income tax liability is the total tax withheld from their annual gross income;
(b) *Filing taxpayers with schedular income*: for the year, whose income tax liability is calculated under s BC 7 [see 230.35]; or
(c) *Filing taxpayers*: whose income tax liability is calculated under ss BC 2 to BC 6.
230.35 **Taxpayer with schedular income** [s BC 7]

“Schedular income” means income of the following types [s YA 1]:

(a) Non-resident passive income under s RE 4;
(b) Policyholder income of a life insurer under s CR 1(4);
(c) Income derived from a mining venture by a non-resident mining operator;
(d) Specified living allowances derived by a non-resident entertainer who does not elect to file a return;
(e) Category A income derived by a trustee of a group investment fund;
(f) Income derived by a multi-rate PIE;
(g) Income derived by a non-resident general insurer under s YD 8;
(h) Income derived by a non-resident shipper under s YD 6; and
(i) Income derived by non-resident film renters under s YD 7.

The income tax liability for an income year of a taxpayer who has any schedular income for that year is the total schedular income tax liability, as calculated below, plus the amount that would be the taxpayer’s income tax liability for the year if the taxpayer had no schedular income.

If a taxpayer has one type of schedular income for an income year, the schedular income tax liability is the amount that would be the income tax liability if the only income for the year were that schedular income. Where there is more than one type of schedular income, the schedular income tax liability is the total of the schedular income tax liabilities, each calculated separately.

230.40 **Income and deductions** [ss BC 2, BC 3, BD 1, BD 2]

A taxpayer’s annual gross income for a tax year is the total of the amounts of the taxpayer’s assessable income that are allocated to the corresponding income year [s BC 2].

An amount is income of a taxpayer if it is income under Part C of the ITA 2007. A taxpayer’s assessable income is any income which is not exempt income, excluded income or foreign sourced income of a non-resident [s BD 1].

An amount is a deduction if deduction is granted under Part D [s BD 2].

A taxpayer’s annual total deduction for a tax year is the total of the taxpayer’s deductions that are allocated to the corresponding income year [s BC 3].

Net income

Net income less

Available net losses

Available net losses equals

Taxable income

Income tax liability
230.45 Allocation of income [s BD 3]
Each amount of income must be allocated to an income year.
The general rule is that items of income are allocated to the income year in which they are derived. However, where a provision of any of Part C or Part E to Part I provides for an allocation on another basis, that provision takes precedence.
In determining when an amount has been derived, regard must be had to case law which requires some people to recognise income on cash basis and others on an accrual basis, and generally defines the concept of derivation. Any income which has been credited in account or dealt with on behalf of, or in the interests of, the taxpayer are treated as having been derived.
An amount of income can be allocated only once. Therefore, it cannot fall to be taxed in two income years.

230.50 Allocation of deductions [s BD 4]
Every deduction must be allocated to an income year.
The general rule is that the deduction is allocated to the income year in which the expenditure or loss is incurred. However, where a provision in Part D to Part I provides for allocation on another basis, that provision takes precedence.
In determining when an amount of expenditure or loss has been incurred, regard must be had to case law which requires some people to recognise income on cash basis and others on an accrual basis and also more generally defines the concept of “incurred”.
Where an amount is required to be apportioned over more than one income year, the total of the amounts allocated can be no greater than the amount of the expenditure or loss so that no double deduction occurs.

230.55 Net income and net loss [s BC 4]
If a taxpayer’s annual gross income is more than the annual total deduction, the difference is the net income for the year. If a taxpayer’s annual gross income equals the annual total deduction, the net income for the year is zero.
If a taxpayer’s the annual gross income is less that the annual total deduction, the difference is the net loss for the year, and the taxpayer is deemed to have net income for the year of zero.
A taxpayer with a net loss for an income year may (under Part I of the ITA 2007):
(a) Subtract it from net income for a future year; or
(b) Make the net loss available to another taxpayer for offset against that other taxpayer’s net income in that or a future income year.
The latter of these two options is available only to group companies [see 940 LOSSES].

230.60 Taxable income [s BC 5]
A taxpayer’s taxable income for an income year is determined by subtracting any available tax losses from the taxpayer’s net income under Part I (treatment of tax losses).

230.65 Income tax liability [s BC 8]
With the exception of non-filing taxpayers, a taxpayer’s income tax liability for an income year is calculated in accordance with the diagram below.
The income tax liability of the taxpayer for the income year is obtained by multiplying the taxable income for the tax year by the applicable basic tax rate. This is adjusted by subtracting the allowable credits. If the resulting amount is more than zero, that amount is the taxpayer’s terminal tax liability which must be paid. If the resulting amount is zero, the taxpayer’s income tax liability for the income year is zero. If the resulting amount is negative, the taxpayer has surplus credits. Depending on the type of credit, these may be extinguished or may be refundable under subpart LA.
Tax credits are sued to satisfy income tax liabilities in the following order:
(a) Non-refundable credits;
(b) Tax credits for supplementary dividends;
(c) Imputation credits; and
(d) Refundable tax credits.

The diagram below (taken from s BC 6) illustrates the process used by taxpayers (except non-filing taxpayers) to calculate income tax liability.
230.70 Surplus credits [ss BC 8, LA 4, LA 5, LA 6, LA 7, LA 8]

(1) Non-refundable credits
Non-refundable credits are

(a) Tax credits under subpart LC (other than tax credits for housekeeping) including:
   (i) Tax credits for persons on low incomes [s LC 1];
   (ii) Tax credits for child’s income [s LC 3];
   (iii) Tax credits for transitional circumstances [s LC 4];
   (iv) Tax credits for absentees [s LC 9].
(b) Tax credits under subpart LJ (tax credits for foreign income tax);
(c) Tax credits under subpart LK (tax credits relating to attributed controlled foreign company income);
(d) Tax credits under subpart LQ (tax credits of conduit tax relief companies);
(e) Tax credits under subpart LR (tax credits for policyholder income);
(f) Amounts in a BETA account or policyholder credit account that the person chooses to use in payment of income tax; and
(g) Credits allocated to the person by a multi-rate PIE or an investor proxy.

To the extent to which non-refundable credits are not used to satisfy the person’s income tax liability for the year, they are extinguished.

(2) Tax credits for supplementary dividends
A company can utilise surplus tax credits for supplementary dividends by using the rules contained in s LP 3. This includes carrying the credit forward or transferring it to another company in the same wholly owned group of companies [see 1010.31 and 1010.32]. For other taxpayers, any surplus credit is extinguished.

(3) Imputation credits
Companies, trustees (other than the Maori trustee) and Maori authorities are able to convert excess imputation credits to a tax loss for carry-forward to a future income year [s LE 2]. Other taxpayers are able to carry the excess credit forward for use in the following income year [s LE 3].

(4) Refundable tax credits
To the extent to which the excess tax credit is for:

(a) PAYE;
(b) Provisional tax payments;
(c) Resident withholding tax;
(d) RSCT (retirement scheme contribution tax);
(e) Foreign dividend payment (FDP) credits;
(f) Tax credits for expenditure on research and development; or
(g) Maori authority credits.
The Commissioner must:

(a) First, use a tax credit to satisfy any outstanding tax liability for previous years;
(b) Secondly, transfer the excess credit to another person if the taxpayer requests that this be done; and
(c) Thirdly, refund the surplus credits.

TaxNote: Both the FDP rules and conduit tax relief rules have been repealed and foreign dividends derived by a New Zealand resident company are exempt from tax, both with effect from the beginning of the first income year commencing on or after 1 July 2009 [see 850 INTERNATIONAL TAX REGIME, 215 CONDUIT TAX RELIEF].
230.80 Withholding liabilities [s BE 1]
A person who makes a PAYE payment must make a deduction from the payment in accordance with the PAYE rules [see 1080 PAYE].
A person who makes a payment of resident passive income must make a deduction from the payment in accordance with the RWT rules [see 1260 RESIDENT WITHHOLDING TAX].
A person who makes a payment of non-resident passive income must make a deduction from the payment in accordance with the NRWT rules [see 1020 NON-RESIDENT WITHHOLDING TAX].
A person who provides a fringe benefit to another person must pay fringe benefit tax in accordance with the FBT rules [see 540 FRINGE BENEFIT TAX].
A person who makes an employer’s superannuation cash contribution to a superannuation fund must pay ESCT (employer’s superannuation contribution tax) in accordance with the ESCT rules [see 1390 SUPERANNUATION].
A person who makes a retirement scheme contribution to a retirement savings scheme must pay RSCT under the RSCT rules.

230.85 Other taxpayer obligations [s BF 1]
A person is obliged to also make the following payments where applicable:
(a) Qualifying company election tax [see 1160 QUALIFYING COMPANIES].
(b) Income tax on taxable distributions from non-qualifying trusts [see 1420 TRUSTS AND ESTATES].
(c) Withdrawal tax (savings in special farm, fishing vessel, or home ownership accounts) [see 1395.80].
(d) Further income tax payable by a company where there is an end of year debit balance in the imputation account, or when the company ceases to be an imputation credit account company [see 670 IMPUTATION].

230.90 Avoidance [s BG 1]
A tax avoidance arrangement is void as against the CIR for income tax purposes. The CIR, in accordance, may counteract a tax advantage obtained by a person from or under a tax avoidance arrangement [see 80 AVOIDANCE].

230.95 Double tax agreements [s BH 1]
A double tax agreement is an agreement that has been negotiated between:
(a) The New Zealand Government and the Government of any foreign territory; or
(b) The New Zealand Commerce and Industry Office and the Taipei Economic and Cultural Office in New Zealand,
and has been declared by the Governor-General, by Order in Council, to have entered into force.
Such a double tax agreement may:
(a) Provide relief from double taxation;
(b) Provide relief from tax;
(c) Tax the income of non-residents derived from any source in New Zealand;
(d) Determine the income to be attributed to non-residents or their agencies, branches, or establishments in New Zealand;
(e) Determine the income to be attributed to New Zealand residents who have special relationships with non-residents;
(f) Prevent fiscal evasion;
(g) Facilitate the exchange of information; and
(h) Assist in the recovery of unpaid tax.

The provisions of a double tax agreement over-ride the provisions of the Revenue Acts. However, an agreement for the recovery of unpaid tax is subject to Part 10A of the TAA.

A reference in a double tax agreement to the profits of an activity or business is to be read, if possible, as a reference to the amount that would be a taxpayer’s net income if that activity or business were the taxpayer’s only activity or business [see 310 DOUBLE TAX AGREEMENTS].

A reference in a double tax agreement to two persons being unrelated is to be read, if possible, as being a reference to two persons not being associated [see 310 DOUBLE TAX AGREEMENTS and 70 ASSOCIATED PERSONS AND RELATIVES].

#### 240.05 Fundamental legislation allowing deductions [ss BD 2, BD 4, BC 3]

Under the core provisions, a taxpayer is required to determine “annual total deduction” for an income year as one of the steps in calculating the income tax liability for that year. Annual total deductions are the sum of all amounts of deductions which are allowable for tax purposes and which are allocated to that income year. The calculation of this figure requires an understanding of both the criteria for determining whether an expenditure or loss is allowable as a deduction and how the timing rules apply to that deduction.

No amount is allowed as a deduction unless deductibility is granted under Part D of the ITA 2007. The fundamental rule for determining what is allowable as a deduction is called the “general permission” and is located in s DA 1. This fundamental rule is then modified by a series of “general limitations” which deny deduction for particular types of expenditure. The general limitations are located in s DA 2.

These general rules can then be modified by specific rules which either provide for a deduction that would not otherwise be available or deny a deduction that would otherwise be available.

Some of these specific rules “supplement” the general permission. This means that the general permission does not need to be satisfied in respect of that deduction. Where this occurs, the provision will specifically state that it supplements the general permission. An example is s DB 7 which allows a company to deduct an interest expense without the need for a nexus with income to exist.

Even where a provision supplements the general permission, it remains subject to the general limitations unless the provision specifically states that it overrides the general limitations. An example of where this occurs is s DB 11 which governs the treatment of a negative base price adjustment under the financial arrangements rules.

#### 240.10 Legislation and common law principles [ss DA 1, DA 2]

The general rule for deductibility is found in s DA 1. It is called the “general permission”. The general permission allows a deduction for any expenditure or loss to the extent to which it satisfies the nexus test between the expenditure or loss incurred and the derivation of income or being incurred by business carried on for the purpose of deriving income. The general permission allows a deduction to the extent to which the expenditure or loss is either:

(a) Incurred by a taxpayer in deriving the taxpayer’s assessable income or excluded income or a combination of both; or

(b) Incurred by the taxpayer in the course of carrying on a business for the purpose of deriving assessable income or excluded income or a combination of both.

The words “to the extent” indicate that an item of expenditure may be apportioned between a deductible amount and a non-deductible amount. This will occur where the expenditure was not incurred wholly in...
Deductions

240.15 General principles underlying the legislation [s DA 1]

The general permission [s DA 1] refers to expenditure or loss that is incurred in deriving assessable or excluded income. Although the wording of this rule has changed over time in the ITA 1976, ITA 1994, Taxation (Core Provisions) Act 1996, ITA 2004, and the ITA 2007, the Courts are likely to continue to apply the same principles, which developed over a number of years, in respect of the tests for deductibility.

In order to be deductible, the expenditure need not necessarily be incurred in the income year in which the income flowing from it is derived. However, under the timing rules, which are located in Part E of the Act, expenditure may be allocated to a year other than the year in which it is incurred. For example, the allowable deduction for some prepaid expenditure is allocated to the year in which the goods are used or services physically provided [see 1140 PREPAYMENTS].

Some of the other general principles that have emerged from the Courts in relation to deductibility and timing are:

(a) The Courts tend to adopt commercial accountancy principles in deciding whether particular items are an allowable deduction. This concept is overridden by any specific provision to the contrary.

(b) The legislation should not dictate to a taxpayer how to carry on a business or what expenditure should or should not be incurred in so doing. If the taxpayer chooses to imprudently incur expenditure, it is still an allowable deduction provided that the nexus test is satisfied and it is not otherwise prohibited from deduction by a specific provision. Similarly, there is no authority for amounts expended by a taxpayer to be reduced to what another more prudent taxpayer would have incurred. However, if a taxpayer incurs expenditure partly for business purposes and partly to produce a non-business benefit, the allowable deduction is limited to the expenditure relating to the business purpose: Buckley & Young Ltd v Commissioner of Inland Revenue [1978] 2 NZLR 485, (1978) 3 NZTC 61,271 (CA).

(c) For an expenditure or loss to qualify as an allowable deduction, there must be a sufficient nexus or relationship between the expenditure or loss and the business or vocation carried on. Similarly, the expenditure or loss must be incurred in deriving the income and not be a distribution of the income after it has been derived. For this reason, dividends from a company or distributions of partnership income are not an allowable deduction. In relationship to sponsorship, the CIR takes the view that “advertising” and “donations” are mutually exclusive terms, but does accept that it may be a proper business decision to pay more for an advertising campaign run in conjunction with a charitable or fund-raising campaign.
(d) To qualify as an “expenditure or loss” there must be either the outlay of money or a laying out of something convertible into money. In TRA Case J32 (1987) 9 NZTC 1,187 a contribution to a union’s leave bank did not qualify under this criteria.

(e) In TRA Case M107 (1990) 15 TRNZ 145, when losses from share transactions were disallowed, it was held that although there was the start of a structure to undertake business operations for the carrying on of a business, the taxpayer had not started to carry on a business undertaking. The purchase of the shares was merely an investment, a capital item that had been recorded in the taxpayer’s balance sheet as such. See also comments in Commissioner of Inland Revenue v Banks [1978] 2 NZLR 472, (1978) 3 NZTC 61,236, (1978) 2 TRNZ 323 (CA) and Grieve v Commissioner of Inland Revenue [1984] 1 NZLR 101, (1984) 6 NZTC 61,682, (1983) 6 TRNZ 461 (CA).

(f) In TRA Case K50 (1988) 10 NZTC 411 it was stated:

“For … expenditure to be a deduction … the benefit obtained or to be obtained is related to an expending or passing out from the person claiming the deduction. A book entry is merely a record of the expending or passing of action or the liability of the person committed to that expense. If such a passing out is never to occur in one form or another then it is not a true record … it must be ignored.”

(g) A payment of an outgoing may be a step towards the production of income. To justify a deduction it is not necessary to show a connection between the outgoing and any particular item of income. If the payment is made in the course of gaining or producing assessable income and it is not specifically excluded from deduction, it is deductible: Ash v Commissioner of Taxation (New South Wales) (1938) 61 CLR 263, (1938) 1 AITR 447 (HCA).

240.20 Meaning of incurred [s BD 4]

A deduction is not allowed for any expenditure or loss unless, and until, the expenditure or loss has been incurred. “Incurred” thus has elements of both obligation, and timing. The term is closely related to the accounting concept of “recognition”, under which an expense or loss is recognised only when it is probable that a consumption of benefits (eg a payment) has occurred or will occur, and that the consumption of benefits can be reliably measured.

Section BD 4 provides that, in determining when an item of expenditure has been incurred, regard must be had to case law.

An expenditure or loss can be said to be incurred when the taxpayer is definitively committed to it, even if there has been no actual disbursement: Federal Commissioner of Taxation v James Flood Pty Ltd (1953) 88 CLR 492 (HCA), 506.

Example:

A taxpayer places an order for supplies on 10 March. The supplies are delivered, and an invoice is issued, on 24 March. The taxpayer pays for the supplies on 19 April. The placing of the order does not of itself give rise to the expenditure being “incurred” because, at that date, the taxpayer has no liability for payment. Once the supplies are delivered on 24 March, the taxpayer has incurred the expenditure because the goods have been delivered and the taxpayer has a liability to make payment for them, even though actual payment is not made until 19 April.

In the vast majority of situations, it will be obvious that an expenditure or loss has been incurred because goods or services will have been supplied and an invoice issued. Difficulty in determining if and when an expenditure has been incurred arises only in more unusual situations, which have given rise to a number of cases: Commissioner of Inland Revenue v Glen Eden Metal Spinners Ltd (1990) 12 NZTC 7,270 (CA) at 750.13 and Commissioner of Inland Revenue v Lyndale Motors (1972) Ltd (1991) 13 NZTC 8,076 (HC).

The following guidelines (based on Ogilvy & Mather Pty Ltd v Federal Commissioner of Taxation (1990) ATR 841, 90 ATC 4,836 (FCA)) will assist in determining if (and when) an expenditure or loss has been incurred.

An expenditure or loss may be incurred:
Deductions

240.25

(a) Even if the amount is not paid in the income year, provided that the taxpayer has completely subjected themselves to that liability;
(b) If it represents a present liability then due, although payable in the future;
(c) Even if it is defeasible; and
(d) Even if there is no existing legal liability to make payment at all, at least where it is certain that the amount will be paid in the future, provided it is otherwise incurred.

An expenditure or loss will not be incurred:

(a) Where it does not represent a pecuniary liability in the income year even if it is certain that the outgoing will arise as a pecuniary liability in the future.
(b) In an income year if it is no more than contingent, pending, threatened, or expected, regardless of how certain it may be that the expenditure or loss will occur in the future.

A reasonable estimate of an expenditure or loss payable in the future will be incurred where it represents a pecuniary liability encountered in the income year, provided it is capable of reasonable estimation.

The meaning of “incurred” was extended by the decision in Commissioner of Inland Revenue v Mitsubishi Motors New Zealand Ltd [1995] 3 NZLR 513, (1995) 17 NZTC 12,351 (PC) in which the Privy Council held that the taxpayer had incurred future estimated warranty expenditure in the year in which warranted vehicles were sold. The Court considered that the past experience of warranty claims justified the view that the expenditure was incurred at the time of the sale even though a warranty claim had not occurred at that time.

Inland Revenue has issued an interpretation statement on the meaning of “incurred” in the light of the Mitsubishi Motors decision [see TIB vol 10:6 (June 1998), Appendix].

TaxNote: In TRA Decision No 14/07 (Unreported, 23 November 2007), accounting fees for the preparation of the 2003 financial statements and returns of income were not incurred until the 2004 income year when the work was actually done. Therefore the deduction was not available in the 2003 income year as claimed.

240.25 Quantum of liability not ascertained in income year

Where a loss or liability is incurred in the course of carrying on a business, the exact amount of which is not ascertained until a later year, the normal allocation rules apply even though the quantum of the expenditure is ascertained in a later year. In practice, estimates are made of the quantum. The Courts have accepted that estimates are a necessary part of calculating some types of allowable deductions: Commissioner of Inland Revenue v Mitsubishi Motors New Zealand Ltd [1995] 3 NZLR 513, (1995) 17 NZTC 12,351 (PC); Commissioner of Inland Revenue v Banks [1978] 2 NZLR 472, (1978) 3 NZTC 61,236, (1978) 2 TRNZ 323 (CA); Commissioner of Inland Revenue v National Bank of New Zealand Ltd (1976) 2 NZTC 61,150, (1976) 2 TRNZ 70 (CA); and Colonial Mutual Life Assurance Society Ltd (Life Branch) v Commissioner of Inland Revenue (1994) 16 NZTC 11,341, (1994) 19 TRNZ 74 (HC).

240.30 Remission of expenditure [s CG 2]

A taxpayer who incurs expenditure in an income year, but does not satisfy that liability during that year, will take that expenditure into account in calculating taxable income for that year because it is assumed that the debt will be paid in due course. If the debt is not paid, and is later remitted or cancelled, the amount remitted is income of the taxpayer. The income arises in the income year in which the remission or cancellation occurs.

Remission or cancellation includes discharge of the debt for inadequate consideration, discharge of a debt under insolvency or bankruptcy law, release by way of a deed or agreement of composition with creditors and lack of enforceability due to lapse of time.

This provision does not apply where the amount of the remission is dealt with under the financial arrangement rules [see 470 FINANCIAL ARRANGEMENTS].

240.35 No deductions for capital [s DA 2(1)]

Unless specifically allowed under Part D of the ITA 2007, no deduction is allowed for any expenditure or loss to the extent to which it is of a capital nature. However, this does not prevent a deduction for deemed
expenditure under the financial arrangements rules. An important modifier to this rule is found in s DB 23, which ensures that the capital prohibition does not apply to expenditure incurred as the cost of revenue account property. This provision is intended to reflect the case law established by Commissioner of Inland Revenue v Inglis (1992) 14 NZTC 9,180 (CA).

Because the nature of an expenditure can only be established on the basis of the facts of the case, the Courts have developed a list of guiding factors to assist in determining whether an expenditure is capital in nature to any extent: Commissioner of Inland Revenue v McKenzies New Zealand Ltd (1988) 10 NZTC 5,233 (CA), Christchurch Press Co Ltd v Commissioner of Inland Revenue (1993) 15 NZTC 10,206 (HC), and BP Australia Ltd v Federal Commissioner of Taxation [1966] AC 224, (1965) 112 CLR 386, (1965) 9 AITR 615 (PC). In these cases, the Courts considered:

(a) The need or occasion which called for the expenditure;
(b) Whether the expenditure was made from fixed or circulating capital;
(c) Whether the payment was of a once and for all nature producing assets or advantages that are an enduring benefit;
(d) How the payment would be treated on ordinary principles of commercial accounting; and
(e) Whether the payment was expended on the business structure of the taxpayer or whether it was part of the income earning process.

Feasibility studies often cause concern as to whether or not the expenditure incurred in carrying out the study are deductible. The CIR has issued an interpretation statement IS 08/02 which discusses the issue. Although the statement does not focus on any particular type of expenditure or deductibility provisions, it does reinforce the basic rules, being:

(a) Expenditure incurred prior to the commencement of a business is not deductible;
(b) If the expenditure is capital in nature, it is not deductible; and
(c) Expenditure is not deductible unless it is incurred in deriving assessable income and as an ordinary incident of the business or income-earning activity.

Business does not commence until the profit-making structure is in place. Therefore, it is necessary to determine the point in time at which the business has progressed to the stage where it has “commenced” for tax purposes.

1) Case law

In Mt Isa Mines Ltd v Federal Commissioner of Taxation 92 ATC 4,755 (HCA), it was held that expenditure incurred for the purpose of improving land as a site for carrying on a business must be regarded as a capital item provided that money is not spent merely on maintenance or upkeep. When expenditure is related to the improvement of the site on which business is conducted, and the improvement is of an enduring and not a transient character, that expenditure is favoured as being of a capital nature. It is not relevant that the taxpayer does not acquire a tangible asset; it is enough that the taxpayer obtains an enduring advantage.

Lockwood Buildings Ltd v Commissioner of Inland Revenue (1996) 17 NZTC 12,483 (HC) involved management fees paid to a parent company to care for management and strategic planning matters. These fees were held to be of a revenue nature and deductible when the parent company provided services (which included investigating the possible acquisition of timber mills and State forests) and the fees payable were based on the profits made by each subsidiary, rather than in relation to services actually performed for that subsidiary.

In Lyttelton Port Co Ltd v Commissioner of Inland Revenue (1996) 17 NZTC 12,556 (HC), the Lyttelton Port Company set up a trust which borrowed money to pay redundancy to waterside workers. These borrowings were to be met by a levy charged to all port users. On 1 October 1990 the company repaid $845,000 on the loan and the levy ceased. The company treated this payment as a revenue payment and claimed a deduction which was disallowed. The repayment of the $845,000 was held to be an election by the company to make a lump sum repayment of money borrowed for redundancy, as opposed to allowing it to be paid off by port levies. The High Court had found the expenditure did not give rise to an enduring benefit and therefore
Deductions

240.35(1)

the payment was not of a capital nature and was allowed as a deduction. The fact that the payment improved the company’s competitive advantage by eliminating the levy was incidental and did not change the essential character of the payment. In Commissioner of Inland Revenue v Lyttelton Port Co Ltd (1997) 18 NZTC 13,273 (CA), the Court of Appeal overturned the decision of the High Court in respect of the costs of demolishing buildings the Port Company was required under legislation to acquire certain buildings for which it did not have a use. It demolished the buildings and claimed a deduction for the demolition costs of $13,500. The High Court had allowed the deduction on the grounds that the costs were a necessary revenue item in the carrying on of the taxpayer’s business. However, the decision was overturned in the Court of Appeal applying the principles laid down in Mt Isa Mines Ltd. By demolishing the buildings, the taxpayer obtained a long-term benefit from the resulting improvement in the standard and extent of the wharf area. The benefit was found to be a capital asset. The costs of demolition were also found to be capital in nature.

In Commissioner of Inland Revenue v Commissioner of Inland Revenue (1997) 18 NZTC 13,487 (HC) a company, jointly owned by a chartered accountant in public practice and his largest client, borrowed $600,000 for investment purposes. The company subsequently lost most of the money, leaving $500,000 owing. Although not legally required to make good the company’s loss, the chartered accountant and his client each undertook to repay the amount owing by payments of $25,000 a year. The Court held that the payments by the chartered accountant were deductible for income tax purposes because they were “calculated from a practical and business point of view to secure his business reputation and so enhance his income earning”. Although the payments could be regarded as capital in nature because they were technically a loan to the company, the reality was that the debt could and would not be repaid. The Court’s conclusion was reinforced by the voluntary nature of the payments and the relationship of the chartered accountant with his largest client. See also Cox v Commissioner of Inland Revenue (1992) 14 NZTC 9,164 (HC).

In Hawke’s Bay Power Distribution Ltd v Commissioner of Inland Revenue (1999) 19 NZTC 15,226 (CA), expenditure by a power board to replace overhead power lines with underground cables was held to be capital in nature for the following reasons:

(a) The “final objective” of the power board was the replacement of existing overhead power lines with underground cables.

(b) The urban distribution system is an entirety by itself.

(c) Underground distribution systems and overhead distribution systems are fundamentally different in character — they are two separate and distinct asset categories.

(d) The scale and degree of the work involved in the replacement project and the money expended on it clearly indicates that the expenditure is capital in nature.

(e) Most of the expenditure incurred on the underground work was acknowledged by the power board to be capital in nature. It was artificial to try to dissect the work into capital and revenue categories.

(f) Substantially the whole of the urban residential distribution system was placed underground — the urban residential system is a new and different distribution system, not a repaired system.

A similar decision was reached in Poverty Bay Electric Power Board v Commissioner of Inland Revenue (1999) 19 NZTC 15,001 (CA) and Auckland Gas Co Ltd v Commissioner of Inland Revenue (2000) 19 NZTC 15,702 (PC).

When a business is sold, the subsequent payment by the purchaser of the accrued liabilities of the vendor are capital payments and are not normally deductible, even if they would have been deductible to the vendor. In Commissioner of Inland Revenue v New Zealand Forest Research Institute Ltd [2000] 3 NZLR 1, (2000) 19 NZTC 15,689 (PC), a company formed under the Crown Research Institutes Act 1992 took over the assets and liabilities of former Crown entities. The liabilities included accrued annual leave owing to employees of the former Crown entities at the date of incorporation. The Privy Council held that the payment of contingent liabilities attributable to a previous employer, and paid as part of the cost of acquiring a business, are not an allowable deduction. This overturned the earlier Court of Appeal decision of New Zealand Forest Research Institute Ltd v Commissioner of Inland Revenue (1999) 19 NZTC 15,211 (CA), that had held that the company’s subsequent payment of this accrued annual leave was deductible expenditure because the Crown
Research Institutes Act 1992 deemed the pre-transfer employment service to be provided to the transferee company on an unbroken basis.

Section DC 10 now governs the deductibility of accrued remuneration payable to employees who transfer to the new owner when a business is sold. However, the principles of the New Zealand Forest Research Institute case remain relevant in respect of other expenditure types.

In Jupiters Ltd v Deputy Commissioner of Taxation [2001] FCA 1869, the Full Federal Court of Australia found that a “special rent” of $7 million per annum over a 10 year period was capital in nature and non-deductible. Payment of the “special rent” obtained for the taxpayer the right to exclusively operate a casino for a 10-year period. The Court held that the payments were made to secure exclusivity and freedom from competition and, as such, provided an enduring benefit that would enhance the goodwill of the business. Hence the payments related to the profit-earning structure of the business and were on capital account.

In Fullers Bay of Islands Ltd v Commissioner of Inland Revenue (2006) 22 NZTC 19,716 (CA), legal costs incurred in an unsuccessful attempt to secure a service contract were held to be on capital account. The contract, if awarded, would have been a major addition to the structure and business of the appellant.

240.40 No deduction for expenditure or loss of a private or domestic nature [s DA 2(2)]

No deduction is allowed for expenditure or loss which is of a private or domestic nature. Expenditure required to remedy an injury or disability to the human body is expenditure of a private or domestic nature, even if the expenditure is to enable the taxpayer to resume earning income by having his or her health restored. Such expenditure is not incurred in the course of gaining or producing income, nor is it an overhead or functioning cost in a taxpayer’s business. Instead, it is a health maintenance cost for a taxpayer as a human being [see TIB vol 7:1 (July 1995)].

However, in Morris v Federal Commissioner of Taxation [2002] FCA 616, the Federal Court of Australia ruled in favour of 10 taxpayers who were claiming deductions for sunglasses, sunscreen and sunhats. The ATO has now accepted that outdoor workers, such as farmers, and builders, whose occupations require them to work in the sun, can claim these costs in the same way as they are able to claim the cost of protective clothing.

Guarantee payments made in relation to two clients’ debts by a taxpayer in business as an accountant were held to be private expenditure and not deductible when they were to protect the accountant’s reputation and maintain his relationship with the bank: TRA Case S44 (1995) 17 NZTC 7,301, (1995) 20 TRNZ 209.

240.45 No double deductions [s BD 4(5)]

If a particular expenditure or loss is deductible under more than one provision of the ITA, the total deduction cannot exceed the amount of the expenditure or loss. For example, in the purchase of trading stock a taxpayer cannot claim a deduction under both ss DA 1 and EB 1: BASF New Zealand Ltd v Commissioner of Inland Revenue (1996) 17 NZTC 12,549 (HC) and BASF New Zealand Ltd v Commissioner of Inland Revenue (1997) 18 NZTC 13,322 (CA).

240.50 Deductions not allowed for taxes and duties paid [s DB 1]

Unless specifically provided for, there is no deduction allowed for income tax or any civil penalty (as defined in s 3(1) of the TAA), criminal penalty, or interest imposed under the TAA 1994. Similarly, there is no deduction allowed for any foreign taxes, penalty, or interest imposed which is of a substantially similar nature to that which is imposed in New Zealand.

In this context, “income tax” also includes the qualifying company election tax, and foreign taxes imposed which are of substantially the same nature as income tax. It also includes any further income tax, imputation tax penalty tax, dividend withholding payment or further dividend withholding payment, or dividend withholding payment penalty tax. It includes any penalty by way of additional tax for late payment of any tax or similar payment.
Income tax, in this context, does not include fringe benefit tax (FBT) or the employer’s superannuation contribution tax (ESCT) [see 540.330].

**240.55 Deduction prohibited for bribes** [s DB 45]

No deduction is allowed for bribes paid to a public official to obtain retail business or obtain any improper advantage in the conduct of business. The prohibition applies to bribes paid within New Zealand and also outside of New Zealand if it is an offence under the laws of the foreign jurisdiction. However, the prohibition does not apply where the amount is paid for the primary purpose of ensuring or expediting the performance by a foreign public official of a routine government action and the amount paid is small.

**240.57 Fines and penalties**

Most fines and penalties are not deductible for tax purposes. In many cases, there is insufficient nexus with the income-earning process. In other cases, deductibility is denied on the grounds of public policy. The CIR has issued interpretation statement IS 09/01 which examines the deductibility of fines and penalties imposed under a statute or regulation. The statement does not apply to the following:

(a) Fines or penalties imposed under a contract or as a result of a commercial dispute;
(b) Penalties for late payment of an amount that is not itself payable in respect of a breach of statute or regulation;
(c) Legal fees incurred in defending a fine or penalty.

It is the view of the CIR that no tax deduction is available for any fine or penalty of a type covered by the statement irrespective of whether or not there is a nexus with the income earning process and irrespective of whether or not:

(a) The fine or penalty imposed forms part of criminal proceedings;
(b) The fine is imposed by the Court or another body;
(c) The fine is imposed on the taxpayer, the taxpayer’s employees or a third party;
(d) The taxpayer intended to break the law; or
(e) The fine is imposed for a strict liability offence.

The full text of the interpretation statement can be found in TIB vol 21:9 (December 2009), at 11-18.

**240.60 Companies in a group** [s DV 13]

Section DV 13 is the deduction side of a measure designed to ensure that no undue advantage accrues to groups of companies having their business operated through a number of different companies rather than through just one company. The income side of the measure is contained in s CV 1.

Section CV 1 notionally combines the activities of companies in a wholly-owned group in order to determine whether an item of income in one of the companies would be taxable if all of the activities of the group were conducted in one company. If the answer is that the item of income would be taxable under those circumstances, it is taxable to the company which derived it.

Section DV 13 ensures that a deduction is available on the same basis. If a deduction would have been allowed had the group operated through just one company, a deduction is available to the company which has derived the income under s CV 1.

**240.65 Deduction prohibited for loss of premises** [s DB 20]

Generally no deduction is allowed for a loss incurred on the demolition, destruction, or disposal of any building. This is because such a loss will generally be a loss of capital. The two exceptions to this rule are where:

(a) Had the premises instead been disposed of, the proceeds would have been income under s CB 1 (Amounts derived from business) or s CB 2 (Profit making undertaking or scheme) or ss CB 6 to CB 15 (Land sales); or
(b) The building is a temporary building [s DB 20].

“Temporary building” means any building which:

(a) Has been erected pursuant to a permit issued by a local authority or public authority subject to its demolition or removal at the pleasure of the local authority or public authority; or

(b) A building erected at a construction site, which is to be demolished or removed on or before the completion of the construction; or

(c) A building which was erected, and is used, for the purpose of housing specific plant or machinery, and will need to be demolished in order to remove or replace that plant or machinery.

In Commissioner of Inland Revenue v Lyttelton Port Co Ltd (1997) 18 NZTC 13,273 (CA), the Court of Appeal disallowed losses on the demolition and disposal of buildings and found the demolition costs to be capital in nature and therefore non-deductible. The case followed the reasoning of Mt Isa Mines Ltd v Federal Commissioner of Taxation 92 ATC 4,755 (HCA) [see 240.35]. The creation of a better asset (a greater area of uncluttered wharf) was an enduring benefit.

240.70 Employee benefits [ss DC 6, CX 31]

(1) Funds [s DC 6]

A deduction is allowable for any amount that an employer pays to, or sets aside as a fund to provide individual personal benefits to, employees. The fund must not be a superannuation scheme and the rights of the employees to receive the benefits must be fully secured.

(2) Income protection insurance [s CX 31]

Income protection insurance premiums paid by employers on behalf of their employees are deductible but not subject to fringe benefit tax provided that any claims under the policies are treated as assessable income of the employees.

240.75 Chatham Islands dues [s DB 4]

A deduction is allowed for dues levied under the Chatham Islands Council Act 1995 for any goods used by the taxpayer in connection with a business. The dues are not to be taken into account in calculating the cost of goods for the purpose of allowing any other deduction for those goods.

240.80 Costs of tax liability determination [s DB 3]

Any taxpayer (including taxpayers deriving salary and wages only) may claim a deduction for expenses incurred in connection with:

(a) The calculation or determination of the income of the taxpayer for any tax year;

(b) The calculation or determination of GST payable by the taxpayer for any taxable period;

(c) The preparation, institution, or presentation of an objection or challenge to, or an appeal against, any determination or assessment made under the ITA 2007, TAA 1994, or GSTA 1985;

(d) Any contribution by the taxpayer to the expenses of another taxpayer concerning the calculation or determination of that other taxpayer’s income or GST payable where the matter involved affects the determination of the taxpayer’s own income and the taxpayer has objected to or challenged or appealed against an assessment or determination.

The kinds of expenditure and costs allowable are legal fees, accountancy fees, expert or other witnesses’ fees, Court costs, and other expenses. The expenses must be directly related to the preparation, institution, and presentation of an objection or appeal against an assessment or determination, or in connection with the calculation or determination of the taxpayer’s income for tax year. It is not vital that a dispute actually reaches the Court or TRA. Expenditure incurred in obtaining specialist tax advice or a legal opinion before the matter is resolved one way or another is deductible. Only net costs and expenses are allowable. Any amount received by way of reimbursement or awarded by the Court is to be taken into account as income in the income year in which it is received. This avoids the necessity for adjusting previous years’ assessments.
Deductions

Section DB 3 further provides that no deduction is allowed in connection with:

(a) Any matter or assessment arising from a return of income which was fraudulent or wilfully misleading.

(b) Any offence under any of the tax legislation.

(c) Any assessment of penal tax, but such costs would be allowable if the taxpayer objects to the assessment on the grounds of not being chargeable with penal tax and wins the case. However, there would be no claim if the penal tax assessment was merely reduced.

(d) Any objection or appeal which, in the opinion of the CIR, is of an inconsequential or frivolous nature.

(e) Any GST assessment or matter if the taxable activity for GST purposes does not constitute a business for income tax purposes. Where the CIR refuses to allow a deduction, the taxpayer can challenge the assessment in the ordinary way, on the ground that the costs are properly deductible under the section.

A deduction was disallowed in TRA Case J8 (1987) 9 NZTC 1,048 on grounds that the company was a "shell" company with prior tax losses which in the year of deduction had not established itself to be in business.

A taxpayer’s loss of work time in attending tax dispute hearings is not deductible: TRA Case S75 (1996) 17 NZTC 7,469.

240.85 Misappropriation and theft by employees and contractors [s DB 42]

A deduction is allowed for any loss incurred by the taxpayer in the course of carrying on a business where the loss results from the misappropriation of any property by any person employed by, or rendering services to, the taxpayer for the purposes of the business. Examples of such losses may include stolen cash or cheques used to pay private expenses, and stolen trading stock or assets.

The loss is allowed as a deduction for the income year during which it is ascertained, or in such earlier years as the CIR considers fair.

Any amount recouped by the taxpayer on account of that loss, whether by way of insurance, indemnity, reimbursement, recovery, or otherwise, is deemed to be income derived by the taxpayer in the income year in which the amount was recouped [s CG 4].

No deduction is available under s DB 42 where the property is misappropriated by any person who is associated with the person who operates the business [see 70 ASSOCIATED PERSONS].

In Curtis v J & G Oldfield Ltd (1925) 9 TC 319 a debt owing by the principal shareholder to a company was held not to be deductible.

In Ash v Commissioner of Taxation (New South Wales) (1938) 61 CLR 263, (1938) 1 AITR 447 (HCA) at 273, 451, the Court observed that:

"... purloinings by office boys and thefts by shop employees should, prima facie, be allowed as deductions. They may be shown to be incidental to, and perhaps inevitable in, the operations which produce income. But the case is different when income is actually received and then misapplied by the proprietor of a business or a person in such a position as a proprietor, as, for example, the manager of a company."

In Bamford v ATA Advertising Ltd (1972) 48 TC 359, a company could not claim a deduction for an amount misappropriated by a director in charge of the financial affairs of the company.

In WG Evans & Co Ltd v Commissioner of Inland Revenue (1976) 2 NZTC 61,080, (1976) 1 TRNZ 358 (SC), a deduction was allowed to a company for funds embezzled by its accountant who was also a nominal shareholder.

In Gray v Penrhyn [1937] 3 All ER 468 (KB), it was held that, where auditors made good misappropriated amounts that their clerk, during inspection of the books, failed to discover, repayments to the client represented income to the client and should be offset against any deduction claimed for the loss.

In Charles Moore & Co (WA) Pty Ltd v Federal Commissioner of Taxation (1956) 95 CLR 344 (HCA), a deduction was allowed for the theft of a day’s takings while being taken to the bank by an employee.
In *Gold Band Services Ltd v Commissioner of Inland Revenue* [1961] NZLR 467 (SC), losses from the armed robbery of a service station were deductible.

In *TRA Case K39* (1988) 10 NZTC 336, (1988) 11 TRNZ 682, an allowance of 2.5 per cent for theft by milk deliverers and two per cent for other categories of cash loss was held to be reasonable in relation to a gross margin basis assessment of a milk vendor.

In *TRA Case K6* (1988) 10 NZTC 129, (1987) 11 TRNZ 373, the CIR made the taxpayer an annual allowance to cover theft. The TRA found that the fixed allowance was artificial and greater regard should have been given to the circumstances of the vendor’s business, particularly its fluctuating returns.

In *TRA Case N40* (1991) 13 NZTC 3,344, (1991) 15 TRNZ 935, a taxpayer could not obtain a deduction for lost money invested in a finance company which went into liquidation. Because the taxpayer’s business was not an investment business, the losses could not be counted as losses of trading stock or on revenue account. Nor could the finance company or its proprietor be said to be employed or engaged in service in the taxpayer’s business.

### 240.90 Theft and burglary losses

The CIR will consider losses by theft (other than by employees), where all of the following apply:

(a) It can be established that the loss was through a normal business hazard, such as unavoidable holding of cash on premises overnight and losses in transit;

(b) There is satisfactory corroborative evidence of the theft and the amount involved;

(c) The loss is not a loss of fixed capital assets; and

(d) The loss is not recoverable by insurance.

Capital losses, whether due to burglary or other causes, are not deductible. In *Calkin v Commissioner of Inland Revenue* (1984) 6 NZTC 61,781 (CA), funds were advanced to an agent for investment and were misappropriated. The taxpayer suffered a loss of capital and the losses were not deductible.

A landlord is not entitled to deduct the loss incurred as a result of personal effects stolen by a tenant. In *TRA Case G80* (1985) 7 NZTC 1,369, the taxpayer rented his own flat to tenants during a temporary absence overseas. Personal effects and clothing belonging to the landlord were stored on the premises. The tenants damaged and stole many of these items. The TRA held there was insufficient relationship between the loss and the taxpayer’s income earning process to claim a deduction for the loss.

Any insurance or compensation received for the loss of trading stock or other article, where the cost of the asset lost has been taken into account in calculating the income, is taxable.

### 240.95 Environmental expenditure [ss DB 46, CB 8]

#### (1) Expenditure incurred from 10 June 2005

The following rules apply to environmental expenditure incurred in any income year starting on or after 10 June 2005. For expenditure incurred before 10 June 2005 see *Staples Tax Guide* (2006) 240.95.

Four broad categories of environmental expenditure are included in s DB 46 and sch 19. These are:

(a) Testing and feasibility expenditure;

(b) Construction or improvement expenditure;

(c) Monitoring expenditure; and

(d) Restoration and remediying expenditure.

Subject to the conditions set out below being satisfied, expenditure falling under any of the above categories (except construction or improvement expenditure), are immediately deductible. Construction or improvement expenditure is required to be amortised over the lesser of 35 years and the length of the applicable resource consent. Where no resource consent is required for an item of expenditure, the amortisation period is 35 years. The percentage amortisation rate is, at the taxpayer’s option, either the straight line rate or the diminishing
Deductions 240.97

value rate, that is nearest to the calculated rate. Taxpayers are able to apply to the CIR for a different category-specific amortisation rate where appropriate.

Landfill cell construction expenditure is able to be amortised. The amortisation rate is, at the election of the taxpayer, either 63.5 per cent straight-line equivalent or 63.5 per cent diminishing value depreciation rate. The amortisation regime applies to cell construction costs by way of excavation, cell lining and leachate drainage [see Determination 05/02 in TIB vol 17:10 (December 2005) at 50].

To be eligible for the deductions, all of the following conditions must be satisfied:

(a) The taxpayer must carry on business in New Zealand;
(b) The expenditure must be incurred as part of the business, or as part of ending the business operations, of the taxpayer;
(c) The expenditure must be of a type listed in sch 19, Part A or Part B;
(d) The expenditure must not be of a type listed in sch 19, Part C (excluded expenditure) being land acquisition or reclamation and dredging which is not for the purpose of avoiding, remedying or mitigating the effects of a discharged contaminant;
(e) The expenditure must not be incurred in relation to property held on revenue account (unless subject to an election under s CB 8); and
(f) The expenditure must not be deductible or depreciable under any other section of the Act.

The remaining balance of any expenditure that is required to be amortised is able to be written-off for tax purposes where either the business operations for which the expenditure was incurred cease or the improvement is destroyed or rendered useless.

To prevent taxpayers from accelerating the amortisation rate by applying for a short-life resource consent and later applying to have its life extended, a clawback mechanism is contained in s CB 28. This section provides that, where a business has claimed a deduction based on the resource consent period, and the consent period is extended or renewed by more than 50 per cent, the taxpayer is required to recalculate the deductions using the 35-year rate. The difference between the deductions claimed to date and the deductions that would have been allowable had the 35-year rate been used is taxable income.

Special provisions for landfill operators are contained in s CB 8. This section grants landfill operators the ability to claim a deduction for the cost of land used as a landfill. In order to avail themselves of the provision, the taxpayer must file an election to treat the land as being on revenue account. An election must be filed in respect of all landfill sites of both the taxpayer and any associated person of the taxpayer. The elections must be filed by 24 June 2006 or 12 months after the date on which the person acquires the land, whichever is later. Further conditions, all of which must be satisfied are as follows:

(a) The land is used as a landfill prior to disposal;
(b) The land is not being used as a landfill at the time of disposal; and
(c) The land is not disposed of to a person who is an associated person under subpart YB [see 70.20].

Where the conditions are satisfied, s CB 8 provides that the proceeds (if any) of the sale are income. Accordingly, the cost of the land is deductible. Examples of the operation of the environmental expenditure regime are contained in TIB vol 17:7 (September 2005) at 23-28.

240.97 Environmental restoration accounts [ss CB 28, CX 52, DQ 4, EK 1 to EK 23]

It is often the case that environmental restoration expenditure results in tax losses that are not able to be used because the underlying business operations of the taxpayer have ceased. In response to this problem, an environmental restoration account scheme has been introduced. Under the scheme, taxpayers are able to make deposits into an Environmental Restoration Funds Account which is held by the CIR in the taxpayer’s name. A deduction is allowed in respect of the deposit with the amount of the deduction being calculated by dividing the amount of the deposit by the highest rate of income tax which could apply to the business. This results in the deposit being entirely funded by the reduction in tax.
Example 1:
XYZ Ltd makes a deposit of $10,000. The allowable deduction is $35,714 ($10,000 / 28%).

(1) Eligibility
The eligibility requirements are contained in s EK 2. In order to be eligible to make a deposit under the scheme, the taxpayer must be carrying on a business in New Zealand and expect to incur in a later income year expenditure for the purposes of avoiding, remedying or mitigating detrimental effects of discharge of a contaminant. The expenditure must not relate to:
(a) Land reclamation or acquisition (other than under an election made under s CB 8 [see 240.95]); or
(b) Dredging, other than dredging for the principle purpose of remedying or mitigating detrimental effects on the environment from a discharged contaminant.

The expected expenditure must be provided for by way of a provision in the taxpayer’s audited financial statements. The minimum deposit is $1,000 [s EK 3]. The maximum deposit is the lesser of:
(a) The amount by which the “maximum account balance” exceeds the balance in their ERA account at the end of the income year; and
(b) The amount permitted under the initial five year spreading mechanism.

The “maximum account balance” for an eligible taxpayer is calculated by multiplying the level of the accounting restoration provision by the applicable tax rate. An initial five-year spreading mechanism applies to limit the fiscal effect of allowing deposits to be made for historic restoration liabilities.

(2) Payments and Transfers
Payments into the account may be made during the income year and up to six months following the income year. Payments after this period can be accepted at the discretion of the CIR. The following information must be provided within two working days of the payment:
(a) Name of the taxpayer;
(b) Income year for which the deposit is made;
(c) A calculation of the business’s maximum payment; and
(d) Any additional information required by the CIR.

The CIR has the ability to require that the information be provided in electronic format. An automatic refund will be made if the required information is not supplied or the payment exceeds the business’s maximum payment amount.

Amounts held in an ERA can be transferred to any of the following:
(a) The ERA of another business provided that the associated environmental obligations have also been transferred and that other business would be entitled to make an equivalent ERA payment;
(b) The department responsible for the administration of the Environment Act 1986; or
(c) The ERA of an amalgamated company.

Any application must be made in writing, state the grounds on which the application is made; and state the amount to be transferred.

The transferee is able to take a deduction for the grossed-up amount of the transfer while the transferor is deemed to have derived income of the grossed-up amount. Any non-qualifying amount will be returned to the transferor.

Compulsory transfers occur on the death, bankruptcy or liquidation of the taxpayer. If the administrator of a person’s estate, the Official Assignee, or the person’s liquidator, notifies the CIR that the obligation associated with an ERA deposit has been transferred to another person, the ERA balance will be transferred to that person and will be treated as a payment by that person into their environmental account. Where a company ceases to exist on an amalgamation, any ERA account balance is transferred to the amalgamated company. The minimum transfer is the lesser of $1,000 and the balance of the account.
In a consolidated group, the nominated company makes the payments and receives the refunds on behalf of the group.

(3) Refunds

Refunds are able to be made where the taxpayer has incurred monitoring or restoration expenditure that is not listed in sch 19, Part C. The expenditure must be incurred after the date on which the ERA is first established. It must not be less than the amount calculated by dividing the amount of the requested refund by the applicable tax rate. Any refund request must be made in writing, state the grounds for the refund and provide evidence to support those grounds. The CIR can make automatic refunds where a person’s ERA balance exceeds their maximum account balance.

Interest at the rate of three per cent per annum is paid on ERA balances. The interest is not added to the account balance but, rather, is paid out on the earlier of 31 March each year or the date on which the relevant payment is refunded or transferred.

For examples see TES 28 (July 2005) 429, 430, 431, 432.

240.100 Payments between spouses [ss DB 57, DC 5]

A deduction is not allowed for payments by a taxpayer to their spouse [see 960.10], unless the following conditions are met:

(a) The CIR’s consent is obtained before a deduction is claimed;
(b) The CIR is satisfied that the payment is for services rendered or is otherwise a bona fide payment;
(c) The services are not domestic services or services performed in connection with the home; and
(d) The payment was exclusively incurred in the derivation of assessable income.

Any deduction for a payment by a taxpayer to their spouse is subject to the restrictions in s GB 23.

Thus, the CIR’s prior approval is required before claiming a deduction for salary or wages paid by one spouse to the other. The payment of any increase in the salary also requires the CIR’s prior approval.

It is a condition of the allowance that the taxpayer first establishes with the CIR that the payment is genuine and at an arm’s length rate having regard to the skills and responsibilities provided. A deduction is not permitted for domestic services or services in connection with the home performed by the spouse, except that a deduction is allowable for wages paid by a farmer to the spouse for cooking for farm employees.

Example:

A claim may be made for wages paid to a spouse who keeps the books of the business at home, to the spouse of a doctor who acts as a receptionist at the home, or who answers the telephone at home.

The following procedures are necessary:

(a) The Act specifically provides that “payment” must be made. The mere crediting of an account in the name of the spouse is not sufficient. However, in certain cases, a crediting in account is equivalent to payment and, provided the following conditions are satisfied, the deduction is allowed:

(i) The spouse has control over amounts received;
(ii) The spouse agrees to the amounts received being used in a certain way;
(iii) The application letter is in order;
(iv) A statement of how amounts received by the spouse are to be used is signed by the recipient and sent in with the taxpayer’s application.

(b) The payment must be a reasonable sum for the services rendered, having regard to the current level of wages payable to an employee at arm’s length. There must be no element of gift in the payment.

(c) The recipient spouse must have an IRD number, complete the necessary tax code declaration, and have PAYE deducted in the same way as any other employee.

(d) Where the payment is not for services but is a bona fide payment of rent or interest and there is no question as to the source of the assets of the spouse and the payment is reasonable, a deduction may
be allowed without the necessity for prior approval. However, this is not a strict application of the section.

Application for approval must be supported by a statement or simple declaration signed by the taxpayer or agent setting out:

(a) The nature of the business in which the spouse is employed. If it is a farming business, the particular type of farming and, where it is dairying, the number of cows milked. This is material for the purpose of determining the amount of labour necessary. Standard share-milking agreements specify the number of milkers according to the number of cows, and this will be regarded as setting a reasonable standard.

(b) Precise and full details of duties carried out by the spouse.

(c) Number of hours worked by the spouse during the average week, and the number of weeks to be worked during the year.

(d) Particulars of other labour employed and amount paid as wages, apart from wages paid to the spouse.

(e) Mode of payments of wages to the spouse, eg in cash at regular intervals, periodically, or by crediting an account.

(f) Amount of wages paid to the spouse.

(g) The scope and extent of domestic duties carried out by the spouse in addition to the duties relating to the business.

240.105 **Bursaries for employees**

Bursaries and similar payments offered by employers to attract staff are deductible to the employer, being expenditure “incurred in carrying on a business”. The expenditure is deductible whether paid to or on behalf of an existing employee or for a prospective employee on condition that he or she stays with the employer for a specified time (whether or not a formal deed is completed).

240.110 **Office expenses**

Office expenses may be deductible for income tax purposes on the ground that they are incurred in the derivation of assessable or excluded income. However, where the only source of income is interest and dividends, the investments of themselves do not make the use of an office essential. Office expenses incurred in deriving this type of income are in the nature of voluntary expenses rather than amounts necessary for the production of income and are therefore not deductible. The interest and dividends will be received whether there is an office or not: *Commissioner of Inland Revenue v Banks* [1978] 2 NZLR 472, (1978) 3 NZTC 61,236, (1978) 2 TRNZ 323 (CA).

240.115 **Business relocation expenses**

The following costs are likely to be incurred when a business relocates:

(a) Physical relocation of employees, trading stock and plant.

(b) Disposal costs associated with old premises.

(c) Acquisition costs associated with new premises.

The CIR has issued Interpretation Statement IS 10/06 setting out the CIR’s opinion regarding the deductibility of items included in the first of these three categories. These costs are likely to include:

(a) Packing and unpacking.

(b) Freight.

(c) Temporary storage.

(d) Insurance specifically related to the move.

(e) Hire of forklifts, containers and other machines specifically for the purpose of the move.

(f) Labour (either employees or contractors) to dismantle, move and reassemble items.
(g) Relocation costs for employees such as physical moving of chattels and temporary accommodation. The Interpretation Statement does not consider the deductibility of costs associated with vacating the old premises such as lease termination payments. Neither does it consider the cost of readying the new premises for occupation.

The Statement concludes that the deductibility or otherwise of the costs is governed by the reason for which the expenditure was incurred. If the relocation is undertaken to enable the business to carry on as usual from a new location, the expenditure will be deductible. This will be the case whether or not the business is growing and requires larger premises to accommodate the growth. If, on the other hand, the relocation is undertaken as part of a plan that changes the structure of the business to enable it to operate in a different way, the relocation expenses will be capital in nature and not deductible. An example would be where the business is expanding the product range that it produces and requires larger premises to accommodate the new plant and equipment.

The full text of the Statement, including examples, can be found in TIB vol 22:8 (September 2010) at 20-38. The Statement takes effect from the beginning of the 2010-2011 income year.

The costs of moving a building are capital and are capitalised to the buildings account. If the original installation costs have been capitalised and depreciation written-off and allowed for tax purposes, any loss is capital and no further allowance can be made where the buildings are removed, or have been demolished or abandoned.

240.120 Outward Bound course fees for employee

The fee paid by an employer to the Outward Bound Trust for an employee sponsored by the employer is treated as part of staff training expenditure and therefore becomes an allowable deduction to the employer. However, any fee paid to the Trust for a person who is not an employee cannot be an allowable deduction under this rule [see TIB vol 4:5 (December 1992) at 43].

240.125 Cost of ceremonies for new buildings

There are three stages in the erection of a new building which are customarily made the occasion for some form of ceremony:

(a) The cost of “laying the foundation stone” and “topping off” ceremonies should be capitalised to the building account and depreciated; and

(b) The opening day expenses including cost of entertainment, scaffolding, seating, the printing of special brochures, and labour may be claimed as a deduction. However, the allowable deduction for entertainment expenditure may be limited to 50 per cent of that expenditure [see 350 ENTERTAINMENT EXPENDITURE and TIB vol 6:9 (February 1995) at 18].

240.130 Fidelity fund levies

Levies imposed by the New Zealand Law Society fidelity fund are allowable deductions. These deductions are allocated to the income year in which the levy is incurred. This is regardless of whether payment is made in one sum or by instalments over a number of income years. The levies are neither fines nor penalties on individual practitioners. Each practising member is liable to make payment by virtue of being a practising member. The payments are a prerequisite for obtaining a practising certificate for a solicitor and so lack the voluntary nature of a gift or donation [see TIB vol 4:7 (March 1993) at 1].

240.135 Telephone and toll charges

Business telephone and toll charges are deductible. When the telephone is installed in a private residence, deductibility may be limited. A deduction for any expenditure or loss to the extent to which it is of a private or domestic nature is not permitted. A telephone installed in a private home need not be registered as a business telephone in order for the rental to be deductible. The extent to which it is used for business purposes is a question of fact and, if there is significant private use, an apportionment of the rental should be made and only the business portion claimed.
Deductions

Inland Revenue sets a standard apportionment of 50 per cent of telephone rental being business related and 50 per cent being private for commercial or domestic telephones installed in residences. If a commercial line is installed in addition to a domestic line, 100 per cent of the commercial line may be claimed. All of the telephone rental for farmers may be claimed as a business expense. The account for tolls should be analysed between business and private calls, and the latter excluded from the claim. In situations when a different apportionment of the rental better reflects the factual situation, the 50-50 apportionment may not be adhered to by Inland Revenue.

In *TRA Case H107* (1986) 8 NZTC 712, the taxpayer was employed by a Catchment Authority. On employing the taxpayer, the Catchment Authority had arranged to list his private telephone number under the Catchment Authority’s entry as an after-hours number. The TRA allowed a deduction of additional charges incurred for extra private listing by the employee.

Where the employee is liable for payment of the telephone account and the employer reimburses the employee for, or otherwise pays, the employee’s home telephone costs, the payment is employee remuneration and the employer must deduct PAYE. The employer is not liable for FBT on the payment. Where Inland Revenue is satisfied that all or part of the reimbursement or payment by the employer is justified for business purposes, that part is not income of the employee and not subject to tax.

Where the employer is liable for the telephone account, the payment of the rental and toll accounts is a fringe benefit. Any amount that cannot be justified as an exempt allowance is subject to FBT. In this situation, the employee is not liable for income tax on any amount that the employer pays [see TIB vol 4:8 (April 1993) at 4].

For a telephone to be neither subject to income tax in the hands of the employee nor FBT in the hands of the employer, Inland Revenue must be satisfied that the reimbursements or payments are justified. This is a question of fact and consideration is given to the type of business that the employer is running, the seniority and responsibilities of the employee, and the extent to which the phone is used for business purposes outside normal office hours. The employer must keep a schedule of employees who receive telephone rental reimbursements or payments. Information should include:

(a) The employee’s name and address;
(b) The amount of employer contribution to telephone cost; and
(c) A statement of the employment related use of the telephone.

240.140 Daycare facilities [TAA, s 91AA]

Businesses providing daycare facilities may deduct the normal “revenue” items associated with providing the daycare service. Capital costs incurred in construction of the facility would be treated in the normal way for capital expenditure. Where a taxpayer provides such services in their own home, the taxpayer is entitled to use actual costs for the purposes of determining deductible expenses, or alternatively to use standard costs determined by the CIR.

The CIR has issued determination DET 09/02: *Standard-Cost Household Services for Childcare Providers* which sets out the costs that may be deducted under the standard cost basis [see TIB vol 21:4 (June 2009) at 10]. Determination DET 09/02 applies to the 2010 and later income years. It remains in force until it is replaced, but is adjusted annually as at 31 March to take into account movements in the Consumer Price Index (CPI).

In order to use DET 09/02 the:

(a) Taxpayer must be a natural person who is not registered for GST; and
(b) Childcare service must be carried on in the taxpayer’s home and involve activities that normally occur in a family household.

Childcare must be provided in accordance with either:

(a) The Education (Home-Based Care) Order 1992; or
(b) The Licensing Criteria for Home-based Education and Care Services 2008.
Where applicable, GST is included in the costs provided in DET 09/02.

Taxpayers have the option of using the determination or, alternatively, deducting actual costs incurred. The election is made on a year-by-year basis. Where the determination is used, no costs other than those set out in the determination are able to be deducted. If taking a deduction for the costs set out in the determination results in a loss, the loss is unable to be offset against other income and is not available for carry forward to a future income year.

The standard costs that may be deducted are broken down into variable costs and fixed costs.

(1) **Variable standard cost**

The variable standard cost for the 2010-2011 income year is $3.29 per hour per child [see TIB vol 23:5 (June 2011) at 9]. This covers the costs of electricity, fuel, food, wear and tear, outings and associated transport costs, laundry, educational resources, modification costs, equipment, and first aid.

(2) **Fixed standard costs**

The fixed standard costs are calculated on an annual basis and do not vary according to the number of children cared for. The fixed standard costs are broken down into two parts:

(a) Administration and record keeping of $321 per annum for the 2010-2011 income year. This covers the cost of telephone usage, postage and stationery, computers, and other incidental administration costs; and

(b) Fixed standard domestic accommodation cost. The amount of the accommodation cost depends on whether the childcare provider owns or rents the home.

Where the provider owns the home, the fixed standard domestic accommodation cost is determined by way of the following formula which includes a reduction for any accommodation supplement received:

\[ ((a \times 5\%) - b) \times 50\% \times 33.33\% \]

Where:

- \( a \) = the purchase price of the property.
- \( b \) = the annualised amount of any accommodation supplement received (ie the weekly accommodation supplement \( \times 52 \)).
- \( 5\% \) = the cost of owning a domestic property including depreciation, rates, insurance, mortgage interest, etc.
- \( 50\% \) = the percentage of use of the house area as per the Order in Council. This covers use of all indoor and outdoor areas.
- \( 33.33\% \) = the availability factor based on 55 hours per week (7.30 am to 5.30 pm Monday to Friday, and 7.30 am to 12.30 pm Saturdays and Sundays).

Where the provider rents the home, the fixed standard domestic accommodation cost is determined by way of the following formula which includes a reduction for any accommodation supplement received:

\[ (a - b) \times 50\% \times 33.33\% \]

Where:

- \( a \) = the annualised rental payment (ie weekly rent \( \times 52 \)).
- \( b \) = the annualised amount of any accommodation supplement received (ie the weekly accommodation supplement \( \times 52 \)).
- \( 50\% \) = the percentage of use of the house area as per the Order in Council. This covers use of all indoor and outdoor areas.
- \( 33.33\% \) = the availability factor based on 55 hours per week (7.30 am to 5.30 pm Monday to Friday, and 7.30 am to 12.30 pm Saturdays and Sundays).
(3) Miscellaneous issues

The allowable variable standard cost and fixed record-keeping standard cost will be increased in line with the All Group Consumers Price Index as at 31 March of each year.

The purchase price of a domestic property includes any improvements made to it. Taxpayers will need to keep a record of any improvements and their cost.

Where the taxpayer incurs costs not included in the CIR’s determination, the costs may be claimed in addition to the standard costs. Adequate records must be kept. The example given in the commentary to the determination is the cost of complying with the training requirements of the Education (Home-Based Care) Order 1992.

Where specific costs are reimbursed by the guardian (for example the admission fee to a venue for an outing) the reimbursement amount is not taxable and the cost is not allowable as a deduction.

Where the standard cost deduction results in a zero income tax liability, the childcare provider is not required to file a return of income provided that the person had no other income from which tax has not been deducted at source.

Example 1:
Mary owns her own home and cares for two children from 7.30 am to 5.30 pm Monday to Friday and from 8.00 am to 12 noon on Saturdays (54 hours per week). She owns her own home which cost $250,000, and receives $50 per week accommodation supplement.

The standard cost deduction to which Mary is entitled is calculated as follows:
(a) Variable standard cost of $3.29 per child per hour:
$$3.29 \times 2 \times 54 = $355.32 \text{ per week} = $18,476.64 \text{ per annum.}$$
(b) Fixed administration cost: $321.00 per annum.
(c) Fixed accommodation cost:
$$((\text{cost of home} \times 5\%) - \text{accommodation supplement}) \times 50\% \times 33.33\% = \left((250,000 \times 5\%) - (50 \times 52)\right) \times 50\% \times 33.33\% = \left((12,500 - 2,600)\right) \times 50\% \times 33.33\% = $9,900 \times 50\% \times 33.33\% = $1,649.83 \text{ per annum}.$$

If Mary cares for the children for the full 52 weeks of the year, her annual standard cost deduction will be $18,476.64 + $321.00 + $1,649.83 = $20,447.47.

Example 2:
Mary rents her home at a rental of $250 per week. The deduction would be as follows:
(a) Variable standard cost of $3.29 per child per hour:
$$3.29 \times 2 \times 54 = $355.32 \text{ per week} = $18,476.64 \text{ per annum}.$$
(b) Fixed administration cost: $321 per annum.
(c) Fixed accommodation cost:
$$((\text{annualised rental} - \text{accommodation supplement}) \times 50\% \times 33.33\% = \left((250 \times 52) - (50 \times 52)\right) \times 50\% \times 33.33\% = \left((13,000 - 2,600)\right) \times 50\% \times 33.33\% = $10,400 \times 50\% \times 33.33\% = $1,733.16 \text{ per annum}.$$

If Mary cares for the children for the full 52 weeks of the year, her annual standard cost deduction will be $18,476.64 + $321.00 + $1,733.16 = $20,530.80.

(4) Presbyterian Support (Upper South Island) Homeshare programme

Determination DET 09/01: Standard-Cost Household Service for Homeshare Care Providers provides a similar standard-cost scheme for services provided by homeshare providers via the Presbyterian Support (Upper South Island) Homeshare programme which operates in the mid-Canterbury area. The programme
Deductions

involves the provision of a day activity programme for older people [see TIB vol 21:3 (May 2009) at 15-19].

240.143 **Boarding service providers** [TAA, s 91AA]

Natural persons providing private boarding services may deduct the normal “revenue” items associated with providing the boarding service. Capital costs incurred in construction of the facility would be treated in the normal way for capital expenditure. Where a taxpayer provides such services in their own home, the taxpayer is entitled to use actual costs for the purposes of determining deductible expenses, or alternatively to use standard costs determined by the CIR.

The CIR has issued determination DET 05/03: *Standard-Cost Household Service for Boarding Service Providers* which sets out the costs that may be deducted under the standard cost basis [see TIB vol 17:10 (December 2005) at 54-64]. In order to use the determination the:

(a) Taxpayer must be a natural person who is not registered for GST;
(b) Boarding service must be carried on in the taxpayer’s home. It can involve services that normally occur in a family household such as meals, laundry, and utilities;
(c) Boarding service provider must not have on average five or more boarders in residence during the income year; and
(d) Service must not be accommodation as an extension of any specialised healthcare or institutional halfway house to facilitate rehabilitation.

Where standard costs are used, any resulting loss is unable to be offset against other income and is not able to be carried forward. Taxpayers make the election by adopting the method in calculating their income. Taxpayers are able to choose between the two methods on a year-by-year basis. The standard costs that may be deducted are broken down into the weekly standard cost and annual capital standard cost.

1) **Weekly standard cost**

The weekly standard cost for the 2010-2011 income year is $243 per week for each of one or two boarders and $198 per week for the third and subsequent boarders [see TIB vol 23:5 (June 2011) at 9]. This component covers expenditure on items and services typically provided to boarders, such as food, laundry, cleaning, heating, power, transport, telephone rental, use of bedroom chattels, general household furniture, linen and incidentals. The amounts are retrospectively adjusted for each income year once the “Consumer Price Index” (CPI) movement for the 12 months to March is known.

Where a taxpayer elects to use this method and the weekly payments for the relevant number of boarders in any week do not exceed the standard-cost amount, the income is exempt.

2) **Annual capital standard-cost**

The annual capital standard-cost element represents the cost for the use of the domestic accommodation in providing the private boarding service and includes financing and depreciation costs. This is an annual calculation for the use of the domestic accommodation, based on:

(a) The actual cost to the boarding service provider of acquiring and making capital improvements to the domestic accommodation or renting the domestic accommodation in which the boarding services are provided;
(b) The proportion of boarders who reside in the accommodation in relation to the overall average number of occupants, and
(c) The proportion of the actual period during which private boarding services are provided in an income year.

The annual capital cost calculated must be reduced by the amount of any accommodation supplement received by a boarding service provider.
(3) **Boarding service provider who owns their domestic accommodation**

Where a boarding service provider owns their domestic accommodation, the annual capital standard-cost for any income year must be determined in accordance with the following formula:

\[ \left( (a \times 5\%) - b \right) \times c \times d \]

Where:
- **5%** represents the typical expenditure incurred in owning a domestic property, including depreciation of the building and outgoings such as rates, insurance, mortgage interest cost, repairs and maintenance;
- **a** is the purchase price of the domestic accommodation plus the cost of all capital additions;
- **b** is the annualised amount of accommodation supplement received by the boarding service provider (weekly amount received multiplied by 52 weeks);
- **c** is the average percentage of boarders in relation to the overall average number of occupants living in the domestic accommodation during the income year;
- **d** is the number of full weeks during which private boarding services were provided in an income year, divided by 52.

(4) **Boarding service provider who rents their domestic accommodation**

Where the boarding service provider rents their domestic accommodation, the annual capital standard-cost for any income year must be determined in accordance with the following formula:

\[ (a - b) \times c \times d \]

Where:
- **a** is the annualised rental payment (weekly rent paid × 52 weeks);
- **b** is the annualised amount of accommodation supplement received by the boarding service provider (weekly amount received × 52 weeks);
- **c** is the average percentage of boarders in relation to the overall average number of occupants living in the domestic accommodation during the income year;
- **d** is the number of full weeks during which private boarding services were provided in an income year, divided by 52.

The standard-cost for boarding service providers is calculated inclusive of GST (if any).

**240.145 Asset valuation fees** [s DB 5]

A deduction is allowed for expenditure incurred on obtaining a valuation of assets where the valuation relates to borrowing money that is used in deriving assessable and/or excluded income.

The cost of an asset valuation undertaken to enter into a policy of insurance is not deductible, although the premiums payable in respect of such policy may be allowed as a deduction. However, if the policy provides for an annual valuation of the assets covered by the policy, the annual costs of valuation are deductible.

**240.150 Expenditure on diploma course non-deductible**

The TRA has held that expenditure incurred on a diploma course by an architect prior to the establishment of his business is non-deductible. The taxpayer undertook the course to enhance his prospects of becoming a self-employed architect: *TRA Case Q18* (1993) 15 NZTC 5,100.

**240.155 Financial investment advice**

Expenditure paid to a financial and property management company to find and manage a suitable realty investment was apportionable between non-deductible capital expenditure and deductible revenue expenditure: *TRA Case R21* (1994) 16 NZTC 6,102.

Expenditure paid to a financial adviser for investment portfolio management services is deductible as it is part of an income earning process: *Commissioner of Inland Revenue v North* (1999) 19 NZTC 15,219 (HC). However, a deduction is not allowed for expenditure paid to financial advisers in relation to the
commencement of a new or significantly changed investment structure or strategy because such expenditure is not incurred in the income earning process: TRA Case T64 (1998) 18 NZTC 8,493; TRA Case U12 (1999) 19 NZTC 9,140.

240.160 Brokerage
Brokerage, being a cost of arranging an investment, or acquiring shares or investments, is not allowable as a deduction except in the case of:

(a) A person whose business consists of or includes dealing in shares and investments;
(b) A single venture, where the whole of the expenses are of a revenue nature; and
(c) Shares or investments that are revenue account property. For example, in Commissioner of Inland Revenue v Inglis (1992) 14 NZTC 9,180 (CA) and Commissioner of Inland Revenue v Stockwell (1992) 14 NZTC 9,190 (CA), the costs of shares were treated as an allowable deduction in determining the tax loss or profit from sales of shares. The decision of the Court in these two cases has been legislated in s DB 23 (cost of revenue account property).

240.165 Goods forfeited by law
In Nicholas Nathan Ltd v Commissioner of Inland Revenue (1989) 11 NZTC 6,213 (HC), goods forfeited by law by an importing company as a consequence of illegal importation were held to have been acquired for the purpose of resale and profit. Accordingly, their cost of acquisition (excluding fines and other penalties) was an allowable deduction.

240.170 Doctors
If fees are returned on a cash basis, a doctor is not allowed a deduction for a bad debt. The cash basis is considered to be an appropriate tax accounting practice for professional taxpayers who earn income as a direct result of their personal exertions, and do not have large levels of stock or accounts receivable, or use employees or assets in a significant way to generate their income: Federal Commissioner of Taxation v Firstenberg (1976) 6 ATR 297, 76 ATC 4,141 (VSC) and Federal Commissioner of Taxation v Dunn (1989) 20 ATR 356, 89 ATC 4,141 (FCA).

The following deductions may be relevant to medical practitioners in private practice:

(a) A doctor was allowed a deduction for part of the expenses of keeping and maintaining a guard dog to safeguard medical drugs and supplies as there was a sufficient relationship between the expenditure incurred and the gaining of income: TRA Case F24 (1983) 6 NZTC 59,671.
(b) The initial costs and additions for both libraries and instruments are not deductible but replacements may be claimed subject to the rules for low value asset write off [see 250 DEPRECIATION].
(c) Fines imposed on a doctor by the Medical Practitioners’ Disciplinary Committee or the New Zealand Medical Council are not deductible.
(d) Legal costs incurred by a professional person in resisting suspension from practice were held to be deductible: No 166 v Minister of National Revenue (1954) 10 Tax ABC 285.
(e) Claims for part of the outgoings on private residences can be made on a factual basis for surgery or rooms at the house specifically set aside and in fact used for the practice, or rooms that while not specifically set aside are used wholly or principally in the practice and to attend to patients. The allowable deductions are based on the proportion that the area of the room or rooms set aside and/or used in the practice bears to the total living area of the home. Expenditure subject to the apportionment would be rates, interest, insurance, heat and power, depreciation, and repairs and maintenance as far as they relate to the house generally (eg painting and repairing the exterior of the house). As far as the interior is concerned, generally repairs and maintenance relating to the surgery or rooms themselves and to the furniture and equipment in those rooms is fully deductible.
240.175 **Accrued holiday pay** [s EA 4]

The CIR interprets “holiday pay” as payment for holidays being the employee’s minimum entitlement under the Holidays Act 2003, and any payment for holidays provided for in an employment contract that are of a similar nature. Holidays are of two kinds: statutory holidays and annual leave.

The Holidays Act 2003 covers statutory holidays, namely: Anniversary Day, Christmas Day, Boxing Day, New Year’s Day, 2 January, Labour Day, Waitangi Day, Good Friday and Easter Monday, Anzac Day, and Queen’s Birthday Observance. The Holidays Act 2003 provides for a minimum of three weeks’ annual leave, or holiday leave provided for in an employment contract of a similar nature. If an industry or company provides for a certain day as a holiday (e.g., accountants’ or lawyers’ holiday, bank holiday, or company anniversary), payment for this day is also included as holiday pay.

Holiday pay does not include long service leave, retirement leave, sick leave, or any other accruing employee remuneration.

Once the amount of the liability for outstanding holiday pay is calculated, the employer must determine the amount of the unexpired expenditure portion of that liability. The unexpired portion is added back as income. This effectively means that the employer takes a deduction for the amount of any holiday pay incurred in the income year only to the extent that it has been taken and paid, or paid out in lieu of leave, either in that income year or within 63 days following the end of that income year.

The calculation of the unexpired expenditure for shareholder-employees takes into account amounts that are paid to the shareholder-employee before 31 March (i.e., the last day the company can have an extension of time for filing its tax return). This effectively means that the company takes a deduction for any shareholder-employee holiday pay incurred in the income year only to the extent that it has been taken (paid out) in that income year or before the relevant 31 March.

The practical effect of s EA 4 is that, while an employer may have incurred expenditure on account of holiday pay, the allocation of the allowable deduction is delayed until such time as payments for the holiday leave are made to the employee. The legislation does not specify what ordering system should be used for accrued holiday pay in cases where “stocks” of accrued holiday pay for which companies have previously been allowed a deduction exist. However, in accordance with the principle from *Clayton’s case; Devaynes v Noble* [1814-1823] All ER Rep 1, the crediting of holidays taken against holiday leave entitlements may be deemed to be paid out on a first-in first-out basis. An employer must use up the existing “stocks” for an employee before leave can be credited against newly accruing leave entitlements. The same first-in first-out rules apply to all accruals of employee remuneration.

240.180 **Accrued holiday pay on sale of business** [ss DC 10, CB 31, EA 4]

The deductibility of provisions for accrued wages and holiday pay, where employees transfer to the new owner on the sale of a business, depends on whether the vendor and the purchaser are associated persons.

Where the vendor and purchaser are not associated persons, the vendor is allowed a deduction for all provisions of employee remuneration where that liability is transferred to the purchaser. The deduction is allowed at the time of sale.

Where the vendor and the purchaser are associated persons, it is the purchaser of the business who is allowed the deduction for any liability transferred to it, provided that the amount would have been deductible to the vendor. The amount is treated as remaining unpaid by the purchaser, and subject to the prepayments rules, until such time as the purchaser physically pays the employees. For this purpose, the purchaser is permitted to account for the contingent and actual employee remuneration either on an employee by employee basis or on a group of employees basis, provided that the treatment is the same in each income year.

In either case, where the provisions for actual or contingent employee remuneration are less than the amount actually paid to the employees by the purchaser, the excess is treated as income of the purchaser at the time at which generally accepted accounting practice recognises the provision as being reduced.
240.185 Employee transfers [s DC 11]

Where employees are transferred to an associated person other than on the sale of the business, the associated person may deduct the amount of actual and contingent employee remuneration in respect of those employees, provided that the amount would have been deductible had the employees not transferred. For example, this would apply where employees are transferred to another company within a group of companies.

240.190 Directors’ fees

Generally, directors’ fees are deductible by the company. In the case of private companies where the directors are the principal or only shareholders, and so are in a position to determine their own remuneration, the question arises as to whether the sums voted as directors’ fees are what they purport to be, or are wholly or partly a distribution of profits. In the latter case, the CIR may reallocate the remuneration as a dividend.

In a private company when fees, salaries, and/or bonuses are voted to directors after the close of the accounting year, the question arises as to whether the amounts voted are deductible by the company in the year in which the remuneration was earned or the year in which they were voted. This question was discussed in TRA Case D3 (1979) 4 NZTC 60,424, (1979) 3 TRNZ 127, where, for some years before its accounting year ended 31 August 1975, the private company concerned had transferred its after-tax profit each year to its appropriation account in order to pay dividends to its shareholders. However, halfway through the accounting year, a budget was prepared which revealed the possibility that the accounts for the full year would disclose a loss. Economies were made, with the result that, when the accounts were completed after the close of the year, a profit was shown. The company decided, for the first time, to pay additional salaries to two of its directors, which it claimed as a tax deduction in its 1975 tax return. However, the CIR disallowed the deduction on the ground that, for the 1975 income year, the company failed to satisfy the deductibility test in that the expenditure had not been “incurred” in the year ended 31 August 1975 but in the year ended 31 August 1976. The CIR assessed the company on the additional salaries in the 1975 assessment, but allowed the amounts as a deduction in the 1976 assessment. The TRA upheld the assessments on the ground that, for an expenditure to be incurred during the income year, there must be a definite commitment by the taxpayer in the income year to meet the expenditure. No such commitment had been made by the company in the year ended 31 August 1975. The case shows the need for private companies to keep minutes of resolutions passed after the end of each accounting year voting extra salaries or fees to the directors in order to show a pattern of such amounts accrued in the accounts each year to provide the necessary evidence of a commitment by the company to meet the amounts.

In TRA Case J54 (1987) 9 NZTC 1,302, it was agreed orally at a directors meeting in the 1984 income year that all profits of a private company would be paid as directors’ fees but payment would be deferred for a reasonable period to allow consolidation of profitability. It was held that the resolution created an existing liability which had been incurred. Thus, deduction of the fees was allowed in the 1984 income year.

In TRA Case L99 (1989) 11 NZTC 1,566, a private company resolved in November 1979:

“that as from the financial year commencing 1 February 1979 directors fees be paid … the amount to be decided after consideration of financial results for the year ending 31 January 1980.”

In August or September of each succeeding year it approved the company accounts, by resolution, for the year ending the previous 31 January and resolved that the provision for directors’ fees as set out be approved. It was held that by this practice a liability to pay directors’ fees had been incurred in the year for which accounts were prepared. The CIR did not, in this case, challenge the quantum of fees on the grounds that the amount was not ascertained until after the end of a relevant income year. The TRA did not, therefore, determine whether the deduction would be limited to any amount (eg the amount paid in a previous income year).

240.195 Music and dancing teachers

Costs, including travel and accommodation (but not entertainment) to attend congresses or refresher courses, are deductible by self-employed dancing teachers. The cost of entering competitions, travelling, books, and other expenses by self-employed teachers are deductible, and prizes won are income. Tuition fees,
examination fees, travelling, books, and other expenses incurred in gaining qualifications are capital expenditure in the case of self-employed musicians and not deductible, but the cost of keeping abreast of modern developments and techniques in the profession are allowable. Self-employed teachers are allowed subscriptions to the Dancing Teachers’ Federation or any other association connected with their profession. Magazines, books, records, CDs and DVDs should be capitalised and depreciated unless allowed as a deduction under the low value asset write off provisions [see 250 DEPRECIATION].

No deduction is allowable for conventional clothing worn by a self-employed teacher at normal lessons, but special clothing, eg evening dresses necessary for teachers acting as partners of pupils appearing at competitions or examinations, and the cost of dry cleaning special clothing, may be deducted. Any extra expenditure incurred by self-employed teachers for hairdressing or make-up on occasions such as competitions may be deducted, but normal expenses under this heading are private and not deductible. Records and tapes required for teaching may be charged to revenue by self-employed teachers. The cost of travelling from home to studio is private, but the cost of travelling between studios is deductible.

240.200 Research and development [ss DB 26, DB 27, EJ 20, EJ 21]
A regime for the deductibility of expenditure on research and development is provided by s DB 26 with key definitions being provided in s DB 27. Use of the rules is optional. Taxpayers are able to use the general and specific deductibility rules contained elsewhere in the Act should they so choose [see 1240 RESEARCH AND DEVELOPMENT].

240.205 Financial planning fees
The CIR’s policy in relation to the deductibility of fees paid for financial planning services is set out in TIB vol 12:5 (May 2000) at 26-46. The main points of the interpretation statement are as follows:

(a) **Passive investors**: Initial planning fees and implementation fees will generally be non-deductible as they relate to the financial structure. Administration and monitoring fees will generally be deductible. Evaluation, replanning and switching fees will generally be deductible provided they result in no major significant change to the income-earning structure.

(b) **Speculative investors**: Investments held by speculative investors are revenue account property and the gross proceeds derived from the sale of the investments will be taxable. Generally, initial planning fees will be on capital account and not be deductible. Ongoing planning fees will generally be deductible provided that they have a nexus with a particular investment.

(c) **Business of investing**: Where the taxpayer is in the business of investing, all fees will generally be deductible. In certain circumstances the investment will be a financial arrangement and the financial arrangement rules will apply. In some cases, the pre-paid expenditure rules will have application. The circumstances under which these additional matters are relevant are discussed in the interpretation statement.

240.210 Resource consent and patent application costs [ss DB 19, DB 37]
The cost of a consent granted under the Resource Management Act 1991 to do something that otherwise would contravene ss 12 to 15 of the Resource Management Act 1991, is able to be depreciated as depreciable intangible property. A patent or the right to use a patent is afforded the same treatment [see 250.105].

Where a consent or patent is not granted or the application is withdrawn, the costs are deductible to the extent to which they would have been depreciable property had the application been granted. The deduction is allowed in the income year in which the grant was refused or the application withdrawn.

240.215 Arrangements involving money not at risk [ss GB 45, GB 46, GB 47, GB 48, DB 58]
A deferred deduction rule targets aggressive tax arrangements that offer investors tax deductions greater in amount than the sum of money that they have invested in the arrangement. The rules apply generally from the 2004-2005 income year. The rules do not apply to arrangements entered into by the taxpayer prior to the beginning of the 2004-2005 income year unless, at the time of entering into the arrangement, the taxpayer...
could reasonably have anticipated that 10 or more persons would acquire an interest in the arrangement and 70 per cent or more of the allowable deductions of the person from the arrangement arise from an interest of that person in fixed life intangible property and/or software.

For the rules to apply, the following criteria must be present in the arrangement at some time after the commencement of the arrangement:

(a) The arrangement has a promoter who sells or issues, or promotes the selling or issuing of, the arrangement.

(b) The arrangement results in losses for the participant and any affected associates in the first three years.

(c) The person or an “affected associate” must have money that is not at risk, being funds borrowed on a limited or non-recourse basis or on the basis that no material repayment is required for a period of 10 or more years.

(d) The money that is not at risk must constitute 50 per cent or more of the property assets of the arrangement.

(e) The total cost of property held is more than 142.85 per cent of the cost of the property that consists of:

   (i) Land;
   (ii) Buildings;
   (iii) Plant or machinery;
   (iv) A 10 per cent or greater interest in shares in listed companies;
   (v) Shares acquired with the intention that the person will be a shareholder-employee of the company in receipt of employee remuneration; or
   (vi) Shares in foreign companies where the proceeds from the sale of the shares would not be assessable income other than under the Foreign investment fund rules.

In other words, less than 70 per cent of the property held is of the kinds listed above, etc.

An “affected associate” is defined as a loss attributing qualifying company and a shareholder in that company or any persons associated under subpart YB [see 70 ASSOCIATED PERSONS AND RELATIVES].

For the purpose of determining the quantum of money that is not at risk, a “limited-recourse loan” means a financial arrangement that is not an excepted financial arrangement. The term excludes money that has been provided on an arms-length basis by a lender who is not an associated person of the borrower and who regularly lends money on an arms-length basis, and who is resident in New Zealand or carries on business through a fixed establishment in New Zealand. Intra-group and intra-family loans are also generally excluded.

For the purposes of ascertaining the amount of income and deductions and the value of property held, intra-group balances are eliminated.

Where a group of persons consists of a partnership, joint venture or loss attributing qualifying company, the gross income, allowable deductions, resulting losses and the cost of property attributable to each person are calculated proportionately.

Having determined whether or not the arrangement falls within the rules, it is then necessary to determine whether or not the participant in the arrangement also falls within the rules for the particular income year. A participant will fall within the rules for an income year if:

(a) The participant is not a loss attributing qualifying company and has a loss from the arrangement for the income year, including any such loss attributed to the person by virtue of being a shareholder in a loss attributing qualifying company; and

(b) The participant and the affected associates, none of which is a loss attributing qualifying company, when considered together have a loss from the arrangement for the income year, including any such
loss attributed to the person by virtue of being a shareholder in a loss attributing qualifying company; and

(c) On the balance date (or latest balance date), of the participant and affected associates for the income year, the arrangement involves a “limited recourse loan” for which the participant or an affected associate is a borrower.

If the rules apply to the person for that income year, the participant is treated as having derived an amount of gross income calculated as follows:

\[
\text{(participant’s excess deductions / total individual excess deductions)} \times \text{total ineligible amount}
\]

where:

“Participant’s excess deductions” is the amount of excess deductions of the participant for the income year;

“Total individual excess deductions” is the total amount by which the deductions from the arrangement exceed the assessable income from the arrangement in that income year. This is arrived at by aggregating the amounts for the participant and each affected associate of the participant who is not an LAQC and who has, for the income year, an excess of deductions over assessable income from the arrangement;

“Total ineligible amount” is the lesser of:

(a) The total individual excess deductions for the group and the income year; and

(b) The total undischarged obligation of the participant and affected associates under the limited-recourse amount as at balance date.

Where the application of the formula results in an amount of deemed gross income, that person is deemed to have an allowable deduction of an equal amount in the following income year. This deemed allowable deduction is taken into account when applying the formula in that following income year. This will result in a greater loss for the purposes of the calculations.

For the purposes of deciding whether or not the arrangement falls within the rules and also for the purpose of “total ineligible amount” in the formula, an obligation to repay a limited recourse amount is not discharged by a transaction to the extent to which the transaction:

(a) Involves the use, as part of the arrangement, of a put or call option that is not a contract for the sale for future delivery of goods at market value, or a contract of insurance or guarantee; and

(b) Does not give rise to gross income for the borrower of the limited recourse amount.

### 240.220 Guarantee fees paid

Guarantee fees paid in the normal course of business are deductible.

(a) A lump-sum payment for a guarantee of a loan or overdraft to be used by the taxpayer as capital in the derivation of assessable income is deductible [s DB 5].

(b) A commission paid for the guarantee of a floating debt was deductible: *Ascot Gas Water Heater Ltd v Duff* (1942) 24 TC 171 (KB).

(c) Fees payable annually during the life of a guarantee were not sufficient to exclude rights of deduction: *Ure v Federal Commissioner of Taxation* (1981) 11 ATR 484, 81 ATC 4100 (FCA).

(d) A company which was called upon to meet a guarantee obligation given for a group subsidiary was denied a deduction for payments made: *Knightsbridge Carpets Ltd v Inland Revenue Commissioner (New Zealand)* (1970) 2 ATR 78 (SC).

(e) An actual loss must be incurred in the relevant tax year and an expectation of a future loss is not sufficient: *Bendix Consolidated Industries v Federal Commissioner of Taxation* (1983) 13 ATR 553, 82 ATC 4,582 (VSC).

(f) Guarantees may be financial arrangements and are referred to as security payments [see 90 BAD DEBTS AND BAD DEBTS RESERVES].
240.225 Loss on guarantee

A loss on a guarantee made in the ordinary course of business is deductible. A loss on a guarantee made other than in the ordinary course of business is a loss of capital [s DA 2(1)], and not deductible although the fee received is assessable: TRA Case F62 (1983) 6 NZTC 59,870.

240.230 Feasibility expenditure

Feasibility expenditure is not a defined term. Accordingly, interpretation statement IS 08/02 Deductibility of Feasibility Expenditure, provides guidelines that are relevant to determining whether feasibility expenditure is deductible under the general deductibility provisions [s DA 1, see TIB vol 20:6 (July 2008) at 12-37].

Generally, feasibility expenditure is expenditure incurred by a taxpayer for determining the practicability of a new proposal. A typical feasibility exercise would involve determining whether a particular course of action should be taken or certain capital assets acquired or developed. Depending on the circumstances, feasibility expenditure may include the cost of carrying out surveys or studies (eg engineering surveys, environmental studies, and geological and geophysical studies), conducting comparative industry and market research, engaging professionals (eg lawyers, consultants and financial analysts), producing samples or prototypes, and travel costs. Feasibility expenses may be closely related to existing operations or may relate to proposals to expand the existing business or commence a new business.

Feasibility expenditure is deductible when it is incurred as an ordinary incident of the business or income-earning process. This requires that the expenditure must be undertaken as an ordinary incident of a particular business or income-earning activity (ie the activity must be carried out with the intention of obtaining assessable income). Feasibility expenditure incurred before or in preparation of the establishment of a business or income-earning activity will not be deductible. A determination of when the business or income-earning activity commences is critical to establishing whether or not the expenditure is deductible. The profit making structure must have been established and current operations must have begun in order for the business to have commenced.

For feasibility expenditure to be deductible there must be a sufficient relationship or nexus between the expenditure and the taxpayer’s business or income earning activity. The correct characterisation of the nature of the relevant business is vital to resolving whether there is a sufficient nexus between the expenditure and a taxpayer’s business. The activities must be characteristic of that kind of business and the expenditure must be incurred as part of the ordinary business operations.

In many situations, the expenditure will not be deductible on the basis that it is capital in nature [see 240.35].

### Depreciation regime [ss DA 1, DA 2, DA 4, EE 1]

As a general principle, the capital limitation [s DA 2(1)] prohibits a deduction for any expenditure or loss to the extent it is capital in nature. The cost of property (either tangible or intangible) acquired or constructed for use in a business is therefore not generally deductible, except for low value items [250.80]. However, taxpayers are entitled to a deduction for depreciation if the general permission is satisfied and none of the general limitations [s DA 2] apply. Under the general permission, a deduction for depreciation is available if it is incurred in deriving assessable or excluded income, or in carrying on a business for the purpose of deriving assessable or excluded income. To confirm this entitlement, s DA 4 effectively excludes depreciation losses from the application of the capital limitation.
The term “depreciation” refers to the process of writing off or expensing the cost of a fixed asset over its estimated useful life. A proportion of the total cost (or value) of the asset is expensed each year. Depreciation for income tax purposes is calculated in a similar way to depreciation for accounting purposes.

In the income tax legislation:

(a) Assets for which depreciation can be claimed are referred to as “depreciable property” [250.60];
(b) Depreciation is referred to as a “depreciation loss” [250.20];
(c) Depreciation recovered on the disposal of an item of depreciable property is referred to as “depreciation recovery income” [250.30];
(d) The written-down value (book value) of an item of depreciable property is referred to as its “adjusted tax value” [250.120].

The rules for calculating the amount of the depreciation loss or depreciation recovery income are set out in subpart EE.

**Depreciation denied on depreciable property used in deriving employment income [s DA 2(4)]**

The general permission is overridden by the employment limitation, which denies a deduction for any expenditure or loss (including a depreciation loss) incurred in deriving income from employment.

**Example:**

An employee claims actual expenses (instead of the approved Inland Revenue distance rates) from her employer for the use of her private motor car in the employer’s business. When completing her personal income tax return she cannot claim a depreciation loss as an allowable deduction to offset the allowances received from her employer for the use of the motor vehicle.

Payments to contract delivery drivers, engaged by restaurants to deliver food to customers, are not income from employment. Such contractors are able to claim depreciation on vehicles they own and use for delivering food [see Product ruling BR Prd 03/01, TIB vol 15:4 (April 2003) at 5–9].

**250.20 Depreciation loss [s EE 1]**

A depreciation loss arises in an income year when:

(a) A person owns an item of property;
(b) The item is depreciable property;
(c) The item is used, or available for use, by the person in the income year; and
(d) The amount of depreciation loss for the person, the item, and the income year, is calculated under ss EE 9, EE 10 and EE 11.

An amount of depreciation loss is treated as incurred in the income year for which it is calculated.

An item of depreciable property is deemed to depreciate at the appropriate diminishing value rate regardless of whether that amount was claimed as a deduction or not. Thus, when the item is disposed of, the disposal value is the adjusted tax value. Depreciation deductions are allocated to an income year under s BD 4. In certain circumstances taxpayers who hold depreciable property can elect under s EE 8 that the property not be depreciable property [see 250.70].

**No depreciation loss in the year of disposal [s EE 11]**

No depreciation loss arises in the income year in which an item of depreciable property is disposed of. However, for most types of depreciable property an adjustment is made to take account of the amount of depreciation over- or under-claimed over the total period of ownership. The main exceptions to this are for buildings and petroleum-related depreciable property.

**250.30 Depreciation recovery income [ss CG 1, EE 1]**

Depreciation recovery income arises in an income year if:

(a) A person owns an item of property [250.50];
(b) The item is depreciable property [250.60];
(c) The item is disposed of or an event of a kind described in s EE 44 [250.440] occurs; and
(d) The amount of depreciation recovery income is calculated for the person, the item, and the income year under any of the following provisions:

(i) Negative pool value [250.160]
(ii) Low value items [250.80];
(iii) Principal disposal rules [250.480];
(iv) Disposal of partial-income use items [250.500];
(v) Items lost or stolen [250.520]; or
(vi) Compensation received [250.530].

An amount of depreciation recovery income is treated as derived in the income year for which it is calculated. Section CG 1 provides that an amount of depreciation recovery income that a person has is income of the person.

The most common way in which depreciation recovery income arises is when an item of depreciable property is sold for more than its adjusted tax value (tax book value).

Example:
A self-employed business person sells their four-year-old business car, which has an adjusted tax value of $10,500, for $12,000. In the income year in which the car is sold, the person has depreciation recovery income of $1,500 ($12,000 − $10,500).

250.40 Arrangements to defeat depreciation rules [s GB 33]
An anti-avoidance provision prevents a taxpayer from claiming a deduction for depreciation if the taxpayer’s depreciable property has been subject to an arrangement aimed at defeating the depreciation rules. If an item of depreciable property of a person has been subject to an arrangement allowing the person or any other person to have a depreciation deduction and the purpose of the arrangement is to defeat the intent or application of the ITA, the relevant person is denied such a deduction.

250.50 Meaning of ownership [ss EE 2, EE 3, EE 4, EE 5]
“Own”, for the purposes of the depreciation rules, means legal or equitable ownership. Ownership is specifically defined in relation to goods that are subject to reservation of title and improvements made to leasehold land by a lessee.

When more than one person owns an item of depreciable property, each person is regarded as owning their respective interest in the depreciable property. For example, two equal partners in a partnership are each deemed to own a 50 per cent interest in depreciable property owned by the partnership and will claim 50 per cent of the depreciation losses.

Deemed ownership also arises for personal property assets (other than bloodstock and livestock) subject to a finance lease [s FA 6] or hire purchase agreement [s FA 12].

250.60 Depreciable property [ss EE 6, EE 7]
Depreciable property is any property (except for that listed below) that might reasonably be expected, in normal circumstances, to decline in value while used or available for use in deriving assessable income, or in carrying on a business for the purpose of deriving assessable income. Intangible property is depreciable property if it falls within the definition of “depreciable intangible property” [see 250.360] and is not excluded below.

The following types of property are specifically excluded from the definition of depreciable property:

(a) Land (excluding buildings, fixtures and improvements listed in sch 13);
(b) Trading stock;
(c) Livestock subject to subpart EB;
(d) Financial arrangements;
(e) Excepted financial arrangements;
Property that will not decline in value (as far as the owner is concerned), because of any right that the owner has to receive compensation for any decline in its value;

Property that the owner elects to treat as not depreciable [250.70];

Property that the owner has elected to treat as low-value property [250.80];

Property for whose cost a person, other than the property’s owner, is allowed a deduction;

Property for whose cost a person is allowed a deduction under a provision of the ITA 2007 outside of the depreciation rules [subpart EE] or under a provision of an earlier Act – not being mining assets used to derive income other than income from mining.

Example:
Under normal circumstances, an original painting would not be expected to decline in value and would therefore not meet the definition of depreciable property. Original paintings normally increase in value over time. An original painting on display in the offices of a business, for example, cannot be depreciated unless it can be shown that the painting is expected to decline in value. On the other hand, prints used as furnishings in hotels and restaurants can be depreciated [see TIB vol 10:9 (September 1998) at 12]. Similar principles would apply to the tax treatment of other appreciating assets employed in deriving assessable income.

Election that property not be depreciable [s EE 8]

A person may choose that an item of property not be treated as depreciable property in the following circumstances:

(a) When a person acquires an item of property that fits the definition of depreciable property, they can elect that it not be depreciable property.

(b) When the use of an item of property owned by a person changes, with the result that non-depreciable property becomes depreciable property, the person may choose that it not be depreciable property.

(c) A person that owns an item of depreciable property for which they have not claimed any depreciation loss despite being entitled to do so, may elect retrospectively that the item of property not be depreciable property.

Note: One of the main reasons why the option not to depreciate property was introduced in 1997 was to enable taxpayers to avoid the impact of the depreciation recovery and loss rules (250.480 to 250.500) on the sale of their home after the home had been rented out temporarily. With the loss of the ability to claim depreciation on buildings (that have an estimated useful life of 50 years or more) from the 2011–2012 income year, the need for s EE8 has largely been removed.

Once an election not to treat property as depreciable property has been made, it has effect in the income year of election and in all subsequent income years, until the item is disposed of or an event described in s EE 47 occurs involving the item [250.460]. A disposal of intangible property as part of an arrangement to replace it with property of the same type [s EE 44(2)(a)] is not treated as a disposal for these purposes.

The circumstances in which a taxpayer can make an election that property not be depreciable, and the appropriate mode of election, are as follows:

<table>
<thead>
<tr>
<th>Type of Property</th>
<th>Mode of Election</th>
</tr>
</thead>
<tbody>
<tr>
<td>Property acquired by the taxpayer.</td>
<td>Giving the CIR notice in the return of income for the income year in which the property is acquired.</td>
</tr>
<tr>
<td>Property changing from non-business use to business use.</td>
<td>Giving the CIR notice in the return of income for the income year in which the change of use occurs.</td>
</tr>
<tr>
<td>Property in respect of which the taxpayer has omitted to claim a depreciation loss since the time of acquisition.</td>
<td>Giving the CIR notice in the return of income for any income year after the property was acquired including any income year after the property has been disposed of.</td>
</tr>
</tbody>
</table>
250.80 **Items of low value** [s EE 38]

When a taxpayer acquires an item of depreciable property for $500 or less during an income year, the taxpayer may elect to deduct the total cost of the property in the income year of purchase, instead of depreciating it. This option is available only if all of the following conditions are met:

(a) The person uses the item or has it available for use in the income year;
(b) The item would be depreciable property if not treated as an item of low value;
(c) The item has not and will not become part of any other item of depreciable property;
(d) The taxpayer is denied a deduction for the cost of the item if the item is not treated as an item of low value; and
(e) If the item is one of a group of items acquired at the same time and from the same supplier, and the same depreciation rate would apply if they were all treated as items of depreciable property, the total cost of all the items must not exceed $500.

The election to treat an item of depreciable property as an item of low value is made simply by claiming a deduction for the cost of the property in the tax return. The tax deduction is regarded as an amount of depreciation loss. Thus, if the item is subsequently disposed of, the full receipt constitutes depreciation recovery income under s EE 38(5).

When an item of low value for which a taxpayer has claimed a depreciation loss ceases to be used mainly for business purposes, or to derive assessable income, for the taxpayer and such use is not subject to FBT, it is deemed to have been disposed of for a consideration equal to its market value at the time at which the property ceases to be so used or available for use.

The threshold value for an item to be treated as an item of low value was $200 before 19 May 2005.

250.90 **Depreciation methods** [ss EE 9, EE 12]

Three depreciation methods can be used for income tax purposes:

(a) Diminishing value method;
(b) Straight-line method; and
(c) Pool method.

Taxpayers choose which depreciation method they will use for each item of depreciable property that they own. There is no general requirement to apply the same method to all items of property. The choice as to which method to use is made by adopting the appropriate depreciation method and rate in the annual return of income. Once the election is made, it cannot be changed for that item and that income year. However, if the depreciation method is changed for a subsequent income year, regard must be had to what the appropriate cost or adjusted tax value is for the straight-line and diminishing value methods.

An item of property may be included in a depreciation pool if it meets the definition of poolable property [see 250.140]. Once included in a pool, an item of poolable property cannot be depreciated under another method.

1) **Diminishing value (DV) method**

The diminishing value method is probably the most commonly used. This method allocates a higher proportion of depreciation loss to the initial years of ownership of an item than the straight-line method. Under the DV method a constant percentage of the “adjusted tax value” (essentially cost less accumulated depreciation loss deductions) of the depreciable property is used in determining the deductible depreciation loss. The depreciation loss for the year is then deducted from the property’s adjusted tax value to arrive at the immediately succeeding year’s adjusted tax value.

**Example:**
Office equipment costing $10,000 that has a DV rate of 33 per cent is depreciated as follows:
Depreciation

<table>
<thead>
<tr>
<th>Year</th>
<th>Adjusted tax value at year start</th>
<th>Depreciation (33%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>20X1</td>
<td>$10,000</td>
<td>$3,300</td>
</tr>
<tr>
<td>20X2</td>
<td>$6,700</td>
<td>$2,211</td>
</tr>
<tr>
<td>20X3</td>
<td>$4,489</td>
<td>$1,481</td>
</tr>
</tbody>
</table>

The DV method cannot be used to depreciate fixed life intangible property [250.370].

(2) **Straight-line (SL) method**

The straight-line method allocates the cost of an item of depreciable property evenly over the item’s estimated life. Thus, for each income year, a constant percentage of the cost of the property is deducted from its adjusted tax value.

**Example:**

Office equipment costing $10,000 that has a SL rate of 24 per cent is depreciated as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Adjusted tax value at year start</th>
<th>Depreciation (24%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>20X1</td>
<td>$10,000</td>
<td>$2,400</td>
</tr>
<tr>
<td>20X2</td>
<td>$7,600</td>
<td>$2,400</td>
</tr>
<tr>
<td>20X3</td>
<td>$5,200</td>
<td>$2,400</td>
</tr>
</tbody>
</table>

The straight-line depreciation method can be used for all items of depreciable property. However, it must be used to depreciate fixed life intangible property.

(3) **Pool method**

The pool method allows taxpayers to pool together similar items of depreciable property and depreciate them as a single item. Only items costing $2,000 or less can be pooled. The pool method cannot be used for buildings and fixed life intangible property.

The value of a pool is averaged over its opening and closing values taken at the start and end of each income year, with the depreciation loss determined similarly to the diminishing value basis, using a rate attributable to the items in the pool, or the lowest applicable rate for an item in the pool if there are items of different classes in a pool. Taxpayers may operate more than one pool. See 250.150.

**250.100 Calculating depreciation** [ss EE 10, EE 13, EE 14, EE 15, EE 16]

The amount of depreciation loss for an income year for an item of depreciable property using the diminishing value or straight line methods is calculated using the following formula:

\[
\text{annual rate} \times \text{value or cost} \times \text{months} \div 12
\]

Where:

“Annual rate” is the rate that applies to the item of depreciable property under the depreciation method and is expressed as a decimal [250.110].

“Value or cost” is defined separately for the DV and SL methods. If the DV method is used, value or cost is the item’s adjusted tax value at the end of the income year before the deduction of an amount of depreciation loss for that year. If the SL method is used, value or cost is the item’s cost to the person. The term cost explicitly excludes expenditure for which the person has been allowed a deduction outside of the depreciation rules in subpart EE.

If the depreciable property is a patent or a plant variety right acquired in the 2005–2006 or later income year, and the person has been allowed a depreciation deduction in a previous income year, the property’s “value or cost” is its adjusted tax value at the start of the month in which the person acquires the item.

“Months” is defined as follows:
Depreciation

250.110

(a) When a person’s income year contains 365 days (366 in a leap year) or less, the term “months” means the lesser of 12 and the number of whole or part calendar months (whole calendar months in the case of a patent application) in the income year in which the person owns the item and uses the item or has it available for use for any purpose.

(b) When a person’s income year contains more than 365 days (366 in a leap year), the term “months” means the number of whole or part months (whole months in the case of a patent application) in that income year in which the person owns the item and uses the item or has it available for use for any purpose.

It is not necessary for property to have been owned and available for use for the whole of a month in order for a depreciation loss to be claimed for that month. For example, for a 31 March balance date taxpayer, an item of depreciable property purchased and available for use on 28 January would qualify for a depreciation loss for the months of January, February and March.

Depreciation can be claimed in respect of an item of depreciable property only if the item is owned by the taxpayer and is actually used or available for use in deriving the taxpayer’s assessable income or in carrying on a business. For example, depreciation cannot be claimed for an item which is owned by a taxpayer but not yet in the taxpayer’s possession.

An item of depreciable property is treated as being available for use while it is temporarily subject to repair or inspection if it was used or available for use immediately before going for repair or inspection [s EE 10].

The amount of depreciation loss calculated for an item for an income year under the DV or SL method must not exceed the item’s adjusted tax value [s EE 14(1)]. This rule ensures that the total amount of depreciation loss claimed over the life of the item does not exceed the item’s cost. In determining the depreciation loss for the income year, it will not often be necessary to make a direct comparison with the adjusted tax value as this will be obvious. However, when it is necessary to make a comparison, the comparison is made with the adjusted tax value of the item for the income year before any deduction for depreciation loss for the item for that year [s EE 15].

250.110 Annual rate [s EE 61]

The “annual rate” is the annual depreciation rate that applies to an item of depreciable property. The annual rate that applies to a particular item of depreciable property depends on the date of acquisition and the type of property:

<table>
<thead>
<tr>
<th>Type of depreciable property</th>
<th>Applicable rate</th>
<th>Staples paragraph</th>
</tr>
</thead>
<tbody>
<tr>
<td>International aircraft acquired in the 1995–1996 or a later income year</td>
<td>15% DV or 10% SL</td>
<td>250.260</td>
</tr>
<tr>
<td></td>
<td>The rate is set by s EE 31(2)(c) or s EE 31(3)(b)</td>
<td></td>
</tr>
<tr>
<td>Fixed life intangible property that is not excluded depreciable property</td>
<td>The rate set by s EE 33</td>
<td>250.370</td>
</tr>
<tr>
<td>Patents acquired in the 2005–2006 or a later income year</td>
<td>The rate set by s EE 34</td>
<td>250.390</td>

Type of depreciable property | Applicable rate | Staples paragraph
--- | --- | ---
Buildings with an estimated useful life of 50 years or more acquired in the 1995–1996 or a later income year (with effect from the 2011–2012 income year) | The rate set by s EE 31(2)(d) or s EE 31 (3)(c) | 250.240
Special excluded depreciable property that would be excluded depreciable property but for the exclusion in s EE 64(3) | Zero per cent for all depreciation methods (with effect from the 2011–2012 income year) [s EE 61(7B)] | 250.670
Depreciable property acquired in the 1995–1996 or a later income year, to which none of the above provisions applies | The rate set by s EE 31(2)(a) or (b) or s EE 31(3)(a) | 250.270

For a comprehensive schedule of economic depreciation rates that apply for depreciable property acquired after 1 April 2005 see 5000 DEPRECIATION RATES.

250.120 **Adjusted tax value** [ss EE 54, EE 55, EE 56, EE 57, EE 58, EE 59, EE 60]

Adjusted tax value (ATV) is the undepreciated balance of the cost or value of an item of depreciable property at any point in time. In accounting terminology, it is the book value. For a pool, adjusted tax value is the amount of the adjusted tax value determined under s EE 21 [see 250.150]. For items of depreciable property that are depreciated separately, adjusted tax value is determined by applying the following formula:

\[
\text{base value} - \text{total deductions}
\]

**(1) Base value** [s EE 57]

The general rule is that the base value is the cost of the item of depreciable property to the person.

If the person is registered for GST, cost is the net amount after deducting input tax [s EE 54]. In addition, cost is:

(a) Reduced by the amount of any adjustment taken into account in the income year under s 20(3)(e) of the GST Act [see 580.127].

(b) Increased by adding the amount of deductible output tax the person has for the income year [see 580.180].

The term “cost” is modified to exclude expenditure that has been allowed as a deduction under any other subpart of the ITA 2007, or if the property qualified for the items of low value deduction [250.80]. Any depreciation loss on disposal of an item is also excluded from its cost. Depreciation loss claimed in respect of an item does not reduce the item’s cost. The term cost also includes the corresponding deductions under the earlier rules, which are now included in the terminating provisions in s EZ 22.

In the case of an item (other than a building or petroleum-related depreciable property) that was previously not depreciable (eg because it was purchased for private purposes), but that has subsequently become depreciable, base value is the market value at the time the owner starts to use it, or to have it available for use, for the purpose of deriving assessable income or carrying on a business for the purpose of deriving assessable income [s EE 58].

**Example 1:**
Pamela bought a car for her private use for $10,000. She subsequently left her job as an accountant and set up in business on her own account. She will use her car in the business. The base value of the car is its market value at the time Pamela first used the car in the business, $8,000.

This rule does not apply if the item is purchased for business purposes but is not immediately available for use. This ensures that the whole cost of an item can be depreciated if it was purchased for business purposes but is not immediately available for use [s EE 58(1)(c)]. In this case, the general rule [s EE 57] would apply.
**Example 2:**
George purchased a machine for his business from a supplier in London for $50,000. He took legal ownership of the machine at the time it was loaded onto a ship in Southampton. Owing to major mechanical problems, the ship did not reach New Zealand until 11 months later, at which time George took delivery of his machine. By the time George actually took possession of the machine, its market value had dropped to $40,000. However, the base value of the machine is its cost of $50,000. Thus, even though George cannot claim depreciation losses until he receives delivery of the machine, he will still be able to claim depreciation on the total cost.

(2) **Total deductions** (s EE 60)

“Total deductions” is the total of all depreciation deductions that have (or could have) been deducted for an item since it was acquired. It is the sum of the following three amounts:

(a) The total of all amounts that have been required to be deducted from an item’s adjusted tax value, since the start of the 1993–1994 income year, where insurance or other compensation received exceeds the expenditure incurred by the owner because of the event for which the compensation was received, under s EE 52(2) or the equivalent provisions in the ITA 2004, ITA 1994, and ITA 1976;

(b) The total of all depreciation deductions:

(i) That were allowed for the item. If the item is a patent, this includes depreciation deductions for the patent application. If the item is a geothermal well acquired in the 2005–2006 or later income year, this includes depreciation deductions for the well before it was acquired; or

(ii) That would have been allowed (using the DV method) for the item, if it had been used wholly in deriving assessable income or carrying on a business for the purpose of deriving assessable income. From the 2008–2009 income year, this does not include items that have been withdrawn from use in deriving assessable income or carrying on a business, except for an amount of depreciation loss deducted under s EE 39 [see 250.430];

(c) The amount of a “catch-up” deduction for plant variety rights under s EE 25 [see 250.400].

The total of the depreciation deductions in (b) is calculated for the period starting with the applicable one of the following starting dates and ending at the end of the preceding income year. The starting dates are as follows:

<table>
<thead>
<tr>
<th>Condition</th>
<th>Starting date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default condition (if none of the following three conditions apply)</td>
<td>The date on which the item was acquired.</td>
</tr>
<tr>
<td>In the case of a geothermal well that is deemed to be acquired under s EE 53(2), the starting date is the earliest date on which the person acquired the well under s EE 47(6).</td>
<td></td>
</tr>
<tr>
<td>In the case of a patent for which a person acquired a patent application, the starting date is the date the person acquired the patent application.</td>
<td></td>
</tr>
<tr>
<td>The item is one to which s EE 58 applies (ie, not previously depreciable). Section EE 58 applies to items that have been converted from a non-business to a business use [see “Base value” above].</td>
<td>The beginning of the month in which the person started using the item, or having it available for use, for the purpose of deriving assessable income or carrying on a business.</td>
</tr>
<tr>
<td>In the case of a patent for which a person acquired a patent application, the starting date is the beginning of the month in which the patent application was acquired.</td>
<td></td>
</tr>
<tr>
<td>Petroleum-related depreciable property is acquired by person A from an associated person under s EE 59.</td>
<td>The date on which the property is acquired by person A or the relevant associated person.</td>
</tr>
</tbody>
</table>
Condition | Starting date
--- | ---

The definition of “total deductions” means that if an item is used for a period for a non-business purpose, the item is deemed to have been depreciated on a DV basis during that period even though no deduction is available. If the owner of that item subsequently uses it for a business purpose, the amount available for depreciation is reduced by that deemed depreciation. However, if the item was purchased for business purposes and has only ever been available for business purposes, but was simply unavailable for use for a period, the item is not deemed to have been depreciated during that period. This ensures that a taxpayer is not penalised when an item, which is only ever available for business use, is unavailable for use for a period (eg the period between purchase and delivery).

**Example:**
Michael Ltd, a standard balance date company, purchases a new bulldozer on 16 September for $200,000. Michael Ltd elects to use the DV depreciation rate of 13 per cent. The bulldozer is owned for seven months of the income year from September through to the following March. The depreciation calculation is:

\[ 13\% \times 200,000 \times \frac{7}{12} = 15,167 \]

The depreciation loss is therefore $15,167. The adjusted tax value at the start of the following income year is:

\[ 200,000 - 15,167 = 184,833 \]

### 250.130 Changing depreciation methods [ss EE 12, EE 18, EE 55, EE 56, EE 57, EE 58, EE 59, EE 60]

A taxpayer who has elected to use the SL or DV method for an item of depreciable property in any particular income year may not change methods after filing that year’s tax return, but can make a different election in a subsequent year. A taxpayer elects which depreciation method to use simply by using it in that year’s tax return. However, if a taxpayer elects to pool an item, that item must continue to be pooled for as long as the taxpayer owns it. An election to pool is effectively permanent.

If a taxpayer changes from the DV method to the SL method for an item, it must be depreciated by writing-off in equal annual instalments the adjusted tax value (as though that value were the item’s cost) at the time of switching to the SL method [s EE 18]. Taxpayers in this situation must use the ATV instead of cost as the base for the SL method so they do not gain an unfair advantage by switching methods partway through an item’s life.

**Example:**
Philippa bought a jet boat at the beginning of income year one for $20,000. At the end of income year three it had been depreciated at 20 per cent DV down to $10,240, and Philippa decided to switch to the SL method. The equivalent SL rate equivalent to 20 per cent DV is 13.5 per cent. Applying the SL method 13.5 per cent of $10,240 (or $1,382.40) will be deducted in each subsequent year Philippa continues to use the SL method, until the ATV is reduced to nil.

If a taxpayer switches an item of depreciable property from the SL method to the DV method, depreciation is calculated on the item’s ATV at the time of the change in method.

### 250.140 Pool method [ss EE 20-EE 24, EE 65, EE 66, EZ 9, EZ 10; TAA, s 91AAL]

The pool method of depreciation is aimed at reducing compliance costs by allowing taxpayers to depreciate items of low value collectively rather than individually. Only poolable property can be depreciated under the pool method.

“Poolable property” is defined in s EE 66 as an item of depreciable property (other than a building) that meets the following criteria:

(a) If the item is acquired during the income year, its cost does not exceed the maximum pooling value; and

(b) If the item was previously depreciated separately, its adjusted tax value at the start of the income year does not exceed the maximum pooling value; and
Depreciation

(c) The item is wholly used or available for use in deriving assessable income or carrying on a business for the purpose of deriving assessable income, or (if not used wholly for these purposes) it is used in a way that is subject to FBT.

The “maximum pooling value” is usually $2,000, but taxpayers may apply for a higher maximum pooling value for specific items under s 91AAL of the TAA. When deciding whether to allow a greater maximum, the CIR will consider whether the item is similar to other items in the pool, whether the taxpayer’s compliance costs will be reduced as a result of allowing the item in the pool, and how often the items are bought and sold.

250.150 Calculating depreciation loss for a pool [ss EE 21, EE 22]

The formula for calculating the depreciation loss for a pool of depreciable property is:

\[
\text{rate} \times \left( \frac{\text{starting adjusted tax value} + \text{ending adjusted tax value}}{2} \right) \times \frac{\text{months}}{12}
\]

Where:

“Rate” is the DV rate of depreciation applicable to all items included in the pool in the income year. If items with different rates are included in the pool, the rate is the lowest of those DV rates.

“Starting adjusted tax value” is the total of:

(a) The pool’s adjusted tax value at the start of the income year; and
(b) The adjusted tax value, as at the end of the previous income year, of any item that was previously depreciated separately and added to the pool during the year.

If the pool did not exist at the start of the income year, the starting adjusted tax value is zero.

“Ending adjusted tax value” is the result of the following calculation:

(a) The pool’s adjusted tax value at the end of the income year, before the deduction of the depreciation loss for the income year;
(b) Plus the cost of any items acquired during the income year and added to the pool during the year;
(c) Plus the adjusted tax value, on the date it is included in the pool, of any item that was previously depreciated separately and added to the pool during the year;
(d) Less the consideration derived from the disposal of any item in the pool.

“Months” is the number of whole or part months in the person’s income year. This number may be more or less than 12 when, for example, the person is commencing or ceasing business, or when the person has changed their balance date.

The formula for calculating the depreciation loss for a pool is built around the concept of calculating depreciation for the average value of the pool. When items with different annual rates were included in the pool at any time during the period, the lowest of those DV rates apply.

Example 1:

All of a shop’s depreciable property is included in a pool. These comprise:

- Cash register 40% DV
- Electric sign 20% DV
- Fittings 20% DV
- Furniture 20% DV

The rate for this pool is 20 per cent. It would be more tax effective to depreciate the cash register separately and combine the remaining assets in a pool.

Another situation in which it is more tax effective to maintain two separate pools is when the depreciation rate changes, so that items owned before the rate change might be in one pool and the items purchased after the rate change might be in the other pool.

The starting adjusted tax value is the pool’s adjusted tax value at the start of the income year. If the pool did not exist at that time, the value is zero. However, when an item of previously separately depreciable property

Staples Tax Guide 2012

253
Depreciation is included in the pool during the income year, the starting adjusted tax value is increased by the adjusted tax value of that item of property.

**Example 2:**
Offices Ltd has over 500 desks on which it claimed depreciation in previous years. At the beginning of the year each desk had an adjusted tax value of less than $2,000, and the combined value of all desks was $14,550. During the year it purchased 40 new desks for $600 each. When preparing the income tax return for the year it elects to form a pool for these desks. The pool depreciation is calculated as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pool value (ATV) at beginning</td>
<td>$14,550</td>
</tr>
<tr>
<td>Add purchases (40 x $600)</td>
<td>$24,000</td>
</tr>
<tr>
<td>Pool value (ATV) at end</td>
<td>$38,550</td>
</tr>
<tr>
<td>Average pool value ($14,550 + $38,550)/2</td>
<td>$26,550</td>
</tr>
</tbody>
</table>

If the applicable depreciation rate is 13 per cent, depreciation on the pool for the year is $3,451.

Once an asset is included in a pool it cannot generally be isolated from the pool at a later stage. An exception applies when an asset must be isolated because it is no longer poolable property under s EE 66, for example, when the item is used privately. In these circumstances s EE 24 deems the asset to have been disposed of and reacquired for its market value at the relevant time.

**Example 3:**
A pool with an adjusted tax value at 1 April of $18,000 includes an item which, on 5 December, begins to be used for private purposes for 20 per cent of the time and is thus no longer poolable property. The item has a market value of $1,500 on 5 December.

**Pool depreciation:**

<table>
<thead>
<tr>
<th>Description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pool value at beginning</td>
<td>$18,000</td>
</tr>
<tr>
<td>Value at end ($18,000 less deemed sale $1,500)</td>
<td>$16,500</td>
</tr>
<tr>
<td>Pool value at end</td>
<td>$34,500</td>
</tr>
<tr>
<td>Average pool value (divide by two)</td>
<td>$17,250</td>
</tr>
</tbody>
</table>

If the applicable depreciation rate is 25 per cent, then depreciation on the pool for the year is $4,312.

**Depreciation of ex-pool asset:**

\[
25\% \times \$1,500 \times 4/12 \text{ (months)} \times 80\% \text{ (business use)} = \$100
\]

### 250.160 Acquisition and disposal of pooled items [s EE 22]

When a taxpayer elects to include in a pool an item of poolable property acquired by the taxpayer, the adjusted tax value of the pool must be increased by the cost of the item. When that item of poolable property has in the preceding income year been depreciated separately:

(a) The adjusted tax value of the pool is increased by the adjusted tax value of the item at the date of its inclusion in the pool; and

(b) The adjusted tax value of the property at the end of the preceding income year is included in the item “starting adjusted tax value” in the formula in 250.150.

Thus, the item will no longer have a separate adjusted tax value and any depreciation loss is now accounted for through the pool.

When an item is disposed of, the adjusted tax value of the pool is reduced by the consideration received [s EE 22(3)]. In effect, there is no cap on the depreciation recovery on disposal of an item of poolable property in these circumstances.

**Example 1:**
Shaky Ltd is a scaffolding contractor. At any time, it owns roughly $100,000 worth of scaffolding and buys new items regularly to replace items which are lost or worn out. At the end of the income year, the total adjusted tax value of all scaffolding is $87,000. The opening value of the pool for the next income year is therefore $87,000. During the next income year, the following events take place:

- May: $10,000 spent on new scaffolding.
Depreciation

250.170

• August: $4,000 received from insurance company for scaffolding stolen off site.
• January: $8,000 spent on new scaffolding.

The closing value of the pool is therefore:

<table>
<thead>
<tr>
<th>Description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opening value</td>
<td>$87,000</td>
</tr>
<tr>
<td>Add purchases</td>
<td>$18,000</td>
</tr>
<tr>
<td>Deduct disposals</td>
<td>$4,000</td>
</tr>
<tr>
<td>Closing balance</td>
<td>$101,000</td>
</tr>
</tbody>
</table>

The applicable depreciation rate is 13 per cent. Applying the formula, the depreciation deduction for the scaffolding pool is:

$$13\% \times \frac{($87,000 + $101,000)/2}{12/12} = $12,220$$

If no consideration is received on the disposal of a pool item (eg, if the item is scrapped or lost), no reduction to the pool’s adjusted tax value is made. If the consideration received is greater than the value of the pool, the adjusted tax value of the pool is reduced to zero and the amount by which the adjusted tax value is negative is an amount of depreciation recovery income [s EE 22(5)(a)]. Even if the pool still has items in it, no further depreciation loss can be claimed in respect of the pool unless the pool has further items added and its adjusted tax value returns to a positive value.

Example 2:

Twenty items of depreciable property are in a pool.

<table>
<thead>
<tr>
<th>Description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjusted tax value of the pool on 30 September</td>
<td>$34,000</td>
</tr>
<tr>
<td>Fifteen items sold on 31 October for consideration of</td>
<td>$36,000</td>
</tr>
<tr>
<td>Depreciation recovery income in the income year ended 31 March</td>
<td>$2,000</td>
</tr>
</tbody>
</table>

The adjusted tax value of the pool on 31 March, even though five items are still in the pool, is zero.

More than one pool may be set up for the same type of items. This may be useful where different rates apply because of different acquisition dates, or the items are used in different locations and separate records are desired.

The pooling regime does not allow the amount of any income derived on disposal to be restricted to the amount of depreciation actually deducted, as is the case with items depreciated separately. Taxpayers should therefore be wary of including in a pool any item which is likely to ultimately be sold for more than its original cost.

When all the items in a pool have been disposed of but the pool still has a positive value the remaining value of the pool is then deductible.

Example 6:

<table>
<thead>
<tr>
<th>Description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjusted tax value</td>
<td>$34,000</td>
</tr>
<tr>
<td>All items sold for</td>
<td>$26,000</td>
</tr>
<tr>
<td>Depreciation loss</td>
<td>$8,000</td>
</tr>
</tbody>
</table>

250.170 Adjusting for non-business use of motor vehicles [subpart DE, s EE 50]

Where an item of depreciable property is used for both business and non-business purposes, the depreciation must be apportioned. There are separate rules for motor vehicles and other property.

(1) Motor vehicles

Motor vehicles used in the business of a sole trader or partnership are subject to the deductibility rules in subpart DE. Subpart DE applies to motor vehicles that are used partly for business purposes and partly for other purposes [see 990 MOTOR VEHICLES]. Subpart DE does not apply to:

(a) A company motor vehicle;
(b) A person whose only income is income from employment;
Depreciation

(c) A motor vehicle that is used only in the course of deriving income; or
(d) A motor vehicle whose use constitutes a fringe benefit.

Private use of a motor vehicle that is owned by a company will either be subject to FBT (if the private use is by an employee or shareholder-employee) or will constitute a dividend (if the private use is by a shareholder). In either case, no apportionment of the depreciation is required.

When a motor vehicle is subject to the apportionment rules, the depreciation loss is limited to the amount calculated by the following formula in s DE 2(5):

\[
\text{standard calculation} \times \text{business proportion}
\]

Where:

“Standard calculation” is the amount as determined by the formula in s EE 16:

\[
\text{annual rate} \times \text{value or cost} \times \frac{\text{months}}{12}
\]

“Business portion” is the proportion of business use of the motor vehicle calculated under ss DE 3-DE 12.

Example:
Anne-Maree is a self-employed salesperson and has calculated using the logbook rules that her car is used 85 per cent for business purposes. The adjusted tax value (ATV) of the car is $18,000, and it is owned for the entire income year. The car was bought secondhand in the previous year, and the applicable depreciation rate is 30 per cent DV. First, applying the formula:

\[
30\% \times \$18,000 \times \frac{12}{12} = \$5,400
\]

Secondly, applying the apportionment formula in s DE 2(5):

\[
\text{standard calculation} \times \text{business proportion}
\]

\[
\$5,400 \times 0.85 = \$4,590
\]

The depreciation loss is $4,590. The adjusted tax value of the car reduces by the full amount of ATV ($5,400) to $12,600 [see definition of “total deductions” and s EE 60(3)(b)].

250.180 Adjusting for non-business use of other depreciable property

[s EE 50]

An apportionment calculation applies to the depreciation loss of other mixed-use property [s EE 50].

As with motor vehicles it is not applied when the private use is subject to the payment of FBT, which in itself is an apportionment mechanism. If all non-business use of property is subject to FBT then no further apportionment is required for depreciation purposes.

In terms of s EE 50(2) the depreciation loss available when an item of property has only partly business use must not be more than an amount calculated under the following formula:

\[
\text{depreciation loss} \times \frac{\text{qualifying use days}}{\text{all days}}
\]

Where:

“Depreciation loss” has the same meaning as is used generally for depreciation purposes.

“Qualifying use days” is the number of days in the income year that the person owns and uses (or has available for use) the property for the purposes of deriving assessable income, carrying on a business, or for a use that constitutes a taxable fringe benefit.

“All days” means the number of days in the income year that the person owns the property and uses or has it available for use.
Depreciation

If a unit of measurement other than days, such as time or distance travelled, etc, would give a more appropriate result when used in the formula in s EE 50, then that unit of measurement must be used.

Example 1:
Max is a self-employed car dealer who owns a caravan. In the current income year he used the caravan as a temporary sales office for eight months while a new office was being built, and took it on holiday for one month. For the rest of the year it was not used, but available for use. At the start of the income year the caravan had an adjusted tax value of $3,500, and a depreciation rate of 16 per cent DV applied. First, when applying the formula in s EE 50(2):

\[
\text{annual rate} \times \text{value or cost} \times \text{months}
\]

\[
\frac{16\% \times $3,500 \times 12}{12} = $560
\]

Secondly, applying the formula:

\[
\text{depreciation loss} \times \text{qualifying use} \div \text{months}
\]

\[
\frac{$560 \times 11}{12} = $513
\]

In this case months was used instead of days [s EE 50(4)]. Eleven months is the period that the caravan was used and available for business use, with the private portion being the one month holiday. The depreciation loss is $513. The adjusted tax value is reduced by the full depreciation loss of $560.

Example 2:
A house is used for private living and has an area of 20 per cent used for business. The cost price of the house (excluding land) is $150,000 and the depreciation rate is two per cent SL. The unit of apportionment is area (ie square meters).

<table>

250.190 Improvements [s EE 37]

(1) Income year in which improvement made

When an improvement is made to an item of depreciable property, the improvement is treated as a separate item of depreciable property in the year the improvement is made. The improvement is depreciated from the start of the month in which the improvement is first used or available for use to the end of the income year.

Example:
A manufacturing company owns an item of plant that cost $50,000 and has an ATV, as at 31 March 20X1, of $21,949. The applicable economic rate for the plant is 20 per cent DV. In September 20X1, an additional component was added to the plant to improve its effectiveness, at a cost of $26,400. The improvement was available for use from 23 September 20X1. In the first income year (the year ended 31 March 20X2), assuming the same economic rate applies, depreciation on the improvement is calculated as:

\[
20\% \times $26,400 \times 7/12 = $3,080
\]

The ATV of the improvement as at 31 March 20X2 is $23,320 ($26,400 − $3,080).

For the year ended 31 March 20X2, depreciation on the original plant is $4,390 ($21,949 × 20%) and its ATV as at 31 March 20X2 is $17,559 ($21,949 − $4,390).

(2) Subsequent income years

In subsequent income years, the way in which the improvement is depreciated depends on the type of property and the date the improvement was acquired or made. The default position is that the taxpayer can either continue to treat the improvement as a separate item of depreciable property or treat it as part of the item of depreciable property that was improved. It can be beneficial to depreciate the improvement separately if the

Staples Tax Guide 2012
annual rate applying to the improvement is higher than the rate applying to the item improved. If the improvement is treated as part of the item of depreciable property that was improved, the following approach must be followed:

<table>
<thead>
<tr>
<th>Depreciation method used</th>
<th>How improvement is treated</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diminishing value</td>
<td>ATV of improvement at start of income year is added to ATV of main item at start of income year.</td>
</tr>
<tr>
<td>Straight-line</td>
<td>ATV of improvement at start of income year is added to ATV of main item at start of income year, and the cost of improvement added to cost of main item.</td>
</tr>
</tbody>
</table>

**Example:**

Continuing the previous example, the ATV of the improvement as at the start of the second income year (1 April 20X2) is added to the ATV of the main item of plant at that date, giving $40,879 ($23,320 + $17,559). From 1 April 20X2, depreciation is calculated on this combined total ATV.

The following are exceptions to the default position explained above.

If the pool method of depreciation is used for the item of depreciable property that was improved [see 250.140], the improvement must be treated as a separate item of depreciable property. In the second and subsequent income years, the item must be included in the pool if its cost is less than or equal to the maximum pooling value (normally $2,000). When the improvement is included in the pool, the pool’s ATV is increased by the improvement’s ATV at the date it is included in the pool, and the improvement’s ATV at the end of the previous income year is included in the starting adjusted tax value.

An improvement must be treated as a separate item of depreciable property if:

(a) The improvement was acquired, or the decision to purchase or construct the improvement was made, after 20 May 2010 [see 250.270 for full details]; and

(b) The item that was improved is:

(i) A “grandparented structure”;
(ii) Not a building;
(iii) Not a used import car;
(iv) Not an international aircraft; and
(v) An item that has not been used or held for use in New Zealand as an item of depreciable property before the date it was acquired.

A “grandparented structure” [s YA 1] is any item in the following list if the item was acquired or a binding contract for the purchase or construction of the item was entered into, on or before 30 July 2009:

- Barns, including barns (drying);
- Carparks (buildings);
- Chemical works;
- Fertiliser works;
- Powder drying buildings;
- Site huts.

**Improvements made by lessee of land [ss EE 4 and EE 5]**

For the purpose of determining who is entitled to claim a deduction for depreciation on fixtures or improvements to leased land, the lessee is deemed to own a fixture or improvement to land (and therefore is entitled to claim depreciation) for the period of the lease if:

(a) The lessee incurs expenditure in erecting the fixture or making the improvement during the period; and

(b) The fixture or improvement is (under land law principles) the property of the lessor.
The lessor, including any subsequent lessor who purchases the land from the original lessor, is deemed not to own the fixture or improvement (and therefore is not able to claim depreciation) either during the period of the lease or after the period of the lease, unless the lessor pays the lessee for the fixture or improvement at the end of the lease period. If a lessee’s interest in a lease is transferred, the transferee is deemed to own the fixture or improvement provided that the transferee pays the lessee for the fixture or improvement and the lessee has depreciated it [s EE 5(1)]. This applies on all subsequent occasions when the item is transferred by the lessee [s EE 5(2)].

250.200 Depreciable property under construction
Depreciation may be claimed on a partly constructed item provided the following conditions are met:
(a) The item constitutes “depreciable property” as defined in s EE 6 [see 250.60]; and
(b) The item is owned by the taxpayer.

In order to constitute depreciable property, the partly constructed property must reasonably be expected in normal circumstances to decline in value while being used, or available for use, in deriving assessable income or carrying on a business for the purpose of deriving assessable income.

No depreciation can be claimed on an item under construction until such time as the item, or some part of it, is in a state in which it either is used, or can be used, in deriving assessable income or in carrying on a business.

Note: Actual use is not necessary; a depreciation deduction is available if the item is merely available for use in deriving assessable income or in carrying on a business. The item cannot be depreciated unless it is reasonably expected to decline in value once in use or available for use.

Example:
A company intends to build a piece of machinery to use in its manufacturing business. It purchased all the component material in December, but did not complete the machine until June of the following year. At no time before its completion was the machine able to be used in deriving assessable income or in carrying on a business for the purpose of deriving assessable income. No depreciable property exists until June when the machine is completed because, before completion, it cannot be used in deriving assessable income or in carrying on a business for the purpose of deriving assessable income. Thus, since no depreciable property exists until June, depreciation deductions will not be allowed before this time.

See interpretation statement IS3175 for further details [see TIB vol 12:9 (September 2000) at 21–27].

250.210 Capital contributions [ss CG 8, DB 64]
When a person derives a capital contribution (as defined below) after 20 May 2010, the person has a choice as to how to treat the amount:
(a) The contribution can be treated as income, spread over 10 years (s CG 8); or
(b) The depreciation base of the item for which the contribution was received can be reduced by the amount of the capital contribution (s DB 64), thus reducing depreciation deductions.

A “capital contribution”, for the purposes of ss CG 8, DB 64 and EE 48, is an amount that is paid by the payer as a contribution for depreciable property owned or to be acquired by the recipient. The following conditions must be satisfied:
(a) The amount is paid by the payer to the recipient under an agreement between them that is not a contract of insurance;
(b) The amount is not paid by the payer in their capacity as settlor, partner or shareholder of the recipient;
(c) The amount is not income of the recipient, except under s CG 8; and
(d) The amount is paid under the express terms and conditions of the agreement.

(1) Capital contribution treated as income
If the recipient of a capital contribution decides to treat it as income under s CG 8, the capital contribution is spread evenly over the income year in which the contribution is derived and the following nine income years. One tenth of the capital contribution is treated as income for each of the 10 years. No adjustment is made if the contribution is received part way through an income year.
250.210(2) Depreciation

(2) Capital contribution deducted from depreciation base

If the recipient of a capital contribution elects to treat it as a reduction of the depreciation base of an item of depreciable property under s DB 64, the item’s ATV, base value, cost or value, as applicable, is reduced by the amount of the capital contribution.

An adjustment is required when an item, for which a capital contribution has been received, is disposed of for more than its ATV. See 250.480.

Example:
On 1 August 2012 a farmer asked his local electricity supplier to connect his new house to the electricity network. Because of the house’s remote location it will cost the electricity supplier $10,000 to do this work, so it requires the farmer to contribute $6,000 towards this cost. If the electricity supplier decides to treat the capital contribution as income, it must include $600 ($6,000/10) in each of its 2013 through 2022 income years. If the electricity supplier decides to reduce its depreciation base instead, it can only claim depreciation losses based on $4,000 ($10,000 − $6,000).

(3) Position before 21 May 2010

Prior to 21 May 2010, capital contributions were non-taxable capital receipts in the hands of the recipient, and the cost of the depreciable property was not reduced by the amount of the contribution.

250.220 Setting of economic depreciation rates [s EE 26]

The “economic rate” is defined as the economic depreciation rate of an item of depreciable property set under ss EE 27-EE 30 [s EE 67].

Different methods apply for setting the economic depreciation rates for the following categories of depreciable property:

<table>
<thead>
<tr>
<th>Kind of depreciable property</th>
<th>Section</th>
<th>Staples para</th>
</tr>
</thead>
<tbody>
<tr>
<td>Depreciable property acquired from 1 April 2005 other than: buildings, fixed life intangible property, excluded depreciable property, and property for which the rate is set under ss EE 29 or EE 30.</td>
<td>EE 27</td>
<td>250.230</td>
</tr>
<tr>
<td>Buildings acquired from 19 May 2005 for which the economic depreciation rate is not set under s EZ 23.</td>
<td>EE 28</td>
<td>250.240</td>
</tr>
<tr>
<td>Certain aircraft and motor vehicles acquired from 1 April 2005.</td>
<td>EE 29</td>
<td>250.250</td>
</tr>
<tr>
<td>Items that have an estimated residual market value greater than 13.5 per cent of their cost, and would otherwise have an economic depreciation rate set under ss EE 27 or EE 28.</td>
<td>EE 30</td>
<td>250.630</td>
</tr>
<tr>
<td>Property of the following kinds:</td>
<td>EZ 23</td>
<td>250.630</td>
</tr>
<tr>
<td>(i) Depreciable property acquired before 1 April 2005 other than buildings, fixed life intangible property or excluded depreciable property;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(ii) Buildings acquired before 19 May 2005;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(iii) Buildings acquired from 19 May 2005, as relationship property or from a company in the same wholly-owned group of companies, from a person who applied to the building an economic depreciation rate set under s EZ 23 or corresponding provision.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

An economic depreciation rate must not be set for fixed life intangible property [see 250.370] or excluded depreciable property [see 250.660]. The CIR has issued a determination [Depreciation Determination DEP54] setting the economic depreciation rates for property of the types referred to in ss EE 27 and EE 28 [items (a) and (b) above].
250.230  **Depreciation rate for property other than buildings** [s EE 27]

The economic depreciation rate for depreciable property acquired from 1 April 2005 (excluding buildings, fixed life intangible property, excluded depreciable property, and property for which the rate is set under ss EE 29 or EE 30), is calculated by the CIR using the procedure set out below. To set the rate, the CIR issues a determination under s 91AAF of the TAA. The CIR issued the first such determination [see Depreciation Determination DEP54] on 27 April 2006. A large number of other depreciation determinations have since been issued.

The formula for calculating the diminishing value rate is:

\[
\frac{2}{\text{estimated useful life}}
\]

“Estimated useful life” is the estimated useful life of the property expressed in years.

The estimated useful life for an item of depreciable property, other than a copyright in a sound recording, is the period over which the item might reasonably be expected to be useful in deriving assessable income or carrying on a business for the purpose of deriving assessable income, taking into account:

(a)  The passage of time, likely wear and tear, exhaustion and obsolescence; and

(b)  An assumption of normal and reasonable maintenance.

The estimated useful life of a copyright in a sound recording is the period from the time at which the copyright is first useful in deriving assessable income until the end of the income year in which it might reasonably be expected that 90 per cent of all the income that will be derived from it has been derived [s EE 63].

Example:
The estimated useful life of a personal computer is four years (as per the IR265). The DV rate is two divided by four, or 50 per cent. The equivalent SL rate is 40 per cent.

The figure calculated under the above formula is then rounded up or down to the nearest rate specified in sch 11 (banded rates of depreciation), column 1. Under Determination DEP54, the CIR has set the following banded rates of depreciation for items with the estimated useful lives shown:

<table>
<thead>
<tr>
<th>Estimated useful life (years)</th>
<th>DV banded depreciation rate</th>
<th>SL equivalent banded depreciation rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>100</td>
<td>2%</td>
<td>1.5%</td>
</tr>
<tr>
<td>50</td>
<td>4%</td>
<td>3%</td>
</tr>
<tr>
<td>33.3</td>
<td>6%</td>
<td>4%</td>
</tr>
<tr>
<td>25</td>
<td>8%</td>
<td>6%</td>
</tr>
<tr>
<td>20</td>
<td>10%</td>
<td>7%</td>
</tr>
<tr>
<td>15.5</td>
<td>13%</td>
<td>8.5%</td>
</tr>
<tr>
<td>12.5</td>
<td>16%</td>
<td>10.5%</td>
</tr>
<tr>
<td>10</td>
<td>20%</td>
<td>13.5%</td>
</tr>
<tr>
<td>8</td>
<td>25%</td>
<td>17.5%</td>
</tr>
<tr>
<td>6.66</td>
<td>30%</td>
<td>21%</td>
</tr>
<tr>
<td>5</td>
<td>40%</td>
<td>30%</td>
</tr>
<tr>
<td>4</td>
<td>50%</td>
<td>40%</td>
</tr>
<tr>
<td>3</td>
<td>67%</td>
<td>67%</td>
</tr>
<tr>
<td>2</td>
<td>100%</td>
<td>100%</td>
</tr>
<tr>
<td>1</td>
<td>100%</td>
<td>100%</td>
</tr>
</tbody>
</table>

**Note:** The economic depreciation rate was increased by 20 per cent if the item (other than buildings) was acquired new before 21 May 2010 [see 250.270].

(1)  **Meaning of “obsolescence”**

The CIR’s view on the meaning of the term “obsolescence” in the context of an item’s estimated useful life under s EE 63 is set out in interpretation statement IS 11/01 [TIB vol 23:6 (July 2011) at 6–16]. Obsolescence...
Depreciation

involves a reduction in the period for which an item might be expected to be useful in deriving assessable income for reasons such as economic, technological or other external causes that affect the estimated useful life of the item. Obsolescence will cause an item to no longer be useful in deriving assessable income before the end of its physical life.

Whether an item is affected by obsolescence is a question of fact to be judged objectively. An item will be obsolete if causes external to that item, and outside the control of the taxpayer, will result in it being no longer useful in deriving assessable income before the end of its physical life. For obsolescence to affect the estimated useful life of an item there must be a reasonable certainty that it will become obsolete and a sufficiently clear indication of when this would be likely to occur. The nature of obsolescence can be described in the following terms:

• Obsolescence is the process whereby an item loses its economic usefulness or ability to function in a business through causes other than physical deterioration or wear and tear.
• Obsolescence may arise from factors that are inherent in the item (functional obsolescence) or that constitute a change to the environment or conditions surrounding an item (economic obsolescence).
• Obsolescence may arise from changes in the way the business is undertaken, shifting of business centres, loss of trade, technological changes, new inventions, inadequacy, and prohibitory laws.
• Obsolescence may arise from technological changes or the development of more modern improved alternatives that are significant enough to affect the useful life of an item and mean that the item has been superseded by improvements.

The following are examples of external causes that may result in an item becoming obsolete:

• Prohibitory laws or regulatory changes;
• Technological changes;
• Changes in consumer tastes and public opinion;
• Changes in the way in which a business or a type of business is undertaken;
• Depletion of raw materials on which the item is reliant to produce income;
• The item causes reduced ability or failure to continue business at previous levels.

Any reasonably predictable obsolescence that reduces the estimated useful life of the item will be taken into account at that time the CIR sets the estimated useful life for an item of depreciable property.

A decrease in the estimated useful life of an item as a result of the following factors is not considered to be caused by obsolescence:

• Demolition, scrapping or abandonment of the item, or a decision to do so;
• A decision of management to discontinue the use of an item;
• The availability of newer or better alternatives;
• Market forces of supply and demand;
• A desire to enhance or expand business operations;
• The likelihood of business failure.

250.240 Depreciation rate for buildings [s EE 28]

(1) No depreciation of buildings from the 2011–2012 income year

From the 2011–2012 income year, no depreciation can be claimed on buildings with an estimated useful life of 50 years or more. Buildings with an estimated useful life of less than 50 years can continue to be depreciated at the appropriate SL or DV rate. See 250.270 for further details.

(2) Setting depreciation rates for buildings

The economic depreciation rate for buildings is calculated by the CIR using the procedure set out below. This method does not apply if the economic depreciation rate is set under s EE 30 (items with high residual value) or s EZ 23 (buildings acquired before 19 May 2005) [see 250.630]. To set the rate, the CIR issues a determination under s 91AAF of the TAA.

The meaning of the term “building” is explained in 250.310.
Depreciation

The formula for calculating the straight-line rate is:

\[
\text{rate} = \frac{1}{\text{estimated useful life}}
\]

“Estimated useful life” is the estimated useful life of the property expressed in years [see 250.230].

Example:
A building has an estimated useful life of 33.3 years (as per the IR265). The SL rate is one divided by 33.3, or three per cent. The equivalent DV rate is five per cent.

The figure calculated under this formula is then rounded up or down to the nearest rate specified in sch 11 (banded rates of depreciation), column 4 (SL banded depreciation rate). Under Determination DEP54, the CIR has set the following banded rates of depreciation for items with the estimated useful lives shown:

<table>
<thead>
<tr>
<th>Estimated useful life (years)</th>
<th>DV equivalent banded depreciation rate</th>
<th>SL banded depreciation rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>100</td>
<td>1.3%</td>
<td>1%</td>
</tr>
<tr>
<td>50</td>
<td>3%</td>
<td>2%</td>
</tr>
<tr>
<td>33.3</td>
<td>4.5%</td>
<td>3%</td>
</tr>
<tr>
<td>25</td>
<td>6.5%</td>
<td>4%</td>
</tr>
<tr>
<td>20</td>
<td>8.5%</td>
<td>5%</td>
</tr>
<tr>
<td>15.5</td>
<td>11%</td>
<td>6.5%</td>
</tr>
<tr>
<td>12.5</td>
<td>13.5%</td>
<td>8%</td>
</tr>
</tbody>
</table>

Note: A building acquired under a binding contract for purchase or construction entered into before 19 May 2005 must be depreciated using the economic depreciation rate determined under s EZ 23.

250.250 Depreciation rate for certain aircraft and motor vehicles [s EE 29]

(1) Aircraft
The economic rate of depreciation for an aircraft is 10 per cent DV or seven per cent SL if the aircraft:
(a) Is self-propelled;
(b) Has fixed wings;
(c) Is not an international aircraft;
(d) Is not used for top-dressing or spraying; and
(e) Is not a helicopter.

Note: The annual depreciation rate for an “international aircraft” is 15 per cent DV or 10 per cent SL [s EE 31(2)(c), 250.260].

(2) Motor vehicles
The economic rate of depreciation for a motor vehicle that is designed exclusively or mainly to carry people, and has seats for no more than 12 people, is 30 per cent DV or 21 per cent SL if the motor vehicle is:
(a) Not available for hire;
(b) Available for hire for a period of more than one month;
(c) A taxi; or
(d) A minibus.
250.260 **Depreciation rate for international aircraft** [s EE 31(2)(c), (3)(b)]

The annual rate for international aircraft acquired in the 1995–1996 or later income year is 15 per cent DV or 10 per cent SL. “International aircraft” means a jet-engined aircraft that a person uses mainly in regular commercial service to transport passengers between New Zealand and any other place [s EE 67].

250.270 **Depreciation rates for property acquired in the 1995–96 income year or later** [ss EE 31, EE 61(2)]

The annual rate for depreciable property acquired in the 1995–1996 or later income year depends on whether the property was acquired before or after 20 May 2010.

(1) **Depreciable property acquired on or before 20 May 2010**

The annual rate for the item is the applicable rate set out in the table below, if the person:

(a) Acquires the item on or before 20 May 2010; or

(b) Decides to purchase or construct the item, meets the administrative requirements, and:

(i) Enters into a binding contract for the purchase or construction of the item on or before 20 May 2010; or

(ii) After deciding to purchase or construct the item, incurs expenditure for its purchase or construction on or before 20 May 2010.

In order to meet the administrative requirements, the person must:

(a) Have available for the CIR documents dated on or before 20 May 2010 that evidence that the person had, on or before 20 May 2010, decided to purchase or construct the relevant item; or

(b) Send to the CIR a statutory declaration that the person had, on or before 20 May 2010, decided to purchase or construct the relevant item.

<table>
<thead>
<tr>
<th>Type of property</th>
<th>Annual rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Buildings (before the 2011–2012 income year)</td>
<td>Economic rate, special rate or provisional rate</td>
</tr>
<tr>
<td>Buildings with an estimated useful life of 50 years or more (from the 2011–2012 income year)</td>
<td>0%</td>
</tr>
<tr>
<td>Buildings with an estimated useful life of less than 50 years (from the 2011–2012 income year)</td>
<td>Economic rate, special rate or provisional rate</td>
</tr>
<tr>
<td>Used imported cars</td>
<td>Economic rate, special rate or provisional rate</td>
</tr>
<tr>
<td>International aircraft</td>
<td>15% DV or 10% SL [see 250.260]</td>
</tr>
<tr>
<td>Property that has been used or held for use in New Zealand as an item of depreciable property before the date on which the person acquires it (ie secondhand property)</td>
<td>Economic rate, special rate or provisional rate</td>
</tr>
<tr>
<td>Property not described above</td>
<td>Economic rate, special rate or provisional rate, increased by 20%</td>
</tr>
</tbody>
</table>

Note: From the 2011–2012 income year, no depreciation can be claimed on buildings with an estimated useful life of 50 years or more.

The economic rates are listed in 5000 DEPRECIATION RATES.

(2) **Depreciable property acquired after 20 May 2010**

The annual rate for the item is the applicable rate set out in the table below, if the person:

(a) Acquires the item after 20 May 2010; or
Depreciation

(b) Decides to purchase or construct the item, and:
   (i) Enters into a binding contract for the purchase or construction of the item after 20 May 2010; or
   (ii) Incurs expenditure for its purchase or construction after 20 May 2010.

Type of property | Annual rate
--- | ---
Buildings with an estimated useful life of 50 years or more (from the 2011–2012 income year) | 0%
International aircraft | 15% DV or 10% SL [see 250.260]
Property not described above | Economic rate, special rate or provisional rate

Note:
1. The 20 per cent loading does not apply to any item of depreciable property acquired, or for which a binding contract is entered into for purchase or construction, after 20 May 2010.
2. From the 2011–2012 income year, no depreciation can be claimed on buildings with an estimated useful life of 50 years or more. This applies whether the building was acquired before or after 20 May 2010.

The economic rates are listed in 5000 Depreciation Rates.

(3) Property not covered by annual rates

The economic rates do not apply to fixed life intangible property or excluded depreciable property, for which the rates are set as explained in 250.370 and 250.660 respectively.

The economic rates also do not apply to property deemed to be acquired under s FL 2(2) when a company emigrates from New Zealand [see 170.65].

(4) Depreciable buildings

Buildings with an estimated useful life of less than 50 years, and for which depreciation at the economic rate can be claimed, are listed below. Refer to the CIR’s table of rates (IR 265) for the relevant estimated useful life and economic rate. The meaning of “building” for depreciation purposes is explained in 250.310.

(a) Buildings and Structures asset category:
   • Barns;
   • Buildings (portable) (if deemed to be sufficiently permanent);
   • Buildings with prefabricated stressed-skin insulation panels;
   • Chemical works;
   • Fertiliser work;
   • Fowl houses;
   • Hothouses;
   • Pig houses;
   • Shade houses;
   • Tanneries.

(b) Agriculture, Horticulture and Aquaculture industry category:
   • Dairy sheds and yards

(c) Dairy Plant industry category:
   • Powder dryer buildings

(d) Cigarette Manufacturing industry category
   • Barns (drying)
Selecting the depreciation rate

The following points must be considered when choosing the appropriate depreciation rate for an asset:

(a) The date of the asset’s acquisition;

(b) All property is either depreciable property or not depreciable property;

(c) All depreciable property is:
   (i) Fixed life intangible property;
   (ii) Excluded depreciable property acquired before 1 April 1993;
   (iii) Depreciable property acquired between 1 April 1993 and the end of the 1994–1995 income year (both dates inclusive);
   (iv) Depreciable property acquired between the start of the 1995–1996 income year and 31 March 2005 (18 May 2005 in the case of buildings);
   (v) Depreciable property acquired from 1 April 2005 (19 May 2005 in the case of buildings); or
   (vi) Buildings with an estimated useful life of 50 years or more, including special excluded depreciable property (with effect from the 2011–2012 income year).

(d) Each classification of assets has its own particular depreciation rates that depend on the type of asset.

Choosing the appropriate depreciation rate

The following flowchart summarises the rules for determining the appropriate depreciation method and rate for an asset. The flowchart must be read in conjunction with the relevant section or definition in the ITA 2007.
The "new" economic depreciation rates are listed in 5000 DEPRECIATION RATES. See also Inland Revenue booklets Depreciation – A guide for businesses (IR260) and General depreciation rates (IR265).
Rates for assets purchased before the end of the 1994–1995 income year are as follows:

<table>
<thead>
<tr>
<th>Date of purchase of asset</th>
<th>Depreciation rates to use</th>
</tr>
</thead>
<tbody>
<tr>
<td>15 December 1991 and earlier</td>
<td>Historic rates</td>
</tr>
<tr>
<td>16 December 1991 to 31 March 1993</td>
<td>Historic rates (plus 25% uplift if applicable)</td>
</tr>
<tr>
<td>1 April 1993 to the end of the 1994–1995 income year</td>
<td>Either the historic rates (plus 25% uplift if applicable), or the old economic rates.</td>
</tr>
</tbody>
</table>

The historic rates are the depreciation rates that applied to assets acquired before 31 March 1993. The old economic rates are the original economic rates set by Inland Revenue and which applied to assets acquired between 1 April 1993 and the end of the 1994–1995 income year. Both the historic rates and the old economic rates are listed in the Inland Revenue publication *Historic depreciation rates* IR 267.

### 250.290 Special rates

#### (1) Applying for a special rate

A person may apply for a special rate if they consider that the economic rate is not appropriate to their circumstances, eg if they use an item of depreciable property more or less intensively than normal. A special rate may be higher or lower than the economic rate for the item. Application for a special rate must be made in writing to the CIR (on form IR 260B) [TAA, s 91AAG(1)].

Within six months of receiving an application for a special rate, the CIR must either issue, or decline to issue, the determination. However, the applicant may agree to an extension of the six-month time limit. Within 30 days of issuing or deciding not to issue a determination, the CIR must give the applicant (or the applicant’s representative) notice of the decision and either a copy of the determination or the reasons for declining it [TAA, s 91AAM].

A special rate may not be set for an item of excluded depreciable property (see 250.660). In addition, from 20 May 2010, a special rate may not be set for an item of special excluded depreciable property or a building [s EE 35(2), see 250.670].

#### (2) CIR’s process

The CIR’s process for issuing a determination is to:

- Prepare a draft determination and send it to the applicant;
- Hold a conference to discuss the determination with the applicant (optional); and
- Issue the determination.

When determining whether or not to grant an application for a special rate, the level of any such rate, and the income year or years to which it applies, the CIR may have regard to any factors that are relevant in determining the item’s estimated useful life, including an estimate based on a depreciation method or on a valuer’s report, or a rate of depreciation that the person uses for the item for financial reporting purposes [TAA, s 91AAG(2)].

A special rate may be either a DV rate or a SL rate. A special rate is set by the CIR using the applicable formula in ss EE 27, EE 28, EE 30 or EZ 23, or using the straight-line method [TAA, s 91AAG(3)].

The term of a lease is not a relevant factor in determining an item’s estimated useful life for the purposes of setting a special rate. For example, the fact that an item of depreciable property is located inside a leased building is not relevant in determining the estimated useful life of the item when setting a special rate. See Inland Revenue interpretation statement IS 10/05.
(3) **Dispute or challenge**
A person who has applied for a determination setting a special rate may dispute or challenge the determination [TAA, s 91AAJ].

(4) **CIR may decline to issue determination**
The CIR may decline to issue a special rate if:

(a) The difference between the economic rate for the item and an appropriate special rate would be less than 50 per cent of the difference between the already applicable economic rate and the next higher or lower rate (as applicable) in sch 11 (for items acquired on or after 1 April 2005) or sch 12 (for items acquired before 1 April 2005);

(b) The CIR is reviewing the economic rate for the item and intends to set a new economic rate that is equal to or more than an appropriate special rate within six months of the date of the application; or

(c) The applicant has supplied insufficient information to enable the CIR to calculate an appropriate rate [TAA, s 91AAH(2)].

| Example: |
The economic rate set for an item of depreciable property is 20 per cent DV. The next highest DV band is 25 per cent. A special rate application will therefore have to produce a rate of at least 23 per cent under the formula in s EE 26 before the special rate determination is issued.

(5) **Revocation**
The CIR may revoke a determination that sets a special rate for an item, or revoke the determination and set a new special rate, if the circumstances that applied at the time the original determination was issued no longer exist or have changed materially. If the CIR revokes a determination without issuing a new one, the person must depreciate the item using the economic rate or an applicable provisional rate. A revocation takes effect from the day after the date the person is notified, or the day after the date notice is published in the Gazette [TAA, s 91AAI].

Within 30 days of revoking the determination, the CIR must notify the applicant (or the applicant’s representative) of the decision and the reasons for revoking the determination [TAA, s 91AAM(5), (6)].

(6) **Using a special rate**
A person may depreciate an item to which a special rate applies by applying, instead, the economic rate or a provisional rate applicable to the item. However, if a special rate applies to an item, the economic rate or the provisional rate cannot be used if:

(a) The special rate is higher than the economic rate;

(b) The person applies the special rate to the item for an income year;

(c) In a later income year, the item’s market value declines at a rate equal to or greater than the special rate; and

(d) It can reasonably be concluded from all the circumstances that the person’s purpose, or one of their purposes, in wanting to change from the special rate to the economic rate or the provisional rate is to enable the person to defer the depreciation deduction [s EE 36].

For certain operating leases, for income years commencing after 20 June 2007, the depreciation allowed for a lease asset is five-sixths of the depreciation otherwise allowable [see 900.30].

(7) **Property previously used other than for business purposes**
When a taxpayer applies for a special rate for an item of depreciable property that was previously used for a purpose other than deriving assessable income or carrying on a business (for example, a secondhand imported asset or an asset previously used for private purposes), it is the CIR’s policy that, in determining the special rate, the estimated useful life of the item will be interpreted as the total useful life of the item, not the remaining...
useful life. In other words, the estimated useful life is not reduced by the period during which the item was not used for income generating or business purposes.

The following examples illustrate how this policy will apply in practice.

**Example 1:**
Company A imports a secondhand machine into New Zealand. The machine is 15 years old, and is expected to be useful in New Zealand for a further four years. It will then cease to comply with New Zealand safety standards, and so will be scrapped or sold offshore. No unusual factors will cause it to deteriorate faster than normal. The estimated useful life of the machine is 19 years, being the total number of years that the machine could potentially be expected to be useful for deriving income or carrying on a business. The machine could potentially have been used for deriving income or carrying on a business in New Zealand during its entire life, even though it was actually outside New Zealand for its first 15 years.

**Example 2:**
Company B purchases a secondhand item of depreciable property in New Zealand. The item was previously used privately for five years, and it will be used by Company B for another three years before it is scrapped. The item would normally last for another five years, but the way that the company uses it will cause it to deteriorate within three years of acquisition. The estimated useful life of the item is eight years. This includes the five years that the item was used privately as it might reasonably have been expected to be useful in a business in New Zealand during this period. The eight year estimated useful life also takes into account the abnormal use of the item by Company B which causes it to lose value faster than normal (normally that type of item would have an estimated useful life of 10 years).

**250.290(8) Depreciation**

(8) Objections to determinations of special rates [TAA, ss 91AAJ]

Any taxpayer who has applied for a determination for a special rate and any taxpayer to whom such a determination applies, may dispute or challenge the determination in accordance with Part 4A and Part 8A of the TAA.

**250.300 Provisional rates [ss EE 35, EE 36; TAA, ss 91AAG, 91AAH, 91AAJ, 91AAM]**

(1) Applying for a provisional rate

A person may apply for a provisional rate if there is no applicable economic rate for an item of depreciable property. This may apply, for example, to a type of property that has not been used in New Zealand previously. Application for a provisional rate must be made in writing to the CIR (on form IR 260A) [TAA, s 91AAG(1)].

A provisional rate may not be set for an item of fixed life intangible property or an item of excluded depreciable property [s EE 35(3)].

Within six months of receiving an application for a provisional rate, the CIR must either issue, or decline to issue, the determination. However, the applicant may agree to an extension of the six-month time limit. Within 30 days of issuing or deciding not to issue a determination, the CIR must give the applicant (or the applicant’s representative) notice of the decision and either a copy of the determination or the reasons for declining it. The CIR must also, within 30 days of issuing or revoking a determination that is expressed to apply to a class of persons, publish a notice in a publication chosen by the CIR giving notice that the determination has been issued and stating where copies can be obtained [TAA, s 91AAM].

(2) CIR’s process

The CIR’s process for issuing a determination is to:

(a) Prepare a draft determination and send it to the applicant;
(b) Hold a conference to discuss the determination with the applicant (optional); and
(c) Issue the determination.

When determining whether or not to grant an application for a provisional rate, the level of any such rate, and the income year or years to which it applies, the CIR may have regard to any factors that are relevant in determining the item’s estimated useful life, including an estimate based on a depreciation method or on a
A provisional rate may be either a DV rate or a SL rate. A provisional rate is set by the CIR using the applicable formula in s EE 27, EE 28, EE 30 or EZ 23, or using the SL method [TAA, s 91AAG(3)]. The rate calculated under the applicable formula must be rounded up or down to the nearest rate specified in schs 11 or 12 [TAA, s 91AAG(4)].

A determination setting a provisional rate for an item and a person may also be expressed to apply to items of the same kind as the item, and to any other person or class of persons [TAA, s 91AAG(5)]. If a provisional rate determination is stated to apply to a class of persons the CIR must, within 30 days of issuing the determination, give notice in the Gazette that the determination has been issued and stating where copies can be obtained [TAA, s 91AAM(4)].

A provisional rate for an item will usually apply to all taxpayers that own and use that class of item. However, a provisional rate may be limited to a class of taxpayers, for example, if the item is used in an atypical way by a particular industry group. A provisional rate can also be set for a specific taxpayer.

(3) **Determination ceasing to apply**

A determination setting a provisional rate ceases to apply when an economic rate for the item comes into force, unless the determination specifically provides otherwise [TAA, s 91AAG(6)].

(4) **Dispute or challenge**

A person who has applied for a determination setting a provisional rate may dispute or challenge the determination [TAA, s 91AAJ].

(5) **CIR may decline to issue determination**

The CIR may decline to issue a provisional rate if:

(a) An economic rate, other than a default rate, already applies to the item;

(b) A default rate applies to the item, and the difference between the default rate and the provisional rate would be less than 50 per cent of the difference between the default rate and the next higher or lower rate (as applicable) in sch 11 (for items acquired on or after 1 April 2005) or sch 12 (for items acquired before 1 April 2005);

(c) The CIR is in the process of determining an economic rate for the item for the income year to which the application relates and intends to set it within six months of the date of the application; or

(d) The person has supplied insufficient information to the CIR to calculate an appropriate rate [TAA, s 91AAH(3)].

(6) **Revocation**

The CIR may revoke a provisional determination if it no longer applies to an item or if the item is no longer in use or available for use. The revocation takes effect on the day after notification in the Gazette [TAA, s 91AAG(7)].

Within 30 days of revoking the determination, the CIR must notify the applicant (or the applicant’s representative) of the decision and the reasons for revocation [TAA, s 91AAM(5), (6)].

(7) **Using a provisional rate**

In some circumstances, a person may not depreciate an item using the provisional rate if a special rate applies to the item. See 250.290.

For certain operating leases, for income years commencing after 20 June 2007, the depreciation allowed for a lease asset is five-sixths of the depreciation otherwise allowable [see 900.30].
(8) Objections to determinations of provisional rates [TAA, ss 91AAJ]

Any taxpayer who has applied for a determination for a provisional rate and any taxpayer to whom such a determination applies, may dispute or challenge the determination in accordance with Part 4A and Part 8A of the TAA.

250.310 Meaning of “building” for depreciation purposes

There are specific provisions in the ITA 2007 that deal with the depreciation of buildings. In particular, the depreciation rate for new buildings is not increased by the 20 per cent loading that applies to most other newly acquired items acquired before 20 May 2010 [s EE 31(2)(b)(ii)]. From the 2011–2012 income year, no depreciation can be claimed on buildings with an estimated useful life of 50 years or more [s EE 31(2)(d), (3)(c)].

The term “building” is not defined in the legislation, although it does exclude grandparented structures and commercial fit-outs [s YA 1]. To clarify the meaning, the CIR issued an interpretation statement (IS 10/02) setting out the meaning of the term “building” in the context of the depreciation provisions. The statement applies from 30 July 2009. Since the interpretation statement was issued, Inland Revenue has revised the depreciation rates (see Determination DEP79) relating to buildings and other structures to reflect its modified view of what a building is.

The CIR’s view is that, in the context of the tax depreciation provisions, a building is an item within the ordinary or conventional meaning of the term “building”. Case law indicates that a building within the ordinary or conventional meaning of that term generally has the following characteristics:

- It is a structure of considerable size;
- It is permanent in the sense that it is intended to last a considerable time;
- It is permanent in the sense that it is designed to be located permanently on the site where it stands. A building is fixed to the land on which it stands. However, a building need not be legally part of the land on which it stands;
- It is enclosed by walls and a roof;
- It can function independently of any other structure. However, a building is not necessarily a physically separate structure.

The design of a building and the materials used to construct a building need to be of a kind that are intended to last for a considerable period.

The appearance and function of a structure are relevant in determining whether it is a building for depreciation purposes, that is, whether the structure looks like the conventional idea of a building and is designed for the uses to which conventional buildings are ordinarily put. It is appropriate to ask whether a reasonable person would regard the structure as a building.

It is the CIR’s view that the ordinary or conventional meaning of “building” is not modified for the purposes of the depreciation provisions either in terms of being broader, to include many built structures, nor to exclude buildings that provide a specialised function or purpose, or are integrated with plant. In the case of the latter group, for some such buildings (“temporary buildings”) s DB 20 provides concessionary treatment by allowing deductions for losses incurred on the destruction of the building. This concessionary treatment would also be available for some buildings that have shorter economic useful lives than buildings in general or are situated at construction sites.

250.320 Land and buildings [s EE 7]

Depreciation cannot be claimed on land [s EE 7(a)]. When land and improvements are purchased and the purchase price does not specify the cost of the improvements it will be necessary to objectively determine the portion of the purchase price that relates to the improvements. While an appropriately qualified valuer could be employed for this purpose, the Ratings Valuation (RV), prepared by Quotable Value [see www.qv.co.nz] provides acceptable and readily accessible information that can be used to apportion the purchase price between the land and the improvements, as follows:

\[(\text{RV of improvements} / \text{RV of land and improvements}) \times \text{purchase price of land and buildings}\]
Depreciation

Example:
A small medical practice purchased a residential property to use as its business premises. The purchase price of the property was $500,000. The most recent ratings valuation indicated that the property had a capital value (total value) of $520,000 and a land value of $295,000. The value of the building itself (i.e., the improvements) is therefore $225,000. The proportion of the purchase price that relates to the building is calculated as follows:

\[
\frac{225,000}{520,000} \times 500,000 = 216,346
\]

250.330 Depreciable land improvements [sch 13]

While land is specifically excluded from the definition of depreciable property, certain land improvements can (from 1 April 1993, unless stated otherwise) be depreciated:

- Airport runways;
- Bores and wells;
- Bridges;
- Chimneys;
- Culverts;
- Dams;
- Fences;
- Hardstanding;
- Pipes (from 2008–2009);
- Purpose-built surfaces for outdoor sports facilities (from 2008–2009);
- Reservoirs;
- Retaining walls;
- Roads;
- Spillways;
- Swimming pools;
- Tanks;
- Tunnels;
- Wharves.

Land improvements made for the purposes of farming, agriculture, aquaculture and forestry can be amortised if the improvements are of a type set out in sch 20 [ss DO 4, DO 12, DP 3, see 430.130, 500.30 and 520.40].

250.340 Building fit-out not separately depreciated [s DB 65]

Depreciation cannot be claimed on buildings with an estimated useful life of 50 years or more from the 2011–2012 income year [250.240, 250.270]. However, commercial building owners who did not separately identify and depreciate building fit-out at the time of acquisition are still able to amortise a portion of the building’s adjusted tax value (as at the start of the 2011–2012 income year) until the building is disposed of. Items of building fit-out that were acquired after the building was acquired and that have been separately depreciated are excluded from the building’s adjusted tax value.

A person who meets all of the criteria (a) to (f), as set out below, for an income year is treated as having a loss equal to the amount calculated by the following formula:

\[
\text{Starting pool} \times 0.02 \times (\text{whole months}/12)
\]

Where:

“Starting pool” is calculated as:

\[
(0.15 \times \text{building atv}) - \text{fit-out atv}
\]

Where:

“Building atv” is the adjusted tax value of the building at the end of the 2010–2011 income year.
Depreciation

“Fitout atv” is the total adjusted tax value, at the end of the 2010–2011 income year, of all items of commercial fit-out that relate to the building, that were acquired after the building was acquired, and for which the person has claimed a depreciation deduction.

“Whole months” is the number of whole months in the income year in which the building is used, or is available for use, by the person in deriving assessable income or carrying on a business for the purpose of deriving assessable income.

The total of all deductions allowed under s DB 65 may not exceed the value of the starting pool. If the amount calculated under the first formula above exceeds the starting pool reduced by all deductions allowed in all previous income years, the lower figure is treated as the deductible amount.

The criteria that must be satisfied for an income year in order to claim a deduction under s DB 65 are:

(a) A person owns a commercial building, which is depreciable property and has an annual rate of zero per cent (ie the building has an estimated useful life of 50 years or more). (A “commercial building” is a building that is not, in part or in whole, a dwelling, unless use as a dwelling is a secondary and minor use);

(b) The “starting pool” for the building is greater than the total of all deductions allowed under s DB 65 in all income years before the current income year;

(c) The person was allowed a depreciation deduction for the building for the 2010–2011 income year and the person has not since disposed of the building;

(d) The person has never had a depreciation deduction for a separate item of depreciable property that is commercial fit-out, and that relates to the building and was acquired at the same time as the building;

(e) The building was acquired in the 2010–2011 or an earlier income year; and

(f) The person is not allowed a deduction under any other provision in relation to the building, for the income year.

The capital limitation does not apply to a loss under s DB 65 merely because the item of property is itself of a capital nature.

250.350 Residential rental properties

(1) Media release

In May 2006, Inland Revenue advised residential rental property owners that it is unacceptable for them to separate out the smaller components of their properties in order to be able to take advantage of higher depreciation rates for tax purposes. Chattels such as carpets, drapes, light fittings and whiteware, as well as water heaters, clotheslines and other fittings that are not part of the building, can be separately depreciated. However, items such as internal walls, doors, electrical wiring, plumbing, and furniture and fittings such as kitchen cupboards, bathroom vanities and built-in wardrobes, which are permanently attached to or are part of the building, cannot be depreciated separately. Prior to the media release, it had been the practice of some residential rental property owners to split these components out and depreciate them separately at depreciation rates listed in the asset category “Building fit-out (when in the books separately from building cost)”. Inland Revenue advised that property owners who have done this will have overstated their depreciation claims in the past, but won’t be required to adjust previous years’ income. However, they will be required to add the value of the various components back to the cost of the building for future depreciation purposes [see Inland Revenue Media release, 29 May 2006].

(2) CIR’s 2010 interpretation statement

The CIR’s view on how to determine whether an item that forms part of a residential rental property is a separate item of depreciable property, or is part of the building, is set out in interpretation statement IS 10/01 (TIB vol 22:4 (May 2010), at 16–47). The statement concludes that the following three-step process should be followed to determine whether a particular item is part of or separate from the building:

Step 1: Determine whether the item is in some way attached or connected to the building. If the item is completely unattached, then it will not form a part of the building. An item will not be considered attached...
for these purposes if its only means of attachment is being plugged or wired into an electrical outlet (such as a freestanding oven), or attached to a water or gas outlet. If the item is attached to the building, go to step 2.

**Step 2:** Determine whether the item is an integral part of the residential rental property such that a residential rental property would be considered incomplete or unable to function without it. If the item is an integral part of the residential rental property, then the item will be a part of the building. If the item is not an integral part of the residential rental property, go to step 3.

**Step 3:** Determine whether the item is built-in or attached or connected to the building in such a way that it is part of the “fabric” of the building. Consider factors such as the nature and degree of attachment, the difficulty involved in the item’s removal, and whether there would be any significant damage to the item or the building if the item were removed. If the item is part of the fabric of the building, then it is part of the building for depreciation purposes.

Applying this approach, the statement concludes that plumbing and piping, electrical wiring, internal walls, internal and external doors, garage doors (when the garage is part of the residential rental building), fitted furniture (wardrobes and cupboards built into the wall), kitchen cupboards, bathroom fittings and furniture, linoleum, and tiles (wall and floor) are not separate assets, but are part of the building. Wardrobes and cupboards not built into the wall, carpets, curtains, blinds and water heaters and hot-water cylinders can be regarded as separate from the building, so can be depreciated at a different rate.

### 250.360 Depreciable intangible property [ss EE 33, EE 43, EE 62, EE 67]

Depreciable intangible property can be depreciated [s EE 6(3)]. Depreciable intangible property is defined as property listed in sch 14, namely:

(a) The right to use a copyright.
(b) The right to use a design or model, plan, secret formula or process, or other like property or right.
(c) A patent or the right to use a patent.
(d) A patent application with a complete specification lodged from 1 April 2005.
(e) The right to use land.
(f) The right to use plant or machinery.
(g) The copyright in software, the right to use the copyright in software, or the right to use software.
(h) The right to use a trademark.
(i) Management rights and licence rights created under the Radiocommunications Act 1989.
(j) A consent granted under the Resource Management Act 1991 to do something that otherwise would contravene ss 12–15 of that Act (other than a consent for a reclamation), being a consent granted in or after the 1996–1997 tax year.
(k) The copyright in a sound recording, if the copyright was produced or purchased by the taxpayer from 1 July 1997 and copies of the recording have been sold or offered for sale to the public.
(l) Plant variety rights granted under the Plant Variety Rights Act 1987 or similar rights given similar protection under the laws of a country or territory other than New Zealand.
(m) A right to use plant variety rights granted under the Plant Variety Rights Act 1987 or a similar right under the laws of a country or territory other than New Zealand.

Under s EE 62(2) depreciable intangible property must meet the following criteria to be listed in sch 14:

(a) It must be intangible; and
(b) It must have a finite useful life that can be estimated with a reasonable degree of certainty on the date of its acquisition.

However, s EE 62(3) provides that property listed in sch 14 is depreciable property even if the criteria are not met. This provision overcomes some issues with the interpretation of the phrase “depreciable intangible property”. In short, if it is listed in sch 14 it is depreciable intangible property.
Although the right to use a trademark for a fixed period is depreciable intangible property, a trademark itself is not, and therefore cannot be, depreciated because it effectively has an unlimited life. Intangible property can only be depreciated if it has a finite and measurable useful life at the time of acquisition: *Trustees of CB Simkin Trust v Commissioner of Inland Revenue* [2003] 2 NZLR 315 (CA); *Trustees in the CB Simkin Trust v Commissioner of Inland Revenue* (2002) 20 NZTC 17,611 (HC).

Intangible property created or purchased after 31 March 1993 (and for which a deduction is not otherwise available) is depreciable. When a taxpayer develops intangible property rather than purchasing it, any scientific research costs may be deductible under s DB 33, or may qualify as expenditure on research and development under s DB 34.

(1) **Transfer of depreciable intangible property**

If a person (Person A) directly or indirectly acquires (on or after 1 July 1997) depreciable intangible property from an associated person, Person A is not allowed a depreciation loss for the property if it:

(a) Was not depreciable property of the associated person because it was not of a kind listed in sch 14 at the time it was acquired by the associated person; and

(b) Was not property the cost of which was allowed as a deduction to the associated person, other than a deduction for a depreciation loss, under a provision outside subpart EE [s EE 43].

**250.370 Fixed life intangible property** [s EE 33]

Fixed life intangible property that falls within the following categories will have its depreciation rate set under the provisions indicated, rather than under s EE 33:

(a) Excluded depreciable property [s EZ 15, see 250.660];

(b) A patent acquired in the 2005–2006 or later income year [s EE 34, see 250.390].

The depreciation rate for FLIPs is calculated using the following formula:

\[
\frac{1}{\text{legal life}}
\]

Where:

“Legal life” is:

(a) The number of years, months and days for which an owner’s interest in an item of intangible property exists under the contract or statute that creates the owner’s interest, assuming the owner exercises any rights of renewal or extension that are either essentially unconditional or conditional on the payment of predetermined fees;

(b) For patents acquired in the 2005–2006 or later income year, or patent applications first lodged from 1 April 2005, the legal life under (a) if the patent was granted when the patent application was first lodged;

(c) For plant variety rights granted in the 2005–2006 or later income year, the total of the legal life under (a) and the number of whole calendar months during which the person owns the plant variety rights application [s EE 67].

In determining the length of the legal life it must be assumed that any automatic rights of renewal are taken up, provided the only action needed is the payment of a predetermined fee.

For the purposes of the above formula, the legal life is taken to be the FLIP’s remaining legal life from the time at which the property was acquired. If the owner of the FLIP incurs additional costs in relation to the FLIP and a deduction for those costs (except as depreciation) is denied, the legal life is taken to be the FLIP’s remaining legal life from the start of the income year in which the additional costs were incurred [s EE 33(3)]. The additional costs are added to the FLIP’s adjusted tax value at the start of the income year.
The rate given by the formula is expressed as a decimal and rounded to two decimal places, with numbers at the midpoint or greater rounded up and other numbers rounded down. The formula gives an SL depreciation rate. The SL method is the only depreciation method that can be used for FLIPs. FLIPs are not eligible for the 20 per cent loading (prior to 21 May 2010) under s EE 31.

Example 1:
A patent for a new type of electric motor is purchased on 1 May 1999 for $100,000. The patent was granted on 1 May 1997 for an initial period of four years, with automatic rights of renewal that enable it to run to 1 May 2013 if it is renewed when required. As far as can be ascertained at the time of purchase, the patent remains valuable until the end of its legal life. The depreciation rate to be used by the purchaser is:

\[
\frac{1}{14} = 0.07 \text{ (or 7\%)}
\]

A $7,000 ($100,000 × 7\%) depreciation loss can therefore be claimed each year. If the patent becomes obsolete before the end of its legal life, the owner can apply to write off the remaining ATV value under the provisions of s EE 39.

Various adjustments must be made when a FLIP is sold, both for the vendor and purchaser.

Example 2:
On 1 October 20X1 Vanessa, who has a 31 March balance date, is granted a lease for three years at a premium of $3,000. The depreciation rate is 33.33 per cent SL. The depreciation allocated to each year is:

<table>
<thead>
<tr>
<th>Income Year</th>
<th>Deduction</th>
</tr>
</thead>
<tbody>
<tr>
<td>20X1–X2</td>
<td>$500</td>
</tr>
<tr>
<td>20X2–X3</td>
<td>$1,000</td>
</tr>
<tr>
<td>20X3–X4</td>
<td>$1,000</td>
</tr>
<tr>
<td>20X5–X6</td>
<td>$500</td>
</tr>
</tbody>
</table>

If on 1 April 20X2 Vanessa assigns the lease to Emma for a premium of $2,000, Vanessa’s deductions for the 20X1–X2 and 20X2–X3 years will be the same, but in the 20X3–X4 year an adjustment is necessary. It means that $500 is included in income, being the difference between the premium received $2,000 and the adjusted tax value $1,500 as at 31 March 20X3 [s EE 48]. Vanessa cannot claim any deduction in the 20X3–X4 and 20X4–X5 years.

Emma can claim depreciation on $2,000 at the rate of 66.67 per cent, which writes the item off over its remaining legal life.

250.380 Economic life intangible property
Depreciable intangible property which can be expected to have an economic life which is shorter than its legal life (economic-life intangibles), such as software, are not FLIPs. The CIR determines their depreciation rate (ie the economic rate) using the same method that is applied to all tangible depreciable property. See 5000 DEPRECIATION RATES.

Unlike FLIPs, economic-life intangibles can be depreciated using either a DV or SL depreciation rate. They can also be pooled, and are eligible for the 20 per cent loading under s EE 31 (for items acquired before 21 May 2010). Taxpayers can also apply for a special or provisional depreciation rate for economic-life intangibles.

250.390 Patents [ss DZ 15, EE 34]
The rate of depreciation applicable to a patent acquired in the 2005–2006 or later income year is calculated using the following formula:

\[
\frac{1}{\text{legal life}}
\]
Depreciation

“Legal life” is defined in s EE 67 [see 250.370]. For the purposes of s EE 34, the legal life of a patent is determined as follows:

<table>
<thead>
<tr>
<th>Circumstances</th>
<th>Legal life</th>
</tr>
</thead>
<tbody>
<tr>
<td>Section EE 19 applies to the patent (see below).</td>
<td>The patent’s remaining legal life from the start of the income year in which the owner incurs additional costs for the patent.</td>
</tr>
<tr>
<td>Section EE 19 does not apply to the patent, and the owner has not been allowed</td>
<td>The patent’s remaining legal life from the time at which the owner acquires the patent.</td>
</tr>
<tr>
<td>a depreciation deduction for the patent application.</td>
<td></td>
</tr>
<tr>
<td>Section EE 19 does not apply to the patent, and the owner has been allowed a</td>
<td>The remaining legal life of the patent application from the start of the income year in which the patent application was acquired.</td>
</tr>
<tr>
<td>depreciation deduction for the patent application, and s EE 19 has not applied</td>
<td></td>
</tr>
<tr>
<td>to the patent application while the person has owned it.</td>
<td></td>
</tr>
<tr>
<td>Section EE 19 does not apply to the patent, and the owner has been allowed a</td>
<td>The remaining legal life of the patent application from the start of the income year in which the patent was acquired.</td>
</tr>
<tr>
<td>depreciation deduction for the patent application, and s EE 19 has applied to</td>
<td></td>
</tr>
<tr>
<td>the patent application while the person owned it.</td>
<td></td>
</tr>
<tr>
<td>Section EE 19 applies to a patent or patent application that meets the definition</td>
<td>Section EE 19 applies to a patent or patent application that meets the definition of fixed life intangible property [see 250.370] if the owner incurs additional costs in relation to the patent or patent application and the owner is denied a deduction for those additional costs other than a depreciation deduction.</td>
</tr>
<tr>
<td>of fixed life intangible property [see 250.370] if the owner incurs additional costs in relation to the patent or patent application and the owner is denied a deduction for those additional costs other than a depreciation deduction.</td>
<td></td>
</tr>
<tr>
<td>The rate calculated using the above formula is expressed as a decimal and rounded to two decimal places, with numbers at the midpoint or greater being rounded up and other numbers being rounded down.</td>
<td></td>
</tr>
<tr>
<td>For the rules applying to the depreciation of patent applications lodged before 1 April 2005, see 250.107 in Staples Tax Guide 2011 edition or earlier.</td>
<td></td>
</tr>
</tbody>
</table>

**250.400 Plant variety rights [s EE 25, sch 14]**

A grant of plant variety rights under the Plant Variety Rights Act 1987 gives the holder the exclusive right to produce for sale and to sell propagated material of the plant variety for a period of 20 or 23 years, depending on the type of plant. The legal life of a plant variety right begins on the date the right is granted. A plant variety receives provisional protection from the date the application for the right is made. Plant variety rights and the right to use plant variety rights (including similar rights under the law of another country or territory) are depreciable intangible property [see sch 14].

Depreciation is allowed in respect of plant variety rights granted, and rights to use plant variety rights acquired, in the 2005–2006 and subsequent income years. The depreciation rates for plant variety rights, which are fixed life intangible property, are determined under s EE 33 [see 250.370].

Depreciation cannot be claimed under s EE 33 for the period between the date an application for plant variety rights is lodged and the date the application is granted. However, a “catch-up” depreciation deduction is available where:

(a) Plant variety rights are granted to a person in their 2005–2006 or later income year;
(b) The rights are granted in relation to an application owned by that person; and
(c) A deduction for expenditure is not allowed under any provision other than s EE 25.

If these conditions are met, the person is allowed a deduction for expenditure on the plant variety rights application in the income year in which the plant variety rights are granted, calculated using the formula:

\[
\frac{\text{cost} \times \text{months of ownership}}{\text{depreciation months}}
\]

Where:
Depreciation

“Cost” is the cost of the plant variety rights application;
“Months of ownership” is the number of whole calendar months for which the person owns the plant variety rights application (ie the period between when the application is lodged and when it is granted);
“Depreciation months” is the total of the months of ownership (as above) and the number of months in the term for which the plant variety rights are granted.

Example:
Plant Breeders Ltd developed a new plant variety and applied for a plant variety right on 14 July 20X1. The cost of obtaining the plant variety right was $100,000. The company has a standard balance date. Provisional protection automatically applied from 14 July 20X1. The plant variety right was granted on 4 November 20X2 for a period of 20 years (240 months). The provisional protection period (from July 20X1 to October 20X2) is 16 months. Depreciation cannot be claimed until the income year in which the right is granted (ie the 20X2–X3 income year). In the 20X2–X3 income year the company can claim depreciation from November 20X2 to March 20X3 as follows:
$$5 \div (240 + 16) \times \$100,000 = \$1,953$$
In addition, Plant Breeders Ltd can claim catch-up depreciation for the period of provisional protection as follows:
$$16 \div (240 + 16) \times \$100,000 = \$6,250$$
The total depreciation the company can claim in the 20X2-X3 income year is $8,203 ($1,953 + $6,250). For each subsequent income year (until the year in which the right expires) the company will be able to claim depreciation of:
$$12 \div (240 + 16) \times \$100,000 = \$4,687$$

250.410 Computer software
A policy statement on the income tax treatment of computer software is given in the Appendix to TIB vol 4:10 (May 1993). It applies to expenditure incurred from 1 July 1993. Software expenditure incurred before 1 July 1993 was fully deductible as an expense for tax purposes. The following summary applies to software purchases from 1 July 1993,
(a) The cost of purchase is capitalised and depreciated;
(b) An immediate write-off is available for software costing less than $500;
(c) The cost of maintenance may be deducted;
(d) The cost of upgrades must be capitalised and depreciated.
When software is acquired under a finance lease:
(a) The cost price of software is capitalised and depreciated;
(b) The interest component of lease payments may be deducted;
(c) Maintenance costs may be deducted;
(d) The cost of upgrades must be capitalised and depreciated.
When software is developed in-house for use in business:
(a) Pre-development expenses may be deducted;
(b) Development expenses must be capitalised until the project is completed and then depreciated;
(c) The costs of unsuccessful development may be deducted upon application to the CIR under s EE 39;
(d) Maintenance costs may be deducted;
(e) The cost of upgrades must be capitalised and depreciated.
When commissioned software is acquired:
(a) Development costs must be capitalised until the project is accepted, then depreciated;
(b) The costs of unsuccessful development may be deducted upon application to the CIR under s EE 39;
(c) Maintenance costs may be deducted;
(d) The cost of upgrades must be capitalised and depreciated.
250.410(1)  Depreciation

The applicable depreciation rate for the above purposes is 50 per cent DV or 40 per cent SL (for software purchased from 1 April 2005).

When software is leased other than under a finance lease, lease payments are deductible over the term of the lease, subject to the general permission and general limitations [subpart DA].

When software is developed for sale or licence:

(a) Development costs are deductible in the year incurred;

(b) The value of unbilled work in progress and unsold completed software must be taken into account as trading stock. The value of trading stock at balance date must be included as income in the taxpayer’s return.

(1) Treatment of unsuccessful software development

After the issue of the policy statement in the May 1993 TIB, the CIR’s position on the deductibility of the cost of unsuccessful software development has changed. The CIR no longer considers that expenditure on software development where the software is never implemented or used in the taxpayer’s income earning process is deductible. This applies whether the software is developed in-house or commissioned. Consequently, the parts of the May 1993 TIB item that refer to this issue are withdrawn with effect from the start of the 2011–12 income year. The effect of this new policy is to create a category of expenditure that is never deductible: the expenditure on developing the software is not deductible because it is capital in nature [s DA 2(1)] and the resulting property created is not depreciable because it is not implemented or used in the income earning process. See TIB vol 23:4 (May 2011), at 2.

Note: The Minister of Revenue announced on 22 June 2011 that businesses should be able to claim tax deductions on failed software developments because not to do so would inhibit productivity and innovation. Amending legislation was introduced in the Taxation (Annual Rates, Returns Filing, and Remedial Matters) Bill on 14 September 2011. It is proposed that new s DB 40B will apply from the 2008–2009 income year and will override the capital limitation.

Expenditure incurred in developing software may amount to scientific research [s DB 33] or research and development [s DB 34, see 240.200 and 1240.20].

250.420 Disposal of intangible property [ss EE 44(2), EE 47(9)]

Since intangible property is not disposed of in the same way as other property, s EE 47(9) deems a disposal to include any event that has the effect of stopping the rights that make up intangible property from ever being able to be exercised by the owner. Disposals of property are explained further at 250.440–250.500.

Example:

A taxpayer purchases for $1,000 a five-year franchise that consists of the right to use a secret process and the right to use a trademark. The franchiser supplies the materials to use in the process. After three years the franchiser is declared bankrupt and, under the terms of the franchise agreement, no new materials can be purchased. The intangible property is a FLIP and has a self-assessed depreciation rate of 20 per cent. After three years, $600 worth of depreciation loss has been claimed so the adjusted tax value of the rights held by the franchisee is $400. Since the rights can never be used again, they are deemed to be disposed of and the $400 adjusted tax value can be written-off.

However, a disposal is also deemed under s EE 44(2) not to include a disposal of intangible property as part of an arrangement to replace it with property of the same type. This is to prevent taxpayers writing-off the cost of software that is sent back to the seller in return for a heavily discounted price on a later version. In effect, the original software has just been upgraded. The cost of the upgrade can be added to the cost or adjusted tax value (depending on the depreciation method being used) of the original version.

250.430 Write-off of depreciable property no longer used [s EE 39]

The adjusted tax value of depreciable property that is no longer used is deductible as a depreciation loss if the following conditions are met:

(a) The property is no longer used in deriving assessable income or carrying on a business for the purpose of deriving assessable income;
Depreciation

(250.440)

(b) Neither the owner nor an associated person intends to use the property in deriving assessable income or carrying on a business for the purpose of deriving assessable income; and

(c) The costs of disposing of the property would be more than any consideration that could be derived from disposing of it.

A deduction is also available under s EE 39 in respect of a geothermal well that becomes unavailable for use under s EE 6(4) because the geothermal energy proving period (defined in s YA 1) has ended. This applies from the 2006–2007 income year for wells completed or acquired from 1 April 2003 [see 250.540].

The amount of the depreciation loss is the adjusted tax value of the property at the beginning of the income year. The adjusted tax value of the property at the end of the income year in which the deduction is made is zero. If the taxpayer subsequently disposes of any property for which the deduction has been allowed, s EE 48 still applies as required by s EE 46(1)(a) [see 250.440–250.510].

A deduction is not available under s EE 39 if the property was depreciated using the pool method, or if the property is a building, unless the conditions set out below are met.

A deduction is allowed for the loss (ie the adjusted tax value) when a building is irreparably damaged and rendered useless for deriving income if the damage occurs:

(a) In the 2005–2006 or a later income year;

(b) As a result of the extreme climatic conditions that occurred in February 2004 in New Zealand; or

(c) As a result of the storm event that occurred during July 2004 in the Bay of Plenty.

In addition, a deduction is not available under s EE 39 if the damage to the building was caused by the action or failure to act of the owner of the building, or of an agent or associated person of the owner.

**Example 1:**

Joe owns a warehouse that is used in his import/export business. Flash flooding caused significant damage to the warehouse. An independent assessor concludes that Joe’s warehouse cannot be salvaged. In this situation, Joe would be able to claim a deduction for the adjusted tax value of the building.

**Example 2:**

Martin owns a workshop that is used to manufacture wooden furniture. Fire safety regulations require that the workshop be fitted with fire safety devices such as sprinklers, smoke alarms and fire extinguishers. A safety check of the premises revealed that the sprinklers were not in working order. Subsequently, a fire that was started by an electrical fault caused significant damage to the workshop. The insurance assessor concluded that the damage would not have been irreparable if the sprinklers were in working order. In this situation, Martin would not be able to claim a deduction for the loss as he has not taken reasonable care to ensure the workshop is safe. The likelihood of the workshop being irreparably damaged is not unexpected, as his inaction in not getting the sprinklers in working order had contributed to the result.

For further details, see TIB vol 17:7 (September 2005) at 38–39.

250.440 Disposals and similar events [s EE 44]

In the year that an item of depreciable property is disposed of, no depreciation loss arises [s EE 11(1)]. However, under the disposal rules, an adjustment (which may be either a deduction or assessable income) is made to the person’s net income when they dispose of an item of depreciable property.

The disposal rules set out in ss EE 48–EE 52 (as explained below) apply when a person derives consideration from the disposal (or an event treated as a disposal) of an item of depreciable property, if:

(a) The consideration is of a kind described in s EE 45 [250.470]; and

(b) The item is of a kind described in s EE 46 [250.450]; or

(c) The event is of a kind described in s EE 47 [250.460].

**Note:** The disposal rules apply if (a) is satisfied and either (b) or (c) is also satisfied.

However, the disposal rules do not apply when:

(a) Intangible property is disposed of under an arrangement to replace it with an item of the same kind (eg when software is upgraded to a later version);
(b) A patent application is concluded because a patent has been granted; or
(c) A geothermal well becomes unavailable for use because the geothermal energy proving period has ended.

250.450 Depreciable property to which the disposal rules apply [s EE 46]

The disposal rules apply to an item of depreciable property that a person owns, including fixed life intangible property for which a person has been allowed a depreciation deduction under s EE 33 and software to which s CZ 11 applies. Section CZ 11 applies when a person has been allowed a deduction for software acquired before 1 April 1993. The amount derived from the disposal is income.

The disposal rules do not apply to
(a) Items that are depreciated under the pool method;
(b) Petroleum-related depreciable property;
(c) An item of intangible depreciable property that is excluded depreciable property, other than software;
(d) A land improvement that is excluded depreciable property of a kind for which no depreciation deduction was allowed under s 108 of the ITA 1976.

250.460 Events to which the disposal rules apply [s EE 47]

The events that trigger the disposal rules are:
(a) Change of use or location of use: The change of use, or change of location of use, of an item of property, as a result of which a person is denied a deduction for an amount of depreciation loss for the next income year. An example of this would be when a rental property changes to a wholly personal use. The event is treated as occurring on the first day of the next income year, and (from the 2011–2012 income year) includes a change in use of an item for the purposes of the definition of “commercial fit-out” and a change in status of a building related to an item for the purposes of that definition.
(b) Loss or theft: The loss or theft of an item of property, if the item is not recovered in the income year in which the loss or theft occurred.
(c) Irreparable damage: The irreparable damage of an item of property.
(d) Repossession: The seller’s repossession of an item of property that is sold subject to a reservation of title [see 250.620] because the buyer fails to pay the consideration. The event occurs on the date the item is repossessed.
(e) Unused geothermal well brought into use: For a person’s geothermal well that is unavailable for use under s EE 6(4) because the geothermal energy proving period has ended, the start of the person’s:
   (i) Using the well in deriving assessable income or carrying on a business for the purpose of deriving assessable income;
   (ii) Having the well available for use in deriving assessable income or carrying on a business for the purpose of deriving assessable income [see 250.430 and 250.540].
(f) Statutory acquisition: The acquisition of an item of depreciable property by a person acting under a statutory authority.
(g) Cessation of ownership of lessee fixtures or improvements: The cessation of ownership of a fixture or improvement that a lessee is treated as having under s EE 4(2) or that a person is treated as having under s EE 5(3).
(h) Cessation of rights in intangible property: An occurrence that has the effect that the owner of an item of intangible property is no longer able, and will never be able, to exercise the rights that constitute or are a part of the item of property.
(i) Item leaving New Zealand permanently: The permanent removal from New Zealand of an item of property for which a first year depreciation allowance was claimed under s 112 of the ITA 1976.
250.470 Consideration derived for the purposes of the disposal rules

The consideration for the disposal of an item of depreciable property is the amount that the person derives, excluding any GST (if the person is registered for GST), minus the disposal costs incurred in deriving the amount. The consideration may be modified in specific circumstances by s EE 47(3)-(10) (see (a) to (h) below). Disposal costs (excluding GST, if the person is registered) are subtracted from the amount derived to the extent to which they:

(a) Are not allowed as a deduction other than as depreciation; and
(b) Are not already taken into account in the amount derived.

For these purposes, the consideration may be zero or a negative amount.

The meaning of consideration is modified in the following circumstances:

(a) Consideration not market value: If the consideration received is not the market value of the item, the amount that the person derives is the item’s market value (excluding GST if the disposal is a taxable supply), unless:
   (i) The disposal is a transfer under a relationship agreement; or
   (ii) Any of the following paragraphs (b) to (h) apply.

(b) Change of use or location of use: If there is a change in the way an item is used or in the location of the item, and as a result the owner of the item no longer qualifies for a depreciation deduction, the consideration is the item’s market value (excluding GST if the disposal is a taxable supply). This does not apply to a transfer under a relationship agreement.

(c) Loss or theft: If an item of depreciable property is lost or stolen, and not recovered in the same income year, the amount derived is the amount (excluding GST, if applicable) of insurance, indemnity or compensation received.

(d) Unused geothermal well brought into use: If an unused geothermal well is brought back into use, the amount derived is the amount of the deduction for depreciation loss allowed under s EE 39(4) [see 250.430 and 250.540].

(e) Irreparable damage: If an item of depreciable property is irreparably damaged, the amount derived is the amount of insurance, indemnity or compensation received (excluding GST, if applicable).

(f) Repossession: If an item of depreciable property is repossessed by the seller, the amount derived is the item’s cost minus the net amount paid (excluding GST, if applicable). “Net amount paid” means the amount paid for the item by the buyer less any amount refunded by the seller to the buyer.

(g) Other items: When an item is disposed of along with other items, or from an event that involves other items, the amount derived is the item’s market value (excluding GST if applicable). This does not apply to a transfer under a relationship agreement.

(h) Item leaving New Zealand permanently: When an item of property for which a first-year depreciation allowance has been claimed under s 112 of the ITA 1976 is permanently removed from New Zealand, the amount derived is the item’s market value (excluding GST if applicable). This does not apply to a transfer under a relationship agreement.

250.480 Disposal at a price exceeding adjusted tax value [s EE 48(1)-(1C)]

When the conditions in s EE 44 are satisfied [see 250.440], if the consideration is more than the item’s adjusted tax value on the date on which the disposal or the event occurs, the depreciation recovery income is the lesser of:

(a) The amount by which the consideration exceeds the adjusted tax value; and
(b) The amount given by the following formula:

\[ \text{item depreciation loss} + \text{CZ 11 item amount} + \text{DB 64 item amount} \]

where:
Depreciation

“item depreciation loss” is the total amount of depreciation loss that has been allowed as a deduction for the item;

“CZ 11 item amount” is the amount of any deduction allowed for the acquisition of the item if the item is one to which s CZ 11 applies (ie software acquired before 1 April 1993);

“DB 64 item amount” is the amount of the capital contribution for the item if the item is one to which s DB 64 (capital contributions) applies [see 250.210].

The amount of depreciation loss for the purposes of determining depreciation recovery income includes any deduction allowed for software acquired before 1 April 1993. This is because any consideration received on the disposal of software acquired before 1 April 1993 is assessable under s CZ 11.

The approach to determining depreciation recovery income means that any depreciation loss deductions previously allowed to the taxpayer are recoverable as depreciation recovery income, but any gains derived in excess of original cost are not income under these provisions.

Example:

Purchase price of depreciable property $15,000
Depreciation allowed as a deduction since purchase $3,000
Adjusted tax value $12,000
Item sold for $16,000
Total gain on sale $4,000
Depreciation recovered — income $3,000
Capital gain — not income $1,000

250.490 Disposal at a price less than adjusted tax value [s EE 48(2)]

If the consideration is less than the adjusted tax value of any property on the date on which the disposal or event occurs, the person has an amount of depreciation loss. The depreciation loss is the amount by which the consideration is less than the adjusted tax value. This does not apply if the depreciable asset is a building unless the building has been destroyed or rendered useless for the purpose of deriving income as a result of a qualifying event [see 430.105].

Example:

Purchase price of depreciable property $20,000
Depreciation allowed as a deduction since purchase $9,000
Adjusted tax value $11,000
Item sold for $8,000
Depreciation loss on disposal $3,000

250.500 Disposal of property used partly for business [ss DE 2, EE 49, EE 50]

The depreciation loss on depreciable property with both business and non-business uses must be apportioned accordingly. For this purpose, the ITA separates the types of depreciable property that may have non-business use into motor vehicles and other property. Calculating the amount of depreciation loss on property used partly for business is discussed at 250.100.

Separate rules provide for the calculation of the depreciation loss and depreciation recovery income on disposal of property used partly for business. These rules are contained in:

(a) For depreciation loss on disposal: s DE 2 in relation to motor vehicles and s EE 50 for other items; and

(b) For depreciation recovery income on disposal: s EE 49.
(1) Depreciation loss on disposal: motor vehicles and other items

Although the depreciation loss is dealt with in different provisions, the formula is the same in both ss DE 2 and EE 50. The formula is:

\[
\text{disposal depreciation loss} \times \frac{\text{all deductions}}{\text{base value} - \text{adjusted tax value}}
\]

Where:

“Disposal depreciation loss” is the amount determined under s EE 48(2) (ie the depreciation loss on disposal calculated in the same manner as for property wholly used in the business).

“All deductions” is the amounts of depreciation loss for which the person has been allowed a deduction in each of the income years in which the person has owned the property.

“Base value” and “adjusted tax value” have their ordinary meanings [ss EE 55-EE 60, 250.120].

Example 1:

Anne-Maree is a self-employed salesperson and has calculated using the logbook rules that her car is used 85 per cent for business purposes. The base value (cost) of the car is $18,000, and it is owned for the entire income year. The car was purchased secondhand at the start of the previous year, and the applicable depreciation rate is 30 per cent DV. Total depreciation for the year is $5,400 ($18,000 × 30%). Anne-Maree disposes of her vehicle in the following income year for $12,000 at which time the ATV is $12,600 ($18,000–$5,400). No depreciation loss other than a depreciation loss on disposal can be claimed in the year an item is disposed of: ss EE 11(1) and (4). Disposal depreciation loss is $600 ($12,000–$12,600). All deductions is $4,590 calculated as follows:

\[
($18,000 - $12,600) \times 85\
\]

Base value is $18,000 and ATV is $12,600. The depreciation loss on disposal is:

\[
$600 \times $4,590 / $5,400 = $510.
\]

Alternatively, as the business use percentage was 85 per cent, all other things being equal, the depreciation loss on disposal is $600 × 0.85 = $510.

(2) Depreciation loss on disposal: disposal in first year of use

If a motor vehicle is disposed of in the same income year as it is first used for business purposes, and a loss results, the amount of deduction allowed is calculated under the following formula [s DE 2]:

\[
\text{disposal depreciation loss} \times \text{business proportion}
\]

Where:

“Disposal depreciation loss” is the amount calculated under s EE 48(2) (ie the adjusted tax value less the amount of consideration received on sale);

“Business proportion” is the proportion of business use of the motor vehicle for the income year as calculated under ss DE 3-DE 12.

If an item other than a motor vehicle is disposed of in the same income year as it is first used for business purposes, and a loss results, the amount of deduction allowed is calculated under the following formula [s EE 50(8)-(11)]:

\[
\text{disposal depreciation loss} \times \frac{\text{qualifying use days}}{\text{all days}}
\]

Where:

“Disposal depreciation loss” is the amount calculated under s EE 48(2) (ie the adjusted tax value less the amount of consideration received on sale);

“Qualifying use days” is the number of days in the income year on which the item is owned and used, or available for use, for business purposes or in a way that is subject to FBT;
“All days” is the number of days in the income year on which the item is owned and used, or available for use, for any purpose.

A unit of measurement other than days may be used if it achieves a more appropriate apportionment.

(3) **Depreciation recovery income: motor vehicles and other items**

When an item of property is an item to which s EE 46 applies and is dealt with under either subpart DE (Motor vehicle expenses) or s EE 50 (Depreciation: partial income producing use), then s EE 49 applies if the consideration received on disposal is equal to or less than cost.

Essentially s EE 42 will apportion an amount of depreciation recovery income such that only that amount of depreciation recovery income that relates to the business use of an item is assessable income.

The depreciation recovery income is determined by the following formula:

\[
\frac{\text{all deductions} \times \text{amount of depreciation recovery income}}{(\text{base value} - \text{adjusted tax value})}
\]

Where:

“Amount of depreciation recovery income” is the amount described in s EE 48(1).

“All deductions” is the amounts of depreciation loss for which the person has been allowed a deduction.

“Base value” and “adjusted tax value” have their ordinary meanings [ss EE 55-EE 60].

**Example 2:**

Using the example above that applied to determine the amount of depreciation loss on disposal, assume that instead of $12,000 the vehicle sells for $16,000. Applying the above formula, “amount of depreciation recovery income” is $3,400 ($18,000 - $14,600), “all deductions” is $4,590, “base value” is $18,000 and ATV is $12,600. The depreciation recovery income on disposal is:

\[
\frac{4,590 \times (18,000 - 12,600)}{3,400} = \frac{2,890}{85}\%
\]

In other words, the depreciation recovery income on disposal is the business use percentage multiplied by the amount of depreciation recovery income (85% × $3,400 = $2,890).

**250.510 When disposal deemed to be at market value [s EE 45(3)-(5), (10), (11)]**

The rules that determine the amount of consideration derived on the disposal of depreciable property are set out in s EE 45. Consideration is deemed to be market value of the item when:

(a) The person receives consideration that is not the item’s market value. If the disposal is a taxable supply, market value for this purpose means the GST-exclusive amount.

(b) There is a change of use, or change of location of use, of an item of property as a result of which a person is denied a deduction for an amount of depreciation loss for the item for the next income year. This includes a change in use of an item for the purposes of the definition of “commercial fit-out” [250.340] and a change in the status of a building related to an item for the purposes of that definition.

(c) An item of property is disposed of with other items, or an event occurs involving an item that also involves other items. If the disposal or event involves a taxable supply, market value for this purpose means the GST-exclusive amount.

(d) By virtue of its ceasing to be used in New Zealand and being taken out of New Zealand for use elsewhere (but only in the case of property for which a first-year allowance was granted under s 112 (excluding s 112(8)) of the ITA 1976).

In the case of (a) and (c), consideration is not deemed to be at market value if it relates to a transfer under a relationship agreement.
Depreciation

Consideration is not deemed to be at market value if the disposal of property is one to which ss FC 3 and FC 4 apply [see 1420.197].

The sale of a vehicle one year after it was purchased by a taxpayer company at a price well below the book value resulted in the CIR disallowing the deduction for loss on sale. The TRA noted that there were various ways of establishing a satisfactory valuation at a particular point in time (eg by obtaining a letter from a recognised motor vehicle dealer), even some years after the event if necessary: TRA Case R22 (1994) 16 NZTC 6,105.

250.520 Depreciation recovery income when lost or stolen items recovered [s EE 51]

When property to which s EE 47(3) applies (ie property that has been lost or stolen) is recovered in a later income year, and the property is still used or available for use in deriving assessable income or in carrying on a business for that purpose, the following treatment applies:

(a) The person is treated as deriving an amount of depreciation recovery income equal to the amount of the depreciation loss allowed under s EE 48(2) following the original loss or theft. The income is deemed to be derived in either the year of disposal or the year of recovery, at the option of the person; and

(b) The person is treated as acquiring the property, on the date of recovery, for its adjusted tax value at the beginning of the year of loss or theft.

250.530 Depreciation recovery income when compensation received [s EE 52]

When a person receives an insurance payment or an indemnity payment or any other compensation for any item of depreciable property (other than property that is lost, stolen, or irreparably damaged), an amount equal to the amount by which the compensation received exceeds any expenditure incurred by the person (for the event for which the person received the compensation) is deducted from the adjusted tax value of that property.

Example 1:
An item is damaged and repairs cost $18,000. The insurance proceeds are $17,000.

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjusted tax value</td>
<td>$20,000</td>
</tr>
<tr>
<td>Add repairs</td>
<td>$18,000</td>
</tr>
<tr>
<td>Less insurance proceeds</td>
<td>$17,000</td>
</tr>
<tr>
<td>New adjusted tax value</td>
<td>$21,000</td>
</tr>
</tbody>
</table>

When the adjusted tax value becomes negative through the application of this rule, an amount equal to that negative amount is included in the income in that income year.

Example 2:
An item is damaged and repairs cost $3,000. The insurance proceeds are $8,000.

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjusted tax value</td>
<td>$4,000</td>
</tr>
<tr>
<td>Add repairs</td>
<td>$3,000</td>
</tr>
<tr>
<td>Less insurance proceeds</td>
<td>$8,000</td>
</tr>
<tr>
<td>New adjusted tax value</td>
<td>$1,000</td>
</tr>
</tbody>
</table>

Any insurance receipt for property which is irreparably damaged is consideration derived on the occurrence of an event [s EE 45(8) and s EE 47(4)].
250.540 Unused geothermal well brought into use [s EE 53]

One of the events that trigger the disposal rules is when a person who owns a geothermal well, which was previously unused, starts to use that well (or have it available for use) for business purposes [see 250.460]. This applies from the 2006–2007 income year if the well is completed or acquired from 1 April 2003.

If this event occurs, the owner of the well is treated as having acquired the geothermal well on the day the event occurs for the cost of the well (as determined under subpart EE) before the event occurs. This applies from the 2006–2007 income year if the well is completed or acquired from 1 April 2003 [s EE 47(6)].

A “geothermal well” is a bore or well solely for the purpose of investigating or exploiting geothermal energy in New Zealand [s YA 1].

250.550 Settlement of relationship property [s FB 21]

When depreciable property is transferred on a settlement of relationship property, the transfer is treated as a disposal and acquisition for an amount equal to:

(a) The cost of the property, if the transferor acquired it in the year of transfer; or
(b) The adjusted tax value of the property at the start of the year of transfer, in any other case.

The transferee has a depreciation loss for the property from the date of transfer, whether or not the transferor in fact had a depreciation loss, and is treated as having had a depreciation loss equal to all the depreciation that the transferor had in income years before the year of transfer. The transferee cannot claim more depreciation on the property than the transferor would have had if they had kept it.

If the property is a building, the transferee’s depreciation loss is based on the original cost of the building to the transferor. If the property was acquired, erected, installed, altered, extended, improved or attached by the transferor in the year of transfer, the item is treated as if it were acquired, erected, etc, by the transferee in that income year.

If, at the time the transferor acquired or erected the property, the property had not previously been used or, in the case of a building, had not previously been occupied, these conditions are treated as applying at the date of transfer of the property to the transferee. This means that the transferee can continue to use the depreciation rates that apply to new items.

Section FB 21 does not apply to a resident mining operator to whom s FB 20 applies.

250.560 Partnership reconstitution or dissolution [ss HG 4, HG 5, HG 7]

From 1 April 2008, when a partner disposes of their interest in a partnership, no income tax liability arises if the disposal proceeds do not exceed the net tax book value of the partner’s share of the partnership property by more than $50,000 [s HG 5]. In this situation, the disposal payment is treated as excluded income [s CX 62]. A small partnership (one that is not a limited partnership and has five or fewer partners) may opt out of the partnership interest disposal rules [s HG 5(7)].

In addition, an exiting partner is not required to account for tax on any item of tangible depreciable property that cost the partnership $200,000 or less [s HG 7].

If a partnership is finally dissolved, each partner is treated as disposing of their interest in the partnership to a single third party for a payment equal to the market value of the interest [s HG 4].

See 1050 PARTNERSHIPS for further details.

For the rules that applied prior to 1 April 2008, refer to Staples Tax Guide 2011 or an earlier edition.

250.570 Effect of transferring depreciable property between associated persons [s EE 40]

A person who acquires depreciable property from an associated person, either directly or indirectly, cannot claim more depreciation on that property than the associated person would have been able to if they had retained the property. The aim of this rule is to prevent associated persons achieving a step up in the value of their depreciable property for depreciation purposes to market value. Section EE 40 works by restricting
Depreciation

the cost of the item to that of the associated person, and the depreciation rate to no greater rate, or equivalent SL or DV rate, than that used by the associated person. Nothing in s EE 40 prohibits a step up to an item’s cost, although other considerations may apply.

For property acquired from an associated person prior to 24 September 1997 see s EZ 12. The predecessor to s EE 40 was substantially amended and applied from 24 September 1997, hence the reference to this date in the ITA 2007.

(1) When the transfer rule applies [s EE 40(1)-(6), (10)]

The transfer rule applies when (from 24 September 1997) a person (Person A) acquires, directly or indirectly, an item of property from an associated person to whom any of the following conditions apply (the income year referred to is the income year of the associated person):

(a) The associated person, but for s EE 11(1), would have been allowed a depreciation deduction for the item for the income year in which Person A acquires it;
(b) The associated person was allowed a depreciation deduction for the item for the income year before the income year in which Person A acquired it;
(c) The associated person has been allowed a deduction for the item under s DZ 9 for either the income year in which Person A acquired the property or the previous income year, and would have been allowed a deduction in either income year if they had incurred a cost for the item for which they were denied any other deduction. Section DZ 9 allows a deduction for a premium paid in respect of a lease of land where the grant or renewal of the lease took place before 1 April 1993;
(d) The associated person would have been allowed a deduction for a depreciation loss for the item:
   (i) For the income year in which Person A acquired it, if they had incurred a cost for the item for which they were denied any other deduction and if s EE 11(1) had not applied; or
   (ii) For the income year before that in which Person A acquired it, if they had incurred a cost for the item for which they were denied any other deduction;
(e) The associated person would have been a person to whom any of paragraphs (a) to (d) applied, if the associated person had not elected under s EE 8 to treat the property as not depreciable.

Generally, the restrictions in s EE 40 will apply if:

(a) An associated person vendor would have been entitled to a deduction for a depreciation loss either in the year of sale or the previous year, but for the restriction in s EE 11(1) (which prohibits a depreciation loss in the year of disposal), for an item of depreciable property or a cost incurred in relation to the property; or
(b) If the associated vendor was entitled to a deduction for a premium paid on the grant or renewal of a lease that occurred before 1 April 1993, or a cost incurred in relation to that lease in either the year of sale or the previous year.

(2) Restriction of the cost [s EE 40(7)]

When the circumstances set out in s EE 40(2)-(6) apply, as summarised above, the cost of the depreciable property to Person A is the lesser of the cost of the item to Person A and the cost of the item to the associated person.

However, if the depreciable property is an item that has, since it was first acquired, been used for a purpose other than deriving assessable income or carrying on a business for that purpose, such that the rule in s EE 58 for determining the item’s base value applies, then the cost of the item is restricted to the lesser of:

(a) The cost of the item to Person A; and
(b) The item’s market value when the associated person starts to use it, or have it available for use, for the purpose of deriving assessable income or carrying on a business for the purpose of deriving assessable income.
(3) **Exclusions [s EE 40(8), (11)]**

The cost restriction rule in s EE 40(7) does not apply to property (excluding depreciable intangible property) that the CIR decides should appropriately be depreciated from the cost of the item to Person A, despite the fact that the transaction is one between associated persons. The way in which the CIR will exercise this discretion is explained in 250.580.

The cost restriction rule also does not apply if the cost to Person A is income of the associated person other than as depreciation recovery income, or if Person A acquires the item under a relationship agreement to which s FB 21 applies. Section FB 21 contains rules restricting the depreciation loss a transferee in a relationship property settlement can claim to that of the transferor in any event.

Section EE 41 (which applies to depreciable property in a non-qualifying amalgamation) [see 250.590] overrides s EE 40. Section EE 40 does not apply to a bequest of property if it is property to which subpart FC applies [see 1420.197] and the property is disposed of at market value.

(4) **Limit on annual rate [s EE 40(9)]**

When the circumstances set out in s EE 40(2)-(6) apply, the annual rate that Person A applies to the property (excluding fixed life intangible property whose rate is set under s EE 33) cannot be more than the rate used by the associated person from whom the property was acquired. If Person A does not use the same depreciation method as the associated person vendor, the annual rate Person A applies to the item cannot exceed the equivalent rate for the other method as given in sch 10.

The specific exclusions that apply to the restrictions on cost do not apply to the limit on the rate. For example, even if the CIR allowed a step up in value for the depreciable property to market value under s EE 40(7)(a), the taxpayer is still restricted to the associated person’s annual depreciation rate in respect of that property.

**250.580 CIR’s discretion on transfer of depreciable property between associated persons [s EE 40(8)(a)]**

When depreciable property is acquired by a taxpayer from an associated person, the cost of the property for depreciation purposes is normally limited to its cost to the associated person [see 250.570]. However, the CIR has the discretion to allow a taxpayer to calculate depreciation based on the cost of the property to the taxpayer, rather than on the original cost to the associated person. When deciding whether to exercise this discretion, the CIR will consider the following factors:

(a) Whether the transfer is genuine;
(b) Whether the transfer is made at no more than the fair market value;
(c) Whether legal ownership of the property is permanently transferred;
(d) Whether the associated vendor (or its controllers) retains virtual ownership of, or beneficial interest in, the transferred property:
   (i) Through power over or control of the associated purchaser; or
   (ii) Through a leaseback or similar arrangement; or
   (iii) Through continued use of the transferred property for income-producing purposes; and
(e) The commercial or non tax-related reasons for the transfer of the property.

Depreciation should not be claimed on the transfer price basis until the CIR has confirmed that this basis may be used.

Taxpayers wanting approval to base their depreciation on the cost of property acquired from an associated person should apply to Inland Revenue in writing with supporting documentation. Alternatively, application can be made for a private binding ruling. The supporting documentation should include all relevant transaction documents, correspondence, and a summary of any unwritten terms of understanding between the parties. These documents may include:

(a) Certificates of title;
Depreciation

(b) Sale and purchase agreements;
(c) Financial, gifting, and legal documents relating to the transaction;
(d) Independent valuation reports;
(e) Acknowledgements of debt;
(f) Loan agreements; or
(g) Constitutional documents (eg trust deeds).

The CIR will need to be satisfied that the transfer was undertaken for business or commercial reasons, and not just to achieve a tax advantage. Care should be taken to ensure that the application is complete. The CIR has indicated that Inland Revenue will not waste resources on applications that are incomplete or ambiguous.

Example 1:
Mr and Mrs H bought a house in Wellington 10 years ago for $260,000 and have been living in it ever since. Mr H has recently been promoted in his employment and Mr and Mrs H have relocated to Auckland. They have decided to rent out their house in Wellington to an unrelated third party. They have obtained an independent valuation from a registered valuer, who advises that the property has a market value of $650,000. Instead of carrying on the rental activity themselves, they set up a look-through company (LTC) and sell the house to the LTC. Mr and Mrs H and the H Family Trust are equal shareholders of the LTC. H Family trust has been settled with Mr H as one of the trustees, and the beneficiaries are Mr and Mrs H’s children. The legal title of the property in Wellington is transferred to the LTC. The LTC is responsible for paying the interest on the mortgage, rates, insurance and any repairs. The unrelated tenant pays their weekly rent by direct credit to the LTC’s bank account. The LTC seeks to depreciate the property based on its acquisition cost of $650,000, which is also the market value of the house. A request has been made under s EE 40(8)(a). The CIR would not exercise the discretion under s EE 40(8)(a) in this example, even though the transfer of the depreciable property is genuine and permanent and the transfer price does not exceed the fair market value. The reasons are as follows:

(a) Mr and Mrs H continue to benefit indirectly from the transferred property. Mr and Mrs H have a legal and equitable interest in the LTC. If the LTC makes a profit or a loss from the rental activity, Mr and Mrs H, in their capacity as shareholders of the LTC, will receive a distribution of the profit or an allocation of the loss.
(b) The non tax-related reasons for the transfer of the real property do not outweigh the factor that the transferors retain significant beneficial interests in the transferred property. Mr H’s promotion in his employment and family relocation seem to be the only non tax-related reasons for the transfer in this example. The CIR considers that these reasons are not sufficient to displace the transferors’ significant beneficial interest in the transferred property.

[Note: In the original Inland Revenue example, the LTC was an LAQC.]

Example 2:
Jack, a 70-year-old sole trader operating a dairy decides to sell the business assets to his nephew, Johnny. Johnny will take over Jack’s dairy business. Jack and Johnny enter into a sale and purchase agreement, whereby all the business assets in the dairy will be sold to Johnny at a price based on an independent valuation. The payment consists of an Acknowledgment of Debt for 75 per cent of the transferred price and cash for the remaining 25 per cent. Jack retires after the transfer. Johnny carries on the dairy business. Jack helps out in the dairy occasionally but is not otherwise involved in the business. Jack forgives some of the debt annually. Johnny requests that the CIR exercises the discretion under s EE 40(8)(a). Jack and Johnny are associated persons in accordance with the definition of “relative” in s YA 1. The CIR will exercise the discretion under s EE 40(8)(a) to allow Johnny to claim tax depreciation on the basis of the assets’ transferred price. This is because:

(a) The transaction is genuine. The transfer of the assets is the result of genuine negotiation between Jack and Johnny. Consideration has passed by Johnny to Jack for the transfer of business assets.
(b) The transferred price is at a fair market value. The transferred price does not exceed the fair market value of the business assets.
(c) The transfer of business assets is permanent. The parties to the transaction do not intend to lease or transfer the business assets of the dairy back to Jack.
(d) The transferor does not continue to benefit from the transferred property. Jack does not have any control over the transferred assets in the dairy. Johnny runs the dairy business by himself. Jack only helps out occasionally.
(e) The transfer is not tax driven. The main reasons for the transaction are to enable Jack to retire due to his old age and for succession planning.

However, Jack is required to calculate depreciation recovery income on disposal at the time of the transfer. For further details see standard practice statement SPS 07/05 [see TIB vol 19:9 (October 2007) at 16].
250.590 Transfer of depreciable property in non-qualifying amalgamation [s EE 41]

Under the amalgamation rules in subpart FO, the general position taken in the case of a non-qualifying amalgamation [s FO 11] is that the property is deemed to be disposed of by the amalgamating company, and acquired by the amalgamated company, for its market value.

By using a non-qualifying amalgamation, taxpayers could avoid the rules for transfers of assets between associated persons and achieve a step up in the depreciation base of their depreciable property to market value. This is not possible for items acquired in these circumstances from 14 May 2002, when the rules in s EE 41 were first introduced.

The rules in s EE 41 largely mirror those applying for the purposes of s EE 40, in placing restrictions on both the cost of the item transferred, and on the depreciation rate able to be used.

1) When the transfer rules apply [s EE 41(1)]

The rules in s EE 41 apply when, from 14 May 2002, an amalgamated company acquires, directly or indirectly, an item of property from an amalgamating company and:

(a) The acquisition of the item is part of a non-qualifying amalgamation; and

(b) The amalgamating company is an associated person of the amalgamated company, treating the amalgamating company as existing at the time that the amalgamated company is treated under ss FO 11(1)(b) or FO 15(3) as having acquired the property from the amalgamating company.

2) Restrictions on the cost [s EE 41(2)]

If the transfer rules apply, the cost of the item of depreciable property is the lesser of the cost of the item to the amalgamating company and the value given under the amalgamation rules in ss FO 11 or FO 15 (ie the item’s market value).

However, if the depreciable property is an item that has, since it was first acquired, been used for a purpose other than deriving assessable income or carrying on a business for that purpose, such that the rule in s EE 58 for determining the item’s base value applies, then the cost of the item is restricted to the lesser of:

(a) The value given under ss FO 11 or FO 15; and

(b) The item’s market value when the amalgamating company starts to use it, or to have it available for use, for the purpose of deriving assessable income or carrying on a business for the purpose of deriving assessable income.

3) Exclusions [s EE 41(3)]

The cost restriction rule in s EE 41(2) does not apply to property (excluding depreciable intangible property) that the CIR decides should appropriately be depreciated from the cost of the item to the amalgamated company, despite the fact that the transaction is one between associated persons. The cost restriction rule also does not apply if the cost to the amalgamated company is income of the amalgamating company, other than as depreciation recovery income.

4) Limit on rate [s EE 41(4), (5)]

The restrictions on the annual depreciation rate [see 250.580] also apply in the case of non-qualifying amalgamations, except in the case of fixed life intangible property whose rate is set under s EE 33. Section EE 40(4) provides that the annual depreciation rate used by the amalgamated company cannot exceed that of the amalgamating company, or the equivalent rate under sch 10 if a different depreciation method is used.

250.600 Transfer of depreciable property between 100 per cent commonly-owned companies

When depreciable property is transferred between 100 per cent commonly owned companies, the vendor company should calculate depreciation recovery income or depreciation loss on disposal on the actual sale.
price. If the property has been disposed of for a consideration that is not market value, s EE 45(3) will treat the consideration as the market value of the property. In these circumstances the vendor must calculate depreciation recovery income or a depreciation loss on disposal on the amount of consideration applying for the purposes of s EE 45. The purchasing company should value the property at the cost it incurred, or the value required under s EE 40.

The amount of depreciation the purchasing company may claim is limited by s EE 34 [see 250.390].

250.610 Petroleum-related depreciable property [s EE 17, EE 59]

“Petroleum-related depreciable property” is petroleum drilling rigs, support vessels for offshore petroleum drilling rigs, and support vessels for offshore petroleum production platforms [s EE 67]. Because of the special nature of this property, the depreciation calculation is done on a daily rather than a monthly basis [s EE 17].

Furthermore, under s EE 59, the term “base value” for petroleum-related depreciable property acquired by the taxpayer from an associate person is the lower of the cost of the property to the taxpayer and the aggregate of:

(a) The cost of the property to:
   (i) The associated person who did not acquire the property from either the taxpayer or another associated person; or
   (ii) The taxpayer or an associated person who owned the property at the start of an unbroken chain of ownership made up of the taxpayer one or more associated persons; and

(b) All expenditure incurred for the property by the taxpayer and any associated person before the date of acquisition of the property by the taxpayer.

The terms “cost and expenditure” are defined in s EE 59(5) as exclusive of any expenditure allowed as a deduction under s EE 38(2) (low-value item deductions), s EE 48(2) (depreciation loss on disposal), and expenditure that is or would be allowed as a deduction under any other subpart of the ITA 2007 or corresponding provisions of the ITA 2004 or ITA 1994.

No adjustment is made on disposition or exit from the tax base under s EE 46(2) for petroleum-related depreciable property.

250.620 Goods subject to reservation of title (“Romalpa” clause) [s EE 3]

A purchaser of depreciable property is entitled to claim a deduction for depreciation on the property before title to the property passes, if:

(a) A person (the purchaser) enters into an unconditional contract to buy an item of depreciable property;
(b) The item is not subject to a hire purchase agreement;
(c) The contract is subject to the Sale of Goods Act 1908;
(d) Title to the property does not pass until the purchase price is paid in full; and
(e) The purchaser takes possession of the property before title passes.

When these conditions are met, the purchaser is treated as owning the depreciable property and is able to claim depreciation from the later of:

(a) The time the purchaser enters into the contract; or
(b) The time the purchaser takes possession of the property.

At the same time, the seller (the vendor) is treated as not owning the item and is prevented from claiming depreciation. The period of deemed ownership expires when actual title passes to the purchaser or if the seller repossesses the item.

If the vendor repossesses the property, an event that triggers the disposal rules is deemed to have occurred on the date on which the item is repossessed [s EE 47(5)]. The consideration that a person derives from the repossession is the item’s cost minus the net amount paid by the buyer [s EE 45(9)]. “Net amount paid” is
defined as the amount paid by the purchaser less any amount refunded by the vendor. If the person from whom the item was repossessed is GST registered, the consideration does not include any GST charged on the taxable supply.

Example:
If the purchase price of an item is $10,000, the purchaser has paid $5,000 towards the property, the vendor repossesses the item and refunds $3,000 to the purchaser, the purchaser is deemed to dispose of the item for $8,000 ($10,000 − $5,000 + $3,000).

Intangible property which may be depreciated is described in sch 14 as depreciable intangible property [see 250.360].

Depreciable intangible property which is fixed life intangible property may be depreciated using the SL method.

250.630 Application of old depreciation rates [ss EE 30, EE 32, EZ 23]

(1) Depreciation rate for property with high residual value [s EE 30]
The “old” economic depreciation rates apply to plant and equipment acquired from 1 April 2005 and buildings acquired from 19 May 2005 if they have an estimated residual market value that is greater than 13.5 per cent of their cost. This does not apply to fixed life intangible property or excluded depreciable property.

The method for setting the rate is identical to that used in s EZ 23 (see below).

(2) Election to continue using old depreciation rates [s EE 32]
Depreciable property (other than buildings) acquired from 1 April 2005 and the end of the taxpayer’s 2005–2006 tax year may be depreciated for the 2005–2006 and subsequent tax years using the economic depreciation rates determined under s EZ 23 (ie the “old” economic depreciation rates). The election to use the old depreciation rates must be made in the taxpayer’s return of income for the 2005–2006 tax year.

(3) Depreciation rates for plant or equipment acquired before 1 April 2005 [s EZ 23]
The “old” economic depreciation rates continue to apply to the following categories of assets:
(a) Depreciable property, other than buildings, fixed life intangible property and excluded depreciable property, acquired before 1 April 2005;
(b) Buildings acquired before 19 May 2005; and
(c) Buildings acquired from 19 May 2005, as relationship property or from a company in the same wholly-owned group of companies, from a person who depreciated the building using the “old” economic depreciation rate.

The “old” economic depreciation rates were set by the CIR using the procedure explained in Staples Tax Guide (2006), 250.60. The old economic depreciation rates are set out in 6000.20 and 6000.30 (Online and CD only).

250.640 Property acquired before the end of 1994–1995 income year
[ss EZ 13, EZ 14]
Sections EZ 13 and EZ 14 give taxpayers a choice of two depreciation rates for depreciable property (other than excluded depreciable property) acquired before the end of the 1994–1995 income year. The depreciation rate can be either the economic depreciation rate or the asset’s pre-1993 depreciation rate.

Note: From the 2011–2012 income year, no depreciation can be claimed on buildings with an estimated useful life of 50 years or more, no matter when they were acquired.

The pre-1993 depreciation rate for an asset is the depreciation rate the CIR allowed to be used for that class of property in the 1992–1993 income year. The pre-1993 depreciation rate always included any supplementary depreciation allowance that would have been allowed under s EZ 16 [see 250.680], and the 25 per cent interim loading if it would have been allowed by the ITA 1976, s 108A as it applied in the 1992–1993 income year.

An election to use the pre-1993 depreciation rate may be made for all or any items of property, and is done by applying the pre-1993 depreciation rate to those items in the return of income for the income year for
Depreciation

which the election is made. This choice can continue as long as the taxpayer holds the property. Once the
election is made it may not subsequently be altered for the income year for which it was made.

The term pre-1993 “depreciation rate”, for any item of depreciable property, means the rate of depreciation
that the CIR allowed to be used in the 1992–1993 income year as a depreciation allowance (as then in force)
for depreciable property of that class. This is defined in s EZ 14(5) as:

\[
\text{section 108 rate + section 108A rate + section 113A rate}
\]

These terms are all defined in s EZ 14. In short, the “section 108 rate” is the pre-1993 depreciation rate, the
“section 108A rate” means the 25 per cent interim loading available to certain property, and the
“section 113A rate” was the supplementary shift allowance rate.

Note: Section 108A of the ITA 1976 was renumbered as s 108N of the ITA 1976 from 1 April 1993 which
is the reason the legislation refers to s 108A as in force for the 1992–1993 tax year.

If the pre-1993 depreciation rate is a DV rate, a taxpayer who has elected to use the pre-1993 rate may instead
depreciate the depreciable property at the SL rate determined by rounding (if necessary) that DV rate to the
nearest rate specified in the column 1 of sch 10, and ascertaining the equivalent SL rate (if any) specified in
the column 2 of sch 10. The provisions work in reverse for a taxpayer using an SL rate and wishing to change
to the equivalent DV rate.

The precise rate used for some assets does not appear in sch 10. When this occurs, round the actual rate to
the nearest rate in the relevant column. The appropriate equivalent is the rate directly opposite.

Example:
The pre-1993 rate for water-fed evaporating type air conditioners was 15 per cent DV. If acquired between 16 December 1991
and 31 March 1993 (or acquired by the taxpayer from 1 April 1993, and before 1 April 1994, under a binding contract entered
into by the taxpayer during the period 16 December 1991 and 31 March 1993) it was also eligible for the interim loading of
25 per cent bringing the DV rate to 18.8 per cent. To find the alternative SL depreciation rate find the nearest rate to 18.8 per
cent in the DV rate column of sch 10 – which is 19 per cent. The equivalent SL rate is 13 per cent.

250.650 Additional depreciation for certain new assets from 16 December 1991 [ss EZ 17, EZ 18, EZ 19, EZ 26]

Certain assets and improvements (referred to as “qualifying assets” and “qualifying improvements” — see
definitions below) acquired or made between 16 December 1991 and 31 March 1993 qualify for an additional
depreciation loss of 25 per cent of the depreciation loss, which includes the supplementary depreciation loss
for machinery used in two and three shift industries [s EZ 16], that would have otherwise been allowed in
the absence of this provision.

This applies to capital expenditure incurred in the acquisition or installation of a qualifying asset or in the
making of a qualifying improvement to any asset owned by the taxpayer. The additional depreciation loss is
subject to s EE 48(2).

The additional depreciation loss allowed is 25 per cent of the lesser of the amount of the depreciation under
subpart EE and s EZ 16, or the depreciation deduction that would have been allowed had the asset’s value
been equal to its qualifying capital value. “Qualifying capital value” is defined in s EZ 26 and is discussed
below.

The following definitions are relevant to the definition of “qualifying capital value” in that that definition
uses the definition of “qualifying asset” and “qualifying improvement”.

“Qualifying asset” is defined in s EZ 26 and means:

(a) Any “new asset” (other than a building), that is owned by the taxpayer in that income year; and

(b) Any “New Zealand-new asset” (other than a motorcar or a building), that is owned by the taxpayer
in that income year,

in respect of which the taxpayer is allowed a depreciation deduction for that income year.

“New asset” is defined in s EZ 24 and means any asset that is either:
(a) Acquired during the period commencing on 16 December 1991 and ending on 31 March 1993 (both dates inclusive) otherwise than under a binding contract entered into before 16 December 1991;

(b) Acquired from 1 April 1993, and before 1 April 1994, under a binding contract entered into during the period commencing on 16 December 1991 and ending on 31 March 1993 (both dates inclusive); or

(c) Acquired by the taxpayer before 16 December 1991 as trading stock, but from 16 December 1991 and before 31 March 1993 first used as a capital asset and qualifying for a depreciation allowance.

Furthermore, the asset must be used, by the taxpayer, before 1 April 1994; and has neither:

(a) Been used, acquired, or held by any person before the date on which the taxpayer acquired the asset, for use before that date; nor

(b) For any period occurring before the date of its acquisition by the taxpayer, been an asset for which any deduction by way of depreciation has been allowed or allowable.

In the case of an asset requiring construction, it does not include any such asset where construction of the asset commenced before 16 December 1991 (except when the asset is trading stock that was later used as a capital asset) or construction commenced after that date under a binding contract entered into by the taxpayer before that date; or construction of the asset was not completed, or the asset was not first used by the taxpayer before 1 April 1994.

“New Zealand-new asset” is defined in s EZ 25. The definition excludes any “new asset”, otherwise it has a similar definition to a “new asset” but with the further qualification that it has not been used in New Zealand by the taxpayer before the date on which the taxpayer acquired the asset.

“Qualifying improvement” is defined in s EZ 27 as any capital improvement of the asset (but not an improvement to a building) where the expenditure for the improvement was incurred by the taxpayer during the period commencing on 16 December 1991 and ending on 31 March 1993 (both dates inclusive) otherwise than under a binding contract entered into before 16 December 1991; or incurred from 1 April 1993, and before 1 April 1994 under a binding contract entered into during the period commencing on 16 December 1991 and ending on 31 March 1993.

Further qualifications are that the asset must be used in its improved form, by the taxpayer, before 1 April 1994 and person is allowed a depreciation deduction for the improvement. Where the improvement arises from construction, it does not include any such improvement when construction of the improvement commenced before 16 December 1991, or commenced after that date under a binding contract entered into by the taxpayer before that date; or construction of the improvement is not completed, or the improvement is not first used by the taxpayer before 1 April 1994.

“Qualifying capital value”, is defined in s EZ 26 and builds on the above definitions. For any qualifying asset owned by a taxpayer, “qualifying capital value” means:

\[(\text{acquisition cost} + \text{improvement cost}) - \text{item’s depreciation}\]

Where:

“Acquisition cost” is the capital expenditure incurred in acquiring the asset, less in the case of any asset requiring construction, the amount of any such expenditure incurred from 1 April 1993 otherwise than under a binding contract entered into before that date.

“Improvement cost” is the amount of capital expenditure (if any) the person incurs in making a qualifying improvement to the asset.

“Item’s depreciation” is the amount of any depreciation loss allowed for the qualifying capital value (as determined under this paragraph) of the asset in any previous income year, other than any such depreciation loss determined on an SL basis.

The qualifying capital value for any asset owned by a taxpayer that is not a qualifying asset but to which the taxpayer has made a qualifying improvement, is:

\[\text{capital expenditure} - \text{improvement’s depreciation}\]

Where:
“Capital expenditure” is the amount of capital expenditure incurred by the taxpayer for that improvement. “Improvement’s depreciation” is the amount of depreciation loss allowed to the taxpayer for the qualifying capital value (as determined under this paragraph) of the improvement in any previous income year, other than any such depreciation loss determined on an SL basis.

Under s EZ 18, when a qualifying asset, or an asset to which a qualifying improvement has been made, is at any time before 1 April 1993 sold or otherwise disposed of by one company in a wholly-owned group of companies [as defined in s IC 4], to another company in the same wholly-owned group, then:

(a) The transferee company has an amount of depreciation loss under s EZ 17 for the period after disposal as if the transferee company were the transferor company, but
(b) The amount of depreciation loss that the transferor company has under s EZ 17 for the asset for the income year in which the disposal occurs must be subtracted when the amount of depreciation loss that the transferee company has under s EZ 17 for the income year is calculated.

Similar rules apply when a qualifying asset or qualifying improvement is transferred in accordance with a relationship agreement [s FB 21].

When a person who has derived nothing but exempt income starts to derive assessable income and would have had an amount of depreciation loss under s EZ 17 if the income was assessable at the time the asset was acquired that item’s qualifying capital value is determined as if the person had had an amount of depreciation loss for the period during which they derived nothing but exempt income [s EZ 19].

250.660 Excluded depreciable property [ss EE 64, EZ 15]

“Excluded depreciable property” is defined in s EE 64 and means any depreciable property:

(a) For whose purchase or construction a binding contract the person entered into a binding contract before 16 December 1991;
(b) That the person used or had available to be used for any purpose whatever within New Zealand, other than as trading stock, before 1 April 1993;
(c) That is an intangible asset that was used or was available for use by the taxpayer before 1 April 1993;
(d) That is or has been for the taxpayer a qualifying asset within the meaning of s EE 16; or
(e) To the extent that the property is or has been for the taxpayer a qualifying improvement within the meaning of s EE 16.

However, it does not include any item of property in existence at the end of the 1992–1993 income year that was permitted by the CIR to be accounted for in that income year using any of the standard value, replacement value, or annual revaluation methods.

From the 2011–2012 income year, buildings of the type that attract a zero per cent rate of depreciation (known as “special excluded depreciable property”) are excluded from the term “excluded depreciable property” [see 250.670].

The annual depreciation rate for any excluded depreciable property is referred to in s EZ 15 as the “section 108 rate”. This is the rate of depreciation that the CIR allowed as a depreciation allowance for depreciable property of that class in the 1992–1993 income year for a standard balance date taxpayer under s 108 of the ITA 1976, as in force for the 1992–1993 tax year.

The “section 108 rate” specifically excludes the “section 108A rate” and the “other sections rate”. The “section 108A rate” means the rate of additional depreciation deduction under s 108A of the ITA 1976 as it applied for the 1992–1993 tax year, and for which an item was eligible for that rate. Essentially this was the uplift in the depreciation rate of 25 per cent when this was applicable [s EZ 16].

The “other sections rate” means a rate of additional or supplementary deduction under s 113A of the ITA 1976 or any other provision of the ITA 1976 for which the item was eligible for the 1992–1993 tax year [s EZ 17].
However, if a person has an additional amount of depreciation loss for an income year for an item of excluded depreciable property under ss EZ 16 or EZ 17, or any other provision, then the rate for the excluded depreciable property may be adjusted to incorporate that additional amount of depreciation loss in such manner as may be prescribed or allowed by the CIR. When this is the case the person does not have a separate amount of depreciation loss under ss EZ 16 and EZ 17 or the other provision.

When the depreciation rate is a DV rate, the depreciable property may instead be depreciated at the SL rate determined by rounding (if necessary) that DV rate to the nearest rate specified in the column 1 of sch 10, and ascertaining the equivalent SL rate (if any) specified in column 2 of sch 10. When the depreciation rate is an SL rate, the person may change to the DV rate by rounding (if necessary) that SL rate to the nearest rate specified in column 2 of sch 10 and taking the equivalent DV rate from column 1.

250.670 Special excluded depreciable property [s EE 61(7B), EE 64(3), EE 67, sch 39]

The annual rate of depreciation that applies to special excluded depreciable property that would be excluded depreciable property but for the exclusion in s EE 64(3) is zero per cent for all depreciation methods. This applies from the 2011–2012 income year.

Excluded depreciable property does not (from the 2011–2012 income year) include special excluded depreciable property [s EE 64(3)].

The formal definition is given below, but in essence, special excluded depreciable property means buildings that were excluded depreciable property (that is, buildings depreciated at the rates that applied before the economic rates were introduced from 1 April 1993: see 250.660 for details) and which are similar to the current categories of building that have estimated useful lives of 50 years or more. The distinction is necessary because the zero per cent rate of depreciation is intended to apply to all buildings which are expected to last for 50 years or more. Items of excluded depreciable property do not have estimated useful lives so it is necessary to refer to them in a different way. The annual rate applying to such buildings from the 2011–2012 income year is zero per cent.

“Special excluded depreciable property” is defined as all buildings not listed in sch 39 [s EE 67]. The buildings listed in sch 39 are:

- Buildings affected by acid
- Carports (hired out to householders)
- Cool-stores and freezing chambers
- Fowl houses
- Glasshouses
- Milking sheds
- Milk powder buildings
- Plastic hothouses
- Portable huts
- PVC tunnel houses
- Roofed livestock yards
- Slaughterhouses on farms
- Temporary buildings
- Wintering barns and simple loafing barns

Example:
A wooden-framed building acquired in 1989 as a business premises and still in use is depreciated at the pre-1 April 1993 rate of 2.5 per cent DV or two per cent SL (see the Inland Revenue booklet Historic depreciation rates, IR 267) until the end of the 2010–2011 income year. From the 2011–2012 income year this building would be classified as an item of special excluded depreciable property (because it is a building not listed in sch 39) and no depreciation deduction can be claimed on it.
Depreciation

250.680   **Additional depreciation for machinery used in shift industries**  
[s EZ 16]

A person is allowed an additional amount of depreciation loss when calculating their net income where:
(a) They are engaged in any business in New Zealand;
(b) They have incurred expenditure of a capital nature in acquiring, installing, or extending any two-shift or three-shift plant and machinery before the 1993–1994 income year; and
(c) The two-shift or three-shift plant and machinery is used wholly for the purposes of any business carried on in New Zealand.

The additional depreciation loss does not apply to depreciable property acquired from the 1993–1994 income year, unless that property is excluded depreciable property [see 250.660].

The provisions do not apply to:
(a) Plant and machinery used in refining petroleum or smelting aluminium;
(b) Motor cars;
(c) Plant or machinery for which a deduction by way of a fixed rate was not, for the 1992–1993 income year or any earlier relevant year, allowed under s 108 of the ITA 1976 [ITA 2007, s EE 11]; and
(d) Plant and machinery for which the CIR has not, in determining a rate of depreciation, prescribed a differential rate for more than one shift operation for the 1992–1993 income or earlier relevant year.

1) **Three-shift plant and machinery**

This means any plant and machinery that is normally in operation for 24 hours each working day. The additional depreciation loss is equal to six per cent DV.

2) **Two-shift plant and machinery**

In relation to the business of the taxpayer and any income year, this means any plant and machinery, not being three shift plant and machinery, that is normally in operation for an average of not less than 16 hours each working day. The additional depreciation loss is equal to three per cent DV.

The additional depreciation loss is allowed in the first, second, third, fourth, and fifth income years in which the plant and machinery is used in the derivation of assessable income, and is in addition to the depreciation allowance under s EZ 15.

260.05 Purpose of disputes procedures rules [TAA, s 89A]

The disputes procedures came into force on 1 October 1996. The purposes of the procedures are to:

(a) Improve the accuracy of disputable decisions made by the CIR under the Inland Revenue Acts;
(b) Reduce the likelihood of disputes arising between the CIR and taxpayers by encouraging open and full communication in both directions;
(c) Promote the early identification of the basis for any dispute concerning a disputable decision; and
(d) Promote the prompt and efficient resolution of any dispute concerning a disputable decision by requiring the issues and evidence to be considered by the CIR and a disputant before the disputant commences proceedings.

The disputes procedures do not apply to any tax returns or notices of assessment that are subject to the objection proceedings under Part 8 of the TAA.

In certain circumstances, taxpayers can correct small errors in income tax, FBT and GST returns without the need to follow the formal disputes procedures. For example, requests for the correction of errors such as the transposition of numbers or arithmetical mistakes can be made by telephone or in writing [see 580.113 and 1270.75].

260.10 Definitions [TAA, ss 3, 89AB]

The following definitions apply for the purposes of the disputes procedures regime.

“Assessment” means:
(a) An assessment of tax made under a tax law by a taxpayer or the CIR;
(b) An assessment of a net loss;
(c) An assessment of terminal tax or a refund of income tax;
(d) An assessment of a GST refund due; or
(e) An amendment of an assessment by the CIR.

“Challenge” means:
(a) To commence proceedings under Part 8A of the TAA challenging a disputable decision;
(b) To commence proceedings under s 89K(6) challenging a refusal to issue a notice; or
(c) The proceedings themselves depending on the context.

“Challenge notice” means a notice issued by the CIR in accordance with s 89P (taxpayer-initiated disputes).

“Decision” (in the expression “disputable decision”) includes the making, giving, or exercising of a discretion, judgment, direction, opinion, approval, consent, or determination by the CIR.

“Disputable decision” means either an assessment or a decision of the CIR under a tax law. The following decisions by the CIR are not disputable decisions:
(a) A decision not to issue a binding ruling under Part 5A;
(b) A decision that cannot be the subject of an objection under Part 8;
(c) A decision that cannot be challenged under Part 8A; or
(d) A decision to issue a CIR’s NOPA under s 89B, a CIR’s disclosure notice or statement of position under s 89M, or a challenge notice.

“Disputant” means a person who may issue a notice of proposed adjustment (NOPA) to the CIR, a person to whom the CIR issues an assessment or a NOPA, or a person who may challenge a disputable decision.
“Notice of proposed adjustment” (NOPA) means a notice (in the prescribed form), issued by the CIR under s 89B of the TAA, or issued by a disputant to the CIR under ss 89D or 89DA of the TAA.

“Response period” for a notice in response to an initiating notice means:

<table>
<thead>
<tr>
<th>Type of initiating notice</th>
<th>Response period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Notice of proposed adjustment</td>
<td>Two months starting on the date of the issue of the notice.</td>
</tr>
<tr>
<td>Notice of assessment issued by a taxpayer</td>
<td>For a NOPA:</td>
</tr>
<tr>
<td></td>
<td>(a) Four months starting on the date of issue of the initiating notice; or</td>
</tr>
<tr>
<td></td>
<td>(b) If the NOPA relates solely to the amount of a tax credit for expenditure on</td>
</tr>
<tr>
<td></td>
<td>research and development, a period starting on the date the initiating notice</td>
</tr>
<tr>
<td></td>
<td>is received by Inland Revenue and ending two years after the latest date to</td>
</tr>
<tr>
<td></td>
<td>provide a return of income* for the relevant tax year.</td>

</tr>
<tr>
<td></td>
<td>by Inland Revenue and ending on the later of —</td>
</tr>
<tr>
<td></td>
<td>(i) Four months after the date of the initiating notice;</td>
</tr>
<tr>
<td></td>
<td>(ii) Two years after the latest date to provide a return of income* for the</td>
</tr>
<tr>
<td></td>
<td>relevant tax year.</td>
</tr>
<tr>
<td>Disclosure notice, a notice issued by the CIR rejecting an adjustment proposed by a</td>
<td>Two months starting on the date of issue of the initiating notice.</td>
</tr>
<tr>
<td>disputant, or a disputant’s statement of position</td>
<td></td>
</tr>
</tbody>
</table>

* If the taxpayer is a member of an internal software development group to which s 68E of the TAA applies, the latest date for providing a return means the latest date for any member of the group. See s 89AB of the TAA.

“Tax law” means a provision of the Inland Revenue Acts (as listed in the Schedule to the TAA), an Order in Council or a regulation made under another tax law, a non-disputable decision, or a provision of the Accident Rehabilitation and Compensation Insurance Act 1992 (ARCI A 1992), Accident Insurance Act 1998 (AIA 1998), or Injury Prevention, Rehabilitation, and Compensation Act 2001 (IPRCA 2001), as they relate to the filing of a tax return or tax form.

“Tax position” means a position or approach regarding tax under one or more tax laws, including a position or approach in relation to:

(a) A liability for an amount of tax, or the payment of an amount of tax;
(b) An obligation to deduct or withhold an amount of tax, or the deduction or withholding of an amount of tax;
(c) A right to a tax refund, or to claim or not to claim a tax refund;
(d) A right to a credit of tax, or to claim or not to claim a credit of tax;
(e) The provision of a tax return, or the non-provision of a tax return;
(f) The derivation of an amount of income or exempt income or a capital gain, or the inclusion or non-inclusion of an amount in income;
(g) The incurring of an amount of expenditure or loss, or the allowing or denying as a deduction of an amount of expenditure or loss;
(h) The availability or use of a tax loss component or loss balance;
(i) The attaching of a credit of tax, or the receipt of or lack of entitlement to receive a credit of tax;
(j) The balance of a tax account or memorandum account of any type or description, or a debit or credit to such a tax account;
(k) The estimation of the provisional tax payable;
(l) Whether the taxpayer must request or respond to an income statement [see 1270.75];
(m) The application of s 33A(1) of the TAA (individuals not required to file tax returns);
(n) A right to a tax credit; or
(o) The amount of subsidy claimed under s RP 4 by a listed PAYE intermediary.

260.15 Meaning of “response period”
“Response period” is a defined term [see 260.10 for the definition].

In TIB vol 12:6 (June 2000) at 14-15, the CIR gave his interpretation of when a response period commences and ends.

Note: The definition of “response period” has changed since this interpretation was issued.

The date of issue of a notice (eg a NOPA) is the date that the notice is sent or posted (ie the date that the notice physically leaves Inland Revenue or the taxpayer, for delivery to the post office or an external mailbox). Generally, this will be determined by the date on the notice. However, this presumption is arguable.

If a taxpayer sends a notice by fax, the date of issue is the date the notice is transmitted.

The response period is the two month period starting on the date of issue of the notice. The response period starts on (and includes) the date of issue. “Month” is defined in the Interpretation Act 1999 as a calendar month. The last day of the two month period is therefore the day which numerically precedes the day of issue in the second month following the month of issue. For example, if a NOPA was posted by Inland Revenue on 5 October, the response period ends on 4 December. 4 December would be the last day the taxpayer could respond to that notice.

The exception to this rule is that if a notice were issued on 29, 30 or 31 December, the last day of the response period would be 28 February in all cases. In a leap year, if a notice were issued on 30 or 31 December, the last day of the response period would be 29 February in both cases.

If the last day of a response period falls on a weekend or statutory holiday, the last day of the response period is the next working day.

260.20 Notices of proposed adjustment [TAA, ss 89B, 89C, 89D, 89DA]
“Notice of proposed adjustment” (NOPA) is a defined term [see 260.10].

The CIR may issue one or more notices of proposed adjustment in respect of a tax return or an assessment. The CIR may issue one NOPA in relation to more than one return period if, in the CIR’s opinion the adjustments relate:
(a) Exclusively to the same issues or arrangements; or
(b) Substantially to the same issues, and the issue of one notice is likely to expedite the issue of the assessments for all of the returns.

The CIR may issue a notice of proposed adjustment in relation to more than one return period, more than one issue, and more than one tax type. The CIR may not issue a NOPA if the proposed adjustment is already the subject of a challenge, or after the expiry of the time bar (under ss 108 to 108B of the TAA), that applies to the assessment [TAA, s 89B].

The CIR cannot make an assessment until a NOPA has been issued, unless:

(a) The assessment corresponds with a tax return that has been provided by the taxpayer;
(b) The taxpayer has provided a tax return that, in the CIR’s opinion, appears to contain a simple or obvious mistake or oversight, and the assessment merely corrects the mistake or oversight;
(c) The assessment corrects a tax position previously taken by the taxpayer in a way or manner agreed by the CIR and the taxpayer;
(d) The assessment reflects an agreement reached between the CIR and the taxpayer;
(e) The assessment is made in relation to a matter for which the material facts and relevant law are identical to those for an assessment of the taxpayer for another period that is at the time the subject of court proceedings;
(f) The CIR has reasonable grounds to believe that a notice may cause the taxpayer or an associated person to leave New Zealand or to take steps to move or hide assets, making it harder for the CIR to collect the tax from the taxpayer;
(g) The CIR has reasonable grounds to believe that the taxpayer has been involved in fraudulent activity;
(h) The assessment corrects a tax position previously taken by a taxpayer that, in the opinion of the CIR, is or is the result of a vexatious or frivolous act by the taxpayer;
(i) The assessment is made as a result of a direction or determination of a Court or the TRA;
(j) The taxpayer has not provided a tax return when and as required by a tax law;
(k) The assessment is issued following the failure by a taxpayer to withhold or deduct an amount required to be withheld or deducted by a tax law, or to account for an amount withheld or deducted in the manner required by a tax law;
(l) The taxpayer is entitled to issue a NOPA in respect of a tax return, and has done so;
(m) The assessment corrects a tax position taken by the taxpayer or an associated person as a consequence or result of an incorrect tax position taken by another taxpayer, and the CIR has made, or is able to make, an assessment for that other taxpayer for the correct amount of tax payable by that other taxpayer;
(n) The assessment corrects a tax position taken by the taxpayer in relation to a tax position taken by a look-through company in a return of income under s 42B of the TAA, and the CIR and the company have completed the disputes process for that return of income and that tax position;
(o) The assessment results from an income statement [see 1270.75];
(p) The assessment extinguishes all or part of a taxpayer’s tax loss in accordance with TAA, s 177C(5) [see 480.40]; or
(q) The assessment includes a calculation by the CIR of a tax credit identified in subparts MA to MF and MZ [TAA, s 89C].

In Bank of New Zealand v Commissioner of Inland Revenue (2006) 22 NZTC 19,822 (HC), the CIR disallowed net losses incurred by BNZ Investments Ltd (BNZI) and issued it with amended assessments. Relying on s 89C(k) of the TAA (as explained in item (m) above), the CIR also issued assessments to Bank of New Zealand Ltd reversing losses previously transferred to it from BNZI, without first issuing NOPAs. The High Court held that the correct tax position referred to in s 89C(k) of the TAA is the one determined by the CIR. In order to be correct, the tax position does not first have to have been confirmed correct by agreement.
between the CIR and the taxpayer, by the disputes process, or by a hearing authority. BNZ can challenge the assessment by issuing a NOPA.

If the CIR issues a notice of assessment to a taxpayer, and the CIR has not previously issued a NOPA to the taxpayer in respect of the assessment, the taxpayer may issue a NOPA in respect of the assessment. From 1 April 2011, this does not apply to the extent that the assessment takes into account amounts arising under subpart HB (look-through companies) [TAA, s 89D]. The NOPA must be issued within the applicable response period [see 260.10].

Where a taxpayer has not furnished a return of income for an assessment period, the taxpayer may dispute the assessment made by the CIR only by furnishing a return of income for that period. For this purpose, s 33(2) of the TAA does not apply. In *Allen v Commissioner of Inland Revenue* [2006] NZSC 19, [2006] 3 NZLR 1, (2006) 22 NZTC 19,827, the Supreme Court held that in order to dispute a default assessment issued by the CIR, a taxpayer must file an income tax return and issue a NOPA within the four-month response period. Filing the return alone is not sufficient.

A taxpayer who receives an income statement that the taxpayer considers to be incorrect and who has not furnished an amended income statement, may dispute a deemed assessment, only by furnishing an amended income statement for the assessment period [TAA, s 89D].

A taxpayer may issue a NOPA in respect of an assessment made by the taxpayer for a tax year or a GST return period, except:

(a) To the extent to which the assessment takes into account amounts arising under subpart HB;
(b) If the CIR has previously issued a NOPA to the taxpayer in respect of the assessment.

A look-through company may issue a NOPA for a return it makes under s 42B of the TAA, for a tax year if the CIR has not previously issued a NOPA to the taxpayer for the return. A NOPA issued by a taxpayer is not effective unless it is issued within the response period [see 260.15; TAA, s 89DA]

If the CIR issues a notice of disputable decision that is not a notice of assessment and the notice of disputable decision affects the taxpayer, the taxpayer, or any other person who has the standing under a tax law to do so on behalf of the taxpayer, may issue a NOPA in respect of the disputable decision. The NOPA must be issued within the applicable response period.

A taxpayer who has not provided a GST return for a GST period may not dispute the assessment made by the CIR except by providing a GST return for that period. For this purpose, the return is not required to contain a notice of assessment as normally required by s 16(3) of the GSTA 1985.

### 260.25 Small claims jurisdiction of TRA [TAA, s 89E (repealed)]

Before the small claims jurisdiction was abolished, effective from 29 August 2011, a disputant who either issued a NOPA or rejected a NOPA issued by the CIR, and the amount in dispute was $30,000 or less, was able to elect, in their NOPA (or notice of rejection), that any unresolved dispute arising from that NOPA could be heard by the TRA acting in its small claims jurisdiction. If the disputant made such an election, the TRA’s decision was irrevocable and bound the disputant.

### 260.30 Content of notice of proposed adjustment [TAA, s 89F]

A notice of proposed adjustment (NOPA) must be in the prescribed form and must contain sufficient detail of the matters listed below to identify the issues arising between the CIR and the disputant.

A NOPA issued by the CIR must:

(a) Identify the adjustments proposed to be made to the assessment;
(b) Provide a concise statement of the key facts and the law in sufficient detail to inform the disputant of the grounds for the CIR’s proposed adjustments; and
(c) State how the law applies to the facts.

A NOPA issued by a disputant (IR770) must:

(a) Identify the adjustments proposed to be made to the assessment;
Disputes and Challenges Procedures

(b) Provide a concise statement of the key facts and the law in sufficient detail to inform the CIR of the
grounds for the disputant’s proposed adjustments;
(c) State how the law applies to the facts; and
(d) Include copies of the documents that the disputant is aware of, at the time the NOPA is issued, that
are significantly relevant to the issues arising between the CIR and the disputant.

260.35 Response notice [TAA, s 89G]

To reject a proposed adjustment, the recipient of the notice of proposed adjustment (NOPA) must, within
two months of the date of issue of the NOPA, notify the issuer that the adjustment is rejected by issuing a
response notice.

A response notice (IR771) must state concisely:
(a) The facts or legal arguments in the NOPA that the issuer considers are wrong;
(b) Why the issuer considers those facts or legal arguments are wrong;
(c) Any facts and legal arguments relied on by the issuer;
(d) How the legal arguments apply to the facts; and
(e) The quantitative adjustments to any figure referred to in the NOPA that result from the facts and legal
arguments relied on by the issuer.

The CIR does not have the power to determine whether a taxpayer’s response notice complies with the
relevant statutory requirements by rejecting that notice and applying the deemed acceptance provisions
[see TES 72 (July 2008) 1164]. Where a taxpayer wishes to challenge the CIR’s conclusion that a response
notice is non-compliant, the appropriate course is to issue challenge proceedings in the procedurally correct
manner and within the statutory time limit: Commissioner of Inland Revenue v Alam [2009] NZCA 273.

For the requirements of a response notice for disputes commencing before 1 April 2005 see

260.40 Deemed acceptance [TAA, s 89H]

If a disputant does not reject an adjustment contained in a notice of proposed adjustment (NOPA) issued by
the CIR within the two-month response period, the disputant is deemed to accept the proposed adjustment
and may not challenge it [see 260.45]. If the CIR does not reject an adjustment contained in a NOPA issued
by the disputant within the two month response period, the CIR is deemed to accept the proposed adjustment
and must issue a notice of assessment to the disputant accordingly [see 260.45].

Where the disputant accepts all or part of the CIR’s notice in writing or the disputant does not, within the
two-month response period, reject in writing all or part of the CIR’s response notice, the disputant is deemed
to accept the matters specified in the CIR’s notice and may not challenge it [see 260.45]. In those
circumstances, the CIR’s response notice is deemed, for the purposes of the exceptional circumstances rules
[see 260.50], to be a NOPA.

If the CIR fails to issue a challenge notice in accordance with s 89P of the TAA, [see 260.50], the CIR is
deemed to accept an adjustment proposed by the disputant or the disputant’s statement of position and TAA,
s 89J applies [see 260.45]. This applies for disputes initiated by a taxpayer issuing a NOPA after 29 August
2011.

A NOPA must be issued under s 89D of the TAA within the applicable response period before it can be
deemed accepted under s 89H of the TAA: TRA No 37/09 [2011] NZTRA 04.

260.45 When disputant may not challenge adjustment [TAA, ss 89I, 89J]

A disputant may not challenge an adjustment proposed by the CIR if the disputant accepts the adjustment in
writing or is deemed to accept the adjustment, and s 89K of the TAA (exceptional circumstances rules) do
not apply [see 260.50]. The CIR must include or take account of each proposed adjustment that is accepted
or deemed accepted by a disputant in a notice of assessment issued to the disputant [TAA, s 89I].
Disputes and Challenges Procedures

260.50

If the CIR accepts or is deemed to accept an adjustment proposed by a disputant, and s 89L of the TAA (exceptional circumstances rules) do not apply [see 260.50], the CIR must include or take account of the adjustment in:

(a) A notice of assessment issued to the disputant; and
(b) Any further notice of assessment or further amended assessment issued to the disputant.

However, the CIR does not have to issue a notice of assessment or an amended assessment that includes or takes into account an adjustment that the CIR has accepted, or is deemed to have accepted, if the CIR considers that the disputant was fraudulent or wilfully misled the CIR in relation to the adjustment [TAA, s 89J].

260.50 Extension of time for exceptional circumstances [TAA, ss 89K, 89L]

(1) Affecting the disputant [TAA, s 89K]

Where the CIR considers that an exceptional circumstance has prevented a disputant from rejecting a proposed adjustment, issuing a notice of proposed adjustment (NOPA), or issuing a statement of position within the applicable response period, the CIR may treat the notice as if it had been received within the response period. This only applies if the disputant sends the CIR the required notice as soon as is reasonably practical after becoming aware of their failure to respond within the response period.

The actions referred to above are:

(a) Rejecting, within the response period, an adjustment contained in a NOPA issued by the CIR;
(b) Issuing, within the response period, a NOPA under TAA, s 89D or 89DA in respect of a disputable decision;
(c) Issuing, within the response period, a statement of position.

The required notice is as follows:

(a) A notice rejecting an adjustment proposed by the CIR in a NOPA specifying the matters required to be shown in a response notice;
(b) A NOPA in respect of a disputable decision specifying the matters required to be shown in a NOPA; or
(c) A statement of position.

If these conditions are met, the CIR may issue a notice in favour of the disputant stating that the disputant’s rejection of the CIR’s NOPA, the disputant’s NOPA, or the disputant’s statement of position, is to be treated for the purposes of the disputes procedures as if it had been given within the applicable response period.

The CIR may accept a late response notice or NOPA even if the CIR has already issued a notice of disputable decision. In these circumstances, the notice of disputable decision is to be deemed not to have been issued.

An “exceptional circumstance” is defined as:

(a) An event or circumstance beyond the control of a disputant that provides the disputant with a reasonable justification for not rejecting an adjustment, not issuing a NOPA, or not issuing a statement of position within the response period; or
(b) A disputant is late in issuing a NOPA, response notice or statement of position, but the CIR considers that the lateness is minimal or results from statutory holidays falling in the response period.

An act or omission of an agent of a disputant is not an exceptional circumstance unless:

(a) It was caused by an event or circumstance beyond the control of the agent that could not have been anticipated, and its effect could not have been avoided by complying with accepted standards of business organisation and professional conduct; or
(b) The agent is late in issuing a NOPA, response notice or statement of position, but the CIR considers that the lateness is minimal, or results from statutory holidays falling in the response period.

If the CIR decides not to issue a notice in favour of the disputant, the CIR must issue a refusal notice within one month of the disputant sending the required notice defined above. A refusal notice is deemed to have
Disputes and Challenges Procedures

been sent after one month if one is not, in fact, sent. The disputant may challenge a refusal notice by filing proceedings, in accordance with the TRA Regs 1998, within two months of the notice’s issue. For the purposes of the TRA Act 1994 and the TRA Regs 1998, a refusal notice is treated as a disputable decision and the challenge is treated as a challenge under TAA, Part 8A.

In Commissioner of Inland Revenue v Wilson (1996) 17 NZTC 12,512 (CA), the Court of Appeal indicated that the CIR should use the following approach when considering whether to accept a late objection:

“If a late objection application is made the Commissioner has to weigh and balance the relevant public policy considerations applicable at that time in the particular circumstances of the case. If particular factors are material to that decision then the weight to be given to the various factors and the overall balancing judgment fall within the wide discretion understandably reposed in the Commissioner.

“The inquiry … calls for some explanation from the taxpayer of the failure to make timely objection and, where there is significant delay involved, the reasons for the failure to make the application earlier. Depending on the circumstances, it may be relevant to consider whether the failures or failure were due to inadvertence, negligence, an agent’s action or a deliberate decision by the taxpayer, as the case may be. Next, the apparent merits of the proposed objection may, and often will be, a relevant factor. … In some circumstances the inadequacy of the explanation for lateness may make it unnecessary to consider the apparent strength of the proposed objection. In many circumstances, however, it will be a material factor to be weighed.”

Although this decision relates to the antecedent of s 89K of the TAA (ITA 1976, s 30), the same principles are likely to apply.

In Wood v Commissioner of Inland Revenue (1999) 19 NZTC 15,255 (HC), the taxpayer sought a judicial review of the CIR’s decision not to accept a late objection (under s 30 of the ITA 1976), on the grounds that the CIR had failed to consider certain matters. The Court held that the CIR had, in fact, taken these matters into account. The issue for the Court was not the correctness of the decision but whether the CIR had considered the relevant matters in reaching this decision. The Court has no power to intervene unless the CIR is shown to have acted wrongly.

(2) Affecting the CIR [TAA, s 89L]

If the CIR considers that an exceptional circumstance has prevented the CIR from rejecting an adjustment within the response period, the CIR may apply to the High Court for an order allowing the CIR to issue a notice rejecting an adjustment proposed by a taxpayer that the CIR has accepted or is deemed to have accepted. The CIR must apply to the High Court:

(a) Before issuing a notice of assessment including the adjustment; or
(b) Relying on s 108(2) of the TAA (which provides an extension of the four year time bar for a fraudulent or willfully misleading tax return) or s 108A(3) of the TAA (which provides an extension of the four year time bar for failure to make full disclosure in a GST return).

The High Court may make an order on such terms as the Court deems fit or decline to make an order. The CIR may apply to the High Court for an order allowing the CIR to issue a challenge notice past the four year period provided for in TAA, s 89P(1) [see 260.67] if:

(a) The CIR considers that an exceptional circumstance applies or has prevented the CIR from issuing the challenge notice within the four years; and
(b) The CIR applies within the four years.

This applies for disputes initiated by a taxpayer issuing a NOPA after 29 August 2011.

The High Court may either make an order on such terms as the Court deems fit or decline to make an order. An “exceptional circumstance”, for the purposes of a High Court application, is an event or circumstance beyond the control of the CIR or an officer of Inland Revenue that provides the CIR with a reasonable justification for not rejecting an adjustment proposed by a disputant within the response period.
260.55 Disclosure notices [TAA, s 89M]

The CIR must issue a disclosure notice in respect of a notice of proposed adjustment (NOPA) to a disputant at the same time as or after the CIR or the taxpayer issues the NOPA. The CIR may not issue a disclosure notice in respect of a NOPA until the disputes process has been completed [see 260.60], and the CIR has already issued a notice of disputable decision that includes, or takes account of, the adjustment proposed in the NOPA.

Unless the disputant has issued a NOPA, when issuing a disclosure notice the CIR must:

(a) Provide the disputant with the CIR’s statement of position; and

(b) Include in the disclosure notice a reference to s 138G of the TAA and a statement explaining the effect of the evidence exclusion rule.

The CIR’s statement of position in the prescribed form must, with sufficient detail to fairly inform the disputant:

(a) Give an outline of the facts on which the CIR intends to rely;

(b) Give an outline of the evidence on which the CIR intends to rely;

(c) Give an outline of the issues that the CIR considers will arise; and

(d) Specify the propositions of law on which the CIR intends to rely.

If the CIR issues a disclosure notice to a disputant, the disputant must issue the CIR with the disputant’s statement of position within the response period for the disclosure notice. A disputant’s statement of position in the prescribed form must, with sufficient detail to fairly inform the CIR:

(a) Give an outline of the facts on which the disputant intends to rely;

(b) Give an outline of the evidence on which the disputant intends to rely;

(c) Give an outline of the issues that the disputant considers will arise; and

(d) Specify the propositions of law on which the disputant intends to rely.

The CIR must issue a statement of position in response to the disputant’s statement of position if the CIR is not required to issue one when issuing a disclosure notice.

The evidence referred to in the CIR’s and the disputant’s statement of position means the available documentary evidence on which the person intends to rely. A list of potential witnesses (named or unnamed) does not have to be provided at this stage. A disputant who does not issue a statement of position within the response period is treated as follows:

(a) If the CIR proposed the adjustment, the disputant is treated as having accepted the CIR’s NOPA or statement of position; or

(b) If the disputant proposed the adjustment, the disputant is treated as having not issued a NOPA.

The CIR may, within the response period for a disputant’s statement of position, provide the disputant with additional information in response to the disputant’s statement of position. The CIR must provide the additional information as far as possible in the manner required for the CIR’s statement of position. The additional information provided by the CIR is deemed to form part of the CIR’s statement of position.

However, the provision allowing the CIR to provide a disputant with additional information does not allow the CIR to change the legal basis upon which the CIR makes a disputable decision [TAA, s 89M(8)]: TRA Case W18 (2003) 21 NZTC 11,175.

The CIR may apply to the High Court for more time to reply to a disputant’s statement of position if the CIR considers it is unreasonable to reply within the response period, because of the number, complexity, or novelty of matters raised in the disputant’s statement of position. The CIR must apply for the disputant’s statement of position before the expiry of the response period.

The disputant may apply to the High Court for more time within which to reply to the CIR’s statement of position if the disputant considers it unreasonable to reply within the response period, because the issues in dispute had not previously been discussed between the CIR and the disputant. The disputant must apply
before the expiry of the response period for the CIR’s statement of position. The High Court must, in considering an application from the disputant, have regard to the purpose of the disputes procedures and the conduct of the parties to the dispute [see 260.05].

In *Chapman v Commissioner of Inland Revenue* (2004) 21 NZTC 18,474 (HC), the High Court granted a one-month extension of time under s 89M(11) of the TAA for the taxpayers to prepare their statements of position even though much of the material in the CIR’s statement of position was familiar to them. The Court held that the purposes of s 89A of the TAA would be furthered if the taxpayers had additional time to prepare their statements, since the CIR’s statement of position was a substantial document.

The CIR and a disputant may agree to additional information being added, at any time, to either of their statements of position. The additional information provided by the CIR or a disputant is deemed to form part of the provider’s statement of position.

### 260.60 Disputes process to be completed [TAA, s 89N]

If a NOPA has been issued and the dispute has not been resolved by agreement between the CIR and the disputant, the CIR may not (except in the circumstances listed below) amend an assessment under s 113 of the TAA [see 60.70] until one of the following has occurred:

(a) The CIR or the disputant accepts a NOPA, response notice, or statement of position issued by the other;

(b) The CIR considers a statement of position issued by the disputant.

The circumstances in which the CIR may amend an assessment before the disputes process has been completed are:

(a) The CIR notifies the disputant that, in the CIR’s opinion, the disputant has committed a tax-related offence that has delayed the completion of the disputes process;

(b) The CIR has reasonable grounds to believe that the disputant or an associated person may hide or dispose of the disputant’s assets to avoid or delay the collection of tax;

(c) The CIR has reasonable grounds to believe that an associated person (under the provisions of the 1988 version of subpart YB) of the disputant may hide or dispose of the disputant’s assets to avoid or delay the collection of tax;

(d) The disputant has begun judicial review proceedings in relation to the dispute;

(e) An associated person (under the provisions of the 1988 version of subpart YB) of the disputant has begun judicial review proceedings in relation to another dispute with the CIR involving similar issues;

(f) The disputant fails to comply with a statutory request by the CIR for information during the disputes process;

(g) The disputant elected before 29 August 2011 to have the dispute heard in the small claims jurisdiction of the TRA;

(h) The disputant and the CIR agree in writing that the dispute would be resolved more efficiently by the court or TRA;

(i) The disputant and the CIR agree in writing to suspend the dispute process until a test case [see 260.65] has been decided.

Despite the above restriction on amending an assessment, the CIR may apply to the High Court for an order that allows more time for the completion of the disputes process, or for an order that completion of the disputes process is not required. This application must be made within the time period that the CIR is required to make an amended assessment. The period of time during which the CIR must make an amended assessment is the total of:

(a) The period of time within which the CIR would, in the absence of the application, be required to make the amended assessment;
Disputes and Challenges Procedures

260.65 Test cases [TAA, s 89O]

A disputant and the CIR may agree in writing to suspend the disputes process in relation to a dispute pending the outcome of a test case. A dispute may be suspended where there is significant similarity between the facts and questions of law in the dispute and the facts and questions of law in the test case. A test case is a challenge by another taxpayer that the CIR has designated as a test case.

The period of suspension is the period from the date of the written agreement to the date of the Court’s decision in the test case, the date on which the test case is otherwise resolved or the date on which the dispute is otherwise resolved, whichever is earlier. Once the test case has been resolved, the CIR may make an assessment or take other action in relation to a suspended dispute that is consistent with the resolution of the test case.

The amended assessment must be made, or action performed, by the later of the following days:

(a) Sixty days after the last day of the suspension;
(b) The last day of the period that:
   (i) Begins on the day following the day by which the CIR would, if the disputes process were not suspended, be required to make the amended assessment or perform the action; and
   (ii) Contains the same number of days as the period of suspension.

260.67 Challenge notice for taxpayer-initiated disputes [TAA, s 89P]

The CIR must issue a challenge notice to a disputant within four years of the disputant issuing a NOPA unless:

(a) The High Court makes an order under TAA, s 89L(2B)(a) allowing the CIR to issue a challenge notice after four years due to exceptional circumstances; or
(b) The CIR considers under s 89J(2) that the disputant was fraudulent or misled the CIR in relation to the NOPA.

The CIR does not have to issue a challenge notice to the extent to which the dispute has ended.

A challenge notice may not be issued before the CIR issues a statement of position, unless one or more of TAA, s 89N(1)(c)(i) to (ix) applies [see 260.60].

A challenge notice must state that the CIR will not be issuing an amended assessment that includes or takes into account the adjustment proposed by the disputant, and that a challenge may proceed.

This applies for a dispute initiated by a taxpayer issuing a NOPA after 29 August 2011.

260.70 Challenge to assessment [TAA, s 138B]

A disputant may challenge an assessment by commencing proceedings in the TRA or the High Court if:

(a) The assessment includes an adjustment proposed by the CIR which the disputant or their look-through company has rejected within the response period. Where the assessment is an amended assessment, the adjustment must impose a fresh liability or increase an existing liability. The disputant must file the proceedings, in accordance with the TRA Regulations 1994 (or any regulations made in substitution) or High Court Rules, within the relevant response period.

(b) The assessment was the subject of an adjustment proposed by the disputant which the CIR has rejected by written notice within the response period, and the disputant is subsequently issued with an amended assessment. The disputant must file the proceedings, in accordance with the TRA Regulations 1994 (or any regulations made in substitution) or High Court Rules, within the relevant response period.
The assessment was the subject of an adjustment, proposed by the disputant, which the CIR has rejected by written notice within the response period, and the CIR has issued a challenge notice to the disputant. The disputant must file the proceedings in accordance with the TRA Regulations 1998 (or any regulations made in substitution) or High Court rules within two months. Despite (c), a disputant may challenge an assessment by commencing proceedings in the TRA or the High Court if:

(a) The assessment was the subject of an adjustment notified to the CIR in writing;

(b) The CIR has issued a challenge notice to the disputant;

(c) The adjustment:

(i) Is in relation to a matter for which the material facts and relevant law are identical to those for another assessment for the taxpayer, for another period, that is at the time of proposing the adjustment the subject of court proceedings; or

(ii) Corrects a tax position taken by the taxpayer or an associated person as a consequence or result of an incorrect tax position taken by another taxpayer and, at the time of proposing the adjustment, the incorrect tax position taken by the other taxpayer is the subject of, or was the subject of, court proceedings; and

(d) The disputant files the proceedings, in accordance with the TRA Regulations 1998 (or any regulations made in substitution) or High Court rules within two months.

260.75 Challenge to disputable decision other than assessment [TAA, ss 138C, 138F]

A disputant may challenge a disputable decision that is not an assessment by commencing proceedings in the TRA or the High Court if the disputable decision was the subject of an adjustment proposed by the disputant which the CIR has rejected. The disputant must file the proceedings in accordance with the TRA Regulations 1994 or the High Court Rules, within the response period for the notice from the CIR rejecting the proposed adjustment [TAA, s 138C].

A disputant may challenge an assessment made by the CIR that takes account of or relies on a disputable decision (other than an assessment), whether or not the disputant has issued a notice of proposed adjustment (NOPA) in respect of the disputable decision. The disputant may not challenge such an assessment if the disputant has issued a NOPA in respect of the disputable decision and the disputant’s grounds for challenging the assessment are the same grounds, or substantially the same as the grounds, that were specified in the NOPA [TAA, s 138F].

260.80 Extension of time to commence challenge [TAA, s 138D]

If the TRA or the High Court considers that exceptional circumstances apply, the TRA or the High Court may, on application by a disputant, allow the disputant to commence a challenge to a notice of a disputable decision after the response period. An “exceptional circumstance” is defined as an event or circumstance beyond the control of a disputant that provides the disputant with a reasonable justification for not commencing a challenge to a disputable decision within the response period. An act or omission of an agent of a disputant is not an exceptional circumstance unless the act or omission was caused by an event or circumstance beyond the control of the agent that could not have been anticipated and the effect of which could not have been avoided by compliance with accepted standards of business organisation and professional conduct.

The importance of challenging a notice of disputable decision within the statutory time period was highlighted by the case Milburn New Zealand Ltd v Commissioner of Inland Revenue (1998) 18 NZTC 14,005 (HC). In that case the finance manager of the taxpayer company mistakenly believed that, because a challenge had already been made to a reassessment of the company’s 1992 income tax, and the same ground for objection existed, it was not necessary for the company to separately challenge a reassessment of the company’s 1993 income tax. As a result, a challenge was not made within the two-month response period. On realising its
mistake, the company applied to the High Court under s 138D of the TAA to make a late challenge on the
grounds of exceptional circumstances. The Court, while sympathetic, declined the application because the
failure to challenge the reassessment was the result of a mistake, not the result of an event or circumstance
beyond the control of the disputant.

In Commissioner of Inland Revenue v Fuji Xerox New Zealand Ltd (2001) 20 NZTC 17,470 (CA), the Court
considered whether the sending of GST notices of assessment by Inland Revenue to the taxpayer’s business
address, rather than to the taxpayer’s agent, constituted an exceptional circumstance that justified the
commencing of a challenge outside the response period. The CIR had commenced an audit of the taxpayer’s
income tax and GST affairs, and the taxpayer had appointed KPMG to act on its behalf. However, KPMG
was not the taxpayer’s agent for GST matters. Up to the point at which the assessments were issued, all
correspondence relating to the audit had been sent by Inland Revenue directly to KPMG. However, the
assessments themselves were sent to the taxpayer because that was the address that had been advised by the
taxpayer for service. The taxpayer failed to identify the significance of the assessments and paid the tax owing
as per company policy. By the time KPMG and the taxpayer realised what had happened, the response period
had expired. The taxpayer applied under s 138D of the TAA to commence a challenge outside the response
period. The Court found that the sending of the assessment notices to the taxpayer’s address was not an
exceptional circumstance as defined in s 138D. That act was not in any real sense causative of the respondent’s
default. The real cause of the default was the systemic and human failures of the taxpayer itself.

260.85 No right of challenge in certain cases [TAA, s 138E]
The following decisions or matters cannot be challenged:

(a) A decision of the CIR under a tax law to enlarge or extend the time for giving notice, making an
application, furnishing a tax return, or doing any other act, matter, or thing; or

(b) A decision of the Minister of Finance under a tax law, or an act, matter, or thing done or omitted by
the Minister under a tax law; or

(c) A matter in respect of which provision is made by a tax law:
   (i) For a challenge or objection to the matter to be heard and determined by;
   (ii) For the matter to be inquired into, considered, reported on, heard, decided, determined, or
        otherwise dealt with by; or
   (iii) For the matter to be the subject of any recommendation of,
         a special committee, tribunal, or authority (other than the TRA) established in that behalf or a person
         or official (other than the CIR); or

(d) A valuation or apportionment made by the Valuer-General or a registered valuer under the Valuation
of Land Act 1951 or the ITA 2007; or

(e) A matter that is left to the discretion, judgment, opinion, approval, consent, or determination of the
CIR by a provision in:
   (i) The PAYE rules;
   (ii) The provisional tax rules;
   (iii) Any of CD 15, CD 19, HD 2, HD 3(2), HD 5(4), HD 15, HD 24, HD 26 to HD 29,
        LA 6 to LA 8, LJ 1 to LJ 7, RD 3, RM 2 to RM 4, RM 6, RM 8 and RM 10; and ss 33, 89,
        92A, 139 (as it applies to unpaid tax for periods before 1 April 1997) and 184 of the TAA;
   (iv) Any of ss 21 to 23, 34B, 36 to 46, 58, 62, 63, 78B, 78C, 80, 88, 89C, 89K, 89L, 89M,
        89N(1)(c)(viii), 89N(3), 92, 106, 107, 108A, 108B, 109, 110, 111, 113, 114,
        120A to 120U, 138I(2B), 138N, 142A, 142C, 146, 150A, 157, 160, 166, 166B, 167,
        174AA, 176, 177, 177A to 177D, 183A, 183D, 183F and 225B of the TAA;
   (v) Any of Parts 1 to 3 of the KiwiSaver Act 2006;
   (vi) Any of Parts 4, 6, 7 and 11 (other than s 76) of the GSTA; or
(f) A binding ruling made under Part 5A of the TAA [see 115 BINDING RULINGS]; or
(g) A status ruling made under s 91GA of the TAA [see 115.70]; or
(h) A matter in respect of which a tax law provides that there shall be no right of objection or challenge to the decision of the CIR.

Any of restrictions (a) to (h) above may be overruled by a tax law or other law that expressly confers a right of objection or challenge in respect of a decision made by any person.

A decision by the CIR to dispense with the statutory disputes procedure (in this case under s 89C(e) of the TAA) is not open to challenge, by virtue of s 138E(1)(e)(iv) of the TAA: *Hieber v Commissioner of Inland Revenue* (2002) 20 NZTC 17,562 (HC).

**260.90 Application to strike out proceedings** [TAA, s 138H]

The CIR may apply to the TRA or the High Court to strike out a challenge commenced by a disputant if the CIR considers that the disputant has failed to comply with any of the requirements of s 89M of the TAA (disclosure notices) [see 260.55] or s 138B of the TAA (when disputant may challenge) [see 260.70].

**260.95 Disputable decisions deemed correct unless challenged or objected to** [TAA, s 109]

Unless it has been objected to (under Part 8 of the TAA) or challenged (under Part 8A of the TAA):

(a) A disputable decision (an assessment or other decision made by the CIR) may not be disputed in Court or in any proceedings on any ground whatsoever; and

(b) Every disputable decision and all of its particulars are deemed to be correct in all respects.

The High Court confirmed in *Commissioner of Inland Revenue v Disputes Tribunal* (1997) 18 NZTC 13,383 (HC), that the Disputes Tribunal has no jurisdiction to hear a claim in relation to money due under the ITA 1994 (now ITA 2007). Once an assessment (or other disputable decision) has been made, its correctness can only be challenged in proceedings on objection or challenge.

In *Rupe v Commissioner of Inland Revenue* (2004) 21 NZTC 18,519 (HC), the High Court confirmed that a taxpayer’s challenge to the validity of assessments for income tax, GST and earner premiums on the basis the Treaty of Waitangi, the New Zealand Bill of Rights Act 1990, and the fact that the taxpayer was a Christian had no basis in law. An assessment can be challenged only through the statutory disputes procedure: s 109 of the TAA and s 29 of the GSTA. There is no reference to the Treaty of Waitangi in the taxation statutes. A person is not exempt from the payment of tax on the basis of Maori sovereignty. The New Zealand Parliament has the right to enact legislation applying to all persons in New Zealand. There is no juridical basis to refuse to pay tax because one is a Christian.

**260.100 Exclusion of evidence** [TAA, s 138G]

If the CIR issues a disclosure notice to a disputant, and the disputant challenges the disputable decision, the CIR and the disputant may raise in the challenge only the issues and the propositions of law that are disclosed in the CIR’s and disputant’s statements of position. This is commonly referred to as the “evidence exclusion” rule. However, the TRA or the High Court may, on application by either party to a challenge, allow the applicant to raise in the challenge new propositions of law, and new issues, if the Court or TRA is satisfied that:

(a) The applicant could not, at the time of delivery of their statement of position, have, with due diligence, discerned those propositions of law or issues; and

(b) Having regard to the purpose of the disputes procedures [see 260.05], and the conduct of the parties, the TRA or the High Court considers that the raising of those propositions of law or issues is necessary to avoid manifest injustice to the CIR or the disputant.

For these purposes, a statement of position includes any additional information that the CIR and the disputant agree (under s 89M(13) of the TAA), to add to the statement of position.
In *TRA Case V9* (2001) 20 NZTC 10,101, it was held that the disputants were barred by s 138G from arguing a point not raised in a response notice to a reassessment. The fact that the disputants prepared the response notice without seeking professional advice was not sufficient reason for the Court to exercise its discretion under the section.

The importance of including all potentially relevant grounds for a challenge in a disputant’s statement of position was reinforced by the decision in *Commissioner of Inland Revenue v Abbatis Properties Ltd* (2002) 20 NZTC 17,805 (CA). The taxpayer claimed (and received), a GST refund of $111,250, which Inland Revenue subsequently decided the taxpayer was not entitled to. The CIR issued an amended assessment to recover the refund, which, together with penalties and interest, ultimately amounted to $388,320. The taxpayer applied for a judicial review of the CIR’s amended assessment, claiming that the assessment was invalid because the taxpayer had never received notice of it. However, the Court of Appeal rejected the application, holding that the taxpayer was estopped from raising any of the issues it sought to raise in judicial review proceedings because they had already been decided with finality by the High Court. There was no evidence that exceptional circumstances were involved. The High Court had already previously determined, in *Abbatis Properties Ltd v Commissioner of Inland Revenue* (2002) 20 NZTC 17,425 (HC), that the failure to give notice did not affect the validity of the assessment. The Court noted that taxpayers who fail to include, in their statement of position, procedural issues arising before the statement was filed do so at their peril.

Section 138G of the TAA does not necessarily exclude an order for discovery. In *Glenharrow Holdings Ltd v Commissioner of Inland Revenue* (2002) 20 NZTC 17,792 (HC), the High Court held that the purpose of s 138G of the TAA is to encourage the disclosure of all relevant information at the statement of position stage and to provide a sanction for non-disclosure. Discovery is a more general process that may disclose documents relevant to the facts and evidence, and the issues arising from them, already stated in the statement of position.

In the dispute resolution process, the CIR and the taxpayer are not restricted by s 138G of the TAA to matters raised in their own statements of position. In *Commissioner of Inland Revenue v Delphi Fishing Co Ltd* (2004) 21 NZTC 18,525 (HC), the CIR was entitled to rely on a ground raised in the taxpayer’s statement of position, even though the matter had not been raised in the CIR’s own statement of position.

### 260.105 Payment of disputed tax [TAA, s 138I]

A disputant is not liable to pay:

(a) The deferrable tax relating to tax in dispute; or
(b) A shortfall penalty that is payable for tax in dispute; or
(c) The interest accruing under Part 7 of the TAA on that tax or shortfall penalty, until the due date for the payment of that deferrable tax.

However, the CIR may require a disputant to pay all tax in dispute that is the subject of the challenge if the CIR considers that there is a significant risk that it will not be paid should the disputant’s challenge not be successful.

After the day of determination of final liability, the CIR must refund or pay to, or apply on behalf of, a disputant whose challenge is successful:

(a) The tax in dispute that a disputant has been required by the CIR to pay, and has so paid; and
(b) Interest accrued on the tax in dispute under Part 7 of the TAA.

Part 7 of the TAA applies to interest calculated on deferrable tax on or after 1 April 1997, irrespective of whether the challenge relates to a tax year before the 1997-1998 tax year. If the challenge relates to the 1996-1997 or an earlier tax year, interest must be calculated on deferrable tax on and after the date that the period of deferral starts.

“Deferrable tax” means:

(a) The amount of tax assessed under a tax law as payable by a taxpayer or disputant; or
(b) GST payable by a taxpayer or disputant on a due date, that the disputant challenges under Part 8A of the TAA.
Disputes and Challenges Procedures

“Shortfall penalties” are explained in 1110.85 to 1110.185.

“Day of determination of final liability” means:
(a) The day on which the disputant notifies the CIR that the disputant is discontinuing a challenge;
(b) The day on which the TRA, in its small claims jurisdiction, determined a challenge. Note that the small claims jurisdiction was abolished effective from 29 August 2011;
(c) The day on which the TRA determines a challenge;
(d) The day on which a Court, whether or not by way of appeal, finally determines the challenge, whether in those proceedings or in a subsequent appeal; or
(e) To the extent the CIR concedes a challenge, the day on which the CIR notifies the disputant in writing of the concession [TAA, s 3(1)].

260.110 Determination of challenge does not affect other matters [TAA, s 138K]

The determination of a challenge by the TRA or the High Court relates solely to the matter that is the subject of the disputable decision being challenged. The determination of a challenge does not affect the right of the CIR to make a disputable decision relating to a different matter and to amend the disputable decision being challenged in any way rendered necessary by the later disputable decision.

260.115 Challenging civil penalties [TAA, s 138L]

A taxpayer assessed by the CIR for a civil penalty may challenge the penalty in the same way as a taxpayer may challenge the assessment of tax to which the penalty relates. The taxpayer has the same rights and obligations, in relation to proceedings concerning the penalty, as a person has in relation to proceedings concerning the tax itself. However, a taxpayer has no right to challenge a civil penalty imposed for the late provision of a tax return, the late payment of tax, a civil penalty imposed under s 215 of the KiwiSaver Act 2006 or the percentage applicable to the civil penalty.

A “civil penalty” is:
(a) A late filing penalty;
(b) A late payment penalty;
(c) A shortfall penalty;
(d) A promoter penalty;
(e) A non-electronic filing penalty; or
(f) A civil penalty under s 215 of the KiwiSaver Act 2006.

260.120 Wrong PAYE withholding determination a ground for challenge [TAA, s 138M]

A disputant may dispute a notice of proposed adjustment (NOPA) or challenge an assessment that is issued by the CIR in relation to an amount of tax withheld on the basis of a determination under s RD 3(5) [see 1080.16] on the ground that the determination is wrong in fact or in law.

260.125 Proceedings may be transferred to different hearing authority [TAA, ss 138N, 138O]

If a disputant commences a challenge in the High Court, the CIR may apply to the High Court to have the challenge transferred to the TRA, or the High Court, of its own motion, may transfer the challenge to the TRA.

If a disputant commences a challenge in the TRA, the CIR may apply to the High Court to have the challenge transferred to the High Court.

The High Court may order that any proceedings transferred to it are to be transferred into the Court of Appeal [TAA, s 138N].
Disputes and Challenges Procedures

260.125(1)

(1)  **Rules applying before 29 August 2011**
If a disputant commenced a challenge to a disputable decision in the small claims jurisdiction of the TRA and the CIR considered that:
(a)  The proposed adjustment in dispute would or was likely to arise again in future assessments;
(b)  The challenge involved significant legal issues of precedent;
(c)  The facts of the challenge were either not clear or were in dispute; or
(d)  For any reason, the TRA acting in its small claims jurisdiction should not determine the challenge, the CIR could have applied to:
(a)  The TRA, requesting that the challenge be transferred to the general jurisdiction of the TRA; or
(b)  The High Court, requesting that the challenge be transferred to the High Court [TAA, s 138O(1) (repealed)].

The TRA, acting in its small claims jurisdiction, could have required a challenge to be transferred to the TRA’s general jurisdiction or to the High Court if the TRA considered that:
(a)  The challenge involved significant legal issues or precedent;
(b)  The facts of the challenge were either not clear or were in dispute; or
(c)  For any reason, another hearing authority should hear the challenge [TAA, s 138O(2) (repealed)].

260.130  **Powers of hearing authority** [TAA, s 138P]
On hearing a challenge, the TRA or the High Court may:
(a)  Confirm, cancel or vary an assessment, or increase or reduce the amount of an assessment. The amount of the assessment can only be increased to the extent to which the CIR was able to make an assessment of an increased amount at the time the assessment to which the challenge relates was made; or
(b)  Make an assessment which the CIR was able to make at the time the CIR made the assessment being challenged, or direct the CIR to make such an assessment.

If a taxpayer brings a challenge, and proves, on the balance of probabilities, that the amount of an assessment is excessive by a specific amount, the TRA or High Court must reduce the taxpayer’s assessment by that amount.

If the challenge relates to a disputable decision that is not an assessment, the hearing authority must not make or amend the disputable decision, but may direct the CIR to amend the disputable decision to the extent necessary to conform to the decision of the hearing authority.

The CIR must make or amend an assessment or other disputable decision to conform to the hearing authority’s determination, but the CIR is not required to make or amend an assessment or other disputable decision before the resolution of any appeal.

The case of Jarman v Commissioner of Inland Revenue (1980) 4 NZTC 61,553, (1980) 3 TRNZ 677 (HC) established that when an objector complains that he has not been provided with sufficient details of the grounds on which the CIR made the assessment, the TRA has no jurisdiction or authority to order that the CIR supply further particulars of the basis of an assessment. However, Roper J said “The objector is not without a remedy although I must agree that it makes for a cumbersome procedure”.

Staples Tax Guide 2012
317
In *TRA Case H33* (1986) 8 NZTC 296, (1986) 9 TRNZ 488, the CIR was permitted to raise at a hearing a new but alternative ground for disallowing an objection, since there was no prejudice to the objector whose objection was sufficiently wide to allow the new ground to be challenged.

In *Richardson v Commissioner of Inland Revenue* (1986) 8 NZTC 5,109, (1986) 9 TRNZ 361 (HC), the High Court held that in order for a taxpayer to seek a motion for the review of the exercise of a discretion by the CIR, the taxpayer must satisfy the Court that there was no tenable basis for the facts and conclusions of the CIR. Alternatively, the taxpayer must show that in weighing up the competing factors, the CIR had made errors so fundamental that its conclusions could not stand.

The issue in *TRA Case J16* (1987) 9 NZTC 1,089, (1986) 10 TRNZ 321, was whether an activity was a business. The TRA rejected the argument of the taxpayer that if the objection succeeded, the TRA had no jurisdiction to then consider the deductibility of each component of the losses the taxpayer had claimed on the basis of the business having existed.

In certain circumstances the taxpayer may have available the right to seek a judicial review of an action of the CIR: *Commissioner of Inland Revenue v Lemmington Holdings Ltd* [1982] 1 NZLR 517, (1982) 5 NZTC 61,268 (CA); *Lemmington Holdings Ltd v Commissioner of Inland Revenue* [1984] 2 NZLR 214, (1983) 6 NZTC 61,576 (HC).

The TRA may proceed with a hearing if either party to an objection fails to attend. If the TRA determines an objection in the absence of either party, it may grant a hearing on the application of that party. It may dismiss a frivolous or vexatious objection or objections made solely for the purpose of delay. Proceedings do not abate if an objector dies, as the legal personal representative takes over.

Decisions of the TRA must be given in writing. On the request of the objector, the disputant, or the CIR, a decision may be made at the hearing or at the time when the decision is given. It must state in writing its findings of fact and any reasons in law for its decision.

### 260.135 Test cases [TAA, s 138Q]

The CIR may designate a challenge as a test case if the CIR considers that determination of the challenge is likely to be determinative of all or a substantial number of the issues involved in one or more other challenges. Test cases are heard in the High Court.

### 260.140 Stay of proceedings for similar cases [TAA, s 138R]

The CIR may stay proceedings by issuing a notice advising a disputant that a challenge is to be stayed because a test case on a similar challenge or objection is to be heard by the High Court. The CIR may issue a notice staying proceedings only if:

(a) The CIR considers that the test case is likely to be determinative of all or a substantial number of the issues in the challenge proposed to be stayed; and

(b) The challenge proposed to be stayed has not been determined by the TRA or the High Court.

When a disputant receives a notice staying proceedings, the disputant may issue a notice requiring that there be no stay of proceedings and notifying the CIR that the disputant requires the challenge to be heard even though a test case is pending. Within 14 days after the CIR receives a notice requiring that there be no stay of proceedings, the CIR may apply to the High Court for an order that the challenge be stayed pending the determination of the test case or the further order of the Court.

If a challenge is stayed, the disputant or the CIR may apply to the High Court for an order that the challenge cease to be stayed.

A stay, following issue of a notice by the CIR, lapses on the expiry of 14 days following the day on which any of the following occurs:

(a) The expiry of the 14 day period, if the disputant has issued a notice requiring there to be no stay of proceedings and the CIR has not, within the 14 day period, made an application to the High Court for an order that the challenge be stayed;

(b) The making by the High Court of an order dismissing the CIR’s application;
Disputes and Challenges Procedures

260.145 Disputes and Challenges Procedures

(c) The making by the High Court, on an application by the disputant or the CIR, of an order that the challenge cease to be stayed; or

(d) The determination of the test case which caused the challenge to be stayed by the expiration of all rights of appeal.

During the period a challenge is stayed:

(a) Any time limits or periods specified in or under the TAA (other than s 138R), in relation to the challenge are not to apply; and

(b) Where the stay of a challenge lapses, any time limits or periods so specified are to be treated as if they were extended by the period of the stay.

The CIR may give notices in relation to stays of proceedings:

(a) Personally;

(b) By sending a copy of the notice to the disputant by registered post to the disputant’s usual or last known place of abode or business in New Zealand, in which case it shall be deemed to have been received when in the ordinary course of post it would be delivered;

(c) By service on a solicitor who accepts service in writing on behalf of the disputant. The service shall be deemed to be personal service on the disputant; or

(d) By effective delivery to an address for service supplied by the disputant to the CIR.

260.145 Challenge to be heard by TRA [TAA, s 138S]

A challenge to a disputable decision made by the CIR under:

(a) The Student Loan Scheme Act 1992, or any provision of the TAA that applies in relation to an employer’s obligation under the Student Loan Scheme Act 1992;

(b) The Child Support Act 1991, or any provision of the TAA that applies in relation to an employer’s obligation under the Child Support Act 1991; and

(c) Any other tax law, where that tax law or another tax law specifies that the disputable decision is to be determined by the TRA,

is to be commenced, heard, and finally determined by the TRA. Section 138S overrides any other section in Part 8A of the TAA.

Note: The Student Loan Scheme Act 1992 is replaced by the Student Loan Scheme Act 2011 from 1 April 2012.

260.150 Taxation Review Authorities [TRAA, ss 5, 6, 13, 13A, 13B, 16, 17, 22, 22B, 23]

The function of a Taxation Review Authority (“TRA”, also referred to as an “Authority”) is to sit as a judicial authority for hearing and determining objections and challenges to assessments of tax and to other decisions or determinations of the CIR as authorised by the Inland Revenue Acts [TRAA, s 13]. The TRA has:

(a) A general jurisdiction to hear and determine objections and challenges, as authorised by the TRAA 1994 and the TAA 1994 [TRAA, s 13A].

(b) For disputes or challenges in relation to which there was an election into the small claims jurisdiction before 29 August 2011, the TRA also had a small claims jurisdiction to determine challenges where the facts were clear and not in dispute, the tax to pay or tax effect was less than $30,000 ($15,000 before 1 April 2005), and there were no significant legal issues of precedent [TRAA, s 13B].

“Tax effect” means the value of an adjustment or amendment to an assessment calculated by applying the taxpayer’s marginal rate of tax for the relevant return period [TRAA, s 13B(2)].

The TRA consists of either a District Court Judge or a barrister or solicitor of the High Court of not less than seven years’ practice. The TRA is appointed by the Governor-General on the recommendation of the Minister of Justice for a term of up to seven years, and may be reappointed. A TRA can be suspended or removed.
Disputes and Challenges Procedures

from office for taking on a job for reward outside the duties of the office or for disability, bankruptcy, neglect of duty, or misconduct, and may also resign. When the term of office expires, or on resignation, the TRA continues in office until all outstanding matters are finalised [TRAA, ss 5, 6].

The TRA has all the powers, duties, functions, and discretion of the CIR in making the determination [TRAA, s 16]. The TRA may receive as evidence any statement, document, information, or matter that may assist it to deal effectually with the proceedings, whether or not it would be otherwise admissible in a Court of law [TRAA, s 17(1)].

If the CIR issues a disclosure notice to a disputant and the disputant challenges the disputable decision, the CIR and the disputant can raise in the challenge only the issues and the propositions of law, disclosed in the CIR’s and the disputant’s statements of position [TRAA, s 17(2A)]. The TRA may allow either party, on application, to raise in the challenge new propositions of law, and new issues, if satisfied that the applicant could not, with due diligence, have discerned those propositions of law or issues at the time of delivery of the applicant’s statement of position, and the TRA considers such admission is necessary to avoid manifest injustice [TRAA, s 17(2B)].

The hearing of an objection or challenge before the TRA is not to be open to the public [TRAA, s 16(4)]. Where an objection is withdrawn, whether by reason of settlement prior to hearing or merely because the taxpayer abandons it, that is the end of the matter so far as the TRA is concerned: TRA Case H7 (1986) 8 NZTC 153. Costs may be awarded to or against the objector or the CIR [TRAA, s 22]. If the objector or the disputant dies, the proceedings before the TRA continue with the legal representative substituting for the deceased [TRAA, s 23].

From 1 April 2008, the TRA may award costs, up to the amount of the filing fee, to the objector or disputant [TRAA, s 22B].

In Holdaway v Commissioner of Inland Revenue (1986) 8 NZTC 5,073 (HC), the High Court stated that there is good reason in tax cases for adopting an approach which is somewhat different from that in ordinary civil litigation when considering awards of costs. A right of objection to an income tax assessment was important and care must be exercised to ensure that the likelihood of an award of costs did not unduly inhibit the exercise of that right.

The TRA has authority in limited circumstances to recover its costs in objection or challenge proceedings, but does not have authority to recover costs for the CIR: TRA Case R26 (1994) 16 NZTC 6,147, (1994) 18 TRNZ 958.

The TRA does not have the power to conduct a judicial review of the process by which the CIR arrives at an assessment. Such a review can only be conducted by the High Court: TRA Case S59 (1996) 17 NZTC 7,378.

260.155 TRA directions hearing [TRA Regulations 1998, regs 26, 27, 28, 29, 30, 32, 34]

Before the TRA hears a case, it must hold a directions hearing. At this hearing it may do all or any of the following things:

(a) Obtain estimates of the time for the duration of the challenge;

(b) Make any appropriate direction concerning the way in which the evidence is to be given at the challenge;

(c) Make any appropriate direction concerning a fact, evidence, issue or proposition of law that is not included in the CIR’s or the disputant’s statement of position, but that the CIR or disputant wishes to raise in the challenge;

(d) Define the issues to be determined;

(e) Make any appropriate direction arising from any interlocutory applications;

(f) Make any appropriate direction appearing to promote the resolution of the proceedings in a just, expeditious and economical way;
(g) Fix a hearing date, if appropriate [TRA Regulations 1998, reg 29].
An authorised Inland Revenue officer and the disputant must both attend the directions hearing. The TRA may permit a disputant (or their representative) to attend the directions hearing by way of a telephone conference linkup. If the disputant does not attend this hearing, the challenge is deemed to be withdrawn unless the TRA gives leave to continue with it [TRA Regulations 1998, regs 30, 32].

After the directions hearing, either the disputant or the CIR can apply to the TRA to appoint a time for the challenge to be heard [TRA Regulations 1998, reg 34]. These procedures enable both the CIR and the disputant to perhaps settle differences before a hearing.

260.160 Disputant should be present at TRA hearing
The TRA may dispense with accepted rules of evidence to deal effectively with the case in hand. However, the TRA is a legal forum and rules of evidence and procedure must generally be adhered to by advocates and professional advisers. The TRA may dismiss a challenge made by a taxpayer where there has been a failure by that taxpayer to attend any hearing of the challenge.

The disputant and the CIR are entitled to appear personally or be represented by counsel, solicitor, or an agent. TRA Case D10 (1979) 4 NZTC 60,480, (1979) 3 TRNZ 252 demonstrates the desirability of the objector being present at the hearing of the case, where his or her credibility can be vital to the outcome. The objector, who was a builder, bought land in 1970 for the purpose of erecting buildings. The agreement for sale and purchase and the certificate of title were in the objector’s sole name. In 1974 he transferred one-half share in the land to his wife. The CIR treated the transfer of the one-half share as a sale and assessed the objector on the profit. The objector claimed that he had held the half-share in trust for his wife from the date of purchase in 1970. The TRA confirmed the CIR’s assessment on the ground that there was no evidence to support the claim that the objector had made an oral declaration in favour of his wife at the time of the purchase. The objector chose not to be present at the hearing or be represented. The TRA pointed out that the evidence on oath of the objector was vital to the success of the case as a question of credibility was involved.

In TRA Case E86 (1982) 5 NZTC 59,499, the need for the objector and his professional advisers to be present at the case stated hearing was emphasised. The objectors did not appear in person before the case stated hearing and the TRA confirmed the assessments. The taxpayer requested a rehearing of the case which was granted by the TRA.

In TRA Case L49 (1989) 11 NZTC 1,291, (1989) 13 TRNZ 49, the CIR’s assessments were held correct in the absence of the taxpayer at hearing, the taxpayer having failed to prove on the balance of probabilities that the assessments were wrong or by how much they were wrong.

In TRA Case L50 (1989) 11 NZTC 1,292, (1989) 13 TRNZ 75, an adjournment was granted where the taxpayer was overseas, although it was acknowledged that fact is not per se a reason for adjournment.

260.165 Burden of proof
In all cases, except where the assessment is for penal tax, the onus of proving that the assessment is wrong rests with the taxpayer. Once the CIR has issued the notice of assessment or determination it is binding in law unless the challenge process has been followed. Taxpayers must show not only that the CIR’s assessment is wrong but also by how much it is wrong: TRA Case H12 (1986) 8 NZTC 168, (1986) 9 TRNZ 292.

In TRA Case L50 (1989) 11 NZTC 1,292, (1989) 13 TRNZ 75, Bathgate J commented on the course of the proceedings and stressed that, in the majority of case stated proceedings, the burden of proof is on the objector (disputant). It is for the objector to prove sufficient facts to establish at least the basic and relevant evidence of the case and the evidence the objector has to give in order to succeed. The case stated request normally sets out the issue to be determined and events leading up to it. It is not proof or evidence of the relevant facts for determination of that issue. It is for the objector to prove, normally by oral evidence given on oath at the hearing, the essential facts for a determination to be made, otherwise there is a substantial risk that a determination is made on the ground that the objector has not discharged the burden of proof.
If the onus cannot be satisfied by proof of an exact amount, the taxpayer must then show on the balance of probabilities that his or her estimate is preferable to that of the CIR: *Dunnenberger v Commissioner of Inland Revenue* (1982) 5 NZTC 61,299, (1982) 5 TRNZ 835 (HC). See also *Yew v Commissioner of Inland Revenue* (1984) 6 NZTC 61,710 (CA).

In *TRA Case F129* (1984) 6 NZTC 60,191, (1984) 8 TRNZ 83, it was held that on the basis of the evidence penal tax was not chargeable to the objector. The objector did not file returns for the 1978 to 1980 income years. The CIR investigated the affairs and issued assessments for the three years. There was no objection to the assessment. The CIR then assessed penal tax and the taxpayer objected. The taxpayer submitted that there was no intention or attempt to evade payment of tax, but merely a failure to maintain records of expenditure.

In *TRA Case K8* (1988) 10 NZTC 149, a company’s claim for deduction of legal costs was denied. The legal advice was to the benefit of the company and its sole shareholder and director. No basis of apportionment of the benefit of expenditure was shown and it failed to show by how much the CIR’s assessment was incorrect.

In *TRA Case M119* (1990) 12 NZTC 2,760, (1990) 15 TRNZ 273, in the absence of records regarding a shareholder’s current account the assessments were not shown to be wrong or by how much they were wrong and the assessments of deemed dividends were upheld.

In *TRA Case G4* (1985) 7 NZTC 1,009, a taxpayer claimed a deduction for expenses but did not appear at the hearing to give evidence in support of the claim. It was held that the burden of proof is placed on the taxpayer and, as insufficient evidence had been received to discharge this burden, the assessments were confirmed. A similar result was realised for the same reason in *TRA Case J21* (1987) 9 NZTC 1,120 (1986) 10 TRNZ 382.

**260.170 Enlarging the grounds of an assessment**

The grounds of an assessment impose a limitation on the CIR’s future action and are, therefore, crucially important. In certain circumstances the CIR can change the grounds of assessment but in general terms they impose the same limits on the CIR that the grounds of objection or challenge later impose on the taxpayer.

It is in the interests of the taxpayer to have the grounds very narrowly stated. There is no statutory requirement that the taxpayer be informed of the grounds of the assessment. However, if the CIR does not disclose the grounds it is difficult for the taxpayer to form a challenge or objection. There is a general argument based on equity that the taxpayer should be informed of the grounds. This receives further support from the related notion that the CIR must have a basis for an assessment. An assessment cannot be produced out of thin air: *Tierney v Commissioner of Inland Revenue* (1982) 5 NZTC 61,112, (1982) 5 TRNZ 271 (HC), *TRA Case T49* (1998) 18 NZTC 8,335 and *TRA Case T22* (1997) 18 NZTC 8,124.

The CIR may find it necessary to change the grounds of an assessment where the original grounds were too narrow or where the original assessment was on the wrong basis. This is generally avoided by assessing on the broadest grounds possible.

There are three principles governing the alteration of the grounds of assessment:

(a) The CIR is the statutory agent of the Crown: *Cates v Commissioner of Inland Revenue* (1982) 5 TRNZ 603 (CA).

(b) Tax is imposed by legislation and the CIR merely acts to quantify the amount due: *Rickett & Colman New Zealand Ltd v Taxation Board of Review* [1966] NZLR 1032 (CA). The quantification may require the CIR to exercise judgment: *Lemming Holdings Ltd v Commissioner of Inland Revenue* [1984] 2 NZLR 214, (1983) 6 NZTC 61,576 (HC). However, the CIR cannot choose to forego enforcing the Act merely because the initial assessment was wrong.

(c) The CIR has a duty to act equitably, which means that the taxpayer must have the chance to object or challenge the entire assessment. Having objected, the taxpayer must have the opportunity to argue every point of the objection before the TRA or High Court.

The practical effects of the three principles are that the CIR can enlarge or change the grounds of the assessment, and the taxpayer must be given the chance to object to or challenge any such changes or enlargements, and be able to argue the case before the TRA or High Court.
Disputes and Challenges Procedures

260.175 CIR’s approach to disputes and challenges

There are two mechanisms by which the CIR can alter an assessment: either by reassessment or by altered assessment.

Where the CIR is merely amplifying existing grounds or advancing new contentions to support the provisions or principles already relied on, it is neither an amended assessment nor a reassessment. An altered assessment arises where either:

(a) A challenge or objection right is still “live”; or
(b) A “fresh” or “increased” income tax liability has arisen.

A detailed explanation of the disputes resolution and challenges procedures and of how Inland Revenue administers these procedures is set out in TIB vol 8:3 (August 1996). The CIR has incorporated into the disputes procedures new administrative (non-legislative) procedures. The conference process is intended to help ensure that issues are resolved during the dispute process. A conference may occur at any stage during the dispute. The Adjudication Unit is a separate unit within Inland Revenue whose function is to independently review disputes. According to the TIB, adjudication “brings an impartial fresh perspective to the dispute”.

The CIR has no legal obligation to undertake administrative procedures that are internal processes of Inland Revenue and are not provided for in legislation: Commissioner of Inland Revenue v ANZ National Bank Ltd (2007) 23 NZTC 21,167 (CA).

260.180 Conferences

The following is Inland Revenue’s explanation in TIB vol 8:3 (August 1996) of how conferences will be used in relation to disputes resolution.

(1) Purpose

The purpose of a conference is to:

(a) Identify and clarify the facts or issues in dispute;
(b) Facilitate resolution of any disputed facts;
(c) Facilitate resolution of any disputed issues; and
(d) State the facts and define the issues in a clear and concise manner for consideration by the Adjudication Unit if they cannot be resolved.

The conference phase is an administrative practice of the CIR. It is not mandatory to have a conference. It is the CIR’s responsibility to ensure that the disputes process moves to the conference stage as required.

(2) Conduct of a conference

Conferences will be kept as flexible as possible, consistent with the taxpayer’s wishes and other factors such as the scope of the audit. Conferences may range from a phone call to several meetings, both before and after the disclosure stage. For complex cases, discussions or conferences are likely to be more formal. If necessary the conference may adhere to a set agenda with one or more face-to-face meetings. The meetings may involve not only the taxpayer and the Inland Revenue officers dealing with the matter, but also lawyers and other appropriate Inland Revenue officers, accountants and lawyers representing the taxpayer, and, if necessary, other experts advising either party. The experts will be people such as valuers, academics, engineers, or bankers, who can provide specialist advice.

(3) Legal and other advisers attending a conference

If a dispute is not settled during the audit or notice of proposed adjustment (NOPA) stage, both the CIR and the taxpayer may want to obtain further expert legal or technical advice. The CIR accepts that in these circumstances it is appropriate for a certain amount of “back tracking” to take place. Some items that have already been discussed between the parties may need to be revisited by the newly-introduced advisers. This approach is consistent with the overall objective of the new procedures, which is to ensure a correct assessment. If this were not the case, it would put pressure on the parties in many disputes to involve expert advisers at an earlier stage than is actually required.
It is not possible to revisit items that have previously been agreed in writing or have not been rejected within the applicable response period.

(4)  Conference not held or abridged

The CIR considers the conference phase to be a vital part of the disputes resolution process. Only in rare circumstances will the CIR not hold a conference, or decide to end or abridge a conference that is already in progress. The CIR will not prolong the conference phase, even if agreement has not been reached.

The conference may be abridged or dispensed with if any of the following apply:

(a)  The CIR is satisfied that the taxpayer or the taxpayer’s agent is acting in a frivolous or vexatious manner, such as when the taxpayer or agent is setting unreasonable demands as to the time and place or terms of such meeting or refusing to conduct themselves reasonably at any meeting;

(b)  Revenue losses may result from delaying tactics on the part of the taxpayer; or

(c)  The taxpayer or agent and the CIR agree to disagree.

Any decision to dispense with or abridge the conference process will be made by an appropriate officer. The decision will be communicated in writing to the taxpayer or agent within five working days of when it is made. A decision to dispense with or abridge the conference process may be changed at the discretion of the reporting officer.

If issues remain unresolved after a conference, the CIR will invoke the disclosure procedures. After the disclosure phase, a further conference may be held if it is likely to help resolve the dispute.

260.185  Adjudication

The following is Inland Revenue’s explanation in TIB vol 8:3 (August 1996) of how Inland Revenue’s Adjudication Unit will be used in relation to disputes resolution.

(1)  Function of the Adjudication Unit

If agreement has not been reached on all issues at the end of the conference/disclosure stage, the case will generally be sent to the Adjudication Unit for consideration, regardless of the issue or amount of tax involved. The Adjudicator is an impartial officer within Inland Revenue, independent of the audit functions. The Adjudicator is required to take a fresh look at the application of the law to the facts of the case.

(2)  Documents to be sent to the Adjudication Unit

On completion of the pre-adjudication disputes resolution process, the following documents will be sent to the Adjudication Unit:

(a)  Notice of proposed adjustment.
(b)  Response notice.
(c)  Rejection of the CIR’s response notice (if applicable).
(d)  Notes of conferences.
(e)  The taxpayer’s statement of position.
(f)  The CIR’s statement of position.
(g)  Any relevant documentary evidence.

A cover sheet will be attached giving details of the taxpayer’s (or taxpayer’s agent’s) and investigator’s names and addresses and the documents attached. A copy of the cover sheet will be sent to the taxpayer or agent together with a letter asking if they would like any other material already disclosed to be sent to the Adjudication Unit. Taxpayers can request copies of any documents they do not already have, such as notes of conferences. Taxpayers will be given 10 working days to respond, after which the file will be sent to the Adjudication Unit.
(3) **Limited fact-finding**

The Adjudicator may need to contact a party involved in the dispute, in order to clarify a point. However, this should be extremely rare.

If the Adjudicator contacts either party, the contact will be recorded in writing. The reason for the contact will be noted, and the other party will be notified as follows:

(a) If contact is to be made with the investigator or other officer, an internal memo will be written to the investigator outlining the reason for the contact. The taxpayer or agent will receive a copy of the memo.

(b) If contact is to be made with the taxpayer or agent, a letter will be written to the taxpayer or agent outlining the reason for the contact. The investigator or other officer will receive a copy of the letter.

If there is a written response from either party, the Adjudicator will forward a copy to the other party. If the Adjudicator requests a meeting, the other party to the dispute will have an opportunity to attend that meeting. The process adopted by Adjudication Unit for dealing with communications with the parties to a dispute are set out in TIB vol 15:12 (December 2003) at 62-63.

(4) **Time-frames**

The Adjudication Unit will attempt to determine the outcome of a case within four to six weeks, subject to workloads and the complexity of cases. Complex cases may take longer than four to six weeks to complete. The time-frame within which decisions are anticipated to be made will be periodically reviewed.

(5) **What happens if a key argument is missed**

On rare occasions the Adjudicator may believe that the assessment will be materially incorrect if he or she accepts either line of argument, because some important legal issue has been missed by both parties or has not been pursued. In these circumstances, the Adjudicator will refer the case back to the investigator or other officer for rework. Another conference may need to be held or a new NOPA may need to be issued. The Adjudication Unit will prepare a “reference back” letter to the taxpayer or agent advising that the file has been referred back to the investigator or other officer. This letter will state the reasons why the file has been referred back.

For cases referred back for rework, the procedure to refer the case back to Adjudication will start at the disclosure notice phase, as the earlier statement of position may no longer be valid for the issues referred back. In some instances the taxpayer and the CIR may agree to amend their statements of position, having regard to the reasons for the case being referred back to the investigator.

These procedures are intended to meet the objective of issuing correct assessments first time.

(6) **Adjudicator’s decision**

In all cases a copy of the Adjudicator’s decision will be sent to the taxpayer or the taxpayer’s agent and the Inland Revenue investigator or other officer involved with the case.

If the Adjudicator determines all the issues in favour of the taxpayer:

(a) If the CIR issued the NOPA, the query will be at an end. If any issues were agreed to before the case was referred to adjudication and an assessment is required, the Adjudication Unit will issue the assessment.

(b) If the taxpayer issued the NOPA, any assessment action will be undertaken by the Adjudication Unit, taking into account any issues agreed on before the case was referred to adjudication.

If the Adjudicator agrees with the adjustments proposed by the CIR, the Adjudication Unit will issue an assessment on that basis. If the Adjudicator agrees with the CIR’s position not to accept a taxpayer’s proposed adjustment, he or she will issue a disputable decision. Any challenge to that assessment or disputable decision [see 260.70], must be filed in the appropriate hearing authority within two months of the date of issue of the assessment or disputable decision.
If the Adjudicator agrees in part with the taxpayer and in part with the CIR, the Adjudication Unit will issue any assessment required to be made. When the Adjudicator determines an issue or adjustment in favour of the taxpayer, the investigator has no ability to challenge that decision.

The High Court in Marshall v Commissioner of Inland Revenue (2008) 23 NZTC 21,876 (HC) held that adjudication reports are assessments and can be accepted as evidence (even if they are photocopies). The manager of the Adjudication Unit has delegated power under s 7 of the TAA to make default or amended assessments of income tax and GST.

(7) Performance of Adjudication Unit

The following table summarises the outcomes of adjudications completed by the Adjudications Unit of Inland Revenue from 1997 to 2005. The figures show that only 19 per cent of adjudications were decided in favour of the taxpayer.

260.190 Disputes resolution process

(1) Disputes resolution process commenced by the CIR

Standard practice statement SPS 11/05: Disputes resolution process commenced by the CIR [see TIB vol 23:9 (November 2011) at 16–49] outlines the CIR’s rights and responsibilities with a taxpayer in respect of an adjustment to an assessment when the CIR commences the disputes resolution process. It applies from 13 October 2011.

The following table summarises the key actions and administrative time-frames when the disputes resolution process is commenced by the CIR.

<table>
<thead>
<tr>
<th>Key actions</th>
<th>Indicative time-frames</th>
</tr>
</thead>
<tbody>
<tr>
<td>The CIR’s NOPA</td>
<td></td>
</tr>
<tr>
<td>The CIR will advise the taxpayer that a NOPA will be issued.</td>
<td>Usually within five working days before the date that the CIR issues a NOPA, but this may happen earlier.</td>
</tr>
<tr>
<td>The CIR will confirm whether the taxpayer has received the CIR’s NOPA (either by telephone or in writing).</td>
<td>Within 10 working days from the date that the CIR’s NOPA is issued, where practicable.</td>
</tr>
</tbody>
</table>
Key actions

Taxpayer’s NOR

The taxpayer issues a NOR in response to the CIR’s NOPA within the applicable response period.

The CIR will confirm whether the taxpayer will issue a NOR.

The CIR will forward the taxpayer’s NOR to the responsible officer.

The CIR will acknowledge the receipt of the taxpayer’s NOR.

The CIR will advise that the taxpayer’s NOR is deficient, but the two-month response period has not expired.

The CIR will consider the application of s 89K, where a taxpayer’s NOR has been issued outside the applicable response period.

The taxpayer is deemed to accept the CIR’s NOPA, because they failed to issue a NOR within the applicable response period and s 89K does not apply in the case of a late NOR.

The CIR will advise the taxpayer in writing that they are deemed to accept the CIR’s NOPA.

The CIR will advise the taxpayer whether their NOR is being considered, has been accepted or rejected in full or part.

If the taxpayer’s NOR has been accepted in full, the dispute finishes and Inland Revenue will take appropriate actions (for example, issue an amended assessment).

Conference phase

The CIR will write to the taxpayer to initiate the conference phase and offer a facilitated conference.

The taxpayer will advise Inland Revenue whether they will attend the conference meeting, and whether they will accept the conference facilitation offer.

When a taxpayer agrees to attend a conference meeting, Inland Revenue will contact the taxpayer to establish a time-frame, and agree on how the meeting will be conducted.

Indicative time-frames

Within two months from the date that the CIR’s NOPA is issued, unless any of the “exceptional circumstances” under s 89K applies.

Usually two weeks before the response period for the CIR’s NOPA expires.

Usually within five working days after the taxpayer’s NOR is received.

Usually within 10 working days after the taxpayer’s NOR is received.

Inland Revenue officers will advise the taxpayer or their agent immediately after they become aware of the deficiency.

The CIR will advise the taxpayer of the outcome within one month of receipt of the disputant’s “late” notice. If the application is rejected, a refusal notice will be issued.

At the end of the two-month period starting on the date of issue of the CIR’s NOPA.

Usually two weeks after the response period to the CIR’s NOPA has expired.

Usually within one month after the taxpayer’s NOR is received.

Usually within one month after the advice of acceptance of the NOR is issued.

The CIR’s offer of a facilitated conference will be made in writing within one month from the date of issue of the taxpayer’s NOR.

The conference letter marks the start of the conference phase.

Usually within two weeks of receipt of the conference facilitation letter. If the taxpayer does not respond within this time-frame, the Inland Revenue officers involved in the dispute will contact the taxpayer about the letter.

Usually within two weeks following the taxpayer’s agreement to a conference.
### Disputes and Challenges Procedures

**Key actions**

Conference meeting(s) and further information exchange between Inland Revenue and the taxpayer.

**Indicative time-frames**

The suggested average time-frame of the conference phase is three months, subject to the facts and complexity of the dispute.

**Opt out**

The taxpayer may request to opt out of the disputes resolution process.

The suggested average time-frame of the conference phase is three months, subject to the facts and complexity of the dispute.

**Disclosure notice and the CIR’s SOP**

The CIR will advise the taxpayer that a disclosure notice and the CIR’s SOP will be issued.

Usually within two weeks before the date that the CIR’s disclosure notice and SOP are issued.

**Taxpayer’s SOP**

The taxpayer must issue a SOP within the response period for the disclosure notice.

Within two months after the date that the disclosure notice is issued, unless any of the “exceptional circumstances” under s 89K apply.

**Addendum to the CIR’s SOP**

The CIR can provide additional information via an addendum to the CIR’s SOP under s 89M of the response period for the taxpayer’s SOP.

Within two months after the taxpayer’s SOP is issued.

---

### Key actions

- Conference meeting(s) and further information exchange between Inland Revenue and the taxpayer.

### Indicative time-frames

- The suggested average time-frame of the conference phase is three months, subject to the facts and complexity of the dispute.

### Opt out

- The taxpayer may request to opt out of the disputes resolution process.

### Disclosure notice and the CIR’s SOP

- The CIR will advise the taxpayer that a disclosure notice and the CIR’s SOP will be issued.

### Taxpayer’s SOP

- The taxpayer must issue a SOP within the response period for the disclosure notice.

### Addendum to the CIR’s SOP

- The CIR can provide additional information via an addendum to the CIR’s SOP under s 89M of the response period for the taxpayer’s SOP.
### Disputes and Challenges Procedures

**Key actions**  
The CIR will consider the taxpayer’s request to include additional information in their SOP under s 89M(13).  

**Indicative time-frames**  
Usually within one month after the date that the CIR’s addendum is issued.

#### Adjudication

The CIR will prepare a cover sheet and issue a letter (including a copy of the cover sheet) to the taxpayer to seek their concurrence of the materials to be sent to the adjudicator.

**Key actions**  
The taxpayer must respond to the CIR’s letter.

**Indicative time-frames**  
Within 10 working days after the date that the CIR’s letter is issued.

The CIR will forward materials relevant to the dispute to the Adjudication Unit.

**Key actions**  
The taxpayer must respond to the CIR’s letter.

**Indicative time-frames**  
Usually after the taxpayer has concurred on the materials to be sent to the Adjudication Unit or after 10 working days allowed for the taxpayer’s response to have elapsed if no response is received.

#### Adjudication of the disputes case.

**Key actions**  
The CIR will forward materials relevant to the dispute to the Adjudication Unit.

**Indicative time-frames**  
Usually within three months after the date that the Adjudication Unit receives the dispute files depending on the number of disputes that are before the Adjudication Unit, any allocation delays and the technical, legal and factual complexity of those disputes.

(2) **Disputes resolution process commenced by a taxpayer**

Standard practice statement SPS 11/06: Disputes resolution process commenced by a taxpayer [see TIB vol 23:9 (November 2011) at 50–78] outlines the taxpayer’s rights and responsibilities in respect of an assessment or other disputable decision when a taxpayer commences the disputes resolution process. It applies from 13 October 2011.

The following table summarises the key actions and administrative time-frames when the disputes resolution process is commenced by the CIR.

<table>
<thead>
<tr>
<th><strong>Key actions</strong></th>
<th><strong>Indicative time-frames</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>The CIR’s NOPA</td>
<td>A taxpayer’s response period for issuing a NOPA in respect of an assessment or other disputable decision.</td>
</tr>
<tr>
<td>The CIR forwards and assigns the taxpayer’s NOPA to the responsible officer.</td>
<td>Usually within five working days after the taxpayer’s NOPA is received.</td>
</tr>
<tr>
<td>The CIR acknowledges the receipt of the taxpayer’s NOPA (either by telephone or in writing).</td>
<td>Usually within 10 working days after the taxpayer’s NOPA is received.</td>
</tr>
<tr>
<td>The CIR advises that the taxpayer’s NOPA is deficient, but the applicable response period has not expired.</td>
<td>Immediately after the Inland Revenue officer becomes aware of the deficiency.</td>
</tr>
<tr>
<td>The CIR considers the application of s 89K, where a taxpayer’s NOPA has been issued outside the applicable response period.</td>
<td>The CIR will advise the taxpayer of the outcome within one month of receipt of the disputant’s “late” notice. If the application is rejected, a refusal notice will be issued.</td>
</tr>
</tbody>
</table>

**The CIR’s NOR**

The CIR advises the taxpayer (either by telephone or in writing) whether the CIR intends to issue a NOR.

**Key actions**  
The CIR advises the taxpayer (either by telephone or in writing) whether the CIR intends to issue a NOR.

**Indicative time-frames**  
Usually within 10 working days before the response period for the taxpayer to issue a NOPA expires.
Disputes and Challenges Procedures

**Key actions**

The CIR has issued and the taxpayer has received a NOR.

The taxpayer’s written rejection of the CIR’s NOR

The CIR confirms whether the taxpayer will reject the CIR’s NOR.

The taxpayer rejects the CIR’s NOR in writing.

Inland Revenue forwards the taxpayer’s rejection of the CIR’s NOR to the responsible officer.

The CIR acknowledges receipt of the taxpayer’s rejection of the CIR’s NOR.

The taxpayer is deemed to accept the CIR’s NOR, because they have failed to reject it within the applicable response period and none of the reasons in s 89K apply.

The CIR will advise the taxpayer in writing that they are deemed to accept the CIR’s NOR.

Conference phase

The CIR will write to the taxpayer to initiate the conference phase and offer a facilitated conference.

The taxpayer will advise Inland Revenue whether they will attend the conference meeting, and whether they will accept the conference facilitation offer.

When a taxpayer agrees to attend a conference meeting, Inland Revenue will contact the taxpayer to establish a time-frame, and agree on how the meeting will be conducted.

Conference meeting(s) and further information exchange between Inland Revenue and the taxpayer.

Opt out

The taxpayer may request to opt out of the disputes resolution process.

An Inland Revenue officer will advise the taxpayer whether the request to opt out has been agreed to.

Disclosure notice

The CIR advises the taxpayer that a disclosure notice will be issued.

**Indicative time-frames**

Within two months starting on the date that the taxpayer’s NOPA is issued.

Usually two weeks before the response period for the CIR’s NOR expires.

Within two months after the date that the CIR’s NOR is issued.

Usually within five working days after receiving the taxpayer’s rejection.

Usually within 10 working days after receiving the taxpayer’s rejection.

At the end of the two-month period starting on the date of issue of the CIR’s NOR.

Within two weeks after the response period for the CIR’s NOR has ended.

The CIR’s offer of a facilitated conference will be made in writing within one month after the CIR receives the taxpayer’s rejection of the CIR’s NOR.

The conference letter marks the start of the conference phase.

Usually within two weeks of receipt of the conference facilitation letter. If the taxpayer does not respond within this time-frame, the Inland Revenue officers involved in the dispute will contact the taxpayer about the letter.

Usually within two weeks following the taxpayer’s agreement to a conference.

The suggested average time-frame of the conference phase is three months, subject to the facts and complexity of the dispute.

Within two weeks from the end of the conference phase.

Usually within two weeks from the date of the taxpayer’s request to opt out.

Usually within two weeks before the date that the disclosure notice is issued.

The taxpayer can file challenge proceedings.

**Indicative time-frames**
Within two months of the adjudication decision.
Chapter 270

Dividends

270.10 What is a dividend? [ss CD 4, CD 5]

A dividend is a transfer of value from a company to a shareholder. A transfer of value occurs where the company provides something of value to a person and nothing, or something having a lower market value, is provided to the company in return. It includes a situation where the company releases a person from an obligation to repay a debt to the company either by way of agreement or by operation of law.

It does not include the situation where the only value provided by the company is the provision of services. However, this exclusion does not apply where the company is a close company and the service is the benefit of expenditure by the company.

Even where a transfer of value has occurred, it will be a dividend only if the factor giving rise to the transaction is a shareholding in the company [see 270.15].

Special rules apply where the company is a:
(a) Qualifying company [see 270.70];
(b) Producer board [see 270.25, 270.35]; or
(c) Co-operative company [see 270.25, 270.35].

Editorial Note
At the time of publication of the Staples Tax Guide 2012, 72nd edition, the Taxation (International Investment and Remedial Matters) Bill had not been passed into law. It is anticipated that the content of this chapter will be changed following the passing of the Bill. For an overview of the changes contained in the Bill, please refer to the “Future Developments” section of this book. When enacted, these changes will also be available in the Staples Tax Guide online at www.brookersonline.co.nz. The changes will also be included in the Staples Tax Guide 2012 - Mid-Year Supplement.
When is a dividend paid?

In *TRA Case Z4* (2009) 24 NZTC 14,051, Judge Barber found that a dividend is “paid” when an unconditional dividend is declared. That is because, when an unconditional dividend is declared, it is automatically credited to the shareholder’s current account. The crediting of the current account constitutes payment of the dividend. The CIR appealed the case to the High Court where Clifford J confirmed the decision of the TRA: *Commissioner of Inland Revenue v Albany Food Warehouse Ltd* (2009) 24 NZTC 23,532 (HC).

**Shareholder capacity test** [s CD 6]

The person’s capacity as a shareholder has to be considered when deciding whether any payment or distribution from, or a transaction with, the company is a dividend.

In order for the shareholder capacity test to be met, the person receiving the benefit must:

(a) Hold shares in the company; or
(b) Be associated with a person who holds shares in the company; or

In addition, the transfer of value must be made by the company because of the fact of that shareholding.

The transfer is likely to be a dividend if the terms differ from those that the company would make with someone who was not a shareholder. However, other factors might also indicate that the amount is, or is not, received in a shareholder capacity.

**Example 1:**

Where a shareholder-employee receives a salary for work performed, the benefit is obtained in the person’s capacity as an employee, not in his or her capacity as a shareholder. It is the work that has been done that has caused the payment to be made, not the fact that the person owns shares in the company. The salary is not a dividend.

**Example 2:**

The provision of a motor vehicle to a shareholder who is not an employee would be derived in the capacity of a shareholder and would be a dividend. If the shareholder was also an employee, it would not be a dividend but would be subject to FBT imposed on the employing company.

**Example 3:**

Where a corporate shareholder receives from a company a trading discount which is available to all those who trade with the company, the benefit does not pass to the shareholder by virtue of the shareholding, and is, therefore, not derived as a dividend.

**Bonus issues** [ss CD 7, CD 8]

A bonus issue in lieu of a dividend is deemed to be a dividend. The amount of the dividend is the amount offered as an alternative to the bonus issue, less resident withholding tax.

Where a unit trust that is a foreign company makes a bonus issue under an arrangement whereby the bonus issue is made instead of money or property vesting absolutely in the unit holder, the bonus issue is a taxable bonus issue and a dividend arises for the unit holder [see 270.65].

A bonus issue that does not fall within either of the above two categories is a dividend only if, and to the extent that, the company chooses to treat it as a taxable bonus issue, and

(a) The bonus issue shares are issued fully paid from reserves of the company; or
(b) If it was a dividend, it would not be exempt income under s CW 10 (dividend within New Zealand wholly-owned group) or s CW 11 (dividend of conduit tax relief holding company).

A taxable bonus issue is a dividend for tax purposes. The company makes this choice by:

(a) Resolving when it makes the bonus issue that it be a dividend; and
(b) Resolving when it makes the bonus issue the amount that is to be treated as a dividend; and
(c) Giving notice to the CIR under s 63 of the TAA of the election and the amount.
Dividends

270.25 Shareholder-employees and directors [s CD 20]
A non-cash benefit provided by a company to a shareholder-employee is a dividend if the benefit is an “unclassified benefit” and the company chooses (under s CX 17(2)) to treat the benefit as a dividend.

An “unclassified benefit” is a benefit that would otherwise be a fringe benefit but is not any of the following:
(a) Private use of a motor vehicle;
(b) Subsidised transport;
(c) Employment related loan;
(d) Certain services provided to members of parliament;
(e) Contributions to a superannuation scheme;
(f) Contributions to a sickness, accident or death benefit fund;
(g) Contributions to a funeral trust;
(h) Contributions to life or health insurance.

An example would be the provision of free or heavily discounted goods.

A non-cash benefit provided to a “non-executive director” is a dividend if the director is also a shareholder in the company. A non-executive director is a person whose only services to the company as an employee are the formal occupation and role of director and compliance with statutory obligations.

In all other cases, a non-cash benefit provided by a company to a shareholder-employee will not be a dividend if it is a fringe benefit.

270.35 Items not a dividend — returns of capital [ss CD 22, CD 24, CD 25, CD 26, CD 27, CD 29, CD 32, CD 33, CD 34, CD 36]

(1) Amount distributed upon an off-market cancellation [s CD 22]
Where a company makes an off-market cancellation of shares, other than on liquidation of the company, special rules apply. Any amount paid to a shareholder will not be a dividend to the extent to which it does not exceed the “available subscribed capital” (ASC) per share, provided that all of the following criteria are satisfied:
(a) One of the brightline tests is satisfied (see below);
(b) The company is not an unlisted unit trust or group investment fund that has chosen the slice rule for the share; and
(c) No part of the payment is in lieu of the payment of a dividend.

The brightline tests are:
(a) The cancellation is part of a pro rata cancellation that results in a 15 per cent capital reduction;
(b) The cancellation is part of a pro rata cancellation that results in a 10 per cent capital reduction and the CIR has given notice that, in the CIR’s view, no part of the cancellation is in lieu of the payment of a dividend;
(c) The cancellation is not part of a pro rata cancellation and the shareholder suffers a 15 per cent interest reduction;
(d) The cancellation is not part of a pro rata cancellation and the company is a unit trust or group investment fund that is not quoted on the official list of a recognised exchange; or
(e) The share is a non-participating redeemable share.

If there is any transfer of value from the shareholder to the company on the cancellation of a share of the shareholder’s rights, the market value of that transfer is deemed to be zero [s CD 5].

Where an amount is derived by a person from a cancellation of shares and that amount is also income of the person under another subpart of the Act, that other income is reduced by the amount of the dividend arising
from the cancellation of the shares (net of any ICA credit). This reduction does not occur where the dividend derived from share cancellation is exempt income of the person under ss CW 9, CW 10, or CW 11 (all of which relate to dividends derived by companies).

(2) **Amount distributed upon an on-market cancellation** [s CD 24]

An amount paid by a company in acquiring its shares in an on-market cancellation is not a dividend. However, to the extent that the amount paid exceeds the ASC per share, calculated under the ordering rule [see 270.50], it is treated as a dividend for the purposes of the following provisions:

(a) Dividend recoveries by a company [s CD 29];

(b) Meaning of the word “returns” in the definition of available subscribed capital [s CD 43(2)(c), see 270.40]; or

(c) Anti-avoidance rule [s GA 1(4)].

The excess also gives rise to a debit in the company’s imputation credit account.

Upon an on-market cancellation, a dividend does not include any amount distributed to the extent that it does not exceed the ASC per share cancelled.

If there is any transfer of value from the shareholder to the company on the cancellation of a share of the shareholder’s rights, the market value of that transfer is deemed to be zero [s CD 5].

Where an amount is derived by a person from a cancellation of shares and that amount is also income of the person under another sub-part of the act, that other income is reduced by the amount of the dividend arising from the cancellation of the shares (net of any ICA credit). This reduction does not occur where the dividend derived from share cancellation is exempt income of the person under ss CW 9, CW 10, or CW 11 (all of which relate to dividends derived by companies).

(3) **Treasury stock** [s CD 25]

The amount paid by a company for the reacquisition of any of its shares is not a dividend where both of the following criteria are met:

(a) The acquisition is deemed, under s 67A(1) of the Companies Act 1993 or under s 24 of the Co-operative Companies Act 1996, not to result in the cancellation of the share; and

(b) The acquisition is not part of a pro rata cancellation or an event which is in substance a pro rata cancellation.

Instead, where the above criteria are met, and either:

(a) The company cancels the share before the first anniversary of the acquisition;

(b) At the first anniversary, the company (not being a company that is established under New Zealand co-operative company legislation) has failed to transfer a share of the same class in an “arm’s-length transfer” (see below); or

(c) The company is established under New Zealand co-operative company legislation and cancels the share after the first anniversary.

Then:

(a) With effect from that cancellation or first anniversary (whichever comes first), the ASC of that class of share is reduced by the lesser of:

(i) The amount paid to the shareholder on the acquisition; or

(ii) The ASC per share calculated under the ordering rule as at the date of the cancellation or first anniversary. In the case of the first anniversary, the reduction is calculated as if all shares to which this rule applies were cancelled on that date; and

(b) With effect from the date of acquisition by the company, s OB 42 (debits arising to the ICA account) applies as if the acquisition were an on-market acquisition but item “ASC per share excess” of the formula in s OB 42 were equal to the excess of the amount received by the shareholder from the
acquisition over the amount of the reduction in available subscribed capital referred to in para (a) above. No imputation penalty tax is imposed which would not have arisen had this paragraph applied only with effect from the date of cancellation or the first anniversary as appropriate.

In order for the transfer of a share to be an arm’s-length transfer, at least one of following conditions must be met:

(a) The transfer is to a person not associated with the company; or
(b) The transaction that occurs on a recognised exchange, through a broker or some other agent independent of the company, and it is not preceded by any arrangement between the transferee and the company for the transfer.

(4) Amount distributed on the liquidation or emigration of the company [s CD 26]

On the liquidation of a company, or where the company migrates and is deemed under s FL 2 to have been liquidated, a dividend does not include any amount distributed for any share to the extent to which it does not exceed the aggregate of:

(a) The available subscribed capital per share cancelled under the ordering rule, and
(b) The available capital distribution amount.

(5) Intra-group property [s CD 27]

Section CD 27 contains two dividend relief provisions relating to transfers of value which arise from the making available of property for less than market value.

Under the first relief provision [s CD 27(1), (2)], where property is made available intra-group for less than market value and that transfer of value would fall within the definition of dividend because either:

(a) The company receiving the benefit is associated with a shareholder of the company providing the benefit; or
(b) The company receiving the benefit is the trustee of a trust of which a shareholder in the company providing the benefit is a beneficiary.

No dividend will arise where the following criteria are satisfied:

(a) The transfer is not a loan; and
(b) In the tax year of the company providing the benefit, the total of the transfers of value to the benefit recipient company to which this provision would apply did not exceed $10,000

Under the second relief provision [s CD 27(3), (4)], there are three companies to consider. The first is the company making the benefit available (“the first company”). The second is the company receiving the benefit (“the associated company”). The third is a company that has a voting interest in the “associated company” (“the parent company”). Under this provision, no dividend will arise where all of the following apply:

(a) The first company:
   (i) Has a voting interest in the associated company; or
   (ii) Is associated with the parent company and that parent company could have received that benefit without it being assessable income, non-resident passive income for the parent company;
(b) The associated company does not have a voting interest in the first company; and
(c) No person other than the parent company has both a voting interest (or market value interest) in the first company and a greater than 10 per cent voting interest (or market value interest) in the associated company.

The effect of this second provision is to prevent dividends from arising from downward transfers of value (downstream dividends). However, the provision does not apply where s FA 3 (Share dealing) applies.
The following examples illustrate the principle that, where a benefit passes from a company to a downstream associate, no dividend arises except where a shareholder of the company owns more than 10 per cent of the associate other than through the company.

**Example 1:**
Sub Co 2 Ltd is a wholly-owned subsidiary of Sub Co 1 Ltd, which in turn is wholly-owned by Parent Ltd. Sub Co 1 Ltd owns a 50 per cent share of Joint Venture Ltd, the other 50 per cent is owned by an unrelated person. Sub Co 1 Ltd passes a benefit to Joint Venture Ltd.

This benefit does not give rise to a dividend because the conditions in s CD 27(3) are satisfied, viz:
(a) Joint Venture Ltd being the recipient (“the associated company”) is a company;
(b) Sub Co 1 Ltd being the provider (“the first company”) has either a direct or indirect voting interest in the recipient (“the associated company”) or is associated with a company that has a voting interest in the recipient (“the parent company”);
(c) The recipient does not have a voting interest in the provider of the benefit; and
(d) No person, other than the parent company, has both an interest in the provider of the benefit and more than a 10 per cent interest in the recipient.

**Example 2:**
In the previous example a dividend does arise when Sub Co 1 Ltd passes a benefit to Joint Venture Ltd if the circumstances are such that Parent Ltd owns the other 50 per cent interest in Joint Venture Ltd. This arises because Parent Ltd holds an interest in Sub Co 1 Ltd and a direct interest of more than 10 per cent in Joint Venture Ltd.

Even though a dividend arises, it is exempt under s CW 10 because both Joint Venture Ltd and Sub Co No 1 Ltd are in the same commonly owned group. However, imputation credits are required at the benchmark rate.

Where the company providing a benefit to a corporate associate has no voting interest in the associate, but is associated with a company that has such an interest (“the parent company”), no dividend arises provided that, if the benefit had passed instead to the related party, no New Zealand tax consequences would arise.

**Example 3:**
A owns Parent Ltd which owns 100 per cent of Sub Co A Ltd and 90 per cent of Sub Co B Ltd. L holds the other 10 per cent shareholding in Sub Co B Ltd. Sub Co A Ltd and Parent Ltd are a wholly-owned group of companies. Sub Co A Ltd makes a low-interest loan to Sub Co B Ltd. Because the loan could pass from Sub Co A Ltd to Parent Ltd without triggering an assessable dividend or a FDP liability (as under s CW 10 the dividend is not assessable to Parent Ltd), no dividend arises for the loan from Sub Co A Ltd to Sub Co B Ltd.
The rationale is that, if a benefit can flow from Sub Co A Ltd to Parent Ltd without a New Zealand tax consequence (as an exempt dividend) and from Parent Ltd to Sub Co B Ltd without a tax consequence (because it is not a dividend), the benefit should be able to pass tax free directly from Sub Co A Ltd to Sub Co B Ltd.

Example 4:
Parent Ltd owns 100 per cent of Sub Co 1 Ltd, which owns 100 per cent of Sub Co 2 Ltd and 50 per cent of Joint Venture Ltd, with the remaining 50 per cent of Joint Venture Ltd being owned by an unrelated person.

A dividend does not arise when:
(a) Sub Co 2 Ltd makes a low-interest loan to Joint Venture Ltd;
(b) Parent Ltd passes a benefit to Joint Venture Ltd;
(c) Sub Co 1 Ltd makes an interest-free loan to Sub Co 2 Ltd; or
(d) Parent Ltd makes an interest-free loan to Sub Co 2 Ltd.

Example 5:
This example relates to transactions spanning across international borders. When USA Ltd owns 100 per cent of both UK Ltd and NZ Ltd, and only NZ Ltd is a resident company, the shareholders of USA Ltd have an interest in USA Ltd but (under these rules) no interest in NZ Ltd.

If USA Ltd makes an interest free loan to NZ Ltd, this does not give rise to a dividend. If UK Ltd passes a benefit to NZ Ltd this does not give rise to a dividend.
Example 6:
Parent Ltd owns 100 per cent of Sub Co X Ltd, which owns 100 per cent of Sub Co Y Ltd, which in turn owns 100 per cent of Sub Co Z Ltd.

If Sub Co Z Ltd makes an interest free loan to Sub Co X Ltd, the transaction breaches the rule where an associate (Sub Co X Ltd) holds an interest in the company providing the benefit (Sub Co Z Ltd). A dividend arises to Sub Co X Ltd to the extent of the interest foregone. The dividend is exempt to Sub Co X Ltd under s CW 10, but is subject to attaching imputation credits at the benchmark rate.

Example 7:
When Lynne owns 100 per cent of B Co Ltd and C Co Ltd and B Co Ltd disposes of property to C Co Ltd for no consideration, a dividend arises to C Co Ltd, which is exempt under s CW 10 but still subject to the imputation benchmark rules.

Example 8:
Adrian owns 100 per cent of B Ltd which owns 100 per cent of D Ltd and 80 per cent of C Ltd. Toni owns the other 20 per cent of C Ltd. When C Ltd makes an interest free loan to D Ltd, a dividend arises to D Ltd because B Ltd is a related company. If C Ltd had made an interest free loan to B Ltd, B Ltd would have received an assessable dividend equal to the interest that would have been payable on the loan had a market rate of interest been applied.
Example 9:
NZ A Ltd owns 100 per cent of UK Ltd and NZ B Ltd, but only NZ A Ltd and NZ B Ltd are New Zealand residents. If UK Ltd makes an interest free loan to NZ B Ltd for six months, it is not an attributed repatriation. NZ A Ltd is the related company, and consequently NZ B Ltd has a FDP liability as the interest shortfall is deemed a dividend.

Example 10:
UK Ltd owns 100 per cent of NZ 1 Ltd and 80 per cent of NZ 2 Ltd, but only NZ 1 Ltd and NZ 2 Ltd are New Zealand residents. Frank has a minority interest in NZ 2 Ltd.

If NZ 1 Ltd transfers property to NZ 2 Ltd for no consideration, it is a deemed dividend, because if NZ 1 Ltd had transferred the property to UK Ltd it would have given rise to a dividend which was non-resident withholding income of UK Ltd. Had NZ 2 Ltd been a wholly-owned subsidiary of UK Ltd, an exempt dividend would have arisen to NZ 2 Ltd under s CW 10.

(6) Non-taxable bonus issue [s CD 29]
A non-taxable bonus issue is not a dividend. A bonus issue is taxable only:
(a) If it is a bonus issue in lieu of dividend; or
(b) If, and to the extent to which, the company chooses that it be a taxable bonus issue.
Although a non-taxable bonus issue is not a dividend, it retains its pre-capitalisation status and is assessable as a dividend on any subsequent return to shareholders.

(7) Amounts subject to FBT [s CD 32]
A dividend does not include any amount that is subject to FBT. Therefore, benefits provided to shareholder-employees that are subject to FBT are not also assessed to the shareholder-employee as a dividend.

(8) Board and lodgings [s CD 32]
A dividend does not include any amount that is board and lodgings received in connection with employment. Such benefits are subject to PAYE deduction.

(9) Distributions by a statutory producer board on dissolution [s CD 26]
A dividend does not include any distribution made by a statutory producer board where the distribution is the return of all or part of a levy charged specifically for capital development and the distribution of that levy is made in the course of the statutory producer board’s dissolution.

(10) Distributions by a statutory producer board [s CD 33]
A dividend does not include any distribution made by a statutory producer board to a member where all of the following apply:
(a) The recipient was a member of the board at some time during the income year;
270.35(11) Dividends

(b) The amount of the distribution corresponds to a notional distribution amount that is treated as a dividend under s CD 13(1); and

c) The amount was based on the total produce transactions of members with the board during the tax year or the total levies payable by members to the board for the income year.

TaxNote 1: The CIR has some discretion to accept an alternative basis of calculation.

(11) Distribution by a statutory producer board [s CD 33]

Any distribution made by a statutory producer board is not a dividend where all of the following apply:

(a) The person was a member of the board at some time during the income year; and

(b) The amount is calculated on the basis of the member’s share of:

(i) The total produce transactions of members with the board during that income year; or

(ii) The total levies payable by members to the board for that income year; and

(c) The amount corresponds to a notional distribution amount treated as a dividend under s CD 13(1).

TaxNote 2: The CIR has some discretion regarding the calculation referred to in item (b).

(12) Distribution by a co-operative company [ss CD 33, CD 34]

Any distribution made by a co-operative company is not a dividend where all of the following apply:

(a) The person was a shareholder of the company at some time during the income year;

(b) The amount is calculated on the basis of the shareholder’s share of the total produce transactions between shareholders and the company during the income year; and

(c) The amount corresponds to a notional distribution amount which is treated as a dividend under s CD 13(3).

The distribution is treated as a return of capital for the purposes of the capital limitation and therefore is not deductible to the company. Section CD 34 allows a co-operative company to elect that distributions of profits arising from non-member transactions be treated as a rebate rather than a dividend. Certain conditions must be satisfied [see 225.45].

(13) Interest in a foreign investment fund (FIF) [s CD 36]

A dividend does not include an amounts distributed by a company where:

(a) The amount is derived from an interest in a company which is a FIF (or would have been a FIF had it not been liquidated); and

(b) The person calculates the FIF income or loss in the period by applying the comparative value (CV) method, deemed rate of return (DRR) method, cost method, or the DRR method where the FIF is not a grey-list company and the person does not hold a direct income interest of 10 per cent or more in the FIF at the beginning of the income year.

270.40 Available subscribed capital [s CD 43]

The purpose of the available subscribed capital formula is to determine the amount that shareholders have paid into the company when subscribing for its shares. This amount can be returned to shareholders free of tax when the company is wound up or on a repurchase of shares.

The formula under which the available subscribed capital for a share in a company is calculated is as follows:

\[ 1 \text{ July 1994 balance} + \text{subscriptions} - \text{returns} - \text{look-through company returns} \]

(1) 1 July 1994 balance

"1 July 1994 balance": if the company did not exist as at 1 July 1994, the 1 July 1994 balance is zero. If the company did exist as at that date, the 1 July 1994 balance is calculated as:

\[ \text{(paid up capital + premiums / all shares issued)} \times 30 \text{ June 1994 shares} \]

Where:
Dividends

“Paid-up capital” is the total amount of capital paid up before 1 July 1994 for shares of that class. It does not include an amount paid up by way of bonus issue unless it was a taxable bonus issue or the amount was paid up by way of an application of an amount of qualifying share premium. However, it does include paid-up capital that (before 1 July 1994), has been written off against losses incurred by the company. Hence, the written off capital is able to be restored by the company upon liquidation without the distribution to shareholders being taxed as a dividend [see Public ruling BR Pub 06/04, TIB vol 18:7 (August 2006) at 5-8].

“Premiums” is the total of qualifying share premiums paid to the company before 1 July 1994 for shares in that class but excluding amounts applied before 1 July 1994 in paying up capital. A share premium originates from the days when a share had a “par value”. If the shares were issued for more than par, the excess was a share premium that remained in a reserve and was able to be distributed as capital.

“All shares issued” is the number of shares in that class as at the end of 30 June 1994.

“All June 1994 shares” is the number of shares in the class on issue at the end of 30 June 1994.

(2) Subscriptions

“Subscriptions” is the total amount of consideration that the company received after 30 June 1994 and before the time for which the calculation is being done for that class of shares. Where a company has migrated and deemed by s FL 2(1) as having been liquidated, and having distributed the proceeds of the liquidation to shareholders, the amount of the deemed distribution is added to the company’s available subscribed capital (ASC), to remove the potential for double taxation in the event that the company pays a dividend in the future.

Sections CD 43(6) to CD 43(21) contain refinements to, and exclusions from, the term “subscriptions”. These relate to:

(a) Bonus issues [s CD 43(6) and (7)];
(b) Re-invested exempt dividends [s CD 43(8)];
(c) Share for share exchanges [s CD 43(9) and (10)];
(d) Share capital reorganisations [s CD 43(11) and (12)];
(e) Ineligible capital [s CD 43(13) and (14)];
(f) Amalgamations [s CD 43(15)];
(g) Emigrating companies [s CD 43(16)];
(h) Maori authorities [s CD 43(17)];
(i) Rule against double counting [s CD 43(18)];
(j) Treasury stock sales [s CD 43(19)];
(k) Superannuation fund’s interest in a group investment fund [s CD 43(20)];
(l) Foreign currency conversions [s CD 43(21)].

(3) Returns

“Returns” is the total amount of share capital that the company has returned to its shareholders by way of reacquiring its shares after 30 June 1994 and before the time in respect of which the calculation is being made. It includes only amounts that were not a dividend because of s CD 22 (off-market share cancellations) [see 270.35] or s CD 24 (on-market share cancellations) [see 270.35] or an equivalent provision of an earlier Act.

(4) Look-through company returns

“Look-through company returns” is the total amount of of share capital that the company has returned to its shareholders by way of reacquiring or cancelling its shares while the company was a look-through company [see 920].

Sections CD 43(22) to CD 43(24) contain refinements to, and exclusions from, the term “returns”. These relate to:

(a) On-market share cancellations by an associate [s CD 43(22)];
Available capital distribution amount [s CD 44]

The “available capital distribution amount” is:

- The amount of realised capital gains; \( \text{plus} \)
- The value of capital assets (less their cost) distributed to shareholders on the liquidation; \( \text{minus} \)
- Any capital losses arising in the 1992-1993 or later tax year,

that is able to be distributed tax-free on the liquidation of the company. The formula for calculating the available capital distribution amount is provides the available capital distribution amount per share. It is:

\[
\text{available capital distribution amount per share} = \frac{(\text{receipts} - \text{asc per share} \times \text{capital gains} + (\text{capital property distributed} - \text{cost}) - \text{capital losses}}{\text{total receipts} - \text{total sales}}
\]

The making of a resolution to adopt a course of action that will culminate in removal of a company from the New Zealand register starts the period during which the company is being liquidated. Where a short-form liquidation process under s 318(1)(d) of the Companies Act 1993 is to be used, any overt decision-making act provided for in the company’s constitution to adopt a course of action that will end in removal from the register without a request to the registrar having to be made marks the commencement of the “on liquidation” period. This first step will generally be the passing of the resolution to cease business. Anything that occurs during that period occurs “on liquidation” [see Public ruling BR Pub 10/06 (effective 1 January 2009 to 31 December 2014), TIB vol 22:5 (June 2010) at 3-7].

Sections CD 44(3) to (18) contain refinements to and exclusions from, the terms contained in the formula. These relate to:

- Negative multiplier [s CD 44(3)];
- Foreign company information [s CD 44(4)];
- Bonus issued capital gains [s CD 44(5)];
- Capital gains amounts [s CD 44(6) and (7)];
- Amalgamated companies [s CD 44(8)];
- Capital losses [s CD 44(9) and (10)];
- Associated persons transactions (effective 1 April 2010) [s CD 44(10B)];
- Close company liquidations (effective 1 April 2010) [s CD 44(10C)];
- Related person transactions [s CD 44(11)];
- Reinvested exempt dividends [s CD 44(13)];
- Amounts written up [s CD 44(14)];
- Available capital distribution amount 1988 to 2010 (relationship with s CZ (9B)) [s CD 44(14B)];
- Related person – meaning [s CD 44(15)];
- Relatives, nominees and interposed companies look-through [s CD 44(16) and (17)];
- Capital property – meaning [s CD 44(18)];

From the 2010-2011 income year, capital gain amounts and capital losses plus close company liquidations are dealt with under s CD 44(10B) and (10C) respectively. This is due to the impact of the new associated persons definition [see 70.60]. The sections provide that no capital gain amount is derived and no capital loss is incurred by a company where property is disposed of under an arrangement with an associated person unless the company is a close company, the associated person is not a company and the disposal occurs on the liquidation of the company.
Dividends

From the 2010-2011 income year, s CD 44(15) (meaning of “related person” and s CD 44(16) and (17) (relatives, nominees and interposed companies look-through) are repealed. This is also due to the revised definition of “associated person”.

The equivalent effect is preserved for the period 1 April 1988 to 31 March 2010 by s CZ 9B.

270.50 Ordering rule and slice rule [s CD 23]

The role of the ordering rule and the slice rule is to allocate the available subscribed capital to shares.

(1) Ordering rule

Under the ordering rule, the available subscribed capital for shares in a particular class is calculated as:

\[
\text{available subscribed capital of class} \div \text{shares being cancelled of class}
\]

Where:

“Available subscribed capital of class” is the available subscribed capital of all shares of the same class as the share under consideration, measured as at the time for which the amount is being calculated.

“Shares being cancelled of class” is the number of shares of the same class as the share (including the share) being cancelled at the time.

The effect of the formula is to allocate the available subscribed capital, in so far as it extends, to the shares which are being cancelled. This can give rise to little or no available subscribed capital remaining for the uncancelled shares and result in those shares being taxable on redemption.

Example:

Buyback Ltd was established with $100 share capital divided into 100 shares, all of the same class. Joe owned 50 of the shares and Sam owned the other 50. Some years ago, the company made a non-taxable bonus issue of $100, divided into 100 shares of the same class as the original shares. Joe and Sam each received 50 of the bonus issued shares. Last year, the company reacquired Joe’s shares. Now the company is to be liquidated.

When the company reacquired Joe’s shares, the available subscribed capital was $100. The allocation was calculated under the ordering rule as follows:

\[
\text{available subscribed capital of class} \div \text{shares being cancelled of class}
\]

As the bonus issue was a non-taxable bonus issue, it did not increase the company’s available subscribed capital. The available subscribed capital is $100 being the amount subscribed for the original 100 shares. The number of shares of the class being cancelled is 100, being Joe’s original 50 shares plus his 50 bonus issued shares. The calculation therefore becomes $100 / 100 shares or $1 per share being cancelled. Assuming that the company has $200 in cash representing its share capital and that it has no other reserves, Joe will have received $100 for his 100 shares, all of which would have been available subscribed capital and therefore non-taxable. When the company is liquidated, Sam will also receive $100 for his 100 shares. However, as there is no remaining available subscribed capital, Sam will be taxed on the entire amount.

(2) Slice rule

Under the slice rule, the formula for calculating the available subscribed capital per share is:

\[
\text{available subscribed capital of class} \div \text{shares of the class}
\]

Where:

“Available subscribed capital of class” is the available subscribed capital of all shares of the same class as the share under consideration, measured as at the time for which the amount is being calculated.

“Shares of the class” is the number of shares of the same class as the share (including the share) on issue at the time.

The effect of the formula is to allocate the available subscribed capital, in so far as it extends, over all of the shares in the class including those which are being cancelled and those which are to remain. Therefore, shareholders whose shares are not being cancelled are not disadvantaged in the way in which they are under the ordering rule.

270.55 Details of dividends required by CIR [TAA, s 67]

All imputation credit account companies declaring dividends are required to complete and retain a company dividend statement. In addition, a copy of any required statement must be forwarded to the CIR by the last
day for filing the income tax return for the income year which corresponds with the imputation year in which the dividend statement was required to be completed. The dividend statement must contain all of the following information:

(a) The number of shares in respect of which the dividend is declared or, if the dividend is a bonus issue, the number of shares included in the bonus issue;
(b) The date on which the dividend was declared and the date on which it was paid;
(c) The total amount paid or, if the dividend is a bonus issue, the amount of the bonus issue;
(d) The total amount of imputation credits attached;
(e) The imputation ratio of the dividend;
(f) If the dividend was paid in Australian currency by an Australian imputation credit account company, the exchange rate used to calculate the imputation ratio; and
(g) Any other information that the CIR may require.

270.60 Taxation of foreign dividends [s CD 19]

Dividends derived by a New Zealand resident individual from foreign companies are liable for New Zealand income tax in the same way as New Zealand dividends. The taxable dividends are the gross dividend (that is gross of any foreign tax) which is liable to income tax in New Zealand. Credit is given for the foreign tax paid up to the amount of the New Zealand tax on that segment of income [s LJ 2]. A double taxation agreement may also be applicable, and should be considered if a dividend is received from a country with which New Zealand has a DTA.

If a foreign dividend is received by a company in its capacity as a trustee of a trust, that foreign dividend will be subject to income tax and not exempted under the rule for companies in s CW 9.

For natural persons with income interests of greater than 10 per cent in a controlled foreign company that receive dividends from the CFC, these dividends are taxable in the normal manner. However, double taxation on the attributed CFC income and the dividend may be relieved through the operation of a branch equivalent tax account [ss OE 17 to OE 22, see 670.285 and 670.340]

For people with interests in a foreign investment fund, the FIF rules will apply in relation to the dividend. The FIF rules are set out at 850.130, with the relationship between the FIF rules and the ordinary dividend provisions explained at 850.235.

Although the dividend may be exempted from tax in the foreign country this does not make it exempt from New Zealand income tax when derived by New Zealand individual shareholders. Foreign sourced dividends derived while a person is a transitional resident are exempt [see 370.35].

270.65 Interests in foreign unit trusts [ss CD 9, CD 10, CD 30]

Historically, it has been possible for New Zealand residents to invest in Australian unit trusts and avoid paying tax on the income in either country. As a temporary measure, while work on the reform of the taxation of international investment continues, amendments have been enacted which apply from 21 December 2004. There are two parts to the measure. The first applies where property vests in a beneficiary, and the second relates to bonus issues that are re-invested.

Where a beneficiary of a unit trust that is a foreign company has a beneficial interest in money or property of the unit trust and that property vests in the beneficiary, a dividend arises. The amount of the dividend is the value of the money or property that has vested. Where an amount is a dividend under this provision it will not constitute a second dividend if and when the legal interest in the money or property passes to the beneficiary.

Where a unit trust that is a foreign company makes a bonus issue under an arrangement whereby the bonus issue is made instead of money or property vesting absolutely in the unit holder, the bonus issue is a taxable bonus issue and a dividend arises for the unit holder. The amount of the dividend is the value of the money or other property the vesting of which has been foregone.
270.70 **Dividends from UK building societies** [s CD 19]

Where UK building societies pay a “composite rate” of income tax on total distributions made to depositors who hold share or term deposit accounts with building societies, the composite rate is paid on behalf of the depositors and is intended to be an average rate of income tax that would be paid by the depositors if taxed individually. The net amount received by the depositors is not liable to UK income tax. In New Zealand, the net amount received by a depositor must be grossed up on the basis of the following formula:

\[
\frac{1}{\text{composite rate}} \times \text{net amount received}
\]

The grossed up figure is then included in the New Zealand tax return, and credit is allowed for the composite rate (with a maximum of the New Zealand tax payable on that income). The income may be a dividend or interest, depending upon the type of investment. If the income is from the share account (although frequently described as “interest on shares or dividends”) it is a dividend, while income on a term deposit is interest. Under UK law, distributions by building societies are not dividends, so the UK-New Zealand Double Tax Agreement does not apply to limit the UK tax to 15 per cent.

Before allowing credit, New Zealand requires evidence of the composite rate paid by the building society. Details of the composite rate are usually shown on a certificate issued by the building society to its members each year.

270.75 **Overview of dividends derived by individual shareholders** [ss CD 1, HA 14]

Dividends derived from:

(a) Resident companies that are not qualifying companies or

(b) Non-resident companies,

are income in the hands of individual shareholders.

Dividends derived from any qualifying company are income in the hands of shareholders if they are fully imputed, otherwise they are exempt.

Dividends on shares held under an employee share purchase scheme are regarded as income to the employee shareholders. They are treated in the same manner as any other class of dividend (ie, they are liable to income tax).

270.80 **Dividends derived by corporate shareholders** [ss CD 1, CW 9, CW 10, DB 55]

Dividends derived from any New Zealand resident company that is

(a) Not a qualifying company; and

(b) Not a wholly-owned subsidiary company,

are income in the hands of corporate shareholders.

Dividends derived by a New Zealand resident company, or as category A income of a group investment fund, from a wholly-owned subsidiary company, are generally exempt income [s CW 10]. However, after 30 June 2009, the exemption does not apply where the interest is:

(a) A direct interest of less than 10 per cent which is not an attributing FIF interest;

(b) A fixed-rate foreign equity; or

(c) Rights to a deductible foreign equity distribution.

Dividends derived from a non-resident company by a resident corporate shareholder (not being a multi-rate PIE), or as Category A income of a group investment fund, are exempt income [s CW 9]. However, for income year beginning on or after 1 July 2009, under s CW 9(2), the following dividends are excluded from this exemption and subject to income tax in the normal manner:
(a) Dividends from a less than 10 per cent interest in a FIF described in ss EX 31, EX 32, EX 36, EX 37, EX 37B or EX 39. These comprise shares in ASX-listed Australian companies, Australian unit trusts with adequate turnover or distributions, certain venture capital investments into New Zealand companies that have since migrated to a grey-list country, and shares in Guinness Peat Group plc [see 850.145];
(b) Dividends from fixed-rate foreign equity; and
(c) Dividends from deductible foreign equity.

Fixed-rate foreign equity and deductible foreign equity are defined in s YA 1. Fixed-rate foreign equity includes foreign dividends that are a specific fixed percentage of the amount paid for the equity (as well as variations on this) and any dividend that is regarded as equivalent to payment for money lent.

A deductible foreign equity distribution is a dividend where the foreign company paying the dividend (or a company in the same group or further up the chain as the foreign company) is allowed a deduction for the payment of the dividend against foreign income tax.

Previously, a resident corporate shareholder had an obligation to meet a quarterly foreign dividend payment in relation to that exempt dividend [see 670.120]. The dividend withholding payment rules have been repealed for all income years beginning on or after 1 July 2009.

With effect from the 2005-2006 income year, companies receiving exempt dividends from foreign companies are able to claim a deduction for expenditure incurred in deriving those dividends [s DB 55]. When the company is not a conduit tax relief company, the expenditure is deductible in full. When the company is a conduit tax relief company, the expenditure is deductible to the extent provided by the following formula:

\[
\text{expenditure} \times (1 - \text{non-resident shareholding})
\]

Where:

“Expenditure” is the expenditure incurred in deriving the dividend;
“Non-resident shareholding” is the fraction of the company’s shareholders that are non-residents, calculated under s RG 7(3) and (4).

**TaxNote:** Subpart LQ, that gave a tax credit for conduit tax relief companies, and s DB 55, which limits the ability for a company to claim a deduction for the cost of deriving exempt dividends, have been repealed for income years beginning on or after 1 July 2009.

### Other miscellaneous dividend provisions [ss GB 23, GB 25]

There are other transactions between shareholders and a company which are deemed to be dividends by virtue of other provisions:

(a) Excessive remuneration for services rendered to a director or shareholder of a close company (or a relative) [s GB 25]; and

(b) Excessive remuneration payable to a relative of a shareholder or director of a company other than a close company [s GB 23].

Amounts arising under a dividend stripping arrangement are dividends [see 80.22]. However, they are excluded from the definition of dividend for the purposes of certain provisions relating to:

(a) Consolidated groups;

(b) Subpart OE, which relates to branch equivalent tax accounts (BETA);

(c) Subpart OJ, which relates to policyholder credit accounts;

(d) The foreign dividend payment (FDP) rules; and

(e) The imputation rules.

### Dividend recovered by a company [s CD 40]

A company may recover dividends paid on failure to pass the “solvency” test in the Companies Act 1993. Where any dividend is subsequently recovered by the company from a shareholder under s 56 of the
Companies Act 1993 (or the equivalent provision of any company legislation of a country or territory other than New Zealand):

(a) The CIR must, if notified in writing of the recovery, notwithstanding the time bar, amend any income tax assessment of the shareholder and make an appropriate refund; and

(b) A credit or debit arises, where necessary, in the imputation credit account or dividend withholding payment account, as the case may be.

270.95 Non-cash dividends

A dividend includes any transfer of value from a company to a person if the cause of the transfer is a shareholding in the company and the transfer is not excluded from being a dividend by any of ss CD 22 to CD 36.

Given the breadth of the dividend definition, it is clear that the term can include transfers of value other than in cash. This has consequences in terms of:

(a) Income tax;

(b) Resident withholding tax (RWT);

(c) Non-resident withholding tax (NRWT); and

(d) Imputation credits;

Non-cash dividends are:

(a) Assessable to the recipient;

(b) Able to carry imputation credits;

(c) Liable to RWT if not fully imputed; and

(d) Liable to NRWT when paid to a non-resident shareholder.

RWT is calculated in accordance with the formula in s RE 14 or, in the case of a taxable bonus issue, in s RE 15. This is done by grossing up the dividend and applying RWT to the gross amount. The deemed deduction should be paid to the IRD by the 20th of the month following the month when the deduction is deemed to have been made [see 1260.45 and 1260.50]

FBT, not RWT, applies to benefits provided to shareholders who are also employees. A non-executive director is not treated as an employee [s CX 17]. Non-cash benefits received by a non-executive director shareholder are exempt from FBT but are subject to the dividend rules under s CX 17 when the recipient has no other employment relationship with the company beyond the formal occupation and statutory obligations of a non-executive director [see 540 FRINGE BENEFIT TAX]. Non-cash dividends passing between 100 per cent wholly-owned companies are exempt [s CW 10].
Chapter 300
Donations and Subscriptions

300.10 Donations
Donations are generally not allowable as a deduction, as they are a disposition of income and not a cost of earning it. However, an individual may claim a “refundable tax credit” under s LD 1 for cash gifts of $5 or more to charitable and other public benefit organisations in New Zealand. The amount of the tax credit is one-third of the total gifts made by the taxpayer in the tax year. No tax credit is allowed for any gifts to the extent to which they exceed the person’s taxable income for the tax year. The term “charitable or other public benefit gift” is defined in s LD 3 [see 150 CHARITIES].

The credit is not available to absentees, companies, public authorities, Maori authorities, unincorporated bodies, or trustees of complying trusts, foreign trusts or non-complying trusts.

The credit is claimable by applying to the CIR on the approved form. Taxpayers are not limited to making only one claim for each year but claims cannot be made before 1 April following the end of the income year (standard and early balance date taxpayers) or the day following the end of the taxpayer’s income year (late balance date taxpayers). Early claims can be accepted from persons leaving New Zealand permanently or for a significant time and from trustees of deceased estates [see 1395.75].

Inland Revenue has ruled that, where fund raising by approved charities includes sale of tickets to attend such functions as concerts, movie premieres, and dinners, only the donation element of the ticket price will qualify as a donation for rebate or deduction purposes. Any element of the purchase price which provides benefit to the purchaser (eg dinner or entertainment) will not be recognised as a donation.

300.20 Gifts to charities by companies and Maori Authorities
Companies and Maori authorities may claim a deduction for any gift of money made by it to any of those organisations, societies, trusts, or funds to which the donations tax credit under s LD 1 applies. Maori authorities are also able to claim a deduction for donations made to a Maori association.

The available deduction is limited to the net income of the company or Maori authority for that year before making the deduction.

300.30 Club membership
The extent to which club subscriptions are deductible is discussed below.

1) Self-employed business or professional persons
The subscription is deductible if it is paid to a professional, business, or similar club (but not to a sporting club) and the club is used frequently and regularly for business purposes (eg to meet and entertain clients, both existing and prospective) or for business lunches or discussions.

2) Key-employees and shareholder-employees of small companies
The subscription is deductible provided there is a direct relationship between the club (which may include a sports club) and the business of the company (eg sports goods representative and golf or tennis club), and the dominant reason for membership is for business purposes. In these cases one subscription per key employee or shareholder-employee may be deducted by the company.
300.30(3) Senior staff members of large companies

Large companies which pay subscriptions to clubs in different cities for senior staff members are allowed a deduction for subscriptions paid for those members to belong to one club in each city for the purpose of transacting the company’s business and entertaining clients.

**TaxNote:** The CIR has no statutory reason for restricting club subscriptions to just one club for employees and one club in each city for senior staff. Depending on individual circumstances, it may be possible to demonstrate that more than one such subscription meets the tests of deductibility.

### 300.40 Subscriptions allowable

Subscriptions are allowable as a deduction to businesses, but not to employees, insofar as they are an expense which meets the requirements of the general permission in s DA 1 [see 240 DEDUCTIONS]. Prepaid expenditure as at balance date comprising subscriptions for membership of any trade, professional, or other association may not need adjustment if they are within Determination E12 [see 1140.70].

The following are examples of subscriptions that are deductible provided that a nexus exists between the payment and the income-earning process of the taxpayer:

(a) Agricultural and pastoral societies;
(b) Associations to ensure protection of a trade;
(c) Automobile Associations and Commercial Travellers’ Associations;
(d) Chambers of Commerce — no deduction of a levy for special purposes is permissible unless it would have been deductible under s DA 1;
(e) Employers’ associations;
(f) Employee benefit funds [s DC 6];
(g) Employer subscriptions for staff groups to the British United Provident Association;
(h) Farm Forestry Association;
(i) Federated Farmers of New Zealand Inc;
(j) National Safety Association of New Zealand;
(k) New Zealand Association of Opticians and Optometrists;
(l) New Zealand Institute of Management annual subscriptions;
(m) New Zealand Mill Owners’ Research Association;
(n) New Zealand Dental Association Research Foundation — claimable within the limits of s DB 33;
(o) New Zealand Fertiliser Manufacturers Association;
(p) New Zealand Institute of Economic Research — claimable within the limits of s DB 33;
(q) Outward Bound Trust fees paid by employers for employees as staff training;
(r) Professional societies;
(s) Public relations offices subscriptions — but donations are non-deductible unless an advertising benefit arises;
(t) Trade associations; and
(u) Trade journals.

### 300.50 Subscriptions not allowable

Payments to the following bodies are not deductible as they are considered to be expenditure of a private nature:

(a) Citizens’ and ratepayers’ associations;
(b) Contributions by firms in the motor trade to the New Zealand Motor Trade Certification Board;
(c) Donations to public relations offices;
(d) Donations to political parties;
(e) Contributions to the Wool Action Committee;
(f) Subscriptions paid to the New Zealand Business Roundtable;
(g) Subscriptions paid to the New Zealand Federation of Business and Professional Women’s Clubs.

</table>
A double tax agreement (DTA) is an agreement that has been negotiated and agreed between the New Zealand Government and the Government of any territory outside New Zealand and has entered into force as a result of a declaration by the Governor-General by Order in Council. A double tax agreement also includes an agreement between the Taipei Economic and Cultural Office in New Zealand and the New Zealand Commerce and Industry Office.

Double tax agreements may be negotiated for the following purposes:

(a) To provide relief from double taxation;
(b) To provide relief from tax;
(c) To tax the income derived by non-residents from any source in New Zealand;
(d) To determine the income to be attributed to non-residents or their agencies, branches or establishments in New Zealand;
(e) To determine the income to be attributed to New Zealand residents who have special relationships with non-residents;
(f) To prevent fiscal evasion;
(g) To facilitate the exchange of information;
(h) To assist in recovering unpaid tax.

Where a double tax agreement refers to the profits of an activity or business, that reference is to be read, if possible, as a reference to the amount that would be a their net income if that activity or business were the taxpayer’s only activity or business.

Where a double tax agreement refers to two persons being unrelated, this is to be read, if possible, as a reference to two persons being not associated.

### Avoiding double taxation

Double taxation can arise when taxpayers are liable to tax in more than one country. For example, a person may be liable to tax in country A, because they are resident in that country, but also liable to tax on the same income in country B, because the income is derived from country B. Consequently, double taxation agreements are entered into between nations and have two main purposes:

(a) To define which country has the right to tax income of specified classes; and

(b) To provide for the exchange of information between the countries which are parties to the agreement.

The agreements prescribe the method of assessment of certain specific classes of income, but many classes of income are not specifically referred to in the agreements and, therefore, this unspecified income is taxed according to the laws of the countries which are parties to the agreements. Where the income is specified in
Double Tax Agreements

310.15

the agreement then in addition to there being rules relating to how and where it is to be taxed, there are also rules which specify whether there should be credits granted for any foreign tax paid. Generally, the country of origin of the income has the primary right to tax and the country of residence has the obligation to grant a credit.

The manner of interpretation of double taxation agreements was considered by the Court of Appeal in Commissioner of Inland Revenue v United Dominions Trust Ltd (1973) 1 NZTC 61,028 (CA). An agreement is not interpreted solely in the light of doctrines peculiar to domestic law but must be construed as a whole after taking into account its object and purpose. For example see TES 19 (September 2004) 272.

310.15 Impact on domestic law [ss BB 3(2), BH 1; TAA, s 88]

A double tax agreement which has been negotiated between New Zealand and another country is given the force of law in New Zealand by an Order in Council under s BH 1(3). In relation to income tax or any other tax imposed by the ITA (including the exchange of information relating to a tax), a double tax agreement overrides anything in:

(a) The ITA [except for s BH 1(5)];
(b) Any other Inland Revenue Act;
(c) The Official Information Act 1982; and
(d) The Privacy Act 1993 [ss BB 3(2), BH 1(4)].

For “exchange of information” purposes, “tax” is defined as having the meaning given by paragraphs (a)(i) to (v) of the definition of “tax” in s 3 of the TAA. The effect of ss BB 3(2) and BH 1(4) is that a double taxation agreement, to the extent that it has any provision which is inconsistent with the New Zealand domestic law, overrides domestic law.

Example:
The ITA 2007 provides that certain classes of income are deemed to be derived from New Zealand including income derived from a business wholly or partly carried on in New Zealand [s YD 4(2)]. However, most double taxation agreements provide that the industrial or commercial profits of an enterprise of one of the contracting states is not liable for tax in the other contracting states unless the enterprise carries on business in the other contracting state conducted through a “permanent establishment” there.

Each agreement provides a modification of domestic law by giving the country of origin of the income the primary right to tax certain classes of income arising in that country, with credit being given in the country of residence for tax paid in the country of origin, and by declaring that certain other classes of income are to be taxed only in the country where the recipient of the income resides. In most agreements a provision is contained whereby dividends, interest, or royalties are taxed by the country of origin at rates lower than the rates applying to non-residents deriving income from similar sources but who reside in a country which is not a party to a double taxation agreement.

The CIR may disclose any information required to be disclosed under a double tax agreement to the authorised tax authorities in the other country which is party to the agreement. This authority overrides any secrecy obligation imposed by any enactment [TAA, s 88].

All New Zealand agreements are the “credit” type, except for the New Zealand-Sweden agreement, which provides exemption in lieu of credits. In the United States-New Zealand agreement the credit provisions have to be applied to all income with a source in the United States.

310.20 Income assessed on an origin basis

The following are examples of income assessed on an origin basis.

(a) Income derived by an enterprise of one of the contracting states from industrial or commercial profits from a business carried on through a permanent establishment of the enterprise situated in the other contracting state. There is usually a clause designed to ensure that the profits of the permanent establishment subject to tax in the country of origin are not less than might be expected if all transactions were made on an arm’s length basis.
(b) Industrial royalties.
(c) Income from land and the exploitation of land or landed property, rents, natural resource royalties, farming and agricultural profits, and forestry.

310.25 Income assessed on a residence basis

The following are examples of income assessed on a residence basis.

(a) Profits of an enterprise carried on in one of the contracting states except to the extent that those profits are attributable to a business carried on in the other contracting state through a permanent establishment situated there. In *JFP Energy Inc v Commissioner of Inland Revenue* (1989) 11 NZTC 6,282 (HC), the Court considered art 15 of the United States-New Zealand agreement, which provides that remuneration derived by a resident of a contracting state for an employment exercise in the other contracting state shall be taxable only in the first-mentioned state if the remuneration is not “borne by” a permanent establishment or a fixed base which the employer has in the other state. The Court held that, to determine whether remuneration is “borne by” a New Zealand permanent establishment, reference may be had as to the presence or absence of the expense in the accounting records relating to that New Zealand establishment. However, attribution in the accounts is less significant than the actuality of where the expenditure comes to rest.

(b) Profits from operating ships or aircraft in international traffic.

(c) Salaries, wages, or similar remuneration, unless the employment is exercised in the other country for a period exceeding 183 days in the income year or in later agreements 183 days in a 12-month period and the other provisions in the respective agreement are met.

(d) Income from independent professional personal services (except public entertainers), unless the person concerned has a fixed base regularly available in the contracting state where not normally resident.

(e) Pensions or annuities.

(f) Employee’s remuneration paid by a government to one of its servants in the other territory if the employee is not a resident of the country where working or is resident there solely for the purpose of rendering the service.

(g) Remuneration of a professor or teacher present in the other contracting state for the purpose of teaching at an educational institution for a period not exceeding two years.

(h) Payments received by a student or business apprentice visiting the other country solely for the purpose of education or training, if the payments are received from outside the country visited.

(i) Income derived by a resident of one of the states from outside both states.

310.30 Refunds for tax paid [TAA, s 184]

If a DTA exempts from tax income derived before the date of the Order in Council that gives effect to the DTA, and tax has been paid on that income, the CIR may (despite ss LA 6 to LA 8, RM 2, RM 4 to RM 6, RM 8 and RM 10) refund that tax if written application is made by or on behalf of the taxpayer within four years after the date the agreement came into effect.

310.35 Tax sparing

Tax sparing arrangements are concessions provided under some of the double tax agreements to which New Zealand is a signatory. Tax sparing, which is designed to eliminate or reduce double taxation, allows a taxpayer to claim a credit for tax that the double tax agreement deems to have been paid in a foreign country. New Zealand has tax sparing arrangements with China, Fiji, India, Korea, Malaysia and Singapore.

A taxpayer claiming a foreign tax credit in respect of a tax sparing arrangement must complete a tax sparing disclosure return (IR 486).

Credit is also available for foreign taxes paid under statutory provisions [see 760.40, 760.45].
Double Tax Agreements

310.40 New Zealand’s double tax agreements

New Zealand has a network of double tax agreements with the countries which are its main trading and investment partners. Although the agreements are broadly similar, each one has some unique feature or features. The countries with which New Zealand has agreements in force, and the main features of those agreements, are set out in 310.45 to 310.200.

Note: The information presented in 310.45 to 310.200 is a summary only of the principal features of the agreements. Only the provisions that are likely to be most commonly used have been covered. No action or decisions should be taken in respect of any of the following classes of income without first consulting the full text of the agreement. For example, each of the agreements has exemptions or exclusions that may apply to particular income types, and terms such as “permanent establishment” and “resident” may be differently defined in each agreement [see Brookers Tax Service for the full text of the agreements].

(1) New and amended agreements

New Zealand signed a double tax agreement with Turkey on 22 April 2010. The agreement came into force on 28 July 2011.

A protocol to amend the double tax agreement with the United States, signed on 1 December 2008, came into force on 12 November 2010. See 310.200 for details.

It was announced on 12 August 2011 that, with retrospective effect from 1 May 2010:

- New Zealand’s double tax agreement with Chile [310.60] has been modified by the reduction in the withholding tax rate on royalties paid between residents of the two countries from 10 per cent to five per cent.
- New Zealand’s double tax agreement with Mexico [310.127] has been modified by the reduction in the withholding tax rate on dividends paid between residents of the two countries from 15 per cent to either five per cent or zero, depending on the investor’s shareholding in the company.

A second protocol to amend the double tax agreement with Belgium was signed on 7 December 2009. It has yet to enter into force.

Negotiations for double tax agreements with Luxembourg (commenced 2009), Vietnam (commenced 2010) and Papua New Guinea (commenced 2011) and are continuing. Negotiations for revised double tax agreements with Austria, Belgium, Canada, India, Malaysia, the Netherlands, and the United Kingdom are in progress (International Treaties List, January 2012, Ministry of Foreign Affairs & Trade).

310.45 Australia

The current double tax agreement between New Zealand and Australia was signed on 26 June 2009 and came into force on 19 March 2010 as the Double Taxation Relief (Australia) Order 2010. In New Zealand the agreement applies from 1 May 2010 for withholding taxes, and from income years beginning 1 April 2010 for other provisions. In Australia it applies from 1 May 2010 for withholding taxes, and from years of income beginning 1 July 2010 for other provisions. The 2009 agreement replaces the previous 1995 double tax agreement — see Staples Tax Guide 2010 for details of the 1995 agreement.

The main provisions of the 2009 agreement are summarised below. They are covered in more detail than for other double tax agreements because of New Zealand’s close association with Australia.

- Article 6 – Income derived by a resident of one state from real property (including the profits of an enterprise from agriculture, forestry or fishing) may be taxed in the state in which the real property is situated. This applies to income derived from the direct use, letting, or use in any other form of real property. For the purposes of art 6, “real property” has the meaning that it has under the law of the state in which the property is situated and specifically includes:
  (a) Natural resources, property accessory to real property, rights to which the provisions of general law respecting property apply, and rights to standing timber;
  (b) A lease of land and any other interest in or over land, whether improved or not, including a right to explore for natural resources, and a right to exploit these resources; and
(c) A right to receive payments (fixed or variable) either as consideration for or in respect of the exploitation of, or for the right to explore for or exploit, natural resources.

• Article 7 – Business profits are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to that permanent establishment. For this purpose, the profits attributed to that permanent establishment are those that it might be expected to make if it were a distinct and separate enterprise engaged in the same or similar activities under the same or similar conditions and dealing wholly independently with the enterprise of which it is a permanent establishment. Where profits include items of income that are dealt with separately in other Articles of the agreement, the provisions of those Articles take precedence.

• Article 8 – The profits of an enterprise that is resident in one state from the operation of ships or aircraft in international traffic are taxable only in that state. However, amounts paid to an enterprise resident in one state for carriage by ship or aircraft of passengers, livestock, mail, goods or merchandise that are both shipped and discharged in the other state may be taxed in that other state. This includes amounts paid for leasing a ship or aircraft on a full basis for such carriage, and profits from the operation of ships or aircraft derived through participation in a pooling or other profit sharing arrangement. Profits from the operation of ships or aircraft in international traffic include profits from the use, maintenance or rental of containers used in the transport of goods.

• Article 9 – Where an enterprise resident in one state is associated with an enterprise resident in the other state, the profits attributed to each enterprise may be adjusted to reflect independent, arm’s-length dealings if the commercial or financial relations between the two enterprises are not those that would be expected to operate between independent enterprises. For this purpose, two enterprises are considered to be associated if one enterprise participates directly or indirectly in the management, control or capital of the other enterprise, or if the same persons participate directly or indirectly in the management, control or capital of both enterprises.

• Article 10 – Dividends paid by a company resident in one state may be taxed in the other state if the dividends are beneficially owned by a resident of the other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to:
  (a) Five per cent of the gross dividend if the shareholder is a company which holds directly at least 10 per cent of the voting power in the company paying the dividend;
  (b) Fifteen per cent of the gross dividend, in all other cases.

No tax is payable on dividends if the shareholder is a company that is resident in the other state and has owned, directly or indirectly (through one or more residents of either state) shares representing 80 per cent or more of the voting power of the company paying the dividends for at least 12 months before the date the dividend is declared. This applies only if the shareholder company:
  (a) Has its principal class of shares listed on a recognised stock exchange and is regularly traded on one or more recognised stock exchanges;
  (b) Is owned directly or indirectly by one or more companies whose principal class of shares is listed on a recognised stock exchange and is regularly traded on one or more recognised stock exchanges;
  (c) Is owned directly or indirectly by one or more companies which, if they owned the shares directly, would be entitled to equivalent benefits in respect of those dividends under a tax treaty between the two countries; or
  (d) Does not meet any of the above requirements, but the competent authority (ie Inland Revenue or the ATO) of the state in which the company paying the dividend is resident determines that the company has not entered into arrangements with the main purpose of taking advantage of art 10.

• Article 11 – Interest arising in one state and derived by a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest. No tax is payable on interest if:

358 Staples Tax Guide 2012
Double Tax Agreements

(a) The interest is derived by one of the states or by a political subdivision or a local authority thereof (including a government investment fund), or by a bank performing central banking functions in the state; or

(b) The interest is derived by a bank or similar institution which is unrelated to and dealing wholly independently with the payer of the interest. In the case of interest arising in New Zealand, the exemption only applies if the person paying the interest has paid the approved issuer levy [see 1020.80]. The exemption does not apply if the interest is paid as part of an arrangement involving back-to-back loans or an arrangement of similar effect.

• Article 12 – Royalties arising in one state and derived by a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to five per cent of the gross royalties. The term “royalties” is defined as payments or credits, whether periodical or not, and however described or computed, to the extent to which they are made as consideration for:

(a) The use of, or the right to use, any copyright, patent, design or model, plan, secret formula or process, trademark or other like property or right;

(b) The supply of information concerning technical, industrial, commercial or scientific experience;

(c) The supply of any assistance that is ancillary and subsidiary to, and is furnished as a means of enabling the application or enjoyment of, any such property or right as is mentioned in (a) or any such information as is mentioned in (b);

(d) The use of, or the right to use:

(i) Motion picture films;

(ii) Films or audio or video tapes or disks, or any other means of image or sound reproduction or transmission for use in connection with television, radio or other broadcasting;

(e) The use of, or the right to use, some or all of the part of the radiofrequency spectrum as specified in a spectrum licence of a state, where the payment or credit arises in that state; or

(f) Total or partial forbearance in respect of the use or supply of any property or right referred to above.

• Article 14 – Income from employment is taxable only in the state of which the employee is a resident. However, if employment is exercised in the other state, that other state may tax the income derived from that other state. This may be overridden by any of arts 16 (directors’ fees), 18 (pensions) or 19 (government service). Income from employment exercised in the other state is taxable only in the employee’s state of residence if:

(a) The employee is present in the other state for a total of 183 days or less in any 12-month period;

(b) The remuneration is paid by, or on behalf of, an employer who is not resident in the other state, or is borne by or deductible in determining the profits attributable to a permanent establishment which the employer has the state of residence; and

(c) The remuneration is not borne by or deductible in determining the profits attributable to a permanent establishment the employer has in the other state.

Remuneration derived from employment on board a ship or aircraft operating in international traffic is taxable only in the employee’s state of residence.

Remuneration derived by an individual who is resident of one state in respect of a secondment to the other state is taxable only in the employee’s state of residence if the individual is present in the other state for a total of 90 days or less in any 12-month period.

• Article 15 – A fringe benefit, which would otherwise be taxable in both states, is taxable only in the state that has the primary right to tax the employment income of the employee concerned.
• Article 16 – Directors’ fees and other similar payments derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 17 – The income of entertainers and sportspersons is generally taxable in the state in which their personal activities as an entertainer or sportsperson are exercised. This applies whether the income from such activities accrues to the entertainer or sportsperson personally, or to another person (eg a company). Article 17 overrides arts 7 (business profits) and 14 (employment income). These rules do not apply to the income derived from personal activities of sportspersons as members of a recognised team regularly playing in a trans-Tasman league competition, unless the person is performing as a member of a national representative team of New Zealand or Australia.

• Article 18 – Pensions (including government pensions) and similar periodic remuneration are taxable only in the state of which the recipient is a resident. However, if the income (other than portable New Zealand superannuation, portable veteran’s pension or equivalent portable payments arising in New Zealand) would be tax-free in the source state if paid to a resident, then it will also be treated as tax-free in the state in which the recipient is resident. This means, for example, that a pension that is tax-free in New Zealand will continue be tax-free if the recipient moves to Australia. The following payments arising in one state (the source state) and paid to a resident of the other state are taxable only in the source state:
  
  a. Lump sums paid under a retirement benefit scheme, or in consequence of retirement, invalidity, disability or death, or by way of compensation for injuries;
  
  b. Alimony or other maintenance payments.

310.47 Austria

The Double Taxation Relief (Austria) Order 2007 was signed on 21 September 2006 and came into force on 1 December 2007. In New Zealand it applies for withholding taxes from 1 March 2008, and for all other taxes for income years beginning on or after 1 April 2008. In Austria it applies for withholding taxes from 1 March 2008, and for all other taxes for assessment years beginning on or after 1 January 2008.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture, forestry or fishing) situated in the other state may be taxed in that other state.

• Article 7 – The profits of an enterprise are taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to that permanent establishment.

• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.

• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.

• Article 14 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  
  a. The recipient is present in the other state for 183 days or less in any 12-month period commencing or ending in the year of income; and

  b. The remuneration is paid by or on behalf of an employer who is not a resident of the other state; and
(c) The remuneration is not deductible in determining the taxable profits of a permanent establishment which the employer has in the other state.

- Article 15 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.
- Article 16 – Income derived by entertainers and sportspersons resident in one state from their personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person. Certain exemptions apply.
- Article 17 – Pensions paid in consideration of past employment are taxable only in the state of which the recipient is a resident. Pensions paid under the social security legislation of one state to a resident of the other state are taxable only in that other state.
- Article 20 – Types of income not covered by previous articles, wherever arising, may be taxed in the state in which the recipient is resident. If the income is derived from sources in the other state, it may also be taxed in that other state.

310.50 Belgium

The Double Taxation Relief (Belgium) Order 1983 was signed on 15 September 1981 and came into force on 8 December 1983. In New Zealand it applies from 1 April 1984. In Belgium it applies from 1 January 1984 for income subject to withholding tax. For all other taxes it applies from 1 January 1984. The second protocol to the agreement was signed on 7 December 2009.

The main provisions of the agreement are:

- Article 6 – Income derived by a resident of one state from real property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.
- Article 7 – Business profits are taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to that permanent establishment.
- Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
- Article 11 – Interest arising in one state and derived by a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
- Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
- Article 14 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, income from such services is taxable only in the other state if the services are performed in that other state and:
  (a) The individual is present in the other state for more than 183 days in the income year or taxable period concerned; or
  (b) The individual has a fixed base in the other state.

Income from services performed in the other state is taxable in that other state only to the extent that the income is attributable to activities performed during such periods of presence, or connected with that fixed base.

- Article 15 – Employment income is taxable only in the state of which the employee is a resident. However, if employment is exercised in the other state, that other state may tax the income derived from that other state. Income from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The employee is present in the other state for 183 days or less in the income year or taxable period concerned;
Double Tax Agreements

(b) The remuneration is paid by an employer who is not resident in the other state; and

c) The remuneration is not borne by a permanent establishment or fixed base the employer has in
the other state.

• Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other
state may be taxed in that other state. Remuneration that a director receives for day-to-day managerial
or technical functions is treated the same as employment income under art 15.

• Article 17 – Income derived by resident of one state from their personal activities as an entertainer or
athlete in the other state may be taxed in that other state. This applies whether the income from such
activities accrues to the entertainer or athlete personally or to another person.

• Article 18 – Pensions paid in consideration of past employment are taxable only in the state in which
the recipient is a resident.

310.55 Canada

The Double Taxation Relief (Canada) Order 1981 was signed on 13 May 1980. The agreement is in force
from 29 May 1981. In New Zealand it applies from 1 April 1976 for income subject to withholding tax. For
all other taxes it applies to income years commencing on or after 1 April 1976. In Canada it applies from
1 January 1976 for income subject to withholding tax. For all other taxes it applies from 1 January 1976.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from real property (including income from
agricultural, pastoral or other farming activities and forestry) situated in the other state may be taxed
in that other state.

• Article 7 – Industrial or commercial profits are taxable only in the state in which the enterprise is
resident. However, if the enterprise carries on business through a permanent establishment situated in
the other state, that other state may tax the profits attributable to the permanent establishment.

• Article 10 – Dividends received by a resident of one state from a company resident in the other
state may be taxed in the state in which the shareholder is resident. Such dividends may also be taxed in the
state that the company is resident, but that tax is limited to 15 per cent of the gross dividend.

• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that
other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 15 per
cent of the gross interest.

• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that
other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 15 per
cent of the gross royalty.

• Article 14 – Income from personal (including professional) services is normally taxable only in the
state of which the recipient is a resident. However, if the services are performed by a resident of one
state, in the other state, that other state may tax the income derived from that other state. Income derived
by a resident of one state from personal services performed in the other state is taxable only in the
employee’s state of residence if:

(a) The recipient is present in the other state for 183 days or less in the income year or taxation
year;

(b) The income is paid by a person who is not a resident of the other state; and

(c) The income is not borne by a permanent establishment or fixed base which that person has in
the other state.

• Article 15 – Directors’ fees derived by a resident of one state from a company resident in the other
state may be taxed in that other state.

• Article 16 – Income derived by a resident of one state from personal activities as an entertainer or
athlete exercised in the other state may be taxed in that other state. If the services are provided by an
enterprise, the profits from those services may be taxed in the state in which the enterprise is resident
unless:

(a) The enterprise is substantially supported from public funds of the state of residence; or
Double Tax Agreements

(b) The enterprise is a non-profit organisation.

- Article 17 – Pensions and annuities arising in one state and paid to a resident of the other state are taxable in that other state. Such pensions and annuities may also be taxed in the state in which they arose if they exceed 10,000 Canadian dollars in any taxation year or income year. In this case, the amount of tax may not exceed:
  (a) The lesser of 15 per cent of the gross pension and a rate determined by reference to the recipient’s marginal tax rate; or
  (b) 15 per cent of the amount of the annuity that is taxable in that state.

310.60 Chile

The Double Taxation Relief (Chile) Order 2004 was signed on 10 December 2003 and came into force from 21 June 2004. In New Zealand it applies for withholding taxes from 1 January 2007. For all other taxes it applies for income years beginning on or after 1 April 2007. In Chile it applies for taxes on income obtained and amounts paid, credited to an account, put at the disposal or accounted as an expense, from 1 January 2007.

The main provisions of the agreement are:

- Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.
- Article 7 – Business profits are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.
- Article 10 – Dividends derived by a resident of one state from a company resident in the other state may be taxed in the state in which the shareholder is resident. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend (in the case of New Zealand), and tax in accordance with Chilean law (in the case of Chile).
- Article 11 – Interest arising in one state and derived by a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest, when derived from loans granted by banks and insurance companies, and 15 per cent of the gross interest, in other cases.
- Article 12 – Royalties arising in one state and derived by a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to five per cent (10 per cent before 1 May 2010) of the gross royalty.
- Article 14 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the income derived from that other state. Income derived by a resident of one state from personal services performed in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in any 12-month period;
  (b) The income is paid by a person who is not a resident of the other state; and
  (c) The income is not borne by a permanent establishment which that person has in the other state.
- Article 15 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.
- Article 16 – Artistes and sportspersons are generally taxable in the state in which their personal activities as an artiste or sportsperson are exercised. This applies whether the income from such activities accrues to the artiste or sportsperson personally, or to another person.
- Article 17 – Pensions (including government pensions) are taxable only in the state in which the recipient is a resident.

310.65 China

The Double Taxation Relief (China) Order 1986 was signed on 16 September 1986 and came into force from 17 December 1986. In New Zealand it applies from 1 April 1987. In China it applies from the tax year...

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from immovable property situated in the other state may be taxed in that other state.
• Article 7 – The profits of an enterprise are taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.
• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
• Article 14 – Income derived by a resident from professional services or other activities of an independent character is normally taxable only in the state in which the person is resident. However, income from such services is also taxable in the other state if the services are performed in that other state and:
  (a) The individual is present in the other state for more than 183 days in any 12-month period; or
  (b) The individual has a fixed base in the other state.
• Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in any 12-month period;
  (b) The remuneration is paid by a person who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base that the employer has in the other state.
• Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.
• Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.
• Article 18 – Pensions paid in consideration of past employment are taxable only in the state in which the recipient is a resident. Pensions paid under a public welfare scheme or social security system may be taxed in the state in which the pension is paid.

310.68 Czech Republic

The Double Taxation Relief (Czech Republic) Order 2008 was signed on 26 October 2007 and came into force on 2 September 2008. In New Zealand it applies for withholding taxes from 1 January 2009, and for all other taxes for income years beginning on or after 1 April 2009. In the Czech Republic it applies for withholding taxes from 1 January 2009, and for all other taxes for taxable years beginning on or after 1 January 2009.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture, forestry or fishing) situated in the other state may be taxed in that other state.
Double Tax Agreements

- Article 7 – The profits of an enterprise are taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to that permanent establishment.

- Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.

- Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

- Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.

- Article 14 – Employment income is normally taxable only in the state in which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in any 12-month period commencing or ending in the year of income or fiscal year; and
  (b) The remuneration is paid by or on behalf of an employer who is not a resident of the other state; and
  (c) The remuneration is not deductible in determining the profits of a permanent establishment which the employer has in the other state.

Articles 15, 17 and 18 override art 14.

- Article 15 – Directors’ fees and other similar remuneration derived by a resident of one state from a company resident in the other state may be taxed in that other state.

- Article 16 – Income derived by entertainers and sportspersons resident in one state from their personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person. This overrides arts 7 and 14.

- Article 17 – Pensions and similar remuneration (including government service pensions and social security payments) are taxable only in the state in which the recipient is resident. This applies regardless of whether the pension is paid in consideration of past employment.

- Article 20 – Types of income, wherever arising, not covered by previous articles are taxable only in the state in which the recipient is resident. However, if the income is derived from sources in the other state, it may also be taxed in that other state.

310.70 Denmark

The Double Taxation Relief (Denmark) Order 1981 was signed on 10 October 1980 and came into force on 22 June 1981. In New Zealand it applies from 1 April 1981. In Denmark it applies from 1 January 1981. The first protocol to the agreement was signed, and came into force, on the same dates as the main agreement. The second protocol to the 1980 agreement was signed on 12 March 1985 and came into force on 22 July 1985. In New Zealand it applies from 1 April 1986. In Denmark it applies from 1 January 1986.

The main provisions of the agreement are:

- Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.

- Article 7 – The profits of an enterprise are taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to that permanent establishment.
Double Tax Agreements

• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.

• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.

• Article 14 – Income derived by an individual from professional services or other activities of an independent character is normally taxable only in the state in which the individual is resident. However, income from such services is taxable in the other state if the services are performed in that other state and:
  (a) The individual is present in the other state for more than 183 days in the income year for the purpose of performing those activities; or
  (b) The individual has a fixed base regularly available in the other state for the purpose of performing those activities.

In this case, income from services performed in the other state is taxable in that other state, but only to the extent that the income is attributable to activities connected with that fixed base or performed during the periods of presence in the other state.

• Article 15 – Employment income is taxable only in the state of which the employee is a resident. However, if employment is exercised in the other state, that other state may tax the income derived from that other state. Income from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The employee is present in the other state for 183 days or less in the income year concerned; and
  (b) The remuneration is paid by or on behalf of an employer who is not resident in the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base the employer has in the other state.

• Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 17 – Income derived by resident of one state from their personal activities as an entertainer or athlete in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.

• Article 18 – Pensions and other similar remuneration paid in consideration of past employment are taxable only in the state in which the recipient is a resident. However, pensions and other payments made under the social security legislation of a state may be taxed in that state.

310.75 Fiji

The main provisions of the agreement are:

• Article 6 – Industrial or commercial profits of an enterprise are normally taxable only in the state in which the enterprise is a resident. However, if the enterprise carries on trade or business through a permanent establishment situated in the other state, that other state may tax the whole of the profits of the enterprise from sources within that state, whether or not attributable to the permanent establishment.
Double Tax Agreements

• Article 9 – Dividends paid by a company resident in one state to a resident of the other state may be
taxed in that other state. Such dividends may also be taxed in the state in which the company is resident,
but that tax is limited to 15 per cent of the gross dividend.

• Article 10 – Interest derived from sources in one state by a resident of the other state may be taxed in
that other state. Such interest may also be taxed in the state from which it was derived, but that tax is
limited to 10 per cent of the gross interest.

• Article 11 – Royalties derived from sources in one state by a resident of the other state may be taxed
in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is
limited to 15 per cent of the gross royalty.

• Article 12 – Remuneration or income derived by an individual from personal (including professional)
services is normally taxable only in the state in which the individual is resident. If the services are
performed in the other state, the income that is derived in that other state is taxable there. However,
income derived by a resident of one state from employment exercised in the other state is exempt from
tax in that other state if:
  (a) The recipient is present in the other state for no more than 183 days in the income year;
  (b) The remuneration is paid by an employer who is not a resident of the other state;
  (c) The remuneration is not borne by a permanent establishment which the employer has in the
      other state; and
  (d) The remuneration is subject to tax in the employee’s state of residence.

• Article 13 – Directors’ fees derived by a resident of one state from a company resident in the other
state may be taxed in that other state.

• Article 14 – Income derived by public entertainers and athletes from their personal activities may be
taxed in the state in which the activities are exercised. An enterprise of one state is deemed to have a
permanent establishment in the other state and to carry on trade or business through that permanent
establishment if it provides the services of a public entertainer or athlete in that other state (in which
case art 6 would apply).

310.80   Finland

The Double Taxation Relief (Finland) Order 1984 was signed on 12 March 1982 and came into force from
22 September 1984. In New Zealand it applies from 1 April 1985. In Finland it applies from 1 January 1985
for income subject to withholding tax from. For all other taxes it applies from 1 January 1985. The Second
Protocol to the 1982 Agreement was signed on 5 December 1986 and came into force 25 November 1988.
In New Zealand it applies from 1 April 1989. In Finland it applies from 1 January 1989 for income subject
to withholding tax. For all other taxes it applies from 1 January 1989.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from real property (including income from
agriculture or forestry) situated in the other state may be taxed in that other state.

• Article 7 – The profits of an enterprise are taxable only in the state in which the enterprise is resident.
However, if the enterprise carries on business through a permanent establishment situated in the other
state, that other state may tax the profits attributable to the permanent establishment.

• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be
taxed in that other state. Such dividends may also be taxed in the state in which the company is resident,
but that tax is limited to 15 per cent of the gross dividend.

• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that
other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per
cent of the gross interest.

• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that
other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to
10 per cent of the gross royalty.
• Article 14 – Income derived by a resident from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the resident performs activities from a fixed base in the other state, the income from those activities that is attributable to that fixed base may be taxed in the other state.

• Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in the fiscal year or taxable period;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base that the employer has in the other state.

• Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.

• Article 18 – Pensions paid in consideration of past employment are taxable only in the state of which the recipient is a resident. Pensions paid under social security legislation may be taxed in the state in which the pension is paid.

310.85 France
The Double Taxation Relief (French Republic) Order 1981 was signed on 30 November 1979 and came into force from 19 March 1981. In New Zealand it applies from 1 April 1982. In France it applies from 1 January 1982.

The main provisions of the agreement are:
• Article 6 – Income derived by a resident of one state from real property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.

• Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.

• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.

• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.

• Article 14 – Income derived by a resident from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the resident performs activities from a fixed base in the other state, the income from those activities that is attributable to that fixed base may be taxed in the other state.

• Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in the fiscal year;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
(c) The remuneration is not borne by a permanent establishment or fixed base that the employer has in the other state.

- Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.
- Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.
- Article 18 – Pensions paid in consideration of past employment are taxable only in the state of which the recipient is a resident. Pensions paid under social security legislation may be taxed in the state in which the pension is paid.

**310.90 Germany**

The Double Taxation Relief (Federal Republic of Germany) Order 1980 was signed on 20 October 1978 and came into force from 21 December 1980. In New Zealand it applies from 1 April 1978. In Germany it applies from 1 January 1978 for income subject to withholding tax. For all other taxes it applies from 1 January 1978.

The main provisions of the agreement are:

- Article 6 – Income derived by a resident of one state from real property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.
- Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.
- Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
- Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
- Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
- Article 14 – Income derived by a resident from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the resident performs activities from a fixed base in the other state, the income from those activities that is attributable to that fixed base may be taxed in the other state.
- Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  
  (a) The recipient is present in the other state for 183 days or less in the fiscal year;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base that the employer has in the other state.
- Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.
- Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.
- Article 18 – Pensions paid in consideration of past employment are taxable only in the state of which the recipient is a resident. Social security pensions may be taxed only in the state in which the pension is paid.
Double Tax Agreements

310.92 Hong Kong

The Double Tax Agreements (Hong Kong) Order 2011 was signed on 1 December 2010 and came into force on 9 November 2011. In New Zealand it applies for withholding taxes from 1 April 2012, and for other provisions generally for income years beginning 1 April 2012. In Hong Kong it applies generally for years of assessment beginning 1 April 2012.

The agreement is between the Government of New Zealand and the Hong Kong Special Administrative Region of the People’s Republic of China. For convenience, the word “state” is used in the following commentary to refer to the parties to the agreement.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture, forestry or fishing) situated in the other state may be taxed in that other state.

• Article 7 – The profits of an enterprise are usually taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to that permanent establishment.

• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is usually limited to 15 per cent of the gross dividend. If the beneficial owner of the dividends is a company which holds at least 10 per cent of the voting power of the company paying the dividend, the tax is limited to five per cent of the gross dividend.

• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arises, but that tax is limited to 10 per cent of the gross interest.

• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arise, but that tax is limited to five per cent of the gross royalty.

• Article 14 – Employment income is usually taxed only in the state of which the employee is a resident. If the employment is exercised in the other state (for example, a New Zealand resident working in Hong Kong), that other state may tax the remuneration derived from that other state. However, remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  
  (a) The recipient is present in the other state for a total of 183 days or less in any 12-month period commencing or ending in the year of assessment or income year concerned; and
  
  (b) The remuneration is paid by or on behalf of an employer who is not a resident of the other state; and
  
  (c) The remuneration is neither borne by nor deductible in determining the profits attributable to a permanent establishment which the employer has in the other state.

• Article 15 – Directors’ fees and other similar payments derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 16 – Income derived by entertainers and sportspersons resident in one state from their personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person. These provisions override Articles 7 and 14.

• Article 17 – Pensions and other similar remuneration paid in consideration of past employment or self-employment are taxable only in the state of which the recipient is a resident. However, lump sums paid under a mandatory provident fund scheme are taxable only in the Hong Kong Special Administrative Region.
• Article 20 – Types of income not covered by previous articles, wherever arising, may be taxed in the state in which the recipient is resident. If the income is derived from sources in the other state, it may also be taxed in that other state.

310.95 India

The Double Taxation Relief (India) Order 1986 was signed on 17 October 1986 and came into force from 3 December 1986. In New Zealand it applies from 1 April 1987. In India it applies from any “previous year” beginning 1 April 1987. The Second Protocol to the 1986 Agreement was signed 21 June 1999 and came into force on 17 December 1999. In New Zealand it applies from 1 April 2000. In India it applies for any “previous year” (as defined in the Income Tax Act 1961) from 1 April 2000.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.

• Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to:
  (a) The permanent establishment, or
  (b) The sales in that other state of items similar to those sold through the permanent establishment.

• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.

• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

• Article 12 – Royalties and fees for technical services arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties and fees may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty or fee.

• Article 14 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, such income may be taxed in the other state if:
  (a) The individual has a fixed base in the other state and the income is attributable to that fixed base, or
  (b) The individual’s stay in the other state exceeds 183 days in any 12-month period and the income is derived from activities performed in that other state.

• Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in a 12-month period;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base that the employer has in the other state.

• Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.

• Article 18 – Pensions and annuities paid in consideration of past employment are taxable only in the state of which the recipient is a resident.
310.100 Indonesia

The main provisions of the agreement are:

- Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.
- Article 7 – The profits of an enterprise are taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.
- Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
- Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
- Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 15 per cent of the gross royalty.
- Article 14 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the services are performed in the other state the income may be taxed in that other state if:
  (a) The individual is present in the other state for more than 90 days in any 12-month period, or
  (b) The individual has a fixed base in that other state.
- Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in a 12-month period;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base that the employer has in the other state.
- Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.
- Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.
- Article 18 – Pensions paid in consideration of past employment and annuities are taxable only in the state of which the recipient is a resident. However, pensions and other payments made under the social security legislation of a state may be taxed in that state.

310.105 Ireland

The main provisions of the agreement are:

- Article 8 – Income derived by a resident of one state from immovable property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.
Double Tax Agreements

• Article 9 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.

• Article 12 – Dividends paid by a company resident in New Zealand to a resident of Ireland may be taxed in Ireland. Such dividends may also be taxed in New Zealand, but that tax is limited to 15 per cent of the gross dividend. Dividends derived from a company resident in Ireland by a resident of New Zealand may be taxed in New Zealand. Where a resident of New Zealand is entitled to an Irish tax credit in respect of such a dividend, tax may also be charged in Ireland on the total of the amount of the dividend and the amount of that tax credit at a rate not exceeding 15 per cent. Otherwise, dividends derived from a company resident in Ireland by a resident of New Zealand are exempt from tax in Ireland.

• Article 13 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

• Article 14 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.

• Article 16 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the services are performed in the other state the income may be taxed in that other state if:
  (a) The individual is present in the other state for more than 183 days in any 12-month period, or
  (b) The individual has a fixed base in that other state.

• Article 17 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in a 12-month period;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base that the employer has in the other state.

• Article 18 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 19 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.

• Article 20 – Pensions paid in consideration of past employment and annuities are taxable only in the state of which the recipient is a resident. However, pensions and other payments made under the social security legislation of a state may be taxed in that state.

310.110 Italy

The Double Taxation Relief (Italy) Order 1983 was signed on 6 December 1979 and came into force from 23 March 1983. In New Zealand it applies from 1 April 1978. In Italy it applies from 1 January 1978.

The main provisions of the agreement are:

• Article 6 – Income from real property (including income from agriculture or forestry) may be taxed in the state in which the property is situated.

• Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.

• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.

• Article 14 – Income derived by a resident from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if that resident has a fixed base in the other state, the income that is attributable to that fixed base may be taxed in that other state.

• Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in a fiscal year;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base which the employer has in the other state.

• Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 17 – Income derived by entertainers and athletes from their personal activities may be taxed in the state in which those activities are exercised. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.

• Article 18 – Pensions paid in consideration of past employment are taxable only in the state of which the recipient is a resident.

310.115 Japan

The Double Taxation Relief (Japan) Order 1963 was signed on 30 January 1963 and came into force from 19 April 1963. In New Zealand it applies from 1 April 1963. In Japan it applies from 1 January 1963.

The main provisions of the agreement are:

• Article 3 – The industrial or commercial profits (excluding profits derived from the operation of ships or aircraft) of an enterprise of one state are not taxable in the other state except to the extent that the profits are attributable to a trade or business carried on through a permanent establishment situated in the other state.

• Article 6 – The rate of tax imposed by a state on dividends derived from sources within that state by a resident of the other state must not exceed 15 per cent unless such dividends arise in connection with a trade or business carried on by that resident through a permanent establishment situated in the first state.

• Article 7 – Income derived from real property in one state by a resident of the other state is taxable in accordance with the laws of the state in which the real property is situated. This applies also to royalties and other payments made in relation to mines or quarries or the extraction or removal of timber or other natural resources.

• Article 9 – Pensions derived from sources within one state by an individual resident in the other state and subject to tax in that other state are exempt from tax in the state from which the pension was derived. Pensions paid to individuals for services rendered to the Government of Japan are exempt from New Zealand tax.

• Article 10 – An individual resident in one state is exempt from tax in the other state on remuneration for personal (including professional) services performed in that other state in any income year if:
  (a) The individual is present in that other state for no more than 183 days during that year;
(b) The services are performed for or on behalf of a resident of the state of which the individual is resident; and
(c) The remuneration is taxable in the state in which the individual is resident.

310.120 Korea

The Double Taxation Relief (Republic of Korea) Order 1983 was signed on 6 October 1981 and came into force from 22 April 1983. In New Zealand it applies from 1 April 1981. In Korea it applies from 1 January 1981 for income subject to withholding tax. For all other taxes it applies from 1 January 1981. The Second Protocol to the 1981 Agreement was signed on 14 July 1997 and came into force on 10 October 1997.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.
• Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.
• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
• Article 14 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the services are performed in the other state the income may be taxed in that other state but only to the extent that the income is attributable to a fixed base the individual has in that other state.
• Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in a fiscal year;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base that the employer has in the other state.
• Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.
• Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.
• Article 18 – Pensions paid in consideration of past employment and annuities are taxable only in the state of which the recipient is a resident.

310.125 Malaysia

The Double Taxation Relief (Malaysia) Order 1976 was signed on 19 March 1976 and came into force from 2 September 1976. In New Zealand it applies from 1 April 1974. In Malaysia it applies from 1 January 1975. The Second Protocol to the 1976 Agreement was signed on 14 July 1994 and came into force on 1 July 1996.

The main provisions of the agreement are:
Double Tax Agreements

- Article 5 – The industrial or commercial profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, tax may be imposed by that other state on the whole of the industrial or commercial profits of the enterprise from sources within that other state, whether or not those profits are attributable to the permanent establishment.

- Article 8 – The New Zealand tax on dividends paid by a company resident in New Zealand to a resident of Malaysia may not exceed 15 per cent of the gross dividend. Dividends paid by a company resident in Malaysia to a New Zealand resident are exempt from any withholding tax in Malaysia. If Malaysian tax law changes after the date of signing the DTA, to introduce a tax on dividends, the tax on dividends paid to New Zealand residents is limited to 15 per cent of the gross dividend.

- Article 9 – The tax on interest derived from sources in one state by a resident of the other state is limited to 15 per cent of the gross interest.

- Article 10 – The tax on royalties derived from sources in one state by a resident of the other state is limited to 15 per cent of the gross royalties. Approved industrial royalties derived from sources in Malaysia by a New Zealand resident are exempt from Malaysian tax.

- Article 11 – Remuneration (excluding pensions) for personal (including professional) services is normally taxable only in the state of which the employee is a resident. If the services are performed in the other state, the remuneration derived from those services may be taxed in that other state. However, remuneration derived by a resident of one state from personal services performed in the other state is exempt from tax in that other state if:
  (a) The recipient is present in the other state for 183 days or less (in total) in the income year;
  (b) The remuneration is paid by a person who is a resident of the first-mentioned state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base which that person has in the other state.

- Article 12 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

- Article 13 – Income derived by public entertainers and athletes from personal activities may be taxed in the state in which the activities are exercised. This does not apply to a visit that is funded by the government of the state in which the entertainer or athlete is resident.

- Article 17 – Where a person is a tax resident under both New Zealand and Malaysian law, but is treated as resident of only one of those states by the DTA [under art 3], the person is exempt from tax in the other state on income than income derived from sources in that state.

Mexico

The Double Taxation Relief (Mexico) Order 2006 was signed on 16 November 2006 and came into force on 19 April 2007. The agreement entered into force on 16 June 2007. In New Zealand it applies for withholding taxes from 1 August 2007. For all other taxes it applies for income years beginning on or after 1 April 2008. In Mexico it applies for withholding taxes from 1 August 2007. For all other taxes it applies generally from 1 January 2008.

The main provisions of the agreement are:

- Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture, forestry or fishing) situated in the other state may be taxed in that other state.

- Article 7 – The profits of an enterprise are taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to:
  (a) That permanent establishment, or
  (b) Sales of goods or merchandise in that other state of the same or similar kind to goods and merchandise sold through the permanent establishment.

- Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident,
but that tax is limited to either five per cent of the gross dividend or zero, depending on the size of the investor’s shareholding in the company. Before 1 May 2010, the rate was 15 per cent.

- Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
- Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
- Article 14 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in any 12-month period commencing or ending in the year of income or the fiscal year concerned; and
  (b) The remuneration is paid by or on behalf of an employer who is not a resident of the other state; and
  (c) The remuneration is not deductible in determining the taxable profits of a permanent establishment which the employer has in the other state.
- Article 15 – Directors’ fees and other similar payments derived by a resident of one state (and, in the case of Mexico, in that person’s capacity as an “administrador” or “comisario” of a company) from a company resident in the other state may be taxed in that other state.
- Article 16 – Income derived by entertainers and sportspersons resident in one state from their personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.
- Article 17 – Pensions (including government service pensions) and annuities are taxable only in the state of which the recipient is a resident. Pensions and other payments made under the social security legislation of one state to a resident of the other state are taxable only in that other state.
- Article 20 – Items of income not covered by previous articles, wherever arising, may be taxed in the state in which the recipient is resident. If the income is derived from sources in the other state, it may also be taxed in that other state.

310.130 Netherlands

The main provisions of the agreement are:

- Article 6 – Income derived by a resident of one state from real property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.
- Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.
- Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
- Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
Double Tax Agreements

- Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
- Article 14 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the services are performed in the other state from a fixed base there, the income attributable to that fixed base may be taxed in that other state.
- Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in the fiscal year;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base which the employer has in the other state.
- Article 16 – Directors’ fees or similar derived by a resident of one state from a company resident in the other state may be taxed in that other state.
- Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.
- Article 18 – Pensions paid in consideration of past employment and annuities are taxable only in the state of which the recipient is a resident.

On 1 March 2007, the New Zealand and Netherland governments signed an agreement for the exchange of information with respect to taxes between the two countries to facilitate the administration and enforcement of each country’s tax laws. Such information may relate to the determination, assessment and collection of taxes, the recovery and enforcement of tax claims, or the investigation or prosecution of tax matters. The agreement applies only to the Netherlands Antilles (a small group of islands in the Caribbean Sea, off the coast of Venezuela), not to the Netherlands as a whole. The agreement came into force on 2 October 2008 under the Tax Information Exchange (Netherlands Antilles) Order 2008, and has effect from 1 January 2009.

The tax treatment of Netherlands social security pension payments received by New Zealand residents is explained in 760.80.

310.135 Norway

The Double Taxation Relief (Norway) Order 1983 was signed on 20 April 1982 and came into force from 31 March 1983. In New Zealand it applies from 1 April 1982. In Norway it applies from 1 January 1982. An Exchange of Notes Pursuant to paragraph (c) of the Protocol to the 1982 Agreement was signed on 16 June 1998 and came into force from 16 July 1998. In Norway, paragraph (c) of the Protocol to the 1982 Agreement applies from 1 January 1999.

The main provisions of the agreement are:
- Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.
- Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.
- Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
- Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.

• Article 14 – Income derived from professional services or other independent activities is normally taxable only in the state in which the recipient is resident. However, if the recipient has a fixed base in the other state, that other state may tax the income attributable to that fixed base. If the recipient is present in the other state for more than 183 days during any fiscal year and the preceding and succeeding fiscal years, the income may be taxed in that other state.

• Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in any fiscal year and the preceding and succeeding fiscal years; and
  (b) The remuneration is paid by an employer who is resident in the same state as the employee; and
  (c) The remuneration is not connected with a permanent establishment or fixed base that the employer has in the other state.

• Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.

• Article 18 – Pensions (including government pensions and social security payments) and annuities are taxable only in the state of which the recipient is a resident.

310.140 Philippines

The Double Taxation Relief (Republic of the Philippines) Order 1980 was signed on 29 April 1980 and came into force from 14 May 1981. In New Zealand it applies from 1 April 1981. In the Philippines it applies from 1 January 1981 for income subject to withholding tax. For all other taxes it applies from 1 January 1981. The Second Protocol to the 1980 Agreement was signed on 21 February 2002 and came into force on 2 October 2008. It is effective from 1 December 2008.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.

• Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.

• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.

• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 15 per cent of the gross royalty.

• Article 14 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the services are performed in the other state the income may be taxed in that other state if:
Double Tax Agreements

(a) The individual is present in the other state for more than 183 days in an income year, or
(b) The individual has a fixed base in that other state.
Only income that is attributable to the period of presence or to the fixed base may be taxed in that other state.

- Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. However, remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in the income or fiscal year;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not deductible in determining the taxable profits of a permanent establishment or fixed base which the employer has in the other state.

- Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

- Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.

- Article 18 – Pensions and annuities paid in consideration of past employment are taxable only in the state of which the recipient is a resident. However, social security pensions paid by a state are taxable only in that state.

Poland

The Double Taxation Relief (Poland) Order 2006 was signed on 21 April 2005 and came into force on 16 August 2006. In New Zealand it applies for withholding taxes from 1 January 2007. For all other taxes it applies for income years beginning on or after 1 April 2007. In Poland it applies for all taxes generally from 1 January 2007.

The main provisions of the agreement are:

- Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture, forestry or fishing) situated in the other state may be taxed in that other state.
- Article 7 – The profits of an enterprise are taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to that permanent establishment.
- Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
- Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
- Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
- Article 14 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in any 12-month period commencing or ending in the year of income concerned; and
  (b) The remuneration is paid by or on behalf of an employer who is not a resident of the other state; and
Double Tax Agreements

(c) The remuneration is not deductible in determining the taxable profits of a permanent establishment which the employer has in the other state.

• Article 15 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.
• Article 16 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.
• Article 17 – Pensions paid in consideration of past employment are taxable only in the state of which the recipient is a resident. Pensions paid under the social security legislation of one state to a resident of the other state are taxable only in that other state. Alimony and maintenance payments are taxable only in the state in which the payment arises.
• Article 20 – Types of income not covered by previous articles are taxable only in the state of which the recipient is resident. However, if the income is derived from the other state, the income may also be taxed in that other state.

310.150 Russia

The Double Taxation Relief (Russian Federation) Order 2001 was signed on 5 September 2000 and came into force from 4 July 2003. In New Zealand it applies from 1 January 2004 for withholding taxes on income. For all other taxes it applies from 1 April 2004. In Russia it applies from 1 January 2004 for all taxes.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from real property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.
• Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.
• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
• Article 14 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the services are performed in the other state the income may be taxed in that other state if:
  (a) The individual has a fixed base in that other state; or
  (b) The individual is present in the other state for more than 183 days in any 12-month period commencing or ending in the fiscal year.

Only income that is attributable to the period of presence or to the fixed base may be taxed in that other state.
• Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in any 12-month period commencing or ending in the fiscal year;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
Double Tax Agreements

• Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 17 – Income derived by entertainers or sportspersons from their personal activities as such may be taxed in the state in which the activities are exercised. This applies whether the income from such activities accrues to the entertainer or sportsperson personally or to another person.

• Article 18 – Pensions, other than government pensions, and annuities paid to a resident of a state are taxable only in that state. Pensions paid by the government of a state may be taxed in that state. However, 50 per cent of the amount of government pensions may also be taxed in the other state.

310.155 Singapore

The Double Taxation Relief (Singapore) Order 1973 was signed on 21 August 1973 and came into force from 1 December 1973. In New Zealand it applies from 1 April 1973. In Singapore it applies from 1 January 1974. The Second Protocol to the 1973 Agreement was signed on 1 July 1993 and came into force from 10 September 1993. The Third Protocol to the 1973 Agreement was signed on 5 September 2005 and came into force on 17 August 2006. The main provisions of the agreement are:

• Article 5 – Industrial or commercial profits are taxable only in the state in which the enterprise is resident. However, if the enterprise carries on trade or business through a permanent establishment situated in the other state, that other state may tax all of the profits of the enterprise from sources within that other state, whether or not those profits are attributable to the permanent establishment.

• Article 8 – The New Zealand tax on dividends paid by a company resident in New Zealand to a Singapore resident is limited to 15 per cent of the gross dividend. Dividends paid by a company resident in Singapore to a New Zealand resident are exempt from tax (because at the date of signing the DTA Singapore did not tax domestic dividends). If Singapore subsequently introduces a tax on dividends, the amount of tax is limited to 15 per cent of the gross dividend paid to a New Zealand resident.

• Article 9 – The tax that one state may impose on interest derived from sources in that state by a resident of the other state is limited to 15 per cent of the gross interest. This restriction does not apply if the person deriving the interest has a permanent establishment in the other state and the interest is connected with that permanent establishment.

• Article 10 – The tax that one state may impose on royalties derived from sources in that state by a resident of the other state is limited to 15 per cent of the gross royalty.

• Article 11 – Income derived by a resident individual from professional services or other activities of an independent character is normally taxable only in the state of which the person is resident. If the individual has a fixed base in the other state, the income from independent professional services attributable to that fixed base may be taxed in the other state. If the individual is present in the other state for more than 183 days in any 12-month period, income from independent professional services performed in that other state may be taxed in that state.

• Article 11A – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in any 12-month period;
  (b) The remuneration is paid by, or on behalf of, a person who is not a resident of the other state; and
  (c) The remuneration is not borne by or deductible in determining the taxable profits of a permanent establishment or fixed base which the employer has in the other state.

• Article 12 – Directors’ fees derived by a resident of one state in their capacity as a member of the board of directors of a company resident in the other state may be taxed in that other state.

• Article 13 – Income derived by public entertainers and athletes from their personal activities may be taxed in the state in which those activities are exercised. An enterprise of one state that provides the
services of a public entertainer or athlete in the other state is deemed to have a permanent establishment in that other state.

(1) 2010 agreement

The Double Tax Agreements (Singapore) Order 2010 was signed on 21 August 2009 and came into force on 12 August 2010. In New Zealand it applies to withholding taxes from 1 October 2010 and, for other provisions, to income years beginning on or after 1 April 2011. In Singapore it applies in respect of tax chargeable for any year of assessment beginning on or after 1 January 2012. As income tax is assessed on a preceding year basis in Singapore, this means that the DTA will apply in Singapore to income earned during calendar years beginning on or after 1 January 2011. For withholding taxes, it will apply from 1 January 2011. The main provisions of the agreement are:

- Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture, forestry and fishing) situated in the other state may be taxed in that other state. “Immovable property” has the meaning according to the law of the state in which the property is situated but specifically includes, for example, natural resources, property accessory to immovable property, livestock and equipment used in agriculture and forestry, and the right to explore for or exploit natural resources or standing timber.

- Article 7 – The profits of an enterprise are normally taxable only in the state in which the person carrying on the enterprise is resident. However, if the enterprise carries on a business through a permanent establishment situated in the other state, the profits of the enterprise that are attributable to that permanent establishment may be taxed in that other state. Where profits include items of income dealt with in other articles of the agreement, the provisions of those other articles take precedence.

- Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to:
  - Five per cent of the gross dividend if the beneficial owner is a company that owns directly at least 10 per cent of the voting power of the company paying the dividend;
  - Fifteen per cent in all other cases.

- Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that state. Such interest may also be taxed in the state in which it arises, but that tax is limited to 10 per cent of the gross interest. Interest arising in one state and paid to the government of the other state is exempt from tax in the state the interest arose.

- Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to five per cent of the gross royalties.

- Article 14 – Employment income is normally taxable only in the state of which the employee is a resident. If the employment is exercised in the other state, that other state may tax the remuneration derived from that other state. However, remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for a total of 183 days or less in any 12-month period;
  (b) The remuneration is paid by, or on behalf of, an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by or deductible in determining the taxable profits of a permanent establishment which the employer has in the other state.

Article 14 is overridden by arts 15 (directors’ fees), 17 (pensions) and 18 (government service).

- Article 15 – Directors’ fees and other similar payments derived by a resident of one state in their capacity as a member of the board of directors of a company resident in the other state may be taxed in that state.
• Article 16 – Income derived by an entertainer or sportsperson who is resident of one state, from that person’s personal activities as an entertainer or sportsperson in the other state, may be taxed in that other state. This applies whether the income accrues to the entertainer or sportsperson personally, or to another person. “Entertainer” includes theatre, motion picture, radio and television artistes, and musicians. Article 16 overrides arts 7 (business profits) 14 and (employment income).

• Article 17 – Pensions and other similar remuneration paid to a resident of one state in consideration of past employment are taxable only in that state. This does not apply to certain government pensions. Pensions and other payments made under the social security legislation of one state to a resident of the other state are taxable only in that other state.

• Article 19 – Payments made to a student or business apprentice who is visiting one state are not taxable in that state if:
   (a) Immediately before visiting that state, the student or business apprentice was a resident of the other state;
   (b) The student or business apprentice is present in the first-mentioned state solely for the purpose of their education or training; and
   (c) The payments are received for the purpose of their maintenance, education or training.

• Article 23 – The agreement authorises and requires the competent authorities (the CIR, in the case of New Zealand, and the Minister for Finance, in the case of Singapore) to exchange information that is relevant for:
   (a) Carrying out the provisions of the agreement; or
   (b) Administering or enforcing the domestic tax laws of either state.

310.160 South Africa

The Double Taxation Relief (South Africa) Order 2004 was signed on 18 February 2002 and came into force from 23 July 2004. In New Zealand it applies from 1 September 2004 for withholding taxes. For all other taxes from 1 April 2005. In South Africa it applies for withholding taxes from 1 September 2004. For all other taxes it applies from 1 January 2005.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture, forestry or fishing) situated in the other state may be taxed in that other state.

• Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.

• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to:
   (a) Fifteen per cent of the gross dividend, in the case of New Zealand;
   (b) In the case of South Africa:
      (i) Five per cent of the gross dividend, if the recipient of the dividend is a company that owns 25 per cent or more of the company paying the dividend; or
      (ii) Fifteen per cent of the gross dividend, in other cases.

• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
Double Tax Agreements

• Article 14 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in a 12-month period;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not deductible in determining the taxable profits of a permanent establishment that the employer has in the other state.

• Article 15 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 16 – Income derived by entertainers and sportspersons resident in one state from their personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or sportsperson personally or to another person.

• Article 17 – Pensions and annuities are taxable only in the state of which the recipient is a resident.

310.165 Spain

The Double Taxation Relief (Spain) Order 2006 was signed on 28 July 2005 and came into force from 31 July 2006. In New Zealand it applies for withholding taxes from 1 September 2006. For all other taxes it applies for income years beginning on or after 1 April 2007. In Spain it applies, for all taxes, generally from 1 January 2007.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.

• Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.

• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.

• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.

• Article 14 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in any 12-month period commencing or ending in the year of income;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not deductible in determining the taxable profits of a permanent establishment which the employer has in the other state.

• Article 15 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 16 – Income derived by entertainers and sportspersons resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or sportsperson personally or to another person.
Double Tax Agreements

310.170 Sweden
The Double Taxation Relief (Sweden) Order 1980 was signed on 21 February 1979 and came into force from 14 November 1980. In New Zealand it applies from 1 April 1981. In Sweden it applies from 1 January 1981.
The main provisions of the agreement are:

• Article 5 – The industrial or commercial profits of an enterprise of one state are normally exempt from tax in the other state. However, if the enterprise is engaged in trade or business in the other state, that other state may tax the profits of the enterprise that are directly or indirectly attributable to that permanent establishment.
• Article 8 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
• Article 9 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
• Article 10 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
• Article 11 – Income from real property may be taxed in the state in which the property is situated.
• Article 14 – Pensions and annuities are taxable only in the state in which the recipient is resident.
• Article 15 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the services are performed in the other state the income may be taxed in that other state if:
(a) The recipient is present in the other state for more than 183 days in the income year, or
(b) The recipient has a fixed base in that other state for more than 183 days in the income year.
• Article 16 – Employment income is taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
(a) The recipient is present in the other state for 183 days or less in the income year;
(b) The remuneration is paid by an employer who is not a resident of the other state; and
(c) The remuneration is not borne by a permanent establishment or fixed base that the employer has in the other state.
• Article 17 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.
• Article 18 – Income derived by public entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. Where such services are provided via an enterprise, the profits derived from those services by that enterprise may also be taxed in the other state.

310.175 Switzerland
The Double Taxation Relief (Switzerland) Order 1981 was signed on 6 June 1980 and came into force from 21 November 1981. In New Zealand it applies from 1 April 1981. In Switzerland it applies from 1 January 1981.
The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from real property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.
Double Tax Agreements

- Article 7 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.
- Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
- Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.
- Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
- Article 14 – Income derived from professional services or other independent activities is taxable only in the state in which the recipient is resident unless the recipient has a fixed base in the other state. If the recipient has a fixed base in the other state, the income attributable to the fixed base may be taxed in the other state.
- Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in a fiscal year;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base that the employer has in the other state.
- Article 16 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.
- Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.
- Article 18 – Pensions paid in consideration of past employment and annuities are taxable only in the state of which the recipient is a resident.

Taiwan

The Double Taxation Relief (Taiwan) Order 1997 was signed on 11 November 1996 and came into force from 15 December 1997. In New Zealand it applies from 1 February 1998 for income subject to withholding tax. Income of aircraft operations applies from 1 January 1996. For all other taxes it applies 1 April 1998. In Taiwan it applies from 1 February 1998 for income subject to withholding tax. Income of aircraft operations applies from 1 January 1996. For all other taxes it applies from 1 January 1998.

The main provisions of the agreement are:
- Article 6 – Income derived by a resident of one territory from immovable property (including income from agriculture, forestry or fishing) situated in the other territory may be taxed in that other territory.
- Article 7 – The profits of an enterprise are normally taxable only in the territory in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other territory, that other territory may tax the profits attributable to the permanent establishment.
- Article 10 – Dividends paid by a company resident in one territory to a resident of the other territory may be taxed in that other territory. Such dividends may also be taxed in the territory in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
- Article 11 – Interest arising in one territory and paid to a resident of the other territory may be taxed in that other territory. Such interest may also be taxed in the territory in which it arose, but that tax is limited to 10 per cent of the gross interest.

Staples Tax Guide 2012
Article 12 – Royalties arising in one territory and paid to a resident of the other territory may be taxed in that other territory. Such royalties may also be taxed in the territory in which they arose, but that tax is limited to 10 per cent the gross royalty.

Article 14 – Income derived by an individual from professional services or other independent activities is normally taxable only in the territory in which the individual is resident. However, if the services are performed in the other territory the income may be taxed in that other territory if:
(a) The individual is present in the other territory for more than 183 days in any 12-month period commencing or ending in the income year, or
(b) The individual has a fixed base in that other territory.

Article 15 – Employment income is normally taxable only in the territory of which the employee is a resident. If employment is exercised in the other territory, that other territory may tax the remuneration derived from that other territory. Remuneration derived by a resident of one territory from employment exercised in the other territory is taxable only in the employee’s territory of residence if:
(a) The recipient is present in the other territory for 183 days or less in a 12-month period commencing or ending in the income year;
(b) The remuneration is paid by an employer who is not a resident of the other territory; and
(c) The remuneration is not borne by a permanent establishment or fixed base that the employer has in the other territory.

Article 16 – Directors’ fees derived by a resident of one territory from a company resident in the other territory may be taxed in that other territory.

Article 17 – Income derived by entertainers and sportspersons from their personal activities may be taxed in the territory in which those activities are exercised. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.

Article 18 – Pensions and annuities are taxable only in the territory of which the recipient is a resident.

Thailand

The Double Taxation Relief (Thailand) Order 1998 was signed on 22 October 1998 and came into force from 14 December 1998. In New Zealand it applies from 1 January 1999 for income subject to withholding tax. For all other taxes it applies from 1 April 1999. In Thailand it applies from 1 January 1999 for income subject to withholding tax. For all other taxes it applies from 1 January 1999.

The main provisions of the agreement are:

Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture, forestry or fishing) situated in the other state may be taxed in that other state.

Article 7 – The income or profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the income or profits attributable to that permanent establishment.

Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.

Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to:
(a) Ten per cent of the gross interest, if received by a financial institution;
(b) Ten per cent of the gross interest, if the interest relates to a sale of equipment, merchandise or services on credit (except where the parties are not dealing at arm’s length); or
(c) Fifteen per cent of the gross interest, in all other cases.

Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to
either 10 per cent or 15 per cent of the gross royalty, depending on the type of royalty (refer to the Article for details).

- Article 15 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the services are performed in the other state the income may be taxed in that other state if:
  (a) The individual is present in the other state for more than 183 days in any 12-month period commencing or ending in the income year; or
  (b) The individual has a fixed base in that other state.

Only income that is attributable to activities performed during such periods of presence or from that fixed base are taxable in the other state.

- Article 16 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in a 12-month period commencing or ending in the income year;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not deductible in determining the taxable profits of a permanent establishment or fixed base which the employer has in the other state.

- Article 17 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

- Article 18 – Income derived by entertainers and sportspersons from personal activities may be taxed in the state in which the activities are exercised. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person.

- Article 19 – Pensions and annuities are taxable only in the state of which the recipient is a resident.

### Turkey

The Double Taxation Agreements (Turkey) Order 2010 was signed on 22 April 2010 and came into force on 28 July 2011. In New Zealand it applies from 1 January 2012 for withholding taxes. For all other taxes it applies generally for income years beginning 1 April 2012. In Turkey it applies generally for taxable periods beginning 1 January 2012. The main provisions of the agreement are:

- Article 6 – Income derived by a resident of one state from immovable property (including income from agriculture, forestry and fishing) situated in the other state may be taxed in that other state. “Immovable property” has the meaning according to the law of the state in which the property is situated but specifically includes, for example, natural resources, property accessory to immovable property, livestock and equipment used in agriculture, forestry or fishing, and the right to explore for or exploit natural resources or standing timber.

- Article 7 – The profits of an enterprise are normally taxable only in the state in which the person carrying on the enterprise is resident. However, if the enterprise carries on a business through a permanent establishment situated in the other state, the profits of the enterprise that are attributable to that permanent establishment may be taxed in that other state. Where profits include items of income dealt with in other articles of the agreement, the provisions of those other articles take precedence.

- Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to:
  (a) Five per cent of the gross dividend if the beneficial owner is a company that owns directly at least 25 per cent of the voting power of the company paying the dividend, and the dividend is exempt from tax in the other state;
  (b) Fifteen per cent in all other cases.
Profits derived by a resident of New Zealand through a permanent establishment situated in Turkey may, after having been taxed under art 7, be taxed on the remaining amount of that profit in Turkey, but that tax is limited to:

(a) Five per cent of the remaining amount, provided that such profits are exempt from tax in New Zealand;

(b) Fifteen per cent of the remaining amount in all other cases.

• Article 11 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arises, but that tax is limited to:

(a) Ten per cent of the gross interest, if it is paid to a bank;

(b) Fifteen per cent in all other cases.

Interest arising in one state and paid to the government of the other state, or to the Central Bank of Turkey or the Reserve Bank of New Zealand, is exempt from tax in the state the interest arose.

• Article 12 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalties.

• Article 14 – Income derived by an individual from professional services or other activities of an independent character is normally taxable only in the state of which the individual is a resident. However, such income may also be taxed in the other state if the services or activities are performed in the other state and:

(a) The individual has a fixed base regularly available to them in that other state for the purpose of performing those services or activities; or

(b) The individual is present in the other state, for the purpose of performing those services or activities, for a total of 183 days or more in any continuous period of 12 months.

Income derived by an enterprise from professional services or other activities of a similar character is normally taxable only in the state in which the enterprise is resident. However, such income may also be taxed in the other state if the services or activities are performed in the other state and:

(a) The enterprise has a permanent establishment in that other state through which the services or activities are performed; or

(b) The period or periods during which the services or activities are performed exceed a total of 183 days in any continuous period of 12 months.

• Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If the employment is exercised in the other state, that other state may tax the remuneration derived from that other state. However, remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:

(a) The recipient is present in the other state for a total of 183 days or less in any 12-month period;

(b) The remuneration is paid by, or on behalf of, an employer who is not a resident of the other state; and

(c) The remuneration is not borne by or deductible in determining the profits attributable to a permanent establishment or fixed base which the employer has in the other state.

Article 15 is overridden by arts 16 (directors’ fees), 18 (pensions), 19 (government service) and 20 (students).

• Article 16 – Directors’ fees and other similar payments derived by a resident of one state in their capacity as a member of the board of directors of a company resident in the other state may be taxed in that other state.

• Article 17 – Income derived by an entertainer or sportsperson who is resident of one state, from that person’s personal activities as an entertainer or sportsperson in the other state, may be taxed in that other state. This applies whether the income accrues to the entertainer or sportsperson personally, or to another person. “Entertainer” includes theatre, motion picture, radio and television artistes, and
musicians. Article 17 overrides arts 7 (business profits), 14 (independent personal services) and 15 (employment income).

- Article 18 – Pensions (including government service pensions) and other similar remuneration (including life annuities) paid to a resident of one state in consideration of past employment are taxable only in that state. Pensions and other payments made under the social security legislation of one state to a resident of the other state are taxable only in that other state.

- Article 19 – Salaries, wages and other similar remuneration (excluding pensions) paid by the government of one state to an individual for services rendered to that government are taxable only in that state. However, such payments are taxable only in the other state if the services are rendered in the other state and the individual is a resident and national of that state, and did not become a resident of that state solely for the purpose of rendering the services. Article 19 is overridden by arts 15 (employment income), 16 (directors’ fees) and 17 (entertainers and sportspeople) in respect of payments for services rendered in connection with a business carried on by a government.

- Article 20 – Payments which a student or business apprentice, who is a national of one state and present in the other state solely for the purpose of their education or training, receives for their maintenance, education or training is not taxable in the other state, provided the payments arise from sources outside that state. Remuneration which a student or business apprentice, who is a national of one state, derives from employment exercised in the other state is not taxed in that other state provided:
  (a) The period or periods of employment do not exceed two years;
  (b) The employment is undertaken in order to obtain practical experience related to their education or training; and
  (c) The student was present in the other state solely for the purpose of exercising that employment.

- Article 25 – The agreement authorises and requires the competent authorities (the CIR, in the case of New Zealand, and the Minister for Finance, in the case of Turkey) to exchange information that is foreseeable relevant for:
  (a) Carrying out the provisions of the agreement; or
  (b) Administering or enforcing the domestic tax laws of either state.

### United Arab Emirates

The Double Taxation Relief (United Arab Emirates) Order 2004 was signed on 22 September 2003 and came into force from 29 July 2004. In New Zealand it applies from 1 September 2004 for withholding taxes. The article dealing with income from employment takes effect retrospectively from 27 October 2002. For all other taxes it applies from 1 April 2005. In the United Arab Emirates it applies from 1 September 2004 for withholding taxes. The article dealing with income from employment takes effect retrospectively from 27 October 2002. For all other taxes it applies from 1 January 2005.

The main provisions of the agreement are:

- Article 7 – Income derived by a resident of one state from immovable property (including income from agriculture, forestry or fishing) situated in the other state may be taxed in that other state.

- Article 8 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.

- Article 11 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.

- Article 12 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

- Article 13 – Royalties arising in one state and paid to a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.
• Article 15 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the services are performed in the other state the income from those services may be taxed in that other state if:
  (a) The individual is present in the other state for more than 183 days in any 12-month period commencing or ending in the income year; or
  (b) The individual has a fixed base in that other state.

• Article 16 – Employment income is taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in a 12-month period commencing or ending in the income year; and
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not deductible in determining the taxable profits of a permanent establishment or fixed base which the employer has in the other state.

• Article 17 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 18 – Income derived by entertainers and sportspersons resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or sportsperson personally or to another person.

• Article 19 – Pensions, including government pensions and annuities, are taxable only in the state of which the recipient is a resident.

310.195 United Kingdom

The Double Taxation Relief (United Kingdom) Order 1984 was signed on 4 August 1983 and came into force from 16 March 1984. In New Zealand it applies from 1 April 1984. In the United Kingdom it applies from 6 April 1984 for income tax and capital gains tax. Corporation tax applies from 1 April 1984. Petroleum revenue tax applies from 1 January 1984. An Exchange of Notes in Relation to Article 27 of the 1983 Agreement was signed on 22 December 1983 and came into force on 22 December 1983. In New Zealand it applies from 1 April 1984. In the United Kingdom it applies from 1 April 1984 for income tax and capital gains tax. Corporation tax applies from 1 January 1984. Petroleum revenue tax applies from 1 January 1984. A Protocol to the 1983 Agreement was signed 4 November 2003 and came into force on 23 July 2004. In New Zealand it applies from 4 November 2003 for income and gains referred to in art 5 of the protocol. For all other taxes it applies from 1 April 2005. In the United Kingdom it applies from 4 November 2003 for income tax, capital gains tax and corporation tax on gains referred to in art 5 of the protocol. For all other taxes it applies from 6 April 2005. For corporation tax (not described in art 5 of the protocol) it applies from 1 April 2005 and 6 April 2006 for tax credits described in art 8.

The Second Protocol to the 1983 Agreement was signed on 7 November 2007 and came into force on 28 August 2008. The protocol amends art 25, allowing the two tax authorities to exchange information on taxes other than income tax, and introduces new art 25A, allowing the tax authorities to assist each other in the recovery of tax debt.

The main provisions of the agreement are:

• Article 7 – Income derived by a resident of one state from immovable property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.

• Article 8 – The profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the profits attributable to the permanent establishment.

• Article 11 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend.
• Article 12 – Interest arising in one state and paid to a resident of the other state may be taxed in that other state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest.

• Article 13 – Royalties arising in one state and derived by a resident of the other state may be taxed in that other state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty.

• Article 15 – Income derived by an individual from professional services or other independent activities is normally taxable only in the state in which the individual is resident. However, if the services are performed in the other state the income from those services may be taxed in that other state if:
  (a) The individual is present in the other state for more than 183 days in any 12-month period, or
  (b) The individual has a fixed base in that other state.

• Article 16 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in a 12-month period;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment or fixed base which the employer has in the other state.

• Article 17 – Directors’ fees derived by a resident of one state from a company resident in the other state may be taxed in that other state.

• Article 18 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person [see TES 27 (July 2005) 404].

• Article 19 – Pensions (including those paid under social security legislation) and similar remuneration for past employment or services, and annuities, are taxable only in the state of which the recipient is a resident.

310.200 United States

The Double Taxation Relief (United States of America) Order 1983 was signed on 23 July 1983 and came into force from 2 November 1983. In New Zealand it applies from 1 April 1984 for income subject to withholding tax. For all other taxes it applies from 1 April 1984. In the United States it applies from 1 January 1984 for income subject to withholding tax. For all other taxes it applies from 1 January 1983.

The second protocol to the 1982 agreement was signed on 1 December 2008 and came into force on 12 November 2010. In New Zealand it applies from 1 January 2011 for income subject to withholding tax. For all other provisions it applies for income years beginning on or after 1 January 2011. In the United States it applies from 1 January 2011 for income subject to withholding tax. For all other provisions, it applies to taxable periods beginning on or after 1 January 2011.

The main provisions of the agreement are:

• Article 6 – Income derived by a resident of one state from real property (including income from agriculture or forestry) situated in the other state may be taxed in that other state.

• Article 7 – The business profits of an enterprise are normally taxable only in the state in which the enterprise is resident. However, if the enterprise carries on business through a permanent establishment situated in the other state, that other state may tax the business profits attributable to the permanent establishment.

• Article 10 – Dividends paid by a company resident in one state to a resident of the other state may be taxed in that other state. Such dividends may also be taxed in the state in which the company is resident, but that tax is limited to 15 per cent of the gross dividend. From 1 January 2011, tax on dividends is limited to:
Double Tax Agreements

(a) Five per cent of the gross dividend, if the beneficial owner is a company that owns at least 10 per cent of the voting power of the company paying the dividend;
(b) Fifteen per cent of the gross dividend, in all other cases.

From 1 January 2011, subject to certain conditions, no tax may be deducted from dividends if the beneficial owner of the dividends is a company (resident in the other state) that has owned, directly or indirectly, shares representing 80 per cent or more of the voting power of the company paying the dividend for at least 12 months prior to the date the dividend was paid.

- Article 11 – Interest derived by a resident of a state may be taxed in that state. Such interest may also be taxed in the state in which it arose, but that tax is limited to 10 per cent of the gross interest. Interest payable to the government of the other state, or to an instrumentality of the government of the other state that is not subject to tax, is exempt from tax altogether.
- Article 12 – Royalties derived by a resident of a state may be taxed in that state. Such royalties may also be taxed in the state in which they arose, but that tax is limited to 10 per cent of the gross royalty. From 1 January 2011, tax on royalties is limited to five per cent.
- Article 14 – Income derived by an individual from the performance of independent personal services is normally taxable only in the state in which the individual is resident. However, if the services are performed in the other state the income from those services may be taxed in that other state if:
  (a) The individual is present in the other state for more than 183 days in any 12-month period, or
  (b) The individual has a fixed base in that other state.

Note: From 1 April 2011, art 14 no longer applies.

- Article 15 – Employment income is normally taxable only in the state of which the employee is a resident. If employment is exercised in the other state, that other state may tax the remuneration derived from that other state. Remuneration derived by a resident of one state from employment exercised in the other state is taxable only in the employee’s state of residence if:
  (a) The recipient is present in the other state for 183 days or less in a 12-month period;
  (b) The remuneration is paid by an employer who is not a resident of the other state; and
  (c) The remuneration is not borne by a permanent establishment which the employer has in the other state.
- Article 17 – Income derived by entertainers and athletes resident in one state from personal activities exercised in the other state may be taxed in that other state, unless the gross receipts derived do not exceed US$10,000 for the income year. This applies whether the income from such activities accrues to the entertainer or athlete personally or to another person (although there is an exclusion if the entertainer or athlete does not benefit personally).
- Article 18 – Pensions derived in consideration of past employment are taxable only in the state of which the recipient is a resident. However, pensions paid under the social security legislation of a state to a resident of the other state or a citizen of the United States may be taxed only in the state from which the payment originated. Annuities are taxable only in the state of which the recipient is a resident.

310.210 Fiscally transparent entities

The United States and New Zealand agreed in February 2005 to allow fiscally transparent entities owned by United States and New Zealand residents to benefit from the DTA. A fiscally transparent entity is an entity that is disregarded for tax purposes, with tax being imposed directly on the owners or shareholders, as happens with a partnership.

Prior to this agreement, entities (such as United States limited partnerships and limited liability companies) that were treated as fiscally transparent in the country they were established in were not treated as fiscally transparent in the other country. This meant that the income of these entities was treated as derived by the entity itself and not by the owners, and the owners were not obtaining the benefits of the DTA.

Under the agreement, the income of fiscally transparent entities will be treated as derived by each owner of the entity, to the extent of the share the owner has in the income.

Tax recovery agreements provide a mechanism by which participating countries can call on each other’s tax administrations to recover tax from absconding debtors.

The following rules relating to tax recovery agreements apply from 20 May 1999.

1. **Definitions**

A “tax recovery agreement” is:

(a) A convention or agreement negotiated to assist in the recovery of unpaid tax due to either or both of the Governments that are parties to the convention or the agreement; or

(b) A double tax agreement, to the extent that it provides for the recovery of unpaid tax.

“Competent authority” has the meaning provided in a double tax agreement or in a tax recovery agreement and includes the CIR.

“Contested act of assistance” means an act of or on behalf of a competent authority that a person affected by the act considers is inconsistent with a tax recovery agreement.

2. **Tax recovery agreements**

The Governor-General may, by Order in Council, declare that a tax recovery agreement has effect for unpaid tax. A tax recovery agreement has effect even if a provision in the agreement is inconsistent with a provision in the ITA or any other Act.

To the extent that the taxes are prescribed in a tax recovery agreement, the agreement may provide for assistance in the recovery of taxes imposed by the laws of New Zealand and the territory with which the agreement is negotiated.

Assistance in the recovery of taxes includes assistance in the recovery of charges associated with the taxes, including interest, administrative penalties, costs of collection or conservancy, or any other related amount.

3. **Requests for assistance**

A competent authority may make a request for assistance under a tax recovery agreement. A request for assistance must be accompanied by:

(a) Written particulars of the amount of unpaid tax to which the request relates and the extent, if any, to which the requesting party considers the unpaid tax is contested;

(b) A declaration made by the applicant’s competent authority that the unpaid tax is a tax prescribed in the agreement and that any other conditions in the tax recovery agreement concerning the making of a request have been complied with; and

(c) A certificate or notarised copy of the instrument that allows enforcement of the unpaid tax in the state of the applicant.

When assisting a competent authority in response to a request made under a tax recovery agreement, the CIR may apply any provision or exercise any authority, discretion, power, provision, or right that is available to the CIR under the laws of New Zealand with the exception of Parts 4A, 5, 5A, 6, 7, 8, 8A, 9 (except TAA, ss 143C to 143E) and 12 (except TAA, ss 203 to 205).

4. **Limitations on assistance**

The CIR may assist in recovering an uncontested amount of unpaid tax only if:

(a) Payment of the amount is enforceable under the laws of the state of the applicant requesting assistance under a tax recovery agreement; and

(b) The amount is owed by a person who cannot, under the laws of the state of the applicant, prevent collection of the amount.
The circumstances in which the CIR may provide assistance include the following, in relation to the amount of unpaid tax:

(a) The period within which the person may exercise a right to contest the assessment has expired;
(b) The person has withdrawn an objection in relation to the amount;
(c) The person has waived a right to contest the assessment;
(d) The person is required to pay some or all of the amount, regardless of any right to contest the assessment; or
(e) The person is otherwise unable, under the laws of the state of the applicant, to prevent collection of the amount.

Despite the above, the CIR may assist in recovering unpaid tax if, after consultation, the competent authorities determine that the taxpayer to whom the request for assistance relates:

(a) Acknowledges that the amount of unpaid tax will no longer be contested;
(b) May leave New Zealand in order to defeat recovery action;
(c) May take steps in relation to the existence or location of the taxpayer’s assets that make it more difficult for the CIR to recover the unpaid tax; or
(d) Is contesting the assessment solely to delay or frustrate recovery action.

Assistance must not be given:

(a) For an amount of unpaid tax that became uncontested more than 6 years before the tax recovery agreement entered into force in New Zealand; or
(b) If the request for assistance is first made more than 15 years after the date on which the unpaid tax became uncontested.

(5) Contested act of assistance
A person that claims to be affected by a contested act of assistance may advise the competent authority of the reasons why the person considers the act is a contested act of assistance. On receipt of such a request, the competent authority must, without undue delay:

(a) Endeavour to resolve with the person the dispute concerning the contested act of assistance; or
(b) Refer the request, together with reasons, to the competent authority of the other territory, and endeavour, by mutual agreement, to resolve the dispute.

This applies whether or not another remedy is available under the laws of New Zealand or the laws of the other party to a tax recovery agreement.

(6) Rights of appeal
A taxpayer may appeal to the District Court on a question of law or fact that arises from the exercise of any authority, discretion, power, provision, or right by the CIR or another competent authority in relation to tax recovery agreements. The District Court may reverse or modify the effect of the authority, discretion, power, provision, or right exercised, or refer the matter back to the CIR or the other competent authority for further consideration.

(7) Certificates by CIR
The CIR may sign a certificate on either of the following matters if the CIR first determines that assistance may be given:

(a) That the request is made under s 173E of the TAA (request for assistance); or
(b) That the request complies with the tax recovery agreement rules in Part 10A of the TAA.

A certificate purporting to be given under these provisions is, in the absence of proof to the contrary, sufficient evidence of the matters certified by the certificate.
(8) Inland Revenue commentary

The practical application of a recovery agreement will be a straightforward process of debt collection [see TIB vol 11/6 (July 1999) at 46-48]. A typical case where New Zealand is called upon to collect foreign tax will proceed as follows:

(a) New Zealand will receive a request for assistance in recovery, accompanied by relevant documentation, from a foreign state with which New Zealand has a relevant agreement.

(b) New Zealand will review the request to ensure that it complies with the provisions of the agreement and the empowering legislation.

(c) New Zealand will pursue recovery action in the same manner as it pursues a New Zealand tax debt.

(d) If the action is successful, New Zealand will pay the recovered amount over to the foreign state.

310.220 Tax information exchange agreements [s BH 1]

Tax information exchange agreements are bilateral treaties that provide for the exchange of information between the signatory states for the purpose of administering and enforcing domestic tax laws. They provide a mechanism whereby tax authorities can request tax records, business books and accounts, bank information, ownership information, and other tax-related information from each other for the purposes of preventing or investigating tax avoidance and evasion.

The tax information exchange agreements that New Zealand has signed, and their current status, is shown in the table below.

These agreements (which can be viewed on Inland Revenue’s Policy Advice Division website: www.taxpolicy.ird.govt.nz) are based on the model tax information exchange agreement, developed by the OECD, which grew out of the work undertaken to address harmful tax practices. The stated purpose of tax information exchange agreements is to promote international co-operation in tax matters through the exchange of information.

Agreements have also been entered into with the Marshall Islands and Samoa for the allocation of taxing rights with respect to certain income of individuals and to establish a mutual agreement procedure in respect of transfer pricing adjustments. The Orders giving effect to these agreements came into force on 13 January 2011. The agreements themselves will enter into force once domestic procedures for bringing them into effect have been completed.
Chapter 315
Duties and Levies

315.05 Duties and levies generally

In addition to income tax, fringe benefit tax, and GST, a number of miscellaneous forms of taxation are imposed in the way of duties and levies, including:

Duty/levy

Gift duty (repealed)
Cheque duty
Gaming duties
Problem gambling levy
ACC levies and premiums
Approved issuer levy

Relevant legislation
Estate and Gift Duties Act 1968
Stamp and Cheque Duties Act 1971
Gaming Duties Act 1971
Gambling Act 2003
[see 20 ACCIDENT COMPENSATION]
[see 1020.80]

Estate duty, originally imposed by the Estate and Gift Duties Act 1968, was abolished under the Estate Duty Abolition Act 1993 for estates of persons dying on or after 17 December 1992 [see 315.80].

Note: Gift duty has been repealed. It does not apply to any gifts made from 1 October 2011.

Stamp duty on the conveyance of land and the execution of leases, originally imposed under the Stamp and Cheque Duties Act 1971, was abolished with effect from 20 May 1999 under the Stamp Duty Abolition Act 1999.
Duties and taxes administered by the New Zealand Customs Service (GST on imports and excise duties) are not dealt with in *Staples Tax Guide*.

**315.10 Gift duty** [EGDA, ss 2(2), 61]

**Note:** Gift duty has been abolished in relation to all gifts made on or after 1 October 2011.

Gift duty on dutiable gifts is imposed by the Estate and Gift Duties Act 1968 (EGDA).

A gift is any disposition of property before 1 October 2011, other than by will, without fully adequate consideration in money or money’s worth passing to the person making the disposition. Partial or inadequate consideration given in exchange for property is treated as a gift to the extent of the inadequacy. Examples of inadequate consideration include:

(a) A transfer of a farm property to a farmer’s children in consideration of past services rendered by them. At law, past consideration is no consideration at all.

(b) A transfer of shares in a company at less than their market value.

(c) A transfer of property in discharge of a moral obligation on the part of the transferor.

The Taxation (GST and Miscellaneous Provisions) Act 2000 amended the EGDA by providing that when a financial arrangement is gifted it is treated as having been transferred at market value and so is exempt from gift duty. This amendment was repealed with effect from 10 October 2000 (the date of the original amendment) although financial arrangements transferred between 10 October 2000 and 2 April 2001 continue to be exempt from gift duty.

“Disposition of property” means any conveyance, transfer, assignment, settlement, delivery, payment, or other alienation of property (whether at law or in equity) includes:

(a) The issue of shares in a company;

(b) The creation of a trust;

(c) The grant or creation of a lease, mortgage, charge, servitude, licence, power, or other right, estate, or interest in or over property;

(d) The release, discharge, surrender, forfeiture or abandonment of a debt, contract, or a thing in action, or of any right, power, estate or interest in or over property;

(e) The exercise of a general power of appointment in favour of any person other than the holder of the power;

(f) A transaction or series of related transactions by which a person diminishes the value of their own estate and increases the value of another person’s estate.

The meaning of “disposition of property” was considered by the Court of Appeal in *Begg v Commissioner of Inland Revenue* (2009) 24 NZTC 23,473 (CA). This test case concerned gifting arrangements entered into by elderly clients of the Public Trust, by means of a “deed of gift and declaration of trust”. Under the deed, each donor made an immediate gift of an amount (typically $27,000) to each of their children, but payment of the gift was deferred until the donor died and their home was sold. The home remained in the name of the donor but was declared to be held in trust for the recipients (to the extent of their debt). The deed gave the recipients the right to secure the amount owing by requesting a mortgage over the title to the home, although this right was never exercised. The deed also provided for subsequent gifts to be made, on the same terms, by completing a gifting clause in a schedule attached to the deed. The main question for the Court was whether the arrangement was a disposition of property for gift duty purposes. The Court (Chambers J) held that:

(a) A trust had been created and therefore there was a disposition of property under paragraph (b) of the definition of “disposition of property”. An act can amount to a disposition of property without coming within the general part of the definition (ie the part of the definition before paragraphs (a) to (f)).

(b) The creation of the trust gave rise to an immediately dutiable gift. The donor’s home became “impressed with the terms of the trust” under the Public Trust template from the date of execution of the deed.
Duties and Levies

315.15

(c) Each separate transfer following the initial gift is the creation of a separate trust and is consequently a separate disposition of property.

(d) The decision reached by the Supreme Court in Perry v Commissioner of Stamps (1913) 32 NZLR 1194 (SC), on which the Public Trust relied in creating the gifting arrangement, was correct. A disclaimer of an interest under a disposition made inter vivos or by will, or of an interest under an intestacy, is not a disposition of property for gift duty purposes.

See also Inland Revenue Booklets Gift Duty (IR194) and Gift duty: A Guide for Practitioners (IR195).

315.15 Dutiable gift [EGDA ss 63, 64]

Gift duty is imposed only on dutiable gifts. A dutiable gift is:

(a) Any gift, wherever the property is situated, made by a donor to a donee where the donor is domiciled in New Zealand at the date of the gift, or is a body corporate incorporated in New Zealand; and

(b) Any gift of property situated in New Zealand, wherever the donor is domiciled or the body corporate is incorporated.

The rules for determining the situation of various classes of property are explained in 315.18.

A disposition of property made in performance or satisfaction of a voluntary contract is deemed to be a gift. A voluntary contract is defined as any contract entered into, whether written or unwritten, without fully adequate consideration in money or money’s worth. The contract is deemed to be voluntary only to the extent of the inadequacy.

Any gift that falls within the definition of a dutiable gift is subject to gift duty unless it is specifically exempted [see 315.20].

315.17 Domicile

A person’s domicile is where their permanent home is located. The Courts have interpreted the word “home” as having an everyday meaning and not just a person’s dwelling: Federal Commissioner of Taxation v Applegate (1979) 9 ATR 899, 79 ATC 4307 (FCA); Geothermal Energy New Zealand Ltd v Commissioner of Inland Revenue [1979] 2 NZLR 324, (1979) 4 NZTC 61,478 (SC); TRA Case H97 (1986) 10 TRNZ 189; TRA Case F138 (1984) 8 TRNZ 140; TRA Case U17 (1999) 19 NZTC 9,174.

In determining domicile, the Courts also appear to presume that a person’s domicile is in their country of origin unless the person can clearly demonstrate that they have chosen another country as their place of domicile: Bosworth v Commissioner of Inland Revenue (1973) 1 NZTC 60,996 (SC).

315.18 Situation of property [EGDA, s 63(2)]

Ordinarily, property is situated where it is physically located. Intangible forms of property are situated in the place they are most associated with. For example bank accounts are situated at the branch where the account is situated, contracts are situated where the contract is made, life insurance policies are situated where the policy is registered, and a business is situated where it is carried on.

Example:
A Fiji-domiciled person is a partner in a Fijian partnership carrying on business in that country. Although the partnership owns certain assets in New Zealand, the person’s interest in the partnership is property situated in Fiji.

The following rules apply for determining the situation of specific classes of property:

(a) A seagoing ship, or a share or interest in the ship, is situated in New Zealand if the ship is registered in New Zealand;

(b) Property at sea, other than a seagoing ship, is situated in New Zealand if in the course of transit directly or indirectly to New Zealand;

(c) The situation of debt payable under a bond or other deed is not determined by where the bond or deed is situated;

Staples Tax Guide 2012
Duties and Levies

(d) Debt owing by a corporation, wherever incorporated, is situated in New Zealand if the debt was incurred or payable in New Zealand and the corporation has an office or place of business in New Zealand;

(e) A debt owing by a person or persons other than a corporation is situated in New Zealand if any of the debtors are resident in New Zealand;

(f) A debt owing by the Crown is situated in New Zealand if it was incurred or is payable in New Zealand;

(g) Despite the above, a debt represented by an instrument that is negotiable in New Zealand is situated in the country in which the instrument is situated;

(h) Despite the above, a debt secured by mortgage, charge or otherwise on any property situated in New Zealand is itself situated in New Zealand. However, if the value of the security is less than the value of the debt, the debt is situated in New Zealand only to the extent of the value of the security;

(i) Shares in a company incorporated in New Zealand are situated in New Zealand; and

(j) Shares in a company incorporated outside New Zealand are situated outside New Zealand, except shares registered in a branch register in New Zealand under any law in force in another part of the Commonwealth.

315.20 Exempt gifts [EGDA, ss 71, 72, 73, 74, 74A, 74B, 74C, 75, 75A, 75B, 75C, 75D]

The following types of gifts are exempt from gift duty:

(a) Gifts totalling no more than $2,000 in any one calendar year made by the same donor to the same donee, in good faith as part of the normal expenditure of the donor — for example, cash gifts to members of a donor’s family [EGDA, s 71].

(b) Gifts for the maintenance or education of the spouse [see 960.10] or any relative of the donor, provided the gifts are not excessive in amount having regard to the legal or moral obligation of the donor [EGDA, s 72].

(c) Any gift creating a charitable trust or establishing a society or institution exclusively for charitable purposes, or any gift in aid of any such trust, society or institution. From 1 July 2008, the trust, society or institution must be registered as a charitable entity under the Charities Act 2005 in order to be exempt from gift duty [see 150.50]. Gifts to the following organisations are specifically exempted:

Gifts required by an order of a court under the Law Reform (Testamentary Promises) Act 1949 or the Family Protection Act 1955 are exempt from gift duty from 24 May 1999.

Gifts to the following organisations are specifically exempted:

(i) New Zealand Historic Places Trust;

(ii) Gifts of protected New Zealand objects to the Crown, libraries, museums, or public institutions for the benefit of the public;

(iii) Museum of New Zealand Te Papa Tongarewa Board;

(iv) Arts Council;

(v) Health Research Council of New Zealand for health research;

(vi) Sport and Recreation New Zealand (formerly the Hillary Commission);

(vii) New Zealand Patriotic Fund Board, the Canteen Fund Board, or any Provincial Patriotic Council for any patriotic purpose;

(viii) Vocational Training Council;

(ix) New Zealand Council for Educational Research;

(x) Queen Elizabeth II National Trust;

(xi) A gift by a local authority to a community trust under specified circumstances [see s 73(2)(k), (ka) of the EGDA];
(xii) New Zealand Antarctic Institute:
(xiii) A Board of Trustees constituted under Part 9 of the Education Act 1989 and not carried on for the private pecuniary profit of any individual (from 1 July 2008);
(xiv) A tertiary education institution established under Part 14 of the Education Act 1989 and not carried on for the private pecuniary profit of any individual (from 1 July 2008) [EGDA, s 73].
(xv) An organisation (other than an educational institution) that is part of the State Services and is not carried on for the private pecuniary profit of any individual (from 7 September 2010);
(xvi) An organisation that is a local authority, a council-controlled organisation, or a subsidiary of a council-controlled organisation and is not carried on for the private pecuniary profit of any individual (from 1 July 2008);
(xvii) The trustee of the Tokelau International Trust Fund or the Niue International Trust Fund; and
(xviii) An organisation that is a donee organisation (as defined in s YA 1) (from 1 April 2008) [EGDA, s 73].

d) An election by a member to take a reduced retirement allowance or pension in a group superannuation scheme in return for the payment after death of a pension to a spouse, civil union partner, de facto partner or dependant, or for payment before a member’s death of a pension to the member’s spouse, civil union partner or de facto partner [EGDA, s 74].

e) A gift between members of the same consolidated group [EGDA, s 74A, see 190 COMPANIES - CONSOLIDATION].

f) A payment, distribution or transaction by a company, unit trust or group investment fund to another company, unit trust or group investment fund, where the payment, distribution or transaction constitutes a dividend for income tax purposes, or would constitute such a dividend if not for s CD 27 [EGDA, s 74B].

g) A gift from an amalgamating company (or from a shareholder in an amalgamating company) to an amalgamated company, where the gift occurs as part of the amalgamation [EGDA, s 74C].

h) A gift from a co-operative company (or a company owned by a co-operative company) to a member of the co-operative company, where the gift is excluded from being a dividend by s CD 34 [EGDA, s 74D].

i) The following payments or transfers, to the extent they are gifts:
   (i) Employer contributions to a group superannuation scheme for employees;
   (ii) Retirement payments, gratuities and bonuses (associated person restrictions apply);
   (iii) Payments made by an employer to the widow, widower, surviving civil union or de facto partner, or infant child of a deceased employee (associated person restrictions apply);
   (iv) Lump sum retirement payments that are deductible under s DC 1; or
   (v) Any issue or sale of shares under a share purchase scheme to an employee, to the extent that it is a gift [EGDA, s 75].

j) Up to 50 per cent of the total value of relationship property (as distinct from separate property) transferred under an agreement under the Property (Relationships) Act 1976, and any disposition of property by order of the Court under s 25 of the Property (Relationships) Act 1976, to the extent the disposition is to a current or former spouse, civil union partner or de facto partner for the benefit of minor or dependent children [EGDA, s 75A].

k) The forgiveness or remission of a liability under a financial arrangement, to the extent that, under the financial arrangements rules, it reduces a person’s deduction or increases their income. To the extent that a transaction is a dividend, it is not a gift for gift duty purposes [EGDA, s 75B].

l) Certain dispositions of property by the Waikato Electricity Authority [EGDA, s 75C].
(m) Certain dispositions of property upon the dissolution of the Raspberry Marketing Authorities [EGDA, s 75D].

### 315.25 Completion of a gift

A gift is not complete until the donor is unable to revoke it. It is important to know the date when a gift is completed as it is at that date that the gift is assessable. The date when a gift is made is also a factor in computing the duty imposed.

#### Examples of completed gifts

- **Cash**: On delivery.
- **Chattels**: On the actual handing over or delivery of the chattels or upon completion of a deed of assignment.
- **Cheque**: When presented by the donee and honoured at the bank.
- **Company shares**: At the earlier of when a registrable transfer duly executed by the donor is handed to the donee and the date on which the company registers the instrument of transfer.
- **Land**: At the earlier of the date on which the instrument of transfer is registered and when the beneficiary is in possession of all documents necessary to effect the registration. However, where a valid trust is created, the trust’s creation date is used.
- **Mortgage release**: By an executed deed of release or forgiveness.

Dates of completion may differ for shares transferred under a system approved under s 7 of the Securities Transfer Act 1991.

#### Example:

A taxpayer gifts a section of land valued at $100,000 and shares valued at $1,500. The gift of land is completed at the date of registration with the Land Transfer Office, and the gift of shares is effective two weeks later when the company registered the transfer. Because gifts made within 12 months of each other must be aggregated, gift duty is calculated on the full $101,500.

### 315.30 Calculation of gift duty [EGDA, s 62, Schedule 3]

#### Note:
Gift duty is not payable on gifts made on or after 1 October 2011.

The gift duty rates (for dutiable gifts made between 1 April 1984 and 30 September 2011) are:

#### Value of gift

<table>
<thead>
<tr>
<th>Exceeding</th>
<th>Not exceeding</th>
</tr>
</thead>
<tbody>
<tr>
<td>$0</td>
<td>$27,000</td>
</tr>
<tr>
<td>$27,000</td>
<td>$36,000</td>
</tr>
<tr>
<td>$36,000</td>
<td>$54,000</td>
</tr>
<tr>
<td>$54,000</td>
<td>$72,000</td>
</tr>
<tr>
<td>$72,000</td>
<td></td>
</tr>
</tbody>
</table>

Gift duty is charged and assessed on each separate dutiable gift according to the following formula:

\[
\frac{a}{b} \times c
\]

where

- \(a\) is the value of the dutiable gift;
- \(b\) is the value of the dutiable gift together with any dutiable gifts made at the same time or within 12 months subsequently or previously by the same donor to the same or any other donee; and
- \(c\) is the gift duty on item \(b\) according to the gift duty rates.
As each gift is made the gift duty is applied according to this formula. If one dutiable gift only is made within a 12-month period, then “a” and “b” are the same and the gift duty is the amount calculated under the schedule of gift duty rates. Where more than one gift is made within a 12-month period, the gifts are aggregated or totalled so as to calculate gift duty. The gifts must be made by the same donor but may be made to any number of donees.

Example:
Andy makes a dutiable gift of $30,000 on 1 January. Gift duty payable on this gift is $150 (five per cent of the excess over $27,000). This is due for payment when the gift is made (1 January). Andy then makes another dutiable gift of $10,000 on 31 August of the same year. Because gift duty must be calculated on all gifts made within a 12 month period, the two gifts must be aggregated. Gift duty on the total gifts ($40,000) is $850 ($450 plus 10 per cent of the excess over $36,000). Because gift duty of $150 has already been paid on the first gift, the amount due on 31 August is $700 ($850 - $150). The amount of gift duty payable on each gift is determined using the above formula. Gift duty on the first gift is:

\[(30,000 \div 40,000) \times 850 = 637.50\]

Gift duty on the second gift is:

\[(10,000 \div 40,000) \times 850 = 212.50\]

Andy then makes a third gift of $50,000 on 1 March of the following year. The first gift (made on 1 January of the previous year) was made more than 12 months ago and so is not aggregated with the third gift. However, the second gift was made less than 12 months ago and so must be aggregated with the third gift for calculating gift duty. Gift duty on the total ($60,000) is $3,450 ($2,250 plus 20 per cent of the excess over $54,000). Because gift duty of $212.50 has already been paid on the second gift, the amount due on 1 March is $3,237.50 ($3,450 - $212.50). The amount of gift duty payable on the second gift is:

\[(10,000 \div 60,000) \times 3,450 = 575.00\]

Gift duty on the third gift is:

\[(50,000 \div 60,000) \times 3,450 = 2,875\]

To summarise, the amount of gift duty payable on each gift is:

| First gift | $30,000 | $637.50 |
| Second gift | $10,000 | $575.00 |
| Third gift | $50,000 | $2,875.00 |

### 315.35 Valuation of dutiable gifts [EGDA, ss 66-69]

#### (1) General [EGDA, ss 66, 67]

For gift duty purposes, dutiable gifts are valued as at the date of making the gift. The valuations generally require expert opinion and must use methods approved by Inland Revenue. According to Inland Revenue (IR195, May 1999), the valuation of property generally calls for an enquiry as to the value at which a willing but not anxious vendor would sell and a willing but not anxious purchaser would buy.

#### (2) Land [EGDA, ss 68A, 68B]

The valuation of land is determined by agreement with Inland Revenue. In the absence of agreement, the value is determined by Inland Revenue. If the value of the land is determined by Inland Revenue, one of the following two methods must be used:

(a) The capital value of the land in the district valuation roll plus the cost of any improvements not included in that valuation; or

(b) A special valuation of the capital value of the land made by a registered valuer.

If Inland Revenue determines the value of land using capital value, the donor may, within one month of the date of the original valuation, require Inland Revenue to revalue the land by a special valuation. The fee for the special valuation may be recovered by Inland Revenue from the donor. The donor may also object to a special valuation provided this is done within one month.

Inland Revenue will accept valuations from a registered valuer, Quotable Value New Zealand or an associate member of the Real Estate Institute of New Zealand. Rating valuations are generally not accepted if more than six months old. The value of land includes any growing or standing timber on the land.
(3) **Shares [EGDA, s 68C]**

The valuation of shares does not take into account any restrictive provisions on share transfers or alienation, except to the extent that the restrictions are (in Inland Revenue’s opinion) reasonable. In determining what is reasonable, contributions by a shareholder to the company by way of services, management, capital or otherwise, and benefits received from the company by that shareholder must be considered.

(4) **Controlled companies [EGDA, s 68D]**

The value of a debt must be determined disregarding the fact that the debt, or any part of it, is not payable before the date of valuation if the debt is owed to a donor or a controlled company by:

(a) A person connected with the donor by blood relationship, marriage, civil union or de facto relationship, or adoption;
(b) A controlled company; or
(c) A trustee for either of the above.

This does not apply if Inland Revenue is satisfied that the donor or the controlled company and the debtor dealt with each other in an arm’s-length manner.

A controlled company is a company controlled by or on behalf of:

(a) The donor;
(b) Any person connected with the donor by blood relationship, marriage, civil union or de facto relationship, or adoption; or
(c) The donor and any connected person.

Control may be direct or indirect or through the holding of a majority of shares in the company or any other company, or in any other manner whatsoever.

(5) **Share or interest in partnership [EGDA, s 68E]**

The valuation of a share or interest in a partnership does not take into account any provision in an agreement or arrangement by the partners that restricts the value of that share or interest, except to the extent that the restrictions are (in Inland Revenue’s opinion) reasonable. In determining what is reasonable, Inland Revenue must consider contributions by the partners to the partnership by way of services, management, capital, or otherwise, and benefits received from the partnership by the partners.

(6) **Annuities and life interests [EGDA, s 68F]**

The value of an annuity or other interest for the life of a person or for any other period, or the value of an interest expectant on the death of any person or on any other event, is calculated using Tables A to D of the Second Schedule to the EGDA.

(7) **Contingent interests [EGDA, s 68G]**

The valuation of contingent interests is determined in a manner that considers how the contingency is expected by Inland Revenue to arise. If the contingency arises in a manner different from expected, the interest must be revalued on the basis of the actual event. The possibility that a widow may remarry is not a contingency.

(8) **Property subject to encumbrances [EGDA, s 69]**

If property is gifted that is subject to any encumbrance, such as a mortgage, charge, or liability, no deduction is allowed from the total value of that property if and to the extent that the donee has a right of contribution or indemnity against any other person in respect of that encumbrance.

**315.40 Valuation when benefit reserved to donor [EGDA, s 70]**

When a dutiable gift is made in consideration of, or with the reservation of, any benefit or advantage to or in favour of the donor, no deduction can be made in respect of that benefit or advantage in calculating the value of that gift.

“Benefit or advantage” means any benefit or advantage whether by way of:
(a) Any interest or estate in the property;
(b) Mortgage or charge;
(c) Any annuity or other payment;
(d) Any contract for the benefit of the donor; or
(e) Any condition or power of revocation or other disposition.

It also includes any benefit or advantage provided in any other manner whatever. It does not include any annuity or payment to the extent that the annuity or payment is:

(a) Of a fixed or ascertainable amount in money payable over a fixed or ascertainable period, or for life, or at a fixed or ascertainable date or dates, or on demand; and
(b) Secured to the donor by way of a mortgage or charge over the property, by an agreement for the sale and purchase of land, by a written agreement to lease land, or by deed, in each case executed by the donee.

A common tax-planning arrangement involves a person granting a “lease for life” to themselves and then transferring the balance of the property to another person or to a trust. Whether or not an income tax liability arises depends on how the arrangement is structured. The CIR had issued nine Public Binding Rulings (BR Pub 02/02 to BR Pub 02/10, all of which expired on 31 April 2005), setting out the income tax and gift duty implications of various permutations of these arrangements [see 3000.10 and TIB vol 14:12 (December 2002) at 15-23].

The purpose of s 70 of the EGDA is to prevent the value of any benefit reserved from a gift by the donor from being deducted from the value of the dutiable gift. In determining whether s 70 applies, it is important to distinguish between a reservation and a retention. Property is reserved if, under the arrangement, some of the property gifted is to be given back to the donor. If the transferor reserves part of the property transferred, that part of the property is included in the value of the dutiable gift. If the transferor retains part of some property and then transfers the balance, the part of the property retained is not included in the value of the dutiable gift.

Public rulings BR Pub 02/02 to BR Pub 02/10 in TIB vol 14:12 (December 2002) at 15-23, explain how the CIR would treat a variety of arrangements for the purposes of s 70 of the EGDA. In general, the effect of the rulings can be summarised as following:

(a) Where the transferor grants an interest in property to themselves, and later transfers the balance or reversionary interest in the property to another person, there is no reservation and s 70 does not apply.
(b) Where a transferor transfers property to another person, and the parties intend that all the property rights in the property be transferred and than later an interest be granted back, there is a reservation and s 70 applies.
(c) Where a transferor grants a property right to themselves, and simultaneously transfers the balance or reversionary interest to a transferee, there is no reservation and s 70 does not apply.

The rulings all expired on 31 April 2005.

315.45 Gift statement [EGDA, ss 79, 80]

When the value of a gift exceeds $12,000, or when the value of a gift when aggregated with the value of all other gifts made within 12 months prior to the gift in question exceeds that amount, a gift statement (form IR635) must be completed and filed with Inland Revenue by the donor within three months of a gift being made. If the gift was created or evidenced by a written instrument, the instrument or a copy of it must accompany the gift statement.

If the donor fails to file the gift statement within three months, the donee (or the donee’s trustees, if any) is required within a further period of one month to file the gift statement.
315.50  **Payment, interest and penalty** [EGDA, ss 83-87]
Gift duty is a debt payable to the Crown by the donor, but may also be recovered from the donee. Unless otherwise provided under the terms of the gift, the donee is entitled to be indemnified by the donor against liability for the gift duty.
Gift duty is a charge on the property that comprises the gift.
Payment of gift duty becomes due upon the making of the gift. However, no liability for interest or penalties arises provided the duty is paid within six months of the date the gift was made.
Where gift duty (or additional gift duty) becomes payable because of the aggregation of a gift with a subsequent gift, the duty (or additional duty) on the first gift is payable on the making of the subsequent gift.
If the gift duty is not paid within six months of the making of the gift, a late payment penalty will be charged consisting of an initial penalty of five per cent and an additional one per cent for each month thereafter that the duty remains unpaid [see 1110.40]. Interest will also be charged on the overdue amount [see 1110.295].
Shortfall penalties may also apply if a donor fails to complete a gift statement, deliberately understates their liability for gift duty, or does not take adequate care in completing a gift statement [see 1110.85].

315.55  **Relief for gift duty paid overseas** [EGDA, s 77]
Where a dutiable gift is also subject to foreign gift duty, Inland Revenue will allow a rebate of 50 per cent of the lesser of the duty otherwise payable in New Zealand or the duty payable in the overseas country. The rebate only applies if the law of the other country allows a similar rebate.

315.60  **Cheque duty** [SCDA, ss 76-86]
Cheque duty is imposed under s 77 of the Stamp and Cheque Duties Act 1971, (SCDA). Cheque duty is payable on every bill of exchange (cheque) made or drawn, at the rate of 5 cents per bill of exchange.
“Bill of exchange” means an unconditional order in writing, addressed by one person to another, signed by the person giving it, requiring the person to whom it is addressed to pay on demand, or at a fixed or determinable future time, a sum certain in money to or to the order of a specified person, or to bearer [Bills of Exchange Act 1908, s 3].
For cheque duty purposes, a bill of exchange includes a promissory note other than a bank note [SCDA, s 2]. “Promissory note” means an unconditional promise in writing made by one person to another, signed by the maker, engaging to pay on demand, or at a fixed or determinable future time, a sum certain in money to or to the order of a specified person or to bearer (Bills of Exchange Act 1908, s 84).
Certain bills of exchange are exempted from cheque duty — for example, bills of exchange drawn by a person acting on behalf of the Crown and bills of exchange drawn under the National Provident Fund Act 1950. For a full list of exemptions see s 79 of the SCDA.
If a bill of exchange is drawn in a set and one of the set is stamped (for cheque duty), the other bill(s) in the set are not liable to cheque duty.
The CIR may exempt certain persons from cheque duty in consideration for the other party paying a sum equivalent to the cheque duty that would have been payable on bills of exchange drawn. This applies only to the Public Trust, Tower Corporation, State Insurance Limited, Housing New Zealand Corporation, and the Accident Compensation Corporation.
The CIR may licence a bank to supply its customers or to procure on its own behalf bill-of-exchange forms prepaid with cheque duty. A licensed bank must, within 21 days of the end of each quarter, provide to the CIR a statement of all bill-of-exchange forms prepaid with cheque duty supplied to its customers or procured on its own behalf during the quarter. The statement must be accompanied by the amount of duty payable for the quarter.
The CIR may also license a printer to print for the use of customers or on the printer’s own behalf bill-of-exchange forms prepaid with cheque duty. Quarterly statements and payments are required as for banks.
The drawer or maker of the bill must, before delivery, duly stamp any bill of exchange for which cheque duty is not prepaid. “Duly stamped” means affixing postage stamps or stamps on the face of the bill for the amount of cheque duty payable on the bill of exchange. Postage stamps must be cancelled so that they cannot be reused.

Late payment penalty and interest will apply to any duty not paid by the due date.

The CIR may, on application within eight years after the payment of the duty, refund the cheque duty on:

(a) Any prepaid bill-of-exchange forms that have not been used;
(b) Any bill-of-exchange forms for which cheque duty has been prepaid that have not been printed; and
(c) Any bills of exchange for which cheque duty has been paid that have been spoiled, defaced, lost, or destroyed before being acted on.

315.70 Gaming duties

Four types of gaming duties are imposed under the Gaming Duties Act 1971 (GDA):

(a) Totalisator duty;
(b) Lottery duty;
(c) Gaming machine duty;
(d) Casino duty.

The problem gambling levy [see 315.79] is collected along with gaming duties.

315.72 Totalisator duty [GDA, ss 4, 5]

Totalisator duty is payable at the rate of four per cent of betting profits. Betting profits are calculated using the following formula:

\[
\text{amounts} - \text{refunds} - \text{winning dividends}
\]

Where:

“amounts” is the total amount received by the Board or its agents (including the net returns from bets laid off) for totalisator racing betting, sports betting and fixed-odds racing betting.

“refunds” is the amount of refunds paid.

“winning dividends” is the amount of all winning dividends paid out in respect of amounts.

“Board” means the New Zealand Racing Board [Racing Act 2003, s 5(1)].

The Board is required to provide monthly returns to the CIR of totalisator duty payable, by the 20th of the following month. The amount of duty payable must be paid by the same date. The return should include the duty payable in respect of events for which the results have been declared during the month.

315.74 Lottery duty [GDA, ss 9-12A]

Lottery duty is payable at the rate of 5.5 per cent of the nominal value of all tickets represented in the drawing of a lottery, whether or not all those tickets are sold.

“Lottery” is defined in s 4 of the Gambling Act 2003 as a scheme or device in which multiple participants pay for the chance to go into a draw for prizes of money. It includes lotto, raffles and sweepstakes, and includes lotteries promoted by the Lotteries Commission.

The organiser of the lottery must furnish a return to the CIR within 14 days after the drawing of the lottery, setting out a statement of the lottery duty payable. The CIR may exempt an organiser from the need to file a return.

Lottery duty must be paid to the CIR within 14 days of the drawing of the lottery. Lottery duty is a debt due and payable to the Crown.

315.76 Gaming machine duty [GDA, ss 12B-12L]

Gaming machine duty is payable at the rate of 20 per cent of the gaming machine profits of dutiable games.
“Gaming machine profits” are the difference (which cannot be less than zero) between the total amount bet and the total amount of all prizes paid on all dutiable games during the return period. A return period is a calendar month.

“A dutiable game” means gambling by means of a gaming machine, but does not include casino gambling.

A gaming machine is a device, whether totally or partly mechanically or electronically operated, that is adapted or designed and constructed for use in gambling. Machines used to draw lotteries or dispense tickets, and random selection devices such as those used in housie, are not gaming machines.

Gaming machine operators must furnish monthly returns (on Inland Revenue Form IR680) to the CIR showing gaming machine profits and gaming machine duty payable for the month. The return is due by the 20th of the following month. The gaming machine duty showing as payable in the return must also be paid by the 20th of following month. If the amount of gaming duty payable on any due date is $5 or less, the CIR will take no action to collect that duty and no interest will be charged on it [GDA, ss 12D to 12FA].

The CIR may issue a default assessment if a person fails to file a return, if the CIR is not satisfied with a return filed, or if the CIR has reason to believe that a person is liable to pay gaming machine duty [GDA, s 12G(1)-(3)].

If a person has filed a return for any period and paid or been assessed for the gaming machine duty for that period, the CIR may not make an assessment or increase the amount of an assessment after four years from the end of the month in which the return was filed or the assessment was made. This time limit does not apply if the CIR believes that the person knowingly or fraudulently failed to disclose all material facts [GDA, s 12G(4)].

The disputes resolution procedures in Part 4A of the TAA and the challenges rules in Part 8A of the TAA apply to gaming machine duty assessments [GDA, s 12HA].

Gaming machine duty is recoverable as a debt due to the Crown. If the gaming machine operator does not pay any duty by the due date, liability for the debt is recoverable as follows:

(a) If the gaming machine operator is incorporated, the officers, trustees, and managers (including the secretary and treasurer) of the gaming machine operator are jointly and severally liable for the debt.

(b) If the gaming machine operator is not incorporated, the members, officers and trustees of the gaming machine operator are jointly and severally liable for the debt [GDA, s 12K].

For further information, refer to Inland Revenue Booklet Gaming Machine Duty (IR180).

315.78 Casino duty [GDA, ss 12M-12R]

Casino duty is payable at the rate of four per cent of the casino win. Casino duty applies only to casinos operated by persons licensed under the Gambling Act 2003 [GDA, s 12N].

“Casino win”, in relation to a return period, means the gaming income of the casino less the aggregate of:

(a) The gaming wins paid out by the casino; and

(b) The casino losses (if any) for the preceding return period.

A return period is a calendar month.

“Gaming income” is the total of money paid to purchase chips and money (other than chips) paid to play authorised games.

“Gaming wins” is the total of money paid to redeem chips and money (other than chips) paid as winnings on authorised games.

Casino operators must furnish monthly returns (on Inland Revenue Form IR199) to the CIR showing the casino win for the month and casino duty payable on that win. The return is due by the 20th of the following month [GDA, s 12O]. The casino duty showing as payable in the return must also be paid by the 20th of the following month [GDA, s 12P].

The assessment procedures for gaming machine duty [see 315.76] also apply for casino duty.
The disputes resolution procedures in Part 4A of the TAA and the challenges rules in Part 8A of the TAA apply to casino duty assessments.

Unpaid casino duty is recoverable from casino operators in the same way as for gaming machine duty [GDA, s 12R].

**315.79 Problem gambling levy** [Gambling Act 2003, ss 317-325]

Legislation providing for the introduction of a problem gambling levy was introduced by the Gambling Act 2003 [ss 317 to 325], and came into force on 19 September 2003. The levy was collected from 1 October 2004. The purpose of the levy is to fund the development, management and delivery of an integrated problem gambling strategy. The strategy will include:

(a) Measures to promote public health by preventing and minimising the harm from gambling;

(b) Services to treat and assist problem gamblers and their families and whānau; and

(c) Independent scientific research on the effects of gambling.

The levy is payable initially by the New Zealand Racing Board, gaming machine operators, casino operators and the Lotteries Commission. A formula for allocating the costs of the integrated problem gambling strategy among the various gaming sectors is provided in s 320 of the Gambling Act 2003.

The levy is charged at the rate of 1.11 per cent (plus GST) on gaming machine profits. The problem gambling levy is neither a tax nor a duty, but the powers of collection, recovery and enforcement in the Gaming Duties Act 1971 and the TAA apply as if the levy were a duty.

Inland Revenue collects the problem gambling levy along with gaming duty. There will be one combined gaming duty and problem gambling levy rate for each gaming sector [see TIB vol 15:11 (November 2003) at 25-26 for further details].

**315.80 Estate duty (abolished)**

Estate duty, originally imposed under the Estate and Gift Duties Act 1968, was abolished by s 3 of the Estate Duty Abolition Act 1993, for estates of persons dying on or after 17 December 1992. Immediately prior to its abolition, estate duty was charged on the final dutiable estate at the rate of 40 per cent of the value of estates having a dutiable value exceeding $450,000.
Chapter 320

Electronic Commerce

320.10 Terminology

Electronic commerce (or e-commerce) encompasses a range of activities based around the use of data transfer using digital technology, including EFT-POS, electronic banking, telecommunications and the internet. Vast improvements in telecommunications technology (particularly in speed and capacity) and a fall in the price of accessing the internet in recent years have led to a meteoric rise in the use of the internet as a means of conducting business. It is now possible to browse, order, purchase and pay for a wide range of goods and services over the internet, and an increasing range of services, such as information, software, music, graphics and video, can actually be delivered over the internet.

320.20 Taxation issues

There are currently no tax rules dealing specifically with e-commerce in New Zealand. From the taxation point of view, e-commerce is fundamentally no different from any other form of business and the same principles that relate, for example, to the determination of assessable income and deductions for businesses in general apply equally to e-commerce businesses. However, the unique nature of e-commerce can lead to difficulties in the interpretation of tax legislation written without modern technologies in mind. For example, when non-residents from countries with which New Zealand has entered into a double tax agreement derive business income from New Zealand, that income is not taxable in New Zealand unless the non-resident has a permanent establishment in New Zealand. A permanent establishment exists only if the non-resident has a physical place of business in New Zealand. Using a website (which does not need to be located in New Zealand), a non-resident can generate substantial business income from New Zealand without having a physical presence here. The question therefore arises as to whether a website is (or should be) a permanent establishment [see 320.37].

Other tax issues relating to e-commerce include the deductibility of website and related expenditure, the treatment of assets (including software), and the applicability of GST to e-commerce transactions. These issues are dealt with in subsequent paragraphs.

Widespread discussion at the governmental and international levels on the possible impact of e-commerce on tax revenue and tax administration has been generated in response to the growth in e-commerce [see 320.70].

320.30 Income from e-commerce [ss BD 1, CB 1]

For a resident conducting a business in New Zealand, income derived from e-commerce is determined in the same way as for any other type of business. Assessable income includes any amount derived from a business,
and residents are taxed on a worldwide basis. “Business” is defined as including any profession, trade, or undertaking carried on for profit [s YA 1, see 130 BUSINESS, 230 CORE PROVISIONS].

For non-residents, the liability of income from e-commerce to income tax in New Zealand depends on:

(a) Whether or not the income is derived from New Zealand [s YD 4, see 760.20];
(b) The existence or otherwise of a double tax agreement [see 310 DOUBLE TAX AGREEMENTS];
(c) If there is a double tax agreement, the type of income involved (different types of income are treated differently under double tax agreements, eg business income and royalties);
(d) If business income is involved and there is a double tax agreement, whether or not the non-resident has a permanent establishment in New Zealand [see 320.37].

320.35 Residence of e-commerce businesses [ss YD 1, YD 2]

The liability or otherwise of a business to income tax depends in part on whether the entity is resident in New Zealand. The rules for determining residence are set out in detail in 1250 RESIDENCE. Note that there are different rules for individuals and companies.

The residence rules may be summarised as follows:

(a) An individual is resident in New Zealand if the individual has a permanent place of abode in New Zealand or if the individual is personally present in New Zealand for a total of more than 183 days in any 12 month period.
(b) A company is resident in New Zealand if:
   (i) It is incorporated in New Zealand; or
   (ii) It has its head office in New Zealand; or
   (iii) It has its centre of management in New Zealand; or
   (iv) Control of the company by its directors is exercised in New Zealand.

320.37 Significance of permanent establishment

Income is deemed to be derived from New Zealand if it is derived from a business “wholly or partly carried on in New Zealand” [s YD 4(2)]. However, if the entity deriving business income from New Zealand is a resident of a country with which New Zealand has a double tax agreement, that income will be taxable in New Zealand only if the entity carries on the business through a permanent establishment in New Zealand.

The OECD Model Tax Convention (on which most double tax agreements are modelled) defines “permanent establishment” as “a fixed place of business through which the business of an enterprise is wholly or partly carried on”, including a place of management, branch, office, factory, workshop, mine, oil or gas well, or quarry. Under the Convention, “permanent establishment” does not include:

(a) Facilities used for the storage, display or delivery of goods belonging to the enterprise;
(b) Stocks of goods solely for the purpose of storage, display, delivery, or processing by another enterprise; or
(c) A fixed place of business used solely for purchasing goods, collecting information, or carrying on an activity of a preparatory or auxiliary character.

An enterprise will be deemed to have a permanent establishment in a state if an agent (other than an independent agent), who has the authority to conclude contracts on behalf of the enterprise, regularly acts on behalf of the enterprise in that state.

Difficulties may arise in attempting to apply the permanent establishment definition to certain e-commerce activities. For example, is a business website located in New Zealand a permanent establishment? This issue was considered by an OECD Technical Advisory Group, which stated (22 December 2000, at 5) [see 320.80]:

“… an internet web site, which is a combination of software and electronic data, does not in itself constitute tangible property. It therefore does not have a location that can constitute a ‘place
of business’ as there is no ‘facility such as premises or, in certain instances, machinery or equipment’ as far as the software and data constituting that web site is concerned. On the other hand, the server on which the web site is stored and through which it is accessible is a piece of equipment having a physical location and such location may thus constitute a ‘fixed place of business’ of the enterprise that operates that server.”

Inland Revenue’s Policy Advice Division has stated [see 320.80] that it supports the OECD view, in particular that:

(a) A website cannot, in itself, constitute a permanent establishment;
(b) A website hosting arrangement — where the website of a business is hosted by an internet service provider (ISP) — typically does not result in a permanent establishment;
(c) An ISP will not typically constitute a dependent agent of another enterprise so as to constitute a permanent establishment of that enterprise; and
(d) A business that owns or leases a server will not necessarily have a permanent establishment where the server is located.

However, as noted by Inland Revenue, the OECD has yet to address the issue of how to determine the profit that can be attributed to a permanent establishment, should one be considered to exist.

See 320.80 for other publications which discuss these issues in depth — in particular L Cox (March 2001) and A Ryan (November 1999).

**320.40 Deductibility of e-commerce expenditure** [s DA 1]

A taxpayer carrying on any business (including e-commerce) is allowed a deduction against assessable income for any expenditure or loss incurred by the taxpayer in deriving assessable income, or in the course of carrying on the business. In other words, to be deductible, the expenditure must either be related to producing assessable income or to the carrying on of a business whose purpose is producing assessable income [see 230 DEDUCTIONS].

According to Inland Revenue [see TIB vol 12:8 (August 2000) at 21-22], expenditure incurred in creating a website to be used in deriving assessable income is deductible in the following circumstances:

(a) Expenditure incurred in acquiring a website domain name is capital expenditure and therefore non-deductible under s DA 2(1). A domain name is not “depreciable intangible property” — see sch 14. As such, the expenditure incurred in acquiring the domain name is also not depreciable.

(b) The hypertext markup language (HTML) or other programming that makes up the website is an asset, being a computer program. The costs incurred in creating the website are appropriately categorised as capital expenditure.

(c) As a capital asset, the costs of creating the website must be capitalised and may be depreciated. To be depreciable, the software must be used in deriving assessable income. Computer software may be depreciated at a rate of 40 per cent diminishing value or 30 per cent straight-line [see 320.50].

(d) Ongoing costs of updating or adding to the information on a website are of a revenue nature, and are deductible when incurred if they satisfy the general permission in s DA 1. It is a matter of degree as to whether expenditure is updating and maintaining a website, and hence revenue, or a reconstruction or functional improvement to a website, which would be capital.

(e) Examples of deductible maintenance would include: updating the content of a web page, adding content to a web page, correcting minor errors or bugs in a website, and minor style or format changes relating to matters such as font types, font sizes and colours.

(f) Examples of non-deductible improvements would include: adding new features to a website (such as adding a sales capability with credit card processing features), adding extra pages to the website, upgrading the version of the software used in the website, and completely changing the layout and functions of the website sufficient to be a reconstruction.
The cost of renting space on a hypertext transfer protocol (HTTP) server is deductible, assuming the general permission [s DA 1] is satisfied. The annual renewal fee for registration of a domain name is also deductible.

The CIR’s policy on the income tax treatment of computer software generally is discussed in 250.410.

### 320.50 Depreciation of e-commerce assets

Assets that fall within the definition of depreciable property [ss EE 6, EE 7] and that are used to produce assessable income or to carry on a business may be depreciated for income tax purposes. Depreciation enables a percentage of the cost of an asset to be claimed as a deduction in each of a number of years. The rate at which the asset is depreciated depends on the estimated useful life of the asset. Depreciation rates are set by the CIR using statutory rules — a complete list of depreciation rates is provided at 5000 DEPRECIATION SCHEDULES. Generally, taxpayers can choose to depreciate an asset using either the straight line (SL) or the diminishing value (DV) method.

Some examples of depreciation rates for assets that might be used in an e-commerce business are as follows:

<table>
<thead>
<tr>
<th>Asset type</th>
<th>Straight-line rate</th>
<th>Diminishing value rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>EFTPOS terminals</td>
<td>40%</td>
<td>50%</td>
</tr>
<tr>
<td>Mainframe computers</td>
<td>21%</td>
<td>30%</td>
</tr>
<tr>
<td>Mini computers</td>
<td>40%</td>
<td>50%</td>

</tbody>
</table>

The depreciation rules are explained fully in 250 DEPRECIATION.

### 320.60 GST and e-commerce

An overview of the GST regime is provided at 580.05.

Only businesses that are registered for GST are required to charge GST to their customers. Any business may register for GST if it is making taxable supplies [see 580.07 and 580.10]. However, a business whose taxable supplies exceed, or are likely to exceed, $60,000 in any 12-month period must register.

Most goods and services supplied in New Zealand are subject to GST at the rate of 15 per cent. Some goods and services, such as financial services, are exempt [see 580.20], while others are zero-rated [see 580.30].

A business that is resident in New Zealand and registered for GST will be required to charge GST on all goods and services it supplies in New Zealand. Exported goods are zero-rated [see 580.05]. Services physically performed outside New Zealand and services supplied to non-residents who are outside New Zealand at the time of supply are also normally zero-rated [see 580.05 to 580.43].

Businesses that are registered for GST may claim a credit for GST they pay on supplies they receive [see 580.120 to 580.124].

All goods imported into New Zealand are charged with GST by the Customs Department [see 580.100]. Imported services are subject to GST under a reverse charge mechanism (ie the recipient is liable to pay the GST on the supply), if the recipient of the services is registered for GST, less than 95 per cent of the supplies made by the recipient are taxable, and the supply would be taxable if made in New Zealand by a registered person [see 580.101].
A non-resident carrying on a taxable activity [see 580.95] and selling goods or services to customers in New Zealand is required to register for (and therefore charge) GST if the total value of the taxable supplies it makes has exceeded, or is likely to exceed, $60,000 in any 12-month period. Registration of non-residents is explained further at 580.83.

A supply is deemed to take place in New Zealand if the supplier is resident in New Zealand. For GST purposes, “resident” includes a person carrying on a taxable activity in New Zealand through a fixed or permanent place (eg a branch or office) in New Zealand. Supplies by non-residents are also deemed to take place in New Zealand if the goods are in New Zealand at the time of supply or the services are physically performed in New Zealand [see 580.50].

**320.70 International issues in e-commerce taxation**

Concern over the possible tax implications of growth in e-commerce is reflected in the widespread discussion of this issue at the international level. Much of this discussion is coordinated by the OECD. Five guiding principles have been formulated in OECD discussions [see 320.80, Ryan (October 1999)], on possible solutions to taxing e-commerce transactions:

(a) The tax treatment of e-commerce transactions should be neutral in comparison with conventional commerce. The tax treatment should not alter economic behaviour;

(b) The taxation of e-commerce transactions should be transparent and simple;

(c) Multiple international taxation should be avoided, to avoid economic distortions and to share tax revenue between countries according to economic activity;

(d) Compliance and administrative costs should be minimised so as not to inhibit trade;

(e) Tax rules should be flexible enough to cope with future developments in technology.

An OECD Ministerial conference in October 1998, *A Borderless World – Realising the Potential of Global Electronic Commerce*, endorsed the following key points from an OECD report [see 320.80]:

(a) Revenue administrators and business affirmed that widely accepted general tax principles should apply to the taxation of e-commerce;

(b) The taxation framework for e-commerce should be guided by the same taxation principles that guide governments in relation to conventional commerce;

(c) Countries should use e-commerce to develop taxation framework conditions for taxpayer service, tax administration, consumption taxes, and international tax norms;

(d) Member countries should work closely with all players including businesses, particularly small and medium enterprises, and non-member countries.

The above-mentioned OECD report confirmed that e-commerce raises tax policy and administration issues for revenue authorities. However, e-commerce is not new business but rather a new way of doing business, and many of the issues posed by e-commerce are simply extensions of existing problems created by international trade.

The ATO report *Tax and the Internet* [see 320.80], identified the following challenges posed by e-commerce for tax administrations:

(a) Difficulties in identifying the parties behind internet businesses;

(b) The ability of internet businesses to store tax records offshore or to encrypt them or alter them without trace;

(c) The possibility that some types of electronic money could exacerbate the problems of the physical cash economy;

(d) The removal of efficient tax collection points in the distribution chain from producer to consumer (“disintermediation”);

(e) The ability of the technologies to change the nature (and thus the tax treatment) of products through digitisation.
320.80 Further information

The following publications provide further information on tax issues relating to e-commerce.

Chapter 325

Emissions Trading

325.10 Introduction
An emissions trading scheme was introduced by the Climate Change Response Act 2002.

Under the scheme, certain participants are allocated units by Government either in recognition of their activities that remove greenhouse gases from the environment, or reduce the amount of gases entering the environment. Others are issued with units to assist them with the cost of the scheme.

Obligations are imposed on participants to surrender units based on the tonnage of greenhouse gases that are emitted by the activities that they undertake.

The following tax rules have been introduced to govern the tax treatment of emissions trading. The GST consequences of transactions involving units is covered in 580.48.

325.15 What is an emissions unit?
An “emissions unit” is a “unit” as defined in the Climate Change Response Act 2002. There are three types of unit included in the definition. These are:

(a) A Kyoto unit: These are specified in, or in accordance with, the Protocol. The Protocol is the Protocol to the United Nations Framework Convention on Climate Change (“the Kyoto Protocol”). These include assigned amount units, certified emission reduction units, emission reduction units, long-term certified emission reduction units, removal units, and temporary certified emission reduction units.

(b) A New Zealand emissions unit: This is a unit issued by the Registrar and designated as a New Zealand unit.

(c) An approved overseas unit: This is a unit, other than a Kyoto unit, which has been issued by an overseas registry and prescribed as being a unit that may be transferred to accounts in the registry.

There is also a fourth type of unit known as a “non-Kyoto greenhouse gas unit” This is a unit that is issued by reference to the sequestration, reduction or avoidance of emission of human induced greenhouse gases, has been verified to an internationally recognised standard and is not an “emissions unit”. These are often referred to as “grey units”.

For tax purposes:

(a) Neither an emissions unit nor a non-Kyoto greenhouse unit is “trading stock”;

(b) An “emissions unit” is revenue account property, as is a non-kyoto greenhouse gas unit;

(c) Both emissions units and non-Kyoto greenhouse units are excepted financial arrangements;
Emissions Trading

A project agreement entered into between the Crown and a participant under the Crown’s Projects to Reduce Emissions programme is a financial arrangement.

325.20 Acquisition, sale, surrender or conversion of an emissions unit

[ss CB 36, CX 51B, CX 51C, DB 60, ED 1B]

(1) Acquisition of a free unit

Where a unit is transferred to a person for a price of zero, under s 64 or Part 4, subpart 2 of the Climate Change Response Act 2002, or in relation to a forest sink covenant entered into by the person, no deduction is allowed for expenditure or loss incurred as consideration for the unit [s DB 60].

(2) Disposal of a unit

The amount derived on the disposal of an “emissions unit” is income. However, the income is excluded income (not taxable) where:

(a) The unit is a pre-1990 forest land emissions unit and the person would not derive income other than exempt or excluded income from a disposal (without timber) of the land to which the emissions unit relates [s CX 51B]; or

(b) The unit is a fishing quota emissions unit and the person would not derive income other than exempt or excluded income from a disposal of the quota to which the emissions unit relates [s CX 51C].

(3) Surrender of a unit

If the disposal was by way of surrender under the Climate Change Response Act 2002:

(a) The unit is deemed to have been sold to an unrelated person;

(b) The disposal is deemed to occur at the time of surrender.

(4) Disposal value

The deemed disposal value is zero if:

(a) The person surrenders the emissions unit for emissions in relation to post-1989 forest land;

(b) The person surrenders the emissions unit in relation to the deforestation of pre-1990 forest land if a disposal of that land (without timber) at the time of the surrender would result in the person deriving assessable income; or

(c) The person transfers the emissions unit to the Crown under a forest sink covenant.

The deemed disposal value is the unit’s market value if:

(a) The person surrenders a post-1989 forest land emissions unit or a forest sink emissions unit other than:

(i) For emissions in relation to post-1989 forest land; or

(ii) By a transfer to the Crown under a forest sink covenant.

(b) The person surrenders the emissions unit before the period of the emissions to which the unit relates; and:

(i) The unit was transferred to the person at a price of zero as part of an allocation of free units to industry, fishing vessel operators and agriculture a price of zero under Part 4, subpart 2 of the Climate Change Response Act 2002; and

(ii) The unit is not a “forest land unit”.

If neither zero nor market value applies (see above), and provided that s ED 1(7B) applies to the unit, the deemed disposal value is its value under s ED 1(7B).

Section ED 1(7B) applies to a unit where any one or more of the following applies:

(a) The unit was a free unit which was transferred under s 64 of the Climate Change Response Act 2002 (entitlement to receive units for the person’s removal activities) or under Part 4, subpart 2 of the
Climate Change Response Act 2002. These units have a value of zero during the period from the date of transfer to a date that is before the end of the income year of transfer;

(b) The unit is a forest land emissions unit or a replacement forest land emissions unit. These units have a zero value at the end of each income year.

(c) The unit is an emissions unit to which s ED 1B applies. These are free units which have been transferred to the person under s 64 or Part 4, subpart 2 of the Climate Change Response Act 2002 and are held continuously to the end of the income year. They relate to a quantity of emissions or emissions-related costs in a period that ends during or after the income year. They are neither forest land emissions units replacement forest land emissions units nor fishing quota emissions units. The units must not have been assigned a cost under s ED 1B(3)(a) for an earlier income year (see item (ii) below). The value at the end of the income year of units to which s ED 1B apply is as follows:

(i) If the emissions unit period begins after the end of the income year, the value is zero.

(ii) If item (i) above does not apply and the emissions unit period ends after the end of the income year, the value is market value for the number of units calculated under the formula contained in s ED 1B(4) and zero for the balance of the units;

(iii) If the emissions unit period ends during or at the end of the income year, the value of the units is their market value.

If none of the above items apply, the unit’s deemed disposal value is its cost.

(5) Conversion of a unit
Where a person converts a New Zealand emissions unit (other than a forest land unit) into a Kyoto emissions unit, a deemed disposal occurs. The unit is treated as having been sold for an amount equal to the value of the unit under s ED 1(7B) (see above) if that section applies to the unit. Otherwise, the unit is deemed to have been sold at cost.

325.25 Emissions units derived under projects to reduce emissions programme  [ss CB 1, CB 36]

Where a project agreement has been entered into between the Crown and a participant under the Crown’s Projects to Reduce Emissions programme, the project agreement is a financial arrangement. Emissions units derived by the participant under the agreement are income under s CB 1 with the amount of the income being equal to the value of the units transferred to the participant. If units (or their cash equivalent) are required to be refunded to the Crown, the refunded amount is deductible. Any amount received from the sale of units is also income [see Public ruling BR Pub 08/03, TIB vol 20:10 (December 2008) at 4-20].

325.27 Permanent forest sink initiative  [ss CB 36 DB 60B, ED 1, GC 3B]

A permanent forest sink initiative is an agreement entered into between the Government and a forester whereby the forester covenants to limit their rights to fell their trees. In return for entering into the covenant, the forester receives emissions units from the Government. For tax purposes the receipt and surrender of units is treated in the same way as the receipt and surrender of units under the post-1989 forest scheme [see 325.35]. Thus the receipt of units can give rise to taxable income and the surrender of units can give rise to a tax deduction. Both the receipt of units and the surrender of units is dealt with on a cash basis.

325.30 Pre-1990 Forest land units  [ss CB 36, CX 51B, DB 60B]

(1) Definitions

A “pre-1990 forest land emissions unit” is an emissions unit that was transferred to the person under Part 4, subpart 2 of the Climate Change Response Act 2002 in relation to pre-1990 forest land and that has been held by that person since its issue. It includes units that have been transferred to the person under a provision of a forestry rights agreement relating to the allocation of income or emissions units between the recipient and the person. It also includes units that have been received by the taxpayer from the person appointed by the Minister to receive units under Treaty of Waitangi settlements.
“Pre-1990 forest land” is defined in the Climate Change Response Act 2002 as being land that was forest land on 31 December 1989, remained as forest land on 31 December 2007 and still is a forest. It must consist predominantly of exotic forest species. It does not include land that has been deforested where any liability to surrender units has been satisfied and that liability arose from deforesting an area of more than two hectares in the five-year period commencing on 1 January 2008 or in any subsequent five-year period. This exclusion applies even where the deforested land has been declared exempt land.

(2) **Sale or surrender [s CX 51B]**
Where a pre-1990 forest land unit is sold or surrendered, the value of that disposal is determined under s CB 36 [see 325.20].

The sale to another person of a pre-1990 forest land emissions unit is excluded income if, at the time of disposal a sale or disposal (without timber) of the forest land to which the unit relates would not result in the person deriving assessable income [s CX 51B].

(3) **Surrender of pre-1990 unit for post-1989 emissions**
Where a person surrenders a pre-1990 forest land unit to meet a liability to surrender units in relation to post-1989 forest land, the person is deemed to have disposed of the pre-1990 forest land unit to an unrelated person and as having then reacquired it. Both the deemed disposal and the deemed reacquisition occur at the market value of the unit at that time. The result is that any gain on deemed disposal of the pre-1990 unit is realised for tax purposes at that time.

(4) **Emissions liabilities in relation to pre-1990 forest land [s DB 60B]**
No deduction is available for any liability incurred for emissions relating to pre-1990 forest land.

(5) **Value of units at year end s ED 1(5B)**
Section ED 1(5B) applies to the valuation of units on hand at year end with the effect that these units are not able to be pooled with other units [see 325.40].

### 325.35 Post-1989 forest land units [ss CB 36, CX 48, DB 60B]

(1) **Definitions**
A “post-1989 forest land emissions unit” is an emissions unit that was transferred to a person under s 64 Climate Change Response Act 2002 for growing trees on post-1989 forest land and that has been held continuously by that person since its issue. It includes units that have been transferred to the person under a provision of a forestry rights agreement relating to the allocation of income or emissions units between the recipient and the person.

“Post-1989 forest land” is:
(a) Land that was not forest land on 31 December 1989, or was forest land on that date but was deforested between 1 January 1990 and 31 December 2007;
(b) Land that was non-exempt pre-1990 forest land that was deforested on or after 1 January 2008 where any liability to surrender units has been satisfied and that liability arose from deforesting an area of more than two hectares in the five-year period commencing on 1 January 2008 or in any subsequent five-year period; or
(c) Exempt land that has been deforested where the number of units that would have been required to be surrendered had it been non-exempt pre-1990 forest land (see item (b) above) have been surrendered.

(2) **Sale or surrender**
Where a post-1989 forest land unit is sold or surrendered, the value of that disposal is determined under s CB 36 [see 325.20].
325.37 Fishing quota emissions units [ss CB 36, CX 51C, DB 61, ED 1]

(1) Definitions
A “fishing quota emissions unit” is an emissions unit that was transferred to a person under s 74 of the Climate Change Response Act 2002 to a person who is the owner of individual transferable quota and that unit has been held continuously by that person since its issue.

(2) Sale or surrender
Where a fishing quota emissions unit is sold to another person, the sale proceeds are excluded income unless the unit is held on revenue account. Where the unit is surrendered, rather than sold, the treatment set out in s CB 36 (10) applies [see 325.20]. Section DB 61 treats the person as having disposed of the unit to an unrelated person and then to have reacquired it, in both cases at market value. The result is that any gain on deemed disposal of the unit is realised for tax purposes at that time.

(3) Value of units at year end [s ED 1(5B)]
Section ED 1(5B) applies to the valuation of units on hand at year end with the effect that these units are not able to be pooled with other units [see 325.40].

325.40 Value of emissions units at year end [ss ED 1 ED 1B]
As emissions units are excepted financial arrangements, they are required to be valued at cost at the end of each income year. Costs are required to be allocated on either the first-in-first-out (FIFO) or the weighted average cost method.

Restrictions apply to which emissions units can be aggregated together when applying the chosen cost method. None of the following types of emissions unit can be aggregated or pooled together with units of another type:

(a) Pre-1990 forest land emissions units relating to pre-1990 forest land, if the holder of the units would derive assessable income from a disposal of the land without timber;
(b) Post-1989 forest land emissions units;
(c) Forest sink emissions units;
(d) Replacement forest land emissions units;
(e) Fishing quota emissions units, if the holder of the units would derive assessable income from a disposal of an individual transferable quota to which the units relate;
(f) Pre-1990 forest land emissions units relating to pre-1990 forest land, if the holder of the units would derive no assessable income from a disposal of the land without timber;
(g) Fishing quota emissions units, if the holder of the units would derive only exempt or excluded income from a disposal of an individual transferable quota to which the units relate;
(h) Emissions units issued for no consideration to which s ED 1B applies [see below]; and that have not been assigned a cost under s ED 1B(3)(a) [see below].

Notwithstanding the above restriction, emissions units described in items (a) to (e) above, can be pooled together, but not with any other types of emissions unit.

(1) Exceptions to the requirement to value at cost
Some units are valued at zero value at year end. Those that qualify for this treatment are set out in s ED 1(7B) and s ED 1B.

Those that qualify under s ED 1(7B) are:

(a) Forest land emissions units. These are valued at zero at the end of each income year.
(b) Replacement forest land emissions units. These are valued at zero at the end of each income year.
(c) An emissions unit transferred under s 64, or Part 4, subpart 2, of the Climate Change Response Act 2002 for zero consideration. These are, in the case of s 64, units allocated in consideration of a person’s
emissions removal activities and, in the case of Part 4, subpart 2, the free units issued to industry groups that have high emissions liabilities and compete on the international markets. We refer to these units as “industry units”. Industry units have a zero value at all times from the date on which they are transferred up to, but not including, the end of the income year in which the transfer occurred. Their value at the end of the income year is determined by s ED 1B.

Section ED 1B applies where the emissions units:

(a) Were held at the end of the income year and meet all of the following criteria:
   (i) Were industry units transferred to the person for a price of zero or were transferred to the person by a public authority under a supplementary agreement to a negotiated greenhouse agreement;
   (ii) Are held continuously by the person to the end of the income year;
   (iii) Have not been valued as a unit shortfall in a previous income year; and
   (iv) Are not forest land emissions units, replacement forest land emissions units, or fishing quota emissions units.

Their year-end value depends on whether or not there was an emissions shortfall in previous income years. An emissions shortfall occurs where there were insufficient free units transferred to the person in the previous income year. As units are allocated on the basis of the prior year’s production, an insufficient allocation will occur where the production level is increasing.

Where there was no unit shortfall in the previous year, it is necessary only to look at the current income year. To the extent to which the correct number of units have been transferred in the current income year, they are valued at market value. If too many have been transferred, the excess is valued at zero. Excess units will either be transferred back to government or offset against a future allocation.

If there is a unit shortfall (too few units have been transferred) the number actually transferred are valued at market value. The shortfall is also valued at market value and, when the shortfall is made up in the following year, an adjustment will occur to ensure that they are not counted twice.

The formula is under which this calculation is undertaken is:

\[
\text{unit entitlement} - \text{disposals at zero value}
\]

“Unit entitlement” is the total for the income year of amounts, each of which the person would have for a period of overlap between the calendar year ending 31 December and the income year if the period of overlap were treated as a year, of (any one or more of):

(i) Final allocation entitlement under s 83 of the Climate Change Response Act 2002;
(ii) Allocation entitlement under s 85 of that Act;
(iii) Emissions units corresponding to the actual emissions amount under a supplementary agreement to a negotiated greenhouse agreement.

“Disposals at zero” value is the number of emissions units disposed of by the person in the income year that had a value of zero at the disposal.

325.45 Anti-avoidance [ss GC 1, GC 3B]

Section GC 3B provides that emissions units are included in the definition of "trading stock" for the purposes of the anti-avoidance rules in s GC 1. However, there are some exceptions. The rule does not apply to:

- The surrender of a unit under the Climate Change Response Act 2002;
- The transfer of a unit to the Crown under a forest sink covenant under s 67Y of the Forests Act 1949; or
- The transfer of a forest land emissions unit by the person who receives it from the Crown to a person as a party to a forestry rights agreement as required by that agreement relating to the allocation of income or emissions units between the two parties.
The effect of the application of s GC 1 is that, where a person disposes of a unit for less than market value, the person is treated as having derived market value from the sale and the person to whom the unit was sold is treated as having paid market value for it.

### 330.10 Amounts derived in connection with employment [s CE 1]

Allowances derived in connection with employment are specifically included as income under s CE 1(a). Benefits of a non-cash nature are not assessable income with the exception of accommodation provided in connection with employment [330.45]. Non-cash benefits are covered by fringe benefit tax rules, and are regarded as excluded income [s CX 3]. By definition in s BD 1(5), assessable income does not include excluded income.

Taxable allowances should be added to salary and wages, and have PAYE deducted. Non-taxable (reimbursing) allowances should be recorded in the employer’s wagebook, but do not need to be shown on the employer monthly schedule (IR348).

### 330.15 Deductibility of employee allowance expenditure [s EA 3]

Expenditure incurred by an employer in providing allowances to employees is deductible if it satisfies the general permission [s DA 1], and none of the general limitations [s DA 2] apply.

If an allowance is based on an estimate of the amount of expenditure that an employee will incur, and some or all of that allowance is paid in advance, an adjustment may have to be made if part of the allowance relates to a subsequent income year. For the purposes of the prepayments rules, an allowance that is exempt under ss CW 17 or CW 18 is treated as a payment for services and the services are treated as being performed in the income year that the employee’s expenditure is expected to occur [s EA 3(7)].

**Example:**
The marketing manager of a company is paid a monthly allowance of $500 to cover his miscellaneous travel and entertainment costs. The allowance is based on an estimate of the expenditure he normally incurs. The allowance is paid in advance, so that the allowance for April expenses is paid at the end of March. Because the expenditure was incurred in March, it is deductible in the year ended 31 March. However, assuming the company has a standard balance date, the $500 payment is unexpired expenditure as at 31 March and must therefore be added back to income for the year ended 31 March and claimed as a deduction in the following income year.
However, an adjustment for unexpired expenditure is not required if any of the exemptions in Determination E12 apply [see 1140.70]. Thus, to continue the previous example, provided the total amounts of prepaid reimbursing allowances (ie that relate to a subsequent income year) paid to all employees do not exceed $14,000 and do not relate to a period of more than six months after balance date, no adjustment under s EA 3 will be required [Determination E12, paragraph (i) of the Schedule].

330.20 Reimbursing expenditure and expenditure on account of an employee [s CW 17]

An amount paid by an employer in respect of an employee’s employment or service is exempt from tax to the extent that it meets either of these conditions:

(a) It reimburses the employee for expenditure for which the employee would be allowed a deduction, if the employment limitation did not exist; or

(b) It is expenditure on account of an employee for which the employee would be allowed a deduction if they incurred the expenditure, and if the employment limitation did not exist.

The key requirement for the exemption is that it must reimburse employees for expenditure that would be deductible to the employee if the employee limitation [s DA 2(4)] did not exist.

“Expenditure” includes a depreciation loss. The exemption in s CW 17 does not apply to relocation payments [see 330.40] or payments for overtime meals [see 330.42].

Employers are responsible for determining the appropriate tax treatment of allowances and payments paid to employees. Employers are entitled to make a reasonable estimate of the amount of expenditure likely to be incurred by an employee or group of employees.

Section CW 17 exempts an amount that would, in the absence of the exemption, be taxable. A reimbursing allowance (ie an amount paid regularly to an employee along with salary and wages) could constitute taxable income, hence the need for the specific exemption when the allowance simply reimburses the employee for costs that are incurred by employees in the course of their employment. However, one off reimbursements would not have the hallmarks of income, and do not require s CW 17 to exempt the amount from tax (ie it was never income in the first instance). However, such an amount could come within the definition of expenditure on account of an employee.

“Expenditure on account of an employee” means a payment made by an employer relating to expenditure incurred by an employee [s CE 5; see 1300.15]. Expenditure on account of an employee can be either:

(a) A reimbursement by the employer of expenditure that an employee has paid; or

(b) An account which is in the employee’s name that is paid by the employer.

Certain deductions are not allowed when calculating assessable income. The most likely ones to apply in relation to allowances and payments on account of employees are the limitations on capital, and private and domestic expenditure. Therefore, an allowance paid by an employer or a payment on account of an employee, can be paid tax free when the allowance or payment reimburses an employee for expenditure which is or would be incurred in deriving the employee’s income, provided the allowance or payment does not reimburse capital expenditure or expenditure of a private or domestic nature.

Only allowances paid to employees can be paid tax free. An “employee” is defined in s YA 1 for this purpose as any person who receives or is entitled to receive a PAYE income payment, which is a payment of salary or wages, an extra pay, or a schedular payment. For this purpose the definition of employee also includes a shareholder-employee of a close company, to which the rules in s RD 3(2) to (4) apply.

Therefore, people who do not receive a PAYE income payment are not eligible to rely on s CW 17 to treat the allowance as tax free.

330.25 Reimbursing allowances versus benefiting allowances

Reimbursing allowances confer no monetary gain on the employee and, therefore, are treated as exempt from taxation [ss CW 17, CW 17B, CW 17C, CW 18]. A benefiting allowance is regarded for tax purposes as
additional salary or wages [s CE 1(a)], and the value of the allowance for any pay period must be added to
the employee’s salary or wages and PAYE tax deducted from the total wages paid including the allowance.

330.30 Transport allowances [s CW 18]
The basic principle is that the normal cost of travel between a taxpayer’s home and their fixed place of work
is not deductible in calculating net income, or, alternatively, that an allowance granted to an employee for
the cost of travel between home and work at normal times and in normal circumstances is taxable in the hands
of the employee as it is reimbursing private expenditure [330.20].

It has been held by the Courts that travelling between home and work is not undertaken to enable the taxpayer
to exercise the vocation but “for the purpose of neutralising the effect of departure from the place of business,
for private purposes, on the previous evening. In other words, the object of the journeys, both morning and
evening, is not to enable a person to do work, but to live away from it” Newsom v Robertson (Inspector of
Taxes) [1952] 2 All ER 728 (EWCA).

However, an allowance received by an employee from an employer to cover the employee’s additional
transport costs is exempt income to the extent to which the employee incurs the costs:
(a) In connection with their employment; and
(b) For the employer’s benefit or convenience [s CW 18].

Additional transport costs are the costs to an employee of travelling between their home and place of work,
where those costs are more than would ordinarily be expected. The costs must be attributable to one or more
of the following factors:
(a) The day or time of day when the work duties are performed.

Example 1:
An employee normally working in the daytime when public transport is running may be required to work late at night
when public transport is not available, and is obliged to use a private car. An allowance to cover the car costs in excess
of normal public transport costs could be tax exempt.

Example 2:
An employee normally working a five day week may occasionally be required by the employer to work an extra day,
say, at stocktaking time, at the weekend. An allowance to cover the additional transport costs on that extra day could
be exempt.

(b) The need to transport any goods, or material for use or disposal in the course of the employee’s work.

Example:
An employee, normally using public transport, may be required by the employer to use a private car to pick up some
material or tools of trade on the way to work for use in the employer’s business. In such a case an allowance paid by
the employer for the additional cost of running the car over and above the normal travel costs would be exempt.

(c) The requirement to fulfil a statutory obligation.

(d) A temporary change in the employee’s place of work while in the same employment.

Example:
An employee normally stationed in one town is seconded to a position in a branch of the employer in another town and
paid an allowance to cover the costs of travelling home and back on weekends. The additional cost of travel, compared
with the employee’s costs of normal travel between home and workplace in the home town, would be exempt. The
word “temporary” is not defined, but in practice a period of up to one year would be accepted without question.

(e) Any other condition of the employee’s work. Here again the additional costs of travel imposed on the
employee must be for the benefit or convenience of the employer, if the allowance is to be exempt.

(f) The absence of an adequate public passenger transport service that operates fixed routes and a
regular timetable for the employee’s place of work. The exempt amount is the amount by which the
transport costs exceed $5 per day.
The absence of an adequate public transport service could be relevant in the case when the place of work is situated in a remote location (e.g., freezing works, airports, prisons, hotels). When this factor (of inadequate or no public transport) applies, a travelling allowance paid to reimburse an employee for the cost of travelling from home to work will be tax-exempt to the extent that the allowance does not exceed the surplus of the actual cost of the transport over $5 per day.

**Example:**

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount per day</th>
</tr>
</thead>
<tbody>
<tr>
<td>Actual transport costs</td>
<td>$7.25</td>
</tr>
<tr>
<td>Deemed normal cost</td>
<td>$5.00</td>
</tr>
<tr>
<td>Surplus</td>
<td>$2.25</td>
</tr>
<tr>
<td>Allowance paid</td>
<td>$8.50</td>
</tr>
</tbody>
</table>

The position for tax purposes is:

- **Tax-free allowance** $2.25 per day
- **Taxable allowance** $6.25 per day

In determining whether a particular public transport passenger system is “adequate”, factors to be taken into account should include:

(a) Distance of the workplace from the public passenger transport system;
(b) Adequacy of timetables; and
(c) Capacity of the public passenger transport service to cope with the volume of the employees requiring transport. Thus, if a company has 250 staff whom are required to commence work at 7:30 am in a remote area, and only one bus is scheduled to arrive at that particular place at the time, the public passenger transport system would clearly be inadequate. **TRA Case K15** (1988) 10 NZTC 196 centred around allowances paid to employees being exempt. The CIR submitted the allowance could not be considered exempt from tax as it was payable to all employees, regardless of whether they each incurred “additional transport costs”.

Often the distinction between a taxable and exempt allowance for transport costs can be a fine one. Within the broad parameters set in the ITA 2007, there are many shades of grey.

### 330.40 Relocation expenses

**[ss CW 17B, CX 19(1)(c); TAA, s 91AAR]**

Payments made by an employer to, or on behalf of, an employee who is required to move to a new location for work purposes are exempt from income tax and FBT if the following conditions are met:

(a) The amount paid does not exceed the actual cost of relocation;
(b) The expense is on the list of eligible relocation expenses (see below);
(c) The expenditure is incurred by the end of the tax year following the tax year in which the relocation occurred;
(d) The employee’s existing home is not within reasonable travelling distance of their workplace (unless the accommodation forms an integral part of their work); and
(e) The relocation is as a result of the employee:
   (i) Taking up new employment with a new employer;
   (ii) Taking up new duties at a new location with their existing employer; or
   (iii) Continuing in their current position but at a new location.

The exemption applies from the 2002-2003 income year.

See TIB vol 21:8 (October/November 2009), Part II, at 64-68 for further information.

1. **Eligible relocation expenses**

The eligible relocation expenses, as set out in Determination 09/04 [TIB vol 21:9 (December 2009), at 8-10], are:
(a) **Preparatory**
- Engaging a relocation consultant;
- A familiarisation trip to the new location immediately prior to relocation, for a maximum of seven days in the new location (this excludes travelling time between the old and new locations);
- Obtaining immigration assistance;
- Immigration and emigration applications;
- Health checks, tests and immunisations necessary for immigration or emigration;
- Any documentation and police and other agency checks required as a result of the relocation;
- Obtaining advice on the taxation and superannuation implications of relocating and of obtaining assistance in meeting any additional tax reporting/return requirements that arise from relocating.

(b) **Transportation**
- Removal and transport of household effects (including insurance, insurance excesses and taxes);
- Moving “tools of trade” (including insurance, insurance excesses and taxes);
- Moving other personal items such as cars, boats or trailers (including insurance, insurance excesses and taxes);
- Cleaning and fumigation associated with the removal, transportation and storage of household effects;
- Excess baggage charges arising from the transportation of household and other personal effects and “tools of trade”;
- Customs clearance and other costs associated with complying with New Zealand Customs regulations and other regulatory requirements that arise when transferring household and personal effects and “tools of trade” from the old to the new location;
- Transport to get to the new location (such as, but not limited to, air fares and car rental costs) using a direct route, and meals and accommodation en route;
- Relocating pets, including quarantining and boarding fees;
- Hiring a replacement vehicle while awaiting transportation and clearance of the employee’s own vehicle to the new location. If the employee does not have a vehicle in transit, the cost is limited to a maximum of one month’s hire;
- A trip to tidy up affairs after relocation.

(c) **Property**
- Exiting or breaking existing accommodation leases and similar contracts;
- Selling an existing home and acquiring a new dwelling; in particular:
  - Real estate commissions;
  - Advertising and auctioning;
  - Legal and conveyancing fees and disbursements;
  - Loan application fees;
  - Mortgage early repayment loan application fees;
  - Valuation costs;
  - LIM and building reports (or similar);
  - Any stamp duty; and
  - Penalty interest charges for breaking a fixed term loan.
  (But not any loss in capital value of the existing home);
- Finding accommodation, whether to rent or to purchase, in the new location (but not bonds, refundable or otherwise);
- Hiring household and/or personal effects for the new location, while awaiting transportation of related property to the new location;
- Storage of household or personal effects left at the old location, for (subject to the overall time limit) up to two years;
- Storage of household or personal effects once they have arrived in the new location, for up to three months, or until the employee finds a permanent home, whichever is sooner;
Employee Allowances

- Disposing of household/personal effects and similar assets at the previous location (but not capital losses);
- Conversion of any electrical appliances because of voltage differences between the old and new locations;
- Disconnection and connection fees for, respectively, the old and new residences in relation to utilities (such as power and gas) and telecommunication services (such as telephone, internet and television);
- Accommodation or value of employer provided accommodation once the employee has arrived in the new location, for up to three months after arrival;
- Cleaning and fumigation of old and new residences;
- Utility, rates, insurance and maintenance for the employee’s previous residence for up to one year if, despite reasonable efforts, it cannot be sold or rented, or if the property is rented by the employee, it cannot feasibly be rented to someone else (for example, because the relocation is for a short period).

(d) **Individuals, dependants and miscellaneous**

- Language training for the employee necessary for the relocation (up to 12 months after relocation);
- Redirecting mail;
- Disposal of investments, including superannuation and insurance policies, (but not any reduction in the value thereof), that cannot be held or continued because of the relocation;
- Charges for currency exchange on actual eligible relocation expenses incurred;
- Travel/health insurance while relocating;
- Additional childcare costs that arise as a result of a relocation giving rise to a temporary household rearrangement, for up to three months from the time of relocation;
- School uniform items that need to be replaced because of the relocation;
- Private school application fees if an employee’s children were enrolled in private schools in the previous location or where there is no alternative to private schools in the new location;
- Cancelling professional and club memberships;
- Other costs directly arising from relocation, up to $500 in aggregate.

Taxpayers wishing to add items to the list can apply to:

LTS Manager, Technical Standards
National Office
Inland Revenue
PO Box 2198
Wellington

The application should include the applicant’s details, the nature of the change being sought, and information to support the change.

(2) **Backdated adjustments**

Because the exemption has been back-dated to the start of the 2002-2003 income year, some taxpayers will be entitled to a credit for tax paid on past payments that should have been exempt. Taxpayers can request Inland Revenue to amend a past assessment under s 113 of the TAA [see 60.70, 60.120]. Employers who have grossed up a payment to compensate an employee for the tax impost can obtain a credit for the overpaid PAYE by requesting an adjustment to the applicable employer monthly schedule, which Inland Revenue will do on receipt of the appropriate documentation.

Payments made by a company to compensate employees for financial disadvantages suffered as a result of transferring to a new locality were not of the nature of being a simple reimbursement of expenses or losses incurred by an employee, and were not exempt under s CW 17: *Shell New Zealand Ltd v Commissioner of Inland Revenue* (1994) 16 NZTC 11,303 (CA).
330.42  Overtime meal payments and allowances [ss CW 17C, CX 19(1)(c)]

1) Overtime meal payments
When an employer pays for a meal for an employee who is working overtime, the payment is exempt income of the employee. This applies whether the payment is made directly to the employee or on the employee’s behalf. The exemption applies only if:
(a) The employee has worked at least two hours’ overtime on the day of the meal; and
(b) Either:
   (i) The employee’s employment agreement provides for pay for overtime hours worked; or
   (ii) The employer has an established policy or practice of paying for overtime meals.

“Overtime” means time worked for an employer on a day beyond the person’s ordinary hours of work as set out in their employment agreement.

There is no monetary limit or restriction on what can be included in a “meal”, therefore it could, for example, include beer or wine.

2) Sustenance allowance
When an employer pays a sustenance allowance to an employee, the payment is exempt income of the employee if:
(a) The employee works a minimum of seven hours on the day for which the allowance is paid;
(b) Their employment requires them to work outdoors and away from their employment base for most of the day, and to undertake a long period of physical activity in travelling through a neighbourhood or district on foot or by bicycle;
(c) It is not practicable for the employer to provide sufficient sustenance on the day for the period when the employee is working outdoors;
(d) The allowance recognises the arduous physical nature of the employee’s work, and that the employer would normally provide tea, coffee, water, or similar refreshments at the employment base in the course of their business; and
(e) The employer has an established policy or practice of paying a sustenance allowance.

Note: This exemption was introduced primarily for the benefit of postal workers who are required to carry mail bags, and therefore do not have the capacity to carry food and drinks with them. They need to purchase these items along their mail route to ensure they maintain their energy levels while delivering mail. The allowance recognises that these employees do not have access to employer-provided drink facilities that are normally available to employees at little or no cost.

3) General
For both overtime meal payments and sustenance allowances, the amount paid by the employer must be the actual cost to the employee or a reasonable estimate of the expenditure likely to be incurred by the employee or a group of employees for whom the payment is made. In the case of overtime meals, if actual cost is being reimbursed, documentation is required for meals over $20.

See TIB vol 21:8 (October/November 2009), Part II, at 68-69 for further information.

The exemptions apply from the 2002-2003 income year.

330.45  Accommodation, board, and lodging assessable to employee
[ss CE 1(1B), RA 5, RD 3, RD 5, RD 6]

When an employee is provided with free or subsidised board or lodging, or the use of a house or living premises, or the use of part of a house or living premises, in connection with their employment, the market value of that non-cash benefit is treated as income [s CE 1(1B)]. Under s RD 6 the value of this benefit is treated as accruing from day to day and must be included in the employee’s salary or wages for the relevant
Employee Allowances

pay period before deducting PAYE. If a cash allowance is paid instead, the allowance is taxable under s CE 1(1)(a) and subject to PAYE under ss RA 5 and RD 3.

Accommodation benefits provided to employees are excluded from fringe benefit tax under s CX 28 [see 540.200].

The market value of an accommodation benefit may be determined by the employer. However, in the case of a dispute with Inland Revenue, the market value determined by the CIR is the relevant value. Given this, getting agreement with the CIR as to the value of the benefits as early as possible should be considered. While this may not necessarily bind the CIR (unless a binding ruling is sought), it does give some degree of comfort should the issue of value arise.

Where the employee’s duties necessitate travelling temporarily away from home or the usual place of residence, and board and lodging, or a cash payment in lieu is made by the employer, the board and lodging or the cash payment take on more of a reimbursing nature than an income nature and as such are not liable for tax [see 330.20].

An employer may provide a house allowance in either of the following ways:

(a) By supplying a free house valued at, say, $200 per week in addition to the weekly cash wage of, say, $1,000 per week; or

(b) By paying a gross wage of $1,200 per week and receiving back by way of rent from the employee the sum of $200 per week.

For taxation purposes the position is as follows:

(a) In the first case the employer is entitled to a deduction from business income for the wages paid in cash at the rate of $1,000 per week plus the upkeep of the house in the form of insurance, rates, interest, repairs and maintenance, depreciation, etc. This applies even when the outgoings on the house plus the cash wage exceed $1,200 per week. The employee is liable for income tax on $1,200 per week.

(b) In the second case, the employer may claim a deduction of the gross wage of $1,200 per week, but must return the net rent derived from the employee (ie the $200 per week less outgoings, as above).

The employee’s position is the same in both cases. PAYE should be deducted on a gross payment of $1,200 per week.

In TRA Case F114 (1984) 6 NZTC 60,111, the taxpayer and his wife operated a bus company and purchased a suitable property from which to operate their business. The property included a dwelling-house and the taxpayer and his wife lent the company $37,000 interest free to upgrade the dwelling for their own use. The CIR assessed the taxpayer for half the rental value of the property. The TRA allowed the objection and held:

(a) The dwelling-house was purchased for the convenient operation of the company. The house was provided for the taxpayer’s position with the company.

(b) The value of the interest free loan equated to the rental value of the house.

Where a shareholder of a company lived above one of the company’s warehouses the shareholder did not gain monetary remuneration in the form of accommodation as the area above the warehouse was not fitted out for residential purposes and was not so used by the shareholder: TRA Case R5 (1994) 16 NZTC 6,027.

330.50 Valuing accommodation, board, and lodging

The full market value of a house or accommodation provided to an employee is taxed [s CE 1(1B)], regardless of whether the employee would have selected that standard of accommodation had he or she been free to choose independently of the requirements of the position. However, in practice the test is what would be a fair value to the employee having regard to this and other factors. Where other factors are thought to be significant, the question of the figure on which PAYE is to be deducted should be taken up with the CIR. The CIR has the right to determine the value of that benefit.

When a shareholder-employee occupies a dwelling, bought or built by the company, and pays less than the full rental value or no rent at all, it is necessary to consider whether there is a taxable benefit. To ensure
uniformity a calculation is made and is used as a starting point to discuss what is a fair rental. This calculation is a guide only.

(1) **The position with shareholder-employees of close companies**

<table>
<thead>
<tr>
<th>Non-farm dwelling</th>
<th>Farm dwelling</th>
</tr>
</thead>
<tbody>
<tr>
<td>The total of:</td>
<td>Three quarters of the total of:</td>
</tr>
<tr>

<td>Depreciation at normal rates</td>
</tr>
<tr>
<td>Repairs and maintenance, average or estimated</td>
<td>Repairs and maintenance, average or estimated</td>
</tr>
<tr>
<td>Rates and insurance</td>
<td>Insurance</td>
</tr>
</tbody>
</table>

The cost of the land and the rates payable are not included in the calculation for farm dwellings as the area occupied by the dwelling is, usually, small compared with the area of the farm, and the amount apportioned would be trivial. Other factors to be considered include:

(a) Remoteness as it affects additional capital cost, as well as rental value;
(b) Age of the dwelling;
(c) If the house was on the land when purchased, it may be a more substantial one than was required;
(d) Any other reason peculiar to the community; and
(e) Whether the taxpayer maintains another house.

<table>
<thead>
<tr>
<th>Example:</th>
</tr>
</thead>
<tbody>
<tr>
<td>A shareholder-employee of a farming company occupies, rent free, a dwelling owned by the company and built for $20,000 (excluding land). Insurance is $40 and estimated cost of annual repairs and maintenance is $60. The calculation would give a rental value of:</td>
</tr>
<tr>
<td>3% of $20,000</td>

<tr>
<td>Rental value</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>The shareholder-employee is assessed for income tax on the annual rental value of $425. The company receives a deduction for the actual expenses and depreciation on the dwelling.</td>
</tr>
</tbody>
</table>

If the deduction allowed to the company exceeds the rental value assessed to the shareholder, the excess is not treated as a “dividend” to the shareholder unless the value of the benefit enjoyed by the shareholder exceeds the value of any consideration provided by the shareholder for such benefit. In *TRA Case F114* (1984) 6 NZTC 60,111 it was held that where a company provided a house to a shareholder-employee there was no assessable benefit as the employee provided the company with an interest-free loan. The value of the interest free loan to the company relative to the rental value of the house was such as to leave no surplus benefit to be taxed. However, if this were not the case and there was a benefit to the shareholder in excess of the taxable rental value, then dividend implications will need to be considered.

(2) **Calculating a fair rental value**

When a senior executive in a widely-held company is provided with a substantial dwelling, the following calculation is used as a starting point to calculate a fair rental value:
Employee Allowances

(a) Three per cent of cost including land;
(b) Five per cent of cost of furniture (if provided);
(c) Repairs and maintenance, estimated or average;
(d) Rates and insurance.

The following factors will also be considered before a decision is reached as to the fair rental value:

(a) Has the executive any say in the choice of accommodation?
(b) Does the position held in the company require the employee to occupy far more pretentious premises than would have otherwise been selected for personal use?
(c) Is the employee generally required to entertain and perform other duties in the house for the benefit of the company?
(d) Is the employee required to reside in a remote area?
(e) Does the employee maintain another residence?

330.55 Accommodation supplied at major construction sites

For many years the CIR placed a nil value on the “on site” accommodation supplied to workers at some major construction sites. The reasons for this are historical but related mainly to the poor type of accommodation supplied and the general remoteness of the sites. With the improvement in the type of accommodation now being supplied, the general improvement in transportation, and the siting of some major projects near to urban areas the CIR is of the view that there is no longer any justification for not including the value of this accommodation in their income. Construction site employees are now assessed for the value of the accommodation supplied and the exemption no longer applies. The amount to be assessed is equal to the allowance paid under the various contract agreements where accommodation is not supplied [see PIB 160 (March 1987)].

330.65 Motor vehicle allowances

The payment of reimbursement or allowances to staff should be distinguished from the supply of a motor vehicle for private purposes, the latter being subject to fringe benefit tax. The following rules apply:

(a) Company employees who are not shareholders may be entitled to a maximum distance allowance for business usage based on Inland Revenue distance rates. Alternatively, a proportion of actual expenses and depreciation applicable to full running of the vehicle is calculated and deductible to the business.

(b) In qualifying and non-qualifying companies the use of vehicles by shareholder-employees is subject to fringe benefit tax, but the revenue costs of providing the benefit is deductible along with the fringe benefit tax.

(c) A sole proprietor or a partner in a partnership who provides a vehicle to the business may be entitled to a maximum distance allowance for business usage based on Inland Revenue distance rates. Alternatively, a proportion of actual expenses and depreciation applicable to full running of the vehicle is calculated and deductible to the business. The expenditure and depreciation related to the non-business use of vehicles is not allowed.

Travelling allowances for the cost of normal travel between home and place of work are assessable.

330.70 Clothing, laundry, dirt, and tool allowances

Allowances paid to employees required to work in dirty, unhygienic, damp, dusty, hot, or cold conditions, etc, and allowances paid to employees required to work in confined spaces, employees handling acids, or employees required to wear clogs or gumboots, etc should be distinguished from allowances to reimburse employees for expenditure incurred in obtaining the necessary gear and clothing to perform the work. The former is a benefiting allowance and taxable, the latter is a reimbursement and is exempt. The following allowances can be understood using this yardstick:

(a) Allowances paid to employees required to perform special duties such as spray painting, welding, higher duties, in charge, etc are assessable.
Employee Allowances

330.75

(b) Under some contracts employers are required to pay a “clothing and dirt allowance”. The payment combines a benefit allowance (dirt allowance) and a reimbursing allowance (clothing allowance) in one sum. One half is regarded as taxable and the other half is exempt.

(c) An allowance granted to employees to supply their own boots and gumboots is exempt, but the allowance paid for being required to work in gumboots is assessable income.

(d) A laundry allowance is exempt.

(e) Allowances paid to employees who are required to provide and work in uniforms do not confer a monetary gain to the recipient in so far as uniforms are not ordinary civilian wear and the recipient still has to maintain a personal wardrobe.

(f) A “plain clothes allowance” paid to a plain clothes police officer is partially benefiting and partially reimbursing.

(g) A clothing allowance paid to clergy for the repairs and renewals of normal everyday clerical clothing (as distinct from robes such as cassock and surplice worn in the church and in conducting funeral services) is assessable.

(h) A commercial traveller’s apparel allowance is assessable.

(i) A clothing allowance paid by stock and station agents to employees required to attend stock sales regularly is assessable.

(j) Replacement of protective clothing (used personally) necessary in the production of income is exempt.

(k) A tool and overall allowance is exempt.

(l) An allowance paid to chainsaw operators who supply their own chainsaws is considered to be an exempt reimbursement [see 330.20].

330.75 Examples of reimbursing allowances

The following are examples of reimbursing allowances which are not assessable:

(a) A country or camp allowance may be a benefitting allowance or a reimbursing allowance, depending on the circumstances. Cases have shown that there are circumstances when the duration of the contract (in one instance two years), is such that a single person at least must be regarded as a matter of fact to have severed an association with the previous town, and the CIR has laid down the following rules as a guide:

(i) A country allowance could be regarded as reimbursing and exempt to a married person working away from home. If the employee gives up that home and moves the spouse [see 960.10] and family to the new area the allowance is exempt only when working away from the new home.

(ii) The allowance may be regarded as exempt to an unmarried taxpayer who is temporarily away from the normal town of residence. When a period of absence ceases to be temporary is largely a matter of fact in each case. To provide a working basis, the CIR considers that where a case of the allowance being paid after more than 12 weeks in one place comes to notice, it should be discussed with the employer to ascertain the facts. It must not be inferred that the allowance is to be treated as taxable after 12 weeks, but merely that after 12 weeks the position should be reviewed to ascertain the facts.

(b) Parliamentary reporters’ allowance.

(c) A broken shift allowance is a reimbursement for additional expenses incurred.

(d) Meal money and tea money allowance.

(e) Free accommodation paid to married seamen and widowers at sea maintaining a home ashore.
Employee Allowances

(f) Victualling allowance paid to married seamen and widowers maintaining a home ashore, while ashore on duty whether in home port or otherwise. But victualling allowance paid under the Holidays Act 1981 while on leave is assessable in all cases.

(g) “Out of port” allowances paid to tally clerks, foremen stevedores, foremen, timekeepers, and shipwrights when working away from their home port. The allowance is treated as a reimbursing allowance, and therefore exempt from taxation, as it recognises the necessity for the recipient incurring extraordinary expenses, and that there is no financial gain to the recipient. It applies only to persons employed on a permanent basis and not to ordinary waterfront employees or harbour board employees.

(h) Tanker allowance:
   (i) Crew members are paid non-taxable allowances.
   (ii) Ships’ officers: a tanker allowance is built into the monthly salaries paid to officers and the total is taxed.

(i) Office allowance paid by firms to representatives who live away from branches and conduct a lot of the firm’s business from their homes. The allowance is a reimbursement of the cost of providing office room in their homes and is therefore not assessable.

(j) Night shift allowance for packaging and associated printing employees is exempt from tax, as is the payment made to night workers to recompense transport costs incurred after hours of normal public transport in excess of normal public transport costs.

(k) Location allowances paid to consultants on overseas aid programmes.

(l) When a farmer employs a shepherd or musterer on a permanent basis, or a permanent farm hand on shepherding or mustering duties and the employee is required to supply dogs, horse, and saddlery any allowances received from the employer are exempt.

(m) Rewards received from the police or the Customs Service for information leading to the apprehension of offenders are not taxable unless received as employees of the department.

330.80 Examples of benefiting allowances

The following are examples of benefiting allowances which are assessable to employees:

(a) Locality allowance, which is additional remuneration to employees required to reside in remote areas and is not paid for the purpose of offsetting additional expenses. This allowance is not to be confused with the country or camp allowance paid to employees temporarily required to reside away from their usual place of residence.

(b) Sailors are entitled to be found both while aboard ship and while temporarily ashore in the employ of the shipping company. The benefit ashore may be in the nature of food supplied by the ship’s galley while the ship is in dock, a specific cash allowance, or the cost of hotel accounts paid by the shipping company. The full value of this allowance is exempt in the case of a married or widowed sailor maintaining a home ashore, and partially exempt in the case of an unmarried sailor.

(c) The assessed value of free house, coal, meat, etc supplied to employees.

(d) Standby allowances, waiting time allowances, and travelling time allowances.

(e) Allowance paid to drivers who collect cash is additional remuneration for the responsibility involved in handling cash.

(f) Cashiers and tellers’ risk allowance paid by trading banks. Where the trading bank does not require tellers to make up losses and where the allowance is paid it is for incentive or pay differential reasons. Consequently, when paid by a trading bank, it is a benefit allowance and is accordingly assessable to the recipient.

(g) Keep and accommodation allowances to shearsers is assessable.

(h) Share buying privileges to staff are included in the term monetary remuneration.
Employee Allowances

(i) Where an employer pays income tax or life insurance premiums on behalf of an employee these payments constitute salary or wages and are assessable accordingly.

(j) Examination bonuses on passing various examinations are assessable notwithstanding they are paid partly in consideration of the tutorial and examination fees and books in studying for and passing the examination.

(k) Salvage money paid to the volunteer crew who had already been paid by the harbour board at ordinary overtime rates was assessable, even though it was a voluntary payment: *Naismith v Commissioner of Inland Revenue* (1981) 5 NZTC 61,046, (1981) 4 TRNZ 300 (HC).

330.85 Gratuities and retiring allowances received [s CE 1]

Amounts derived in connection with employment [s CE 1] includes gratuities, which may be classified as either an extra pay or as salary and wages. It is immaterial whether there was an express or implied agreement to pay the amount, or whether the payment was merely a spontaneous gesture on the part of the donor, provided the payment was for or in relation (whether directly or indirectly) to employment or service. A non-cash benefit is subject to the fringe benefit tax regime.

As from 30 November 1992 redundancy payments are assessable income in full with no distinction between lump sum and instalment payments [s CE 1(f)]. However, a tax credit of up to $3,600 was available for payments received between 1 April 2008 and 30 September 2011 under subpart ML [see 1395.90].

As from 1 January 1994 all retirement payments paid by an employer to an employee are taxable to the employee. This applies whether the payment is made in one lump sum or in instalments. The payments are extra pays, so they are liable for an initial PAYE deduction at the extra pay rate but are later included in the person’s annual income tax return and assessed in the ordinary way along with other income. The Social Security Act 1964 includes retiring allowances in the definition of “average income” for the purpose of calculating the high income earner. It applies to all retiring allowances paid on stand-down. People earning above the average wage who receive a retiring allowance are required to look to savings before being granted income support. However, retiring allowances are not taken into account for the purpose of determining the rate of payment of any benefit.

Amounts received as tips are assessable income of the recipient. Although they are given voluntarily, they are given in relation to services rendered, however negligible the service may be. How the tips are taxed depends on whether they are received directly or by way of a service charge. Where the tips are made by the customer direct to the employee, or where the payments are placed in a common pool for the benefit of a number of employees, the employees should return the payments in their annual income tax returns.

Where a service charge is added to the customer’s bill and later paid by the employer to the employee, the employer should treat the payment to the employee as additional wages for the week and deduct PAYE at the appropriate rate. To be deductible by the payer, the tips must represent expenditure necessarily incurred in carrying on a business for the purpose of deriving assessable income and could be expected to be considered as travelling or entertainment expenses.

330.90 Deduction for retiring allowance paid to employee [s DC 1]

A deduction is allowed to a person carrying on a business for any lump sum payment made as a bonus, gratuity, or retiring allowance to an employee of that business when the employee retires. Section DC 1 supplements the general permission, and overrides the capital limitation.

The deduction is allowed when the employee has ceased to be employed as a result of redundancy or loss of office or employment or other similar circumstances. The deduction is also allowed when the former employee cannot be re-employed in any seasonal employment or service of the taxpayer through the occurrence of similar circumstances.

Any lump sum payment made when the employee ceases to be employed or the former employee is unable to be re-employed, is deemed to be a retiring allowance paid on the occasion of retirement. That employee or former employee is deemed to have retired on that date. No deduction is available under s DC 1 to the...
extent that the taxpayer has accepted a liability to make a lump sum payment as part of the purchase of the business [see 1300.25].
Chapter 335

Employment Relationship

335.10 Independent contractor or employee relationship
The question of whether a person is in business or an employee arises because an employee is not permitted any deductions in deriving assessable income. An independent contractor is someone who is in business and is therefore allowed deductions for expenditure and losses [s DA 1]. If the person is not in business, payments received are subject to tax deductions at source in the form of PAYE and schedular payments [see 1080 PAYE]. Accident compensation levy obligations might also arise. The question usually only arises with sole proprietor type operations.

The application of tax law relies on the terms “contract of service” and “contract for services”, but does not define them. Therefore, the meanings depend on the general contract law developed by the Courts and any statutes that apply to a particular kind of work. A person has the same employment status for tax purposes as under general law. If Inland Revenue needs to determine a worker’s status, it uses the current general law [see Inland Revenue Booklet Self-Employed or an Employee? (IR336)].

335.20 Tests of the employment relationship
The following is an extract of the main points from the CIR’s interpretation guideline on whether a person is an employee or an independent contractor [Interpretation Guideline IG 11/01].

The common law distinguishes between contracts of service and contracts for services. A contract of service means there is an employer-employee relationship; a contract for services means there is a principal-independent contractor relationship. At common law, the Courts have developed various tests to determine whether there is a contract of service or a contract for services. The case law shows that the main tests are the intention, control, independence, fundamental and integration tests. These tests are explained below.

The tax obligations of a taxpayer with respect to payments received for work done by the taxpayer depend on his or her employment status (ie whether the taxpayer is an employee or an independent contractor). Employment status has the following consequences for tax purposes:

- Payments to employees from their employer must have PAYE deducted at source;
- Employees cannot register for GST or charge GST for services they supply as employees;
- Independent contractors may deduct certain expenses incurred in deriving assessable income;
- Independent contractors must account to Inland Revenue for tax and accident compensation earner and employee premiums for themselves and any employees; and
- Independent contractors must meet all the requirements of the Goods and Services Tax Act 1985 if the services they supply are in the course of a taxable activity and they are registered (or liable to register) for GST.

Taxpayers cannot change their employment status (or the resulting tax implications of that status) merely by calling themselves independent contractors when they are essentially still employees.

Although there is no exhaustive list of considerations, the tests discussed below (established by the case law) provide useful guidance as to the factors that are to be considered in determining whether someone is engaged as an employee or contractor. These are relevant tests to be considered but, as the cases demonstrate, they may not all be relevant to any one particular enquiry.

It is important in each case to determine employment status by balancing all the circumstances of the relationship between the parties. Often there will be competing factors that support differing conclusions as
to whether someone is an employee or an independent contractor. Applying the tests to the facts of a case requires an objective weighing of the various relevant factors to determine the true nature of the relationship. Often the terms of the relationship between two persons will be recorded in a written agreement; though this is not necessarily the case. If there is a written agreement, the first step is to analyse its terms and conditions. However, it is important to note that the nature of the relationship may change over time (e.g., a person takes on more duties), and this may not be reflected in the written agreement. Changes in regulations and work practices may also cause the employment status of some workers to change. Or, it could simply be that the written agreement does not accurately reflect how the relationship works in practice. It is necessary to consider how the parties actually work together when determining the type of employment relationship between them.

The two leading cases on determining employment status are *Bryson v Three Foot Six Ltd* [2005] NZSC 34, [2005] 3 NZLR 721 (SC) and *TNT Worldwide Express (New Zealand) Ltd v Cunningham* [1993] 3 NZLR 681, (1993) 15 NZTC 10,234 (CA) [see 335.30].

(1) **Intention of the parties test**

The intention of the parties test looks at the intentions of each party to the agreement regarding the nature of the relationship. The description given to a relationship by the parties to the contract is a strong, but not conclusive indication of the type of relationship that exists. The fact that a written contract states that a person is an employee or an independent contractor may indicate the intention of the parties, but it is not determinative: *Bryson v Three Foot Six Ltd*. If the actual circumstances point to an employment relationship, then simply labelling it an independent contract relationship will not alter the true position.

The taxation arrangements between the parties may be relevant when establishing their intentions. For example, if the person engaged to perform the services is paid at a set rate at regular intervals and PAYE is deducted, this may support the view that the parties intended a contract of service.

In some circumstances industry practice may be relevant when determining the intention of the parties. In *Bryson* the Supreme Court agreed with the Employment Court’s statement that industry practice could be relevant when considering the parties’ intention, but that it was not determinative.

(2) **Control test**

The control test looks at the degree of control the employer or principal exerts over the work an employee or contractor is to do and the manner in which it is to be done. The greater the extent to which the principal or employer specifies work content, hours and methods and can supervise and regulate a person, the more likely it is that the person is an employee.

This test used to be considered as the deciding factor, but this is no longer the case. In *TNT Worldwide Express (New Zealand) Ltd v Cunningham* [see 335.30], the Court of Appeal emphasised that control is only one of several factors relevant to the interpretation of the contract.

(3) **Independence test**

The independence test was not mentioned in *Bryson* or *TNT*. The independence test is simply the inverse of the control test. A high level of independence on the part of an employee or a contractor is inconsistent with a high level of control by an employer or a principal.

A person generally has a high level of independence if they:

- Work for multiple people or clients (but the fact the person works for only one person or client does not necessarily mean the person is an employee);
- Work from their own premises;
- Supply their own (specialised) tools or equipment;
- Have direct responsibility for the profits and risks of the business;
- Hire or fire whomever they wish to help them do the job;
- Advertise and invoice for the work;
- Supply the equipment, premises and materials used;
- Pay or account for taxes and government and professional levies.
**Employment Relationship**

(4) **Fundamental test**

The fundamental test is also sometimes described as the “business test” or the “economic reality test”. The fundamental test looks at factors such as:

- Whether the type of business or the nature of the job justifies or requires using an independent contractor;
- The behaviour of the parties before and after entering into the contract;
- Whether there is a time limit for completing a specific project;
- Whether the worker can be dismissed;
- Who is responsible for correcting sub-standard work;
- Who is legally liable if the job goes wrong.

Usually, an independent contractor agrees to be responsible for their work. An independent contractor cannot usually be “dismissed”, although the contract can be terminated if it is broken.

(5) **Integration test**

The integration test is really whether the person is part and parcel of the organisation and not whether the work is necessary for the running of the business. According to the integration test, a job is likely to be done by an employee if it is:

- Integral to the business organisation;
- The type of work commonly done by “employees”;
- Continuous (not a “one-off” or accessory operation);
- For the benefit of the business rather than for the benefit of the worker.

### 335.30 Cases on the employment relationship

The Supreme Court considered the distinction between employee and independent contractor in *Bryson v Three Foot Six Ltd* [2005] 3 NZLR 721, (2005) 22 NZTC 19,242 (SC). Mr Bryson was seconded from Weta Workshop to Three Foot Six Ltd to work in its miniatures unit as a temporary model maker. After two weeks he was offered a permanent position as an on-set model technician working on the production of The Lord of the Rings films. He was not given a written employment agreement or work contract when he began. For the first few weeks he received training. Six months later, Three Foot Six Ltd supplied a written contract (“crew deal memo”) for all of its crew, which refers throughout to “Contractor” and “Independent Contractor”. Approximately 18 months after he commenced work with Three Foot Six, Mr Bryson was made redundant. He alleged unjustifiable dismissal, but could only bring such a claim if he was found to have been an employee.

In the Employment Court, Shaw J found that the real nature of the employment was that of a contract of service. There was no evidence that Mr Bryson was acting as a separate business entity. He had arrived by transfer from Weta and took up the position he was offered. It was not a short-term position and he had no other employment while he was with Three Foot Six. He had model making skills but no relevant experience for his new position. He required six weeks training. He could not be said to have been contracting his skills. Much of the crew deal memo read like a contract of service. Three Foot Six closely controlled his work. He was expected to work regular hours and was treated as an employee, being paid for downtime.

The Employment Court decision was overturned by the Court of Appeal, which found that Shaw J had not placed sufficient weight on contractual intent and industry practice. However, on appeal the Supreme Court concurred with the Employment Court decision that Mr Bryson was an employee, not a contractor. The Supreme Court held that:

(a) The Employment Court correctly directed itself in accordance with s 6 Employment Relations Act 2000 (which defines “employee”).

(b) It was open to the Employment Court to conclude that the crew deal memo did not give any reliable indication of the real nature of the relationship.
Employment Relationship

(c) The Employment Court correctly used the control, integration and “fundamental” tests, in conjunction with other relevant matters, to determine the real nature of the relationship, as directed by s 6(2) Employment Relations Act 2000.

(d) The finding by the Employment Court that industry practice was not helpful in establishing the common intention of Mr Bryson and Three Foot Six Ltd, because Mr Bryson’s working conditions were not typical of the industry, was not a legal error.

(e) The Employment Court was correct in concluding that evidence about invoicing of Mr Bryson’s services, and of the fact that Inland Revenue had not challenged his categorisation as an independent contractor, did not support the respondent’s case that his real status was independent contractor.

(f) On the basis of the evidence as a whole it was open to the Employment Court to find, for the reasons it gave, that the real nature of the relationship between Mr Bryson and Three Foot Six Ltd was one of employment. Mr Bryson was not able to delegate his work. His job was effectively full-time. On the evidence, the Employment Court could take the view that Mr Bryson was not in business on his own account, taking the profits and running the risks of a sole trader, despite being required by Three Foot Six to issue invoices to them and comply with taxation requirements on that basis. The evidence about the industry did not seem to describe relationships similar to that of Mr Bryson with Three Foot Six.

In *TNT Worldwide Express (New Zealand) Ltd v Cunningham* [1993] 3 NZLR 681, (1993) 15 NZTC 10,234 (CA), it was held that an owner-driver courier for TNT was an employee and not self-employed. *TNT Worldwide Express* was not a tax case, but it has tax implications because the general law determines employment status for tax purposes.

Employers who attempt to opt out of their PAYE obligations by putting staff on contract should ensure those staff actually meet the tests outlined above and are in fact contractors. Otherwise, employers may face claims for PAYE not deducted plus additional tax if the staff are actually employees.

Inland Revenue’s policy that real estate agents paid by commission were employees and not independent contractors was upheld because it was stated as such in the legislation under which the real estate industry operated: *Challenge Realty Ltd v Commissioner of Inland Revenue* [1990] 3 NZLR 42, (1990) 12 NZTC 7,212 (CA); *Challenge Realty Ltd v Commissioner of Inland Revenue* (1990) 12 NZTC 7,022 (HC). Consequently, the Real Estate Agents Act 1976 was amended by inserting s 51A to allow these persons to be treated as independent contractors as from 1 April 1991. Where deductions for expenses are claimed Inland Revenue needs to see a written agreement between the parties expressly acknowledging the independent contractor relationship. GST implications are also likely to arise when the taxable supply threshold is exceeded, which also requires tax invoices to exist for the payment of commission, and adjustments to be made when any private asset is brought into the business. Commission payments are subject to withholding tax, a practice upheld by the High Court in *Wendell and Associates Ltd v Commissioner of Inland Revenue* (1986) 8 NZTC 5,155, (1986) 9 TRNZ 721 (HC), for real estate agent commissions.

The West Australian Supreme Court in *GH Teede Pty Ltd v Commissioner of State Taxation (Western Australia)* (1985) 16 ATR 647, 85 ATC 4447 (WASC) held the relationship between the taxpayer real estate agency and its real estate salespeople to be that of employer and employee. Commissions paid were treated as wages despite the fact that little, if any, control and supervision were exercised over the manner in which the agents did their work.

Whether a national broadcasting personality was an independent contractor or an employee of the Broadcasting Corporation was discussed by Judge Barber before holding that the taxpayer (on the facts), was an independent contractor. Eighty-five per cent of the taxpayers income came from Broadcasting Corporation sources and its real estate salespeople to be that of employer and employee. Commissions paid were treated as wages despite the fact that little, if any, control and supervision were exercised over the manner in which the agents did their work.

A private company claimed a person to be neither an employee nor a subcontractor. He had joined the firm for a trial period prior to becoming a shareholder. He was paid monthly and received car petrol expenses and payment of private telephone expenses from the company. He had no shareholding, no position of responsibility, nor any partnership agreement with the company. He was held to be an employee for purposes
of PAYE deductions, his work being held to be an integral part of the business: TRA Case J7 (1987) 9 NZTC 1,044.

A council rubbish tip operator was held to be not an employee. The fact that the contract could only be assigned or sublet on conditions approved by the council was held not to be uncommon. There was a bona fide mutual intention that the operator be an independent contractor. He invoiced fortnightly for services and maintained his own proper records of materials sold and accounted (including GST thereon) to the council accordingly: TRA Case K72 (1988) 10 NZTC 578.

An underwater inspection engineer considering diving for offshore oil drilling operators, who would only contract with companies in order to avoid industrial award and employer obligations, formed a company which then contracted to do work for the operator. Inland Revenue claimed the legal arrangements were a sham and treated the company’s income as being income of the individual personally. Inland Revenue was held to be incorrect, the TRA stating it was impossible to go behind the contracts or to pretend the company did not exist. The individual was an employee of the company and not of the operator: TRA Case K10 (1988) 10 NZTC 63.

Mechanics were held on the facts by the High Court to be independent contractors even although almost all work was provided to them by the objector company. Relevant factors were the following: each mechanic was GST registered and paid accident compensation levies; tools were provided by and maintained at the expense of the mechanics; no restrictions existed in relation to their hours worked; no holiday or sick pay entitlements existed; no union membership was taken; and the mechanics had personal keys and paid rent for work areas. In relation to work, each mechanic turned down work offered, fees were paid on invoice rendered by the mechanic on an hourly rate basis (a time for a job having been negotiated in advance between the company and the mechanic). Any remedial work was performed at the expense of the mechanics: Enterprise Cars Ltd v Commissioner of Inland Revenue (1988) 10 NZTC 5,126 (HC).

A mechanic who was re-engaged as an independent contractor by a company of which he was previously an employee, had his status of independent contractor confirmed in Coro Trading Ltd v Commissioner of Inland Revenue (1996) 17 NZTC 12,495 (HC). This decision was reached despite the fact that from the customers’ point of view there had been no change in how they were billed, and that the company maintained some control over how the contractor conducted his business in order to ensure consistency. Critical factors in the decision were:

(a) He was responsible for organising his own workload;
(b) He took the financial risk of earning a business income;
(c) He lost the entitlement to regular hours and fringe benefits such as holiday pay, sick leave, and superannuation;
(d) He could accept or decline whatever work was offered to him;
(e) His income was proportionate to his effort; and
(f) He fulfilled his financial and taxation obligations to Inland Revenue as an independent contractor.

Arrangements made by a forestry company when changing employment arrangements with a bulldozer driver employed for 13 years were held thereafter to constitute the driver an independent contractor: TRA Case L107 (1989) 11 NZTC 1,597.

A useful summary of the tests to be applied for resolving the employee/independent contractor position is stated in TRA Case L39 (1989) 11 NZTC 1,241, at 1,245-1,247.

Where an employment agency introduced specialist personnel to do work for its clients, it was held that the employment agency was not required to make PAYE deductions from payments made by the employment agency to the specialists as the specialists were not employees of the employment agency: TRA Case M122 (1990) 15 TRNZ 308.

A 19-year-old man in his fourth year of an apprenticeship, working for another person in order for hours worked to count towards the total hours needed to complete an apprenticeship, was an employee and not an independent contractor: TRA Case P48 (1992) 16 TRNZ 887.
In *TRA Case S62* (1996) 17 NZTC 7,393, the taxpayer and two other employees of a company who entered into a contract to do work for their employer outside their normal hours of work were held to be independent contractors with regard to the contract work. The contract work was carried out some distance from their normal place of work as employees. There was little control by the company over when or how the contract work was done. No holiday or sick pay was provided by the company in relation to the contract work and no replacement labour provided during holidays or periods of sickness.

In *TRA Case T18* (1997) 18 NZTC 8,108, the TRA held that a person employed to manage a sports club was an employee and not an independent contractor. Reasons given for the decision were:

(a) The manager was under the firm control of the club committee — he was not free to manage the club as he saw fit;

(b) The manager was an integral part of the club’s operation;

(c) The manager did not provide the tools or equipment required to perform his task;

(d) The manager undertook no real business risk; and

(e) The manager’s base salary was paid, in regular and identical weekly payments, regardless of his effectiveness in the job.

The TRA noted that it would be almost impossible to structure the manager as an independent contractor.

In *TRA Case X17* (2006) 22 NZTC 12,224, the TRA held that a relief courier driver was a casual employee and not an independent contractor.

In *TRA Case Z10* (2009) 24 NZTC 14,113, drivers engaged by a car rental company to move cars from one location to another were held to be independent contractors, not employees. Among other things, the contract between the company and the individual drivers provided for: work to be offered on an “as available” basis, made the drivers responsible for paying any insurance excesses on claims, and required drivers to acknowledge that the agreement was not an employment contract and that no holiday pay was payable. Drivers were paid fixed rates for relocating vehicles, depending on distance, and were required to provide invoices to the company for work done and their GST number if they were registered. Judge Barber considered that in many ways the issue in the case was borderline and that therefore the intention of the parties (which was accepted as genuine and not a sham), should prevail. The contract between the drivers and the company specifically stated that the drivers were independent contractors and the parties had dealt with each other in a manner consistent with the drivers being independent contractors. The integration of the drivers into the business was limited. The independence and control tests do not support the drivers being casual employees. The drivers were exposed to some degree of legal and financial risks. Consistent with them being in business on their own account, they could delegate work to others, were free to work for other people or themselves, could refuse to accept relocation work at any time, and could make themselves unavailable at any time for any length of time.
Chapter 340

Employee Share Purchase Schemes

340.10 Employee share purchases [ss DC 12, CE 2(7)]

A company may provide financial assistance to an employee by way of an interest-free loan to enable the purchase or subscription for shares in the company. Where such financial assistance is provided, the company is entitled to a notional deduction for interest in respect of the loan. This notional deduction is in addition to any deduction for interest that the company may in fact have incurred on capital borrowed for the purpose of making the loan.

An employee share purchase scheme can apply to all classes of employees, including part-time and seasonal workers. A director cannot participate and neither can any persons who are associated with each other and who between them hold 10 per cent or more of the issued capital of the company. However, there is nothing to prevent an employee who has joined a scheme from subsequently being appointed a director.

The amount of the notional deduction is the interest which the employing company would have paid in the income year if all of the following applied:

(a) The money lent to the employee had been borrowed by the company at 10 per cent per annum;
(b) The interest on the notional loan was calculated with monthly rests; and
(c) Repayments by the employee had been repayments of the notional loan by the company.

The notional deduction is allowed for five years following the date on which the loan to the employee was made.

If the employing company is part of a group of companies, it is not necessary for the shares that are issued to the employee to be shares in the employing company. They may, instead, be shares in another company within the group. Where this occurs, the section applies as if the issued shares were shares in the employing company.

To qualify for the notional interest deduction, the scheme must satisfy a long list of criteria and must be approved by the CIR [see 340.20].

The value of the benefit to an employee through taking up shares in an employee share purchase scheme made available under these rules is nil. Any gain cannot be assessed to the employee as employment income [s CE 2(7)].

340.20 Criteria for approval of employee share purchase schemes [ss DC 13, DC 14, DC 15]

A company must obtain the CIR’s approval of the scheme in order to qualify for the notional interest deduction. When seeking approval, the company should send a copy of the rules and/or trust deed to the CIR.

The CIR is bound to approve an employee share purchase scheme submitted by any company provided all of the following criteria are satisfied:

(a) Share purchase:
   (i) The shares must be fully paid ordinary shares that rank equally with existing ordinary voting shares in the company;
Employee Share Purchase Schemes

(ii) The cost to employees of shares made available for purchase or subscription must not exceed market price at the date of purchase or subscription. The cost can be below market price [s DC 15(1)];

(iii) The aggregate amount of purchases which may be made by any employee within a three year period must not exceed $2,340 [s DC 13(2)].

(b) Employee eligibility:

(i) Every full-time permanent employee must be eligible to participate in the scheme on an equal basis with every other full-time permanent employee. Where the scheme is available to part-time employees or to seasonal employees, they must be eligible to participate on an equal basis with every other part-time employee, or every other seasonal employee;

(ii) Any minimum period of employment or service which may be required before a full-time permanent employee becomes eligible to participate in the scheme is not to exceed three years. In the case of other employees, any minimum period of service is not to exceed a cumulative period that is the equivalent of three years’ full-time service [s DC 13(3)].

(c) Loans:

(i) Loans to employees for the purchase of shares must be free of all interest and other charges;

(ii) Where it is a requirement that loans made under the scheme to any employee shall be of a minimum amount, the minimum amount is not to exceed $624;

(iii) The repayment of loans by employees is to be by regular instalments at intervals of not more than one month over a period of not less than three years and not more than five years from the date of the loan;

(iv) Any employee may however elect to repay all or any part of the loan prior to the due date for repayment, but the shares may not be released until after the end of the restrictive period [s DC 13(4)].

(d) During the restrictive period:

(i) The shares are to be held in trust for the employee;

(ii) The trustee must pay to the employee all dividends on the shares, and the dividends are not to be applied by the trustee towards repayment of any loans owing under the scheme or towards any other debts owing to the company;

(iii) Any employee, for whom shares are held in trust, must be precluded from charging or disposing of all or any of their rights or interests in the shares [s DC 13(5)].

(e) Employee hardship: Where the trustee is satisfied that continuing to participate in the scheme would result in the employee suffering serious hardship, the trustee and the employee must be permitted under the scheme to agree as follows:

(i) To vary the terms of the loan repayments; or

(ii) That the employee be allowed to withdraw from the scheme [s DC 13(6)].

(f) Withdrawal from the scheme: Employees must be entitled to withdraw from the scheme on giving three months’ written notice to the trustee.

(g) On expiry of the restrictive period:

(i) On repayment of loans at the expiry of three years or other restrictive period, the shares are to be transferred to the employee by the trustee or, at the employee’s option, the shares are to be purchased by the trustee from the employee at the lesser of market value or cost price to the employee at the date of purchase;

(ii) On the death of an employee, the shares must be transferred to the trustee of the deceased employee’s estate, or, at the option of the trustee of the estate, the shares must be purchased...
Employee Share Purchase Schemes

by the trustee of the scheme at the lesser of market value or cost price to the employee. This is subject to repayment of any loans outstanding for the shares;

(iii) If the employee suffers accident, sickness, redundancy, or enters into retirement at normal retiring age, the shares are to be transferred to the employee, or at the option of the employee, they are to be purchased by the trustee at the lesser of market value or cost price to the employee. This is subject again to repayment of any loans outstanding on the shares. The words “or retirement of the employee at normal retiring age” enable an employee who retires within three years of taking up the shares to keep the shares instead of having to sell them back to the trustee.

The expression “normal retiring age” means:

• Not less than 60 years of age;
• Not less than 55 years of age in the case of a female employee who is entitled, by reason of a contract of employment entered into before 1 April 1978 with the employing company, to retire before attaining the age of 60 years; or
• Such earlier age as the CIR considers reasonable having regard to the nature of the employment or the general terms of employment in the business or the occupation of the employee.

(iv) On termination of employment: Other than for reasons of death, accident, sickness, redundancy or retirement at normal retiring age or on withdrawal from the scheme, the trustee is not to transfer to the employee any shares held on trust, but is to purchase the shares from the employee at the lesser of market value or the original cost price to the employee. This is subject to repayment of all loans outstanding for the shares [s DC 14].

340.30 Shares issued to employee at below market value [ss CE 1, CE 2, CE 6, CE 7, CZ 1]

(1) General rules

The income of an employee includes any benefit that the employee receives under a share purchase agreement [s CE 1]. However, the value of the benefit is nil where the benefit arises under a share purchase scheme that has been approved by the CIR under s DC 12 [see 340.10, 340.20, s CE 2(7)].

A “share purchase agreement” is defined in s CE 7 as “an agreement to sell or issue shares in a company to an employee that is entered into in connection with the employee’s employment or service, whether or not an employment relationship exists when the employee receives a benefit under the agreement”.

The term “share purchase agreement” does not include any agreement entered into before 19 July 1968 [s CZ 1]. Convertible notes are included in the term “share” [s CE 6(1)].

There are four circumstances under which a taxable benefit can arise:

(a) The employee acquires the shares;
(b) The employee disposes of rights to a non-associated person;
(c) An associated person of the employee acquires the shares; or
(d) An associated person of the employee disposes of rights to a non-associated person.

(2) Employee acquires shares

If an employee acquires shares under a share purchase agreement, the assessable income of the employee includes the difference between the market value of the shares as at the date of acquisition and the consideration (if any) paid or payable for them. The benefit is taxable in the year in which the employee acquires the shares. [s CE 2(2)].
Employee Share Purchase Schemes

Example:

1 February X1  Employee granted option to acquire 1,000 shares for $1,000. The market value of the shares at this date is $1,000.
1 May X1  Employee exercises the option and pays $1,000 for the shares. On this date the shares have a market value of $1,500.
Assessable benefit  $500. ($1,500 value less $1,000 paid.)
When assessable  Year ended 31 March X2. (tax year in which shares acquired.)

There is one exception to the imposition of tax where the employee acquires shares under a share purchase agreement. If the agreement provides unconditionally that, if the employee dies or ends his or her employment, the shares must be transferred back to the employer or to the person from whom they were acquired either for no consideration or for an amount no greater than the amount paid by the employee for the shares, the value of any benefit under the share purchase agreement is deemed to be nil [s CE 2(6)].

(3)  Employee disposes of rights to non-associate

If, instead of acquiring shares, the employee disposes of the rights under the share purchase agreement to a non-associated person, the assessable income of the employee includes the amount received for the rights. The benefit is taxable in the year in which the employee disposes of the rights [s CE 2(3)].

Example:

1 February X1  Employee granted option to acquire 1,000 shares for $1,000. The market value of the shares at this date is $1,000.
1 May X1  Employee disposes of the rights under the agreement to a non-associated person for $1,100. At this date the market value of the shares is $1,500.
Assessable benefit  $1,100 (amount received for the rights.)
When assessable  Year ended 31 March X2. (tax year in which rights disposed of.)

(4)  Associate acquires shares

If an associated person of the employee acquires the shares, the employee’s assessable income includes the difference between the market value of the shares on the date of acquisition and the amount paid for them. If the difference is negative, the value of the benefit is zero. The benefit is taxable in the tax year in which the associated person acquires the shares [s CE 2(4)].

This provision encompasses a series of any number of associated person transactions that culminate in an acquisition of the shares by an associated person.

“Associated persons” is defined in Subpart YB and includes (among other things) two persons who are “relatives” [see 70 ASSOCIATED PERSONS AND RELATIVES].
Employee Share Purchase Schemes

(5) **Associated person disposes of rights to non-associate**

If an associated person of an employee disposes of rights under a share purchase agreement to a non-associated person, the employee’s assessable income includes the consideration for the disposal. The benefit is taxable in the year in which the rights are disposed of to an unassociated person [s CE 2(5)].

**Example:**

<table>
<thead>
<tr>
<th>Date</th>
<th>Event Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 February X1</td>
<td>Employee granted option to acquire 1,000 shares for $1,000. The market value of</td>
</tr>
<tr>
<td></td>
<td>the shares at this date is $1,000.</td>
</tr>
<tr>
<td>1 May X1</td>
<td>Employee disposes of rights to his spouse [see 960.10] for $1,000.</td>
</tr>
<tr>
<td>1 December X1</td>
<td>Spouse sells the rights to her brother for $1,500.</td>
</tr>
<tr>
<td>1 February X2</td>
<td>Brother sells the rights to an unrelated friend for $2,000. The market value of</td>
</tr>
<tr>
<td></td>
<td>the shares at this date is $3,000.</td>
</tr>
<tr>
<td></td>
<td><strong>Assessable benefit</strong></td>
</tr>
<tr>
<td></td>
<td>$2,000. (the amount of the consideration received by the brother-in-law.)</td>
</tr>
<tr>
<td></td>
<td><strong>When assessable</strong></td>
</tr>
<tr>
<td></td>
<td>Year ended 31 March X2. (tax year in which rights sold to a non-associated person.)</td>
</tr>
</tbody>
</table>

As can be seen in the above examples, where the employee disposes of the rights under a share purchase agreement to an associated person, the employee is taxable on:

(a) The exercise of the rights by that (or any other) associated person; or
(b) The sale of the rights by that (or any other) associated person to a non-associated person.

Income arising from the exercise of an employee share option is not subject to tax — to the extent that the gain relates to overseas employment. A pro-rata apportionment (on a time basis) is required where the employment, to which the share option relates, was performed both in New Zealand and offshore [see 370.35].

### 340.40 Valuing benefits arising under a share purchase agreement

[ss CE 3, CE 4]

Employees are taxable on benefits received under a share purchase agreement. Where the benefit arises from the exercise by the employee (or an associated person) of a right to acquire shares, the taxable value of the benefit is the difference between the amount paid for the shares and their market value as at the date of acquisition [see 340.30].

It is therefore necessary to be able to ascertain the market value of the shares. If the share purchase agreement imposes restrictions on the employee’s ability to deal with the shares, those restrictions will impact on the market value of the shares.

However, in determining the value of any benefit, the effect of any restrictions contained in the agreement as to the disposal of the shares are ignored unless the restrictions apply:

(a) For a period of eight years or more from the end of the tax year in which the benefit is received;
(b) For a period ending not earlier than the date of death of the taxpayer; or
(c) For either of the periods mentioned above, but subject only to the exception that, on the taxpayer ceasing employment prior to the expiry of either of those periods, all or any of the shares must unconditionally be transferred to the employer or to the person from whom they were acquired, either without consideration or for a consideration that is not more than the taxpayer paid for them.

**Example 1:**

If an agreement provided that the taxpayer could not sell or otherwise deal with the shares acquired under the agreement for a period of five years this restriction would be ignored in valuing the shares. But if the period was 10 years, the restriction would need to be taken into account in valuing the shares.

Where a share purchase agreement does not restrict an employee from transferring shares under a relationship agreement, but the transferee under the relationship agreement remains restricted as if he or she was the employee, the restriction is deemed to apply to the employee.
Example 2:
A share purchase agreement provides that:
(a) Employees are not able to dispose of shares for a period of 10 years other than by way of relationship agreement; and
(b) Shares acquired under a relationship agreement are not able to be disposed of for a period of 10 years from the date on which they were first acquired by the employee.

If an employee acquired shares and, after four years, disposed of them to their spouse [see 960.10] under a relationship agreement, the spouse would be precluded from disposing of the shares for a further six years. The combined 10-year restriction is sufficient for it to be taken into account in valuing the benefit.

The CIR may make an equitable adjustment at any time to the value of a benefit previously assessed where that value is reduced by a restriction or other condition that was not taken into account when the benefit was originally valued.
Chapter 350

Entertainment Expenditure

350.10 Business entertainment deductibility overview [s DD 1]

The business entertainment rules, forming the basis of the rules in the ITA 2007, first applied from 1 April 1995. The rules applying from 1 April 1995 replaced previous rules restricting the deductibility of business entertainment expenditure, which came into effect on 1 April 1993. These rules were not well understood and caused much confusion in practice. The rules as introduced from 1 April 1995 are discussed in some detail in TIB vol 6:12 (May 1995) at 14-19.

The underlying policy for these rules is that business expenditure giving significant private benefits should not be fully deductible. This policy is reflected in s DD 1(1) which states that subpart DD applies when, in deriving income, a person incurs expenditure on entertainment that provides both a private and business benefit.

The rules are based on the premise that all business entertainment expenditure of the type set out in the expenditure limitation rule in s DD 2 is denied a deduction, except for 50 per cent of that expenditure, if that amount would have been deductible under the general permission. The deductibility rules for the purpose of subpart DD are expressed to override the general permission — effectively making the subpart a complete code governing the deductibility of business entertainment expenditure of the type set out in s DD 2.

350.20 Business entertainment definitions [s DD 11]

The entertainment deductibility rules contain the following definitions.

“Business” includes any recurrent income-earning activity.

“Business contacts” includes clients, customers, shareholders, other financiers and suppliers of the taxpayer, or of an associated person. For a taxpayer in a partnership it does not include other partners in the partnership.

“Business premises” means the normal business premises or a temporary workplace of the taxpayer or of an associated person. It excludes premises or a workplace established principally for the purposes of enjoying entertainment.

350.30 Expenditure to which the limitation rules applies [s DD 2]

The types of entertainment expenditure to which the limitation rule in s DD 2 applies is set out in ss DD 2(2) to DD 2(6).

(1) Corporate boxes

The limitation rule applies to expenditure on corporate boxes, corporate marquees or tents, and other exclusive areas (whether temporary or permanent) at:

(a) Cultural, sporting, or other recreational events; or

(b) Activities occurring away from the person’s business premises.
The limitation rule also applies to tickets or other rights of entry to such boxes or other areas and the cost of food and drink incidental to this entertainment.

The limitation rule only applies to expenditure incurred on a corporate box during an event of the type stated under (a) and (b) above.

(2) **Holiday accommodation**

The limitation rule applies to expenditure on accommodation in a holiday home, time-share apartment, or similar leisure venue. The cost of food and drink incidental to this form of entertainment is also included. Accommodation which is merely incidental to business activities or employment duties is excluded.

The rule limits deductibility to expenditure on accommodation in a holiday home, not expenditure on a holiday home, as contrasted to expenditure on pleasure craft.

(3) **Pleasure craft**

The limitation applies to expenditure on yachts or other pleasure craft. The cost of food and drink incidental to this form of entertainment is also included.

(4) **Entertainment off premises**

The limitation rule applies to expenditure on food and drink that a person provides off their business premises.

(5) **Entertainment on premises**

The limitation rule applies to expenditure on food and drink that a person provides on their business premises at a party, reception, celebration meal, or other similar social function. It also includes expenditure on food and drink consumed in an area of the premises that at the time is reserved for senior employees to use and is not open to all the person’s employees working in the premises.

Light refreshments, such as morning tea, that are not provided in an area reserved for senior staff, are excluded in all cases, as the expenditure incurred in providing tea, coffee and other light refreshment is not brought into the entertainment limitation rules, unless provided at a party, reception, celebration meal or similar social function.

Light refreshments provided in an area specifically reserved for senior staff is excluded from the limitation rule under s DD 4(3)(b) when provided as part of the employee’s employment duties. For example, the costs of a morning tea provided to senior managers during a meeting in the executive dining room are fully deductible [see 350.50]. Otherwise, refreshment provided in such reserved areas is always subject to the 50 per cent limit on deductibility.

(6) **Meaning of expenditure for the purposes the above entertainment expenditure classes**

Expenditure includes any incidental expenditure on such matters as waiting staff, hireage of crockery, glassware or utensils, and music or other entertainment.

For corporate boxes, corporate holiday homes, and pleasure craft, expenditure includes any deduction for depreciation, or for a lease premium, and any deduction for running costs, maintenance and similar matters.

**350.40 Reimbursement and apportionment** [s DD 10]

A person is treated as incurring expenditure on entertainment described in s DD 2 if the person pays an allowance or reimburses an employee for that expenditure, and the allowance or reimbursement is exempt from tax under s CW 17. For example, when an employee takes a client out for lunch and is reimbursed by the employer, or an employee receives an allowance for such expenditure, the cost of that allowance is 50 per cent deductible to the employer. Thus, it is not possible to avoid the entertainment rules by paying a reimbursing allowance to an employee rather than incurring the cost directly.

**Note:** The exclusions to the entertainment rules in ss DD 4, DD 5, DD 6, DD 7, and DD 8, apply also to allowances and reimbursements.
If a person incurs expenditure that relates only partly to the entertainment, the expenditure must be apportioned appropriately. For example, this may be the case with expenditure on a firm’s holiday home when it is used as a business planning retreat [s DD 2(3)(b)].

Example 1:
A business owns a yacht. 60% per cent of the time the yacht is available for use by the business. The rest of the time the yacht is chartered out. 60% per cent of the yacht’s costs are subject to the deductibility rules. The remainder is fully deductible.

Example 2:
A company sponsors a basketball team. In return the company gets the use of a corporate box on selected days. The cost of the sponsorship attributed to the corporate box is 50% per cent deductible; the remainder is fully deductible to the company. The value of the corporate box may be specified in the contract. If it is not specified, market value should be used.

350.50 When the limitation rules for entertainment expenditure do not apply [ss DD 3, DD 4, DD 5, DD 6, DD 7, DD 8]

The limitation rule in s DD 2 is either restricted or does not apply to deductions for the expenditure described in ss DD 4 to DD 8 (as set out below).

(1) Business travel expenditure [s DD 4(1)]

The limitation rule does not apply to expenditure on food or drink consumed by a person while travelling on business or for the purposes of their employment. An exception to the exclusion applies when:

(a) The travel is mainly for the purposes of enjoying entertainment; or
(b) The food and drink is consumed at a meal or function involving an existing or potential business contact as a guest; or
(c) The food and drink is consumed at a celebration meal, party, reception, or other similar social function.

Whether something is a “meal or function” or a “celebration meal, party, reception, or other similar social function” is a question of fact in each case. A “function” is some sort of meeting or get-together, such as Friday night drinks. It is something more than just a morning tea. Nor is it a “party or similar social function”. “Party” is not defined in the ITA 2007. Accordingly, the word takes its ordinary meaning. In ordinary language, a morning tea is not a “party”, nor is it a “reception, celebration meal, or similar social function”.

The examples below give an indication of the types of things included in these categories.

Example 1:
In the course of a week, a Palmerston North-based sales representative travels to Wanganui, New Plymouth, and Hawera, staying overnight in each place. The sales representative is accompanied to Wanganui and New Plymouth by a fellow employee, who has just started working for the company. The sales representative and trainee dine together. The sales representative travels to Hawera alone. The night the representative is in Hawera she dines alone. The cost of all these meals is fully deductible to the employer. The next week the sales representative travels to Napier, where she takes a client out for dinner. Because a business contact is a guest, the cost of both meals is 50% per cent deductible. The following week the sales representative travels to Gisborne, where she pays for dinner for a valued client and staff who are opening a new store. The cost is 50% per cent deductible, because the food and beverages are being consumed at a meal at which a business contact is a guest. The next day, the sales representative happens to be at another client’s premises at morning tea time. She buys savouries and cakes for morning tea for the staff. The expenditure is fully deductible, as a morning tea “shout” is not a “meal or other function”.

Example 2:
A person travels from Wellington to Auckland on business and takes a client out to dinner. The cost of both of the meals is 50 per cent deductible.

Example 3:
Company A is a subsidiary of Company B. An employee of Company A travels from Christchurch to Auckland on business with an employee of Company B. If the employee of Company B is a guest of the employee of Company A at a meal (i.e., the meal is paid for by Company A), the cost of the meal is 50 per cent deductible. If the employees pay for their own meals, the
Entertainment Expenditure

costs are fully deductible to their respective companies. This applies even if the companies are in a consolidated group of companies.

(2) Conference expenditure [s DD 4(2)]

The limitation rule does not apply to expenditure on light refreshments at a conference, educational course, or similar event. Food and drink consumed at such an event that lasts for at least four consecutive hours (excluding meal times), is also excluded from the limitation rule. However, the limitation rule will apply if the event is principally for the purposes of entertainment.

The event must involve the conveying of knowledge. Seminars and conventions therefore qualify for the exclusion, as do some meetings. The event must not be held principally for the purposes of entertainment. For example, a four-hour lunch cannot be recharacterised as a “conference”, because the principal purpose of the lunch is entertainment. Although the event must be at least four consecutive hours, excluding meal times, the four hours can include a morning or afternoon tea break.

Example 1:
A course on negotiating skills runs from 10 am to 3 pm. Lunch is provided and there is a lunch break from 12 noon to 1 pm. There are also two 10 minute coffee breaks at 11 am and 2 pm. The lunch is excluded from the limitation rule and the cost is fully deductible. The cost of providing the morning and afternoon tea is also fully deductible.

Example 2:
A training course on management techniques which lasts from 2 pm to 5 pm has afternoon tea provided. The cost of the afternoon tea is fully deductible to the taxpayer, whether the course is held on or off the business premises, and whether it lasts for four hours or more.

(3) Expenditure on relocation expenses, employees’ meals and sustenance allowances [s DD 4(3)]

The limitation rule does not apply to expenditure on an amount that is exempt income under ss CW 17B and CW 17C (which relate to relocation expenses, expenditure on overtime meals, and sustenance allowances). [See 330.40, 330.42.]

It also does not apply to expenditure on a light meal consumed as part of the employee’s employment in an area of the person’s business premises that at the time is reserved for senior employees and guests and is not open to all the person’s employees.

Example 1:
A shop attendant is required to work late on Friday night. He is paid an overtime meal allowance which is non-taxable. The cost of paying the allowance is fully deductible to the employer.

Example 2:
Every week, the unit managers of a company have a lunch-time meeting in a reserved portion of the employer’s premises. The light lunch of sandwiches and fruit is excluded from the limitation rule.

(4) Sponsorship expenditure [s DD 5(1)]

The limitation rule does not apply to entertainment expenditure if the entertainment is sponsored mainly to advertise or promote a person’s business, goods, or services to the public and none of the following people has a greater opportunity to enjoy the entertainment than the public generally:

(a) Business proprietors;
(b) Existing business contacts;
(c) Employees of the proprietor; or
(d) Anyone associated with any of the above.

Example 1:
A soccer club arranges a sponsorship deal with a local engineering company. The engineering company pays for the team’s uniforms, which have the sponsor’s name on them, and provides food and beverages for the team and family members.
Entertainment Expenditure

immediately after the game. The cost of providing the uniforms is fully deductible to the engineering company as an advertising expense. The cost of providing the food and beverages is 50 per cent deductible as business contacts and employees of the sponsor attend, and it cannot be enjoyed by members of the public.

Example 2:
A rugby club has an arrangement with a local tavern under which the teams attend the tavern after their games and drinks are available at a special price to both the team and other patrons. The costs incurred in providing the drinks are fully deductible to the tavern as any member of the public is able to buy the drinks at the special price and the drinks, although provided at a discount price, are provided in an arm’s-length transaction.

(5) **Incidental costs of promotion** [s DD 5(2)]

The limitation rule does not apply to expenditure that is merely an incidental part of:

(a) A function open to the public and mainly held to advertise or promote a business, goods or services; or

(b) A trade display mainly held to advertise or promote a business, or goods or services.

Example 1:
A manufacturer promoting a new model of video camera holds a demonstration for home appliance dealers. The costs of providing drinks and nibbles at the display are fully deductible.

Example 2:
A law firm holds a free seminar on employment issues for clients one evening from 5.30 pm to 7.30 pm. The costs of providing drinks and nibbles at the end of the seminar are fully deductible.

(6) **Samples** [s DD 5(3)]

The limitation rule does not apply to a deduction for expenditure on entertainment that is provided as a sample for advertising or promotion purposes to persons who are not employees or their associates.

Example:
A winery gives away product samples at a wine and food festival; a brewery gives away beer at a launch of a new product; samples of a new brand of breakfast cereal are distributed to households. The costs incurred are fully deductible.

(7) **Entertainment for review** [s DD 5(4)]

Entertainment that is provided to a person reviewing that entertainment for a paper, magazine, book, or other medium is not subject to the limitation rule.

Example:
A food critic for a magazine has a meal at a restaurant and reviews that meal in her weekly food column. The cost of the dinner is fully deductible.

(8) **Entertainment as business** [s DD 6(1)]

The limitation rule does not apply to expenditure on entertainment provided by the person for market value or otherwise in an arm’s-length transaction in the ordinary course of the person’s business, if that business comprises providing one or more forms of entertainment listed in s DD 2 [see 350.30]. The use of the words “or otherwise in an arm’s-length transaction” recognises that entertainment may be provided in the ordinary course of business for less than market value.

(9) **Entertainment for charitable purposes** [s DD 6(2)]

The limitation rule does not apply to a deduction for expenditure on entertainment that a person provides to members of the public for charitable purposes.

Example:
A company provides food and beverages for a Christmas lunch for the homeless. The cost is fully deductible.
(10) **Entertainment outside New Zealand** [s DD 7]

The limitation rule does not apply to a deduction for expenditure on entertainment that is enjoyed or consumed outside New Zealand.

**Example:**
A New Zealand business holds its annual business-planning conference in Sydney. The costs are fully deductible. Some offshore entertainment is subject to fringe benefit tax (see below).

(11) **Entertainment that is income or fringe benefit** [s DD 8]

The limitation rule does not apply to expenditure on entertainment that is income to the person who consumes it, or is a fringe benefit subject to fringe benefit tax.

**Example 1:**
An employee receives an entertainment allowance that is fully taxable in their hands. The allowance is fully deductible to the employer.

**Example 2:**
As part of an incentive scheme, an employee is given a voucher for a restaurant meal. This is subject to FBT, and fully deductible to the employer.

### 350.60 Licensed premises operators

The following types of expenditure incurred by a licensed premises operator (a “licensee”) are fully deductible:

(a) Expenditure incurred on food or beverages, when a special offer of one of the following types is made in the ordinary course of business in an arm’s-length transaction with the general public:

(i) Happy hours, where a licensee offers drinks to customers at reduced prices during a particular time period;

(ii) Offers of free drinks or food, or both, on certain days or at certain times to customers or categories of customers selected from the general public;

(iii) Two meals offered to customers for the price of one; or

(iv) “Toss the boss” competitions, where for every drink purchased the customer can toss a coin and has the chance to win a free drink.

(b) An allowance paid to an employee (such as a bar manager) to cover the costs of that employee providing free drinks or food, or both to customers on the licensee’s business premises in the ordinary course of business. This does not apply if the free drinks or food are provided at a party or similar social function, or in a reserved area, or where the employee does not have an arm’s-length relationship with the customer.

The CIR considers that these types of expenditure are fully deductible because they are not entertainment and, even if they were, they would be excluded entertainment [see Public ruling BR Pub 04/02 (expired 1 April 2004) in TIB vol 16:3 (April 2004) at 4-7].

**Example 1:**
A licensee offers half-price drinks on St Patrick’s day to all patrons who wear a green hat. All other drinks are sold at full price. As the half-price drinks are provided to the green hat wearers in arm’s-length transactions in the ordinary course of the licensee’s business, the expenditure on the drinks is fully deductible to the licensee.

**Example 2:**
A licensee offers the next round of drinks free for a period of one hour on a Friday night to any customer who, following the purchase of a round, is able to score more than 10 by throwing a single dart at a dartboard. As the free rounds of drinks are available to all customers in arm’s-length transactions in the ordinary course of the licensee’s business, the expenditure on the drinks is fully deductible to the licensee.
## 350.70 Entertainment and fringe benefit tax [ss DD 9, CX 29]

Sections DD 2 to DD 8 override the FBT rules (ie if a benefit comprised of entertainment expenditure is subject to both FBT and the entertainment expenditure limitation rules, then the limitation rules apply). However, the FBT rules [specifically s CX 29] apply if an employee can choose when to receive or use the benefit, or does not receive or use the benefit in the course of their employment duties.

Section CX 25 states that the FBT rules will apply when:

(a) The employee does not receive or use the benefit in the course of their employment;
(b) The employee does not receive or use the benefit as a necessary consequence of their employment; and
(c) Either the employee may choose when to receive or use the benefit, or the entertainment is outside New Zealand.

**Example:**

FBT is payable on the value of a meal voucher awarded to an employee as part of an incentive scheme. The meal can be enjoyed at the employee’s discretion and is not enjoyed in the course of the employee’s employment duties.

If the benefit is subject to FBT, the general exclusion for benefits provided on the premises applies in determining whether entertainment provides a fringe benefit subject to fringe benefit tax.

Fringe benefit tax is also payable when a benefit that is entertainment is excluded from the limitation rule because it is enjoyed or consumed outside New Zealand and the benefit is not enjoyed or consumed in the course of employment duties. For example, as a sales incentive, staff who achieve certain targets receive an all-expenses paid trip to Hawaii to be taken at their discretion.

FBT may also be payable on the travel costs of an employee travelling to a corporate box, a yacht, or a holiday home. The FBT rules exclude from FBT any expenditure on an employee’s transport and accommodation when the travel is to enable the employee to perform the employee’s employment duties [s CX 20]. If the travel does not have a “business purpose” the expenditure is subject to FBT, unless s CX 20 applies.

**Example:**

Auckland employees are flown to Dunedin to watch a rugby test in the company’s corporate box at Carisbrook. The costs of the corporate box are subject to the entertainment deductibility rules, while the transport and accommodation costs are subject to FBT.

## 350.80 Entertainment and GST

A GST adjustment must be made of one-ninth of the non-deductible portion of entertainment expenditure (the GST-exclusive amount for GST registered persons). GST must be returned in the taxable period in which the income tax return is filed or is due to be filed (whichever is the earlier) [s 211(4) GSTA].
Chapter 370

Exempt and Excluded Income

370.10 Overview [ss BD 1, DA 1, DA 2]

Section BD 1 divides “income” into:

(a) Exempt income;
(b) Excluded income;
(c) Non-residents’ foreign-sourced income; and
(d) Assessable income.

In order for an amount to be “exempt income” it must first be “income”: Commissioner of Inland Revenue v Brierley [1990] 3 NZLR 303, (1990) 12 NZTC 7,184 (CA).

Amounts that are “exempt income” are located in subpart CW (Exempt income) or subpart CZ (Terminating provisions). Expenditure incurred in earning exempt income is unable to be deducted for tax purposes [s DA 2(3)].

Amounts that are “excluded income” are located in subpart CX (Excluded income) or subpart CZ (Terminating provisions).

Excluded income is not subject to income tax. However, it is taxed in other ways. For example, a fringe benefit is excluded income of an employee. However, it is subject to fringe benefit tax payable by the employer.

Expenditure incurred in earning excluded income is able to be deducted for tax purposes under s DA 1 provided that the deduction is not prohibited by one of the limitations contained in s DA 2, for example, an employee would not able to claim a deduction for any cost associated with the receipt of a fringe benefit as the deduction would be precluded by the employment limitation in s DA 2(4).

370.15 Exempt income

The following incomes are wholly or partially exempt from tax under the ITA 2007.

</tr>
</thead>
<tbody>
<tr>
<td>Health research Council of NZ</td>
<td>Exempt [CW 64].</td>
</tr>
<tr>
<td>Herd improvement associations</td>
<td>Income of any herd improvement society or association if established mainly to promote the improvement of the standard of dairy cattle in New Zealand, is exempt; provided that no part of its funds is used or available to be used for the private pecuniary profit of any proprietor, member, or shareholder or any associated person [s CW 51].</td>
</tr>
<tr>
<td>Home-based services</td>
<td>Standard-cost household services provided by natural persons are exempt to the extent permitted under a determination issued by the CIR. The exemption also applies where the person may be treated under a determination as having incurred costs equal to, or in excess of, the income and the person elects not to claim any excess deductions. The activity must require the use of the taxpayer’s domestic accommodation and involve activities that commonly occur in a family. Taxpayers can, as an alternative, claim the actual costs incurred, in which case the income is not exempt [s CW 61; TAA, s 91AA, see 710.85].</td>
</tr>
<tr>
<td>Interest derived from tax-exempt source in foreign country</td>
<td>Interest derived from a country or territory outside New Zealand is exempt when two conditions are met. The first is that the recipient was not resident in New Zealand during the period for which the interest is payable. The second is that the interest is exempt from income tax (or a tax substantially the same as income tax) in the country of origin. It applies to people who have taken up residence in New Zealand and have subsequently received a payment of interest which accrued before they became resident in New Zealand. If that interest was exempt from tax in the country of origin it is exempt in New Zealand also. The taxpayer is put in the same position as would apply if the interest was uplifted immediately prior to taking up residence in New Zealand [s CW 7].</td>
</tr>
<tr>
<td>Interest on UK post-war credits</td>
<td>Interest on post-war credits payable under s 2 Income Tax (Repayment of Post-War Credits) Act 1959 of the United Kingdom Parliament is exempt in the UK and in New Zealand. The credits themselves were never taxable as they are not income [s CW 5].</td>
</tr>
<tr>
<td>Interest payable to non-residents</td>
<td>Payment made outside New Zealand to a non-resident being interest or a redemption payment on: (a) Money lent to the New Zealand Government; or (b) Money lent to a local or public authority for any non-commercial activity carried on in New Zealand, if exemption from income tax is given by the New Zealand Government [s CW 8].</td>
</tr>
<tr>
<td>International funds</td>
<td>Income derived by the trustee of the Niue International Trust Fund and by the trustee of the Tokelau International Trust Fund is exempt. Also, distributions by these trust funds is exempt income in the hands of the person receiving the distribution [s CW 59B].</td>
</tr>
<tr>
<td>International venture capital</td>
<td>Profits derived by qualifying foreign equity investors (“QFEI”) on the sale of shares in unlisted New Zealand resident companies that do not engage in certain prohibited activities are exempt [see 1000.60, s CW 13].</td>

</table>
**Type** | **Details**
--- | ---
Non-resident entertainers and visiting sportspeople | Income exempt only when derived from any activity or performance: (a) Pursuant to a cultural programme sponsored by any overseas government or the New Zealand Government; or (b) Pursuant to a programme of a foundation, trust, or other organisation which exists for the promotion of any cultural activity and not carried on for private pecuniary profit of any proprietor, member, or shareholder; or (c) For any game or sport where the participants are the official representatives of an association, league, union, or other body administering the game or sport in an overseas country. Only the official representatives of the body administering the game or sport in the overseas country are exempt. For example, a professional sporting team from one of the Australian states, not representing the Australian union or a body administering the game or sport for Australia as a whole, does not qualify for the exemption. The exemption does not apply to New Zealand based promoters of these activities [s CW 20].

Non-residents income | From personal services if stay does not exceed 92 days [see 1000 NON-RESIDENTS AND ABSENTEES, s CW 19].

Non-resident students, experts, and trainees | Income derived by non-resident students, experts, and trainees who are in New Zealand under arrangements for assistance entered into by the New Zealand Government. For example, students, experts, and trainees under the Colombo Plan, various programmes of SEATO, the Japanese Cultural and Technical Assistance Fund, and programmes of the United Nations or of specialised agencies of the United Nations, and to officers of the Western Samoan Public Service or the Cook Islands Public Service and residents of Western Samoa, the Tokelau Islands, or the Cook Islands (including Niue) who are in New Zealand for education, training, or experience. Residency is determined as if the 183-days residency rule did not exist [s CW 22].

Overseas social security payments | Overseas social security payments that are subject to the direct deduction policy are exempt. This does not include veterans’ pensions paid under the Social Welfare (Transitional Provisions) Act 1990 [s CW 28].

Personal service rehabilitation payments | [s CW 35, see 20 ACCIDENT COMPENSATION].

Petroleum exploration and development | Income derived by a non-resident company from drilling exploratory or development wells or undertaking seismic surveys relating to petroleum exploration in an offshore permit area. The exemption applies from the beginning of the 2005-2006 income year and ends on 31 December 2009. The Minister of Revenue has announced that this exemption is to be extended to 31 December 2014 [s CW 57, see 980.20].

Promotion bodies | Income derived by any society or association which is established mainly to advertise, beautify, or develop any city or district so as to attract trade, tourists, visitors, or population, or to create, increase, expand, or develop amenities for the general public, is exempt; provided no part of the income or other funds is used or available for non-charitable purposes. The exemption does not apply to council-controlled organisations or income...

#### 370.20 Exemptions under other legislation [s CW 50]

Types of income and entities that are expressly exempted from income tax by legislation other than the ITA 2007 include:

(a) Diplomatic representatives of a foreign State, etc [see the Diplomatic Privileges and Immunities Act 1968];

(b) Arts Council of New Zealand;

(c) Broadcasting Commission;

(d) Broadcasting Standards Authority;

(e) Carter Observatory;

(f) Historic Places Trust;

(g) Income from free-of-tax Government stock issued in place of Bank of New Zealand shares;

(h) Money paid by any racing club, hunt club, or trotting club to the New Zealand Racing Conference or New Zealand Trotting Conference or by either of those Conferences to any club [Gaming Amendment Act 1953, s 8(7)];

(i) Payments made by the Asian Development Bank for services rendered to it are exempt from tax; and

(j) Certain payments made in consideration of the entering into of a conservation covenant over specified Maori land are exempted under the Forests Amendment Act 2004. That Act also provides for the Governor-General to exempt particular payments by way of order in Council.

</tr>
</tbody>
</table>
### Exempt and Excluded Income

#### 370.30 International venture capital exemption [ss CW 12, CW 13]

Non-resident investors are exempt from income tax on profits derived from the sale of shares in unlisted New Zealand resident companies that do not engage in certain prohibited activities. Non-resident investors that qualify for the exemption are referred to as qualifying foreign equity investors (QFEIs). The objective of the exemption is to encourage foreign equity investment in new business ventures in New Zealand. The main requirements are that the non-resident investor must be resident in an approved territory, and it must be exempt from income tax in its country of residence. The exemption does not apply if the New Zealand company is engaged in certain excluded activities.

1. **Exemption requirements**
   - All of the following criteria must be met in order for the exemption to apply:
     1. a) The New Zealand company must be resident in New Zealand;
     2. b) The share, option, or convertible note, must have been held for not less than 12 months prior to its disposal;
     3. c) At some time during the 12-month period following purchase, the New Zealand company has been an unlisted company; and
     4. d) The non-resident investor remains a QFEI from the time of purchase to the time of disposal.

2. **Non-resident investor**
   - In order to be a QFEI, the non-resident investor must be resident in a country with which New Zealand has a double tax agreement (DTA), excluding Switzerland, and must be unable to benefit from a tax credit in their own country for any tax that would otherwise have been imposed in New Zealand. The exemption also applies where the investment is made through a “flow-through” limited partnership or other entity. Switzerland is not an approved territory because the DTA with that territory does not provide for the free exchange of tax information. For a list of approved territories (ie active DTAs) [see 310.40].
   - If the investment is made through an exempt partnership, all of the following criteria must be met:
     1. a) The partnership must be established under the laws of a country with which New Zealand has a DTA (excluding Switzerland);
     2. b) The partnership must have at least one general partner and one special partner;
     3. c) The general partner and all partners with a greater than 10 per cent interest in the partnership must be resident in a country with which New Zealand has a DTA (excluding Switzerland); and
     4. d) All partners with a greater than 10 per cent interest in the partnership must be unable to benefit from a tax credit in their own country for New Zealand tax that would otherwise be imposed.
   - If the investment is made through an exempt entity (other than an exempt partnership), the entity must be established under the laws of a country with which New Zealand has a DTA (excluding Switzerland) and all members with a greater than 10 per cent interest in the entity must be resident in a country with which New Zealand has a DTA (excluding Switzerland) and be unable to benefit from a tax credit for any New Zealand tax which would otherwise be imposed.

3. **Prohibited activities**
   - The New Zealand company must not have as a main activity, any one or more of the following:
     1. a) Land development;
     2. b) Land ownership;

(c) Mining;
(d) Provision of financial services;
(e) Insurance;
(f) Construction of public infrastructure;
(g) Acquisition of public infrastructure assets; or
(h) Investing with the main aim of deriving interest, dividends, rent or personal lease payments that are not royalties.

In order to accommodate investment into holding companies (including multiple tiers of holding companies), the exemption will still apply, provided that the New Zealand company has a main activity of providing capital to other companies, in the form of debt or equity funding, and the lower-tier company does not have as a main activity one or more of the prohibited activities.

4) New Zealand Venture Investment Fund

From 3 April 2006, the scheme is extended by the introduction of s CW 13. This section provides that the income derived by a non-resident investor from the sale or other disposal of a share or purchase option is exempt where the investment is made by the non-resident alongside New Zealand Venture Investment Fund Ltd (NZVIF). NZVIF is a Crown-owned company established to promote the development of the New Zealand venture capital industry. All of the following conditions must be met in order for the exemption to apply:

(a) The venture capital manager must have an agreement with NZVIF or a company owned by NZVIF;
(b) The agreement must require the venture capital manager to purchase a share or option on behalf of NZVIF or a company owned by NZVIF and an identical share or option on behalf of the non-resident;
(c) The agreement must specify that, at the time at which the investment is made, the company in which the investment is made has more than 50 per cent of the value of its assets and 50 per cent of its employees in New Zealand;
(d) The company invested into must not have as its main activity one of the activities listed in (a) to (h) above; and
(e) At the time of disposal of the share by the non-resident, both the venture capital manager and the non-resident must have complied with the obligations set out above and there must be no New Zealand resident investors who (with their associates) have a direct or indirect interest of more than 10 per cent in the share or option.

Normal dividend rules apply to dividends derived by the non-resident from the investee company.

370.35 Transitional Resident Exemption

An individual who falls within the definition of “transitional resident” is exempt from New Zealand tax on certain foreign-sourced income for the first 48 months following that person becoming tax-resident in New Zealand. The exemption applies to persons who became a transitional resident on or after 1 April 2006 and is effective for the 2005-2006 and later income years.

A “transitional resident” is an individual who:

(a) Is resident in New Zealand either under the 183-day test or because they have acquired a permanent place of abode in New Zealand [see 1250.35];
(b) Has not been tax-resident for a continuous period of at least 10 years, immediately before acquiring a permanent place of abode in New Zealand [see 1250.30, 1250.35];
(c) Has not previously been a transitional resident; and
(d) Has not ceased to be a transitional resident [s HR 8(2)].
The exemption begins on the first day when the person becomes resident in New Zealand and ends on the earlier of the day before the person ceases to be tax-resident, or on the last day of the 48th month following the month in which the person first became resident in New Zealand [s HR 8(3)-(6)].

Transitional resident status is optional. A person who does not wish to use the transitional resident exemption may elect not to be a transitional resident from a date of their choosing. Once made, the election is irrevocable. Any election must be made before the due date for the filing of the income tax return for the income year during which the person wishes the election to take effect. Extensions of time for the filing of an election are governed by s 37 of the TAA [see 1270.61].

The exemption applies to all foreign-sourced income other than income from employment services performed while the person is a transitional resident and income from the supply of services [ss HR 8, CW 27].

The effects of the transitional resident rules are:

(a) Foreign interest, dividends, royalties, rental income are exempt from New Zealand tax for the duration of the exemption. Income from employment performed while offshore (eg bonus payments derived before coming to New Zealand but received after arrival), gains from the disposal of revenue account property and offshore business income not related to the provision of services are likewise exempt [CW 27];

(b) Neither attributed CFC income nor CFC losses arise [ss CD 45, CQ 2, DN 2, EX 41];

(c) Foreign financial arrangements are not subject to the financial arrangement rules. To qualify for the exemption, no other party to the arrangement may be a New Zealand resident and the arrangement must not be for the purposes of a business carried on in New Zealand [s EW 17, EW 37, EW 41];

(d) Foreign Investment Fund income and losses do not arise [ss CQ 5, DN 6, EX 41, EX 64];

(e) Disclosure requirements for CFC and FIF interests do not apply while the person is a transitional resident;

(f) Income arising from the exercise of an employee share option is not subject to tax to the extent to which the gain relates to overseas employment. A pro-rata apportionment (on a time basis) is required where the employment to which the share option relates was performed both in New Zealand and offshore [s CD 2(9)];

(g) A trust is treated as a foreign trust. Therefore, the 12-month period in which to elect that the trust become a qualifying trust runs from the date on which the settlor ceases to be a transitional resident. During this period, the trustee is not subject to New Zealand tax on foreign income of the trust [ss HC 25, HC 30];

(h) Neither non-resident withholding tax nor approved issuer levy is required to be withheld from interest payments made to offshore lenders, provided that:
   (i) the money was borrowed while the person was a non-resident;
   (ii) the lender was not a person associated with the transitional resident; and
   (iii) the interest is not paid in relation to a business carried on through a fixed establishment in New Zealand [s RF 12(4)];

(i) Transitional residents and their spouses are subject to special rules in respect of any form of working for families tax credit [ss MC 5, MC 10, MD 7, see 420 FAMILY ASSISTANCE];

(j) No deductions are available against the exempt income [s DA 1].

The transitional resident exemption does not apply to any income that has a New Zealand source. For examples see TES 43 (November 2006) 665.

370.40 Canterbury earthquake relief [s CZ 23]

The Taxation (Canterbury Earthquake Measures) Act 2011 provides an exemption for certain welfare contributions made by an employer to employees as a result of the Christchurch earthquakes of 4 September 2010 and 22 February 2011.
There are three categories of exemption:

(a) Accommodation;

(b) Sundry fringe benefits where the employer cannot reasonably estimate which employees received which benefits [s CZ 24, see 540.257]; and

(c) The first $3,200 per earthquake of monetary remuneration and fringe benefits of the kind where the employer can reasonably be expected to know which employees received which benefits.

The s CZ 23 income tax exemption applies where all of the following criteria are met:

(a) The benefit was provided for the purpose of relieving employees of the effects of the earthquakes;

(b) The benefit would otherwise have been taxable income;

(c) The benefit was derived in the eight weeks following the relevant earthquake;

(d) The benefit was not paid as a substitute for salary or wages;

(e) The amount of the benefit is not dependent on the seniority of the employee;

(f) If the employee who received the benefit is associated with the employer, the benefit is also available to non-associated full-time employees; and

(g) The employer elects to treat the income as exempt income of the employee.

Provided the criteria are met, all accommodation benefits as defined in s CE 1(2) are exempt. The definition includes board or lodging, or the use of the whole or part of a house or living premises. In relation to each of the two earthquakes, the first $3,200 paid to each employee (other than accommodation benefits) is also exempt.

### Working for families tax credits

Under the working for families (WFF) tax credits scheme, the parents or caregivers of children (18 years or under) may be eligible to receive one or more of the following tax credits, depending on the number of dependent children, total family income, and whether or not an income-tested benefit is being received:

(a) **Family tax credit**: a credit of tax is paid for each dependent child, the amount (ranging from $3,182 to $5,303) depending on the age of the child [see 420.25].

(b) **In-work tax credit**: a payment of $3,120 per year ($60 per week) for up to three children, plus $780 per year ($15 per week) for each child in excess of three children, is made to working parents or caregivers with dependent children. The credit is not paid to parents or caregivers who receive certain forms of government assistance such as income-tested benefits [see 420.30].

(c) **Child tax credit**: a credit of tax of $780 per child per year is paid to parents or caregivers who do not receive other forms of government assistance such as income-tested benefits. This credit is being phased out and replaced by the in-work payment [see 420.35].

(d) **Parental tax credit**: a one-off credit of tax of $1,200 is paid for each dependent child born on or after 1 October 1999 to caregivers who are not in receipt of other forms of government assistance such as income-tested benefits [see 420.40].

(e) **Minimum family tax credit**: a credit of tax is paid to the parents or caregivers of dependent children sufficient to ensure that gross annual family income is at least $22,204 [see 420.50]. The credit is not paid to parents or caregivers who receive certain forms of government assistance such as income-tested benefits.

The amount received from the family tax credit, the in-work tax credit (or the child tax credit) and the parental tax credit is reduced by the credit abatement [see 420.45], if total family income exceeds $36,827 a year.

The amounts shown above are for the 2011-2012 income year.
WFF tax credits are calculated by the CIR [s MD 2(1)]. Family scheme tax credits are excluded income [s MA 3].

**Note:** For the purposes of the family scheme rules, a spouse includes a person with whom another person has entered into a de facto relationship or civil union. The term “married” is used in Staples Tax Guide to include persons who are in a de facto relationship or civil union; “unmarried” has a corresponding meaning [see 960.10].

**420.10 Principal caregiver** [s MC 10]
A “principal caregiver” for a dependent child means the person (whether or not a parent) who the CIR considers has the primary responsibility for the day-to-day care of the child other than on a temporary basis. The following cannot be principal caregivers:

(a) A body of persons, (whether incorporated or not);

(b) The proprietor or an employee of:

(i) A residence established under the Children, Young Persons, and Their Families Act 1989;

(ii) Any residential disability care institution (within the meaning of s 58(4) Health and Disability Services (Safety) Act 2001); or

(iii) Any other institution in which the child is being cared for;

(c) A person who is eligible to be a transitional resident, who has not elected under s HR 8(4) not to be a transitional resident, or their spouse.

The meaning of “principal caregiver” is modified for different tax credits. The modified meaning is explained in the relevant paragraph. The principal caregiver is required to notify Inland Revenue of any change in the arrangements for the care of the child that will affect the person’s status as a principal caregiver.

“Family scheme income” is net income modified for the purposes of the family scheme [see 420.60].

**420.15 Qualifying person** [ss MC 2, MC 3, MC 4, MC 5, MC 6, MC 7, MC 8, MC 9]
A person qualifies for an entitlement under the family scheme if, for an entitlement period, they meet the following criteria:

(a) The person is 16 years of age or older [s MC 3];

(b) The person is the principal caregiver for one or more dependent children [s MC 4, see 420.10];

(c) Either the person or the dependent child meets the residence requirement:

(i) The person meets the residence requirements if they are a New Zealand resident who has been both resident and present in New Zealand for a continuous period of 12 months at any time, and are tax resident and present in New Zealand on the date the tax credit arises. In addition, the person must not be a transitional resident, not have made an election not to be a transitional resident, and not be the spouse of a transitional resident [s MC 5(2)];

(ii) The dependent child meets the residence requirements if the dependent child is both resident and present in New Zealand for the entitlement period [s MC 5(3)].

A person does not qualify for an abating working for families (WFF) tax credit if, during the relationship period, they receive a parent’s allowance under s 32(2) of the War Pensions Act 1954 [s MC 6(a)]. A person does not qualify for an in-work payment, parental tax credit or minimum family tax credit if, during the relationship period, they receive an income-tested benefit or a parent’s allowance [s MC 6(b)].

If a person and their spouse both meet the qualifying criteria and both have dependent children, only one of those persons can be the qualifying person in respect of all of those children. The CIR decides who that person is [s MC 7].

An “entitlement period” means a period (forming all or part of a relationship period) during which a person meets the continuing requirements set out below [s MC 11].
A “relationship period” means an unbroken period in a tax year. It may consist of some or all of the days in the tax year [s MC 11].

In order to receive entitlements and tax credits under the family scheme, a person who meets the qualifying criteria in ss MC 3 to MC 7 must also meet the following requirements throughout the entitlement period:

(a) The person meets the qualifying criteria on each day of the period;
(b) Another person does not start or stop being the person’s spouse;
(c) The person does not start or stop being the principal caregiver of a dependent child (other than on the first or last day);
(d) A child for whom the person is the principal caregiver does not stop being a dependent child (other than on the first or last day);
(e) The composition of a tax credit does not change (other than on the first or last day); and
(f) The person does not start or stop being a person receiving a protected family tax credit (other than on the first or last day) [s MC 8].

If a child is treated as financially dependent under the in-work tax credit rules [s MD 6(2)], the above requirements do not have to be met [s MC 8(2)].

For example, if a child is born during a tax year, there will be two entitlement periods — one up to the date of birth, and one from the date of birth to the following 31 March.

A “protected family tax credit” is an amount of family scheme income derived in the manner set out in s MD 14 [s YA 1, see 420.45].

The abating WFF tax credit and a minimum family tax credit are payable for a child aged 18 if the child is not financially independent and is attending school or a tertiary educational establishment [s MC 9].

420.20 Abating WFF tax credit [ss MD 1, MD 2]

A person who qualifies for an entitlement under the family scheme [see 420.15] is entitled to receive the “abating WFF tax credit”, which is calculated as follows:

\[
\text{family tax credit} + \text{(in-work tax credit or child tax credit)} + \text{parental tax credit} - \text{credit abatement}
\]

Where:
“Family tax credit” as explained in 420.25;
“In-work tax credit” as explained in 420.30;
“Child tax credit” as explained in 420.35;
“Parental tax credit” as explained in 420.40; and
“Family credit abatement” as explained in 420.45;

In calculating the individual credits making up the abating WFF tax credit, the CIR must:

(a) Treat the family tax credit, in-work tax credit, child tax credit, and the parental tax as tax credits corresponding to the period;
(b) Treat the family credit abatement as a debit to the period; and
(c) Apply the amount of the family credit abatement first to reduce the family tax credit, secondly to reduce the in-work tax credit or child tax credit, and thirdly to reduce the parental tax credit [s MD 2].

420.25 Family tax credit [s MD 3]

The family tax credit is payable to the principal caregiver [see 420.10], of one or more children, and is calculated using the following formula:

\[
\text{prescribed amount} \times \frac{\text{days}}{365}
\]

Where:
“Prescribed amount” is the sum of the following amounts:
Family Assistance

(a) For the eldest dependent child:
   (i) $4,578 if aged under 16; or
   (ii) $5,303 if aged 16 or more. If the eldest dependent child turns 16 during the entitlement period, the weighted average of $4,578 and $5,303 is used.

(b) For each additional dependent child:
   (i) $3,182 if aged under 13;
   (ii) $3,629 if aged 13, 14, or 15; or
   (iii) $4,745 if aged 16 or more. If a child turns 13 during the entitlement period, the weighted average of $3,182 and $3,629 is used. If a child turns 16 during the entitlement period, the weighted average of $3,629 and $4,745 is used.

The prescribed amounts shown above apply for the 2011-2012 income year.
The prescribed amounts for the 2012-2013 income year are $4,822 and $5,303 (for the eldest dependent child) and $3,351, $3,822 and $4,745 (for additional dependent children).

“Days” is the number of days in the entitlement period.
The family tax credit is reduced in proportion to the time in the entitlement period that a dependent child spends in the exclusive care of another qualifying person.

“Child” means an unmarried person who:

(a) Is aged 15 years or less;
(b) Is aged 16 or 17 years and is not financially independent; or
(c) Is aged 18 years and is a person for whom a credit of tax is allowed under s MD 1 or both ss MD 1 and ME 1 [s YA 1].

“Dependent child”, in relation to any person, means a child:

(a) Whose care is primarily the responsibility of that person;
(b) Who is maintained as a member of that person’s family;
(c) Who is financially dependent on that person;
(d) Who is not a child for whom payments are being made under s 363 of the Children, Young Persons, and Their Families Act 1989; and
(e) Who is not a child for whom an orphan’s benefit or an unsupported child’s benefit [ss 28 and 29 of the Social Security Act 1964] are being paid [s YA 1].

Despite paragraph (d), a child for whom payments are being made under s 363 of the CYPF Act 1989 is a dependent child if s 361 of the CYPF Act 1989 applies to the child, and the child is placed (under s 362 of the CYPF Act 1989) in the care of a person who is the child’s parent. This enables the parents of a child who has been returned to their care, but not their custody, to claim WFF tax credits.

420.30 In-work tax credit [ss MC 10(3), (4), MD 4, MD 5, MD 6, MD 7, MD 9, MD 10]

(1) Criteria for entitlement [ss MC 10(3), (4), MD 4–MD 9]

A principal caregiver is entitled to the in-work tax credit for a child if for an entitlement period, the person meets the following conditions:

(a) The principal caregiver is aged 16 years or over;
(b) The principal caregiver is primarily responsible for the care of the child;
(c) The child is financially dependent on the principal caregiver [requirements (b) and (c) override the continuing requirements set out in s MC 8 — see 420.15];
(d) The principal caregiver or the child satisfies the residence requirements (see below);
(e) Neither the principal caregiver nor their spouse receives an income-tested benefit, a basic grant, an independent circumstances grant, or a parent’s allowance under the War Pensions Act 1954; and

(f) The principal caregiver and/or their spouse satisfies the full-time earner requirement (see below).

For the purposes of the in-work tax credit, a principal caregiver includes a person (the first person) who lives apart from another person who qualifies for entitlements under the family scheme (eg in the case of separated parents), and the first person has the dependent child in their exclusive care for periods totalling at least one-third of a four-month period or the tax year. In this situation, the principal caregiver is entitled to receive the in-work tax credit for the periods the child is in their exclusive care.

(2) **Residence requirements [s MD 7]**

To qualify for the in-work tax credit, either the principal caregiver or the child must satisfy the residence requirement. A principal caregiver satisfies the residence requirement if the principal caregiver:

(a) Is both resident and present in New Zealand for a continuous period of 12 months at any time, and is resident and present in New Zealand on the date an abating WFF tax credit arises; and

(b) Is neither a transitional resident nor the spouse of a transitional resident [see 370.35].

A child satisfies the residence requirement if the child is both resident and present in New Zealand for the entitlement period.

(3) **Full-time earner requirement [s MD 9]**

To qualify for the in-work tax credit, either or both the principal caregiver and their spouse must be normally a full-time earner receiving income from a work activity, and must derive:

(a) Income as a full-time earner, as described below; or

(b) An amount of compensation (as described below).

A “full-time earner” is a person who:

(a) Is unmarried and employed for 20 hours or more a week; or

(b) Is married and together they are employed for 30 hours or more a week.

The full-time earner requirement is also met if a person is normally a full-time earner but in a one-week period they do not work, or work less than, the number of hours required to be a full-time earner because of the birth of a child. This applies only if the person is entitled to receive the parental tax credit for that child.

To satisfy the above requirement to derive income as a full-time earner, the income derived must be:

(a) A PAYE income payment [see 1090.10], but not an excluded PAYE income payment (see below) or a benefit or allowance described in s MD 8 (ie an income-tested benefit, a basic grant, an independent circumstances grant, or a parent’s allowance under the War Pensions Act 1954);

(b) Shareholder-employee salaries from close companies not received by way of regular payments during the year;

(c) Income from a business carried on for profit; or

(d) An amount paid or benefit provided by a person, who receives a personal service rehabilitation payment, to another person for a key aspect of social rehabilitation.

Excluded PAYE income payments are:

(a) Accident compensation earnings-related payments [as defined in s YA 1], other than payments of weekly compensation under the Injury Prevention, Rehabilitation, and Compensation Act 2001;

(b) Gratuitous payments, other than parental leave payments, made to a person in return for services that the person or their parent, child, spouse, former spouse or dependant provided to the payer, when the payment would not have been made if the services had not been provided;

(c) Veteran’s pensions, New Zealand superannuation and living alone payments;

(d) Schedular payments, being contract payments for contract activities or services of non-resident contractors;
(e) Compensation paid as a result of an incapacity (suffered before 1 January 2006), due to personal injury by accident as defined in s 26 of the Injury Prevention, Rehabilitation, and Compensation Act 2001.

To satisfy the above requirement to derive an amount of compensation, the person must meet all of the following conditions:

(a) They receive a child tax credit for an entitlement period ending on 31 March 2006;
(b) On or after 1 January 2006, they or their spouse suffers an incapacity due to personal injury by accident;
(c) Weekly compensation is or will be paid for the incapacity; and
(d) The requirement to derive income as a full-time earner would have been met and the person would have been eligible for the in-work tax credit if s MD 9 had been in force before the date of the incapacity.

(4) Calculation of in-work tax credit [s MD 10]

For each week in which the principal caregiver or their spouse is entitled to receive the in-work tax credit and is a full-time earner, the in-work tax credit is $60 if the principal caregiver is responsible for one, two or three children, plus $15 for each child in excess of three.

<table>
<thead>
<tr>
<th>Number of dependent children</th>
<th>Weekly in-work tax credit entitlement</th>
<th>Full-year in-work tax credit entitlement</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>$60</td>
<td>$3,120</td>
</tr>
<tr>
<td>2</td>
<td>$60</td>
<td>$3,120</td>
</tr>
<tr>
<td>3</td>
<td>$60</td>
<td>$3,120</td>
</tr>
<tr>

<tr>
<td>5</td>
<td>$90</td>
<td>$4,680</td>
</tr>
<tr>
<td>6</td>
<td>$105</td>
<td>$5,460</td>
</tr>
</tbody>
</table>

Depending on the family’s net income, the in-work tax credit may be reduced by the credit abatement [see 420.45].

420.35 Child tax credit [ss MZ 1, MZ 2]

The child tax credit is only available to persons who meet the following criteria:

(a) The person was eligible for a child tax credit as at 31 March 2006;
(b) The person is not entitled to an in-work tax credit; and
(c) The person continues to be entitled to a child tax credit at all times after 31 March 2006 (ie there is no break in the entitlement).

The child tax credit is calculated using the following formula:

\[
\frac{($780 \times \text{dependent children} \times \text{days in entitlement period})}{365}
\]

Where:

“Dependent children” is the number of dependent children for whom the person is a principal caregiver during the entitlement period; and

“Days in entitlement period” is the number of days in the entitlement period for which the person and their spouse, do not receive a social assistance payment and do not have a suspended entitlement to an income-tested benefit.

“Social assistance payment” means:

(a) An income-tested benefit;
(b) A veteran’s pension;
(c) New Zealand superannuation;
(d) A basic grant or an independent circumstances grant; or
(e) An accident compensation earnings-related payment [s MA 8].

420.40 Parental tax credit [ss MC 10(5), MD 11, MD 12]
The parental tax credit entitles a qualifying person (usually the mother) to $1,200 for each child born, provided the parents have not (during the parental entitlement period) received a social assistance payment [see 420.35], or a suspended entitlement to an income-tested benefit. If the parents have received a parental leave payment at any time for the child, they do not qualify for the parental tax credit. A qualifying person continues to be entitled to the credit even if the child dies within eight weeks of birth.

The parental tax credit for a parental entitlement period is calculated using the following formula:

\[
\text{prescribed amount} \times \frac{\text{days}}{56}
\]

Where:

“Prescribed amount” is $1,200; and
“Days” is the number of days in the parental entitlement period (up to a maximum of 56) for which the person and their spouse, do not receive a social assistance payment and do not have a suspended entitlement to an income-tested benefit.

The “parental entitlement period” is the first 56 days after the date of the dependent child’s birth.

For the purposes of the parental tax credit, a principal caregiver includes a person (the first person) who lives apart from another person who qualifies for entitlements under the family scheme (eg in the case of separated parents), and the first person has the dependent child in their exclusive care for periods totalling at least one-third of the parental entitlement period.

The parental tax credit is paid to the qualifying person either as a tax credit in an end-of-year assessment, or by instalment. If an application is made, the credit is paid by instalment in the 56 days following the date of application [see 420.70]. To receive the credit by interim instalment, application must be made within three months of the child’s birth.

420.45 Credit abatement [ss MD 1(3), MD 13, MD 14, MD 15, MD 16]
The credit abatement is the total, for an entitlement period, of:

(a) The family credit abatement; and
(b) The parental tax credit abatement [s MD 1(3)].

(1) Family credit abatement [ss MD 13, MD 14, MD 15]
The family credit abatement for an entitlement period is calculated using the following formula:

\[
\frac{\text{full-year abatement} \times \text{days}}{365}
\]

Where:

“Full-year abatement” is 20 cents for each whole dollar of family scheme income (if any) including that of a spouse in excess of $36,827;
“Days” is the number of days in the entitlement period (excluding the days of any calendar months in which the person receives protected family tax credit).

A person receives protected family tax credit for a calendar month in an entitlement period if the person:

(a) Has no spouse, receives an income-tested benefit and derives family scheme income that is less than $36,827; or
(b) Has a spouse, receives an income-tested benefit and derives family scheme income that (together with the family scheme income of their spouse) is less than $36,827.

In calculating family scheme income:

(a) Section MB 1(1)(a) and (b) do not apply; and
420.45(2) Family Assistance

(b) Employment income derived in the calendar month from an extra pay period is ignored; and
(c) Any business income and shareholder-employee income from a close company that is not subject to PAYE, and any expenditure incurred in deriving that assessable income, are treated as derived and incurred at a uniform daily rate over the income year (or part of the income year).

“Family scheme income” is defined in 420.60.

If the parental tax credit is received by fortnightly instalments, and the 56-day entitlement period includes 31 March, the family credit abatement is applied so that instalments received in the first tax year are abated against family scheme income for that tax year, and instalments received in the second tax year are abated against family scheme income for the second tax year.

(2) **Parental tax credit abatement [s MD 16]**

A person who is entitled to a parental tax credit is required to take the parental tax credit abatement into account when calculating their abating WFF tax credit if:

(a) They choose to have the parental tax credit paid in a lump sum; and
(b) The birth occurs within 56 days of the end of the tax year.

The parental tax credit abatement is calculated using the formula:

\[
\text{full-year abatement} \times \left( \frac{56}{365} \right) - \text{amount used}
\]

Where:

“Full-year abatement” is as explained above;

“Amount used” is the amount of family credit abatement as calculated above for an entitlement period that ends on 31 March, to the extent that the abatement would be applied under s MD 2(2)(c)(i) and (ii) in calculating a net contribution.

420.50 **Minimum family tax credit [ss ME 1, ME 2, ME 3]**

The minimum family tax credit is payable to any qualifying person whose net family scheme income for the tax year is less than $22,204 ($22,568 from 1 April 2012). The Governor-General may prescribe a higher amount by Order in Council. A qualifying person is a person who meets the requirements of ss MC 3 to MC 6 [see 420.15]. The tax credit is payable for an entitlement period.

(1) **Calculation of credit [s ME 1]**

The minimum family tax credit is calculated by the following formula:

\[
\text{(prescribed amount – net family scheme income)} \times \left( \text{weekly periods} / 52 \right)
\]

Where:

“Prescribed amount” is $22,204 ($22,568 from 1 April 2012);

“Net family scheme income” is the net family scheme income (see below) for a relationship period containing the entitlement period of the person and/or their spouse civil union partner, or de facto partner;

“Weekly periods” is the number of one-week periods in the entitlement period for which the person is a full-time earner.

A “full-time earner” [s MA 7] is a person who:

(a) Is unmarried and employed for 20 hours or more a week; or
(b) Is married and together they are employed for 30 hours or more a week.

A person does not lose their status as a full-time earner if they work fewer hours than normal as a result of incapacity due to personal injury or because the person is taking parental leave for which they receive a parental leave payment.
(2) **Meaning of employment [s ME 2]**

For the purposes of the minimum family tax credit, “employment” in the definition of “full-time earner” means the activity that gives rise to an entitlement to a PAYE income payment other than:

(a) A payment by a partnership to a working partner under s DC 4;
(b) An income-tested benefit;
(c) A veterans’ pension;
(d) New Zealand superannuation;
(e) A living-alone payment;
(f) A basic grant or an independent circumstances grant;
(g) A contract payment to a non-resident contractor;
(h) A payment made by a close company to a major shareholder;
(i) A payment made by a person to their spouse; or
(j) A payment made by a business carried on jointly or in partnership to a spouse of a partner.

(3) **Net family scheme income [s ME 3]**

Net family scheme income means the amount calculated using the following formula:

\[
\text{adjusted income} - \text{adjusted liability} + \text{amount received} - \text{amount paid}
\]

Where:

“Adjusted income” is the person’s net income under s MB 1 [see 420.60] for the tax year in which the relationship period falls that is attributable to the number of weeks in which the person is a full-time earner, adjusted to an annualised amount that is found by multiplying the amount by the fraction that is 52 divided by the number of weeks in the relationship period for which the person is a full-time earner. For this purpose, s MB 1(2) and (3) are ignored;

“Adjusted liability” is the amount of tax that would be payable by the person on adjusted income;

“Amount received” is the total of overseas pensions, child support and spousal maintenance (which are exempt income but are added back to net income for the purposes of calculating family scheme income) derived by the person for the tax year;

“Amount paid” is the total of child support and spousal maintenance (which are deducted from net income for the purposes of calculating family scheme income) paid by the person for the tax year.

**Example:**

Homer and Marge Simson are married and have a three-year-old child. Marge was a full-time earner for the whole of the tax year, earning wages of $12,875 and interest of $91. Homer worked part-time earning $1,242. He also received gross dividends of $1,548. Their net family scheme income is calculated as follows:

<table>
<thead>
<tr>
<th></th>
<th>Marge</th>
<th>Homer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Employment earnings</td>
<td>$12,875.00</td>
<td>$1,242.00</td>
</tr>
<tr>
<td>Interest</td>
<td>$91.00</td>
<td>nil</td>
</tr>
<tr>
<td>Dividends</td>
<td>nil</td>
<td>$1,548.00</td>
</tr>
<tr>
<td>Taxable income</td>
<td>$12,966.00</td>
<td>$2,790.00</td>
</tr>
<tr>
<td>Tax on taxable income (at 2011-2012 rates)</td>
<td>$1,361.43</td>
<td>$292.95</td>
</tr>
<tr>
<td>Net family scheme income</td>
<td>$11,604.57</td>
<td>$2,497.05</td>
</tr>
</tbody>
</table>

Their minimum family tax credit is $8,102.38 calculated as follows:

\[
(\text{gross income} - (\text{adjusted income} + \text{amount received} - \text{amount paid})) \times \frac{52}{52}
\]

Homer and Marge will also be entitled to the abating WFF tax credit.
An anti-abuse provision enables the CIR to determine the extent to which a person is a full-time earner if that person receives a PAYE income payment but does not perform duties to the extent that would justify entitlement to that PAYE income payment [s ME 2(2)-(4)].

**420.60 Determination of family scheme income** [ss MB 1 - MB 13,]

(1) **Assessable income derived at uniform daily rate** [s MB 1(1)]

The family scheme income on which the calculation of family scheme tax credits is based is the person’s net income as determined by applying certain rules and after making certain adjustments. The following general rules apply:

(a) Income from employment is treated as derived at a uniform daily rate during the period of employment;

(b) Income from income-tested benefits is treated as derived at a uniform daily rate during the period for which it is paid;

(c) Income from other sources is treated as derived at a uniform daily rate during the income year; and

(d) Any expenditure incurred in deriving the income in (c) is treated as incurred at a uniform daily rate during the income year.

(2) **Amounts added to net income**

The following amounts must be included in net income in determining family scheme income:

<table>
<thead>
<tr>
<th>Description of item</th>
<th>Section</th>

<tr>
<td>Any payment made during the income year under s 27K of the Social Security Act 1964.</td>
<td>MB 1(3)(b)</td>
</tr>
</tbody>
</table>

### 5) Amounts not allowed as deductions

The following amounts cannot be claimed as deductions in determining family scheme income:

<table>
<thead>
<tr>
<th>Description of item</th>
<th>Section</th>
</tr>
</thead>
<tbody>
<tr>
<td>Deductions for business or investment activities that produce a net loss (see below for details).</td>
<td>MB 3</td>
</tr>
</tbody>
</table>
(6) **Adjustment for a period of more or less than a year** [s MB 2]
If a person’s income is calculated for a period of more or less than a year, their family scheme income must be adjusted using the formula:

\[
\text{family scheme income} \times \frac{365}{\text{days}}
\]

Where:

“Family scheme income” is the person’s income calculated under subparts MB to MF and MZ;

“Days” is the total days in the period for which the income has been derived.

(7) **Net losses from businesses or investment activities** [s MB 3]
The income and deductions for a business or investment activity carried on by a person are ignored when calculating the person’s family scheme income if the business or investment activity produces a net loss for the year. If the person carries on more than one business or investment activity, each business or activity must be considered separately.

Deductions that relate to an asset used in carrying on two or more business or investment activities must be appropriately apportioned between the activities on the basis of the use of the asset in those activities. If two or more business or investment activities are carried on, the CIR may treat them as a single activity if the CIR considers they are of a kind that are normally carried on together.

“Investment activity” includes passive holding of an investment asset, other than a variable principal debt instrument. This would include rental properties and trading in shares, for example.

(8) **Major shareholders in close companies** [s MB 4]
A person who is a major shareholder (ie owns or controls 10 per cent or more of the company’s ordinary shares or voting rights) in a close company on the company’s balance date is required to include in their family scheme income the amount calculated by the following formula:

\[
\left(\frac{\text{person’s shares}}{\text{company’s shares}}\right) \times \text{company’s income}
\]

Where:

“Person’s shares” is the number of shares (excluding fixed-rate shares) held by the person in the company on the last day of the accounting year;

“Company’s shares” is the total number of shares (excluding fixed-rate shares) issued by the company as at the last day of the accounting year;

“Company’s income” is the net income of the company for the accounting year.

If the company has paid the major shareholder a dividend in the income year, the amount of family scheme income calculated under the above formula is reduced by the total dividends paid for the income year.

(9) **Distributions from superannuation schemes** [s MB 5]
Where a person receives a distribution from a superannuation scheme, and an employer has made contributions to that superannuation scheme and the person continues to work for that employer more than one month after the date of the distribution, the amount of the employer’s contributions for that tax year and the preceding two tax years is included in the person’s income for the appropriate tax years, less an amount attributable to the member’s contributions for any year. This does not apply to a person who receives a distribution from a superannuation scheme as a result of, and on or after the person’s retirement from, employment with an employer who was a contributor to the scheme.

(10) **Distributions from retirement savings schemes** [s MB 6]
Where a person receives a distribution of a retirement scheme contribution from a retirement savings scheme, the distribution is treated as family scheme income derived by the person in the income year of distribution if RSCT has been withheld from the contribution and, at the time of the distribution, the person is not eligible to receive New Zealand superannuation but is eligible to receive a retirement scheme contribution from a retirement scheme contributor.
(11) **Settlor of trust [s MB 7]**

The family scheme income of a person who is the settlor of a trust during the income year includes the undistributed income of the trust, as calculated below. This does not apply if:

(a) The person is the settlor of a trust solely as a result of providing personal services, for less than market value, in the administration of the trust or the maintenance of the trust property;

(b) The trustee of the trust is registered as a charitable entity under the Charities Act 2005;

(c) The trust is solely for the benefit of a local authority;

(d) Interest and dividends derived by the trustee of the trust would be exempt income of the trustee under s CW 45 (funeral trusts);

(e) The trust is a superannuation fund; or

(f) The person and the members of the person’s family are not permitted to benefit from the trust except under a court order.

If s MB 7 applies, the person’s family scheme income includes the amount calculated under the formula:

\[
\text{trustee + company – dividends/settlor number}
\]

Where:

“Trustee” is the net income of the trustee of the trust for the income year reduced, to not less than zero, by the amount of the trustee’s income that vests or is paid by the trustee as beneficiary income for the income year;

“Company” is the total of amounts calculated for companies in which, at the end of the company’s income year, the trustee of the trust and associated persons hold voting interests of 50 per cent or more, or market value interests of 50 per cent or more if there is a market value circumstance, with the amount for each company being calculated by multiplying the company’s net income for the income year by the trustee’s voting interest or market value interest in the company at the end of the income year;

“Dividends” is the total amount, not exceeding the item “company”, of dividends that are derived by the trustee of the trust in the income year from companies as defined above;

“Settlor number” is the number of settlors of the trust, including the person, for which s MB 7 applies.

(12) **Fringe benefits [s MB 8]**

A person’s family scheme income for an income year includes:

(a) The taxable value of the fringe benefits that a company must attribute to the person under ss RD 47–RD 49 for the income year [see 540.295]; and

(b) The company’s FBT liability in relation to the person under s RD 50 for the income year [see 540.300].

This applies when:

(a) The person is an employee of a company in which the person and associated persons hold, in total, voting interests of 50 per cent or more or, if a market value circumstance exists, market value interests of 50 per cent or more; and

(b) The company provides a fringe benefit that must be attributed to the person under s RD 47.

(13) **Deposits in main income equalisation accounts [s MB 9]**

A person’s family scheme income for an income year includes the amount deductible under s DQ 1 for a deposit into the person’s main income equalisation account for an accounting year corresponding to the same tax year as does the income year. This applies for the person’s own business, as well as:

(a) A company that meets the requirements of s MB 4 for the person’s family scheme income to be affected by net income of the company for the accounting year;
(b) A trustee of a trust that meets the requirements of s MB 7 for the person’s family scheme income to be affected by net income of the trustee for the accounting year;

(c) A company in which a trustee referred to in paragraph (b) and associated persons hold a voting interest of 50 per cent or more, or a market value interest of 50 per cent or more (if a market value circumstance exists).

(14) **Amounts derived by dependent children [s MB 11]**
A person’s family scheme income includes the amount by which the total income derived by a dependent child of the person from the following sources exceeds $500:

(a) Resident passive income;
(b) Royalties;
(c) Rent;
(d) Beneficiary income that is not referred to in s HC 35(4)(b)(i), (ii) or (v) [see 1420.60];
(e) Attributed income from a PIE that is not a superannuation fund or retirement savings scheme;
(f) A distribution from a listed PIE.

(15) **Other payments [s MB 13]**
A person’s family scheme income for an income year includes the value of payments paid or provided to the person from any source and used by the person to replace lost or diminished income of the person or the person’s family, or to meet usual living expenses of the person or the person’s family, but does not include:

(a) A loan under ordinary commercial terms and conditions;
(b) A payment from an amount that is:
   (i) Proceeds of the disposal of property; and
   (ii) Not assessable income of the person disposing of the property;
(c) A payment on behalf of the person by a local authority or public authority;
(d) A forgiveness of debt by a public authority;
(e) A charitable distribution from a charitable entity registered under the Charities Act 2005;
(f) An educational scholarship;
(g) A student loan under the Student Loan Scheme Act 1992;
(h) A grant for the payment of expenses relating to medical treatment or a funeral;
(i) A payment under an insurance contract, other than a payment for a loss of income;
(j) Compensation for a loss other than a loss of income;
(k) Lump sum compensation under the Accident Compensation Act 2001;
(l) A monetary benefit under the Social Security Act 1964 that is exempt income;
(m) A pension or allowance under the War Pensions Act 1954 that is exempt income;
(n) A payment that is exempt income under s CW 33(1)(c), (e), or (f);
(o) An amount that is declared not to be income for the purposes of the Social Security Act 1964 by a regulation under s 132 of that Act;
(p) A payment included in the family scheme income of the person under another section;
(q) A payment expressly excluded from the family scheme income of the person under another section.
(r) A payment to relieve the adverse effects of an event declared by the CIR to be an emergency event, where the payment is made in the period (maximum 12 months) set by the CIR for that event under s 91AAS of the TAA. (This applies, for example, to the Canterbury earthquakes of 4 September 2010 and 22 February 2011).
If the total of the payments that would otherwise be included under s MB 13 in the family scheme income for the income year of the person and their spouse, civil union partner or de facto partner does not exceed $5,000, the payments are not included in the person’s family scheme income.

420.65 Allowance of tax credit in end-of-year assessment [ss LA 4, LA 7, MF 5, MF 6; TAA, ss 41, 80KU, 80KV]

Every person entitled to a working for families (WFF) tax credit or a minimum family tax credit is required to furnish a return of income each year [TAA, s 41(4)]. A tax credit may be set off against any tax payable by the person for the tax year, so far as that tax extends, and any balance remaining is refunded [s BC 8(2)]. Any tax credits that have been incorrectly allowed on an instalment basis during the tax year may be corrected when the annual tax assessment is made for the taxpayer.

A credit of tax is not allowed for a child if the caregiver has not provided the CIR with the child’s tax file number (IRD number) or birth certificate, or other evidence verifying the birth or existence of the child.

A person who has been given a notice of entitlement for a tax year must, in the time within which they are required to file their return of income for the tax year, give the CIR a complete statement of their family scheme income for the tax year, including that of a spouse, civil union partner or de facto partner, as applicable [TAA, s 80KV].

1) Recovery of overpaid tax credit [s MF 5]

Where an abating WFF tax credit or a minimum family tax credit set off or refunded to a person is more than the proper amount, the CIR may recover the excess as if it were income tax payable by the person. If the person is in a relationship with a spouse, civil union partner or de facto partner, the person and that spouse or partner are jointly and severally liable for paying the excess.

2) Overpayment or underpayment of tax credit [s MF 6; TAA, 80KLB]

When a person, who is entitled to an abating WFF tax credit or a minimum family tax credit, has the tax credit paid by instalment:

(a) Any overpayment is added to the tax payable by the person for the tax year, and is recoverable by the CIR under s 80KLB of the TAA, as if it were tax payable by the person for the year.

(b) Any underpayment is used to satisfy the person’s income tax liability, and any balance remaining is treated as tax paid in excess and available for use under s LA 7(2) [see 1395.15].

A person is not liable for a shortfall penalty in relation to a credit the CIR is entitled to recover if the offset or refund was in excess of the proper amount because:

(a) The person applied by an annual return and before 1 April 2007 for a credit of tax;

(b) At the time of the application, the person was eligible to be a transitional resident [see 370.35]; and

(c) Before 1 June 2007, the person gave notice to the CIR that they did not wish the application to be treated as an election under s HR 8(4)-(6).

420.70 Tax credits paid by instalments [ss MF 1, MF 2, MF 3, MF 4; TAA, ss 80KA–80KH]

Any person entitled to an abating WFF tax credit or a minimum family tax credit may apply on form FS1 for the amount to be received in interim weekly or fortnightly instalments. The application must be in the prescribed form and must be signed by the applicant and, if applicable, their spouse. The application must:

(a) Give, for each signatory, a complete statement of the net income that is expected to be attributable to the applicable tax year and elected period;

(b) Elect whether interim instalments are to be paid weekly or fortnightly;

(c) Contain such other information as the CIR may require; and

(d) Be accompanied by the supporting evidence described below.

The supporting evidence required to accompany the application is:
(a) Evidence of employment income (if any) derived during the month immediately preceding the date of application;
(b) If the signatory expects to derive business income, any one of the following:
   (i) A copy of the financial statements of the business for the tax year (or corresponding income year) immediately preceding the relevant tax year;
   (ii) If the financial statements referred to in (i) have not been completed, a copy of the financial statements of the business for the tax year (or corresponding income year) before the immediately preceding the relevant tax year;
   (iii) A set of budgeted accounts of the business for the relevant tax year (or corresponding income year);
   (iv) Other evidence acceptable to the CIR in relation to the business for the relevant tax year (or corresponding income year);
(c) The tax file number (IRD number) of each child for whom a credit is claimed;
(d) In the case of a child who has died or been given up for adoption, a birth certificate or other evidence verifying the birth or existence of the child for whom a credit is claimed.

A person who is entitled to receive the parental tax credit may apply to receive the credit by way of weekly or fortnightly interim instalments. The application must be made within three months after the date of the dependent child’s birth. If the application is not made within three months, the credit can be received only by way of a credit in the person’s end of year assessment in the tax year in which the birth occurs. The parental tax credit is explained in 420.40.

If the three-month application period spans two tax years and the period of entitlement (56 days) falls entirely in the first tax year, but all the interim instalments are paid in the second tax year, the period of entitlement (“selected period”) is treated, for family assistance purposes, as falling in the second tax year.

If an IRD number is not provided, the interim instalments apply for a period of only eight weeks, and then cease until the information is provided.

On receipt of the application, the CIR determines the estimated tax credit entitlement and issues a notice of entitlement to the person specifying:
(a) The amount of the weekly or fortnightly interim instalment;
(b) The amount contributed by the family tax credit;
(c) The amount contributed by the in-work tax credit;
(d) The amount contributed by the child tax credit;
(e) The amount contributed by the parental tax credit; and
(f) The amount contributed by the minimum family tax credit.

Amounts (b) to (e) are the amounts after abatement. The CIR retains a copy of the notice of entitlement and arranges for payment of the interim instalments [see 420.80].

Any person who expects to receive an income-tested benefit is not entitled to apply for interim instalments of abating WFF tax credit. Work and Income New Zealand instead makes appropriate provisions.

A person holding a notice of entitlement for interim instalments must advise the CIR immediately, in writing, when any of the following occurs:
(a) The holder commences or ceases to be the principal caregiver or the spouse of a principal caregiver of any child, where it is expected this will last for more than 56 consecutive days;
(b) The holder commences or ceases to be a spouse for another person;
(c) Any event happens which is specified in the notice of entitlement;
(d) Any other event happens that the person considers may affect his or her entitlement to the tax credit; or
(e) The notice of entitlement is lost or destroyed.

The CIR may also require an incorrect notice to be returned for cancellation or replacement. A certificate of entitlement is not transferable, is invalid if altered, and is subject to the terms and conditions stipulated thereon. If it is withdrawn it shall be surrendered within seven days.

420.75 When Work and Income New Zealand delivers tax credits [TAA, ss 80KN, 80KO, 80KP, 80KQ, 80KR, 80KS, 80KT]

When Work and Income New Zealand (WINZ) pays a person an income tested benefit, it must, at the same time, pay the amount of the working for families (WFF) tax credit the person is entitled to. If the family credit abatement is greater than nil, WINZ can only pay the credit if it is authorised to do so by an Order in Council made under the TAA, s 225A. WINZ uses the methods set out in ss MD 3, MD 13 and MF 3 to calculate the amount of WFF tax credit payable.

When WINZ ceases to pay to a person an income-tested benefit it will, if the person applies, continue to pay to the person, for a period determined by WINZ in consultation with the CIR, a credit of tax determined as if the person were still being paid an income-tested benefit during the period.

WINZ may request the CIR to accept from a person an application for a notice of entitlement if it is satisfied that the person is entitled to a credit of tax but WINZ is not authorised to pay it. WINZ may, any time after making such a request to the CIR, request the CIR to cease making payments to the person if WINZ subsequently becomes authorised to pay the credit.

A person who is entitled to the tax credit may notify WINZ not to pay the tax credit in this way. Later, that notification may be cancelled by the payee and WINZ would then recommence payment of the tax credit as soon as practicable. Where WINZ makes the payment either to the person or to a spouse and is not otherwise required to deliver a tax deduction certificate, then it shall:

(a) On or before 20 April following the end of the tax year in which the payment is made, deliver to the person a summary showing the total of all of the amounts of the tax credits paid along with any other information required by the CIR; and

(b) On or before the following 31 May, deliver to the CIR a copy of every such summary delivered.

WINZ must also provide Inland Revenue with payment details in an employer monthly schedule.

420.80 When CIR delivers tax credits by instalments [TAA, ss 80KI, 80KJ, 80KK, 80KL, 80KM, 80KU]

When a notice of entitlement to receive the abating WFF tax credit or minimum family tax credit by interim instalments has been issued to a person, the tax credits must be paid to the person by Inland Revenue in weekly or fortnightly instalments for the period of entitlement.

The CIR must deliver to the recipient a summary showing the total of all tax credits paid to the person by instalment during the tax year. The summary must be delivered:

(a) For a non-filing taxpayer, on or before 20 May following the end of the tax year; or

(b) For a filing taxpayer, on the same day as the CIR issues the person with an income statement [see 1270.75].

The CIR may start paying interim instalments before a notice of entitlement is issued if the CIR considers that the issue of the certificate has been unduly delayed.

If WINZ ceases paying a person a credit of tax (eg if the person ceases to qualify for an income-tested benefit), the CIR will, on application by the person, continue to pay the balance of the person’s entitlement for the remainder of the entitlement period.

The CIR normally requires the person receiving the instalments to supply the details of a bank account into which the CIR pays the instalments. The bank account may be held either in the person’s name alone or jointly with their spouse.
**420.85 Overpayments resulting from additional pay day** [TAA, s 80KW]

Persons receiving the WFF tax credit or the minimum family tax credit by instalment during the year are required to make a square-up calculation at the end of the tax year and repay any overpayment.

If a person who is entitled to a WFF tax credit or a minimum family tax credit receives 27 fortnightly or 53 weekly instalments of the credit, s 80KW of the TAA adjusts the amount of the credit accordingly.

**420.90 Anti-avoidance** [ss MA 6, GB 44]

Where an arrangement is made between a person (the claimant) and another person, the purpose of which is to obtain a more favourable working for families (WFF) tax credit or minimum family tax credit than would otherwise have occurred, the CIR may reduce the claimant’s tax credit to eliminate the advantage.

430.175 Assessability of allowances or benefits in the hands of employees
430.180 Working partners and shareholder-employee positions contrasted
430.05 Types of livestock [s EC 1]

For valuation purposes, livestock is divided into four categories. These are:

(a) Specified livestock: sheep, dairy cattle, beef cattle, deer, goats and pigs [see column 1 of sch 8], but excluding high-priced livestock that is not subject to a bailment. The six types of specified livestock are then further divided into classes of livestock such as “mixed age cows” or “rising 2-year heifers”;

(b) High-priced livestock: sheep, cattle, deer, goats and pigs [see column 1 of sch 17], which is capable of being used for breeding or expected to be capable of breeding when it reaches maturity and which is purchased for not less than:

   (i) $500; and

   (ii) Five times the national average market value at the end of the year of purchase in the income year of purchase or the previous income year whichever is greater. The relevant national market value is the national market value for the class [see column 2 of sch 17], in which the livestock is able to be classified at the end of the income year in which it was purchased;

(c) Non-specified livestock: all livestock other than specified livestock, high-priced livestock, and bloodstock; and

(d) Bloodstock: a horse that is a member of the standard bred or thoroughbred breed of horses. The term includes a share or interest in such a horse.

430.10 Definitions [ss EC 27, YA 1]

The following terms are used in this Chapter.

1. Short-term bailment

   A “short-term bailment” is a bailment or lease under which all of the following apply:

   (a) At the time at which the bailor delivers the livestock to the bailee, the bailor expects to have the same livestock delivered back;

   (b) The bailee or lessee did not provide consideration to the bailor for the delivery of the livestock; and

   (c) The term of the bailment or lease ends on or before the end of the income year following the income year in which the arrangement is made.

2. Long-term bailment

   A “long-term bailment” is a bailment or lease under which, at the time at which the bailor delivers the livestock to the bailee, the bailor does not expect to have the same livestock delivered back at the end of the bailment. Generally the bailment agreement will specify that the same number of livestock of the same class and quality are to be returned.

3. Profit-sharing arrangement

   “Profit-sharing arrangement” means an arrangement under which all of the following apply:

   (a) A person (Person A) makes specified livestock available, without specifying a fee for doing so, to another person (Person B) who carries on a business in which the livestock are used;

   (b) Any return or compensation that Person A receives for making the livestock available depends on the profits of the business;

   (c) Person A participates in the profits and losses of the business; and
(d) If a partnership between Person A and Person B arises, Person A is bound by the requirements of the Partnership Act 1908 for third parties.

430.15 Valuation of livestock generally [ss EC 2, EC 3, EC 4, EC 5]

All livestock is required to be valued using a method available under subpart EC. That value becomes the closing value for the purposes of the trading stock regime and the opening value for the following income year.

Where a taxpayer dies on or after 1 October 2005, the provisions of ss FC 1 to FC 7 apply to determine the value of livestock as at the date of death [see 1420.197].

Special rules apply where livestock is transferred between companies in a wholly-owned group. The company holding the livestock at balance date (Company B) is able, if it so wishes, to value it at the cost to the group company which originally acquired it (Company A). All of the following conditions must be met:

(a) At all times since the livestock was originally acquired, it has been held by a company which is a member of the same wholly-owned group and which is resident in New Zealand;

(b) At the end of the income year, both Company A and Company B remain members of the same wholly-owned group; and

(c) Company A and Company B have the same balance date, or have the CIR’s approval to use different balance dates on the basis that this is necessary to prevent the material distortion of net income that would result from income and allowable deductions for a single business cycle being reported in different income years.

If Company A and Company B cease to be members of the same wholly-owned group, Company B is deemed to have sold the livestock for its market value and to have immediately reacquired it at the same price. Any profit or loss arising on the deemed sale is thus realised for tax purposes when the livestock is transferred out of the wholly-owned group of companies.

Section EC 5 deals with livestock that is donated or supplied to a taxpayer by a non-associated person at less than market value for use in a farming or agricultural business that is affected by a “self-assessed adverse event”. A “self-assessed adverse event” is defined as a drought, fire, flood, or other natural event, or livestock disease or sickness, that materially affects the business. The event must be described by the taxpayer to the CIR by way of statutory declaration. Where this occurs, the livestock leaves the business of the donor or supplier, and enters the business of the recipient at the amount received from the recipient (which may be zero).

430.20 Valuation of specified livestock [s EC 7]

The valuation methods available for specified livestock are as follows:

(a) Herd scheme;

(b) National standard cost; and

(c) Cost price, replacement price or market value.

Special rules apply to bailed livestock.

Taxpayers must elect which method they wish to use. The election is made by using the method in their return of income. The election then continues in force until another alternative method is chosen. There are restrictions on the circumstances under which a person can elect to use a different method.

If the taxpayer fails to make a valid election, the CIR is able to determine, in consultation with the taxpayer, the method to be used.

430.25 Herd scheme for specified livestock

Under the herd scheme, livestock is valued at the National Average Market Value (NAMV) for its class. The NAMVs are set each year and are designed to reflect the average market values throughout New Zealand as at 30 April.
Both the opening and closing stock is valued at the NAMV for the year. Thus, changes in livestock values do not affect income for tax purposes. Changes in livestock numbers do affect income for tax purposes.

430.30 Restrictions on using the herd scheme [s EC 8]

It is not necessary to value all livestock on hand under the herd scheme. However, there are two requirements that must be met:

(a) The number of animals of a particular class valued under the herd scheme cannot be less than:
   (i) The number on hand as at balance date; or
   (ii) The number valued under the herd scheme in the previous income year, whichever is less.

(b) All male breeding stock must be valued under the herd scheme where national standard cost scheme or the cost price scheme is also being used in the same income year.

430.35 Herd valuation [ss EC 16, EC 17, EC 18, EC 19, EC 20, EC 21]

Livestock on hand at the end of the income year is valued at the herd value for that class of livestock.

To the extent to which the opening stock was valued under the herd scheme in the previous income year and was on hand at the beginning of the income year, its opening value is the herd value for the income year. Thus, movements in NAMVs do not affect income for tax purposes. Changes in livestock numbers do affect income for tax purposes.

Taxpayers are able to elect to adopt a “herd value ratio” for livestock of a particular type. The “herd value ratio” allows a taxpayer to value livestock at a value that more accurately reflects their own market value taking into account such things as stock quality and regional variations. If a herd value ratio has been adopted, the herd values are multiplied by the herd value ratio. It is calculated following an assessment by a recognised livestock valuer of the average head of stock in each class. The formula is:

\[ \frac{\sum (\text{average value} \times \text{number})}{\sum (\text{herd value} \times \text{number})} \]

Where:
- “\(\Sigma\)” is the total of the individual calculations for all applicable classes of livestock valued under the herd scheme.
- “Average value” is the average value of an animal in a class.
- “Number” is the number of all livestock of that class on hand at the end of the income year including livestock not in the herd scheme but excluding high-priced livestock.
- “Herd value” is the NAMV livestock of that class.

The result is then rounded to the nearest of the following: 0.9, 1.0, 1.1, 1.2, 1.3. The effect of using the herd value ratio is that livestock is brought to account at 90 per cent, 100 per cent, 110 per cent, 120 per cent or 130 per cent of NAMVs.

The CIR has the power to require a person to recalculate the herd value ratio where it is felt that the ratio being used is inaccurate.

A special ratio, referred to as the “Chatham Islands adjustment” applies to the Chatham Islands. This is set by the CIR.

Where the taxpayer ceases to derive income from specified livestock and herd livestock is disposed of before the 1 February preceding the determination of NAMVs for the year, the taxpayer may choose to value the herd livestock that has been disposed of at the previous year’s value. This would be advantageous if NAMVs are expected to fall.

Similarly, where a person dies and the herd livestock owned by that person is sold before 1 February preceding the determination of the herd values for the year, and the person’s return of income is filed before the values are determined, the person may adopt the previous year’s values. This overrides the general position of livestock being required to be valued at market value in the return to date of death.
430.40 National average market values [ss EC 15; TAA, s 91AAE]

The CIR is required to make determinations of national average market values for each class of specified livestock listed in column 2 of sch 17. The values shown in the determination apply to an income year, whether that income year commenced before, on, or after the date on which the determination is made.

The national average market values of specified livestock for the following income years are:

430.45 National standard cost for specified livestock

The national standard cost valuation method values purchased livestock at its purchase cost. Livestock bred on the farm are valued at the first balance date following birth at the breeding, rearing and growing (BRG) value for the type and class. Animals carried to the next balance date have rearing and growing (RG) costs added. With the exception of male non-breeding cattle, all animals are considered mature after the second year and no further costs are added to their value. Male non-breeding cattle are considered mature after the third year.

The BRG and RG costs are published each year.

430.50 Restrictions on using national standard cost [s EC 9]

There are five restrictions on the use of the national standard cost (NSC) scheme. These are as follows:

(a) NSC is not available to a taxpayer where the taxpayer also values livestock under the cost price method.

(b) NSC is not available to a taxpayer where, in the previous income year, the taxpayer valued specified livestock under the cost price method and has not given at least two income year’s notice to the CIR of an election to use NSC.

(c) NSC is not available in respect of a type of livestock where the taxpayer makes livestock available to another person under a profit-sharing arrangement and that other person values livestock of that type under the cost price method. This restriction also applies where there is another (third) person who has made livestock available under that profit-sharing arrangement and that third person values livestock of that type under the cost price method.
Farmers

(d) NSC is not available for livestock which is bailed or leased to another person under a long-term bailment.
(e) NSC is not available in an income year if the CIR has made a determination that precludes the use of NSC for that livestock.

430.55 National standard cost values
The national standard cost values of specified livestock for the following income years are:

</tbody>
</table>

TaxNotes:
(1) Animals born on farm are recorded at their published value at the end of year 1.
(2) Animals purchased in their first or second year of life are recorded for that year at purchase cost.
(3) Where animals are carried over to their second year of life, the published rearing and growing costs for rising 2-year animals of that category must be added to their year-1 value.
(4) As male non-breeding cattle are considered not mature until the third year, the published rearing and growing costs for rising 3-year animals must be added to their year-2 value.
(5) Animals carried over to their third year of life (fourth year for male non-breeding cattle), remain on hand at their prior year value with no further costs required to be added.

Example:
Farmer Brown commences farming in 20X1. He purchases the following livestock:

- 500 mixed age ewes @ $50 = $25,000
- 500 mixed age ewes @ $60 = $30,000
- 20 rams @ $200 = $4,000
Farmers

500 ewe lambs @ $80

$40,000

At the end of the 20X1-X2 income year the livestock is brought into closing stock at as follows:

<table>

$55,000

$40,000

$4,000

In the 20X2-X3 income year, 1500 lambs are born and survive. All other stock survive the year. No further stock are purchased.

At the end of the 20X2-X3 income year the livestock is brought into closing stock at as follows:

(a) The mixed age ewes retain their original average purchase price as their NSC;
(b) The rams retain their purchase price as their NSC;
(c) The ewe hoggets have rearing and growing costs added; and
(d) The lambs are brought to account at their breeding rearing and growing cost.

Using the 2009-2010 determination to illustrate (rising 1 year sheep breeding, rearing and growing costs of $24.20, rising 2 year sheep rearing and growing costs of $16.10) the closing values for the 20X2-X3 income year would be:

430.60 Valuation of specified livestock at cost price, market value, or replacement price [s EC 25, EC 10]

Taxpayers are able to value specified livestock at any one of cost price, market value or replacement price. Use of cost price is subject to certain restrictions.

Where a taxpayer changes in the income year to the cost price method from another method, the opening value of livestock is the closing value from the previous income year calculated under that other method.

There are five restrictions to the use of the cost price method. They are:

(a) The cost price method is not available to a person if, in the same income year, they value specified livestock under the national standard cost scheme.

(b) The cost price method is not available where, in the previous income year, they valued specified livestock under the national standard cost scheme and have not given two income years’ notice to the CIR in the prescribed manner of their election to adopt the cost price method.

(c) The cost price method is not available to value specified livestock that is bailed or leased to another person except where that bailment is under a profit-sharing arrangement.

(d) The cost price method is not available in an income year where the specified livestock has been bailed or leased to another person under a long-term bailment or under a short-term bailment between associated persons for other than fair market value.

(e) The cost price method is not available to value a type of specified livestock in an income year in which the person has made specified livestock available under a profit-sharing arrangement to another person who values any livestock under the national standard cost scheme. This restriction also applies where there is another (third) person who has made livestock available under that profit-sharing arrangement and that third person values livestock of that type under the national standard cost scheme.
430.65 Valuation elections for specified livestock [ss EC 11, EC 12, EC 13]

There are a number of elections required under the various methods for the valuation of specified livestock. Some are able to be made in the income year to which they relate. Others must be made two years in advance. The various elections are described below

(1) Same year elections

An election must be made by the date on which the person files the return of income for the income year in which the election is first to apply:

(a) To value livestock of a particular type under the herd scheme; or

(b) To adopt a herd value ratio or the Chatham Islands adjustment for livestock of any type if the income year is the first income year in which the particular livestock is valued under the herd scheme.

(2) Two years' prior notice

Notice is required by the date on which the person files the return of income for the income year that is at least two years prior to the first income year in which any one or more of the following elections is to apply:

(a) To cease valuing any particular type of specified livestock under the herd scheme unless the person continues to value some livestock of that type under the herd scheme or when another valuation method is available (eg where there is an excess of livestock numbers over the number required to be valued under the herd scheme);

(b) To adopt a herd value ratio, recalculated herd value ratio or Chatham Islands adjustment for any livestock unless it is the first year in which the herd scheme has been used;

(c) To move from the cost price method to the national standard cost scheme; or

(d) To move from the national standard cost scheme to the cost price method.

Any election once made is irrevocable in the first income year in which it applies. Elections continue to apply in all subsequent income years until superseded by a further election.

(3) Information requirements

Each notice of election must contain all of the following information:

(a) The income year in which it is first to apply;

(b) The type, class or other description of the livestock;

(c) The existing and proposed methods of valuing that livestock; and

(d) If the election is to use a herd value ratio or recalculated herd value ratio, the assessed value of an average animal of each applicable class of livestock, the date on which each animal was valued and the name and address of the valuer.

A valid election notice may state different valuation options for different classes of livestock within a type, but must state only one valuation option for any particular class of livestock.

(4) Joint elections

If livestock is owned jointly by two or more persons, the election regarding the valuation method to be used must be made jointly by all of the owners. In the absence of a valid election, the following applies:

(a) If the owners lease or bail the livestock to another person under the market value method, or enter into a profit-sharing arrangement under the market value method for the livestock, the market value method is required to be used; and

(b) In any other case, the national standard cost scheme applies.

(5) Profit-sharing arrangements

Where the national standard cost scheme or the cost price method is used to value livestock under a profit-sharing arrangement:
(a) The person who owns the livestock;
(b) The person who has the use of the livestock; and
(c) Any other person who has made livestock of the same type available to the person who has the use of the livestock,
are treated as the single owner of the livestock.
This means that parties to the arrangement must use the same valuation method.

(6) **Partnerships**
A person’s partnership interest in livestock is treated separately from any other livestock interest that the person may have. Separate elections are required for the person’s partnership interest and for their other interests. It is not necessary for the same valuation methods to be used for the partnership as are used for the other interests.

(7) **Changes in partnership interests**
Where the make-up of a partnership is changed and at least 50 per cent of the property of the new partnership is owned by persons who:
(a) Owned all of the property of the old partnership; and
(b) Derived income from specified livestock of the same type as that owned by the new partnership,
in (either that income year or the previous income year) the new partnership must use the same valuation methods as were used by the old partnership.

430.70 **Bailed or leased specified livestock** [s EC 26]
A bailment occurs where the user of the livestock (the bailee) pays the owner of the livestock (the bailor) for the use of that livestock. It includes such things as lease arrangements and some sharefarming arrangements. It does not include a sharemilking arrangement.

Where a taxpayer (the bailee), has entered into a bailment, lease, or other agreement to use specified livestock (or any high-priced livestock) and is required under the agreement to return, or pay full compensation for, the livestock at a future date, the livestock is deemed to be owned by the taxpayer. Such livestock is required to be valued as at the end of each income year. The number of bailed livestock which must be returned as closing stock is calculated under the following formula:

\[
total \text{ livestock} - \text{bailed livestock}
\]

Where:
“Total livestock” is all of the livestock that the bailee has on hand at the end of the income year. It includes both livestock that is owned by the person and livestock that they have use of under the bailment, lease or other agreement.

“Bailed livestock” is the total number of livestock of that class that the taxpayer has been given the use of under the bailment, lease, or other agreement that, as at the end of the income year, is still in force.

Under the formula, the livestock that are subject to the bailment are deducted from the number of livestock on hand. Where this results in a positive number, it is a bailment surplus and the bailee is treated as owning that surplus. Where it results in a negative number, it is a bailment deficiency which means that the bailee has a future liability to make good those deficiencies. The livestock number on hand in this case in negative.

430.75 **Valuation of high-priced livestock** [ss EC 32, EC 33, EC 34, EC 35, EC 36, EC 37]
“High-priced livestock” means any sheep, cattle, deer, goat or pig, where all of the following apply:
(a) The cost of the animal is $500 or more;
(b) The purchase price was not less than five times the national average market value for that class of livestock for either the end of the year of purchase or at the end of the immediately preceding income year; and
(c) The animal was (at the time of purchase), capable of being used for breeding or expected to be capable of being used upon maturity.

The high-priced livestock regime is based on depreciation of the livestock over its breeding life. The scheme applies only to purchased livestock. Livestock that are bred are required to be valued under one of the other valuation regimes. Under the high-priced livestock regime, taxpayers have the option of using either a straight line depreciation rate or a diminishing value rate. The diminishing value rate is set at:

\[ 1.5 \times \text{the straight line rate} \]

If the diminishing value method is chosen, the taxpayer is required to give notice to the CIR at the time of filing their return of income for the first income year in which the high-priced livestock is taken into account. Once the choice has been made, it cannot be revoked.

The rates are set by the CIR having regard to the:

(a) Average cost of that type or class or category of livestock;
(b) Estimated useful life of the livestock; and
(c) Estimated average residual market value of the livestock.

The following rates currently apply:

<table>
<thead>
<tr>

</tbody>
</table>

No write-down of high-priced livestock is available in the year of purchase where the animal is not more than one year of age at the end of the income year of purchase. Writedown in the year of purchase is also prohibited where the animal is purchased within six months of the end of the income year and, within that period:

(a) If male livestock, has not been used for insemination or semen collection; or
(b) If female livestock, has not given birth or had ova removed.

High-priced livestock must be transferred to another livestock valuation regime where either or both of the following apply:

(a) The value of the livestock to be taken into account at the end of the income year is equal to or less than the national average market value applying to livestock of that class; or
(b) The livestock is no longer expected to be used for breeding purposes for that or any subsequent income year, and the taxpayer has no intention of selling or otherwise disposing of the livestock to any other person to be used for breeding purposes.

430.80 **Valuation of non-specified livestock** [ss EC 29, EC 30, EC 31]

The term “non-specified livestock” is defined in s YA 1 as any livestock that is not specified livestock, high-priced livestock or bloodstock. It includes, horses (other than bloodstock), emus, alpacas, rabbits and dogs.

The taxpayer has the option of valuing any non-specified livestock to be taken into account at the end of any income year at its cost price, market value, replacement price, or (with the concurrence of the CIR) its standard value. The CIR may from time to time determine standard values for any type or category of non-specified livestock.
Farmers

430.80(1)

Where a taxpayer undertakes new or expanded production of non-specified livestock and purchases additional non-specified livestock for that purpose, any write-down to standard value is required to be spread over three income years [s EC 31].

(1) Valuation of ostriches and emus

The CIR has published an interpretation statement on the valuation of ostriches and emus for income tax purposes in TIB vol 9:8 (August 1997) at 11-21.

430.85 Valuation of livestock generally and on sale of property

In TRA Case B15 (1975) 2 NZTC 60,112 and Land Projects Ltd v Commissioner of Inland Revenue [1964] NZLR 723 (SC), it was held that all livestock, coming within the natural and ordinary meaning of that word and which is an asset of a farming business, is regarded as trading stock.

The general principle, arising from the judgments of the New Zealand Courts (and approved by the Privy Council) in the case of Hansen v Commissioner of Inland Revenue [1973] 1 NZLR 483 (PC), is that, in the case of a sale of a farm as a going concern, the value of the livestock to be taken into account by both the vendor and the purchaser for income tax purposes is the market value of the livestock as at the date when possession of the farm property is given to the purchaser. However, should the total of the market values of the farm property and the livestock as at that date exceed the total consideration payable by the purchaser for the farm property and the livestock, the value of the livestock to be taken into account by both the vendor and the purchaser is the market value as above of the livestock scaled down in accordance with a formula which may be expressed as follows:

\[
\frac{a}{b} \times c
\]

Where:

- \(a\) is the market value of the livestock as at the date when possession of the farm property is given to the purchaser;
- \(b\) is the total of the market values of the farm property and the livestock as at the date when possession of the farm property is given to the purchaser; and
- \(c\) is the total consideration payable by the purchaser for the farm property and the livestock.

For simplicity in the above formula, other assets included in the sale have been omitted. In practice they would also come into the calculation.

430.87 Treatment of livestock where partners enter and exit a partnership

Special rules apply where partners enter and exit a partnership. They apply where the disposal of a partner’s interest in a partnership includes livestock of the following types:

(a) Specified livestock that is not valued using the herd scheme or one of the cost price, replacement price, or market value methods under s EC 25; and

(b) Non-specified livestock.

430.90 Carcasses on hand at balance date

The freezing company, with sales on “owner’s account”, does not purchase the stock but processes it on the farmer’s behalf and later sells it for the farmer. Immediately after killing, the freezing company pays an advance to the farmer of between 75 per cent and 90 per cent of the schedule values of the stock. When the carcasses are sold, the farmer is paid the balance. At no stage does ownership of the livestock (or carcasses) pass to the freezing company. The value of carcasses on hand and held by agent freezing companies prior to sale overseas should be included in calculating income. The CIR has ruled that the value to be adopted at balance date should not be less than 75 per cent of the schedule price at balance date. Sales made through a pool account where an advance is received are treated differently and the amount of any such advance should be returned as income in the year in which the advance is received.
430.95   **Group livestock breeding schemes**

Group breeding schemes entered into by farmers to improve the quality of their flocks are usually carried on with the group being registered under the Companies Act 1993, the Incorporated Societies Act 1908, or the Industrial and Provident Societies Act 1908. Groups so registered are “companies” for tax purposes. Such a group is a legal entity and a separate taxpayer from its members. The principle of mutuality is not applied in these circumstances.

If registered under the Companies Act 1993 or the Industrial and Provident Societies Act 1908, payments from members for share capital are not assessable to the group, but levies to meet a group’s trading expenses are income. If the group is incorporated under the Incorporated Societies Act 1908, entrance fees are not assessable but levies to meet trading deficits are assessable to the group. From the individual members’ point of view, share capital contributions and entrance fees paid to the group are non-deductible, but subscriptions to meet expenses are deductible. The group’s income, calculated in the normal way, is assessable whether the sales are made to members or others. Allowable deductions are calculated in the normal way.

A member who sells livestock to the group is assessable on the sale price, and the group deducts the cost as a purchase. Conversely, a member buying stock from the group deducts the cost, and the group treats the transaction as a sale.

Ewes contributed to the group by a member become the property of the group and the member usually receives one ram in return for a certain number of ewes. A member who buys a ram from the group in excess of the member’s entitlement must make the purchase at a realistic market price. The closing stock on hand at the end of the year is determined as follows:

(a) Ewes contributed to the group by a member should be excluded from the member’s stock on hand; 
(b) Rams received in exchange should be included in the member’s closing stock at the value adopted for flock rams; and 
(c) Ewes contributed by members are included as part of the group’s closing stock at the value adopted by the group for its ewe flock.

430.100   **Wool industry — restructuring**

The Wool Board Restructuring Act 2003 provides for the restructuring of the wool industry by dissolving the New Zealand Wool Board and, as of 15 September 2003, converting it into a company called Wool Board Disestablishment Company Ltd. The company assumes the Board’s assets and liabilities and is required to oversee the disbursement of the net assets to wool growers.

The Act contains a number of provisions that ensure that wool growers suffer no tax effects from the restructuring. In particular, s 36 provides that the issue of shares to a wool grower does not constitute a dutiable gift, a dividend or assessable income of any other kind. Section 36 further provides that proceeds from the sale, exchange, redemption or other disposition of a share, other equity or similar instrument is not income for tax purposes [see TIB vol 15:9 (September 2003) at 28-30].

430.105   **New start grants** [ss CX 48, EW 46; TAA, s 177D]

The new start grant programme was introduced as part of Government’s disaster relief package for farmers. The scheme relates to persons engaged in the following industries:

(a) Animal husbandry; 
(b) Poultry keeping; 
(c) Beekeeping; 
(d) Breeding horses other than bloodstock; 
(e) Horticulture; or 
(f) Cropping.

The grant must relate to an “emergency event” (previously referred to as a “qualifying event”). An emergency event is an event that has been declared by the Governor General to be an emergency event. The purpose of
the provision is to remove from income the remission of a liability where that remission is a prerequisite for a new-start grant being made.

The criteria are as follows:

(a) The taxpayer incurs a liability before the declaration of the state of emergency is made;
(b) The liability is deductible within three months following the end of the state of emergency;
(c) The liability is remitted within 18 months following the end of the state of emergency as a prerequisite for payment of the new-start grant; and
(d) That remission would be taxable to the taxpayer under s CG 2 (remitted amounts).

Where these criteria are met, the remission is excluded income of the taxpayer to the extent to which the result of the following formula is more than zero:

\[
\text{remitted amount} - \text{current loss} - \text{loss balance} - \text{other loss}
\]

Where:

“Remitted amount” is the amount of the remitted liability.
“Current loss” is the amount of the net loss that the taxpayer would have for the income year of remission.
“Loss balance” is any loss balance that the person has. These are generally losses brought forward from earlier income years.
“Other loss” is a loss incurred by an associated person of the taxpayer where the following criteria are met:

(a) The associated person carries, or has carried, on the business for which the grant is paid or owns, or has owned, the land used in the business (either freehold or leasehold); and
(b) The associated person is under a substantial degree of control by the taxpayer and has substantial identity interests with the taxpayer; and
(c) The loss is incurred from the business and/or the land is used in the business.

The loss incurred by the associated person is taken into account only to the extent to which the CIR determines and the CIR is required to provide the associated person with a written notice of determination.

The effect of the formula is that, while the remission may result in the taxpayer forfeiting losses, it will not result directly in additional tax payable.

A similar treatment applies under the financial arrangement rules where a business loan is taken out prior to the declaration of a state of emergency that relates to an emergency event. Where the loan is remitted within 18 months following the end of the state of emergency and as a prerequisite for the payment of a new start grant, the remitted amount is deemed to have been paid to the extent to which it is allowed under the formula described above. The same associated persons provisions as described above also apply.

Under s 177D of the TAA, the CIR must grant relief to any taxpayer to whom a new start grant is payable or to an entity that is associated with the taxpayer, to the extent that the CIR thinks appropriate. The relief is from the unpaid tax that relates to an income tax liability arising from:

(a) The farming business for which the new start grant was paid;
(b) Land used in carrying on the farming business; or
(c) The sale of the farm.

The amount of the relief is calculated as if the relevant income was the only income derived. This is relevant where the taxpayer’s income tax liability is calculated other than at a flat rate of tax.

If the new start grant relates to a declared emergency event, the CIR is required to grant additional relief to the taxpayer in respect of the payment of unpaid tax or amounts owing under the PAYE rules. These liabilities must relate to the farming business for which the new start grant was paid.

430.110 Farming or agricultural business defined

In determining whether a particular activity or enterprise is a farming or agricultural business, it is necessary to consider:

Staples Tax Guide 2012
Farmers

(a) Whether the activity or enterprise constitutes a business for tax purposes; and
(b) Whether the business is carried on for farming or agricultural purposes.

The leading New Zealand case on the subject of whether a business is a farming or agricultural business is *Horniblow v Napier* [1955] NZLR 104 (SC), a case which did not involve income tax. Dicta in this case and several dictionary definitions were considered in *4 NZTBR Case 7* and the Board gave the following definition:

“So far as it is possible to distil a factor common to the citations or quotations we have made, it seems apparent that an agricultural business … would comprehend such uses of land as the cultivation thereof, the growing of crops, or the rearing of livestock thereon.”

A number of activities have been held to be outside the scope of the definition:

(a) Growing trees for production of timber (silviculture);
(b) Aerial top-dressing;
(c) Provision of services to persons themselves carrying on a farming or agricultural business (eg seed dressing, coolstores, agricultural contracting, etc);
(d) Dealing in livestock; and
(e) Bailment or leasing of livestock.

The CIR accepts that any of the following are activities carried on for farming or agricultural purposes:

(a) Agriculture — soil cultivation, cropping, animal husbandry;
(b) Horticulture — growing plants, shrubs and flowers;
(c) Orcharding — growing fruit;
(d) Viticulture — growing grapes;
(e) Apiculture — beekeeping;
(f) Poultry farming — keeping poultry.

Many of the concessions available to farmers depend upon the taxpayer being engaged in a farming or agriculture “business” (eg the deduction of development expenditure and the income equalisation scheme).

Can a taxpayer who is farming in a relatively small way in a rural retreat, often on a part-time basis, be said to be carrying on a farming “business” so as to claim the above concessions, and to set off any resulting losses against income from other sources? The decision in *Grieve v Commissioner of Inland Revenue* [1984] 1 NZLR 101, (1984) 6 NZTC 61,682, (1983) 6 TRNZ 461 (CA) presents the current state of the law in this area and held that the existence of a business depends upon the intention of the taxpayer. It is no longer appropriate to regard “intention” and “reasonable prospect” of profit as separate tests. The Court stated that the taxpayer’s prospect of profit is but one of the factors to consider in evaluating whether there is a genuine intention to make a profit.

PIB 118 (November 1982) contains a useful indication of the matters the CIR considers when determining the existence of a business:

“It is reasonable to expect that any person embarking on a genuine profit-making venture will make enquiries and investigations into the economic feasibility of the proposed activity and that the results of such enquiries will be adequately documented. The intentions for the property will generally be known before it is acquired and a property suitable for the activity in mind will be acquired. Investigations will no doubt have been made into the soil type or carrying capacity of the land if a farming or agricultural activity is contemplated. Expert advice may also have been obtained on the kinds of activities suitable for the property and how they should be carried on. Other factors such as the size and locality of the property and the time the taxpayer has available to devote to the activity are also relevant.”

If, for a year or two, the CIR allows losses claimed on the basis that the taxpayer’s activities amount to the carrying on of a “business” and later, in the light of further losses being returned, decides that there is now
no prospect of a profit being achieved and disallows the losses in the return for the year under review, it is generally not the CIR’s practice to apply the decision retrospectively and review assessments for the earlier years to disallow the losses previously allowed [see 130 BUSINESS].

430.115 **Other items of farmer’s income**

In addition to the net profit derived from the farming business, the income of a farmer includes the following:

(a) The value of meat and produce taken from the farm for private and domestic purposes.
(b) Prize money won at agricultural shows. Entrance fees and other expenses in connection therewith may be claimed as a deduction. As the prizes are not schedular payments, deduction of tax at the source of payment is not required.
(c) Rent for any portion of the farm let out, including grazing fees.
(d) Stud fees received.
(e) Compensation received for stock condemned. The book value of the stock would automatically be deducted in the process of accounting for livestock on hand at the end of the trading period.
(f) Compensation received for cattle slaughtered because of brucellosis [s CG 6].
(g) Compensation received for livestock lost in an adverse event. In *MacLean v Commissioner of Inland Revenue* (1985) 7 NZTC 5,035 (HC), the High Court confirmed that a grant from the Otago-Southland Flood Relief Trust Fund to a taxpayer as compensation for livestock lost during a flood was income. The Court held that the grant was received as compensation for loss of profits and had its basis in the market value of trading stock which had been destroyed. Compensation, indemnity, damages, or insurance proceeds for the loss or destruction of, or damage to, trading stock or any other article produced, manufactured, acquired, or purchased for the business of producing goods for sale or exchange is deemed to be income [s CG 6].
(h) Depreciation recovered on the sale of farming assets [s EE 40].
(i) Insurance proceeds on account of crop or stock losses [s EE 6].
(j) Proceeds from sale of timber [s CB 25].
(k) Income equalisation deposit scheme refunds plus interest thereon [subpart EH, see 440 FARMERS’ INCOME EQUALISATION SCHEME].
(l) Livestock and unsold wool or other produce on hand at balance date [ss EA 1, EB 3].
(m) Farm holidays for tourists. PIB 152 (September 1986) comments:

“The practice of providing farm holidays for tourists has now become well established on either a live-in basis or by providing separate accommodation with or without meals. The length of stay can vary from one night to an indefinite period. Any payments received for accommodation or food are liable for income tax. A record should be kept of all receipts and expenditure and any profits arising from the activity must be included in the recipient’s income tax return. The supply of accommodation and/or food is a service liable for GST.”

430.120 **Deductions in farmers’ tax returns**

The material in this paragraph does not constitute an exhaustive list of deductible or non-deductible farm expenditure. Rather, it is intended to serve as a guide to the treatment of some commonly incurred expenditure that is not discussed elsewhere. Expenses that are not allowable include:

(a) Depreciation of improvements to land, such as sheep dips, fences, yards, etc. Repairs are allowable as a deduction. Fences are able to be expensed under s DO 1 and a system of depreciation applies to expenditure on land improvements under sch 20 [ss DA 1, DA 2, DA 3, DO 1, DO 4 see 430.130].
(b) Money spent on permanent improvements to the land except to the extent it constitutes development expenditure provided for in s DO 1 or is expenditure on land improvements under s DO 4 [ss DA 2, DA 3, DO 1, DO 4 see 430.135].
(c) No deduction is permitted for any expenditure on, or depreciation of, a farmer’s dwelling where the dwelling is not situated on the farm property [s DA 2].

(d) Certain legal expenses [s DA 2].

(e) A farmer’s meal costs on sale days are private expenses and non-deductible: TRA Case H31 (1986) 8 NZTC 289.

Deductible expenses are in many cases subject to the prepaid expenditure provisions for unexpired expenditure at balance date. Deductible items may include:

(a) Legal expenses incurred in raising money to buy the farm, including the legal costs of raising mortgage moneys to finance the purchase of the farm and other income-producing assets. Legal costs such as conveyancing fees for the assets purchased are not allowed as they are part of the cost of the asset [ss DB 5, DB 18].

(b) Legal expenses incurred in connection with any lease or renewal of lease of property used in the production of income, and also expenses incurred in borrowing or renewing loan moneys employed as capital in the production of income [ss DB 5, DB 18].

(c) Telephone rentals and business tolls.

(d) Car expenses applicable to use in the business. The deduction for motor vehicle expenses may be restricted to a maximum of 25 per cent of expenditure claimed where adequate records of business and total mileage are not maintained. The requirement to maintain records does not apply where the vehicle is used 100 per cent for business purposes [ss DE 1 to DE 11].

(e) One-quarter of the depreciation, repairs, maintenance, insurance, and domestic power on a farmer’s own dwelling is deductible provided the dwelling is situated on the farm property.

In TRA Case K57 (1988) 10 NZTC 465 a husband and wife farming partnership successfully claimed dwelling house depreciation and outgoings of 25 per cent when the husband had other full-time employment and the wife taught part-time. Both worked with their family on the farm before and after work and at weekends.

(f) Maintenance costs for stockyards, sheep dips, and fencing. In the case of new stockyards, the cost of fencing may be claimed as development expenditure [ss DA 1, DO 1].

(g) Daily or weekly newspapers, providing stock reports or other farming information.

(h) A farmer is allowed a deduction of up to $7,500 per annum for expenditure incurred in planting or maintaining trees for shelter belts, erosion prevention, or for other agricultural or pastoral purposes or in erecting or maintaining fences to protect these trees. The concession excludes trees planted primarily for the production of fruit [s DO 3].

Expenditure incurred in planting “listed horticultural plants” is subject to a separate regime [see 430.120].

(i) Any taxpayer engaged in any farming or agricultural business on any land in New Zealand may elect in writing (under s EJ 3) to apportion the deduction for the expenditure incurred in the purchase and application of fertiliser and lime over the year in which the expenditure is incurred and the four succeeding years. The object of the provision is to encourage increased development of land by permitting the farmer to set off the expenditure in a later year when there is increased income arising from the application of the fertiliser and lime. The amount allocated may be determined with the passing of each year. Any balance remaining after the final year of the expenditure and the three following years is automatically deductible in the fourth year. The election for each year is to be made by way of notice to the CIR (an entry in the tax return suffices) within the period specified for furnishing the return. Once made, the election is irrevocable. Where a farmer ceases to carry on business, or dies, during the “spread” period, an election may be made by the farmer (or the personal representative) to have the balance not already deducted allocated either to the year in which the business ceased, or equally to the year of expenditure and the years up to and including that in which the business ceased. The CIR’s policy is set out in TIB vol 6:10 (March 1995) at 3-5.
(j) A farmer may deduct employer superannuation cash contributions paid to a superannuation fund or to a company (eg an unregistered superannuation scheme) for the benefit of employees. These contributions attract employer’s superannuation contribution tax (ESCT), or at the election of the employee, PAYE [ss DC 7, RD 65].

(k) Farmers are entitled to deduct from income the payments made to a housekeeper for cooking for permanent employees employed full time on the farm. A similar allowance is permitted to farmers making such payments to their spouse [see 960.10].

(l) A deduction is allowable for the costs of transporting an employee’s children to school. However, the claim excludes the cost of sending the farmer’s own children to school. Where the farmer personally provides the transport for the employee’s children, the petrol costs and other vehicle expenses are deductible in full against the farming income. Similarly, if the farmer contributes directly towards a transport service for employee’s children on a modified bus system, the cost of the contributions is allowable as a farm expense.

(m) In many rural areas, shelter trees used by farmers encroach on road reserves and foul overhead power lines. As an alternative to trimming or removing trees, some property owners are asked to contribute to the cost of putting the power reticulation system underground. Contributions made by farmers towards the cost of installing power underground are deductible.

(n) Farm sundries are consumable stores purchased to meet ordinary and continuous farming requirements and not held for resale. Examples are fertiliser held ready for spreading, stockfeed purchased or held for winter/summer use, and stock drenches. The full cost should be claimed in the year of purchase, provided payment or delivery occurs before balance date. They should be excluded from trading stock at balance date for tax purposes but are treated as consumable aids and subject to the prepaid expenditure rules if the value of the amount on hand at balance date exceeds $58,000.

The deductibility of farm sundries was confirmed in *TRA Case 90* (1982) 5 TRNZ 908, where the husband and wife taxpayers carried on a farming business in partnership. Together with another partnership they purchased a dairy farm. Included in the purchase were 6,000 bales of hay with a market value of $1.50 per bale. Part of the surplus hay was sold in 1978. A deduction was claimed for the value of the hay in their returns of income.

The CIR’s views on the tax treatment of conversions of land from one farming or agricultural purpose to another are set out in a operational statement in TIB vol 16:6 (July 2004) at 18-30. The CIR’s views on the deductibility of items of expenditure relating to dairy farming are set out in TIB vol 12:2 (February 2000) at 10-41.

The following additional points should be noted:

(a) Generally, farmers’ aerial mapping costs are capital expenditure and not deductible. However, the costs may be associated with land improvements.

(b) The following guidelines may be used when considering deductibility of a proportion of the cost of a swimming pool available for fighting fires in farm dwellings and adjacent farm buildings:

   (i) When the pool is built primarily as a swimming pool no deduction is allowable, the expenditure being of a private or domestic nature.

   (ii) When the pool is built partly for farming purposes and partly for private purposes, the expenditure can be apportioned as to private and business content. Depending on the aspects of the business use that portion of the cost is capitalised and depreciated.

   (iii) Proximity to house, elaborateness, and the nature of ancillary equipment are the elements to consider when deciding the private expenditure content.

(c) The cost of spray type sheep dips may be depreciated.

(d) Artificial shelter surrounding and subdividing horticultural blocks and used as a cover over sensitive crops is to be treated in the following manner:
Farmers

(i) If erected as a windbreak around the boundary of a horticultural block it is accepted as within the meaning of “fences”;
(ii) If erected to protect trees planted to provide shelter, prevent erosion, or otherwise for agricultural purposes is acceptable as coming within the $7,500 deduction allowed by s DO 7;
(iii) Artificial shelter which is more than a fence, eg it provides cover over a crop, is not regarded as a “fence” and is not deductible. However, depreciation is allowed on those structures constructed on land for shelter purposes [under s DO 4].

(e) Forestry. As forestry is not a farming or agricultural business, any plant or machinery bought for the purposes of a forestry business does not qualify: TRA Case D5 (1979) 3 TRNZ 198.

(f) In some cases, land is developed by taxpayers before commencing a farming or agricultural business but with the intention of ultimately doing so. It has been the CIR’s practice to defer the deduction in all cases where the taxpayer is not in receipt of farming income. A case where a deduction was claimed but denied is TRA Case G36 (1985) 7 NZTC 1,133. It was held that the development expenditure was not deductible because the taxpayer was not carrying on a farming or agricultural business on that land in the relevant income year. However, this situation does not arise where the taxpayer is an established farmer. In such a case, the deduction is allowed in the year claimed, despite the fact that the block under development may be separate from the regular farm and has not yet produced any farming income.

(g) The treatment of regrassing and fertiliser expenditure incurred on or after 1 July 2004 has been clarified by way of legislative amendment. Section DO 1 now provides that pasture regrassing and fertilising is fully deductible in the year in which the expenditure is incurred unless it is incurred in the course of a “significant capital activity”. The term “significant capital activity” is defined in s YA 1 as an activity that enables a change in the nature or character of a farming activity but excludes an activity that enables a change in the intensity of farming practice (eg a change in pasture type to accommodate an increase in stocking intensity). Where the expenditure is incurred in the course of a significant capital activity, it is able to be amortised under s DO 4 at the rate of 45 per cent diminishing value. Expenditure on pasture that has an estimated useful life of one year or less is able to be deducted in the year in which it is incurred regardless of whether or not it is incurred in the course of a significant capital activity.

(1) Depreciation on farm buildings

Depreciation is allowable on farm buildings and dwellings situated on the farm.

Where the owner lives in the dwelling, the depreciation allowable is 25 per cent of the depreciation calculated on the cost of the dwelling provided the owner is a full-time farmer.

Where the owner has some other income-earning activity and the farming activity is carried on part-time, the proportion of the depreciation allowable on the dwelling should be calculated in accordance with the degree or extent to which the dwelling is actually used in the farming business.

Where a partnership dwelling is occupied by a partner (other than a partner with a minor interest), 25 per cent of the depreciation on the cost price of the house occupied by the partner and one-quarter of the repairs and maintenance and domestic power is allowable as a deduction in arriving at the income of the partnership. However, a greater proportion may be deductible in certain circumstances, as indicated in TRA Case F47 (1983) 6 NZTC 59,801, which concerned a farming partnership of six persons which owned a large sheep station. Two of the partners, who were entitled to 12.5 per cent of the profits each, lived in the farm homestead. A dispute arose as to the deductibility of the dwelling expenses and depreciation against farming income. It was held that at least 75 per cent of the expenditure and depreciation could not be expenditure of a private nature and was therefore deductible. This apportionment was based on the percentage of profits allocated to partners not living on the farm. The remaining 25 per cent was regarded as the cost incurred to enable the continuance of the administrative base of the farm as well as provide a home for the two partners living on the property. In the opinion of the TRA, a reasonable apportionment of the remaining 25 per cent, was 50 per...
cent of a business nature with the remaining 50 per cent being of a private and domestic nature. Accordingly, 87.5 per cent of the dwelling expenditure and depreciation was deductible from farming income and the remaining 12.5 per cent was added back, being of a private nature. As a result of this decision it would now appear that the CIR’s administrative 75:25 apportionment ratio (in the case of a sole-proprietor farmer) may not be the most appropriate for partnerships where some of the partners do not live on the property.

When a taxpayer occupies a farm dwelling owned by a trust, and the taxpayer or spouse is the settlor, a quarter of the rental applicable to that building is allowed as a deduction against the taxpayer’s farming income. The following formula is used to determine the amount of rental applicable to the dwelling:

\[
\frac{a \times b}{c}
\]

Where:

- \(a\) is cost price of dwelling as used for depreciation purposes by the trust;
- \(b\) is cost price of farm; and
- \(c\) is annual rental for the property including dwelling.

The essence of the adjustment is to identify the portion of total rent paid for the farm (including the homestead) which relates to private and therefore non-deductible expenditure for the dwelling.

When a farmer leases a farming property from an “associated person”, a similar adjustment should also be made.

Depreciation on the furniture of an owner-occupied farm dwelling cannot be claimed except in the case of furniture of an office used exclusively for business purposes. Depreciation on furniture is allowable where an employee occupies a furnished dwelling.

Where existing or new stockyards are covered with a roof of permanent materials the cost of the roof should be capitalised and depreciation claimed as for other farm buildings.

**430.125 Farmers’ capital expenditure [ss DO 1, DO 2, DO 3]**

Any taxpayer engaged in any farming or agricultural business on any land in New Zealand is entitled to a deduction of the amount of any expenditure incurred by the taxpayer in that income year for enhancements to land, erosion and shelter planting, and tree planting or maintenance. Each of the three categories of expenditure has different requirements before a deduction is allowed.

All three categories require the person be engaged in farming on land in New Zealand. However, expenditure for enhancements to land and for tree planting or maintenance, requires the expenditure be for things on the farm land, whereas erosion and shelter planting expenditure does not need to be for things on the farm land (ie trees can be planted outside of the farm land). In addition, expenditure for planting or maintaining trees requires that the farming business is the principal business activity on that land. Expenditure on tree planting and maintenance under s DO 3 also has an annual monetary limitation. These requirements are summarised in the table below.

<table>

</tr>
</tbody>
</table>

(1) **Enhancements to land [s DO 1]**

The following amounts are deductible where the expenditure is incurred on enhancements to the land (except trees) on which the farming or agricultural business is carried on:
Farmers

(a) The destruction of weeds or plants detrimental to the land;
(b) The destruction of animal pests detrimental to the land;
(c) The clearing, destruction, and removal of scrub, stumps, and undergrowth;
(d) The repair of flood or erosion damage;
(e) The construction on the land of fences for agricultural purposes, including the purchase of wire or wire-netting for the purpose of making new or existing fences rabbit-proof; and
(f) The regrassing and fertilising of pasture where the expenditure is not incurred in the course of a “significant capital activity”.

The term “significant capital activity” is defined in s YA 1 as an activity that enables a change in the nature or character of a farming activity but excludes an activity that enables a change in the intensity of farming practice (eg change in pasture type to accommodate an increase in stocking intensity).

(2) **Erosion and shelter plantings [s DO 2]**

In order for the following amounts to be deductible, it is only necessary that the taxpayer be carrying on a farming or agricultural business on land in New Zealand. The deduction is allowed whether or not the trees are planted on that land:

(a) The planting and maintaining of trees for the purpose of preventing or combating erosion of the land;
(b) The planting and maintaining of trees for the purpose of providing shelter to the land.

The deduction is allowed whether or not the trees are planted on that land.

(3) **Trees on farm [s DO 3]**

Under s DO 3, a deduction is allowed for the cost of planting or maintaining of trees on the land other than:

(a) Trees for which the person is allowed a deduction under s DO 2 (see above); or
(b) Trees planted mainly to produce fruit; or
(c) Trees planted under a forestry encouragement agreement under the Forestry Encouragement Act 1962.

The deduction is limited as follows:

(a) In an income year in which the person incurs expenditure on planting trees on the land, the maximum deduction is the lesser of $7,500 and the expenditure incurred; and
(b) In an income year in which the person incurs expenditure on maintaining trees on the land, the maximum deduction is the lesser of $7,500 and the expenditure incurred.

In order for the deduction to be available, the farming or agricultural business must be the principal business carried on the land.

**TaxNote:** Where there is an overlap between types of expenditure which are fully deductible under ss DO 1, DO 2 or DO 3 and those which are able to be amortised under s DO 4, taxpayers are required to take the immediate deduction [see 430.130].

**430.130 Expenditure on land improvements [ss DO 4, DO 10, DO 11, DZ 13]**

Any taxpayer carrying on a farming or agricultural business in New Zealand may claim a deduction for any expenditure of the types listed below which is incurred in preparing or otherwise developing land and is of benefit to the business in that income year. The provision excludes: expenditure incurred on listed horticultural plants [see 430.135], expenditure on avoiding, remedying or mitigating effects of the discharge of a contaminant [see 230.95], improvements to forestry land [see 520.40], or improvements to aquacultural businesses [see 500.30]. Each of these has its own regime.

Sections DO 4 and DO 10 state that expenditure incurred by the taxpayer that owns the land or by any other taxpayer qualifies for the deduction. The expenditure must comply with all of the following conditions:

(a) Be of the type listed in the schedule;
Farmers 430.130

(b) Not be immediately deductible under any of ss DO 1, DO 2, or DO 3;
(c) Have been incurred in relation to the land owned or leased by the taxpayer;
(d) Have been incurred in the 1995-1996 or later income year;
(e) Not have been incurred in the year in which the land is sold, or in the case of a lessee the year in which the person ceases to carry on business on the land;
(f) Be incurred in developing the land; and
(g) Be of benefit to the business in the year in which the deduction is allowed.

The words “or by any other taxpayer” mean that a taxpayer who owns land on which a farming or agricultural business is carried on is able to claim a deduction in relation to qualifying expenditure incurred by a previous owner of the land. The amount of the deduction is the relevant percentage of the diminished value of that expenditure (ie the amount of expenditure originally incurred less all previous deductions in relation to that expenditure) [see TES 6 (July 2003) 87].

Example:
Farmer A owned a farm, and in the 20X1 income year, spent $20,000 constructing an access road to the back of his farm. In that year Farmer A would be entitled to a deduction of five per cent of $20,000 (which is $1,000).
In the 20X2 income year, Farmer A sold his farm to Farmer B. In the 20X2 income year, Farmer B spent $10,000 building a landing strip for top dressing. Therefore, in the 20X2 income year, Farmer B can claim a deduction for both:
(a) Five per cent of the diminished value of the expenditure incurred by Farmer A (ie five per cent of $20,000 − $1,000, which is $950).
(b) Five per cent of the expenditure he incurred himself (ie five per cent of $10,000, which is $500).

The deduction allowed is the amount equal to the percentage specified in sch 20, Part A of the “diminished value” of the item of expenditure (see table below). “Diminished value” means the amount of the expenditure reduced by every amount allowed as a deduction in any preceding year in respect of that expenditure, and every amount allowed as a deduction in the current income year under other provisions in the Act.

Staples Tax Guide 2012 511
Expenditure on farming improvement

The construction on the land of structures for shelter purposes 12%

The remaining value of any improvement that is destroyed, or irreparably damaged, rendering it useless for the purposes of deriving income, may be written-off where the person would otherwise have been allowed a deduction in respect of that improvement under s DO 4 or s DO 10. In order for the deduction to be claimed, the damage must not result from the action or inaction of the taxpayer, taxpayer’s agent or an associated person of the taxpayer. The deduction is available in respect of the 2005-2006 and subsequent income years [s DO 11].

The remaining value of any improvement that was destroyed or made useless as a result of February 2004 floods or the July 2004 Bay of Plenty storm is able to be written-off if the taxpayer would otherwise have been allowed a deduction in respect of that improvement under s DO 4 or s DO 10 [s DO 11].

If vines or trees have ceased to exist or have ceased to be used in the production of assessable income, their remaining value may be written-off and a deduction claimed for that amount. For the tax treatment of listed horticultural plants see 430.135.

Expenditure on listed horticultural plants [ss DO 4, DO 5, DO 6, DO 7, DO 8, DO 9, DO 10, DV 14]

Historically, the tax treatment of replacement plantings of horticultural plantings such as orchards has been uncertain. Certain types of horticultural plant now have their own amortisation and deduction rules. The types of plants included in the rules are specified by the CIR. Thirty five categories of plant have been included in the list [see 5000.50]. Trees planted for timber production, ornamental trees or grape vines planted for wine production are not included. The commencement date for the revised tax treatment is the beginning of the 2003-2004 income year. Vines, trees and other plants not covered by the rules continue to be covered by s DO 4 [see 430.150].

The regime provides for:

(a) Amortisation of plantings;

(b) Immediate deduction for replacement plantings to a maximum of 15 per cent of the planting in any three-year period with a maximum of 7.5 per cent of the planting in any income year; and

(c) Write off of plants which cease to exist or cease to be used as part of the business where that plant is not replaced.

To qualify for the new rules, the taxpayer must carry on a farming or agricultural business on land in New Zealand and the land must have been developed by way of planting listed horticultural plants. The term “farming or agricultural business” includes horticulture.

(1) Amortisation [s DO 5]

Expenditure incurred on acquiring and planting the types of plant listed in the CIR’s determination is to be amortised at the rates stated in the determination [see 5000.50]. The rates are based on the estimated useful life of the plants. The only exception to this rule is for expenditure incurred on replacement plantings to the extent to which that expenditure can be deducted in the income year in which it is incurred. Non-listed horticultural plants continue to be amortised at 12 per cent per annum under s DO 4 and sch 20. If the taxpayer owns the land, no deduction is allowed in the income year in which the taxpayer disposes of the land. If the taxpayer does not own the land, no deduction is allowed in the income year in which the taxpayer ceases to carry on business on the land.

(2) Immediate deduction for replacements [s DO 6]

An immediate deduction is allowed for expenditure incurred on replacement planting to a maximum of 7.5 per cent of the area of the planting in any income year and 15 per cent in any three consecutive income years. Replacement plantings in excess of these limits must be capitalised and amortised. Replacement plantings include graftings. It is not necessary that the plant be replaced with a plant of the same type. Further, as the
Farmers

...deduction is based on the percentage of the area replaced, it is not necessary that the same number of plants be planted as replacements. Use of a different variety may mean that the plants are located closer together thereby increasing the number of plants in the area. There is no deduction available for the remaining cost of the original plant that has been replaced. Instead, it is allocated either to the replacement plants or to other plants as the taxpayer chooses [s DO 5(7)].

(3) **Immediate deduction for plants not replaced** [s DO 5(6)]

If a plant ceases to exist or ceases to be used to derive income, and is not replaced, a deduction is allowed for the part of the cost of the plant that has not yet been amortised.

(4) **Applying for a new or amended amortisation rate**

Where a horticultural plant has not been determined by the CIR as a listed horticultural plant, taxpayers may apply in writing to the CIR for a specific horticultural plant or category of horticultural plants to be so determined. The process is as follows:
Taxpayer applies in writing for a horticultural plant to be determined as a listed horticultural plan, or to amend the amortisation rate for an existing horticultural plant.

Is the application complete? (signed, information provided on the EUL of the horticultural plant and all information/explanations including amendment attached)

- No: IRD contacts the applicant and requests further information.
- Yes: If required, IRD contacts an independent industry expert to verify the EUL of the horticultural plant.

If required, the independent industry expert assesses the information provided by the applicant and provides IRD with their assessment of the EUL of the horticultural plant.

Does the independent industry expert's assessment agree with the applicant's?

- No: IRD advises the applicant that the industry expert's assessment differs to that provided. IRD also discusses the discrepancies with the applicant and/or the industry expert with a view to resolving the discrepancies.
- Yes: IRD proceeds to calculate an appropriate amortisation rate for the horticultural plant based on "Schedule 12 Banded rates of depreciation of the ITA 2007".

Inland Revenue Consultation Process

[1] Applicant advised of draft amortisation rate
[2] Internal IRD consultation for a period of 3 weeks
[3] General external consultation for a period of 6 weeks - required only if the applicant does not represent the whole industry to which the amortisation rate is to apply
[4] IRD reviews feedback and amends draft amortisation rate (where appropriate)
[5] IRD advises applicant of the new amortisation rate

Agreement reached on the estimated useful life of the horticultural plant? - applicant, industry expert and IRD

- No: Decision made by IRD on the horticultural plant's EUL
- Yes: IRD advises applicant of the new amortisation rate.

IRD publishes the new/revised listed horticultural plant amortisation rate in the next available TIB. IRD also notifies the public of the new/revised listed horticultural plant amortisation rate in the New Zealand Gazette.
430.140   Growing crops purchased with land  
Where crops that are still growing are purchased with the land and no separate price is allocated, they are treated for tax purposes as land and are not regarded as trading stock unless and until they are harvested. Consequently, no portion of the purchase price can be allowed as a deduction to the purchaser or assessed to the vendor as representing the value of trading stock at the date of sale. The definition of trading stock specifically excludes land. Where a separate price is specifically allocated to growing crops and to the land, that portion allocated to the growing crops is allowable as a deduction to the purchaser and represents income to the recipient.

430.145   Apiarists  
The hives of ordinary commercial beekeepers are a capital asset and not trading stock. They are regarded as plant and should be capitalised and depreciated [see 250 DEPRECIATION]. The cost of repairing or replacing hives which become dilapidated is fully deductible. The cost of replacement frames, whether plastic or wooden, is a deductible expense. The cost of frames for additional supers or hives or for a new beekeeper is capital expenditure and not deductible for tax purposes. The sale of hives by beekeepers who also deal in bees and hives, and the manufacture of hives for sale are treated as stock-in-trade.

430.150   Fruit grower’s costs of establishing orchard  
The purchase of land including legal expenses on purchase is capital expenditure and not deductible. However, if the land is merely leased, the cost of preparation of the lease is deductible. Expenditure incurred in raising money to purchase the land is also deductible. The cost of planting and maintaining shelter trees (but not the fruit trees) is deductible. There is a deduction for the cost of planting trees only where it indirectly promotes agriculture in the sense of promoting the use of the fields for growing purposes by providing shelter or by preventing erosion or something similar.

The planting of the fruit trees is not regarded as preparation of the land. It is part of the operation of fruit growing. Normally an orchardist buys and plants out trees from a nursery. Alternative schemes allow an orchardist to buy cuttings for a nominal cost and pay the nursery a “management fee” for caring and tending the cuttings until they are mature enough to transplant. The CIR considers that all costs incurred up to and including final planting are capital costs of establishing the orchard and therefore not deductible.

Until the trees reach fruit-bearing age, expenditure in cultivating, pruning, spraying, rates, insurance, depreciation, and similar recurring annual charges are deductible notwithstanding that they are incurred to earn profits in future years. If the deductible expenditure creates a loss, it is offset against other income of the taxpayer. Any amount not able to be offset against other income is carried forward and offset against profits in future years [see 940 LOSSES].

The Apple and Pear Marketing Board capital levy on new pipfruit production, designed to finance new capital facilities, is deductible in the income year in which it is incurred.

The following extract from TIB vol 7:1 (July 1995) presents the CIR’s policy on deductions for replacement, regrafting, and write off of vines and trees.

(1)   Replacement trees  
Schedule 7 refers to the “planting” of vines and trees and allows a deduction of 12 per cent on the diminished value of the expenditure. The CIR’s view is that “planting” means the initial planting at the establishment of an orchard, and any future replacement plantings when a particular species or variety is removed and replanted with a new species or variety. Schedule 7 refers to vines and trees rather than orchards. The CIR’s view is that the term “vines or trees” refers to vines or trees collectively, whether as a complete orchard or part of the orchard such as blocks or rows of trees. Any replacement plantings of any part of the orchard are a capital expense, and the cost must be capitalised to the orchard account and written-off at the rate specified in sch 7. The CIR allows a current year deduction only when a small number of vines or trees are replaced because they die or are destroyed. The number of trees and vines allowable as a current year deduction depends on the facts of each particular case, but is generally limited to replacing a small number of trees in a row or block, rather than replacing every vine or tree in that row or block. For example, an orchardist plants...
Farmers

a new block of apple trees. Of the 50 trees planted, six die due to wind damage. The cost of replacing those six trees can be claimed as a current year deduction under the general deductibility provisions. There is no need to adjust the tree account to which the cost of the whole planting had been capitalised. In summary, the replacement of vines and trees is treated as follows:

(a) New plantings — capital;
(b) Replacement with new varieties — capital;
(c) Regrafting to existing trees — capital;
(d) Replanting of blocks — capital;
(e) Single vine or tree replacements — revenue.

(2) Write off of vines and trees

Section DO 4(4) permits the write off of the unexpired book value of vines or trees that have been replaced and completely removed. The replacement of a variety of vine or tree by cutting back and regrafting to the existing rootstock does not qualify for a write off. This is because the vine or tree has not ceased to exist or ceased to be used for producing income. The rootstock, once regrafted with new budwood, will still be producing income sometime in the future. Further, the write off does not apply to vines or trees that ceased to exist or ceased to be used for producing income before 16 December 1991.

430.155 Crops other than listed horticultural plants

Asparagus plants and small berryfruit-producing plants (eg raspberries and strawberries), are “listed horticultural plants” [see 430.135]. Crops which are not “listed horticultural plants” should be treated for tax purposes as follows:

(a) For plants with a life span longer than that of annuals, the initial cost and the cost of planting is capitalised;
(b) Any subsequent replanting is regarded as replacement and deductible in the year incurred;
(c) The planting of vines or trees on the land (but not timber trees) may be depreciated as expenditure on land improvements; and
(d) The replacement crop and the cost of planting crops, as part of a crop rotation programme, are deductible in the year of replacement provided there is no increase in the acreage under cultivation.

430.160 Tobacco growers

The valuation of the stock on hand at balance date of a tobacco grower must be based on cost or market value. “Cost” is determined as expenditure incurred by each grower for the crop grown and harvested but not sold at balance date. Valuations of stock on hand based on a standard value are not acceptable. The most favourable balance date for tobacco growers, if undue fluctuation of stock valuations is to be avoided, is 31 July.

430.165 Flower growers

The cost of lily bulbs and tubers purchased by a flower-farming business is deductible because:

(a) Bulbs and tubers have to be continually replenished;
(b) Bulbs and tubers have a limited lifetime, and therefore do not create an enduring benefit; and
(c) Expenditure on bulbs and tubers cannot be regarded as “once and for all” because most die or become unusable within a year.

430.170 Deduction for food, stores, and lodgings supplied to employees

The cost of stores and rations supplied to employees is deductible where an accurate record is kept of the cost of rations supplied. If the stores and rations are bought with those for the farmer and the farmer’s family, apportionment of the total cost needs to be made to find the amount that can be claimed. An apportionment on a “per person per week” basis is accepted provided an accurate record of the total cost of stores and rations is kept.
Farmers

is kept, and items of personal expenditure not normally shared with employees are excluded. If the detailed record gives a reasonable result, the “per person” basis established in one year could be used in future years. However, in some circumstances the CIR may ask that full records be kept.

The farmer may claim depreciation and outgoings, such as repairs and maintenance, on a house supplied free to an employee.

430.175 Assessability of allowances or benefits in the hands of employees

The value of benefits provided to employees by way of the provision of board or lodging or the use of a house or quarters is taxable to the employee. Cash allowances paid in lieu of those benefits are also included. The value of these benefits or the cash allowances must be added to the monetary wages, and tax is deducted on the basis of the gross amount, according to the appropriate tax table and the employee’s tax code. To overcome the difficulty in valuing the benefits, the CIR accepts that a fair indication of the real value is the amount of the cash allowance that must be paid in terms of the relevant contract of employment if free board and lodging is not provided [see TES 6 (July 2003) 78].

The rental value of a free house supplied to an employee should be realistic and fair and reasonable bearing in mind the value of the house and its remoteness from town. One basis which is often used is to consider the rentals of comparable houses in the nearest centre and then reduce that figure for remoteness.

430.180 Working partners and shareholder-employee positions contrasted

A working partner in a partnership is in a different legal position from a shareholder-employee in a close company. In the latter case, the shareholder is an employee of the company whereas, in the case of the partnership, the partner is not an employee but is a part proprietor. If a partnership incurs expenditure on personal living costs of a partner it is not deductible by the partnership and is added to the partner’s share of the partnership profits. The full value of items such as stores, meat, fuel, three-quarters of private power, and the private portion of partnership car expenses which have been incurred by the partnership, but not depreciation and normal maintenance of the dwelling, are treated as private expenditure of the partner benefiting from the expense. Depreciation and repairs and maintenance on the dwelling occupied by the partner are treated in a different way. As in the case of a sole farmer, only one-quarter of depreciation, repairs and maintenance, and domestic power is deductible. The balance of depreciation and repairs and maintenance is not allowed as a deduction.

430.185 Sharemilkers and contract milkers

All sharemilkers are classed as taxpayers in business on their own account. No tax deductions are to be made from their shares of dairy cheques or from any other payments to them including any wages paid by the farmer with whom the sharemilker has entered into a sharemilking agreement. The sharemilker is required to furnish returns and make provisional tax payments in the same way as other self-employed persons. Income derived by a sharemilker is assessable. A deduction is allowable for shed and other farm expenses which are required under the contract.

Where a sharemilker also receives wages from the farmer with whom the sharemilker has a sharemilking agreement, the wages may be paid by the farmer without tax deductions. The wages then form part of the income of the sharemilker from sharemilking and are treated as provisional income for taxation purposes. This applies only to wages received by the sharemilker from the farmer and not to wages received from other employers.

Where a sharemilker owns the herd, or an owner of land is operating under a sharemilking agreement, the rental value of a house provided for either party under the sharemilking agreement or arrangement is not subject to taxation.

Whether or not a sharemilking agreement creates a partnership when made by the owner of a farm with a sharemilker couple is a matter to be decided on the terms of the agreement. Where the sharemilkers are merely contractors who contract to do certain work in return for payment by way of a share in the farming profits, they are not partners carrying on the business of farming.
Contract milkers are employees for tax purposes meaning that employers need to account for PAYE deductions and ACC levies for all payments made. Any contract milker who considers that this ruling should not apply to any particular contract can have the matter considered on an individual basis.

**430.190 Shearers, shed hands, and shearing contractors [s RD 8, sch 4]**

A farmer’s responsibility for PAYE tax deductions depends on the basis of the shearer’s engagement. If the shearing is undertaken by a shearing contractor who in turn employs the shearers, or the shearer is an independent self-employed person, payments made are schedular payments. In this case, the farmer is required to deduct tax at a flat rate of 15 per cent from the contract moneys payable to the contractor, but is not concerned with deductions which the contractor personally is obliged to make from payments to the contractor’s own shearers. If the shearing contractor produces an IR331 certificate of exemption issued by the CIR, no tax deduction at all is to be made from the payment to the contractor. The shearing contractor then accounts to the CIR for the tax deductions made from the shearers’ wages.

Farmers who employ shearers directly as employees must make tax deductions from the payments made to each individual shearer. If an employee has not provided their employer with an employee declaration form showing their tax code, tax deductions must be made at the “no declaration” rate of 45 per cent.

Shearing contractors and self-employed shearers are usually carrying on a business and are entitled to deduct expenditure necessarily incurred in carrying on the business. Self-employed shearers may deduct the cost incurred in the purchase of new and replacement combs and cutters. A handpiece is an asset which is required to be capitalised and depreciated unless it costs not more than $500 and meets the other requirements for the low-value asset write off [see 250.50].

The travelling allowance and hand piece allowance derived by employees are non-taxable.

Allowances paid to shearers and shed hands to cover the cost of combs, cutters and other equipment are exempt, provided that the amount is no more than is reasonable.

All other payments of allowances plus the value of free meals and board are taxable and should be added to wages.

**430.195 Shepherds, drovers, and musterers allowances**

Permanent shepherds, musterers, and general farm employees who are required to supply their own working dogs, horses, and saddlery, are entitled to have part of their salary treated as a non-taxable allowance. The amount treated as non-taxable must be no more than is reasonable.

**430.200 Employee allowances in remote areas to meet boarding school costs for children**

These allowances are deductible for the farmer and are not assessable to the employee provided that:

(a) the allowance is for children of farm employees living in remote areas;

(b) a boarding allowance is paid by the Ministry of Education for the child or children concerned; and

(c) the employer actually pays a boarding allowance in addition to the allowance paid by the Ministry of Education.

The tax-free limit is the smallest of:

(a) the allowance actually paid;

(b) the extent to which it is used by the employee to pay the child’s or children’s board; or

(c) $150 per child with a maximum of $450, when there are three or more children.

The arrangement does not apply when there is a close relationship between the employer and employee (eg when the farmer’s grandchildren are involved).
Chapter 440

Farmers’ Income Equalisation Scheme

440.05 Overview [ss EH 1, EH 2]

Income equalisation schemes provide a mechanism by which taxpayers engaged in certain industries can smooth the level of their taxable income. The smoothing is achieved by the fact that deposits of money into the scheme are tax-deductible while refunds from the scheme are taxable. Eligible taxpayers can deposit money into the schemes in years in which their taxable incomes and marginal tax rates are high and withdraw it in years in which their incomes and marginal tax rates are lower.

There are three income equalisation schemes in operation:

(a) **Main income equalisation scheme**: which is available to farmers, fishers and foresters;

(b) **Adverse event income equalisation scheme**: which is available to farmers who sell livestock but who do not replace the livestock because of a self-assessed adverse event; and

(c) **Thinning operations income equalisation scheme**: which is available to forestry companies in the years in which they derive income from thinning operations.

Deposits are made by remitting the money to the CIR. The funds deposited are then held in a special Crown bank account called the “Income Equalisation Reserve Account” which is operated under the Public Finance Act 1989.

440.10 Entitlement to use the scheme [ss EH 3, EH 34]

Deposits to the main income equalisation scheme can be made by:

(a) Any taxpayer carrying on a farming or agricultural business on any land in New Zealand;

(b) Any taxpayer carrying on a fishing business; or

(c) Any taxpayer (other than a company, a public authority, a Maori authority, or an unincorporated body) who derives gross income from forestry.

The term “farming or agricultural business” is restrictive and various types of business do not qualify [see 430 FARMERS]. Agricultural contracting income is not income from a farming or agricultural business, and consequently is not eligible for the scheme. However, where a taxpayer combines the business of farming with a business as an agricultural contractor, the schemes are available in respect of the income from farming.
“Fishing” includes rock oyster farming, mussel farming, and freshwater fish farming under a licence issued under the Freshwater Fish Farming Regulations 1983.

“Income from forestry” means income from the sale of standing or cut or fallen timber in its natural state grown on land owned by a taxpayer in New Zealand (other than as licensee) or from rights to cut or remove such timber. It also includes “PFSI forestry income”. PFSI forestry income is income from a PFSI forestry business which relates to a forest sink covenant entered into by the person. The income referred to is income which is derived from the receipt of emissions units under the covenant or from entering into a transaction in relation to such a unit.

440.15 Deposits [ss DQ 1, EH 4, EH 5, EH 7, EH 8, EH 35]

For a deposit to be deductible in calculating net income for a tax year it must be made either:

(a) During the accounting year; or

(b) Within the “specified period” for the immediately preceding accounting year, in which case a written election must accompany the deposit.

“Accounting year” means the year to the person’s annual balance date.

Deposits made are deductible. The deduction is taken in the tax year for which the deposit is made. The amount of the deduction is the lesser of the total deposits made for that tax year and the person’s “main maximum deposit” for that tax year.

The “specified period” is the shorter of a period ending:

(a) Six months after balance date; and

(b) One month after the due date for furnishing the return of income.

The CIR has a discretion to accept a deposit for an income year where the request is made outside the specified period. The CIR’s standard practice in this regard is set out in standard practice statement SPS 05/09 [see TIB vol 17:8 (October 2005) at 7-14].

“Main maximum deposit” means the “maximum deposit” that can be made to the person’s main income equalisation account.

“Maximum deposit” means:

(a) Where the taxpayer derives income from forestry, an amount equal to the income from forestry derived in that tax year;

(b) Where the taxpayer derives any income from the business of fishing, an amount equal to the income derived in that tax year from that business; and

(c) Where any taxpayer is engaged in any farming or agricultural business on any land in New Zealand, an amount equal to the income derived from that business in that tax year. This amount is reduced by any amount deposited by the taxpayer for that accounting year in the taxpayer’s adverse event income equalisation reserve account.

The Governor-General may by Order in Council declare that, for any tax year or years, the maximum deposit shall be an amount calculated in the manner specified in the Order in Council or shall be an unlimited amount.

Once a voluntary refund has been made for a tax year, no further deposits may be made for that same tax year, unless the CIR is satisfied that, before the subsequent deposit is made, the refund has been wholly expended on development or expansion of the business. However, using the specified period option, where a voluntary refund is made during the year, it is possible to make deposits in that same tax year for another tax year.

The CIR is required to maintain a separate main income equalisation account in the name of each person making a deposit. This account is able to be used only for the deposits and interest thereon.

Deposits are required to be in minimum amounts of $200 or such lesser amount which brings the aggregate deposits for the year to the allowable maximum.
Where aggregate deposits for a tax year exceed the allowable maximum, The CIR is required to refund the excess as soon as it is practicable. The provisions of the scheme do not apply to any excess deposits [see TES 6 (July 2003) 84].

Amounts entered in a taxpayer’s account are unable to be assigned or charged or pass by operation of law to any other person. Neither are they able to be assets for payment of debts (except by reason of bankruptcy) or for the payment of the debts and liabilities of the taxpayer’s estate, so long as they remain in the reserve account.

440.20 Interest payable on deposits [s EH 6]

Interest at the rate of three per cent per annum is payable on deposits, computed with daily rests from the date of acknowledgement of the receipt of a deposit until refunded; but no interest is payable on any deposit withdrawn within 12 months.

The interest accrues until 31 March in each year (or until the date of refund, if that is earlier) and is then added to and forms part of the deposit. The interest thus becomes assessable as business income, or income from forestry as the case may be, in the income year in which the refund is assessable: TRA Case 77 (1982) 5 TRNZ 705. The interest forms part of the deposit for the purposes of the allocation of the deposit to a year other than the year of payment and the interest goes with the principal or the deposit of that year accordingly.

440.25 Automatic refunds [ss EH 10, EH 11, EH 28]

The maximum time for which a deposit may remain in a person’s account is five years following the end of the tax year for which the deposit was made. Any deposit remaining after the five-year deadline is automatically refunded by the CIR unless the amount is less than $200.

440.30 Voluntary refunds [ss EH 12, EH 13, EH 14, EH 15, EH 16, CB 27]

Refund applications must be made in writing. No refund is able to be made of amounts less than the lesser of $200 and the balance of the account. The minimum period for which a deposit must be held in a person’s account varies with the circumstances surrounding the person’s application for a withdrawal.

(1) Twelve-month minimum period

The CIR is required to refund the amount applied for provided that it has remained in the account for not less than one year. The refund generally will be taxable in the tax year in which application for the refund was made. However, where the application is made during the “specified period”, the taxpayer is able to choose that the refund be taxable in the prior tax year being the tax year to which the specified period relates.

The CIR has a discretion to allow a refund for an income year where the request is made outside the specified period. The CIR’s standard practice in this regard is set out in standard practice statement SPS 05/09 [see TIB vol 17:8 (October 2005) at 7-14].

(2) Six-month minimum period

A refund is able be made of any amounts deposited for six months or more where the CIR is satisfied that the refund is required for either or both of the following purposes:

(a) For immediate development or repair work; or

(b) For immediate purchase of livestock (other than to replace livestock sold or lost as a result of a self-assessed adverse event).

(3) No minimum period

There is no minimum period for which funds must remain on deposit before a refund can be made where the CIR is satisfied that the refunded amount will be used for any one or more of the following purposes:

(a) Replace livestock sold or lost as a result of a self-assessed adverse event;

(b) Avoid serious hardship; or

(c) Any other purpose for which the CIR determines a refund shall be made.
440.35 Refund on retirement [ss EH 17, EH 18, EH 27]
Where the CIR is satisfied that the taxpayer (not being a company or a trustee) has retired from farming or fishing as the case may be, the following provisions apply:
(a) Any balance in the account is refundable automatically; and
(b) It is assessable as income derived during the year in which the taxpayer retires, unless and to the extent to which the deposit was made for an earlier tax year and the taxpayer elects in writing to have all or part of that deposit assessed as income for that earlier year. Any such election must be made within the time during which the taxpayer is required to furnish a return of income for the year of retirement, or within such extended period as the CIR may allow. Any necessary amendments to earlier assessments may be made notwithstanding the normal four-year time limit.

440.40 Refund on death [ss EH 12, EH 19, EH 20, EH 21, EH 22]
When a depositor dies, any balance remaining in the reserve account is generally automatically refundable. It is assessable as income in the period to the date of death unless the trustee elects in writing to either:
(a) Have the amount assessed wholly or in part as income derived by the deceased during the lifetime in the earlier years in which the relevant deposits were deducted. In this case, the provision is the same as on retirement; or
(b) Spread the amount, or any part of it, forward to any of the three years after death but subject to the maximum five year deposit term.
The trustees may only make an election under (b) if they have not made an election under (a). If this second alternative is adopted, the trustee must state in the application the respective amounts of deposits to allocate to each or any of those succeeding years, and the funds so allocated must remain in the account until the time specified in the application and are deemed to be trustee income derived at the time specified in the election. If either of the alternatives is elected, the trustee must make written application within the time by which it is required to furnish a return of income derived by deceased to the date of death, or such further time the CIR in its discretion may allow.
In each case, any amendments to assessments issued for the earlier years may be made notwithstanding the normal time bar limitation for re-opening assessments.

440.45 Refund on bankruptcy [ss EH 12, EH 23, EH 24]
Where any taxpayer is adjudicated a bankrupt, all amounts standing to the credit of the bankrupt’s income equalisation account on the date on which the CIR receives notice of the adjudication are refundable to the Official Assignee. This includes any amount held which exceeds the maximum deposit. The refunded amounts are assessable as income derived during the period to date of adjudication.

440.50 Refund on liquidation of company [ss EH 12, EH 25, EH 26]
On the liquidation of a company (whether voluntarily or otherwise) all amounts remaining in the company’s reserve account on the date on which the CIR receives notice of the liquidation are to be refunded. The refund is assessable as income derived during the period to date of liquidation.

440.55 Tax credit [ss EH 30, EH 31, EH 32, EH 33]
Refunds from a taxpayer’s account are deemed to have been made in the order in which the deposits were made.
A tax credit is available to ensure that a refund does not attract more tax than would have been paid if the deposit had not been made. This does not apply to any refund which is assessed in the same year as the deposit was made. More than one refund may be assessed in a particular year, and this may comprise several deposits or parts of deposits. The total “extra tax” attributable to refunds assessed in a year is aggregated and compared with the “tax saving” attributable to the individual deposits or part deposits in the year deducted. If additional
tax is payable, a rebate equal to the additional tax is allowed in the tax year in which the refund is taxed. For the purpose of calculating the rebate, the tax saving for any particular deposit is a proportionate amount based on the ratio of the deposit being refunded to the total deposits deducted for a particular accounting year.

“Extra tax” means the amount by which the income tax payable on the income exceeds the amount that would have been payable had those refunds not been included.

“Tax saving” means the amount by which the income tax payable on the income is less than the amount that would have been payable had those deposits not been deducted.

440.60 Adverse event income equalisation scheme [ss DQ 2, EH 37, EH 38, EH 39, EH 40, EH 41, EH 42, EH 43, EH 44, EH 45, EH 46, EH 47, EH 48, EH 49, EH 50, EH 51, EH 52, EH 53, EH 54, EH 55, EH 56, EH 57, EH 58, EH 59, EH 60, EH 61, EH 62]

The adverse event income equalisation scheme enables farmers to spread, across future income years, the gross amount of income arising from forced sales of livestock.

(1) The scheme

A “self-assessed adverse event” means a fire, flood, drought, or other natural event, or sickness or disease among the livestock that materially affects the taxpayer’s farming or agricultural business and for which the taxpayer has made and furnished to the CIR a statutory declaration describing the event and specifying how the taxpayer’s business is affected.

An “adverse event income equalisation account” is kept in the taxpayer’s name by the CIR under rules distinguishing it from any “main income equalisation account” which operates under the general rules.

The scheme is available to any taxpayer who is engaged in a farming or agricultural business on land in New Zealand and who sells livestock and does not replace it in the same tax year because of a “self-assessed adverse event”.

No amounts in a taxpayer’s adverse event income equalisation account may be assigned or charged, or pass to any person by operation of law (except through the bankruptcy or liquidation of the taxpayer), or be assets for the payment of the taxpayer’s debts or liabilities or of the debts or liabilities of the taxpayer’s estate (in the event of the taxpayer’s death), at any time before they have been duly refunded.

(2) Deposits

Taxpayers are allowed a deduction for the amount of any qualifying deposits made for a tax year.

The maximum deposit for a taxpayer is the total of the net income arising as a result of the event. The amount calculated on the basis that the cost of all livestock sold due to the effect of that adverse event is either:

(a) Determined using the immediately preceding accounting year’s closing value for the class or classes of livestock in which, had that livestock not been sold, it would have been included at the end of the accounting year in which the livestock was sold; or

(b) If no relevant livestock was on hand at the end of the immediately preceding accounting year, an amount calculated in accordance with the following formula:

\[
\frac{\text{number at start} \times \text{value} + \text{number bought} \times \text{price}}{\text{number at start} + \text{number bought}}
\]

Where:

“Number at start” is the number of livestock of the class sold which was on hand at the beginning of the tax year of sale.

“Value” is the opening value of livestock of the class sold which was on hand at the beginning of the tax year of sale. This is determined without applying s EC 16(2) (valuation under herd scheme).
“Number bought” is the number of livestock of the class sold which was purchased in the accounting year of sale before the sale of that livestock.

“Price” is the average purchase price of the number bought.

**Example 1:**
A farmer using the herd scheme for all classes of sheep is affected by a drought during the 20X1 income year. The farmer is forced to sell 400 rising five year old ewes in December 20X0. The maximum deposit is calculated as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sale price of 400 ewes at $43 per head</td>
<td>$17,200</td>
</tr>
<tr>
<td>Book value of ewes at $40 per head (closing book value of rising 5 year and older ewes for the 20X0 year herd values)</td>
<td>$16,000</td>
</tr>
<tr>
<td>Maximum deposit</td>
<td>$1,200</td>
</tr>
</tbody>
</table>

**Example 2:**
A farmer uses the national standard cost scheme for all sheep. A drought forces the reduction in capital livestock by 400 mixed aged ewes. These animals were in the mature inventory grouping under the average cost inventory system. The opening value of the mature inventory grouping during the year of forced sale was $23 per head. The maximum deposit is calculated as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sale price of 400 ewes at $40 per head</td>
<td>$16,000</td>
</tr>
<tr>
<td>Opening book value ($23 per head)</td>
<td>$9,400</td>
</tr>
<tr>
<td>Maximum deposit</td>
<td>$7,800</td>
</tr>
</tbody>
</table>

The minimum deposit is $200 or the amount that increases the aggregate amount of all payments by way of deposits previously made for that accounting year to the taxpayer’s maximum deposit for that year, whichever is the lesser.

Deposits to the adverse event income equalisation account for a tax year may be made during the accounting year or during the month immediately following the end of that accounting year.

**(3) Interest**
Interest, at the rate set by the Governor-General by Order in Council, is payable on deposits. The rate is intended to reflect market rates. The interest is computed with daily rests from the date of receipt until the date the deposit is refunded or, as the case may be, credited to the taxpayer’s main income equalisation account. All interest accrues until 31 March, and is then added to, and forms part of, the deposit.

**(4) Automatic transfer**
Where any deposit remains in the taxpayer’s adverse event income equalisation account 12 months after the day on which that amount was deposited, the amount plus any interest is transferred to the taxpayer’s main income equalisation account. For the purposes of computing interest payable, it is treated as having been deposited in the main income equalisation account on the day on which it was transferred. For all other purposes, it is treated as having been deposited in the taxpayer’s main income equalisation account on the day on which it was deposited in the adverse event income equalisation account. While these transfers increase the balance in the taxpayer’s main income equalisation account, they do not, of themselves, give rise to a tax deduction.

**(5) Refunds**
Refunds are income derived in the tax year in which the application for the refund is received by the CIR. The provisions for refunds on retirement, death, bankruptcy, or liquidation from the main income equalisation account also apply to the adverse event income equalisation account. Every refund made from the taxpayer’s adverse event income equalisation account must be in the order in which the deposits were made by the taxpayer. No refund made to a taxpayer can be less than $200 or the balance in that adverse event income equalisation account, whichever is the lesser.
440.65  **Thinning operations income equalisation scheme** [ss DQ 3, EH 63, EH 65, EH 66, EH 67, EH 68, EH 69, EH 70, EH 71, EH 72, EH 73, EH 74, EH 75, EH 76, EH 77, EH 78, EH 79]

The thinning operations income equalisation scheme allows companies that carry on a forestry business in New Zealand to spread across future tax years the income from thinning operations.

(1) **The scheme**

The scheme is available only to foresters who are companies.

For the purposes of the scheme, “forestry business” includes permanent forest sink initiative forests established under the emissions trading scheme.

The term “thinning operations” is defined as operations in which some trees in an immature stand of trees are felled for the purpose of improving the growth and form of the remaining trees and not for the purpose of permanently breaking the canopy.

Where a company carries on both farming and forestry operations in New Zealand, separate reserve accounts are required to be kept for deposits in the main income equalisation account and deposits of thinning income.

(2) **Deposits**

The whole of the proceeds from thinning operations derived during a tax year may be deposited in the account.

When calculating the amount, stock on hand at the beginning and end of the year, any provision of the Act that spreads income or deductions, and the provisions of the various income equalisation schemes are ignored.

The minimum deposit is the lesser of $200 and the difference between deposits already made for the tax year and the person’s “thinning operations maximum deposit”.

The deposits are allowable as a deduction in the year for which they are made (ie forestry companies have the option available to farmers of allocating the deduction to either the accounting year in which the deposit is made, or the immediately preceding accounting year covered by the “specified period”).

The “specified period” is the shorter of six months after balance date and one month after the due date for furnishing the return of income. The CIR can extend the period on a case by case or class by class basis. The CIR has a discretion to accept a deposit for an income year where the request is made outside the specified period. The CIR’s standard practice in this regard is set out in standard practice statement SPS 05/09 [see TIB vol 17:8 (October 2005) at 7-14].

Where the person has received a voluntary refund or a development or recovery refund for a tax year, a deposit may be made for that tax year only where the CIR is satisfied that the refund has been used to expand or develop the person’s business.

(3) **Interest**

Interest at the rate of three per cent is computed with daily rests from the date of acknowledgement of deposit until the earlier of 31 March in each year and the date of refund. Accrued interest is added to the deposit. No interest is payable where the deposit is refunded within one year of deposit.

(4) **Refunds**

A request for the refund of amounts that have been in the person’s thinning operations income equalisation account for at least one year can be made at any time during a tax year or during the specified period following the end of a tax year.

A request for the refund of amounts that have been in the person’s thinning operations income equalisation account for at least six months can be made if the CIR is satisfied that the amount will be used for planned development or maintenance work for the forestry business.

There is no minimum period for which funds must remain in the account where the refund is to be used to avoid serious hardship or for another purpose that the CIR determines should give rise to the refund.
In each case, the refund is taxable in the year in which the refund application is made. However, where the application is made during the “specified period”, the person can choose for the amount to be taxable in the year to which the specified period relates. The CIR has a discretion to approve a refund for an income year where the request is made outside the specified period. The CIR’s standard practice in this regard is set out in standard practice statement SPS 05/09 [see TIB vol 17:8 (October 2005) at 7-14].

Where the taxpayer company is put into liquidation, the CIR must refund the balance in the account regardless of the length of time for which the amount has been in the account. The refund is income derived by the company immediately prior to the commencement of the liquidation.

No refund can be given of an amount that is less than the smaller of $200 or the balance in the account.

(5) Tax credit

The provisions of the main income equalisation scheme that provide for a tax credit to ensure that a refund does not give rise to more income tax than was saved when the deposit was made apply equally to the thinning operations income equalisation scheme [see 440.55].
Chapter 460
Film Industry

460.10 Income from films [s CC 10]
When a person has a right or an interest in a film, a print of the film, publicity material for the film, or any other tangible asset relating to the film, the following amounts are income:

(a) An amount received or receivable for:
   (i) The use of, or right to use, the film or a right or interest in a right in the film;
   (ii) The granting of a licence for a future right in the film;
   (iii) The disposal of some or all of a right or interest in a right in the film;
   (iv) The assignment of a right or an interest in a right;
   (v) The assignment of a right to derive income from the use of a right or interest; and

(b) The amount derived from the rental, sale, use or other exploitation of the film.

The “right or interest” referred to above means a current, future or contingent right or interest of any of the following kinds:

(a) Copyright in a film;
(b) A licence relating to the copyright;
(c) An equitable right in the copyright;
(d) An equitable right in a licence relating to the copyright;
(e) Any other right existing in or attaching to the film;
(f) A right to income, or a share of income, from the rental, sale, use or other exploitation of the film.

Section CC 10 is overridden by ss CV 17 and YD 7 [see 460.55].

460.12 Tax treatment of government film funding [ss CX 47, CX 48C, DF 1, DF 5]
Government funding for film and television productions includes:

(a) Screen production incentive fund (SPIF): Introduced on 1 July 2008, this fund provides a grant to a production company of 40 per cent (for feature films) or 20 per cent (for television and other screen productions) of the qualifying New Zealand expenditure, provided certain criteria are met.
(b) **Additional funding (co-funding) by government agencies**: Government agencies such as the New Zealand Film Commission, NZ On Air, the New Zealand Film Production Fund Trust and Te Māngai Pāho are able to provide additional funding for productions that receive the SPIF grant.

For income tax purposes, LBSPGs and SPIF grants are collectively known as “government screen production payments” (GSPP). The grant or incentive must be approved by the New Zealand Film Commission and paid to a company that is resident in New Zealand or has a permanent establishment in New Zealand. GSPPs do not include funding payments (ie co-funding).

Prior to 1 October 2009, funding was also available under the large budget screen production grant scheme. See *Staples Tax Guide 2011*, 460.15.

From 1 October 2009, the income tax treatment of all three types of payments are similar.

GSPP grants are excluded income under s CX 47. The recipient of a GSPP grant is denied a deduction for the expenditure (including expenditure on depreciation property) for which the grant was provided, to the extent of the amount of the grant [s DF 1]. Effectively, the film company’s deductions are reduced by the amount of the grant.

Funding payments are excluded income under s CX 48C. Funding payments are payments, which are not grants, subsidies, or grant-related suspensory loans, made by a public authority to a company in addition to a GSPP. The recipient of a funding payment is denied a deduction for the expenditure for which the funding payment was provided, to the extent of the amount of the payment [s DF 5]. Effectively, the film company’s deductions are reduced by the amount of the funding payment. The recipient of a funding payment is allowed a deduction for any repayment of the funding payment they make, to the extent that the repayment is part of the arrangement with the funding provider.

A deduction is available for film production expenditure under s DS 2, and the deduction is allocated to an income year under ss EJ 4, EJ 5, EJ 7 or EJ 8 [see 460.20].

The taxation of government grants in general is explained at 610.05.

### 460.17 Disclosure of information by Inland Revenue [TAA, s 85F]

In order to assist the New Zealand Film Commission (NZFC) to obtain the information needed to enable it to determine the entitlement of a company to a GSPP, the CIR is authorised to provide the NZFC with the following information:

(a) Particulars relating to the amount of expenditure incurred (in New Zealand or elsewhere) in relation to a project that is the subject of an application for a GSPP;

(b) The CIR’s opinion as to the accuracy of any information provided by an applicant in relation to an application for a GSPP.

If any of the information required by the NZFC is not held by the CIR, the CIR is authorised to use its information gathering power’s under Part 3 of the TAA to obtain that information.

### 460.20 Deductions for film production expenditure [ss DS 2, DS 2B, EJ 6, EJ 7, EJ 8]

A comprehensive tax regime applying specifically to the film industry was introduced with effect from the 1982-1983 income year and modified for films completed on or after 16 December 1983. Film production expenditure (as defined) is deductible only under ss DS 2 and DS 2B.

The deductibility of costs of production or acquisition of films excluded from these provisions must be determined under the general permission and general limitations. Section DS 2 contains the principal film production expenditure rules. A person is allowed a deduction for film production expenditure if:

(a) The film is completed; and

(b) The person has a “film right” [s YA 1] in the film, before, during or after its completion.

“Film production expenditure” is:

(a) An amount of expenditure or loss incurred in producing a film;
An amount of depreciation loss on property used in producing the film; or
An amount of depreciation loss arising from a disposal of property used in producing the film [s YA 1].

“Film production expenditure” specifically excludes:
Expenditure incurred in acquiring depreciable property;
Costs of acquiring a film right after the film is completed; or
Film marketing and selling costs.

“Large budget film grant” means a payment that:
Is in the nature of a large budget screen production grant or post-production digital and visual effects grant;
Is made in relation to a film or television production; and
Is authorised by the New Zealand Film Commission in relation to a company that is resident or has a permanent establishment in New Zealand.

Film production expenditure includes such post-production costs as:
Taking the film from the double head fine cut stage to the stage it is ready for distribution to cinemas;
Converting the film from 18 mm to 35 mm gauge; and
Adapting the film for overseas exhibition, such as dubbing or cutting [see PIB 120 (March 1983)].

Film production expenditure and interest incurred in producing a film that is incurred before a film is completed, extends to film production expenditure reimbursed by a person (ie when a person reimburses another’s film production expenditure, the reimbursement takes on the same nature as the expenses the amount is reimbursing).

The deduction available under s DS 2 is allocated under:
Section EJ 4 (acquiring film rights in feature films) or s EJ 5 (acquiring film rights in other films), if a large budget film grant has been made for the film; or
Section EJ 7 (New Zealand films) or s EJ 8 (other films), if a large budget film grant has not been made for the film.

A deduction is not available for film production expenditure if:
The film is produced mainly for broadcast in New Zealand by a person who operates a television station, television network or cable television system;
The film is intended to be shown as an advertisement; or
Section DS 2B applies to the film production expenditure (see below).

The amount of deduction available under s DS 2 may be reduced, or the timing of the deduction may be delayed, under ss GB 17, GB 18 or GB 19 [see 460.50].

(1) Films intended for sale [s DS 2B]
A deduction is allowed for film production expenditure or expenditure incurred in acquiring a film right if, at the time the expenditure is incurred, the intention is to dispose of the film or film right. The deduction so allowed must be allocated under s EA 2 [see 1140.80]. The right to the deduction overrides the capital limitation, but the general permission must still be satisfied and the other general limitations apply.

(2) New Zealand films [s EJ 7]
A deduction for film production expenditure is allocated under s EJ 7 if the film has significant New Zealand content and a large budget film grant has not been made for the film. To verify that the film has significant New Zealand content, the film must have a final certificate issued under s EJ 6.
Film production expenditure is allocated to the later of:
The income year in which the film is completed; or
(b) The income year in which the expenditure is incurred. Thus, the deduction for film production expenditure incurred before the film is completed is deferred until the income year in which the film is completed. Expenditure incurred after the film is completed is allocated to the income year in which it is incurred.

A film is “completed” when it has reached the stage of production at which the film has been completely edited, shot by shot, to its final length, or an equivalent production stage [s YA 1].

(3) Films that are not New Zealand films [s EJ 8]

A deduction for film production expenditure is allocated under s EJ 8 if the film does not have significant New Zealand content and large budget film grant has not been made for the film. The film production expenditure is deductible over a two-year period commencing with the year in which the film is completed.

Example:

A film (not a New Zealand film), is completed in 20X2. Deductions available to the film owner are as follows (assuming a 31 March balance date):

<table>
<thead>
<tr>
<th>Year</th>
<th>Cost of production</th>
<th>Cost of marketing</th>
<th>Deduction for year</th>
</tr>
</thead>
<tbody>
<tr>
<td>20X1</td>
<td>$1,200,000</td>
<td>—</td>
<td>—</td>
</tr>
<tr>
<td>20X2</td>
<td>$1,800,000</td>
<td>$100,000</td>
<td>$1,600,000</td>
</tr>
<tr>
<td>20X3</td>
<td>—</td>
<td>$200,000</td>
<td>$1,700,000</td>
</tr>
<tr>
<td>Total</td>
<td>$3,000,000</td>
<td>$300,000</td>
<td>$3,300,000</td>
</tr>
</tbody>
</table>

Note 1. Deduction 20X2:
- Cost of production (50% of $3,000,000) $1,500,000
- Marketing costs $100,000
  - Total $1,600,000

Note 2. Deduction 20X3:
- Cost of production (50% of $3,000,000) $1,500,000
- Marketing costs $200,000
  - Total $1,700,000

If film income derived in the income year is more than 50 per cent of the film production expenditure, the deduction may be increased to the lesser of the amount of film income and the total amount of the deductible film production expenditure. Film production expenditure incurred after the film is completed is deductible in the year incurred.

If a person disposes of a film right in the year the film is completed (such that they own no right in the film at year end), any remaining deduction for film production expenditure is deductible in that year.

In *DB Group Ltd v Commissioner of Inland Revenue* (1996) 17 NZTC 12,446 (HC), the High Court dealt with issues relating to the New Zealand-made film “The Navigator”. One issue was whether an amount paid by the taxpayer towards the production costs of the film, and in return for which the taxpayer became a part owner of the completed film, represented film production expenditure in terms of s EO 4(4) of the ITA 1994 [now s DS 2]. The Court held that the payment did come within the definition of “film production expenditure” in s OB 1 of the ITA 1994 and that therefore the favourable tax treatment allowed by s EO 4(4) of the ITA 1994 was available to the taxpayer.

460.25 Limitation on film expenditure deduction to amount at risk

[ss GB 45, GB 46, GB 47, GB 48]

Until the end of the 2003-2004 income year, s DK 1 of the ITA 1994 limited the deduction available to investors for film expenditure financed from limited recourse loans. This provision was anti-avoidance in nature and restricted deductible film expenditure to expenditure and depreciation not financed by a limited recourse loan. Film production expenditure financed by a limited recourse loan was not deductible until such time as the limited recourse loan was repaid.

From the 2004-2005 income year, the deferred deduction rule [see 240.215] applies to all such mass-marketed arrangements (ie not just those related to film expenditure). As a result, s DK 1 of the ITA 1994 was repealed.
from the 2004-2005 income year. However, it continues to apply to any taxpayer who has entered into an arrangement covered by the deferred deduction rule if, prior to the taxpayer’s 2004-2005 income year:

(a) The taxpayer could reasonably have anticipated that 10 or more persons would acquire an interest in the arrangement; or

(b) 70 per cent or more of the person’s deductions arise from ownership of fixed life intangible property or software.

460.30 Completed film acquisition cost [ss DS 1, EJ 4, EJ 5]

Under s DS 1, a person is allowed a deduction for expenditure that they incur in acquiring a film right, whether the film is completed before, at the time, or after the film right is acquired. Expenditure incurred in acquiring a film right is not deductible if the:

(a) Person operates a television station, a television network, or a cable television system, and the film right is acquired mainly to enable the film to be broadcast in New Zealand;

(b) Film is intended to be shown as an advertisement;

(c) Expenditure is film production expenditure; or

(d) Section DS 2B applies to the expenditure [see 460.20].

The timing of the deduction allowed for the acquisition of a film right is governed by s EJ 4 for feature films, and s EJ 5 for other films.

When the film right is a right in a “feature film” (35 mm films produced for the cinema of not less than 75 minutes duration) [s YA 1], s EJ 4 applies to determine the timing of the expenditure incurred in acquiring the film right that is deductible under s DS 1.

(1) Feature films [s EJ 4]

Expenditure incurred in acquiring a feature film is allocated under s EJ 4 if the expenditure is deductible under:

(a) Section DS 1; or

(b) Section DS 2 and a large budget film grant has been made for the film.

The cost of acquisition of the film right is spread over a 24-month period. The deduction is the lesser of the “remaining deduction” or the greater of the following amounts:

(a) The amount of the film income derived in the income year; or

(b) The amount apportioned using the formula:

\[(\text{completed months} / \text{non-completed months}) \times \text{deduction}\]

Where:

“Completed months” is the number of months (or part months) in the income year for which the film is completed.

“Non-completed months” is 24, reduced by the number of complete months in the period starting on the first day of the month in which the film is completed and ending on the last day of the income year for which the deduction is being sought.

“Deduction” is the amount of the deduction for expenditure incurred before the income year that has not been allocated to a previous income year.

(2) Non-feature films [s EJ 5]

Expenditure incurred in acquiring a film is allocated under s EJ 5 if the film is not a feature film and the expenditure is deductible under:

(a) Section DS 1; or

(b) Section DS 2 and a large budget film grant has been made for the film.
If the person has the film right at the end of an income year, the deduction that is allocated to the income year in which the film right is acquired or the film is completed (whichever is the later) is 50 per cent of the deduction or if film income derived in the income year was more than 50 per cent of the deduction, the lesser of the amount of film income and the total amount of the film acquisition expenditure.

If a person disposes of a film right during an income year, and does not own a film right in the film at the end of the year, the remaining deduction (the amount of deduction that has not been allocated to a previous income year) is deductible in that year.

Sections GB 17 and GB 18 contain some rules designed to ensure non-market transactions are not able to be used to manipulate the purchase price of a film right in non-arm’s-length transactions, or when the amount and timing of the expenditure have been deliberately altered to give a more favourable outcome than would have otherwise been the case [see 460.50].

**460.40 Clawback of deductions for film reimbursement schemes [ss DS 3, DS 4]**

Deductions otherwise available under ss DS 1 and DS 2 (or under the general permission if the expenditure is for a right in or in relation to a film) may be reduced retrospectively if a person enters into a scheme that essentially reimburses those costs.

Section DS 3 applies to expenses that are deductible under ss DS 1 and DS 2. Section DS 4 defines the scheme to which s DS 3 applies.

1. **Film reimbursement scheme [s DS 4]**

There are three requirements that must be satisfied.

The first requirement is that it is a scheme under which a person may incur expenditure for which they are allowed a deduction under ss DS 1 or DS 2 (or would be allowed a deduction but for s DS 3) or under the general permission if the expenditure is for a film right or a right to an amount that is dependent on or calculated by reference to income from the rental, sale, use, or other exploitation of a film.

The second requirement is that any one of the following applies to the arrangement:

(a) It enables the person or an associated person to dispose of property; or

(b) It gives a right to the person or an associated person to dispose of property; or

(c) It gives a right that creates an obligation for the person or an associated person that may be met by disposing of the property.

The third requirement is that it is a scheme under which some or all of the consideration for the property is not film income.

For the purposes of s DS 4, the following are associated persons:

(a) Persons associated under the provisions in Subpart YB that apply for the purposes of the whole Act (excluding the 1973, 1988, and 1990 version provisions); and

(b) A shareholder in a loss attributing qualifying company and the company.

2. **Claw back of deductions [s DS 3]**

When a person disposes of property under a film reimbursing scheme the total deductions allowed under ss DS 1 and DS 2 are reduced in accordance with the formula:

\[
\text{total deductions} - \text{total consideration}
\]

Where:

“Total deductions” is the total amount of deductions that have been allowed to the person under ss DS 1 and DS 2 (or would, but for the clawback rules in DS 3 be allowed).

“Total consideration” is the total consideration for the disposal of the property that the person derives that is not film income.
The deductions must be reduced in the order that they have been allowed as deductions. The total deductions must be reduced to an amount equal to the greater of zero and the amount resulting from the above formula. A taxpayer or an associated person affected by ss DS 3 and DS 4 must furnish a special return under s 44A of the TAA. The CIR is given the authority to amend any assessment affected, despite the statutory time bar on amending assessments.

(3) **Excluded expenditure**

Sections DS 3 and DS 4 do not apply to substantial expenditure ($1,000,000 minimum), that is incurred before 7 July 1999 on goods and services in relation to a qualifying film (ie a film which is a New Zealand Film or for which the Film Commission has issued a provisional certificate), if:

(a) The film is not completed before that date;
(b) The required notice is given to the CIR;
(c) The recipient of the payments for those rights is taxable in New Zealand or is resident in a country specified in Part A of sch 3;
(d) Total expenditure on the film is not greater than 140 per cent of the physical production costs; and
(e) The investor has a commercial expectation for profit;
(f) The person or an associated person disposes of property (eg shares) under the arrangement or under a right given by the arrangement; and
(g) All or some of the consideration for that property is not film income under s CC 10.

[see TIB vol 11:6 (July 1999) at 34-35 and TIB vol 11:9 (October 1999) at 3-4].

460.45 **Effect of prepayments rules**

The provisions for the deduction of film production and acquisition expenditure set out very precise rules for the timing of the expenditure deduction. The prepayments rules [s EA 3] require the unexpired portion of accrual expenditure to be included as income. However, the prepayments rules do not override or destroy any existing specific deduction provisions (such as film production expenditure), in the Act. Furthermore, film production and acquisition expenditure is by nature expenditure on capital account and, therefore, falls outside the definition of prepaid expenditure [see PIB 168 (January 1988)].

460.50 **Avoidance matters** [ss DB 58, EJ 9, GB 17, GB 18, GB 19]

(1) **Non-market transactions to acquire film rights [s GB 17]**

A person is required to reduce the deduction allowed to them under ss DS 1 or DS 2 to the market value of the film right (or goods or services), at the time of purchase, if the CIR considers that the person purchasing the film right (or goods or services) and the person from whom the film right (or goods or services) was acquired were not dealing with each other on arm’s-length terms, and as a result the person purchased the film right (or goods or services) for more than the market value. If the buyer acquires only a share in a film right, the reduction applies only to the part of the total market value of the film right that is attributable to that share.

(2) **Manipulation of arrangements to acquire film rights or incur film production expenditure [s GB 18]**

If the CIR considers that two persons have made arrangements so that ss DS 1, DS 2, EJ 4, EJ 5, EJ 7 or EJ 8 apply more favourably than they would have in the absence of those arrangements, the deduction allowed under s DS 1 or DS 2 is reduced to the amount that the CIR considers would have been allowed if the arrangements had not been made. In addition, the deductions allocated under ss EJ 4, EJ 5, EJ 7 or EJ 8 are allocated to the income year to which the CIR considers they should have been allocated in the absence of the arrangement.
(3) **Film production expenditure if payments postponed or contingent** [ss EJ 9, GB 19]

If payment for goods and services has been excessively deferred by agreement between the supplier of goods and services and the person incurring the film production expenditure, or if the liability for payment is contingent, then, for the purposes of ss DS 2, EJ 7 and EJ 8, a person is treated as incurring the expenditure at the time of payment.

**460.55 Non-resident film renters liability to tax** [ss CV 17, DW 3, YD 7]

Ten percent of the amount derived by a non-resident person from a source in New Zealand, from one or more of the following activities is income of the non-resident:

(a) Renting, exhibiting, or issuing a film, or making other arrangements for its exhibition;
(b) Selling or hiring film container, cinematographic or photographic materials, or equipment or accessories relating to a film;
(c) Selling or hiring advertising materials relating to a film.

No deductions can be claimed against this income [s DW 3]. Thus, the income is effectively taxed at three per cent being 10 per cent of the total amount derived, at a tax rate of 30 per cent (assuming the non-resident person is a company). If a double taxation agreement regards the payments as a royalty, the tax payable in New Zealand is unlikely to change as it will be lower than the treaty rate in any case. The balance of the income not taxed under these rules (ie the other 90 per cent) is treated as not having a source in New Zealand.

If a non-resident person is required under an agreement with another non-resident (person A) to pay person A a film rent, royalty or commission, or an amount that arises from an amount derived by the non-resident person from the activities described in (a) to (c) above, the amount paid is treated as not having a source in New Zealand. Sections CV 17 and YD 7 do not apply if the amounts derived by the non-resident from the above activities are an insignificant proportion of the total amounts derived by them from a business in New Zealand.

When the film renter incurs a loss from any other source in New Zealand the loss is not deductible from the film rental income under s IA 8, and any excess loss can be carried forward [see 940 LOSSES].

A discussion of the tax treatment of non-resident film renters is set out in TIB vol 7:2 (August 1995) at 24-27.

**460.60 Treatment of payments to film industry workers**

It is very common in the film industry to engage people on a contract basis, rather than as employees. Thus, depending on the nature of the services, the income will either be taxed as a schedular payment or subject to provisional tax.

The following is a summary of the tax treatment of various types of payment made to film industry workers:

(a) If the person receiving the payment is a resident and is not an employee of the person making the payment, and the payment is made for work done or services rendered in relation to the production of television, video or film productions or presentations (ie a schedular payment), the payer must deduct tax from the payment at the rate of 20 cents in the dollar [sch 4]. This applies when the work or services are of a type that is commonly involved in the on-set and off-set pre-production, production and post-production process. This rate is consistent with the rate applying to resident and non-resident entertainers, and is intended to simplify tax practices for film producers [see 1320 SCHEDULAR PAYMENTS and TIB vol 15:8 (August 2003) at 13].

(b) If the person receiving the payment is not an employee of the person making the payment, and the payment is one of the classes of schedular payment other than film production services (eg freelance journalists and writers), tax must be deducted from the payment at the rate specified in sch 4 [see 1320.40].

(c) If the person receiving the payment holds a special tax rate certificate, tax must be deducted at the rate specified on the certificate [see 1320.20].
(d) A daily living allowance of up to $60 per day paid to contractors (resident or non-resident) living away from home while working on films may be paid free of tax [see 460.65].

(e) If the payment is a contract payment to a non-resident contractor, tax must be deducted at the rate of 15 cents in the dollar [see 1320.20].

(f) If the payment is made to a resident or non-resident entertainer, tax must be deducted at 20 cents in the dollar [see 1000.50].

(g) If the person receiving the payment is not an employee of the person making the payment, and the payment is not one of the classes of payment listed in sch 4, there is no requirement to deduct tax from the payment [see 1320.40].

The difference between an employee and an independent contractor in the film industry was considered by the Supreme Court in Bryson v Three Foot Six Ltd [2005] 3 NZLR 721, (2005) 22 NZTC 19,242 (SC) [see 335.30].

When non-resident employees of offshore production companies are working on a film project and are personally present in New Zealand for no more than 92 days in the tax year, they will be exempt from New Zealand tax under s CW 19. This exemption does not extend to “public entertainers.” The 92 day term may be extended to 183 days under New Zealand’s double taxation agreements. Once the 92 day (or 183 day) period is exceeded, an individual will become liable for income tax in New Zealand. To avoid the deduction of PAYE in the interim, the non-resident employer may provide a bond to Inland Revenue under s RD 23.

The entertainers articles contained in New Zealand’s double tax agreements may apply. These provisions generally give the taxing rights to the country in which the performance or activities are exercised. However, this is only a general rule. For example, the United States-New Zealand treaty provides that a theatre, motion picture, radio, or television artist may be taxed in New Zealand, but only if the artists’ gross receipts exceed US$10,000 for the year.

**460.65 Exempt daily allowances**

Film producers commonly pay a daily allowance to independent contractors and entertainers (actors, film crew, etc) working on film productions when they are working away from their normal place of residence. This allowance is intended to cover costs such as meals and minor incidental expenses. Such payments are classified as schedular payments and so are liable to tax. However, the CIR has issued a determination that up to $60 per day of a daily allowance is to be regarded as expenditure incurred in the production of the payment [see TIB vol 15:8 (August 2003) at 14-15].

The effect of this determination is that if the allowance is less than or equal to $60, then the whole of the allowance is exempt. If the allowance is more than $60, then $60 of the allowance is exempt and tax has to be deducted from the amount of the allowance that exceeds $60. However, the non-taxable amount is reduced on a pro rata basis to the extent that any goods or services, to which the allowance relates (eg meals), are provided to the contractor.

**Example 1:**

An actor on a film set receives a daily allowance of $60 while required to work away from their town of normal residence. The actor buys his own meals. The payer does not have to deduct tax because the total payment does not exceed $60 per day.

**Example 2:**

A worker on a film set receives a daily allowance of $60. The worker is also provided with all meals while working, either on the set, or at some other location. The worker has not incurred the expense herself so the exemption does not apply. The payer has to deduct tax from the entire allowance of $60.

**Example 3:**

Assume the same situation as in Example 2 except that the worker is provided with meals to the value of $20 per day. The payer will be required to deduct tax from $40 ($60 less $20).
Example 4:
An actor receives a daily allowance of $100. The actor incurs the expenses for which the allowance is paid herself. The payer must deduct tax from $40, the amount by which the allowance exceeds the $60 exemption.
# Financial Arrangements

## Chapter 470

### Income recognition under the financial arrangements rules

The financial arrangements rules are a timing regime for the purpose of s BD 4. These rules provide a legislative basis for taking the income and expenditure under a financial arrangement and spreading it over the life of that arrangement.

Some items that might otherwise be regarded as capital in nature are deemed by the financial arrangements rules to be income. Items of income calculated or derived under a financial arrangement are included in income by virtue of s CC 3. Expenditure incurred under the financial arrangements rules generally must meet the normal tests of deductibility.

**TaxNote:** The rules do not apply to foreign financial arrangements held by a transitional resident unless the arrangement is held for the purposes of a business carried on in New Zealand [see 370.35].

For reasons of compliance cost reduction, taxpayers whose financial arrangements have a low aggregate value may calculate their gross income and expenditure under those arrangements using the cash basis [see 470.65].

### Two parts to the regime

There are two parts to the rules governing financial arrangements. They are:

</table>
(a) The financial arrangements rules; and
(b) The old financial arrangements rules.

(1) Old financial arrangements rules
The old financial arrangements rules relate to financial arrangements entered into from the implementation
date for that type of financial arrangement and before 20 May 1999. They are located in ss EZ 33 to EZ 52.

(2) Financial arrangements rules
The financial arrangements rules relate to financial arrangements entered into from 20 May 1999. They are
located in subpart EW and ss 90AA to 90AE of the TAA.

Section EW 10 governs which set of rules apply. The financial arrangements rules apply to all financial
arrangements to which any one or more of the following apply:

(a) Entered into from 20 May 1999;
(b) Existing immediately before 20 May 1999 to the extent to which a person becomes a party to it on
or after 20 May 1999. This would include such things as existing Government stock which is
purchased after that date; and
(c) Entered into before 20 May 1999 where the arrangement is rolled over or extended, or under which
an advance is made, from 20 May 1999.

The financial arrangements rules do not apply to a financial arrangement where all parties entered into it on
or after 20 May 1999 if they do so under a binding contract entered into prior to that date. The old financial
arrangements rules would apply.

Where a person becomes a party to a financial arrangement under a relationship agreement, the financial
arrangement rules apply if all of the following apply:

(a) The transferor was a party to it before 20 May 1999;
(b) It is rolled over or extended or an advance is made from 20 May 1999 under a binding contract entered
into before 20 May 1999; and
(c) It is transferred under a relationship agreement entered into from 20 May 1999.

Taxpayers may elect to move all of their financial arrangements which were entered into before 20 May 1999
from the old financial arrangements rules to the financial arrangements rules [s EZ 34]. A transitional
adjustment calculation is performed, and the resulting income or expenditure is included in the calculation
of their taxable income for the year of election [s EZ 51]. However, if the arrangement is not subject to the
financial arrangements rules (eg a small variable principal debt instrument), s EZ 51(9) requires the taxpayer
to treat the arrangement as transferred at market value. Therefore, the taxpayer must do a base price adjustment
under the old financial arrangements rules. Once a taxpayer has elected to move onto the financial
arrangements rules, the election cannot be revoked.

The commentary that follows concentrates on the financial arrangements rules, although some of the main
differences with the old financial arrangements rules are noted. For a full discussion of the old financial

470.15 Relationship with rest of Act [s EW 2]
A financial arrangement may be subject to both the financial arrangements rules and another income provision
or timing regime. In this situation, unless there is a specific section overriding the financial arrangements
rules, the financial arrangements rules take precedence.

For the sake of clarity, the section provides that expenditure under the financial arrangements rules is not
included as any of the following:

(a) The cost of trading stock, for low turnover traders;
(b) The cost of revenue account property;
(c) The cost of livestock;
(d) The cost of bloodstock;
(e) The cost of acquiring a film or a right in a film;
(f) Film production expenditure;
(g) The cost of timber; and
(h) Exploration expenditure or development expenditure in relation to petroleum mining.

470.20 Financial arrangements

“Financial arrangements” means:

“An arrangement under which a person receives money in consideration for that person, or another person, providing money to any person:

“(a) At a future time; or
“(b) On the occurrence or non-occurrence of a future event, whether or not the event occurs because notice is given or not given.”

Examples include:

(a) A debt, including a debt that arises by law;
(b) A debt instrument;
(c) The deferral of the payment of consideration for an absolute assignment of a person’s rights under another financial arrangement or under an excepted financial arrangement;
(d) The deferral of the payment of consideration for a legal defeasance releasing a person from some or all of their obligations under another financial arrangement or under an excepted financial arrangement.

The definition has broad coverage to encompass nearly all transactions where money is paid after a time elapse. The definition of money includes money’s worth (whether or not convertible into money) and the right to money (including the deferral or cancellation of any obligation to pay money, whether in whole or in part). Time has a “money’s worth” in many situations. The meaning of a financial arrangement encompasses many situations where the only money’s worth is obtained in consideration for future money’s worth. Therefore, land or assets are “money’s worth”, and so is a binding obligation to do something in the future.

(1) Old financial arrangements rules

For all practical purposes, there is little difference in the definition of financial arrangement. The old financial arrangements rules definition is located in s EZ 48.
470.25 Excepted financial arrangements [ss EW 5, EW 6, EW 8, EW 7]
The term “excepted financial arrangement” is defined in s EW 5 and means:

(a) An annuity for a term contingent upon human life or an annuity for a term that is not dependent on
human life to which s EY 8(2)(c) applies, in each case to the extent to which it is not “life financial
reinsurance”; 
(b) A bet on a race, a bet on a sporting event under a sports-betting system, and gambling, including a
New Zealand lottery; 
(c) An employment contract; 
(d) A farm-out arrangement; 
(e) An interest in a group investment fund; 
(f) A hire purchase agreement for livestock or bloodstock; 
(g) An insurance contract, to the extent to which it is not “life financial reinsurance”; 
(h) A lease that is not a finance lease; 
(i) A loan that is interest-free, repayable on demand and denominated in New Zealand dollars, for the
lender of the loan only; 
(j) An interest in a partnership or a joint venture; 
(k) A look-through interest for a look-through company; 
(l) A share lending arrangement; 
(m) Shares or an option to acquire or to sell shares; 
(n) A specified preference share to which s FZ 1 applies; 
(o) A membership of a superannuation scheme; 
(p) A warranty for goods or services; 
(q) An emissions unit; 
(r) A non-Kyoto greenhouse gas unit; 
(s) An agreement between a person (Person A) and another person (Person B) under which Person B
will provide property or services to Person A in consideration for a payment to Person B by a public
authority under a technology development grant or a technology transfer voucher; 
(t) For a transitional resident only, an arrangement where no other party to the arrangement is a New
Zealand resident and the arrangement is not for a purpose of a business carried on in New Zealand
by any party to the arrangement; 
(u) A loan in foreign currency for the borrower if the borrower is a cash basis person and uses the loan
for a private or a domestic purpose; 
(v) An option to acquire, sell, or dispose of property, other than an interest in a financial arrangement,
for a person who becomes a party to the option for a private or a domestic purpose only; 
(w) An agreement for the sale and purchase of property or services for private or domestic purposes where
settlement is required within 365 days and the subject matter is real property with a purchase price
of less than $1 million or other property or services with a purchase price of less than $400,000; 
(x) A specified option granted either to or by the person for private or domestic purposes which, if the
option is exercised, requires settlement of the property or performance of the services to take place
within 365 days of the granting of the option and the subject matter is real property with a purchase
price of less than $1 million or other property or services with a purchase price of less than $400,000; 
(y) An agreement for the sale and purchase of property or services if all of the sales and purchases of
property or services under the agreement are prepaid, and the total value of prepayments for all such
agreements on every day in that income year is $50,000 or less;
(z) A short-term agreement for the sale and purchase of property or services;
(za) A short-term option;
(zb) Travellers’ cheques;
(zc) A variable principal debt instrument if the total value, on every day in a particular income year, of all variable principal debt instruments to which a person is a party is $50,000 or less.

The limitation regarding “life financial reinsurance” in paras (a) and (g) above applies from 1 July 2010. However, where the life insurer chooses to apply the new life insurance rules for an income year that includes that date, the limitation applies from the beginning of that income year.

If an excepted financial arrangement of a type referred to in items (a) to (r) above is part of a financial arrangement, any amount solely attributable to the excepted financial arrangement is not taken into account under the financial arrangement rules. Conversely, if an excepted financial arrangement of a type referred to in items (s) to (zc) above is part of a financial arrangement, any amount solely attributable to the excepted financial arrangement is taken into account under the financial arrangement rules [s EW 6].

Where an arrangement of a type referred to in any of items (t) to (x) above ceases to be used for a private or domestic purpose, it ceases to be an excepted financial arrangement, and the person becomes a party to a financial arrangement, from (and including) that date [s EW 7].

(1) Election to treat excepted financial arrangement as financial arrangement [s EW 8]

Taxpayers can elect to treat as a financial arrangement the categories of excepted financial arrangement referred to in items (y) to (zc) above. Where such an election is made, it applies to all such financial arrangements to which the person is a party.

In addition, a person is able to choose to treat a class of short-term agreements for the sale and purchase of property or services as financial arrangements. The class must be identified by the currency of the agreement, the term of the agreement, or both. The election is made by including income derived or expenditure incurred under those financial arrangements in the person’s return of income. Such an election can be revoked by giving notice to the CIR by the due date for the filing of the income tax return. The revocation applies to financial arrangements entered into after the income year in which notice is given.

(2) Old financial arrangement rules

The Division 1 definition of excepted financial arrangement [s EZ 48] is not as comprehensive as the financial arrangements definition. Also, the categories of excepted financial arrangement that a taxpayer can elect to treat as a financial arrangement are restricted to certain classes of short-term agreements for the sale and purchase of property.

470.30 Further definitions

(1) Agreement for the sale and purchase of property or services

“Agreement for the sale and purchase of property or services” means a financial arrangement that is a conditional or an unconditional agreement to acquire or dispose of property or obtain or supply services; but does not include an option, a specified option, a forward or a futures contract.

(2) Finance lease

A “finance lease” is a lease of personal property entered into on or after 20 May 1999 which falls within either or both of the following:

(a) At the time at which it is entered into, the lease involves, or is part of, an arrangement which provides for one or more of the following:

   (i) The ownership of the asset to be transferred to the lessee or an associate of the lessee during, or at the end of, the term of the lease;

   (ii) The lessee or an associate of the lessee to have the option of acquiring the asset for an amount that is likely to be substantially lower than the asset’s market value on the date of acquisition;
(iii) A put or call option whereby an associate of the lessee acquires the lease asset during the lease term but does not entitle the associate to receive all of the lease payments that may fall due after the acquisition; or

(b) The term of the lease to be more than 75 per cent of the asset’s estimated useful life.

(3) **Property**

“Property” means any property, whether real or personal, legal or equitable, tangible or intangible, but does not include foreign exchange or a financial arrangement.

(4) **Short term agreement for sale and purchase**

“Short term agreement for sale and purchase” means an agreement for the sale and purchase of property or services to which any one or more of the following applies:

(a) Where settlement must take place, or services must be performed, on or before 93 days after the date on which the agreement is entered into;

(b) If the date on which the agreement is entered into cannot be established, an agreement under which settlement must take place or services must be performed on or before 93 days from the earlier of:
   (i) The date the buyer first makes a payment to the seller; or
   (ii) The date on which the first right in the contracted property is transferred or the services are performed; or

(c) If the agreement for the sale and purchase is continuous and the vendor renders periodic invoices for the property or services, an agreement under which settlement must take place or services must be performed on or before 93 days from the date on which each invoice is rendered.

(5) **Specified option**

“Specified option” means an option to acquire or dispose of property or services. The agreement for the sale and purchase of property or services, if any, entered into as a result of the option being exercised is treated as part of the option.

(6) **Old financial arrangement rules**

The old financial arrangement rules use the terms “holder” and “issuer” for the parties to a financial arrangement. These terms are not used in relation to the financial arrangement rules. For the purposes of the old financial arrangement rules, the holder is the person holding the financial arrangement, generally the lender, vendor, creditor, or the one who will ultimately receive the “money’s worth”. If A sells goods to B, A will be left holding the outstanding debt and will be the holder. More specifically, a holder is:

(a) A vendor in an agreement for sale and purchase of property, or a forward or futures contract;
(b) A grantor of the option in an option to purchase or acquire property;
(c) A grantee of an option to sell or dispose of property;
(d) A lessor for a hire purchase agreement;
(e) In other financial arrangements, a person who would receive or would be entitled to receive payment or pecuniary benefit if any amount (in whole or in part) were due and payable.

An “issuer” means a party to the financial arrangement who is not a holder. The issuer is the person who has issued the financial arrangement.

**Example:**

Emma, having purchased goods from Pauline, has issued a debt to Pauline. Emma is the issuer. Hence, the issuer is the borrower, purchaser, or debtor.

### 470.35 Financial arrangements rules not applicable [ss EW 9, EW 11]

The financial arrangements rules apply to a person who is a party to a financial arrangement.
The financial arrangements rules generally do not apply to a person who is not resident in New Zealand. However, they do apply to a non-resident:

(a) To the extent to which the person is a party to the financial arrangement for the purposes of a business carried on by the person through a fixed establishment in New Zealand; or

(b) If the person is a trustee for a New Zealand resident settlor. Even where there is a New Zealand resident settlor, the financial arrangements rules will not apply if there has been no settlement since 17 December 1987 or where the only settlements made since that date were made by non-resident settlors.

Where a non-resident is not subject to the financial arrangements rules, the following apply:

(a) If a commercial bill is disposed of, the value of the commercial bill on the day on which it is disposed of is income to the non-resident; or

(b) If a commercial bill is redeemed and the issuer of the commercial bill is an associated person of the non-resident, the amount received on redemption is income of the non-resident.

The financial arrangement rules do not apply to the following:

(a) The calculation of resident passive income;
(b) The calculation of non-resident passive income; or
(c) Interest paid by or to the CIR.

**470.35(1) Old financial arrangement rules**

There are similar exclusions under the old financial arrangement rules. One of the main exclusions is for financial arrangements issued or entered into before the relevant implementation date. The date varies depending on the type of financial arrangement:

- **Forward or future contracts, including those for foreign exchange, commodities, financial arrangements, excepted financial arrangements.** 8 pm NZST, 23 October 1986
- **Future contracts, trade credits, annuities, agreement for the sale and purchase of property and convertible notes.** 8 pm NZST, 23 October 1986
- **Debt defeasances and assignments of income.** 20 December 1986
- **Variable principal debt instruments.** 1 April 1987
- **Financial arrangements where monetary obligations are expressed in New Zealand dollars and the holder may require repayment on demand or call but it is not contemplated that the holder may advance further sums to the issuer on demand or call under the financial arrangement.** 1 April 1987
- **Every other financial arrangement.** 8.30 pm NZST, 31 July 1986

**470.40 Spreading methods [ss EW 12, EW 13, EW 14, EW 15]**

To comply with the financial arrangements rules, a person must allocate a fair and reasonable amount of income or expenditure to each income year over the term of the financial arrangement. The only exception is in the income year in which the base price adjustment calculation is required [see 470.80].

Cash basis persons are not required to spread income or expenditure but may choose to do so under s EW 61 [see 470.75].

From the 2009-2010 income year, a trustee who is a cash basis person and who holds a financial arrangement to manage compensation paid for personal injury under the various accident compensation Acts, or pursuant to a Court order, is not required to spread the income arising under that financial arrangement.

Also excluded from the requirement to spread are trustees who hold a financial arrangement in trust to manage compensation for personal injury under the Accident Insurance Act 1998, the Workers Compensation Act...
1956 or a court order, provided that the trustee is a cash basis person or would be if the trustee were a natural person.

The available spreading methods are:
(a) Yield to maturity [see 470.45];
(b) Straight-line [see 470.50];
(c) Market valuation [see 470.55];
(d) A method prescribed under a determination [see 470.60];
(e) A financial reporting method [see 470.65];
(f) IFRS financial reporting method [see 470.67];
(g) A default method.

Whichever method is used, the following items are included in the calculations:
(a) All consideration paid or payable to or by the person under the financial arrangement other than:
   (i) Non-contingent fees (if the IFRS method is not used), and;
   (ii) Non-integral fees (if either the IFRS method or the modified fair value method is used)
(b) All amounts that have been remitted or are to be remitted by the person under the financial arrangement; and
(c) All amounts that would have been payable to the person had those amounts not been remitted by law.

**470.45 Yield to maturity method** [ss EW 16, EW 19, EW 23]

The yield to maturity (YTM) method ceases to be the primary method of spreading income or expenditure under a financial arrangement from:
(a) The 2007-2008 income year; or
(b) At the taxpayer’s option, the first income year for which a person adopts IFRS for the purposes of financial reporting if that is before the 2007-2008 income year; or
(c) The 2008-2009 and later income years, if a person’s 2008-2009 income year starts before 1 January 2008 and the person has not adopted IFRS for the purposes of financial reporting before 1 January 2007.

The prime method that must be used where the taxpayer uses International Financial Reporting Standards (IFRS) for the preparation of financial statements and for the reporting of financial arrangements is the IFRS financial reporting method [see 470.67]. The yield to maturity method may be used only where the IFRS financial reporting method is not required to be used.

While YTM is not defined in the legislation, Determination G3 sets out how YTM is applied to financial arrangements, and Determination G1 sets out how the resulting income or expenditure is allocated to income years. YTM can be applied to a financial arrangement only if expected cash flows and payment dates for the financial arrangement are certain (eg YTM cannot be applied to financial arrangements with variable rates or when terms and conditions of a financial arrangement are varied).

An alternative to YTM may be used if it has regard to the principles of accrual accounting, conforms with commercially accepted practice and results in an allocation that is not materially different from that which would arise under YTM. There is a further requirement that the person also use that method for that type of financial arrangement for financial reporting purposes. This final requirement does not apply where all of the following conditions are met:
(a) The person consistently uses that method for financial arrangements of that sort;
(b) The method appropriately reflects the purpose for which the financial arrangement was entered into;
(c) The method has not been used for tax avoidance; and
(d) Its use has been approved by the CIR by way of notice or determination.
Financial Arrangements

470.50  **Straight-line method** [ss EW 17, EW 19, EW 25, EW 26]

The straight-line method can only be used if the person is a party to financial arrangements that have a total value of $1.85 million or less and the person is not required to use the IFRS financial reporting method [see 470.67]. Before the 2009-2010 income year, the threshold was $1.5 million.

Where the straight-line method is used, it must be used for all of the financial arrangements to which the person is a party. It then must continue to be used for the life of the arrangement until such time as a base price adjustment is required to be performed. A person is able to change from the straight-line method if they change to a method that is not a method for IFRS and the CIR’s written authorisation for the change has been obtained.

The straight-line method apportions interest amounts over the life of a financial arrangement on a pro rata basis. This approach is similar to that detailed in Determination G1A: *Apportionment of income and expenditure on a daily basis*, which is applied when apportioning amounts from “periods” to income years.

In certain limited circumstances the straight-line method will produce a result identical to yield to maturity:

(a) A discounted loan involving only one payment each by the holder and the issuer, such payments being not more than 12 months apart. For example, a zero-coupon bond redeemed within 12 months of purchase.

(b) A non-discounted fixed principal debt instrument with regular and fixed interest payments made not more than 12 months apart. For example, a five-year bank term deposit with non-reviewable interest paid semi-annually.

For other types of financial arrangement there will always be some difference in the amounts of income or expenditure calculated. Whether this difference is material is something that needs to be considered for each particular case.

If the amounts payable or receivable can be expressed with certainty in New Zealand currency, Determination G3 should be applied. An example of such a situation is a floating-rate foreign currency borrowing which is completely hedged for the term of the borrowing as to interest rates and to New Zealand currency.

470.55  **Market value method** [ss EW 18, EW 19, EW 23, EW 25, EW 26]

The (pre-IFRS) market valuation method is available only where the person is not required to use the IFRS financial reporting method [see 470.67]. Where the IFRS financial reporting method does not have to be used, the market value method is available on a restricted basis to persons who are carrying on a business that includes dealing in financial arrangements. A person who is a party to forward contracts for foreign exchange, futures and exchange-traded options may also apply the market valuation method of financial arrangements to those financial arrangements. All of the following further requirements for use of the method must also be met:

(a) The parties to the arrangement are not associated persons;

(b) Either the CIR has approved the market, the method and the source of information under a determination or that the person can demonstrate that the market prices used are reliable;

(c) The method conforms with commercially acceptable practice;

(d) The method is used for the life of the arrangement unless the CIR has given written authorisation that the method used be changed; and

(e) The method is used for financial reporting purposes for arrangements of that sort.

This final requirement does not apply where all of the following conditions are met:

(a) The person consistently uses that method for financial arrangements of that sort;

(b) The method appropriately reflects the purpose for which the financial arrangement was entered into;

(c) The method has not been used for tax avoidance; and

(d) Its use has been approved by the CIR by way of notice or determination.
A person is able to change from the market value method to a method that is not a method for IFRS provided that the CIR’s written authorisation for the change has been obtained.

**470.60 Determination method or alternative [ss EW 20, EW 23]**

A person is able to use a method prescribed by the CIR by way of determination for that type of financial arrangement where:

(a) The person is not required to use the IFRS method [see 470.67];
(b) The person cannot use the YTM method or an alternative; and
(c) Is not permitted to use, or chooses not to use, the straight-line method or a market valuation method.

For further details see 470.100 (Determinations) and 470.105 (Determinations issued).

**470.65 Financial reporting method [ss EW 21, EW 23]**

A person may use a financial reporting method where all of the following apply:

(a) A person cannot use YTM or an alternative;
(b) A person cannot, or chooses not to, use the straight-line or market valuation methods;
(c) The person does not use IFRS to prepare financial statements and to report for financial arrangements; and
(d) The CIR has not made a determination for the financial arrangement.

A person may use a financial reporting method, provided all of the following conditions are met:

(a) The method conforms with commercially acceptable practice;
(b) Is used by the person for financial reporting purposes; and
(c) Allocates a reasonable amount to each income year over the term of the financial arrangement.

The requirement that the method be used for that type of arrangement for financial reporting purposes is waived where all of the following apply:

(a) The person consistently uses that method for financial arrangements of that sort;
(b) The method appropriately reflects the purpose for which the financial arrangement was entered into;
(c) The method has not been used for tax avoidance; and
(d) Its use has been approved by the CIR by way of notice or determination.

**470.67 IFRS financial reporting method [ss EW 15B, EW 15C, EW 15D, EW 15E, EW 15FEW 15H, EW 15I, EW 25B]**

Taxpayers who are a party to a financial arrangement and who use International Financial Reporting Standards (IFRS) to prepare financial statements and to report for financial arrangements must use one of the following four methods to account for their financial arrangements for tax purposes [s EW 15C]:

(a) IFRS method [s EW 15D];
(b) A determination alternative [s EW 15E];
(c) Expected value method [s EW 15F]; and
(d) Fair value method (modified) [s EW 15G].

The fair value method is not able to be used where the financial arrangement is treated under IFRS by the person as a hedge of another financial arrangement and the person uses a method other than the IFRS financial reporting method for that other arrangement.

The methods must be applied using New Zealand dollars, notwithstanding that another currency may be used as the functional currency under IFRS.

The IFRS financial reporting method applies from:

(a) The 2007-2008 income year; or
(b) At the taxpayer’s option, the first income year for which a person adopts IFRS for the purposes of financial reporting if that is before the 2007-2008 income year; or

(c) The 2008-2009 and later income years, if a person’s 2008-2009 income year starts before 1 January 2008 and the person has not adopted IFRS for the purposes of financial reporting before 1 January 2007.

1 Compulsory determinations [s EW 15H]

The use of some of the determinations issued by the CIR is compulsory where the terms of the method described in the determination allows its use for the particular type of financial arrangement. The compulsory determinations are as follows:

(a) Determination G5C: Mandatory conversion convertible notes (or a determination that succeeds it);

(b) Determination G22: Optional conversion convertible notes denominated in New Zealand dollars convertible to the option of the holder (or a determination that succeeds it);

(c) Determination G22A: Optional convertible notes denominated in New Zealand dollars (or a determination that succeeds it);

(d) Determination G29: Agreements for sale and purchase of property denominated in foreign currency: exchange rate to determine the acquisition price and method for spreading income and expenditure (or a determination that succeeds it);

(e) An alternative method to the methods described above if that alternative has regard to the purposes of the financial arrangements rules under s EW 1(3), is for financial arrangements similar to those arrangements to which the above methods may apply, and results in the allocation to each income year of amounts that are not materially different from the result using one of the methods described above.

2 Where compulsory determinations do not apply [s EW 15I]

Where none of the above compulsory determinations applies, and the financial arrangement:

(a) Includes in part an excepted financial arrangement;

(b) Is treated (either wholly or in part) by the taxpayer or by the issuer of the arrangement as an equity instrument under IFRS; or

(c) Is an agreement for the sale and purchase of property or services;

the person must then (if available), use one of the following methods:

(a) Yield to maturity method [see 470.45];

(b) Determination G26: Variable rate financial arrangements (or a determination that succeeds it); or

(c) A determination made by the CIR under s 90AC(1)(bb) of the TAA; or

(d) An alternative method to those described above, provided the alternative method has regard to the purposes of the financial arrangements rules under s EW 1(3), is for financial arrangements similar to those arrangements to which the methods described above may apply; and results in the allocation to each income year of amounts that are not materially different from the result using one of the methods described above.

3 Where arrangement does not include an excepted financial arrangement

Where the arrangement does not include an excepted financial arrangement, is not treated as an equity instrument under IFRS, and is not an agreement for the sale and purchase of property or services, one of the following methods must be used:

(a) IFRS method [s EW 15D];

(b) A determination alternative [s EW 15E];

(c) Expected value method [s EW 15F]; or

(d) Modified fair value method [s EW 15G].
(4) **IFRS method [s EW 15D]**

Where none of the preceding paragraphs applies and the taxpayer does not use an allowable alternative method, the IFRS method must be used. This entails allocating income (or loss) to each income year in accordance with IFRS, but with the following modifications (where relevant):

(a) Where the financial arrangement is a financial asset, amounts arising from an “impaired credit adjustment” under IFRS is reversed out. This does not apply where the fair value method is used, the financial arrangements are not derivative instruments, and the person’s business includes dealing in those financial arrangements;

(b) Borrowing costs are not capitalised under NZIAS 23;

(c) An amount arising from the fair value method under IFRS is included for tax purposes, even though the amount is allocated to equity reserves under IFRS.

An “impaired credit adjustment” means:

(a) Where the fair value method is used, the movement in fair value due to the decline in credit quality of the arrangement;

(b) Where the fair value method is not used, the credit impairment adjustments made under IFRS.

(5) **Determination alternatives to IFRS [s EW 15E]**

The determination alternatives to IFRS contained in s EW 15E apply where the taxpayer chooses to use them in a return of income. However, the following conditions must be met:

(a) The terms of the relevant method (modified as described below) allow the person to use it for the financial arrangement; and

(b) The person:
   (i) Does not treat the financial arrangement under IFRS as a hedge of a financial arrangement; or
   (ii) Treats the financial arrangement under IFRS as a hedge of other financial arrangements for which the person does not use the fair value method; or
   (iii) Treats the financial arrangement under IFRS as a hedge of something that is not a financial arrangement.

The determination alternatives (modified as described below) are:

(a) Determination G3: *Yield to maturity*, but only if the financial arrangement is denominated in New Zealand currency and is not a derivative instrument. When applying Determination G3, Determination G25: *Variation in the terms of a financial arrangement* must be used;

(b) Determination G9C: *Financial arrangements that are denominated in a currency other than New Zealand dollars: an expected value approach* (or a determination that succeeds it);

(c) Determination G14B: *Forward contracts for foreign exchange and commodities: an expected value approach* (or a determination that succeeds it);

(d) Determination G27: *Swaps* (or a determination that succeeds it);

(e) A determination made by the CIR under s 90AC(1)(bb) of the TAA; or

(f) An alternative method to those described above, if that alternative has regard to the purposes of the financial arrangements rules under s EW 1(3), is for financial arrangements similar to those to which the methods described above may apply, and results in the allocation to each income year of amounts that are not materially different from the result using one of the methods described above.

The required determination modifications referred to above relate to the use of Determinations G9C: *Financial arrangements that are denominated in a currency other than New Zealand dollars: an expected value approach*, and G14B: *Forward contracts for foreign exchange and commodities: an expected value approach*.
The required modifications are as follows:

(a) The term “forward contract” is treated as including a conditional or unconditional agreement to pay or be paid an amount calculated by reference to the price of property or services, without the property being delivered or the services being performed;

(b) A requirement that all members of a group of companies to which the person belongs make an election to use the determination alternative is treated as met if:
   (i) All members of the group of companies make an election on or before the sixty-third day after the person enters into the relevant financial arrangement, or such further time as the CIR may allow; and
   (ii) The financial arrangement is the first financial arrangement of the group of companies for which Determinations G9C or G14B may be used; and
   (iii) The election to use Determinations G9C or G14B is in writing.

(c) Where the determination alternative is Determination G27: Swaps, the allocation is modified in that only method C is to be used and, for method C, Determination G9C: Financial arrangements that are denominated in a currency other than New Zealand dollars: an expected value approach, must be used, rather than Determination G9A.

6) Expected value method [s EW 15F]

The expected value method can be used where all of the following conditions are met:

(a) The financial arrangement is denominated in a currency other than New Zealand dollars or is a derivative instrument as defined in NZ IAS-39;

(b) The person:
   (i) Does not treat the financial arrangement under IFRS as a hedge of a financial arrangement; or
   (ii) Treats the financial arrangement under IFRS as a hedge of other financial arrangements for which the person does not use the fair value method; or
   (iii) Treats the financial arrangement under IFRS as a hedge of something that is not a financial arrangement.

(c) The person is not in the business of dealing in the financial arrangement;

(d) The person has entered into the financial arrangement in the ordinary course of their business; and

(e) The person and all members of a group of companies to which the person belongs have elected in writing to use the expected value method. An exception to this requirement applies to a member company that does not have a business of a substantially similar nature to a business of another company in the group and the financial arrangement is with other parties where either:
   (i) None are associated with the person or a member of the group; or
   (ii) All are associated with the person and use the method used by the person for the arrangement.

The method chosen must have the features of an expected value approach described in Determinations G9C and G14B, and must result in the allocation of a reasonable amount, having regard to the purposes of the financial arrangements rules under s EW 1(3) for each income year over the term of the arrangement.

7) Modified fair value method [s EW 15G]

The modified fair value method can be used where all of the following conditions are met:

(a) A person has entered into the financial arrangement in the ordinary course of their business;

(b) The person is not in the business of dealing in relation to the financial arrangement;

(c) The financial arrangement is denominated in a foreign currency or is a derivative instrument;

(d) The person:
(i) Does not treat the financial arrangement under IFRS as a hedge of a financial arrangement; or
(ii) Treats the financial arrangement under IFRS as a hedge of other financial arrangements for which the person does not use the fair value method; or
(iii) Treats the financial arrangement under IFRS as a hedge of something that is not a financial arrangement; and

(e) The person and all members of a group of companies to which the person belongs have chosen to use the modified fair value method and have notified the CIR at the time of filing a return of income. An exception to this requirement applies to a member company where:

(i) The company is not otherwise required by this section to use the modified fair value method; and
(ii) The company does not have a business of a substantially similar nature to a business of another company in the group; and
(iii) The financial arrangement is with other parties where either none is associated with the person or a member of the group, or all are associated with the person and use the method used by the person for the arrangement.

When using the modified fair value method, the taxpayer must use the IFRS method to account for income and expenditure under the financial arrangement. However, an amount which has been allocated to equity reserves under IFRSs is excluded for tax purposes. Also excluded any amount in respect of the financial arrangement which is not allocated by the company to equity reserves under IFRS provided that all of the following criteria are satisfied:

(i) The company is a member of a wholly-owned group;
(ii) The financial arrangement is related to an arrangement of another company in the group (Company B);
(iii) The company and Company B are members of the same group consolidated under IFRS;
(iv) Company B does not use the fair value method or the other arrangement; and
(v) The consolidated group makes an allocation of a corresponding amount to equity reserves under IFRS.

Where the company or the consolidated group allocates an amount or the arrangement to equity reserves under IFRS and a member of the consolidated group (Company B) does not allocate an amount for the financial arrangement to the income year for tax purposes, the company must use the modified fair value method for the financial arrangement.

(8) Consistency requirement [s EW 25B]

Where a person uses one of the methods available under the IFRS financial reporting method, that method must be used for:

(a) The remaining term of the financial arrangement until the base price adjustment is required to be performed [see 470.80]; and
(b) All other financial arrangements that are the same as, or similar to, that financial arrangement unless a different accounting treatment under IFRS is used for a particular financial arrangement.

This rule is overridden in the following circumstance. A change in the specific individual method used under the IFRS financial reporting method is allowed where the accounting treatment for the relevant financial arrangement under IFRS is changed for financial reporting purposes in the same income year. A spreading method adjustment is required to be performed under s EW 26 [see 470.70] unless:

(a) The method being changed from is the fair value method and relates to a financial arrangement that is not subject to a creditor workout; or
(b) The change is from the (pre-IFRS) market value method to an IFRS method.
In both of these cases, a base price adjustment must be performed [s EW 29].

**470.70 Changing methods** [ss EW 26, EZ 52C]

A person may change from the straight-line method or market valuation method to a method that is not a method for IFRS under s EW 15B [see 470.67] provided that they have written authorisation of the CIR.

A change may be made from other methods if there is a good commercial reason (other than income tax advantage) for doing so. The term “good commercial reason” is deemed to include starting to use, or ceasing to use IFRS for financial reporting purposes at the same time as starting or ceasing to use an IFRS method for tax purposes. Where a change in method is made, a “spreading method adjustment” must be made for the year in which the method is changed. The spreading method adjustment is the only income or expenditure that arises under the financial arrangement for that income year.

The formula for the spreading method adjustment is:

\[
\text{income (new method)} - \text{expenditure (new method)} - \text{income (old method)} + \text{expenditure (old method)}
\]

Where:

"Income (new method)” and “expenditure (new method)” are the income and expenditure (respectively) that would have been derived or incurred under the financial arrangement if the new method had been used from the time at which the person became a party to the financial arrangement until the end of the income year for which the adjustment is being calculated.

"Income (old method)” and “expenditure (old method)” are the income and expenditure derived and incurred by the person under the financial arrangement in previous income years.

In the formula, the effect of the application of the formula is to place the person in the position in which they would have been had the new method been used from the outset.

The change of method adjustment is not required where a person changes the spreading method for a particular financial arrangement from the fair value method under the IFRS method [see 470.67] and the financial arrangement is not subject to a creditor workout. Neither is the change of method adjustment required to be performed where the person changes from the (pre-IFRS) market value method to a method for IFRS under s EW 15B. In these cases, a base price adjustment is required to be performed under s EW 29(13) [see 470.80].

The change of method adjustment is prohibited from being used where a person changes from using Determination G22: *Optional convertible notes denominated in New Zealand dollars convertible at the option of the holder* to using Determination G22A: *Optional convertible notes denominated in New Zealand dollars*. Instead, Determination G22 applies for the part year before the change and Determination G22A applies for the part year following the change [s EZ 52C].

**470.75 Cash basis persons** [ss EW 54, EW 55, EW 56, EW 57, EW 58, EW 59, EW 60, EW 61]

A cash basis person is not required to use a spreading method to spread the income or expenditure under a financial arrangement. Instead, the income of expenditure is returned on a cash receipts or cash payments basis. A base price adjustment still must be calculated where any of the circumstances in ss EW 29(1) to EW 29(13) applies [see 470.80].

From the 2009-2010 income year, a cash basis person is a person who (for the income year in question), meets the following threshold tests:

(a) In the income year the absolute value of the person’s income or expenditure from the financial arrangements is not more than $100,000; or

(b) On every day in the income year all of the person’s financial arrangements have a total value of not more than $1 million.
In addition, the deferral threshold must not be breached. The deferral threshold will be breached if the cash basis results in a deferral of income or an acceleration of expenditure of more than $40,000 in aggregate. Any of the above thresholds are able to be increased by way of Order in Council.

In determining whether any of the thresholds have been breached, the financial arrangements under both the old financial arrangement rules and the financial arrangement rules must be taken into account. The formula for calculating the deferral is:

\[(\text{accrual income} - \text{cash basis income}) + (\text{cash basis expenditure} - \text{accrual expenditure})\]

Where:

“Accrual income” is the income derived from the date on which the person became a party to the arrangement to the end of the income year for which the calculation is being made using a spreading method;

“Accrual expenditure” is the expenditure incurred from the date on which the person became a party to the arrangement to the end of the income year for which the calculation is being made using a spreading method;

“Cash basis income” is the income derived from the date on which the person became a party to the arrangement to the end of the income year for which the calculation is being made using the cash basis;

“Cash basis expenditure” is the expenditure incurred from the date on which the person became a party to the arrangement to the end of the income year for which the calculation is being made using the cash basis.

Both “accrual income” and “accrual expenditure” must be calculated using the yield to maturity method, straight-line method or an alternative method approved by the CIR. Yield to maturity and straight-line can be used for this purpose whether or not the method is available to the person for the arrangement. The calculations apply to each financial arrangement to which the person is a party but only to the extent of the person’s interest in it. Where a financial arrangement is held by a bare trust, each beneficiary makes the calculation to the extent of that beneficiary’s share in the arrangement.

The CIR may treat a person who would otherwise be a cash basis person for a class of financial arrangements as not being a cash basis person where either or both of the following apply:

(a) Any person has structured and promoted that class of financial arrangement with a view to deferring an income tax liability; or

(b) The parties to the financial arrangement are associated persons who do not calculate income and expenditure under the financial arrangement in the same manner.
